5438. Have you considered the practicability and the possible expediency of extending the building, by projections from the ends of the north and south wing respectively, towards the west?—Certainly; there is a large space of ground there, which I have always considered applicable to any additions that might be required.

5439. Mr. *Hawes.*] What would be the width of those galleries which you propose to erect outside, in the book department?—On the west side they would be 36 feet wide, on the east side 17 feet wide.

5440. Then they are to be considered merely a gallery for books?—Yes; and therefore, receiving as many as can be conveniently placed in them.

5441. Lord *Stanley.*] The appearance of that wing is a matter of indifference, inasmuch as it is completely blocked up by houses on that side?—It is; nor will it be seen but by persons in the building, or looking out of the windows of the houses behind.

5442. Sir *Robert Inglis.*] The plan which you have actually delivered, and which is now upon the table of the Committee, comprehends both the additions which you have lately specified; namely, the gallery for books on the east side of the east wing, and the elongation at the west end of the north building now actually erected, and also includes the proposed room for the prints and the proposed private rooms for the officers?—It does.

5443. You regard your plan as incomplete unless such additions, particularly the elongation of the north wing, be adopted?—I think the elongation of the north wing will very soon be indispensable. There is also much unappropriated space westward of the proposed south side of the quadrangle.

5444. A corresponding elongation of the south wing would also be desirable?—Yes; it will be capable of that lateral extension also.

5445. On the west wing would it be desirable to add a range of gallery, corresponding with that which you propose on the east wing, without interfering either with the light of the room for the Egyptian antiquities and for the miscellaneous antiquities, or with the light of the rooms proposed for the officers?—There is space for that purpose.

5446. Is that west front in any way visible to the public?—Not at all.

5447. You could also fill up the space between the Elgin room and the proposed elongation of the south wing?—Without any inconvenience.

5448. And without any interference with the light?—None whatever; the area is so large that it would not affect the light of the galleries parallel to it.

5449. Mr. *Hawes.*] At what do you estimate the gross cost of the buildings?—I have never made any estimate of it.

5450. Mr. *Baring.*] Supposing that at any future time the marbles and miscellaneous antiquities and Egyptian antiquities were removed to some other building, could the rooms now appropriated to them be applied to the purpose of receiving books with advantage?—Not with advantage, because they would be too remote from the reading-room.

5451. That would be the only difficulty?—Yes.

5452. Lord *Stanley.*] Supposing the elongation to take place of the north wing, it would not be too remote to put books in that elongation?—No; it would only be a continuation of the rooms now finishing, and which are connected with the reading-rooms.

5453. Sir *Robert Inglis.*] In point of fact, then, the original plan was formed upon an area, and with a capability of extension which would provide for more than double the number of books now in the Museum, and for collections of natural history greatly exceeding those of the Jardin des Plantes, and for galleries of antiquities considerably exceeding the gallery at Berlin?—We have,

have, at this time, an area appropriated to the department of antiquities considerably larger than the whole area provided for it in the great museum at Berlin.

5454. And the accommodation which you have provided for the officers exceeds any which, in your knowledge, is provided for the officers in Paris?—Yes; they have none, I believe, in Paris in immediate connexion with the galleries; they must be in the galleries, or in their houses adjoining.

5455. Mr. *R. Colborne.*] If ever a division was made between the collections relative to science and those of art, the latter being removed to a more accessible part of the town, for instance joined to the National Gallery, could the buildings now appropriated to works of art be converted to scientific objects?—They might, perhaps, be converted to many purposes; but I do not know to what other they could now be so well applied.

5456. Sir *Philip Egerton.*] Might it not be converted into a gallery for the mammalia, and the large cætacea, and bulky animals of that description?—I think we have rooms capable of exhibiting them in the fullest degree in the proposed plan; we have rooms 40 feet wide and 20 feet high, and I do not apprehend that there are any likely to require greater height.

5457. And of sufficient extent to accommodate a large collection of that branch of zoology?—A greater collection than I can conceive will be formed for many years.

5458. Lord *Stanley.*] Supposing it were thought desirable to alter the mode of lighting of the present mineralogical gallery, for the purpose of affording as good a light as there will be in the new rooms intended for the minor Egyptian antiquities, could that object be effected at a comparatively trifling expense?—At a very moderate expense, and without any alteration of the roof.

5459. Can you give the Committee any idea of the sum?—I would rather not, having made no calculation of the expense.

5460. Do you think it would be desirable to make such an alteration?—When the roof of the east wing was built it was prepared with skylights, adapted for pictures. The plan of placing the pictures there being abandoned, I suggested that the skylights should remain as they were, in the roofs, and that others should be made in the centre of the ceiling, so that no alteration was made; but my original instructions were, to construct the roof in such a manner, that when the pictures should be removed such an alteration in the manner of lighting might be made as would be better adapted to the collections of natural history; but no such alteration has been made. It will be as easily made now as it would have been at that time, nor will it be attended with any material expense.

5461. You consider the light in the new rooms very superior to that in the mineralogical gallery?—Unquestionably.

5462. With regard to ventilation, do you conceive that it is equally advantageous in the new rooms?—I think I have provided for ventilation satisfactorily in the new rooms, now finishing, and I can easily improve it in the east wing, if it should be required.

5463. The mode of opening and shutting the windows at present is exceedingly inconvenient and cumbrous?—It is, and has been left in that manner because I have always thought it probable that an alteration would be made in the skylights, and therefore have suggested nothing to be done by which they would be more easily opened and shut.

5464. Mr. *Hawes.*] Do not you think, if the estimate be once determined, as far as a sum can be estimated for buildings of this kind, that it would be desirable that the Trustees should have direct power to communicate with you and to suggest such alterations as might be desirable from time to time?—They have that power now; they now communicate with me respecting whatever is wanted; but I provide nothing till I have sent an estimate of the expense to the Commissioners of Woods, which estimate is forwarded to the Treasury.

5465. Do you think there would be any advantage in taking a sum of money on account of buildings, and leaving the appropriation of it to the Trustees and yourself, as the architect?—There would be no other advantage than that of removing the delay which frequently takes place between the requisition being made and the answer given.

 5466. *Chairman.*]

Sir *Robert Smirke.*

23 June 1836.

5466. *Chairman.*] Has any inconvenience arisen from that interruption?—I think not, though it has often caused some complaints of supposed neglect or delay on my part.

5467. Lord *Stanley.*] Have the Trustees, to your knowledge, at any time pressed upon Government the necessity, for the accommodation of the public, of proceeding more rapidly with the buildings?—Very frequently, and it is very seldom that the money which has been applied for has been granted; sometimes only one half.

5468. Mr. *Colborne.*] Have the Trustees ever suggested any considerable alterations in the plans?—None.

5469. Have they ever complained of any part of the plan?—I have never heard of any complaints.

5470. Lord *Stanley.*] Within what space of time will the whole of the north wing be available to the public?—As to the upper story of the north wing, the appropriation of that has not yet been determined; the Trustees have not determined to what branch of natural history it shall be applied, but the room may be finished next year.

5471. When will the whole of the lower floor be available to the public?—The latter end of the autumn in the ensuing year.

5472. Can you state what amount of Parliamentary grant remains for the completion of this?—£. 10,000.

5473. What sum will it take in the present year?—£. 25,000.

5474. The 10,000 *l.* which remains will be the completion of the amount which was originally estimated for those buildings?—Yes.

5475. Will the buildings when finished have been completed within the limits of the original estimate?—They will.

5476. Mr. *Hawes.*] Will you furnish the Committee with a statement of the chief points of the specification and the prices at which the work has been contracted for, confining the information to the principal portions of the work?—I will furnish it of all those parts of the building contracted for since the accounts have been made up and examined by me.

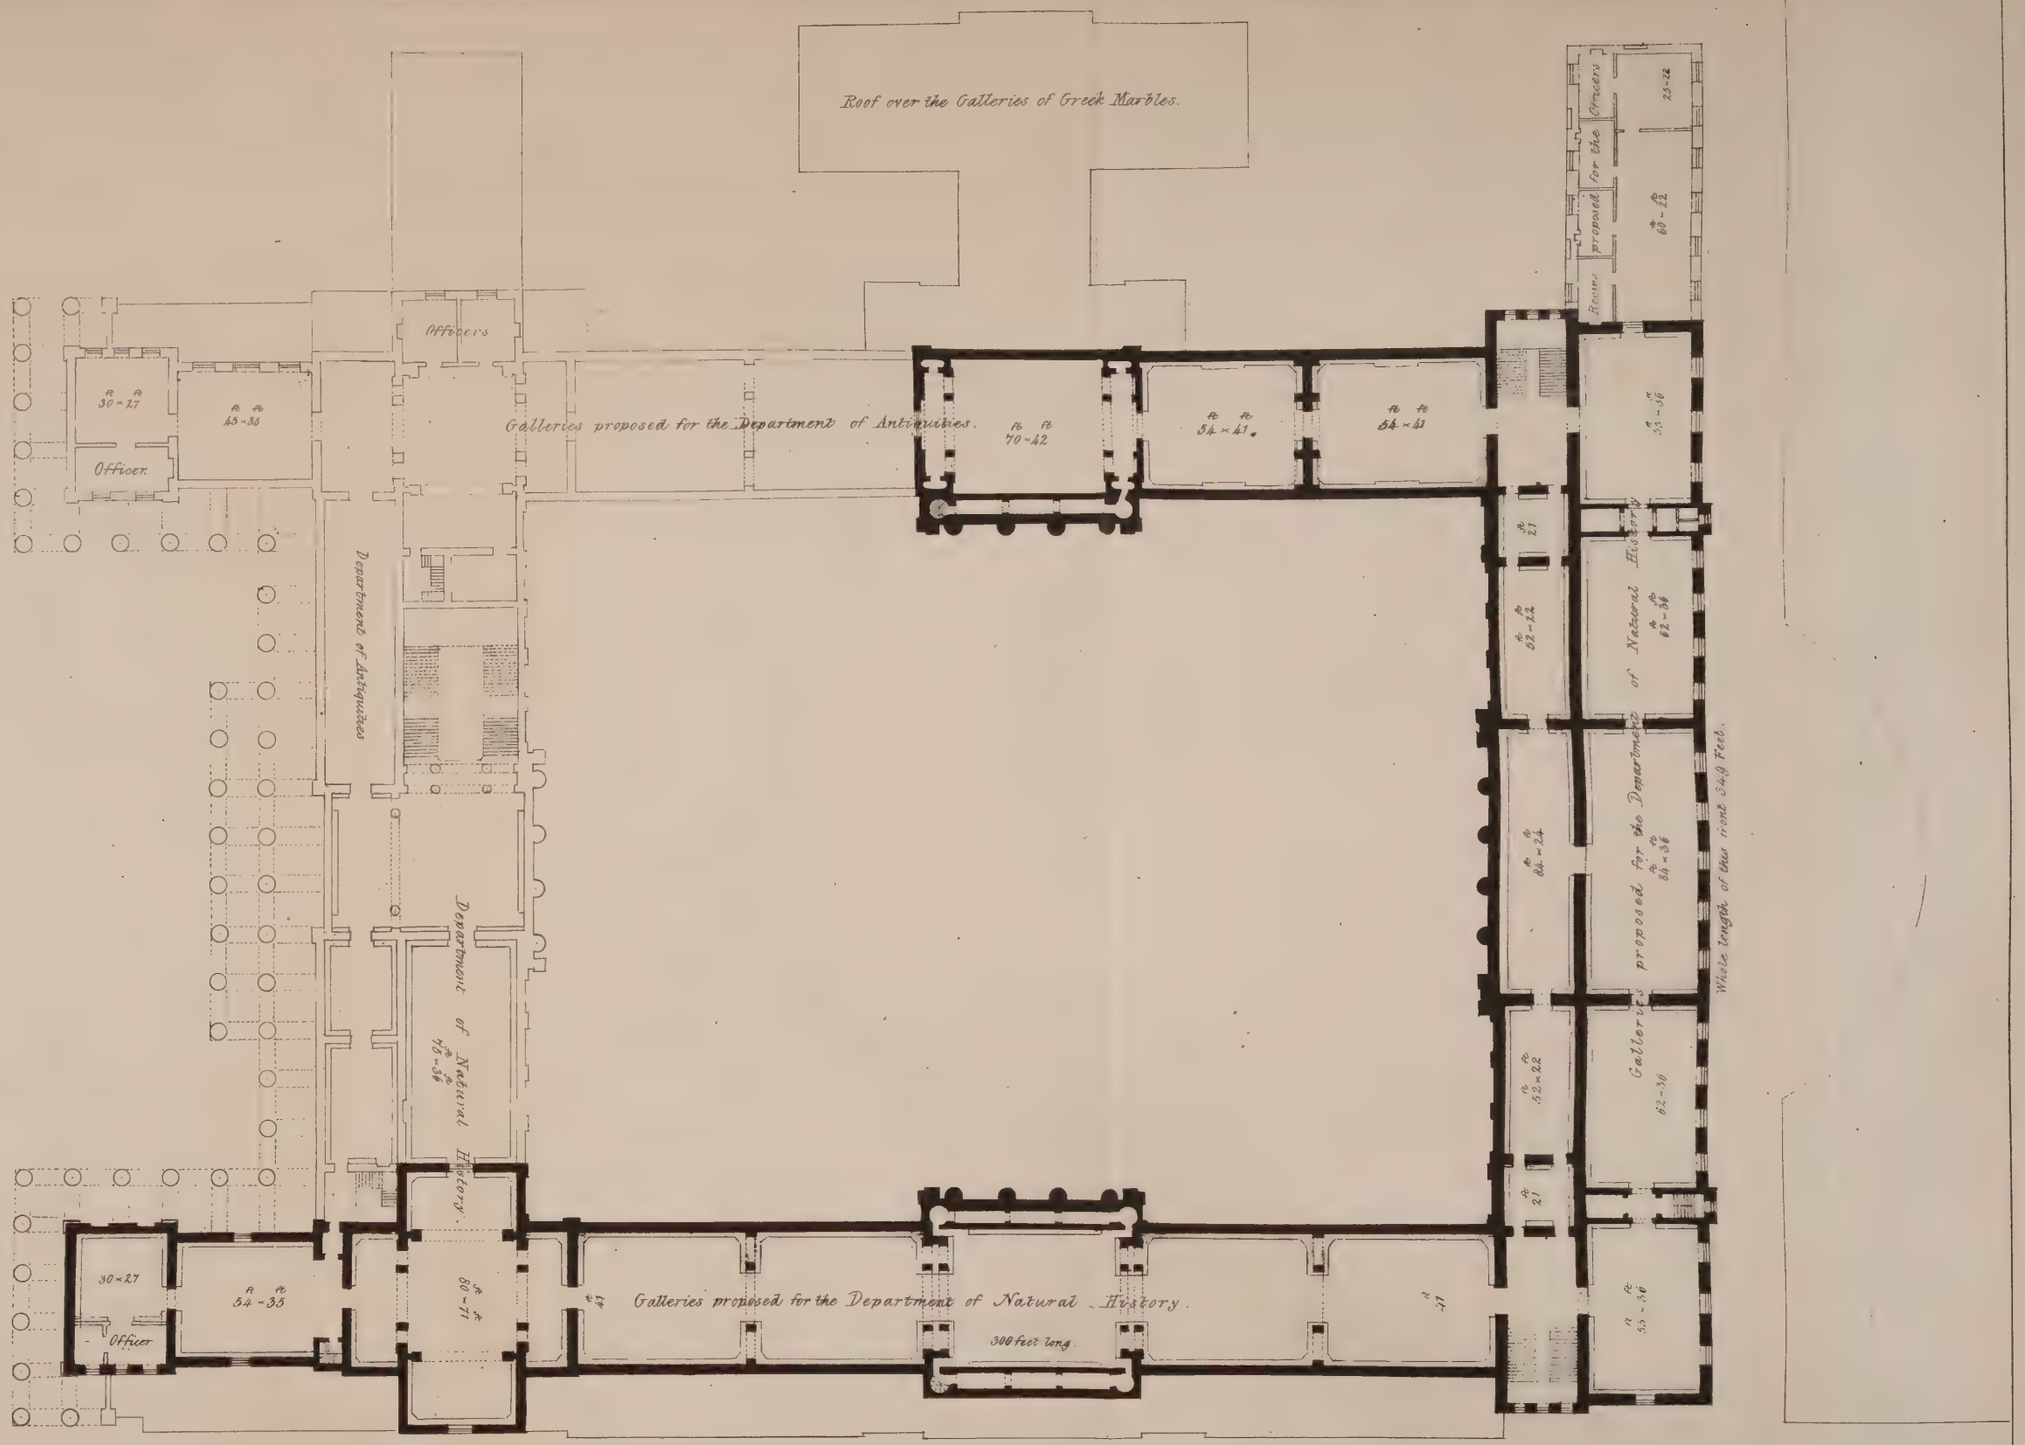
5477. Lord *Stanley.*] You have stated in your evidence that it would be very possible to make still further additions, by projections in various directions upon the east and west side, to the original plan; do you conceive that that object ought to have been contemplated in the first instance, and that there was any want of foresight in the parties under whose direction the building was undertaken, as to the probable wants of the Museum after the lapse of a few years?—I think, from what I have already stated to the Committee, it must be seen that such information could not be obtained. The officers themselves, from the facts I have stated, were quite unable to form any well-founded opinion as to the extent to which the buildings or the collections would be increased, so that after the general arrangements were formed, all that could be done was to show that there were means of extending them in different directions, and facilities given for that purpose in the construction of the building for whatever might be required.

5478. Mr. *Colborne.*] You think, as there can be no limit to the collection, it is impossible to devise a building that can meet all wants or expectations?—Certainly not. It was extremely uncertain how far the public interest in any particular department would be increased, so as to lead to its greater extension. A short time before the new buildings were first in contemplation, I remember Dr. Leach, who had had the care of the department of zoology, expressing the greatest satisfaction at my being authorized to fit up one additional room for zoology. I am persuaded that, enthusiastic as he was, he could never have imagined that in so short a time such a collection as we have now in contemplation would have been formed.

5479. Lord *Stanley.*] When was the north wing finally sanctioned?—In the early part of 1833.

5480. Mr. *Hawes.*] You gave up with great regret the portico in the north wing, did you not?—I did, and I had the satisfaction to hear that both Lord Grey and the present Chancellor expressed the same regret.

5481. It is, in fact, a deterioration of the building, entirely on grounds of economy?—It is, and the question was very much discussed among the Trustees.



Those parts not shaded are the Buildings not yet erected.

Sir *Robert Smirke.*

23 June 1836.

5482. As an architect, you considered the portico important, with a view to the effect of your design?—Yes.

5483. Lord *Stanley.*] When you state that economy was the object consulted in the non-adoption of the portico, will you also state to the Committee whether there be not gained, for the purposes of the library, a very considerable accession of space?—I could use no argument against it, because the advantage to the collection by the increased space it afforded was obvious.

5484. Mr. *Hawes.*] Could it not have been obtained in any other way without the sacrifice of so prominent a feature of the building?—It could have been obtained, but that space must have been lost for books.

5485. Could it not have been obtained by extending the building in any other direction?—It might, but still the space it occupied must have been lost.

5486. What was the amount of the saving in point of money?—None; the present building costs rather more than the estimated expense with the portico; the expense of the interior finishings and of the bookcases being considerable.

5487. Mr. *Colborne.*] In the plan which you now produce there appears to be a small space in the south-east and south-west corners, which are not the property of the Trustees, which belong to the Duke of Bedford. Would it not be very desirable that they should be purchased of his Grace, and made applicable to the purposes of the building at any period when they may be wanted?—It has always been considered necessary that they should be purchased at some period or other; and it was a part of the original plan sanctioned by the Lords of the Treasury, but no steps have yet been taken for that purpose.

5488. But it is your opinion that it is very desirable that they should not be lost sight of?—It will certainly be necessary to purchase that ground.

The Rev. *Josiah Forshall,* called in; and further Examined.

Rev. *J. Forshall.*

5489. Lord *Stanley.*] Sir Robert Smirke has stated in his evidence that the north wing of the British Museum was not sanctioned till the year 1833. Was there any correspondence upon that subject in the years 1831 and 1832 between the Trustees and the Treasury?—There was.

5490. Do you produce that correspondence?—I do.

[*The same was delivered in and read. Vide* Appendix.]

5491. In the evidence of one of the officers of the Museum, Mr. König, it has been stated, inadvertently no doubt, in answer 2584, that with reference to the new building he had no communication from you of an official kind, or that could be considered as such; can you produce any letter which in your capacity as secretary to the Trustees you addressed to him with reference to the accommodation to be afforded in the new buildings?—Yes, I can.

5492–3. What is the date of that letter?—June the 6th, 1833.

[*The Letter was delivered in and read, as follows:*]

My dear Sir, British Museum, 6 June 1833.

If you have any suggestions to offer on the plans of the new north side of the Museum, which you inspected with me on Tuesday, I should be glad to have your remarks in writing, in order that they may be considered by the Trustees on Saturday.

The Trustees desire that the convenient arrangement and advantageous display of the collections of natural history should be provided for in the fullest manner which the general plan of the buildings admits.

Any hints from you which will tend to effect these objects will be valuable.

Ever yours, most faithfully,

C. König, Esq. (signed) *J. Forshall.*

5494. Mr. *Hawes.*] Did you receive any written answer to that?—None.

5495. Did you receive any answer at all?—I think none.

5496. Do you know that Mr. König had the letter?—I am sure that the letter was delivered to Mr König.

Martis, 28° die Junii, 1836.

MEMBERS PRESENT.

Mr. T. G. B. Estcourt.	Sir Philip Egerton.
Sir Robert Inglis.	Mr. Ridley Colborne.
Mr. Compton.	Mr. Thornely.
Mr. Bingham Baring.	Lord Stanley.
Mr. Marshall.	Lord Sandon.
Mr. Hawes.	

MR. T. G. B. ESTCOURT, IN THE CHAIR.

His Grace the *Archbishop of Canterbury*, attending by permission of the House of Lords, was Examined.

His Grace the *Abp. of Canterbury.*

28 June 1836.

5497. Mr. *Hawes.*] YOUR Grace is *ex officio* one of the principal Trustees, in connexion with the Lord Chancellor and the Speaker?—I am.

5498. It appears from a paper in the Appendix to the Evidence of last year, No. 8, page 290, being a return of the meetings of the Trustees of the British Museum during the years 1832, 1833 and 1834, that of the 35 meetings there returned, the Lord Chancellor attended only two, the Speaker only nine, whilst your Grace attended 36; your Grace may hence be considered as the principal Trustee, upon whom devolves the responsibility of the patronage and appointments vested by the 26 Geo. 2, in the three principal Trustees?—That is the case, in a great measure, with respect to the patronage vested in the three principal Trustees. It has generally been the custom of the Lord Chancellor and the Speaker of the House of Commons to defer in respect to the disposal of the patronage to the Archbishop of Canterbury, who is in the habit of attending more frequently than their occupations will allow, and who is also a permanent Trustee, whereas they are temporary; at the same time I should add, that in all the more important cases the Archbishop is in the habit of consulting the Lord Chancellor and the Speaker of the House of Commons.

5499. In the event of a vacancy occurring in an office to which is attached the care and custody of the general repository, to use the words of the Act, what steps are taken by your Grace in order to ensure the appointment of the most competent individual?—A general inquiry, in the first place; whenever there is a vacancy of that kind there are very many applications made, comprising probably almost all the persons who are qualified for the place, and many who are not qualified for it; further than that, I know something myself, in general, of the reputation of the different persons. In the few instances that have occurred I have been in the habit of gaining every information I could from the officers of the Museum in particular, to make myself perfectly acquainted with the duties of the office, and also to learn what is the general estimation as to the person, both with respect to ability, and to character and conduct, and what are his qualifications for the situation. On all such occasions I have a great number of recommendatory letters, in favour, in general, of those who are best qualified, and I pay that attention to those letters which it appears to me the character and the ability of the several writers deserve; but I use every means that I can use in order to enlighten my own judgment, and so to obtain the assistance of the person who is best qualified for the situation.

5500. The Committee has been informed by Mr. Forshall, the secretary of the Museum, that on a vacancy occurring in the office of assistant, the course taken to fill it up is the following: the secretary communicates with your Grace in the first instance, and then gives all the notice that he thinks may be conducive to the appointment of a proper person to the head of the department; and that he is, at the same time, encouraged to lay before your Grace all that he knows, upon "good authority" with regard to the qualifications of the candidates; is this the course sanctioned by your Grace and the principal Trustees?—That is the course sanctioned

His Grace the *Abp. of Canterbury*

28 June 1836.

tioned by me, and which, I presume, is approved by the principal Trustees; because in all communications I have had with them, I have found them desirous of learning, from good authority, what were the qualifications of the persons whom I had recommended to their notice.

5501. Taking into consideration the urgent and important duties having superior claims upon your Grace's attention, is not such a course calculated, practically, to throw the whole patronage and management of the Museum into the hands of one of its officers?—No, I should say not. Supposing the Archbishop entirely to rely upon the representation of any one of the officers, to have no judgment of his own, to have no knowledge respecting the persons qualified for such situations, and to apply to no one but one officer of the Museum, then undoubtedly that would be the case; but that has not been so; I have always spoken to Mr. Forshall, and I have derived much valuable information from him. Though I have reason to rely on his truth and fairness, I have always thought it necessary to make further inquiries; and when, in the result, I have made up my mind with respect to the fitness of the person, I have consulted others confidentially, in order to learn their opinion and assist my judgment in making the best choice that circumstances would allow.

5502. Does your Grace, from time to time, communicate with any of the other principal officers, with regard to the appointments in their departments?—Whenever there is a subordinate appointment in a department I inquire whether there is any person whom those officers think particularly well qualified to assist them, and at the same time, in the first instance, to know whether any of those who are already engaged at the Museum are qualified for the place.

5503. Does your Grace make that inquiry personally of the officers, or through the secretary?—I think that, in general, the inquiry has been made through the secretary; but the communication to the secretary puts it in the power of any officer to communicate personally with me if he chooses, or to answer my inquiries in writing.

5504. Lord *Stanley*.] When your Grace communicates in this manner with the secretary; is the communication between the secretary and the officer so consulted made in writing in general, or verbally?—Verbally, I think, in every instance; I do not recollect any other.

5505. Mr. *Hawes*.] Are the officers subordinate to that of the assistants in the departments filled up in the same way?—As far as I recollect they are.

5506. Then the Committee is to understand from your Grace that the system adopted in the Museum is this:—in the event of a vacancy occurring in the office of assistant, or in any subordinate office, your Grace communicates through the secretary with the officer of the department in which the vacancy is, with a view to fill it up to his satisfaction as well as to the benefit of the Museum?—My view is to get the best person; I should not conceive myself bound to consider the satisfaction of the officer solely, though it would, without doubt, have weight with me.

5507. When an appointment takes place is the secretary ordered to communicate the appointment to the party in writing?—The appointment is communicated to the party, and it is made out in writing; but of course it may be previously notified in conversation.

5508. It has been stated by one of the witnesses examined before this Committee, Mr. Holmes, who is an assistant in the manuscript department, that the only knowledge he has of his appointment is his being appointed verbally by Mr. Forshall, and that he continues to assist him without any direct or written communication with the Trustees as to the nature of his appointment or its tenure; does your Grace approve of such a system?—That must be one of the cases in which particular assistance was wanted at the time, and in which the Trustees gave directions that Mr. Forshall should have assistance in this respect; and as he was a much better judge of the assistance he wanted than I could be, I desired him to find out a proper person. It is to be observed that in these matters the persons best qualified are often unknown in the world; their previous habits must have produced their competency for such situations.

5509. Sir *Robert Inglis*.] Will your Grace be pleased to look at page 426 of the evidence of last year, where there is entered the minute upon the subject of the appointment of Mr. Holmes; does the perusal of that minute bring the circumstances to your recollection?—Yes, that is the case; I perceive that my memory

His Grace the *Abp. of Canterbury.*

28 June 1836.

failed me; I supposed that the Trustees might have referred it to me, but it appears that the Trustees engaged Mr. Holmes for 12 months, and so far it corresponds with my notion that it was a temporary engagement.

5510. Will your Grace be pleased to look at Appendix No. 6 of the same Parliamentary Paper, which contains a list of the officers' assistants and attendants, and will you be pleased to state who amongst the first class may have been appointed by your Grace?—Antonio Panizzi and William Young Ottley; I think those are the only two.

5511. In the appointment of Mr. Antonio Panizzi did your Grace consult with the Lord Chancellor at that time?—Mr. Panizzi was entirely unknown to me, except by reputation; I understood that he was a civilian who had come from Italy, and that he was a man of great acquirements and talents, peculiarly well suited for the British Museum; that was represented to me by several persons who were not connected with the Museum, and it was strongly pressed by several Trustees of the Museum, who were of opinion that Mr. Panizzi's appointment would be very advantageous for the institution; and considering the qualifications of that gentleman, his knowledge of foreign languages, his eminent ability, and extensive attainments, I could not doubt the propriety of acceding to their wishes.

5512. In the other appointment which your Grace states yourself to have made, viz., the appointment of Mr. Young Ottley, late keeper of the print-room, did your Grace also consult the other Trustees, and especially the then Lord Chancellor?—I consulted the other Trustees and the Lord Chancellor upon the appointment of Mr. Ottley; there was a great deal of competition at the time for the office, which had been vacated by the late Mr. Smith. Mr. Ottley was a person of high reputation as a man of taste; he had written much upon the fine arts; he stood confessedly first in the country in the knowledge of prints, and had been concerned, I believe, very extensively in collecting engravings; he had the knowledge of a dealer united to that of an amateur. A most powerful influence was exerted in Mr. Ottley's favour. Looking, as I am accustomed to do, at the benefit of the Museum, I thought that Mr. Ottley's qualifications were too high for the appointment; I thought also that he was too far advanced in years to bear the drudgery of making catalogues, and to give constant attention to the laborious duties imposed on the keeper of the prints; and I certainly was disposed to prefer another candidate, Mr. Josi; but considering the high character of Mr. Ottley, and the general feeling in his favour, I yielded to the opinion of others, whose judgment was perhaps better than my own.

5513. In the only two instances then in which your Grace has exercised your power, you have consulted the other Trustees; in the one instance with a perfect satisfaction to your own mind, and in the other with a feeling that your own judgment was overruled by such consultation?—That is the exact state of the case.

5514. Lord *Stanley.*] In consequence of the death of Mr. Ottley recently, your Grace has subsequently appointed Mr. Josi to that situation?—Yes.

5515. Did your Grace upon making that appointment consult the other Trustees, or make any further reference with regard to Mr. Josi's qualifications?—I consulted some of the Trustees; I cannot say all; but I consulted some of those in particular who had opportunities as well as myself of seeing what Mr. Josi had done; for he had been appointed assistant to Mr. Ottley during Mr. Ottley's illness. It was generally agreed that he had shown more than ordinary diligence and skill, and appeared to be particularly well qualified for the place. At the same time, though I had in my possession testimonials very strong to Mr. Josi's character, sent in on a former occasion, I thought it right to require fresh testimonials, and to make farther inquiries, and the result was satisfactory; I then wrote to the Lord Chancellor and to the Speaker of the House of Commons, to inform them of the person whom I thought the best fitted for the place, to obtain their concurrence in the recommendation; after some further communication they declared themselves satisfied, and Mr. Josi was in consequence appointed.

5516. Lord *Stanley.*] There appears in the Appendix to the last year's Report another list of other persons of a higher standard employed by the Museum as assistants; has your Grace appointed any of the persons in that list?—I cannot exactly say how many of those persons are appointed under the same circumstances as Mr. Holmes; but in some instances such appointments have been referred to me, in others to Mr. Forshall, or other officers, with my approbation.

5517. Mr.

His Grace the *Abp. of Canterbury.*

28 June 1836.

5517. Mr. *Hawes.*] With reference to the former questions that have been asked of your Grace as to the mode in which you obtained information relating to the qualifications and fitness of individuals for the offices of keepers of departments, your Grace having stated that you mainly obtained it through the secretary, and occasionally through the principal librarian, is your Grace of opinion that it is desirable that such a system should be continued?—I apprehend that the system is so far good, as it procures the persons who are generally the fittest; for, as I stated before, when any vacancy takes place, there are a number of applicants, and among those applicants are to be found most of those who are qualified for the situation, and have looked to it before; and all those gentlemen, when they make their application, either send testimonials, or they refer to individuals who are supposed to be judges, and thereby give me an opportunity of making inquiries, the result of which enables me to form a judgment which, from my own knowledge, I should not be able to form. I should add, that there are only three instances in which I have appointed—that of Mr. Panizzi; it appears, from what I stated before, how Mr. Panizzi was introduced to the Museum, and also Mr Ottley. Mr. Josi was known to many of the Trustees, being employed at the time in the Museum.

5518. The Committee understands from your Grace that no publicity is given to the vacancies in the Museum, and that the information upon which the principal Trustees act is mainly obtained through the personal inquiries of the secretary?—Partly from the secretary, partly from my own knowledge, and partly from communication with the Trustees and others.

5519. Your Grace is aware that the nomination and appointment of the elected Trustees is vested in the official and family Trustees, who exclusively fill up vacancies as they occur; the official Trustees being a fluctuating body, and depending upon the holding of their offices, and the family Trustees being a body over whose appointment the Trustees generally have no control, however unfit they may be for their office. Is it your Grace's opinion that a body so constituted is the best for ensuring the selection of the fittest and ablest men to fill the office of Trustee?—Though the election is legally vested in the whole body of the official and family trustees, it has been usual to defer to the recommendation of the three principal trustees, communicated by the Archbishop of Canterbury. In all the experience I have had, the three principal trustees have in reality nominated; and I am not aware that the practice has led to any bad result.

5520. Would it not be desirable that the elected Trustees, who, it is to be supposed, are more especially selected for their fitness for the office of Trustee, should also have some voice in electing Trustees?—In effect they have considerable influence. Often many of them are consulted before an election takes place, and none of them would have any difficulty in making his objections known, if an unfit person were proposed.

5521. Will your Grace inform the Committee what is considered a qualification for the office of elected Trustee?—I believe there is no definite qualification.

5522. In the course of the examinations of last year the principal librarian was asked the following question, and gave the following answer: "What eminent men, distinguished by their works on literature or science, and not by their patronage or collections, have been elected Trustees?" The answer is, "I cannot find any such person." Your Grace's opinion is solicited upon that answer?—I should think it would be difficult to select from persons who are merely known by their reputation as authors, so good a board of superintendence as that which actually exists under the present system. At the same time I do not mean to say that it might not be so. I have taken the Museum as it is, and have not speculated upon what it might be.

5523. In your Grace's opinion is the present constitution of the Museum susceptible of amendment or not, keeping in mind the remarkable absence of learned and distinguished Commoners from the list of elected Trustees, the little interest taken in the management of the Museum by so many of the official Trustees as is shown by the number of their attendances in the three last years, and the nature of a family trusteeship, which depends upon the accident of inheritance, and is altogether apart from the fitness of the individual for the office?—Certainly, if I were to set about making a theoretical system, that is not the mode that would suggest itself. But looking at the formation of the Museum, we see that, from the very first, these official persons were named as Trustees,

His Grace the *Abp. of Canterbury.*

28 June 1836.

though their time must have been generally occupied with more important duties. The reason may probably be found in the weight of their name, their influence in the direction of public affairs, and the advantages which might thence be derived to the Museum. With respect to the family Trustees, they were introduced in consideration of some great acquisition to the Museum; and the question is not, whether they are the fittest persons for the management of that institution, but whether, in justice to those persons who gave large collections to the Museum upon condition of being represented in after times by Trustees, to be nominated by themselves or their descendants, the conditions upon which those donations were accepted ought not to be scrupulously observed. But so far I may say, that I have found no inconvenience in the management of the Museum from the family Trustees, and that some of them have been exceedingly useful.

5524. Would not the conditions in question be fulfilled, if the family Trustees were confined to the duties of Trustees, even though they were deprived of any share in the management of the institution?—I do not know any advantage that would be derived to the institution from such a restriction; it would abridge their privileges, and perhaps would make the situation less honourable to them; and it would deprive the Trustees of the valuable assistance which it has frequently received from these Trustees.

5525. May not the Museum be subject to the risk of having a Trustee who is objectionable, from whatever cause, by its being annexed as a condition to the property bequeathed, the right of appointment of a Trustee, over which there is no control?—An objectionable person may be possibly named, but I see no great inconvenience that could result even if, among such a number, some objectionable persons were found. Generally speaking, the representatives of those families, from regard to their own credit, and from a sense of duty, would be disposed to nominate persons properly qualified for the discharge of the duties.

5526. Your Grace is aware of the miscellaneous duties imposed upon the principal librarian?—Yes; they are very multifarious and miscellaneous.

5527. Do you think it desirable to continue to devolve upon him such various minor duties, or does not your Grace think it more advisable to separate them from this office, and give them to a secretary or clerk, and thus confine the principal librarian to his literary duty, and that of superintendence?—That is one of the points on which, if I were a member of any commission to whom the question might be referred, and had before me all the documents upon the subject, I should be much more competent to form a judgment than I now am. To this question, without a distinct enumeration of all the duties incumbent on the principal librarian, I do not think I could give a satisfactory answer.

5528. Your Grace is aware that at present the secretary is also the keeper of the manuscripts, holding therefore two important offices; is your Grace of opinion that it is desirable that such an union of offices should remain, when the duties of the Manuscript department alone are sufficient for some years to employ the uninterrupted time and attention of the keeper?—If the keeper of the manuscripts is eminently qualified to be at the head of his department, and possesses those qualifications which are required in a secretary, it would be desirable that they should remain united. The duties of the secretary, such, for instance, as the preparation of business for the Board, and the writing of letters, are all personal; they occupy a great deal of time, and cannot be discharged by deputy. With respect to the other office, if he exercises a constant superintendence over the department, if he has time enough to do that which is required of the principal, and time to direct the operations of those who work under him, I cannot see that the interests of the Museum, which is the point in question, suffer at all by the union of those two offices.

5529. It has been given in evidence that, with the present staff of the Manuscript department, at least 10 years must elapse before accurate catalogues of the manuscripts can be given to the public; does not your Grace think that that alone furnishes a sufficient ground for relieving the keeper of manuscripts from any secretarial duties?—On the supposition that the publication would be very much accelerated by his being confined to that single office, perhaps it might; but I am not prepared to say that that is really the case. There is a great deal of work of that kind which cannot be done very fast.

5530. According to a report which was made to the Trustees, dated February 11th 1831, it is stated, among other things, that "a new catalogue is required to the Royal Collection of Manuscripts; many additions required to be made to the Cotton

His Grace the *Abp. of Canterbury.*

28 June 1836.

Cotton Catalogue; the latter part of the Harleian Catalogue requires to be made anew, and the whole of it should be revised; the Catalogue of the Sloane Manuscripts requires to be made anew. The Catalogue of the additional MSS. requires much revision and amplification. Not an inconsiderable portion of the rich manuscripts remain to be described, and an index to be made. Nearly 1,000 volumes of manuscripts have not been entered in any catalogue whatever. A much more perfect catalogue is required to the collections of charters; a classed index is required to the whole collection." Is not your Grace of opinion that, in order to carry that report into effect, deeming it to be of great importance to the public, that to relieve the keeper of the manuscripts from all duties except those of his department, is the only way to bring about the execution and completion of it?—I apprehend it would go a very little way indeed towards such completion. The writing out of 800,000 titles of entries, on the calculation that a well-qualified person can execute 75 titles every day, would require upwards of 40 years of unremitting labour; supposing the keeper of the Manuscript library to write out twice as many titles every day as he does now, the effect would be very inconsiderable. The fact is, that the staff of the Museum is not strong enough to do all those things at once. The work is in graduai progress; and if a sufficient number of hands were employed to carry the whole of these objects into effect in the course of a couple of years, it is likely they would be done ill; work of this nature requires a great deal of superintendence; and in the superior departments, the superintendence of what is done by others is of much more importance than the personal labours of the superintendent.

5531. Considering, according to the report, that there are great arrears in the Manuscript department, and referring to the miscellaneous duties of the principal librarian, is your Grace of opinion, or not, that it would be advantageous to separate a portion of that miscellaneous duty from the librarian, and the secretarial duty from the keeper of the manuscripts, in order that they may both devote themselves to the business of their departments?—With respect to the principal librarian I cannot exactly say what his miscellaneous duties are. If he performs them well, and has the time to perform them and also attend to his other duties, I do not see why he may not perform them as well as another. With respect to the secretary, I conceive that his are not subordinate duties; the duties of the secretary are some of the most important in the Museum. All our communications at home and abroad are carried on through his agency; he ought to be a person of knowledge, of judgment, of good manners, of intelligence, and with habits of intercourse, both in writing and conversation, with men of literature, and science, and the world; all these, I think, are required to enable him to discharge his duties properly.

5532. Sir *Robert Inglis.*] Does your Grace find those in the existing officer?—I find those in a very eminent degree in Mr. Forshall.

5533. Mr. *Hawes.*] Your Grace is aware that among the many duties imposed upon the principal librarian he has to check the tradesmen's accounts, and to pay the menial servants; does your Grace think it desirable or not that such inferior duties should be rather committed to a clerk than to a person with the important duties of the principal librarian?—I dare say that the principal librarian would be very glad to be relieved from those duties; at the same time I must say that he discharges both those and his other duties exceedingly well, and there is no cause of complaint. He is a man of great activity of mind, well known in the literary world, and finds time to devote to learned pursuits and researches, and to publications which do him great honour.

5534. Sir *Robert Inglis.*] A reference has been made to the state of the manuscript collections, according to the report of the year 1831; is your Grace aware what has been done since that date in the preparation of a public catalogue, and in the arrangement of the whole?—Where I cannot give accurate information I should be sorry to give an answer at all; we have reports made to us from time to time of the progress made in those subjects. At every meeting of the Trustees reports are presented, and we have reason to be satisfied with the attention of the several individuals employed to their duties.

5535. Your Grace is aware and can state to the Committee that a proportionate progress has been made in the preparation of the manuscript catalogue since the year 1831?—Certainly; there can be no doubt whatever that great progress has been made; it is a great object with the Trustees to get a complete catalogue of the manuscripts and also of the printed books; but no one is aware of the great

His Grace the *Abp. of Canterbury.*

28 June 1836.

expense and the great labour attending a work of that kind, except those whose attention has been particularly called to such matters.

5536. Is your Grace able to state to this Committee that from your own knowledge, and with the capabilities of information which you possess, there is reason to believe that the catalogue of the manuscripts will be finished, irrespective of a classed catalogue, in a period considerably less than that of 10 years, to which your Grace's attention was called in a former question?—Certainly it has been stated to us that it would be so.

5537. Your Grace has been asked as to the character and constitution of the Board of Trustees; looking alike at the Act of Parliament under which the British Museum was founded, and at the successive Acts under which the trust has been continued, and the administration has been conducted, and looking at the practical working of the system, and at the duties which the existing Trustees have to discharge within the Museum, does your Grace consider that the duty of the Trustees of the British Museum is to write books, or to aid in collecting them; to be artists in sculpture, or to have a liberal taste and knowledge of the art; to be personally pre-eminent in any one branch of natural history, or to have that general interest in the promotion of the objects of science which may lead them to take the best measures for the conservation and the increase of all the collection?—I think the latter part of the question describes the qualifications which ought to be found in a Trustee of the British Museum. Taking the analogy of private individuals, a man of fortune and rank is not supposed to be conversant with books in the way of a mercantile collector; but with the assistance of persons of that description he makes a very fine library, unequalled perhaps in extent and in value, such as may be seen at Althorp; the same may be said of collections of pictures, and of other objects of art or science, which have been formed by persons of general taste, knowledge, and literature, having the means at command, with the assistance of competent judges in their several lines, and which do honour to the country. I cannot see why men of the same description, in the capacity of Trustees of the Museum, with the same views and the same qualifications, should not act with as much advantage to the nation as they have acted for themselves.

5538. Lord *Stanley.*] Has your Grace occasionally found any inconvenience in managing the affairs of the Museum, from the great amount of business and the small number of Trustees occasionally attending?—Since I have been Archbishop there has been no inconvenience of that sort.

5539. Has not some inconvenience occasionally been experienced and some difficulty been found in finding a sufficient number of Trustees to attend to the duties of sub-committees, upon whom the general meetings have frequently devolved laborious and extensive inquiries?—If there has been any difficulty it may have been in that respect; but at the same time I must say that the Museum has received most efficient assistance from those committees, and that there are many persons who, although they have very important occupations of their own, do devote a great portion of their time to the business of the Museum.

5540. Would your Grace consider it of any advantage to the trust if the number of Trustees were augmented, or if any provision were made by which some who have hitherto given no attendance were to resign for the purpose of enabling other Trustees to be elected, who could devote more time and attention to the Museum?—The attendance of Trustees depends upon their living in London; a Trustee who goes abroad, or retires into the country, is no longer useful as a Trustee, yet still retains his office.

5541. Does your Grace conceive that any advantage might be derived if, in the case to which you have referred, notice were given to a Trustee so retiring into the country, of the great amount of business which the Trustees have to discharge; and with a request that he would intimate whether it was his intention to give his attention to the duties of the Museum, or whether he would be willing to resign the trust to which he had been appointed?—I should think a good effect would follow from such a measure generally adopted, and directed to every one who had not attended a certain number of times in the year, except the official Trustees.

5542. In point of fact there are several now upon the list of Trustees who, if such a letter were written, would probably be induced to resign, but who do not think it necessary to resign, it not being communicated to them that any inconvenience has been felt from the absence of a sufficient number?—I think it is possible that there might be Trustees who would resign in that way, but some might feel offended by the request.

5543. Does

His Grace the *Abp. of Canterbury.*

28 June 1836.

5543. Does your Grace think there is any advantage derived to the trust from the number of official Trustees connected with it?—I should say it was desirable that the great officers of Government should be connected with the Museum, because it gives an opportunity of communicating with them upon subjects of importance to the Museum. When any measure of expense is contemplated, a special wish is sometimes expressed to the Chancellor of Exchequer that he would attend upon such an occasion. Again, Trustees who are in habits of business with Ministers are occasionally requested to communicate privately with them upon subjects relating to the Museum.

5544. Has your Grace found that great convenience has arisen upon several occasions from the attendance of the Chancellor of the Exchequer more especially, and other officers of Government at a meeting of the Trustees, beyond what would have resulted from a private communication with them at their own apartments?—I believe that advantage has frequently resulted from their attending at the Museum, where they have the opportunity of inspecting the documents, of obtaining full information, and learning the opinion of the Trustees in general with respect to the object desired.

5545. Sir *Robert Inglis.*] Whether, however, those individuals may be present or not at the actual meetings of the Board, is your Grace aware that direct and frequent communications are made to them upon all matters in which their official sanction is required or desired?—Certainly; sometimes direct official communications, sometimes private communication, according to the circumstances; and I conceive that the members of the Government are thereby led to take a greater interest in the affairs of the Museum than they would do if they were not Trustees.

5546. Mr. *Hawes.*] Your Grace has been asked a question with reference to the attendance of the Trustees on sub-committees; is your Grace of opinion that the inconvenience, if any has been found from the want of proper attendance, may be at all accounted for from the number of official Trustees, and the pressure of their official duties elsewhere?—There is a sufficient number of Trustees to discharge all the duties of the Museum; inconveniences will sometimes arise, not only from a deficiency of numbers in transacting business, but from too many attending.

5547. With regard to the benefit arising from the connexion of the great officers of State with the Museum, has your Grace reason to believe that it has been more beneficial within the last few years than it appears to have been a few years ago?—To say the truth, I think there has been a greater disposition, within the last few years, to attend to expensive recommendations on the part of the Trustees than there was before; that is a point on which it appears that there is a less disposition to be economical than almost any other at the present time.

5548. Does your Grace attribute that to the influence of the official Trustees, the great officers of State, or to the improved state of public opinion and the diffusion of information?—I attribute it to various causes; to the improvements that have taken place in the Museum, to the greater facilities of admission, to the general improvement in the taste of the people for such objects as the Museum presents to their view, and to the effect which these circumstances must have on the members of the Government, by showing them that an expenditure of money in that way will be rather approved by the people than otherwise.

5549. With regard to the visitation of the Trustees, which has been spoken of in the course of the examinations taken before the Committee, does your Grace attach much value to that practice, it having been described by a witness, the keeper of the Natural History department, as merely a walk through the departments, and occupying, according to the evidence of other witnesses, a very short space of time?—The description is perfectly true; but, at the same time, I attach great value to it, because it draws the attention of every officer, at a particular time, to the state of his own department. It requires everything to be put in order; and though the inspection may generally be cursory, yet if anything is going wrong in any department, it is pointed out to the Trustees at the time, or their attention may be called to it from some other quarter, so that I conceive the visitation to be of very great use; but a really effective visitation, which would bring every article under the eye of the Trustees in so immense a collection, would be quite impossible. We employ trustworthy persons, and we must repose confidence in them.

5550. Is your Grace of opinion or not, that the heads of the departments at present, assuming them to be every way qualified for their offices, might be made

His Grace the *Ab. of Canterbury.*

28 June 1836.

more independent in their respective departments, that they might be entrusted with the subordinate patronage of their departments, and that they might together form a committee of management with benefit to the Museum?—That question is proposed to me at once, without giving me time to consider; but, as it strikes me at the moment, I should think no benefit would result from it in the management of the institution.

5551. Is your Grace aware of the constitution of the Jardin des Plantes, at Paris?—No, I am not.

5552. It appears from the Appendix to the last year's evidence, that the management of the institution there is entrusted to the officers; and it is notoriously an institution celebrated throughout the world; practical inconveniences not having occurred there, are they more likely to arise here?—I should, in the first place, ask what practical inconveniences have arisen out of the present system at the Museum.

5553. In reference to the last answer, your Grace's opinion is requested upon Mr. Gray's statement, in answer to questions 3295 and 3296, in the evidence of last year. "3295. Then your present opinions are not founded upon the bad working of the present system, but rather opinions expressed with a view to improve the existing arrangements?—I speak of the bad working as far as relates to the progress of the Zoological department. It will be readily understood that a mineralogist at the head of a department in which zoology is included, will naturally prefer mineralogy to zoology, and the contrary would naturally be the case as regards a zoologist at the head of a department including mineralogy. 3296. But when you speak of the 'bad working' of the present system, in what department do you imagine there has been the most of what you term bad working?—I beg to observe that I have only used the expression 'bad working' through an inadvertent adoption of the terms of the question addressed to me. As an example of what I mean, it will be sufficient to state that the mineralogical collection in the British Museum has been gradually and constantly increasing, until it has become (as far as I know) the finest collection in the world; while the zoological collection was for years almost stationary, and has only lately began to expand itself. Had the zoology formed a separate department, I see no reason why it might not have kept pace with the mineralogy."—It appears that there are here two departments united, which ought to be under two separate heads. Supposing this view to be accurate, I apprehend that it arose out of the narrow system of the Museum, when it was in its infancy; and that a very prompt remedy would be found in dividing those departments into two, if that were determined to be expedient; but this might very well be done without having recourse to the plan which has been suggested, of forming a board of officers to superintend the executive of the whole.

5554. Some examination has been gone into before this Committee in reference to the mode of paying the inferior officers of the Museum; your Grace's attention is requested to the following answer, with reference to which your opinion is asked, whether such a system should continue; the question is, "That is to say, a messenger of the Museum is employed to pay the weekly wages of the gentlemen employed upon literary duties in the Museum?" the answer is, "It is so in fact, but I do not think that it is done with any intention to mark a difference, because the messenger, I believe, sometimes carries to the officers the cheques for their salaries."—I think that is a system which admits of improvement; it is probable that in almost all old institutions the arrangements respecting accounts may require revision.

5555. Lord *Stanley.*] Is that system, whether it be good or bad, one which is regulated at all by the rules of the Museum, or does it depend upon the arrangements personally made by the gentleman who happens to fill the office of chief librarian?—I should apprehend that a subordinate arrangement like this does not arise out of the regulations of the Museum, but has been adopted merely for convenience.

5556. Mr. *Hawes.*] Is your Grace aware that there is a distinction drawn in the mode of payment in one particular instance, which therefore prevents its being supposed to depend upon the principal librarian, namely, that the Rev. Mr. Horne, who ranks only as an assistant, is paid by cheques, whereas the assistants generally are paid by a messenger carrying their daily pay to them at the end of some fixed period?—I should think it very likely the regulation is made with a view to Mr. Horne's convenience.

5557. Sir *Robert Inglis.*] Your Grace was asked, with reference to questions 3295 to 3297, of last year's examination, whether you consider that the arrangement there adverted to was susceptible of improvement; and the Committee understand your Grace to state that if it were expedient on other grounds, such a separation of the departments as contemplated in the words of the witness, might be made; is your Grace aware how far, even under the present system, in which it is implied that less attention has been paid to zoology than to mineralogy, according to the questions and answers quoted to you, the collections in zoology have, during the period of the attendance of the present officer in the Museum, increased in the course of the last 10 years five-fold?—I know that a great increase has taken place, and a much greater would have taken place, but that the Museum does not afford the means of setting out any very great number of animals.

5558. From your Grace's superintendence of the Museum, can you state to the Committee that it is the desire of yourself and the other Trustees that the collection should be commensurate with the space in which they are displayed, and that such has been done, the increase taking place in proportion to the space?—That is our desire, and as far as I can judge I understand that our collection is very valuable.

5559. Mr. *Hawes.*] With regard to the safe custody of some of the manuscripts, it has been stated before this Committee that occasionally the attendants have the entire custody, and are in possession of the keys, so that, in point of fact, their safety is wholly dependent upon the honesty of the attendants in question; does your Grace think it advisable that such a system should continue?—I do not know how this is to be remedied; a person who comes to the Museum for a manuscript, if the keeper of the manuscripts is not there, which he cannot be expected to be at all times, must go away with great inconvenience to himself, and return again with the chance of a second disappointment, or there must be confidence reposed in some one regarded as trustworthy, and who, though inferior in station and learning, may not be wanting in integrity.

5560. Sir *Robert Inglis.*] Practically, is your Grace aware of any injury which has accrued to any manuscripts, or of any loss which has occurred of any manuscripts in the collection of the British Museum since your Grace's superintendence?—Since I have been connected with the Museum I have heard of no such thing.

5561. Therefore whatever objection might appear in theory to the arrangement, the confidence which has been exercised has not been excercised improperly, so far as your Grace is aware?—So far as I am aware I have reason to believe that the trust has been properly exercised.

5562. Mr. *Hawes.*] What is your Grace's opinion with regard to an additional infusion of scientific Trustees into the existing board of management, on the same principle on which the President of the Society of Antiquaries and the President of the Royal Academy were admitted by 5th of Geo. 4, c. 39?—In the first place I do not see that much advantage would be derived from scientific Trustees, considering that the objects of the Museum are but little scientific in the strict sense of the word. That there are many men of ability, knowledge, and cultivated minds, whose assistance would be useful in the Museum I have no doubt, but it is possible that evils might arise out of such an arrangement, from the jealousies which sometimes exist among scientific men; hitherto we have been free from dissensions from the influence of personal partialities, and from attachment to system, which often misleads the most ingenious men. The great qualifications to be sought in the managers of institutions of this sort are, general knowledge of science and literature, acquaintance with what is going on in the world, and habits of attention to business, which are not always to be found in men who are eminent for their scientific and literary attainments

5563. Does not your Grace think the same objection would apply occasionally both to official and to noble Trustees?—Without doubt it would.

5564. Does not your Grace think that amongst the literary and scientific men of the day, there is a sufficient field of choice occasionally to justify the selection of a trustee from amongst them?—I should think embarrassment would arise from the abundance of such persons. The selection would be very difficult to make, if it were to be understood that such a choice implied a preference of one learned man to another in his own particular line. There are names that must occur to every one that would do honour to any institution. I have seen some of those names mentioned. I have no doubt that many of them are eminently qualified, and their services would be useful; but I should apprehend the introduction of great evils, not from any of those distinguished individuals who have been named,

His Grace the *Abp. of Canterbury.*

28 June 1836.

but upon a general principle. Every man is apt to think himself the first in his own line; and when he sees another preferred to him, may feel the disappointment keenly, and may show his resentment in a way that would not be advantageous to the public, or to the interests of science and literature.

5565. Lord *Sandon.*] Would not some of the evils which your Grace apprehends from a general introduction of scientific or learned men into the trust of the British Museum, be obviated by such persons not being selected by the Trustees of the British Museum themselves, but being officially the representatives of certain learned bodies, similar to those whose representatives are now found upon the trust?—I am glad that your Lordship has asked me that question, because I have omitted to say that scientific bodies are, to a certain degree, represented by their presidents in the Museum, and perhaps much better than they can be by the choice of their most distinguished members. We have those among the Trustees whom those bodies have thought fit to place at the head of their own concerns; the President of the Royal Society, the President of the Royal Academy, the President of the Society of Antiquaries, and I may add, that in my request to Lord Derby to allow himself to be nominated as a Trustee, I was influenced among other considerations by the circumstance of his Lordship being President of the Zoological Society.

5566. Following out the same principle, would there be any inconvenience in a larger admission of scientific men in the same position, such as the President of the Astronomical Society, of the Linnæan Society, and of the Zoological Society, of which the present President is now a Trustee? The question does not mean to limit it to those particular societies, but to a choice founded upon such principles, thereby avoiding the odium of selection, and leaving whatever inconvenience there might be in the selection to the responsibility of those societies themselves?—I think there is a great deal of value in that suggestion; to a certain degree it has been acted upon, and I have shown my feeling upon it in one instance.

5567. Considering the great development of all the various branches of knowledge, and how much, since the foundation of the Museum, different branches have grown up into distinct departments of science, perhaps the original principle might be fairly carried out by increasing the numbers of those societies, the representatives of which might have a place among the Trustees of the Museum?—I think that a suggestion worthy of consideration.

5568. Sir *Robert Inglis.*] Considering the number of societies which have sprung from the Royal Society, being probably at this time not less than 10, does your Grace contemplate in the answer which you have given to the question last addressed to you, the introduction of one, two, or three gentlemen deputed from each of those societies, or a selection of some three or four of those societies from which the representatives are to be selected?—I understood the question to relate to the heads of those societies, the persons entrusted by the societies themselves with the direction of their affairs; I think that if individuals were selected from those societies, all the evils to be apprehended from literary jealousy might arise. The number of societies certainly was not present to my mind, nor do I exactly know it.

5569. Lord *Sandon.*] In fact the selection of the particular societies would be a matter of subsequent consideration and of detail?—It would.

5570. It might depend upon the permanence of the constitution of each society, and the importance of the branch that they represent?—Yes; I was trying to draw some principle of distinction from their being public or private; but when I consider the societies upon an immense scale that are entirely private, it would not perhaps be thought right not to include some of those.

5571. Mr. *Hawes.*] In fact, your Grace rather sanctions the principle than attempt to define any specific mode of applying it?—Yes; I think it is worthy of consideration, and of course the details would be arranged when the principle was determined upon; then the mode of application might be fixed.

5572. Mr. *R. Colborne.*] Would your Grace think it desirable to make the Trustees much more numerous?—I question whether any good would result from the admission of a great number of men of active minds who might not always agree in their views.

5573. Have you ever found any deficiency of numbers at any of your meetings?—I think of late years there has not been, in general; there may be in the latter end of the summer, when few persons remain in town.

5574. Lord *Stanley.*] While your Grace does not absolutely dissent from the principle

459

principle of introducing the presidents of several of the learned societies in London, you would consider the introduction of any person not chosen by themselves, but selected out of them, as the representatives of those bodies, to be highly objectionable?—I should think that would be pregnant with evil, with dissension and jealousy.

His Grace the *Abp. of Canterbury.*

28 June 1836.

5575. Sir *Robert Inglis.*] Your Grace considers that the principle is not now for the first time to be established, but is already actually adopted, of science being represented in the Board of Trustees, by the presidents of the Royal Society and of the College of Physicians, who, from the foundation of the Museum, were *ex officio* Trustees, and that the interests of literature and of art are represented by the nomination of the president of the Society of Antiquaries, and the nomination of the president of the Royal Academy?—Yes, that was a late introduction.

5576. Has your Grace reason to think, that an individual pre-eminent in science might desire to exercise a control over the chiefs of the departments, which would be more inconsistent with their independence than the present arrangement?—It is very possible; it must depend upon the disposition of the person; but, of course, a man who is conscious of his own eminence in any branch of science or literature, is more likely to take too much upon him than a man of humble attainments.

5577. Lord *Sandon.*] Is there any organization, according to the existing practice of the Museum, by which a small number of the Trustees engage to attend specifically to the ordinary management of the Institution during certain portions of the year?—Yes, that is the regular system.

5578. Your Grace thinks there is no inconvenience from the shifting constitution of the monthly general meetings?—I have never found any; there are some Trustees who make a point always of attending; I always do whenever I have no very pressing business.

5579. Your Grace does not think it would be an improvement in the system if the general meetings were more rare, and the habitual management of the Museum were more particularly confided to the management of a few persons pointed out?—A great general meeting takes place once in three months, and there is a general monthly meeting; if there should not happen to be a sufficient number of persons to make a general meeting, they would resolve themselves into a committee, but that very seldom happens. We have a very good attendance, and the opinion, even of Trustees who do not take any very active part in the management of the Institution, is often very valuable to us.

The Rev. *Josiah Forshall,* called in; and further Examined.

Rev. *J. Forshall.*

5580. Sir *Robert Inglis.*] IN the questions 3234, 3236, 3346 and 3348 of this year's examination, reference is made to the purchase of a Latin Bible, alleged to have been transcribed by Alcuin, and presented by him to the Emperor Charlemagne; has that copy been since purchased by the Museum; and if so, for what price has it been obtained?—It has been purchased for 750*l.*, the Trustees giving besides a copy of the fac-simile of the Alexandrian manuscript.

5581. Was that copy of the Alexandrian manuscript made part of the bargain, or has it been given by the Trustees in consequence of an application on the part of Mr. de Speyr Passavant?—It was made part of the bargain.

5582. Did he accompany the sale of the volume with testimonials with respect to the authenticity and genuineness of the volume?—He did.

5583. Lord *Stanley.*] This Bible has been bought for 750*l.*; what was the price at which it was bought in at the nominal sale?—£. 1,500.

5584. What was the price originally asked when the volume was first submitted to the Trustees of the Museum?—£. 12,000.

5585. Sir *Robert Inglis.*] Do you keep an accurate register of all the manuscripts purchased and otherwise acquired by the Museum?—I do.

5586. Does that show the date of the acquisition?—It does.

5587. Lord *Stanley.*] In questions 3805 to 3808 of last year's Evidence, Mr. Samouelle states, that he strongly recommended to the Trustees the purchase of Mrs. Noel's collection of insects; is it consistent with the fact that Mr. Samouelle did so recommend to the Trustees?—No; he may have done so to Mr. König, but Mr. König did not lay such recommendation before the Trustees; he merely makes the following observations in his monthly Report, dated May 10, 1832: "Mr. Samouelle has, since the last meeting of the Trustees, arranged the

Rev. *J. Forshall.*

28 June 1836.

insects purchased at Mr. Lee's sale. He wishes to have the honour to acquaint the Trustees that a collection of South American insects, in 10 glazed cases, consisting of about 15,000 specimens, is offered for sale by Mrs. Noel. The price is 100 *l.* for the whole, or 15 *l.* for one case, if selected from the rest. It may perhaps be the pleasure of the Trustees to allow Mr. Samouelle to select some of them for the collection of the Museum."

5588. Then the recommendation of Mr. König in his monthly Report was, that Mr. Samouelle might be allowed to select some insects of the collection?—It was.

5589. Was leave given by the Trustees to Mr. Samouelle to select some insects from the collection?—Yes.

5590. In Question 3825 Mr. Samouelle states, that he strongly recommended the purchase of the collection of Mr. Stone; was any such recommendation made to the Trustees?—Not to the Trustees, but to Mr. König; and Mr. König does not allude to the offer in his Report, but appears to have laid Mr. Samouelle's letter to him before the Trustees, without any remark upon it.

5591. With reference to the collection of Mrs. Haworth, mentioned in Questions 3832, 3833, Mr. Samouelle is asked whether Mr. König concurred, or whether he expressed any dissenting opinion?—Mr. König's Report runs in these words: "As the sum for which Mrs. Haworth wishes to dispose of the collection to the British Museum is no less than 1,000 *l.*, Mr. König will not trouble the Trustees with the particulars as communicated to him by Mr. Samouelle."

INQUIRY into the Application of the *Procedé de Collas* to a Publication of Engravings from Medals in the British Museum.

Extract from the Journals of the House of Commons;

Mercurii, 1° die Junii, 1836.

"A Petition of *Charles Tilt*, of No. 86, *Fleet-street*, in the city of *London*, Publisher, "praying The House to take into its consideration the propriety of adopting some means "for a publication of Engravings from the collection of Medals in the *British* Museum, "was presented, and read; and referred to the Select Committee on the *British* Museum."

COMMITTEE ON THE BRITISH MUSEUM.

Martis, 14° die Junii, 1836.

MEMBERS PRESENT.

Mr. T. G. B. Estcourt.	Mr. Ridley Colborne.
Sir Robert Inglis.	Mr. Thornely.
Mr. Hawes.	Lord Sandon.
Mr. Bingham Baring.	Mr. Compton.
Sir Philip Egerton.	

MR. T. G. B. ESTCOURT, IN THE CHAIR.

Mr. *Charles Tilt*, called in; and Examined.

Mr. *Charles Tilt.*

14 June 1836.

5592. *Chairman.*] YOU have presented a petition to the House of Commons, which has been referred to this Committee?—I have.

[*The Petition was read as follows:*]

To the Honourable the Commons of the United Kingdom of Great Britain and Ireland, in Parliament assembled.

The humble petition of Charles Tilt, of No. 86, Fleet-street, in the City of London, publisher,

Sheweth,

That a correct delineation of the various medals, illustrative of the History of Great Britain, is greatly wanted.

That the existing collections in the metropolis are wholly inaccessible to persons residing in the country, and that even those resident in London cannot at all times avail themselves of the originals without great personal inconvenience.

That there are now in the British Museum upwards of 3,600 British medals of various dates, from the remotest period of English history to the present day, of which 3,200 are particularly qualified to form the subject of engravings, which the trustees of that institution are desirous should be published.

That a machine has been invented, and is now brought to perfection, by which the likeness of any object represented in relief can be accurately transferred to a plane surface, on any proposed scale, so as to affect the eye in precisely the same manner as the original.

That by the use of this invention, the object which your petitioner proposes could be effected with the most minute precision, at a cheaper rate, and in a manner far more perfect than if the ordinary methods only were employed.

That eight medals on an average, with their reverses, could be included in one plate, were the size of imperial quarto adopted for the publication, which would thus require 400 plates for its completion; the whole series could be comprised in five volumes, and produced, without difficulty, in the space of five years.

That your petitioner submits that the publication in question, which relates to a class of

Mr. *Charles Tilt.*

14 June 1836.

national antiquities now open but to few persons, and which throws so much light on the history of the country, must be regarded as an important national work; and that, in many countries of Europe, as in France, Italy and Denmark, the same has been already produced at the expense of their respective governments.

Your Petitioner, therefore, most humbly prays that your Honourable House will take into its consideration the propriety of adopting some means for rendering such a work generally accessible to the public, at as reasonable an expense as possible, and your petitioner will ever pray.

Charles Tilt.

5593. What have you to say in support of the allegations of this petition?—There are several gentlemen here whom I beg the Committee to examine. I have been in the habit of importing from France a work, now in course of publication there, and which has excited a great deal of admiration; and it has occurred to me that a similar work, devoted to the medals of Great Britain, would be of essential service in an historical point of view, and would be likely to be very favourably received. My attention has been more particularly directed to it by some gentlemen who have pointed out, more clearly than I knew before, the possibility of producing this work at a moderate expense, and with rapidity.

5594. Producing it through the medium of Mr. Nolte's invention?—Yes.

5595. Mr. *Hawes.*] Mr. Nolte's method is a mechanical process?—It is.

5596. Have you any evidence to show that it is sufficiently perfected for the purpose?—I should be glad to refer the Committee to Mr. Nolte, Sir Francis Chantrey, and Mr. Hawkins, who are in attendance.

Mr. *Charles Tilt*; further Examined.

5597. Mr. *R. Colborne.*] You have said that a work of the kind proposed is a desideratum for science and general information?—Decidedly so.

5598. Do you think the public would take such an interest in it, that it would meet with a great sale?—I think that they would take a great degree of interest, and that there would be a considerable sale; but not sufficient to defray the expenses of the work, and leave a profit to the publisher.

5599. Do you imagine that the public aid is absolutely necessary for its execution?—I consider that it is essential; I think no publisher would engage in the work without the aid of the Government.

5600. Not even at the reduced expense for which you can manage a work of this kind under Mr. Nolte's plan?—The expenses would be considerably decreased in consequence of this invention, but still they are very heavy, too heavy to be repaid by the sale of a work of this kind. To engrave them well, in the line manner, would be out of the question, no possible sale would ever repay the publisher; the expenses would be considerably reduced by this new process, but still heavier than could be borne by any publisher taking his chance of profit from the general demand for the work.

5601. Are you able to form any opinion as to how much per copy you could publish a work of this kind for?—It would depend entirely upon the assistance rendered by the Government; but, from the calculations I have made, I consider that if 20 per cent. of the expenses were paid by the Government, it might be produced at a moderate price. It would be best to publish it in parts, which would render it easier to the purchaser; it could be comprised in five volumes, or 80 numbers, each containing five plates.

5602. At what rate each number?—About 5 *s.* 6 *d.*

5603. Do not you think that the public might take that interest in a work published at that rate, that it could be executed without the assistance of Government?—I think not; the public has latterly been accustomed to works of art, and books of engravings, at so very low a price, that nothing but a very extensive sale renders any publication of this class a paying one.

5604. Is that price of 5 *s.* 6 *d.* calculated after the Government have paid 20 per cent. of the cost?—Yes.

5605. Supposing the Government did not assist, how much could you publish it for?—I should abandon it at once, I would not engage in it at all; and I would not engage in it if that 20 per cent. were given me privately, that is to say, if a private individual advanced it. I not only want the assistance of the Government, but I want that species of *eclat* and general sanction which would induce the public to think more of it.

5606. Are you aware of any work that has ever been published in this country that

that required such aid, or to which it has ever been given?—I am not aware that it has ever been given. A great many works have been projected that have never been brought out, in consequence of their wanting such aid, and it being denied or not applied for; there are many works of importance that ought to be published; but it is quite out of the question that they should be undertaken as private speculations.

5607. Do you think a work of this kind would meet with any foreign sale?—I look to that to assist me. I do not think the sale in Great Britain would be sufficient. I should hope that in America and on the Continent there would be a considerable demand for it.

5608. Is it your opinion that, if a work of this kind is to be executed, this is the only mode in which it could be done; and that even this mode cannot be adopted unless you have the aid and assistance of the public purse?—There are, as has been observed before in the evidence of Mr. Hawkins, but three ways of doing it: Outline; this mode; and highly-finished engraving. A work in outline would not have any great sale; it would be bought only by the antiquary, and some few scientific men. But I consider this new process has the advantage of presenting a pleasing appearance to the eye, and at the same time a correct representation of the medals, and therefore is the best way in which the work in question could be produced.

5609. Has it not the advantage also of being cheaper, as well as more pleasing?—I think not; I think engravings in outline could be produced as cheaply, if not more so; but the great difficulty with outline is the procuring a correct copy of the medal; it is liable to distortion in all its parts from the mistakes of the draughtsmen.

5610. Did you ever overlook any publication of this kind, or publish any work of this kind?—I have not, with the exception of importing and selling the French work.

5611. Do you know any publisher that has had any experience in a work of this kind?—I do not think there is a publisher that has in this country. It is a new field entirely.

5612. *Chairman.*] In calculating what you apprehend the expense would be, upon which you found the price of 5*s.* 6*d.* per number, do you take into account the cost of employing fine artists to finish the engravings after they come from the machine?—If I undertook this work I should make a contract with the parties in Paris for the plates, and I should expect that they would hand them over to me in a perfect state, nor would I receive them till the impression from them was properly sanctioned by some person appointed for the purpose.

5613. Sir *Robert Inglis.*] Do you calculate upon the work being executed at Paris?—Upon the engravings being done there, and the steel plates being sent over to be printed here.

5614. Mr. *Colborne.*] So that from steel plates you could take any number of engravings from them?—I am hardly prepared to say how many impressions could be taken from those; but I think that any number that was likely to be required could be taken.

5615. In the specimens before the Committee there is an inferiority between some of the medals and others; does that arise from the medals themselves, or from any imperfection in the instrument?—I think it occasionally arises from imperfection in the instrument; in other cases from deficiencies in the medals themselves, and sometimes from neglect in the person working the machine.

5616. Sir *Robert Inglis.*] When you propose that the work exhibiting the medals in the British Museum should be executed in Paris, what security have you for the accuracy of the revision of the work, admitting even that casts shall be taken of the medals in the Museum for the purpose of the work?—I should not receive the plate till it had been submitted to some competent person, and his approval signified by his signature on a proof impression. It would be manifestly to my interest to be very careful in this respect, depending as I should principally on popular opinion for the sale of the work.

5617. Why could not the work be executed in England?—I am not aware that there is any individual in England who has a machine that would engrave the plates with sufficient accuracy and rapidity.

5618. Has there been no attempt to naturalize the discovery in England?—Yes, it has been attempted by Mr. Bate. I do not know how far he has succeeded, but I have never seen any engraving produced by his machine that was altogether

Mr. *Charles Tilt.*

14 June 1836.

satisfactory. I have understood it requires the superintendence of a species of artist; and that, consequently, the machine must work very slowly. In Mr. Collas' machine the process is mechanical.

5619. The specimens exhibited to the Committee to-day bear the inscription, "Procédé de Achille Collas;" will you explain to the Committee under what circumstances that name is connected with the name of Mr. Nolte, who is understood to be more immediately the party interested in the question under the consideration of the Committee?—If I am correctly informed, Mr. Collas is the inventor of this machine; and it is now taken up by a company of gentlemen in Paris, of which Mr. Nolte is one of the partners.

5620. The merit of the discovery, then, so far as you know, and the actual execution, so far as you know, will alike be attributable to Mr. Collas?—I should say so.

5621. Is it then a purely mercantile speculation upon the part of others?—I conceive that it is.

5622. You have stated, as the proposed extent of the work, that it should consist of 80 numbers each, containing five plates, forming an aggregate of 400 plates; and you have stated, in your petition to the House of Commons, that you would consider that there are 3,200 British medals qualified to form the subject of engravings in the proposed work; do you calculate upon including eight medals in every plate?—On the average.

5623. Thus, at the close of the work, exhibiting the whole 3,200 in the 400 successive plates?—Yes.

5624. What is the length of the period which you contemplate as the probable time during which the work must be in progress?—I apprehend that it might with ease be produced in three years; but it would not be for the interest of the publisher to bring it out so rapidly, because it would be more expensive to subscribers than is expedient; and I therefore mentioned five years.

5625. In what mode do you desire to receive, according to the terms of your petition, the aid of the Government?—That I should be paid at certain intervals or on the publication of each number, a fixed sum of money.

5626. That a proportional amount of a fixed sum, to be settled before the commencement of the work, should be paid to you on the publication of each number, or that a proportional part of the expense actually incurred in the preparation of that particular number should be paid to you?—It would be a matter of indifference to me in which way it came; in either way, either by paying a fixed sum or a proportionate part of the expenses.

5627. If the latter mode be adopted of paying, not a proportional part of a previously fixed sum, but a proportional part of the expenses actually incurred, in what mode and under what circumstances do you propose to exhibit the state of your affairs to the Government?—I think there would be considerable difficulty in arranging any satisfactory method by which I could be paid a per centage on the actual outlay of the work; but if such were decided on, the only way would be to lay before the proper parties a statement of the actual expenses incurred, furnishing the items, and leaving them open to any revision that might be necessary. But there are so many expenses in publishing that depend upon the discretion of the publisher, and which might be objected to, that I think there would be an awkwardness and unsatisfactoriness in that way of adjusting it. For instance, advertising; one person might say such a sum was necessary for advertising, and another would fix upon six times as much.

5628. Do you know any analogous work which has ever succeeded in this country, or in any other, as a matter of speculation, distinct from the reputation derived from it as a work of art?—Yes; I think there are some works in this country that have succeeded; but they are hardly analogous, because they have not been accompanied by so many plates, and they have been produced in a much cheaper form.

5629. Will you state the works to which you refer as having so succeeded?—The only one that occurs to me at present is "Akerman on Roman Coins," a work in two volumes, octavo.

5630. What is the number of plates in that work, and what is the price at which it was published; the number of plates in your proposed work being 400, and the aggregate

aggregate expense of a copy being 22 *l.*?—I am not prepared to answer that question. The letter-press greatly preponderated in that work; and, if I recollect right, there are very few plates, perhaps about fifteen.

5631. The question had reference to the probability of a work of the kind contemplated in your petition being successful as a matter of speculation, judging from the success of any former work of an analogous kind?—I do not think there is any work that would enable me to institute a comparison.

5632. Mr. *R. Colborne.*] What guarantee could you give for having the work continued in the same style of excellence in which it was commenced?—The only guarantee that occurs to me is, that it would be my own interest to keep up the merit of the work, for I should be the greatest sufferer by a falling off in its character.

5633. Sir *Robert Inglis.*] Some former questions which I addressed to you had reference to the assistance which you desired to receive from Government. To combine them in one question, would you desire to receive a definite proportion of a sum fixed beforehand, say 4,000 *l.* or 5,000 *l.* out of 20,000 *l.*, calculated as the aggregate expense of the whole work; or would you desire to receive 20 per cent. or 25 per cent., or any other proportion upon the sum actually expended by you in the prosecution of the whole work; and would you have such proportion taken at the close of each number, or at the close of the whole work?—In the first place I should prefer, and in fact almost require that the assistance should be given as the work proceeded; not perhaps number by number, but on the printing of every three or four numbers. With reference to the first part of the question a difficulty has occurred to me, which I do not see can be got over. Supposing that 20 per cent. on the expenses were to be allowed me as an assistance from Government, if 1,000 copies were printed certain expenses would be incurred, if 2,000 a much larger sum would be expended. Am I to receive a per-centage upon that also? Supposing 1,000 cost me 240 *l.* a number; and supposing the 2,000 cost me 340 *l.* a number, if I were fortunate enough to sell 2,000 copies I should also be fortunate enough to receive 20 per cent. upon my additional outlay, which would be manifestly contrary to the interests of the Government, and unnecessary. The expenses of the work may be divided into three distinct branches. First, there is getting the work ready to print, providing the manuscript, setting up the type, engraving the plates, and all the necessary work of preparation. Then comes the second expenditure, for paper, working the letter-press and steel plates, and binding. And thirdly, there is the advertising. Now the only way in which a per centage could be allowed me would be on the first part of the expenses.

5634. Mr. *R. Colborne.*] You contemplate that the work would be accompanied with some historical description of the medals?—Undoubtedly it would not do to bring it out without.

5635. Are you aware of any publisher of works of this nature in London having been consulted upon this subject?—I believe that Mr. Nolte called on Messrs. Longman & Co., and Mr. Pickering, on the subject, and Mr. Murray has been consulted; but Mr. Nolte will be able to answer this question.

5636. You feel perfectly confident that you yourself cannot, and would not, undertake the work, unless with the aid of Government?—Most decidedly not; nor do I believe that any publisher in London would think of it for one moment.

5637. Sir *Robert Inglis.*] Then, if it be an object worthy of the national support, it can be done in your view only by a direct payment from the organs of the Government?—I think so.

5638. You think the nation generally will not give, in their individual character, that support which you think the work is entitled to receive?—I think not.

5639. Mr. *R. Colborne.*] And that you cannot calculate upon a sale from abroad to make up the deficiency?—Certainly not; in my calculations I have taken into account the sale of the work on the Continent and America, as well as the assistance of the Government.

5640. Mr. *Hawes.*] Should you object to execute the work, subject to the approbation either of the Trustees of the British Museum, or of parties to be named by the Trustees, as may be agreed upon from time to time?—No, I should not. The only difficulty that strikes me is, that if I were left in the lurch by the parties engaged to engrave the plates, and they were not equal to the first specimens, I do not see what remedy I should have.

Mr. *Charles Tilt.*

14 June 1836.

5641. As against that, you could enter into some conditional arrangement with the parties to hold you harmless, in the event of the Trustees taking any proceedings against you for the non-fulfilment of their part of the contract?—I should be responsible; but, at the same time, the only remedy that I should have would be against a company of gentlemen in Paris; and it might form a matter of investigation as to how far that would be satisfactory. It is not so easy to take an indemnity from a foreigner in a foreign country.

Sir *Francis Chantrey,* called in; and Examined.

Sir *Francis Chantrey.*

5642. Mr. *Hawes.*] ARE you acquainted with the process of Mr. Collas for the engraving of medals by a mechanical process?—No further than from having seen the engravings produced by his machine.

5643. Have you examined the specimens of engravings which have been made by the machine?—Yes; and with great satisfaction to myself.

5644. Have you looked at them as works of art?—Yes, as imitations of relief.

5645. Have you ever compared the engravings with the medals themselves so as to be able to speak to their fidelity?—No, I have not; I had not access to those medals.

5646. What is your opinion of the general effect of those engravings?—They are the most satisfactory representations of medals that I have seen.

5647. Should you be disposed also to state that they are excellent as works of art?—The relief given in these representations I certainly mean to say is satisfactory.

5648. Are you able to state whether the spirit and character of the medal is preserved?—Not having seen the medals from which those engravings have been produced, I cannot speak from actual comparison.

5649. Have you been able to compare the engravings before you with other engravings of the same medals?—I have seen no engravings of the same medals.

5650. Sir *Robert Inglis.*] You have in no instance then compared the impression on paper with the original from which it professed to be taken?—No.

5651. Mr. *Hawes.*] Will you have the goodness to look at the medal and the engraving now put into your hand. The medal is one of Sir Walter Scott, by Parker. The engraving is by Collas' method, of the same medal. Will you give your opinion upon the merit of the engraving as a copy of the medal, with regard to its accuracy?—I am aware of the point alluded to; there is a difference in the projection from the centre on one side to the other, but as a whole it will give you, I believe, a correct representation; at least I am induced to believe so, for I have never measured it myself. This medal I observe has been measured, but I understand that the whole quantity is correct to the proportion of the medal; and with regard to that slight difference which has been remarked upon, I think as a representation of a work of art it is of little consequence.

5652. Speaking of the engraving in question as a copy of the medal, should you be disposed to think it accurate and satisfactory?—This engraving to my eye is not a very satisfactory one; it appears rather inferior in effect to the specimens before me, which are produced by Mr. Nolte.

5653. Then you think the inaccuracy which has been alluded to not objectionable to the result as a work of art?—That inaccuracy never attracted my attention before. I did not discover it myself till it was pointed out to me, therefore I consider it is not of very essential importance, and those representations of medals appear to me to be more satisfactory than any representations of medals I have ever seen produced in the ordinary mode by engravings copied from drawings.

5654. Mr. *R. Colborne.*] Putting aside the question of expense, do you regard Mr. Nolte's plan as giving as good a representation of a medal as the usual plan of engraving?—I should expect a much more faithful one.

5655. Have you any means of judging as to the relative expense or labour of the work?—None whatever.

5656. Mr. *Baring.*] You observe a flower round the edge; you will see that the representation of it upon the print before you is very different in the different parts

parts of it, although it is the same flower upon the medal; would not that inaccuracy make it probable that a similar distortion might probably take place in the representation of the main figure?—That inaccuracy in the flower does not affect the general result, it is a minor matter; I should never have observed it; I look at medals as an artist, not as an antiquarian.

Sir *Francis Chantrey.*

14 June 1836.

5657. Mr. *Hawes.*] Are there such distortions in these engravings as to be fatal to the truth and beauty of the representation?—That is a very difficult question to answer; they appear to me to be correct in character and expression; how the distortion which appears in this has happened, I am at a loss to account for at this moment, unless it be an error common to the machine, and rendered more obvious by the greater boldness of this medal.

5658. Speaking generally, then, as works of art, are those engravings to your satisfaction?—Perfectly so, and sufficient for all the purposes of art.

5659. Upon measuring from the extreme of one side of the medal produced to the extreme point of the other, do you find any difference between it and the engraving which is submitted to you?—Taking the extreme outline I find no difference, but I perceive taking it from the centre that on the light side it is larger than on the shadow side, and I am not prepared to account for that; it never occurred to me before.

5660. But the effect is not such as to produce an idea of distortion, or any disagreeable effect to the eye?—It never produced any disagreeable effect to my eye, nor did I observe it before it was pointed out to me.

5661. Mr. *B. Baring.*] Is the discolouration greater than if you were to look at the medal itself obliquely?—I am not prepared to answer that; but for all the essential purposes of art, it appears to me that these are sufficiently faithful representations; and if extreme accuracy is of importance, it is much more to be relied upon by the machinery than by an engraving made from a drawing, which may have inaccuracies in parts which you can have no means of detecting. I should look upon an engraving by the machine with satisfaction, knowing its defect, because I should know how in all instances to make an allowance, but you have no such dependence upon a drawing which is made by the eye.

5662. Mr. *Hawes.*] These engravings being made direct from the medal, is there not a greater probability that both fidelity and spirit should be preserved, than in engravings from medals in the ordinary mode?—Spirit is a word very eqivocal in art; there is much more uniform fidelity, expression and likeness, than could be given by the hand.

5663. Sir *Robert Inglis.*] In the last question it was implied, that the impression before you had been taken from the medal. The engraving, it is understood, is made from a cast of the medal, as in ordinary cases engravings are made from drawings of medals; does that alter your view?—No.

Edward Hawkins, Esq., called in; and Examined.

5664. Mr. *Hawes.*] YOU are the keeper of the antiquities in the British Museum?—I am.

Edward Hawkins, Esq.

5665. Have you had your attention drawn to the new method of engraving medals, called Collas' method?—I have; but before I say anything on the subject, I beg leave to say that the result of this examination may influence a meditated work upon British medals; if that work is undertaken, I should probably have something to do in the conducting of it, and contributing the letter-press. I wish the Committee to be aware that I am so far interested in the question, that they may estimate my evidence accordingly.

5666. Will you state to the Committee what your opinion is of this method of engraving, in reference to medals generally?—I think it highly satisfactory, and I always thought it would give the best idea of the medal of any method that I have seen.

5667. Do you speak not only from having seen engravings of medals, but from a knowledge of the machine, and from having compared engravings with the originals?—I speak more as to the impression made upon my mind from examination of these and other engravings.

5668. Have you ever compared the medal from which the engraving is taken with the engraving itself?—Yes, in many instances.

Edward Hawkins, Esq.

14 June 1836.

5669. In those instances, have you been perfectly satisfied both as to the effect and the fidelity?—Yes, certainly; one of the excellencies of the mechanical process is, that it does not give anything but what is upon the medal; it may not give a full and entire representation of all that is there, but the defect is one of deficiency, not of inaccuracy, or rather not a misrepresentation.

5670. Have you seen the machine itself?—Yes, I have seen it at work.

5671. Are you of opinion that engravings made by this method are well qualified to satisfy both the man of science and the artist?—I should say so, certainly.

5672. The work which you alluded to in the opening of your examination was a medallic history of England, was it not?—It was.

5673. Do you know any method by which an entire series of illustrations for such a work could be obtained, with anything like the excellence of the specimen submitted to the Committee, at so small a cost?—The cost I do not know anything at all about.

5674. Can you state whether it is cheaper or dearer than the ordinary method of engraving?—I have always understood it to be very much cheaper, and indeed the proprietor in Paris assured me that he could do it at a much cheaper rate than any other mode of engraving.

5675. Did he state to you the difference between the cost of a medal engraved in the ordinary way and a medal by this machine?—That would be difficult to do, unless we knew the way in which the other medal was to be done; but he spoke of it as being one-tenth, and in some instances one-twentieth the expense of the other.

5676. Can you inform the Committee the expense of engraving a medal of about four inches diameter by a first-rate artist?—Not from my own knowledge, merely from hearsay.

5677. Will you state what you have heard upon the subject?—I have heard from 40 to 50 guineas.

5678. Are you acquainted with the Soane medal?—Yes.

5679. Can you state what that would cost if a first-rate artist were employed to engrave it?—A first-rate artist has been employed to engrave that medal, and I heard that he received 45 guineas for it.

5680. Have you seen the engraving of that medal by this machine?—Yes, I have.

5681. Have you compared the two engravings?—Not together: I have not had an opportunity of putting them side by side.

5682. Speaking of them without having accurately compared them side by side, were you satisfied with the appearance of the medal engraved by this machine?—Yes, quite satisfied.

5683. Satisfied, you mean, as compared with the other engraving, and speaking from recollection?—I do not know how to compare them exactly, not having seen them side by side, and there having been a considerable distance of time between the two; but I was perfectly satisfied with the representation of the medal by machinery.

5684. It has been said that this process of engraving, when copying those portions of the medal which are in high relief, is apt to distort those portions of the medal; do you think that distortion or inaccuracy is at all fatal to either the truth or beauty of the medal?—Certainly not, in the state to which they have now brought the machinery. I am inclined to think that a great deal more has been said about distortions, in consequence of the early specimens, which were exceedingly distorted, and visibly so to the eye; but I think the representations now given do not strike an observer as distortions.

5685. Are there not instances in which two medals from the same die are the one inferior to the other?—Hardly from a die, except from a defect in striking; several of the earlier medals were not struck from dies in the same careful manner in which they are now; some, indeed, were cast and finished with a chasing tool; of course there is some difference in every one of these medals.

5686. Take the medal of the Duke of Guise; there are more medals than one of that?—I believe there are; but I am not very well acquainted with the varieties of that medal.

Edward Hawkins, Esq.

14 June 1836.

5687. Do you know anything of the medals of Henry the Second and Francis the Second?—I know several of them, but I do not know sufficiently the different varieties of them. I know that medals are liable to variations from their being cast, and afterwards chased. There will be a considerable difference between two such original cast medals.

5688. Supposing an engraving to be made of the inferior medal, and that engraving to be compared with the superior medal, may that not be the foundation for those apparent inaccuracies, without altogether attributing them to the process of engraving?—Most certainly. There is one medal in the series from which the plates upon the table have been taken, which would in some degree illustrate this. The medal of Henry the Second, with a Greek inscription, is copied from an imperfect cast, and the inscription is so entirely altered, that the gentleman called upon to describe it has been misled into an erroneous explanation. For instance, ΘΕΟΣ ΑΠΟ is converted into ΟΛΟΣ ΑΓΟ.

5689. Then that is an instance in which the excellence of the machine remains the same, but its effect is different, in consequence of its having to engrave from an inferior cast?—Yes, from an imperfect cast; it has faithfully represented the imperfection of the original.

5690. With reference to casts, are you of opinion that the accuracy of casts for the purposes of this machine can be ensured?—Certainly.

5691. You have no doubt on that point?—Certainly not.

5692. Can you inform the Committee what opinion is entertained among artists as well as literary men in Paris, of this mode of engraving?—I conversed with several of them, and they were decidedly favourable to the process; and perhaps I may take this opportunity of laying before the Committee an opinion which was given me, rather in an official form, in consequence of applying to Monsieur Lenormant and Monsieur Mionnet, who are two of the conservators of the medals and antiquities in the Royal Library at Paris. The opinion of Monsieur Lenormant is highly favourable to the process, and he considers that by Monsieur Collas going to a trifle more of expense he may even improve the effect of the engravings; viz. by a little more free use of the engraver than he has yet done.

5693. Has not Monsieur Mionnet published a very extensive work on coins?—He has published a very extensive work on Greek coins, and Monsieur Lenormant has also distinguished himself by his writings on archæology and works of art.

5694. They are to be considered as amongst the highest authorities upon that subject?—I should think them very high authorities, being particularly conversant with medals and medallic works.

5695. And they have had their attention especially drawn to this mode of engraving?—Yes, they have particularly.

5696. And they are satisfied with it?—Perfectly satisfied. Mr. Lenorman says it gives results beyond all comparison good, with respect to correctness and effect, especially in representing the European medals since the 15th century. With the permission of the Committee I will deliver in the opinion of these gentlemen.

[*The same was delivered in, and is as follows:*]

Cabinet des Médailles et Antiques.

Bibliothèque Royale, Paris, le 25 Mai 1836.

Je soussigné, conservateur adjoint au département des médailles et antiques de la Bibliothèque Royale, consulté par Monsieur Hawkins, conservateur du Musée Britannique, sur la question de savoir si dans l'intention où l'on serait en Angleterre de faire graver la collection complète des médailles nationales, le procédé de M. Achille Collas n'offrirait pas une garantie de bonne exécution supérieure à celle que pourraient présenter les procédés ordinaires de la gravure à l'eau forte et au burin:

Estime que principalement pour des objets d'une assez grande dimension, tels que sont les médailles exécutées en Europe depuis le 15e siècle, le procédé de Collas donne des resultats hors de toute comparaison, sous les rapports de l'exactitude et de l'effet:

Que ce procédé employé brux et sans le secours d'aucune retouche, quoique déjà supérieur à tous les autres, pourrait néanmoins donner lieu à quelques reproches fondés, quant à l'exécution des détails minutieux et à la reproduction claire des légendes; mais que ces objections disparaissent devant l'emploi intelligent des rétouches au burin:

Que cette ressource, ainsi que celle des morsures à différents dégrés a été employée avec succès sous la direction d'artistes supérieurs, dans plusieurs parties du Trésor de Numismatique; que si le même soin minutieux qu'on a mis dans cet ouvrage à produire quelques chef-d'œuvres, était consacré à toutes les parties d'un ouvrage de grand luxe, tel que serait une collection entreprise par un gouvernement, les éditeurs du Trésor de Numismatique

Edward Hawkins, Esq.

14 June 1836.

Numismatique seraient en état d'atteindre une perfection évidente, et à laquelle les moyens ordinaires de l'art ne pourraient conduire ; c'est-à-dire, de faire à coup sur et toujours mieux que ne feraient dans quelques rares occasions les artistes les plus habiles.

En foi de quoi, j'ai rédigé la présente déclaration, qui est l'expression de ma plus sincère conviction.

Paris, le 25 Mai 1836. *Lenormant.*

Nous partageons entièrement la manière de voir de notre savant collégue Monsieur Lenormant, et nous sommes persuadé que l'ingenieux procédé de M. Achille Collas doit infailliblement offrir les résultats les satisfaisants pour reproduire tous les chefs-d'œuvres de la Numismatique, à partir du 15^{e} siecle jusqu'à l'époque où nous sommes.

Paris, le 26 Mai 1836. *Mionnet.*

5697. Is it your opinion that the spirit and character of a medal is better given by these engravings than by the ordinary mode?—I think so.

5698. Do you think that is the opinion of competent judges who are engaged in numismatic studies?—I do not know ; I have not had much conversation with any of them in England, but those in France were certainly of that opinion.

5699. Does the machine itself require a skilful mechanic to work it?—Certainly not.

5700. Can any mechanic, with the ordinary qualities of care and attention, under the direction of an artist, work it with success?—Yes, quite so ; I saw several persons at work in the establishment in which Mr. Nolte is concerned, and there were several females at work, and it seemed to require nothing but a steady hand, no artistical skill at all.

5701. There have been some other machines for producing similar engravings?—There have several.

5702. Do they or do they not require very superior artists to direct them?—I do not know ; I have never seen them actually at work.

5703. With reference to the engraving of the collection of medals in the Museum, do you think such a work is likely to be undertaken as a private enterprise?—Certainly not ; I have tried it, and it did not succeed.

5704. If therefore the British series of medals are to be engraved, you think it must be done either wholly or in part at the expense of the public?—Perhaps a fact will best answer that question. After a publisher had gone to some expense in preparing prospectuses for such a work, he abandoned the project on account of the great expense, and the little probability of getting an adequate return.

5705. Will you now favour the Committee with your opinion on the utility of diffusing the knowledge of the stores in the Medal department in the Museum, more particularly with reference to British history?—It has all the general interest of any historical work, and it has this particular interest, that it draws the attention of persons to those acts and persons which individuals or the Government have thought worthy of being recorded, either the acts or the personal character of individuals in whose honour the medals have been struck.

5706. Lord *Sandon.*] Is the collection of British medals in the British Museum so full and complete as to furnish, if published, a satisfactory series with reference to the subject which it is to illustrate?—The work would be exceedingly incomplete if it were confined to those medals in the collection of the British Museum, because there are many in private collections, some even unique, which it would be necessary to comprise in any such publication.

5707. Is it the intention of this publication to comprise other than those which are in the British Museum?—The work contemplates the entire history of the British medals ; of all medals that refer to Britain and its dependencies, whether in the British Museum or in any private collection.

5708. Mr. *Hawes.*] Could such a work be undertaken without some mode of engraving cheaper than the ordinary mode?—Certainly not, as far as my experience goes.

5709. Mr. *R. Colborne.*] Was the undertaking that you say was commenced and abandoned, under the sanction of the British Museum?—No ; it was entirely a private undertaking.

5710. But that was an undertaking in the usual mode of engraving?—It was intended to have given outline engravings, which was the cheapest mode then known of giving anything like a representation of a medal.

5711. But this mode would be infinitely cheaper?—It would be cheaper and better.

5712. Do

5712. Do you think that if this work were commenced under the sanction of the British Museum, that it would so far meet the wishes of the public that it would find a sufficient sale to pay its own expenses?—That requires more knowledge of the trade than I possess. I am given to understand that it could not, even at this cheap rate.

5713. Lord *Sandon.*] Can you state what proportion of the whole number of British coins and medals in existence is possessed by the British Museum?—No; I am not able to state that.

5714. Mr. *Hawes.*] Monsieur Mionnet's work, which you have alluded to, on antique medals and coins, contains only outline engavings?—It contains only a few plates added to each volume; they are a little shaded.

5715. May it not be supposed that he was deterred by the expense of the ordinary mode of engraving from giving a more complete collection of engravings?—That I do not know.

5716. Is there any national collection of medals or coins which has been engraved?—Yes, the medals of Louis the Fourteenth were engraved at the public expense, and also his medallions, a large work in folio, the other work in quarto; and the Danish government have published a very extensive work of all the coins and medals of Denmark, which is also entirely at the public expense. The Vienna cabinet have published catalogues and plates of various portions of that collection.

5717. Are they very expensive works?—Very expensive. I do not know whether they were sold, but most of the copies I have seen seem to have been originally distributed as presents; such I believe to have been the case with the Danish work.

5718. Have you a copy of it in the British Museum?—Yes, we have.

5719. Have you a copy of the other works which you have alluded to?—All that I have alluded to.

5720. Sir *Philip Egerton.*] You mentioned that you had seen this machine at work; as so much of this evidence turns upon the accuracy of the representations executed by this machine, can you very shortly explain to the Committee the principle upon which this machine is constructed?—A line drawn by the tracing point across the middle of the medal will, upon the copper, represent the section of the medal.

5721. Every one of those lines is an exact section of the medal?—An exact section of the medal in that particular part; it is by that process that the light and shade is produced.

5722. Lord *Sandon.*] Is the deviation from the straight line always in proportion to the elevation over which the tool has to pass?—I should think it must be, or else it would not represent an exact section; I am not prepared to say that it is mathematically correct, but it is a close approximation to it.

5723. Mr. *Hawes.*] As to the effect of this deviation upon the eye, what opinion should you be disposed to give of it, as affecting the representation?—Nothing perceptible.

5724. You would not be disposed to use the term distortion with regard to it?—Certainly not; a deviation which is not visible to the eye I should not consider a distortion.

5725. Sir *Robert Inglis.*] Can you state to the Committee what is the history of the discovery of which specimens have now been laid on the table?—I cannot state the history, except from mere hearsay; I believe it originates from a representation that was given in a work upon turning; I understand that was the first representation of anything of this kind; that has given rise to various machines, which have been improved from time to time.

5726. Has it been practised in any other country than in France?—Machines for a similar purpose have been constructed in America and in England, as well as France.

5727. In what country has the process been brought the most near to perfection?—Practically, in France.

5728. Mr. *Hawes.*] The specimens produced are all from the French machines?—They are.

5729. Sir *Robert Inglis.*] How long ago has this discovery been known in Europe?—I believe about 15 years.

5730. Has it been much improved lately?—Yes, very much.

5731. Have

Edward Hawkins, Esq.

14 June 1836.

5731. Have you reason to think that it is in course of improvement?—I do not think it is.

5732. Do you think it has arrived at its full measure of excellence?—I think the mechanical part has; but it is difficult to set bounds to any mechanical improvement.

5733. Do you think it is in a state which would justify an expenditure on the part of the Government, in regard to the conduct of a work to represent the collection of coins or medals in the British Museum?—Inasmuch as I think it is the most faithful representation of a medal with which I am acquainted, I think it is; if any national work upon that subject is entitled to assistance, such a one as this would be.

5734. It has been stated in the petition to the House of Commons, which the House have referred to this Committee, that in the British Museum are upwards of 3,600 British medals of various dates, from the remotest period of English history to the present day, of which 3,200 are particularly qualified to form the subject of engravings; do you confirm the accuracy of that statement?—Not exactly; I think the numbers there stated rather refer to the number of British medals generally, than to those contained in the British Museum.

5735. Can you state generally to the Committee what number of medals in the British Museum would, in your judgment, be fit subjects for the application of the invention to which the attention of the Committee is now called?—I do not at this moment recollect what number there are in the British Museum.

5736. Twelve plates have been produced before the Committee to-day, numbered IV. VI. VII. VIII. IX. XXIV. XXVIII. XXXI. XXXII. XL. XLVI. and L.; have you examined them?—Not all, to-day; but I have seen the work generally, and some three or four plates, now on the table, taken from them, but not all.

5737. Have you seen the other plates of the same work?—Yes, several of them.

5738. Do you regard the impressions now produced as a fair average of the work with which they are connected?—They do not appear to me to differ materially from those that I have seen; but I dare say these are among the best; it is natural to suppose they would be.

5739. Do you consider them as specimens selected to give the most favourable exhibition of the work, or as representing the average of the style in which the work has hitherto been executed?—They seem to be good impressions; but from looking at them, I should not have been aware that they were selected impressions.

5740. The question refers not to the state of the impressions, but as to the quality of the engraving, as furnishing a fair specimen of the style in which the work has been carried on to the present stage?—They appear to me to be fair specimens.

5741. What is the value of the discovery in representing large specimens?—It is very good; but the higher the relief the more will be the apparent distortion.

5742. Mr. *Hawes.*] You have been asked with regard to the engraving of large medals; have you seen a cast of the head of Louis Philippe engraved by this process?—Yes.

5743. Can you state about the diameter, the length and breadth of that cast?—No, I cannot from recollection; it is very large.

5744. Can you state whether it is about nine inches?—It must be quite that.

5745. With regard to the effect of the machine in that case, what are you disposed to say?—I should say it was exceedingly good; and I see no distortion, nor anything at all offensive in any way.

5746. Lord *Sandon.*] What you call distortion does not affect the truth of the representation to the eye?—I think not.

5747. It is in fact a distortion merely of the line to produce the effect?—No; in some cases, especially in very high relief, there is actually distortion; but even in an object of that size I can see nothing that is offensive.

5748. And not sufficient to affect the fidelity of the representation?—No.

5749. Sir *Robert Inglis.*] What is the value of the discovery in representing small specimens?—It seems to be very good, except that in very minute objects the detail is not quite perfect.

5750. What is the proportion of the number of large to small specimens which you have of the British series in the Museum?—There are considerably more large than small; we have not many very small.

5751. Do you consider a large medal, as contradistinguished from a small one, to be one above the ordinary size of coins?—I should say the common size of a medal

L83

Edward Hawkins, Esq.

14 June 1836.

a medal would be about an inch and a half, and that what is below that I would call a small medal; there are probably more above an inch and a half than below it in the British Museum.

5752. What style of engraving, previously to this discovery, would you have recommended for the exhibition of coins or medals?—Outlines, as the cheapest.

5753. Distinct from cheapness, what style would you have recommended?—Regardless of expense, I should have put them into the hands of the finest artists, certainly; I should have had full engravings, by the best artists.

5754. Mr. *R. Colborne.*] The expense of a work so undertaken would render it perfectly impracticable?—Quite so.

5755. Would you recommend that those medals, and parts of medals, to which the machine is least suited, should be retouched by the hand?—Certainly.

5756. Sir *Robert Inglis.*] How far does the machine represent faithfully the inscriptions?—Very faithfully, but not so distinctly as I should wish; and therefore I should use engraving to assist.

5757. Does it represent, with sufficient accuracy to satisfy you as an archæologist, the form of the letters?—Yes, where the letters are well defined upon the medal.

5758. Do you, as an archæologist, consider that the form of the letters is an essential element in determining the genuineness and the age of a particular work?—Not of the sort of medals that we have been contemplating, medals since the 15th century.

5759. The question had reference generally to all numismatic work; with that extension of the question, do you consider that the form of the letters constitutes a very important element in your estimate of the date and genuineness of the medal?—In ancient coins, certainly.

5760. The document from which you read a passage in the earlier part of your examination, purports to be a copy of a certificate from Mons. Lenormant, dated Paris, 25th May 1836; to which is annexed an attestation by Mons. Mionnet, dated Paris, 26th May 1836; both of them speak particularly of medals from the 15th century to the present day, and your late answer also referred to the same date and period; can you state the reason of the limitation assigned by Messrs. Lenormant and Mionnet to coins and medals of the later ages, in contradistinction to the works of Greek and Roman art, or the works of any other age than of the last four centuries, as particularly rendering them suitable to the application of the discovery now under the consideration of the Committee?—Their attention was particularly directed by the question to the medals struck since the 15th century.

5761. Then you would infer that their opinion must not be considered as unfavourable to the application of the discovery to the remains of Greek and Roman art, or as meaning to say that it was more particularly suited to the medals subsequent to the 15th century; but simply, that, having had their attention by the questions directed to works of that age, they expressed themselves in that manner?—Directed to works since the 15th century.

5762. Do you state that the application of this discovery would be as well suited to the finer works of the best days of Greek art, as it would to the large medals struck in the 15th, 16th and 17th centuries?—I am not quite sure; I have not seen it much applied to that description of art, and I should be rather shy of giving an opinion upon that point at present.

5763. To revert to the immediate subject before the Committee, what is the number of British coins or medals of the last five centuries which would form the materials of the work contemplated in the petition of Mr. Tilt?—Upwards of 3,000.

5764. The Committee understand you to have said that all those are not to be found in the British Museum?—Certainly not.

5765. Can you state what number of impressions could be taken from this new discovery?—I do not accurately know; but I apprehend some thousands, because they are done upon steel.

5766. Can you state what is the utmost number of impressions which could be taken from the mezzotint, or from the line engravings respectively?—Upon steel many thousands have been taken from line engravings of fine plates; for instance, such as you have seen in the Annuals; several thousands of them have been taken off, but not without some repairs from time to time.

5767. Looking at the number which may be taken from the three respectively, whether

Edward Hawkins, Esq.

14 June 1836.

whether mezzotint or line engraving, or this discovery now under consideration; do you consider that any greater number may be taken from an engraving by this discovery than from the ordinary mode of engraving upon steel?—I am not aware that there would be any material difference in the number.

5768. Do you know under what circumstances the Medallic History of Louis the Fourteenth was published?—At the expense of the government.

5769. Was not it published by the Jesuits, with aid from the government?—I have always understood that it was distinctly a government undertaking.

5770. Do you refer in that answer to the Histoire de Louis le Grand, or to the Medals?—To the medals; Medailles sur les principaux evenemens du Regne entier de Louis le Grand; 1723.

5771. The Histoire de Louis le Grand was published as a distinct work?—I was alluding to two works, a large folio work, the Medallions of Louis the Fourteenth, 1723, and a quarto work, the Medals of Louis the Fourteenth, 1702; and there was a continuation, of the medals of Louis the Fifteenth.

5772. That work to which your attention was first called was printed in 1693, and was originally published by the Jesuits, with aid from the government; the latter work was in 1723; do you know at all the expense which the Government either contributed to the first work, or altogether laid out on the second?—No, I am not at all acquainted with it; the general impression I have is, that it was done entirely at the expense of the government.

5773. Mr. *R. Colborne.*] Is it your opinion, that if such a work is to be executed, this is the best and perhaps the only practicable mode in which it could be executed?—I think it is the best, as giving the most faithful representation of the medal; and, as far as I understand of the expense, the only practicable mode.

5774. Mr. *Hawes.*] Have not some casts been taken from medals in the Museum, with a view to engravings being taken from them?—Some have.

5775. Have you seen the engravings taken from those casts?—Yes, I have.

5776. Will you look at the engravings now shown to you, and state whether the original from which those are taken is in the Museum?—Yes, the original of this is in the Museum.

5777. Was not that medal selected as likely to test the accuracy of the machine?—It was.

5778. Will you describe the medal?—It is a medal of William the Third, commemorative of three celebrated battles in Ireland, those of Galway, Athlone, and Sligo.

5779. Will you give the Committee your opinion upon the engravings put into your hand?—I think them very faithful representations of the medal.

5780. And they are therefore to be taken as specimens valuable because the originals were selected as being difficult of representation?—Yes.

5781. You have been asked some questions with reference to the form of letters, does the machine in any way alter the form?—Not perceptibly.

5782. It does sometimes render letters indistinct, but it does not in any way alter their form?—It cannot alter their form.

5783. So that, archæologically speaking, there is no objection to the machine?—No objection to the machine.

5784. Lord *Sandon.*] The inscriptions do not appear so legible as might be desired in the smaller medals?—No, they are not; they are not so prominent as they ought to be, but the defect is remedied very easily by the engraving-tool, and that should be used to assist the machine.

5785. It appears to be the opinion of Monsieur Lenormant and Monsieur Mionnet, that an engraver, an intelligent artist, should be employed in giving additional minuteness and exactness to the smaller details, and to the legends?—To the legends, decidedly; to the smaller details with caution; because the objection to engraving in general is, that something may be put in upon the plate which does not exist upon the medal. The beauty of this machinery is, that it cannot put in anything that does not exist upon the medal.

5786. *Chairman.*] You have described three modes of engraving medals; the one by the finest artists, which you say is impracticable on account of the expense; the second mode by a mere outline; and the third by this machine; now, supposing three works to have been executed, one in each way, do you consider that the one that was executed by the finest artist would be very far superior when executed, to that which would be executed by the machine?—It would be a more pleasing work to the eye, but I should not like to trust to it as an historical work

so

Edward Hawkins. Esq.

14 June 1836.

so much as I would to this; it would not be so faithful a representation of the medal.

5787. Supposing the work to be undertaken at the expense of the public, and therefore to become a national work, and without having any regard to expense, which of these three modes of executing the work would you recommend as most likely to produce a work that would redound to the glory of the country?—As a work of art, the work by the artist would be the most pleasing, and perhaps most honourable to the country; but as an archæological work, in which is required a faithful representation, the mode I would adopt would be to use machinery, and to assist it when necessary by the graving-tool, to supply its deficiencies by the graver.

5788. Then, if the nation is to undertake the work, what would be the mode in which you would recommend that it should be executed, so as to produce a work that would do credit to the country in after ages?—Machinery, assisted by the engraver.

5789. Do you apprehend that the additional expense of that assistance would very much enhance the cost of the work?—It would enhance the cost, but I believe not so much so as to make it impracticable.

5790. Would you recommend that any work should be undertaken by the nation unless it was completed in the most satisfactory manner that artists of the present day could produce?—Certainly not, unless it could be produced in the most satisfactory manner. But for the work in question, I consider that this mode is the groundwork of the most satisfactory manner.

5791. Lord *Sandon.*] If you wished to purchase a correct representation of the coins of any country, what you would wish to possess in your library would be a work executed on these principles?—Certainly, for the sake of correctness.

Sir *Francis Chantrey*, further Examined.

Sir *Francis Chantrey.*

5792. Lord *Sandon.*] YOU have examined the result of this particular process?—I am acquainted with the engravings that have been laid before me, and with the volume that has been published.

5793. Have you had an opportunity of comparing any of them with the originals?—No, except the one of Sir Walter Scott, which was shown to me to-day.

5794. That you consider a close representation?—It is in bold relief; and I see that in proportion as the relief increases, those deviations must necessarily increase also.

5795. Which do so far affect the precise accuracy?—Which do so far affect the precise accuracy as not to allow the measurements from the centre to agree.

5796. But not to distort the features or to affect the general fidelity of the representation?—Not to injure the representation in any way that would make it unsatisfactory to myself, being aware of the uniformity of deviation in the machine.

5797. Should you consider that the inaccuracies thus produced are greater than would arise in the common method of engraving?—It is difficult to make a comparison; in the common method you are subject to differences in various parts; here the differences are limited, and you can understand them, but you cannot rely upon the differences which are incident to the eye and the hand of man.

5798. If you wished to possess a representation of any set of medals, you would prefer them, for accuracy, executed in this manner, to the same medals executed by the common method?—I should prefer this to any other method that I am acquainted with.

5799. Should you feel, when in the possession of a representation of medals executed upon this method, that you were in possession of every fact which you would acquire by the possession of the medal itself?—That, as an artist, would be my feeling.

5800. Mr. *R. Colborne.*] Having heard Mr. Hawkins' examination, does anything occur to you which you would wish to state to the Committee?—Nothing occurs to me; I think that Mr. Hawkins has taken a very fair view of the subject. I fully agree with him in the general principles of his evidence.

5801. Lord *Sandon.*] For representing beautiful works of art upon a small scale,

Sir *Francis Chantrey.*

14 June 1836.

scale, do you conceive that this method would be satisfactory?—It must depend on the nature of the work; it is totally inapplicable to engraving in full relief, because in the full figure the relief is only given by shadows thrown from the projections; now this machine cannot feel shadow, it can only represent substance by the form of its line, and therefore this machine, like all other machines, has its limits, and it is applicable to medals more particularly than anything else, and the flatter the medal the less will be the distortion, as it is called, a word which however, I think ought not to be admitted; I should not call it distortion.

5802. Lord *Sandon.*] Is the term distortion a technical term?—The word distortion conveys to my mind a false notion, an extreme degree of inaccuracy that I do not think the small deviations in these representations deserve; when the word distortion has been applied I have felt that it is too severe.

5803. Would you rather call it a deviation?—It is a deviation of very little importance, and more particularly when the deviation is always in the same proportion to the relief; and when you know that, it is of no consequence whatever; if you were to get a very bold relief the machine is unfit for it, but for a flat medal it is the most satisfactory thing I have seen.

Mr. *Vincent Nolte,* Examined.

Mr. *Vincent Nolte.*

5804. Mr. *Hawes.*] YOU have heard the evidence that has been given to day in reference to these engravings, and the machine which produces them?—Yes.

5805. Have you any observations you wish to make?—I am not aware of anything in particular. I think that the general character of the evidence is in favour of what I would wish to establish, viz. that the machine is a proper one to produce a faithful image of the medals.

5806. Are you interested in the company which has been alluded to by Mr. Tilt?—Yes, inasmuch as I am the founder of the company in some respects, and have embarked a great deal of money in it.

5807. Would there be any difficulty in indemnifying Mr. Tilt for any violation of the contract between him and the Trustees, which might arise out of the non-fulfilment of the contract between Mr. Tilt and the company in Paris?—I should think we should have the same inducement which Mr. Tilt would have, to continue to supply the works in the very best state in which they could be given; and if in addition to that, it is required to give him anything in the shape of a guarantee for the execution, it must be reciprocal, I conceive.

5808. Mr. *R. Colborne.*] Are you an artist, or did you take this up as a speculation?—I have taken it up as a speculation with artists. The origin of this thing is, that Mr. Collas, a mechanic, who, when the revolution took place in 1830, found himself without any particular employ, remembered to have seen the outline of a machine in the *Manuel des Tourneurs,* and he contrived to make one upon very different principles to produce the same effect. At the end of 1831, some specimens thus produced were so satisfactory to myself, and a number of artists with whom I was connected, that we thought that it would be a good thing to make some publication with engravings of that description; however, we did not embark in it without having tested the excellence of the proceeding, by consulting the very best authorities among men of science as to the faithfulness of the engravings, and among artists as to the effect; and those persons were Mr. Horace Vernet, Mr. Lenormant, Mr. Tiolier, the engraver of the Royal Mint in Paris, and Mr. Barre; Henriquel Dupont, our first engraver, and Mr. Paul De la Roche, member of the Institute, were also consulted upon the subject. Their unanimous report was of that description, that we thought we could venture upon the thing: we commenced by saying, "I will advance so much money, you will supply some other sum," and in that manner this company was organized and formed for the purpose of executing engravings of medals, coins, basso-relievos, cameos, intaglios, and things of various kinds, of which I have a variety of specimens. When the first specimens came out, we all calculated that on account of the pleasing nature of the work, the number of subscribers would be very great; but we found that we had no more than 180 to 200 subscribers, which was perfectly insufficient to defray the expenses of the establishment; we then thought of calling in aid from the government of France, and having felt the pulse of the minister of the interior, he gave it his decided approbation, and we then proceeded in the usual way by presenting a petition to government, supported by such evidence as we thought useful to obtain the desired result. The government upon that, determined to give it its protection,

tion, by the King and the Royal Family subscribing for a certain number of copies, and the libraries and the other public institutions of that description did the same. The whole amount of the copies thus taken by government was about 350, and, in value, equivalent to the receipt of about 17,000*l.* After the government had subscribed, the encouragement became then very general; the public fell in with the views of the government, and the celebrity of the undertaking has been spread a great deal throughout Europe. We have received from various parts of Europe, where there are collections of medals, orders for the execution of plates, and that has led me to England, under the impression that encouragement of the same kind would be given in this country if some public work was undertaken. I was not aware at that time that the medallic history of England was a blank in literature; in fact, that none existed; and it is only since I have been in England, that I have discovered that it would be desirable.

5809. Have you calculated how many copies would form a sale sufficient to repay the cost of a work of that kind?—Mr. Tilt put an exact calculation into my hands, in which all the expenses had been put down; I have had an opportunity to compare it with other calculations (perhaps not quite so accurate), as to the principal part of the expenditure, enough to satisfy me that his proposals were the best and the cheapest. I first had some conversation with Mr. John Murray, who, after eight days of deliberation, was alarmed at the extent of the work, and afterwards conceived that he was not perfectly qualified to publish it. Mr. Murray hinted Mr. Tilt's name to me, and I became acquainted with Mr. Tilt. When I had received from Mr. Tilt various calculations, I came to a clear understanding with him of undertaking the thing, provided we could be aided in the expense by Government. On his own account he declined everything of the kind, and that has been equally done by every other publisher whom I have consulted in London; for instance, Longman & Company, and Mr. William Pickering, and their estimates differed materially from the one produced by Mr. Tilt.

5810. But they all concurred in refusing to execute a work of that kind without public assistance?—Unless the Government gave its aid and patronage, they all declined it, and would have nothing to do with it.

5811. You have not stated how many copies Mr. Tilt made the calculation upon?—Two thousand.

5812. If 2,000 could be subscribed, could the work be published without the aid of Government?—I should suppose Mr. Tilt has already answered that question, because he does not think that 2,000 subscribers could be obtained unless the eclat of the Government aid brought them.

5813. But supposing the Government patronage took place under the sanction of the British Museum, but without the aid of money?—Mr. Tilt is more able to answer that question than I am.

5814. Would you propose that the work should be executed in Paris, and yet the medals all remain in London?—I would take precise casts of those medals, as I did in the instance of those that I hold in my hand, which were taken in the medal-room of the British Museum, and sent to Paris.

5815. Could the work be executed with the same degree of excellence with the originals remaining in England, and the work be carried on in Paris, as if the work was carried on in London?—Yes, I suppose that it could be carried on even better there than here, from the engravings being superintended there by artists appointed for the purpose.

5816. Would not the artist that finishes the work feel the necessity of having the original to work by?—No; the cast gives a correct representation of the medal, and if any imperfection should arise, that could be easily pointed out by Mr. Hawkins, or any other person competent to judge of the subject, by comparing the medals with the engravings. Those engravings which were imperfect would be rejected, and the good ones adopted.

5817. Sir *Philip Egerton.*] Do you take the casts in plaster or in sulphur?—In plaster of Paris; we have sometimes taken them in sulphur.

5818. Sir *Robert Inglis.*] The plates which you have exhibited to-day have been variously numbered, not in a regular series; were these plates selected for their particular excellence, or taken fortuitously, and furnishing therefore only an average view of the merit of the work?—They were indiscriminately taken from different works, to give a fair idea of the *ensemble* of the publication. I did not select the worst, but they give a fair idea of the plates that have hitherto appeared. In some instances, there has been a little neglect on the part of the copper-plate

Mr. *Vincent Nolte.*

14 June 1836.

printer; in other instances, the steel has not been good, and thence arise many of the differences that appear in the engravings.

5819. Mr. *Hawes.*] Can you state the cost of engraving by this machinery, compared with the cost of engraving similar works by the ordinary mode of engraving?—Yes; I have had an instance of the kind: when the question was, whether the machine could execute difficult medals, I sent the celebrated Soane medal over to Paris, and had an engraving made from it. It appears that Sir John Soane had previously put the medal into the hands of a gentleman of the name of Bate, who has invented or perfected a machine somewhat similar as to the effect of it. With the result of this engraving he does not seem to have been exactly satisfied, for he employed Mr. Corbould, the painter, to make an outline of the Soane medal, which was afterwards engraved by Mr. Freebairn; and Mr. Freebairn told me that the engraving was paid for to him 45 guineas for the head and the other side of the medal. Now, we should consider ourselves well paid by eight guineas.

5820. Do you propose to offer any security for the maintainance of the excellence of the work throughout?—Our own interest is at stake in it.

5821. Should you object, for instance, to the work being submitted to either an officer of the Museum, Mr. Hawkins, for instance, or to some competent person to be agreed between yourself and the Trustees?—I certainly should not object to it in that shape.

5822. Mr. *Compton.*] Is any security given to the French government?—No; they were satisfied with it as it was; they did not ask for any; they only said, that if the work did not maintain its excellence they would discontinue the subscription.

5823. Mr. *Hawes.*] But if any were required, you would have no objection to give it?—No; I would readily fall into any plan that might be suggested.

5824. Sir *Robert Inglis.*] What is the proportion of support given to you by the French government, in respect of the work which you have mentioned?—It happens to be very nearly the proportion asked here, with a very slight difference, namely, one-fifth.

5825. Can you state what is the actual number of copies printed?—That is difficult to state, because there are ten works which are in course of publication, some of which have been finished; to some parts of the work, for instance, to the basso-relievos of the Parthenon, the number of subscribers has been greater than to some others; therefore we can only give an idea of the aggregate number of subscribers to the whole course of publication, which is liable to error, but I should suppose that the whole number of subscribers, including what the government takes, amount to about 1,600 or 1,700 or 1,800. It is upon the increase now.

5826. Mr. *Hawes.*] What is the greatest number of impressions taken from any of your plates within your own knowledge?—I think we took upwards of 1,000 or 1,200 impressions of the Parthenon.

5827. In what state were the plates after that?—The plates are in a very fair state; the later impressions are perhaps not quite so perfect as the earlier, which is the case in every engraving.

[*Two engravings were shown to the Witness.*]

5828. The two engravings now shown to you are from medals that were placed in your hands by Mr. Hawkins; did you employ any one to take the casts from the originals?—Yes, I employed a person whom I found in the medal-room of the Museum, that is Mr. Doubleday, who, I believe, is allowed to take casts.

5829. How long have you been executing the engravings from those casts?—The time employed to execute those engravings has been a day or a day and a half, but they made a great many unsuccessful attempts; sometimes two days to do it with great nicety.

5830. Mr. *Hawes.*] Is the adjustment of this machine so accurate as to apply it to taking patterns for the use of manufacturers, from off damask silk, for instance?—Yes; I have a plate, as a specimen of the kind, at home.

5831. Then it is applicable to various other purposes besides that of engraving medals?—Yes, basso-relievos, cameos, chisel-work, &c.

L89

Martis, 21° die Junii, 1836.

MEMBERS PRESENT.

Mr. T. G. B. Estcourt.	Lord Stanley.
Mr. Hawes.	Sir Robert Inglis.
Mr. Thornely.	Mr. Ridley Colborne.
Mr. Bingham Baring.	Lord Sandon.
Sir Philip Egerton.	Mr. Marshall.

MR. T. G. B. ESTCOURT, IN THE CHAIR.

Mr. *Vincent Nolte*, called in; and further Examined.

Mr. *Vincent Nolte.*

21 June 1836.

5832. *Chairman.*] THE Committee understand that you wish to add something to your evidence of the other day?—I am desirous to correct a few inaccuracies which have crept into my evidence, from my not having attended so much to the details of the trade. I mentioned the other day, in answer to a question that had been put to me, I believe by Mr. Hawes, as to the number of copies that we have taken of our engravings of the Parthenon. I stated that we had taken upwards of 1,200; I was incorrect in that; we have taken nearly 3,000 copies altogether, and the quantity sold exceeded 2,000. Considerable sales have been made of that since I left Paris; it was only when writing to make inquiry on that point, that I learned that I had mistaken the figures. They say, at the same time, that the impressions which the plates would bear might amount to about 9,000 or 10,000, without showing it in the least. There is another part of my statement which I wish to correct. It was remarked the other day, with respect to the plates of medals before the Committee, that a part of them were very well done, and others indifferently; I endeavoured to explain, that that might arise from a want of care on the part of the printer, or from the casts of the medals having been in an imperfect state. Here is an engraving of the medal of Jean Rovère, which is in a work of Italian medals by the Pisans, and which has been taken from an imperfect cast. Here is a perfect cast of the same medal, which we received from Vienna after our engraving had been executed [*producing the same*]. On comparing that cast with our engraving, it will be found that the latter is unlike it; but our engraving was taken from this cast, which is a faithful one of a medal of the same kind, but in an imperfect state, in the Royal Collection of Paris; and this, here, is an engraving which we made since we received the Vienna medal [*producing the same*]; so that it is not it every instance to the want of care on the part of the printer, or to any defect of the machine, that the indifferent aspect of the engraving is owing, but it arises from the circumstances that the casts from which the engraving is taken are in an imperfect state, because the medals themselves are imperfect. I had an opportunity of seeing Mr. Westmacott a few days ago; I understood that he had alluded, in a letter to the Trustees, to the imperfect execution of the particular medal which I now hold in my hand, representing the busts of Francis the First, Henry the Second, and Francis the Second. This is the plate from which Mr. Westmacott has formed his judgment [*producing the same*]; and this is a true cast of the medal [*producing the same*], which will clearly establish the facts just now alluded to. I have further to state, that I find objections have been taken occasionally to the legends of our medals, as being scarcely intel ligible, and likely to mislead an archæologist. Here are three engravings of the same medal, which were executed under the eyes of Mr. Hawkins, in Paris [*producing the same*]; the one contains the product of the machine in its original state; the second is the same engraving, after the legend had undergone a slight touch by the engraver; and the third is the same plate again, after the letters around had been made quite distinct to the eye. I am desirou s to add to the specimens which I have produced before the Committee, an engraving of the celebrated Napoleon medal of the battle of Marengo, containing a bas-relief of the battle

Mr. *Vincent Nolte.*

21 June 1836.

battle at the bottom of it [*producing the same*]; and here is an engraving executed of a medal, which was put into my hands here in London [*producing the same*]. The last thing I would put on the table of the Committee, is an engraving of the medal of Napoleon and Marie Louise, which has also been engraved in London, and will be placed before the Committee to-day, in order to enable them to form their opinions upon the subject [*producing the same*].

5833. Sir *Robert Inglis.*] From what work were the impressions taken which were exhibited to the Committee on the 14th, and delivered to the Committee to-day?—They were taken indiscriminately out of two works; a collection of the medals of the Revolution, and a collection of the medals of the Empire. There is one plate containing some medals of the Popes.

5834. Are none taken from the Tresor de Numismatique?—They are all taken from the Tresor de Numismatique.

5835. In other words, form part of a series of different publications, under the general title of Tresor de Numismatique?—Yes.

5836. Exhibiting impressions of the coins and medals in the collection of the Bibliothèque du Roi?—Yes, and other collections. We are in the habit of receiving daily supplies from public and private collections of medals on the Continent, from Vienna, Berlin, Rome, St. Petersburgh and other places.

5837. Is the work which is now produced by Mr. Forshall, from the British Museum, the work to which you refer?—It is.

5838. Under what authority and from what fund is this work carried on?—It commenced at our own expense, as I explained the other day; but I have stated also that the success of it was so very slow, that we found that the sale would not cover the expense, and that we had thought it necessary to call in aid the contribution of the French government, which was given to us upon a report made to the minister of the interior of the excellency of the work.

5839. Who made the report, upon which the minister of the interior recommended the grant?—The first artists in Paris, the first medallists in Paris, whose names I mentioned on the former day; the report was made by order of the minister, through the Bureau des Beaux Arts.

5840. What is the extent of the contribution furnished in aid of this work by the French government?—I answered that question the other day, by stating that it amounted to about 17,000 *l.* in the number of copies taken from the enterprise; that is to say, for the whole series of the publication, up to the end of 1838, when all the sundry publications hitherto announced will be completed.

The Rev. *Josiah Forshall*, called in; and further Examined.

Rev. *Josiah Forshall.*

5841. Sir *Robert Inglis.*] IN obedience to the intimation given at the meeting of this Committee on the 14th instant, have you brought from the British Museum, and do you now exhibit, the Tresor de Numismatique, from which the impressions exhibited to the Committee upon the 14th, and delivered in by Mr. Nolte this day, are taken?—Yes.

William Wyon, Esq., called in; and Examined.

William Wyon, Esq.

5842. Sir *Philip Egerton.*] YOU are chief engraver to the Royal Mint?—I am.

5843. You are also an associate of the Royal Academy, and of other societies?—I am.

5844. You are also, independent of your official character, a medallist by profession?—I am.

5845. You have executed numerous dies for medals, amongst others, the Cheselden medal, the Wollaston medal, and the Soane medal?—I have.

5846. You have also been sent for to Portugal to engrave dies for the new coinage of that country?—I went to Lisbon with the permission of our Government, to make a model of Her Majesty the Queen of Portugal, for the obverses of the new coinage, and I am now engaged in making a series of dies for that country.

5847. Consequently, having been so long conversant with die-cutting, and with medallic history in general, and having attained such eminence in your profession,

fession, you are enabled to state to the Committee the result of the opinions you have formed as to the engravings which have from time to time been executed of medals, as well as of other works of art of a similar description?—I should be happy to give any information in my power.

5848. Are you acquainted with any method of engraving medals by machinery?—I am acquainted with several. The first attempt of the kind was described in the Manuel du Tourneur, published in France many years ago. The invention, I believe, remained in abeyance until about 1828, when the Americans published a series of portraits, from medals, of illustrious men; this induced the late Mr. Bawtree, engraver to the Bank of England, in conjunction with Mr. Bate, to construct a machine; and one of the earliest specimens of engraving by their machine was taken from a medal executed by me for St. Thomas's Hospital. It will be seen on comparing the medal with the engraving, that the head of Cheselden on the obverse is manifestly distorted; the same fault is visible in the figure upon the reverse. Although from parts being smaller the distortion is not quite so obvious, the effect of the whole is, that of having been taken from a worn-out medal. This latter imperfection may in some degree be caused by bad etching [*an impression from the plate was delivered in, marked* A, B.]

5849. Are the engravings you have now handed in the first experiment of Mr. Bate's machine?—They were amongst the earliest specimens. I will also submit to the Committee an engraving from another of my medals, that was struck by command of the Queen; it was engraved by Mr. Lacy, for Mr. Charles Heath's Keepsake, in 1833, which will show that there is a little improvement in the effect from the former works, this having the superintendence of an eminent engraver. [*The same was delivered in, marked* C.]

5850. Were those executed by the first machine invented by Mr. Bate?—The one I have now produced is by another machine (Mr. Lacy's).

5851. Can you state the year in which the engravings you have now handed in, marked A, B and C, were executed?—The Cheselden medal (marked A and B), which I first submitted, was, I think, engraved in 1830. The one by Mr. Lacy, (marked C), though dated 1833, was really done in 1832.

5852. What is your opinion of the accuracy of those engravings, as compared with the original medals from which they were taken?—The one of Cheselden appeared to me so inaccurate and unsatisfactory, that I begged all the copies might be suppressed, being unwilling that a work of mine should go forth in so imperfect a state. On comparing the engravings with the medal, the amount of error will be obvious.

5853. Will you proceed to inform the Committee whether you are aware of any further improvements that have taken place in this art since the execution of these engravings?—About 1831, or the commencement of 1832, Mr. Bate, finding the distortion that existed in all works of that kind, made another machine, for which he obtained a patent. I believe that the whole of the errors are now rectified, and that we have a perfectly accurate representation. My belief is so strong upon that point, that I have now given another impression of the same medal (the Cheselden), that he may engrave it with his improved machine.

5854. Then although you were not satisfied with the engravings executed by the old machine, yet, as a medallist of great experience, you are satisfied with the results of the improved machine of Mr. Bate?—Entirely, as to the accuracy of the representation.

5855. Are you satisfied with the effect produced by these engravings, looking at them with the eye of an artist?—In many respects I think they give a more faithful and accurate representation as to the metallic appearance of the medal than any other mode with which I am acquainted. At the same time there are many subjects incapable of being properly represented. For example, architectural buildings, battles by sea or land, anything dependent on minute execution, cannot possibly be executed with the same perfection as by the skill of an artist. In inscriptions it is of the utmost importance to the archæologist and numismatist, that even the shape of letters, &c. should be preserved, in order to fix the epoch. You will find on examination of works executed by hand, for example, the collection of engravings from Flemish historical medals by Van Loon, the fine series from the medals of Louis the Fourteenth, or the still finer specimens of art from the works of Hedlinger, a superiority in every respect as well as in the minuteness and beauty of the execution. I submit to the Committee an engraving by hand, of the medal struck in testimony of respect to Sir John Soane [*producing the same*].

William Wyon, Esq.

21 June 1836.

If the capitals of the columns are examined, you will find very superior accuracy in the minuteness of the detail.

5856. Mr. *Hawes.*] Who was the engraver of that?—It was engraved by Mr. Freebairn from a drawing made by Mr. Corbould, and at the request of Sir John Soane.

5857. Sir *Philip Egerton.*] Having instituted a comparison between the hand-engraving of the medal of Sir John Soane, and the engraving of the same medal executed by the machine, can you state in round numbers the comparative expense of the two processes?—It is quite impossible that I can do it otherwise than in round numbers, not having made a very accurate calculation; but I should suppose, taking it upon the average, the whole of the medals required to be engraved for the British Museum would cost 30,000*l.* by hand, that they would require only 3,000*l.* to make very good representations by machinery.

5858. Are you aware that a machine exists in France for the purpose of engraving medals?—I am.

5859. Have any of your works been engraved by that machine?—The one I have now submitted is from a work of mine, the Soane medal by the French machine.

5860. Are you satisfied with the correctness of this engraving executed by the French machine?—I find it inaccurate in several of its parts, which may be observed by measuring it. For my own eye I do not require compasses, it is sufficiently obvious, but on measuring the great disproportion between the medal and the engraving, it becomes very apparent. I now place my compasses from the lobe of the ear to the point of the nose, most projecting in the outline, and on applying the compasses to the medal itself, I find a difference of nearly an eighth of an inch greater in the medal than in the engraving.

5861. Can you explain to the Committee in a few words the cause of that distortion?—I am not sufficiently conversant with the French machine to speak very accurately, but I believe it arises from this circumstance, the tracing point that goes over the medal itself moves in a straight line across it, while the cutting point which is transferred to the copper takes a curved direction, consequently there is an inequality between the two. But I prefer leaving this part of the subject to those who are more conversant with the machine.

5862. There is a power of diminishing that distortion, is there not?—Yes, by lessening the relief, which the French have done very well.

5863. In a relief of a quarter of an inch, if you attempt to reduce the distortion, you reduce the effect of the relief to the same effect?—Certainly, in proportion as you reduce the relief, you reduce the amount of distortion.

5864. Consequently, the engraving does not give so accurate an idea of the original as would be desired?—It is always desirable to make it as accurate as possible.

5865. You have placed upon the table an engraving of the same medal by Mr. Bate's improved machine?—I have.

5866. Upon measuring that, and comparing it with the medal, do you find the same distortion to exist as in the former engraving?—No; in Mr. Bate's improved machine it is quite accurate. If examined, it will be found there is not the slightest disproportion existing; I have now placed the point of the compasses very accurately in the same place that I did in the engraving from the French machine, and I find it gives quite correctly the proportions, and so it would in every other point.

5867. Then Mr. Bate has the merit of having modified his machine so as to obviate the distortion which characterised the engravings of the original machines?—Certainly. I think I can make this more clear to the Committee if they would allow me to compare the large medal of Napoleon and Marie Louise, which was engraved in France, with one executed in England. The first point to which I request the attention of the Committee would be, that the English medal is perfectly circular, and in the French there is a considerable disproportion; the hollow part of the rim on the right-hand side of the medal is considerably larger than it ought to be; somewhat narrower on the left-hand side. In the English, it is perfectly concentric.

5868. Sir *Robert Inglis.*] Do you know whether the impressions in your hand were taken from one and the same copy of the medal?—There is but one die that I am acquainted with, consequently I believe all the medals have been struck from the same original.

493

William Wyon, Esq.

21 June 1836

5869. Mr. *Hawes.*] But in reference to proportions, they must be the same in all cases?—Yes.

5870. Lord *Stanley.*] Do you conceive that in consequence of the increased accuracy, in point of outline, there is any sacrifice of the effect of relief?—I am not sure that it is necessarily so; in this case unquestionably the French has the superiority in the brilliancy of impression. In France, I am informed there is a kind of committee of taste to examine every work before it is put into the hands of the machine engraver; this committee directs the proper way to throw the lights and shadows, and thus by having the advantage of art conjointly with that of mechanism, a more brilliant and better effect is produced. I consider that accuracy may be obtained with an equally good effect.

5871. Do you mean with the machine in its present state, or do you mean that the machine is still capable of further improvement?—I should think the machine in its present state is capable of doing everything that is required, if properly directed by artists.

5872. Lord *Sandon.*] The advantage they possess is in the superintendence of artists?—I think so. I will now, with the permission of the Committee, compare the French engraving from the celebrated medallion of Napoleon and Marie Louise, with the medallion itself; and it will be found, by measuring the distance from the corner of the eye to the greatest projection of the frontal sinus, in the head of Napoleon, that the space occupied is more than one third smaller than in the original. On taking the same measurement from the medal copied by Mr. Bate's improved machine, it is quite accurate.

5873. Sir *Robert Inglis.*] You stated that the machine of Mr. Bate has been so improved as to be capable of removing the distortion of which complaints have been made; and you have produced, as a specimen of the first machine of Mr. Bate, the impression marked B, being from the head of Cheselden, in which the upper part of the head appears inclined to the spectator?—It is precisely so.

5874. That is, in other words, the effect which some witnesses have described by the term distortion?—It is.

5875. Has he corrected that subsequently?—He has; and as a proof that I think so, I have now entrusted him with another impression from the Cheselden medal, and he is on the point of making one, which I am quite sure will be a correct and faithful representation of the medal.

5876. Lord *Sandon.*] Do you think it would give a great stimulus to the art of medalling if this collection of medals in the British Museum were engraved?—I have not the slightest doubt of it; I think it a very important national work, and one that would be of the greatest possible benefit to numismatic science, and also to the country at large, by an extended circulation of engravings from medals.

5877. Are you acquainted with British medals generally?—I am generally.

5878. Are there many of them that it would be advantageous to the numismatic art generally to have dispersed by means of engravings?—Very important indeed.

5879. For the art as well as for history?—For the art as well as for history, more particularly for fixing dates upon the mind; there is more certainty as to the correctness of dates upon medals than there is in any other way.

5880. Would it contribute in any degree to the history of the arts in this country?—I should think it certainly would.

5881. And be a work likely to be desired by foreign countries as well?—It would extend all over the Continent.

William Brockedon, Esq., called in; and Examined.

William Brockedon, Esq.

5882. Sir *Philip Egerton.*] YOU are a member of the Royal Society, and other scientific bodies, a painter of history, and a member of some foreign academies, and you have published many works accompanied with beautiful illustrations and engravings?—I have.

5883. Consequently you are well acquainted with many branches of engraving, and have employed engravers in the execution of your works?—I have.

5884. Have you any knowledge of the processes of engraving medals, cameos, and embossed surfaces by machinery?—I have, of different methods; by the old machine and Bate's improved machine.

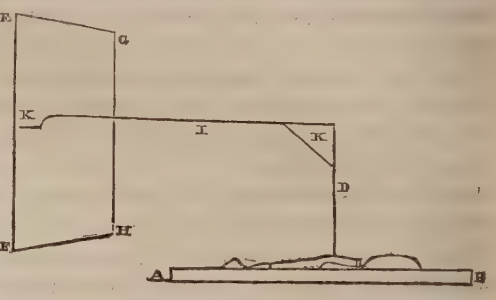
5885. Can you give the Committee your opinion upon the process?—Yes. I have now before me a medal which has been cut in sections, in order to explain the

William Brockedon, Esq.

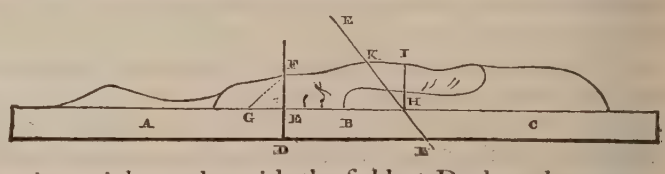
21 June 1836.

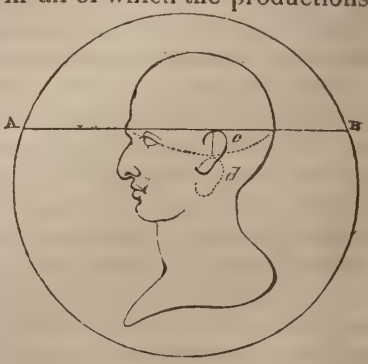
the difference between the old and the new processes; it is a French medal of Napoleon and Marie Louise. The earliest process with which I became acquainted was that which we now term the old; that was four or five years since. Though I have not seen specimens, I know that a similar process had been employed at a much earlier period; for there is in a French work, called "Manuel de Tourneur," of which a second edition appeared in 1816, a process by which, in a very rough way, embossed surfaces can be drawn or laid down upon plane surfaces, with the effect of relief.'

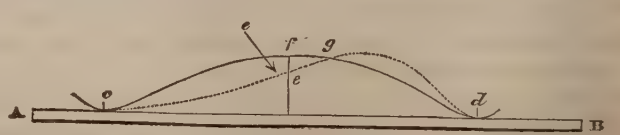
5886. Sir *Robert Inglis.*] Is that the invention to which Mr. Babbage has called the attention of his readers?—It is. I will now endeavour to explain the old machine: Having laid down the medal (A B, fig. 1) to be engraved, the vertical tracing-point D of the instrument is made to pass over it at right angles with the plane of the medal, and consequently as it passes it must be raised and lowered as it follows the variations of surface in the medal; in order at the same time to trace such varying lines upon a plane surface, imagine a plate of steel or copper, E F G H, upon which the image is to be traced for etching, placed at right angles with the plane of the medal; you will perceive that as the tracing-point D is lifted, and passes through a vertical plane across the medal, it lifts also the etching-point I, attached at right angles to the tracing-point D, and marks upon the plate a curved line K, which agrees perfectly with the curved line described by D across the medal in lifting; a straight line across the field of the medal would be represented by a straight line also on the plate, but wherever there is relief or embossment this lifts the point which touches the medal, and the etching-point marks its course. Now, the fault to which that process was liable will be found in many of the examples which have been placed before the Committee to-day, not only in those executed by the old English machine, as in the head of Cheselden, but in other examples from the French, which have been measured, and shown to be distorted and erroneous, and the way in which that distortion is produced I think I shall be able to explain.



Here are three pieces (A B C, fig. 2,) which united make a complete cast or impression of the large Napoleon and Marie Louise medal; the pieces exhibit two sections across the medal, one is at right angles with the field at D, the other at an angle of 45° with it at E. I will at present speak of the right-angled section only. The tracer, as in D, fig. 1, in passing over in the direction of the section D, fig. 2, would trace in rising over the curved surface from E to F a similar curved line on the plate, but which line would not be represented on the plate as at E, but at G, as far from it as each point touched by the tracer is above the base, and the error in the representation amounts to the whole of this difference. This error exists in all the old machines that I have seen, and must exist in all of which the productions exhibit this defect. These defective machines present, if the lines be horizontal, the appearance of the top of the head leaning towards the observer; thus, if the line A B be traced across the medal, fig. 3, touching the top of the ear, the dotted line representing the curve of elevation of the head in relief, will represent the true position of the ear in the medal *c*, in the false position of the dotted ear *d* in the engraving. The outline of the engraving, when traced by either the old or the new machine, is correct; the distortion is in representing the relieved or embossed objects within it. A familiar illustration of this may be given. Fig. 4, A B, is a table upon which is a piece of paper fixed at the opposite edges *c* and *d*, but so pressed together that the paper







rises

rises in the curve; let the points *c d* represent the opposite points touching an outline, if a pressure in the direction of *e e* be made against the paper, it thrusts forward the point *f* in the curved line to *g* in the dotted curve, though the points *c* and *d* remain unchanged and equidistant. Perpendiculars from the curved line would on the dotted curve be wider apart from *c* to *g*, and closer from *g* to *d*. To this distortion the less offensive name of foreshortening has been given, but as no change in the outline takes place, it is obviously distortion.

5887. This has relation to the old machine?—To the old machine entirely.

5888. Lord *Sandon.*] This creates false shadows?—Certainly, because of the undue crowding of the lines on the shadowed side. I will now describe the new machines, for I am acquainted with two, both of them obviate the distortions produced by the old machines; one is the invention of Mr. Bate, optician in the Poultry, who has taken out a patent for the improvement, and spent large sums in bringing it to its present perfection. The other machine I have been allowed to bring with me, the better to enable the Committee to understand its principle, which is the same as Mr. Bate's, but differently applied; this machine has been very recently invented, and made by Mr. William Froude, a son of Archdeacon Froude, a young engineer of great promise, who distinguished himself as a first-class man at Oxford. As all the correct engravings of medals placed before you were, however, produced by Mr. Bate's machine, I shall refer to his, by which three years ago Mr. Bate engraved for me a head of Michael Angelo for the card of the Graphic Society. Instead of the vertical section of the medal, as shown at D fig. 2, Mr. Bate takes the section that is formed by a plane at the angle of 45° E E. The result is, that instead of the tracer passing in a straight line across it, as at H I, you here get a curved line over the medal from H to K, which curved line actually represents (if the tracer pass over the medal at an angle of 45°) a curved line on the plate, which is exactly equal to a line on the field of the medal, which is constantly perpendicular to the curve traced on its surface. In proof of this, I place the oblique section on its base, and trace with a pencil held perpendicularly to the base the curved line of the relief, which the obliquity of the section presents; the line thus traced on the base perpendicular to this curve is exactly the same as the line traced on the copper plate, by the etching point; thus, both the tracing and the etching points coincide in their curves, instead of, as in the old machines, where the lines directed to the base by the tracer were straight, whilst the etcher represented the curve of elevation, the whole amount of difference being error.

5889. Lord *Sandon.*] In fact, the tracing line is constantly perpendicular to every portion of the field of the base?—Yes.

5890. Mr. *Marshall.*] Why is the elevation of 45° the most advisable?—Because at an angle of 45° the tracer extends laterally, exactly as far upon the surface of the medal as its perpendicular at that point is from the base or field of the medal. By the new process, as I have already stated, both the tracer and the etcher describe the same curve, and gives at that angle an apparent equal relief in the print to the medal itself.

5891. Lord *Sandon.*] Are you obliged in that machine to adjust the instrument to every line?—No, the etching point and the tracing point move with the same adjustment for the spaces between each line; this you will perceive in the machine invented by Mr. William Froude, but his is not so readily adjusted as Mr. Bate's, though he obtains by his arrangements the angle of 45°, which is so necessary and valuable in making the tracer and the etcher perform exactly the same curve.

5892. Sir *Philip Egerton.*] Having stated that a great amount of error is consequent upon the operation of the old machine, and having explained the cause of that error, and having also explained to the Committee the very ingenious method by which Mr. Bate and Mr. Froude have corrected that fault of the old machine, have you any engravings with you by which you can show the Committee the comparative merits of the productions of the two machines, the old and the new?—I think I have. Before Mr. Froude went out of town he desired me to ask Mr. Bate to make a cone, the height of which should be equal to the radius of its base; he said, "If you get such a cone, the old machine will throw the point of its engraved representation upon the periphery, whilst with the new machine you will have it in the centre." This example [*producing one*] was the result of the first experiment; subsequently another was made, half the radius.

5893. Lord *Stanley.*] In one case it is half way between the centre and the periphery, and in the other it is correct?—Yes. As another illustration beyond the mere cone, I have here an example of a production by the new machine; it

William Brockedon, Esq.

21 June 1836.

has been recently executed expressly to place before the Committee; it is evidence not only of the accuracy of the new machine, but also of the rapidity with which such a work as this can be executed. This large medal of Henry 4th, about four inches in diameter, was begun last evening at four o'clock, and finished at two o'clock this morning, that is, finished in the tracing upon the etching ground; it then went into the hands of an inferior artist, who bit the lines traced through the ground with an acid, and it is now a proof that if an artist had superintended it, it would have united all the beauties of such a work of art: its accuracy you will see by comparison.

5894. Even this is a faithful representation of the medal?—It is, under all the disadvantages of haste, and wanting the aid of an artist.

5895. Lord *Sandon*.] In these two heads, the one of the new machine looks you in the face, the one of the old machine looks askance?—Yes, that is the distortion consequent; on the use of the old machine, though there is a mode of rendering that error less offensive, and I understand that it has been adopted by the French artists. It is by an adjustment of the etching point upon the plate to be engraved, so as not to give the full height of the relief. In subjects which are in very high relief the distortion is so obvious, and has been felt so strongly by those who use the imperfect machinery, that to prevent its being too offensive they have only allowed an elevation of one-third of the relief in some instances; but the whole amount of that third is error. It is very true that two-thirds have been spared, but then you have produced another error, which grows out of the correction, by falsely representing the height of the actual relief of the medal; because, if the height of the relief be three-fourths of an inch above the base, at its greatest height, and the relief be reduced to one quarter of an inch, it is not a representation of the amount of the true relief, though it is less offensive, because there appears to be less distortion.

5896. Sir *Philip Egerton*.] Are the Committee to collect from your evidence that, under the superintendence of an artist, the machines which have been invented by Mr. Bate and Mr. William Froude are calculated to represent, with great accuracy and with good effect, such a series of medals as that to be found in our national collection of the British Museum?—Yes; I believe that the principle of their construction affords the only way in which medals can be accurately engraved; because if any engravers of skill are employed to execute the imitation of such work in the ordinary way, by line engraving, they do not represent a metallic surface; a print is in fact only a conventional resemblance of a face in black and white, and line engravers have a conventional mode of touching by dots and crosses, so as to represent the texture of flesh. The engraving by Mr. Freebairn, from Sir John Soane's medal before you, is a good example. But it may be an engraving of a painted portrait; there is nothing hard, nothing metallic, in its appearance to represent a medal; and these are characteristic qualities which can only be represented by the process of engraving by these machines. The ordinary modes of engraving are not only very costly, but for this purpose every way inferior; and you have to trust for accuracy of resemblance to the skill of the individual artist employed. There are however certain very small and delicate works, which it is extremely difficult to give well by this machinery; and in such cases touching a little with the graver will often be necessary to aid the details of the work.

5897. Have you any doubt but that the machinery used for this purpose is still capable of considerable improvement, and that such improvement is likely to take place within a limited period of time?—No; my opinion is, that the new machine is incapable of improvement in principle, though in some details improvements may be suggested; accuracy is now obtained. You may have different machines to obtain such accuracy, but you cannot go beyond accuracy; and therefore it is incapable of important improvement. The difference between such things as have been produced by Mr. Bate and the French works is, that the French works have been under the superintendence of skilful persons, while Mr. Bate has been unaided by the judgment of artists. When a medal is to be engraved, an artist should point out in what direction the light should fall; Mr. Bate has generally thrown his light upon the front of the face, while the French, on the other hand, have skilfully thrown the light upon the back of the head, and if they had had an accurate machine for their work they would have approached perfection. It is also after the tracing by the machine that the skill of the artist is required, and it is not necessary that he should be a first-rate artist. I would venture to say that in Messrs. Finden's establishment, out of 50 pupils and assistants, 40 of them could

could be put at an hour's notice on this work, so as to produce it as perfect, with the artist's skill, as any examples that have been shown to-day.

5898. It also requires some little judgment to decide in what direction the tracing point should traverse the line of the medal?—That is what I mean by the direction of the light, as it always falls at right angles to the line traced; and the artist is required beyond this, because, when it goes into the hands of a person to etch it, he must observe the progress of the acid, and know its effects in the depth and colour of the lines. These are advantages which the French possess, but which have not yet been required in this country, though hundreds may be had the moment they are wanted. Here is a specimen of the skill of the artists employed on the Tresor de Numismatique, a work now publishing in France; I venture to say that, as far as the skill of the artist can go, nothing can exceed the perfect beauty of this specimen plate of their work; but that is due to the artist, not to the machine. This is specimen No. 2, produced by Collas's establishment; the taste and judgment with which it has been etched up to a beautiful tint of colour, is one of the finest specimens I ever saw.

5899. Mr. *Hawes.*] Do you think that the French machine possesses any advantages in medals of very low relief and small size?—None whatever; because, however low the relief may be, the instrument by which it is traced is still erroneous; not a line out of the straight line can be drawn by that machine which is not erroneous, nor by any known, unless the diagonal tracer be employed. This is capable of mathematical demonstration. There is hardly a stronger evidence than in the two engravings of Ariadne, by the old and new machines, and in that which has just been produced, already mentioned, that of Henry the Fourth, a front face. Those who use the old machine avoid a front face as much as possible. I have been informed that the Ariadne has been sent to France, with a request that they would produce a specimen of engraving from that gem; it was sent as a challenge to Messrs. Collas's establishment in France, but it has not been accepted.

5900. Mr. *R. Colborne.*] Have you ever considered the question, whether if a work of this kind was undertaken under the patronage of the Trustees of the British Museum, it would pay its expenses without Parliamentary aid?—I think it would; I have no doubt it would pay its expenses after a short time; but many expenses would be necessary before the work could be known. Expenses would be incurred before any return, which perhaps might be alarming; but I think money advanced in aid of such a work would be repaid by its proceeds. If a sufficient number of subscribers were found at first, it might be published without aid; especially looking at the price at which it could be executed, which I have the means of knowing. Here is an example of the Athenæum head: the original head was charged 40 guineas by Mr. Lane; it is the head of Minerva, the seal of the club. I inquired of Mr. Bate at what price it could be executed by the machine: the answer was, that they would be very glad to do such an obverse, even as a single commission, for 1 *l.*; but that if a number were to be done, one-half of that expense would be sufficient, taking the average of medals two inches in diameter; if the whole number gave an average of two inches, they might be executed for 1 *l.* a medal; that is, both the obverse and the reverse; this would be the cost of ruling or tracing. There would be, in addition, the incidental expenses of the plate, etching, &c.

5901. Have you a specimen of that Athenæum head?—I have. [*The Witness delivered in the same.*]

5902. You are quite of opinion that if a work of that kind is ever undertaken it must be by machinery?—Certainly; because it not only is by far the cheapest, but it is the only way in which a series could be executed. It is the only way in which a plate from a medal could be executed accurately; because if you go to a line engraver, you have to trust to his skill in drawing as well as engraving, so that you have by the new machine the advantage of both the cheapest, the most ready, and the only accurate mode.

5903. Mr. *Hawes.*] You have not the remotest interest in this question beyond that interest which you have in anything connected with the arts?—In no way whatever. It is only a few days since that I heard that this Committee was sitting, and was told that I was to be summoned to give evidence upon it. I certainly feel great interest, not only as an artist, in the publication of such a collection of medals as are in the British Museum, but I have been from my childhood (my father was a watchmaker,) initiated in mechanical structures. This gave me early an insight

William Brockedon, Esq.

21 June 1836.

into the subject, and created a taste for such inquiries as led to my going to see the machine for engraving the moment I heard of it, and making myself master of its principles.

Mr. *John Doubleday*, called in; and Examined.

Mr. *John Doubleday*.

5904. Sir *Robert Inglis*.] YOU have permission to take casts in the British Museum from the coins and medals and cameos, and, generally speaking, from the works of art connected with engraving?—I have.

5905. Have you examined the different medals produced by the old and by the new machine; meaning by the old machine, that the impressions of which have been exhibited to this Committee, by Mr. Nolte, and by the new machine, that of which impressions have been delivered to-day by Mr. Brockedon and others; and can you state to the Committee what in your judgement is the relative value of those several impressions?—I have been acquainted with the French rolling-machine for three or four years, and with Mr. Bate's not so long, but the old machine I have been acquainted with about three years.

5906. Will you state what in your judgment is the relative merit of the one and of the other?—The old machine I have examined by the medals; I found them in many cases very much out of proportion; one medal which I examined was a large medal of Peter Jeannin, with about six or seven inches across the field. The amount of distortion in that was a quarter of an inch; the face was contracted about a quarter of an inch, while the head was lengthened out at the back a quarter of an inch; it was measured with spring dividers.

5907. From what work was the engraving taken?—The one published by the French artists in Paris.

5908. Do you mean the Tresor de Numismatique?—Yes.

5909. Was it in an early number of the publication?—That I cannot answer; it was from a medal of which there is one from the same die in the Museum, recently laid before the Trustees of the Museum.

5910. Has there been a considerable improvement in the style of engraving on the old plan, as exhibited in the successive numbers of the Tresor de Numismatique?—There has been an improvement in the appearance of the plates, but not, that I have observed, in their correctness; the plates have had a more pleasing appearance latterly than at the commencement, but I have not observed any improvement in their correctness.

5911. Lord *Stanley*.] Improvement in the appearance of the plates depends upon the skill of the artist, and improvement in the correctness depends upon the machinery?—It does.

5912. Have you examined the successive productions of the second machine, namely, that of Mr. Bate; and can you state whether there be a progressive improvement, or otherwise, in these productions?—I have examined those which have been produced by Mr. Bate, and measured them with compasses, and found them generally correct; they have not had the beautiful appearance which the French have, but I think correctness is far more important; in fact they were perfectly correct.

5913. Do you limit that answer to the later productions of the machine of Mr. Bate, or do you extend it generally to all his works?—To his later works.

5914. You conceive that the machine has been in continual progress since its first invention?—The early impressions of Mr. Bate's works I am not acquainted with; it is only the latter ones I am acquainted with, and I speak from those.

5915. Do you know any of the productions of the machine invented by Mr. Froude, a model of which has been exhibited to-day?—I had not heard of that machine till Saturday.

5916. From your knowledge of the state of the art in this country, and the demand for works of art of the character of the Tresor de Numismatique, do you conceive that a work of the same character in England would, as a commercial speculation, be likely to be successful?—I have not a doubt of it; it is a work that is wanted much in this country, and it is a great complaint with many collectors that we want such a production.

5917. Then you consider that it would succeed, independently of any aid to be derived from the Parliament or Government support?—I do not think a work of that extent would be produced by any bookseller without some aid from some parties or other.

5918. Then

Mr
John Doubleday.

21 June 1836.

5918. Then when you said, that in your judgment it would succeed as a commercial speculation, you meant provided some public aid were in the first instance afforded?—I mean that for such a work a number of plates would be necessary to be engraved, that a bookseller would not think himself justified in publishing the work at his own expense, because the demand would not be sufficient to repay him.

5919. In that answer, have you taken into calculation the reduction of expense, stated by a late witness to be in the proportion of 45 to 1?—I have.

5920. And still you consider that no bookseller, and no associated booksellers, would undertake the production of a work, the demand for which you describe would be great?—I think that the expense would be so great that they could not accomplish it without some aid.

5921. Lord *Sandon.*] You understand that one of these large medals was produced between four o'clock yesterday and two o'clock this morning?—I have heard that statement made, which I believe to be correct.

5922. Does not that give you a notion of the extreme cheapness with which it might be produced?—The number would be so large, that even with the cheapness with which the machine would produce them, it would not be sufficient to guarantee the publication.

5923. Sir *Robert Inglis.*] Can you give the Committee an approximation of the number of medals which you conceive to be requisite in order to supply general readers and collectors with a just view of medallic history, confining yourself first to English medals, and beginning with the 14th century?—I should think the number of medals necessary to engrave, relating to English history, would amount to 2,000 or perhaps 3,000 altogether, according to this plan. In fact, the number of medals that have been issued on different occasions are very numerous. Mr. Hawkins has a very extensive collection.

5924. When you say 2,000 or 3,000 medals, do you mean that the number should be doubled, in reference to the reverse side?—I mean double the impressions; you would have 6,000 impressions if you give the reverses; but very frequently the same head is used to different reverses, and it would not be necessary to engrave those.

5925. Sir *Philip Egerton.*] You have had considerable experience in taking casts from medals?—I have cast a great number.

5926. Do you conceive that a medal suffers any injury from being submitted to that process?—Not in taking one or two impressions from it, but by multiplying impressions from it repeatedly I think it would receive injury.

5927. It would be necessary, in order to execute such a work as Mr. Tilt proposes, to take casts?—One cast would be sufficient.

5928. Then you think, so far as that work is concerned, the medals would not suffer injury by being once cast for the purpose of being engraved by the machine?—I should say not.

5929. Lord *Sandon.*] Even the oldest medals?—It matters not what the age is, no injury would be received by taking two or three impressions; but if it were repeated often there might be a trifling wear upon the sharp parts, but there might be a multiplicity of impressions taken before it received any injury that an inexperienced eye would notice.

5930. Mr. *R. Colborne.*] Has an idea of a publication of that kind ever been considered and then abandoned on account of the expense?—Mr. Young, the dealer in coins, has frequently expressed a desire of editions of former works on medals being reprinted, but he has been afraid on account of the expense; he bought the copyrights of one of the works that was published, either Ruding's work or Snelling's; and the necessary additions to a new edition of that would cost more than the first edition cost.

5931. Has he ever applied to the Trustees or to anybody for aid?—I am not aware of any proposition of the kind.

5932. Sir *Robert Inglis.*] Ruding's work and Snelling's work were engraved by hand?—They were.

5933. Can you state what would be the relative expense of engraving, even in outline, which is the style adopted in both these works, as compared with the expense by this machine?—I have had some conversation with Mr. Corbould on this subject, and he thought that one medal would not be done for less than 12 *l.*, while by the machine it might be done for 10 *s.*

5934. Are you aware of the character of the machine invented by Mr. Bate;

Mr. *John Doubleday.*

or do you speak from its results as exhibited in the specimens?—I speak from its results; I have never seen the machine.

5935. Mr. *R. Colborne.*] If you could not have the work executed by Mr. Bate's improved machine, would you still resort to the French machine, as the best mode?—If Mr. Bate's machine was not used I should resort to the French, as being the second best.

John Henning, of Paisley, now of No. 11, Seymour-place North, Euston-square, called in; and Examined.

John Henning.

5936. Sir *Robert Inglis.*] YOU have as an artist attended specially to bas-relief?—A good deal.

5937. And executed a series of works from the Panathenaic frieze?—Yes, that was the first work I ever engraved at all.

5938. Have you continued your attention to works of the same class?—Yes.

5939. Are you acquainted with the old and with the new method of representing the surface of medals by continuous lines on a metallic plate?—I have seen and paid a great deal of attention to it, and the more so as my works on the Parthenon and Phygaleian marbles have been engraved by the old process.

5940. The work on the Parthenon and Phygaleian marbles, to which you have just referred, is a work carrying on at this moment in Paris?—Yes.

5941. Can you exhibit to the Committee any specimen of that work?—Here is a cast executed by myself from a part of the frieze, and I must say that that is not so perfect as the cast from which the French must have done theirs, because that was a cast before the engraving was quite finished. Here is plate No. 2, from the work carrying on in Paris from my Panathenaic frieze, and here is a specimen from the same work by the machine of Mr. Bate, executed recently in England as a specimen. [*The Witness produced the same.*]

5942. Was the impression which you have just delivered in (as having been executed by the machine of Mr. Bate,) taken from a better cast than that from which the Paris work was executed?—No; that is the cast from which Mr. Bate's has been done; it was a cast made before the engraving was finished, a good many years ago, and the cast which the French has been done from, is from a more finished engraving.

5943. Are you personally acquainted with the working of the machine, or do you speak of its results only?—From both, I have seen it at work; that engraving by Mr. Bate's machine has been done in the course of four or five hours. It was taken from me about eleven in the morning, and before five in the afternoon I saw an impression of it.

5944. Do you mean that you saw the impression which you have just delivered to the Chairman?—Not that impression, but a finished impression of it, and I saw part of the work done.

5945. Has any considerable improvement been made in the impression which you have delivered to the Chairman, comparing it with that which you saw yourself before five o'clock in the afternoon?—Here is the actual impression taken upon that occasion [*producing the same*]; I can account partly for the difference by the difference of the subject upon which the point works. Mr. Bate's is done upon an enamelled surface, by which means the machine works with greater accuracy, but there is no metal in my opinion sufficiently strong to resist the impression of the point without a slight impression, and I account for the many inaccuracies I see in the French work from the circumstance that they are done with a substance that is not hard enough to resist the point.

5946. From your knowledge of the state of the art in this country, and of the demand in the English market for the works of art of the character of your own Panathenaic frieze, do you conceive that a work embracing the medallic history of England could be undertaken and carried on as a commercial speculation by any bookseller, or any associated booksellers?—It is a difficult matter to answer that question; because there is a very considerable expense incurred independently of the engraving. You must have correct impressions of the medals in a substance that will resist the point. If the medals of the Museum should be done, to ascertain the one who may be able to give the most perfect fac-similes of them, I would propose that whoever could give the best fac-simile of any of the coin fresh from the Mint (which would give the clearest indications of any injury either on the coin

or

John Henning.
21 June 1836.

or cast) should have the making of the casts. In fact it is impossible to engrave them correctly with the machine, without the most perfect casts. My work has been pirated all over Europe. The gentlemen at Paris have taken my work, and engraved from it; after I have wasted years of life in doing this. The gentlemen at Paris behaved very politely to me; I sent over a letter to them, saying that I thought it was not very decorous to publish my work without recognizing my name; for I found on examining one plate that my name had actually been expunged. They behaved very civilly to me, and they sent me 13 copies; but what is that compared with the hundreds they have sold?

5947. Will you explain the quality of the material which you employ in your own casts?—That is enamel or crystal.

5948. The hardness of which exceeds that of any other material employed in similar works?—Yes. I can account for the superiority of Mr. Bate's in this case, from the circumstance of the surface being of such a nature that his point operates upon it without making any wound in it; that is the way in which I account for the difference in the appearance.

Measure of the Figure 14 WEST, F. Mr. Bate's is a fac-simile.

The French Measure.

I do not know of any substance so capable of giving a fac-simile impression, except type metal, but that is too soft for the point of the engraving machine.

5949. Sir *Philip Egerton.*] It is rather an expensive process, making casts in that enamelled glass, is it not?—It is; for you require first to make the mould itself, and then it has to go through a chemical furnace, and you must take the impression while it is in a state of fusion; the mould does only once. When I first saw the French work, from my intimate knowledge of my own work, I was surprised at the monstrosity of the faces which are done in front; some which are done looking up, in these engravings are looking down and distorted; I attributed this to the bad ones from which they must have worked; but finding this error the same in all the front faces, this assured me that there must be something wrong in the machine; the evidence of Mr. Brockedon has put this in the clearest light to-day.

5950. Can you state about the expense of executing a cast in the enamelled glass of the size you handed in to the Chairman?—I would not make a cast such as that for less than 15*s.* If the medals are to be engraved you must have them cast in something of that kind. Of course, according to the size the expense would be less.

5951. Mr. *R. Colborne.*] Is your name not upon the plate published at Paris?—In the first impression which I saw I could not discover my own name. A gentleman told me that with a microscope it might be seen, and he discovered the name of Henning. I then examined, and thought that I could see that the work of the etching point or graver had been used to obliterate the name.—Mr. *Nolte.* The name of Mr. Henning, as being the author of the casts, was introduced in the description of the work, together with several others.—Mr. *Henning.* I never met with it*.

Mr. *John Bate*, Examined.

Mr. *John Bate.*

5952. Lord *Stanley.*] YOU have heard the evidence which has been given to the Committee by the gentlemen who have been examined upon this subject; have you anything to say in addition to what they have stated?—All that I can speak to is the difference between my machine and the French; and Mr. Brockedon has so fully explained that, that I have nothing to add to what he has said.

---

* 11, Seymour-place North, Euston-square, 7 July 1836.

Sir,—Having been led to believe that a certain part of my Evidence, given by me on the 21st of June, before the Committee on the British Museum, may be misconstrued, so as to imply a censure on the publishers, at Paris, of a set of Engravings from my Sculptures, after Parthenon and Phigaleian Friezes, I consider it just to state to the Committee, that I am now in possession of a volume of that work, in which my name is introduced as the author of the Reductions from which the engravings have been done, not only in the preface, but also in the index; this I find was done immediately on my complaining of the neglect, which I am now satisfied was unintentional. As I do not wish a false impression to go before the public, I beg that you will have the goodness to allow this to be inserted on the Minutes of the Committee.

With the greatest respect, I have the honour to be, your humble servant,

To the Chairman of the Committee.

John Henning, Sen.

Martis, 12° *die Julii*, 1836.

MEMBERS PRESENT.

Mr. T. G. B. Estcourt.	Mr. Bingham Baring.
Sir Robert Inglis.	Mr. Hawes.
Mr. Thornely.	Mr. Marshall.
Mr. Ridley Colborne.	Lord Sandon.
Sir Philip Egerton.	

MR. T. G. B. ESTCOURT, IN THE CHAIR.

Mr. *Vincent Nolte*, called in; and further Examined.

Mr. *Vincent Nolte*. 12 July 1836.

5953. *Chairman.*] DO you apprehend that the evidence you have already adduced in explanation of the properties of your machine is not sufficient to convey to the Committee a just idea of its powers and accuracy?—Yes, I do so, most decidedly. Owing to the terms old machine and improved machine, which have been introduced on that occasion, the distorting properties of Mr. Bate's old machine have been blended with the qualities of ours, which was not present, nor have any of the witnesses ever seen it. Hypothetical grounds have been assumed, and inferences drawn from our engravings, to show the pretended inaccuracy of our machine; and all that has been said upon that subject does not convey a just idea of the capacity of the machine.

5954. Will you state in what particulars the evidence is defective?—I wish first to satisfy the Committee that the machine can produce a correct engraving, by laying one before them. The Soane medal has been produced, and has been measured. When I found that some objections were taken to the correctness of our engraving of that medal, to satisfy all views of the matter, I had another engraving taken of it, which I have now produced, and which shows to the Committee, if it be measured in the same comparative way in which the other was measured, that is to say, from the lobe of the ear to the point of the nose, or from the lobe back to the head, or from the lobe to the frontal sinus, and so on, that it answers all the exigencies of that mathematical accuracy which some are disposed to require. It corresponds, in fact, and most accurately, with all the proportions of the medal.

5955. Is that specimen which you have now produced, in your opinion, mathematically correct?—Yes: however, I must observe, that we have found latterly that as our engravings are executed from casts in brass, which are taken of these medals, the shrinking of the cast always diminishes a little the size to the eye; wherefore our engravings from medals generally give an idea of their being a little smaller than the medals from which they are engraved. This, I can easily prove arises from the shrinking of the cast.

5956. And so far, the engraving is not accurate?—Certainly not: our casts cost but a trifle. Mr. Bate has taken his engravings from casts in enamel, which may have cost from one to two guineas a-piece, and the engravings taken from these casts in enamel are apt to be (where a pair of compasses is applied) a little more accurate than ours. It has been stated in evidence, with doubt by one witness, but positively by another, that there was not a corresponding movement between our tracing and our cutting points, the one moving in a straight line, the other producing a curve. This is a mistake; the difference that may be found merely arises from the view taken by our artists of the manner in which the medal is to be engraved. We usually take a perspective view of it, which is invariably found to answer all purposes, particularly that of giving the effect of relief, better than one taken from the top. It has also been stated, that in order to conceal a distortion, (which I cannot admit,) we have contrived to lessen the relief of the medal, and that therefore we resorted to another incorrectness to hide the first. This, again, is an error. We have always given the height of the relief clearly, as may be seen in all our engravings of medals and others. Mr. Bate, in his machine, has got over the difficulty, by giving no relief at all, as I will show to the Committee in the following instance. Here is an engraving, which has been already before the Committee, of a medal

Mr. *Vincent Nolte*

12 July 1836.

a medal with the head of Henry the 4th by our machine, and another engraving of the same medal by Mr. Bate. [*The Witness delivered in the same.*] In our engraving, the height of the relief is perceptible by the shelving of the bust towards the plane of the medal, by the collar, &c. Mr. Bate's medal shows nothing of the kind: it gives shadow, but no light. I have further to state, that an account of a comparative measurement has been given by one of the witnesses of the large medal of Pierre Jeannin. Although his geometrical eye could discover a difference of one-third of an inch in the head, it has not been able to see within the whole of an inch the width of the diameter of the medal. Mr. Hawkins, now in the room, has it in his hands, and its diameter measures exactly seven inches and a half. Here is our engraving of this very medal, which we consider one of our best productions, and in which there is a relative difference in the diameter from the medal. The diameter of that engraving is less by three lines than that of the medal. We consider this engraving, as I have already stated, one of our best productions, from the very circumstance of the medal being in the highest possible relief, and one of difficult execution.

5957. You produce this engraving to show the accuracy of the work of your machine?—Not exactly. To show that as we do take our engravings from casts made of brass or copper, and as these casts shrink, they will of course be a little less in size than the originals from which they are taken. The diameter of the medal is seven inches and a half, whilst the diameter of our engraving, being equal to the cast, is seven inches and a little above three lines. The cast having shrunk so much in proportion, the engraving is, of course, much less. The principal reason why I think that the opinion formed of our machine upon the foundation of its productions is an incorrect one, is, that in no instance allowance has been made for the perspective view which we have invariably taken of the medals. We conceive that to be the fittest and the best for the eye of the public at large, and for collectors of medals, because it enables us to give the effects of light and shade, and we cause our engravings to be executed accordingly. There is no imperfection in the machinery, but there is merely a voluntary departure from that mathematical accuracy which we might have maintained if we had thought fit to do so. In the taking the perspective view, there must be always a little fore-shortening. If the Pierre Jeannin medal had been measured across the head, it would have been found that the engraving is nearly a line less in width than the medal itself, which arises both from a little shrinking in the cast of the medal and from fore-shortening.

5958. In that shrinking of the cast, does it shrink in a greater proportion in one part than in another?—Sometimes. Mr. Faraday will be able to explain that satisfactorily. Every subsequent cast is a little smaller than the first, whilst an enamelled substance resists the effect of contraction. Our machine is capable of executing perfect engravings where they are required.

5959. Is that engraving in the state in which the impression was taken off?—This is a medal from the collection in the British Museum. Our medal at Paris most probably is a little different. It is from the medal at Paris that we have taken the cast from which our engraving was made.

5960. Has your engraving been improved or touched up by a skilful artist since it left the machine?—Yes. We had many experiments made to improve the operations of the machine. For instance, as to the engraving of the cone which has been produced, we have had in our possession a machine similar to the one said to have been made by Mr. Froude, upwards of 18 months ago. Mr. Collas had invented the same thing, and I stated that to Mr. Brockedon the moment I saw it. But we found that the hand of a skilful engraver was far more useful, and could be more intelligently applied than the operation of a diagonal tracer in the manner in which it was explained the machine of Mr. Bate was made to move. In the instance of the Soane medal, this is the very medal which was sent over to Paris. We took a cast in yellow copper, and from that yellow copper cast we have made the engraving. If it be measured, our engraving is less by a line in the diameter than the medal, which solely arises from the shrinking of the cast. I have nothing further to say, except that, as it has been stated in evidence by one of the witnesses that we have received a challenge to engrave the head of the Ariadne, and that that challenge had not been accepted, I trust I may be permitted to return the compliment, and to produce herewith something which I should be very happy to see executed by Mr. Bate's machine.

[*The Witness delivered in an engraving.*]

Mr. *Vincent Nolte.*

12 July 1836.

5961. Is not the specimen you have just delivered in an engraving from Mr. Henning's cast, taken from Stoddart's Canterbury Pilgrimage?—Yes. Please to observe that the inclination in the angles or corners arises from a defect of that description in the cast, and that it is by no means the fault of the machine.

Mr. *Robert Faraday*, called in; and Examined.

Mr. *Robert Faraday.*

5962. *Chairman.*] YOU are the brother of Dr. Faraday, the celebrated chemist?—I am.

5963. What is your profession?—A brass-founder, a gas-fitter, and general brass worker.

5964. You have had extensive practice and large experience in that way?—I have.

5965. Have you ever noticed that casts in metal from any mould will, when they become cold, be less than the original from which the casts are taken?—Invariably so.

5966. Will you state the cause of that?—A contraction in the settling and cooling of the metal.

5967. Is the extent of that dependent upon the quantity of metal that is used in the cast?—We consider that a round article, about six inches diameter, will shrink about the eighth of an inch; it is in that proportion.

5968. Is that at all dependent upon the thickness of the cast?—It does not depend upon the thickness, because it shrinks equally in all parts. If one cast is double the thickness of another with the same diameter, the shrinking to the eye will be the same, although it does shrink double; it is like two articles shrinking. If an article six inches diameter shrinks an eighth of an inch, an article double that thickness and the same diameter will shrink the same to the eye, though in reality it does shrink double, but not in the diameter; it has to shrink two thicknesses.

5969. Sir *Philip Egerton.*] That is to say, the contraction in the superficies of the cast is equal in both cases?—It is.

5970. Mr. *R. Colborne.*] And it is always that, never more or less?—Not in all metals; not a metal I am speaking now of, brass; it is about the eighth of an inch in an article about six inches diameter. In some cases, where there are greater thicknesses in one part than in another, it sinks in the thickest part in the settling of the metal; sometimes it contracts very considerably indeed in the settling of it.

5971. *Chairman.*] Do you know any substance that will effectually resist the effects of heat and cold, and permit true casts to be taken?—No, I do not; there is enamel, and there is brimstone, but brimstone will not effectually resist heat and cold, and enamel is not, I believe, cast at all; it is a kind of paste or glass, a composition of that kind; I do not think it is poured in; I think it is placed as an amalgam or paste would be.

5972. Have you ever taken casts from medals?—Frequently.

5973. Have you found that those casts were reduced in size?—Always; I should say the article of tin does not shrink so much as that of brass, or any harder metal, because it does not require so great a temperature to liquify it; it does not have occasion to contract so much.

5974. You have seen the Soane medal?—I have.

5975. Have you examined it?—I have not examined it.

5976. Have you noticed it sufficiently to be able to say whether the difference of a line in the diameter of the Soane medal, as it appears in that engraving, arises from a corresponding contraction in the cast, taking a line to be the twelfth of an inch?—I should say barely so much, but I should not wish to speak positively upon that; it might possibly be as much as a line.

5977. In the cast of a medal which has a diameter of 7 ½ inches, such as the medal of Pierre Jeannin now upon the table, if taken in brass, would the loss of a fourth part of an inch be the natural effect of the contraction?—I should say not quite so much as that.

5978. Mr. *Baring.*] Would that contraction be proportional throughout?—Yes, it would.

5979. So that it would clearly account for a representation taken from that cast being generally smaller than the original medal?—It would shrink in equal proportion.

5980. But

505

Mr. *Robert Faraday.*

12 July 1836.

5980. But if you were told that in the representation of this cast the distance between the ear, which is in the centre of the figure, and the back of the head was increased, whereas the distance from the ear to the nose is diminished, would you consider that distortion of the features cannot be accounted for by the contraction of the metal, but must arise from some other circumstances?—I do not think it is possible in a medal; I have never noticed an instance of the kind; I am speaking of a cast only.

5981. That distortion must arise from some other circumstance than the shrinking of the metal?—If it is correctly cast it must; sometimes in casting the flask overlaps a little, and will produce a distorted cast, but that is bad workmanship.

Mr. *Benedetto Pistrucci,* called in; and Examined.

Mr. *Benedetto Pistrucc*

5982. Mr. *Hawes.*] YOU are a gem and die engraver, and chief engraver at His Majesty's Mint?—I am chief medallist at the Mint, where I was also chief engraver when the new coinage was brought out at the end of the war.

5983. And a member of some learned societies, among others the Academy of San Lucca at Rome?—Yes, and corresponding member of the Royal Institute of France.

5984. You have had great experience in the art of engraving medals?—I have had an experience of 20 years.

5985. Have you seen any engravings of medals which have been the work of machinery?—I have seen some, two or three years ago, at the Duke of Sussex's party one evening; a person was there showing some of the first specimens; and I have seen them recently.

5986. Were they specimens of the French machine?—I have seen lately the specimens of the French machine; those which I saw at the Duke of Sussex's were of the English machines.

5987. Have you ever had an opportunity of comparing two engravings of the same medal, one by the French machine and the other by the English machine?—I have compared them lately.

5988. What opinion have you come to?—My opinion is that both are very clever, but each of them is deficient in that which makes the chief merit of the other; the French machine is beautiful and admirable for the effect, and gives a correct idea of the work, but in a perspective view, or what I may call more appropriately fore-shortening, it does not give the objects precisely as we see them when we look at the centre of a real medal, but in chiaro-oscuro, and with much effect. The English one gives it straight, as far as I can judge; but I cannot say that it is mathematically correct with the original, not having had the original medal before me to compare it with; and it is possible that there may be a difference in the height, though not in the breadth, of the objects rendered; but the engraving is flat and hard, with little or no effect. I think, however, that both are preferable to common engraving, as well as to drawings. This mode of imitative art gives greater accuracy than if drawn by the hand of the greatest draughtsman; nor will that of the most skilful engraver be so accurate as either of those two machines, even in their present state.

5989. The Committee have been told that in the engravings produced by the French machine there is a distortion or inaccuracy, arising from the arrangement of light and shade; will you favour the Committee with your opinion upon that?—I cannot find out this distortion; I cannot call it a distortion, if it arises from the point of view that is taken of the medal. I call it correctness, not distortion; because the point of view which the machine takes of the medal must give a correct drawing. If it was not in a fore-shortened or perspective view, the whole would then indeed be incorrect; because all that is called enlargement, I suppose to be the effect of the tracer passing over the relief, which makes the line a little longer than it would be if it passed over a straight plate.

5990. Should you be satisfied to place a medal of yours in the hands of the proprietors of the French machine, with a view to its being engraved, the engraving to be considered as an accurate representation of your own work?—Yes, I should; but the public at large, not those accustomed to look at such things, should be made to understand that it gives a fore-shortened or perspective view of the original.

5991. But confining your answer to a medal in high relief and a front view; should you be disposed to place a gem, for instance, that you have engraved in the

Mr. *Benedetto Pistrucci.*

12 July 1836.

hands of the French engravers, in order to obtain an engraving from it to exhibit as a correct representation of your own work?—Yes, I should; because this machine gives a correct drawing in a perspective view, though it does not give it straight; it does not give it as you look straight to the profile of a person, but a part of the profile is lost: but still, though the French engraving will thus appear shorter in the side which falls off, it is still an accurate representation in the point of view. I should add also, as the question refers particularly to my gems, that these would not be correctly represented by the French method, inasmuch as the tracer, always passing over a metallic surface, will always give a metallic appearance to the print, whatever be the material of the original.

5992. Take the front face; should you be satisfied with an engraving the product of the French machine?—If I had no better, I should; but if the relief is high, the appearance of the fore-shortening would be still stronger.

5993. Mr. *B. Baring.*] What you mean by looking at the perspective is this: that the features in the engraving occupy the same relative proportions of space in the field of sight, as if you looked at the medal itself obliquely, say at an angle of 45°?—Exactly so; but the angle to be supposed would be much smaller than 45°.

5994. Mr. *Hawes.*] There are now two engravings before you; one of a large medal by Andrien, representing the heads of Napoleon and Maria Louisa, executed by Mr. Collas's machine; the other, the same medal, engraved by the machine of Mr. Bate: in the case of the French engraving, it is said there is great distortion and inaccuracy, which does not exist in the English engraving; will you compare the two, and give your opinion upon the subject to the Committee?—I have before said that no distortion is produced by the French machine; but it is like looking at a colossal statue, and making a drawing from the point where you stand. The machine acts upon the same principles; it gives you a point of view; then, if you take it from one side or the other, you fore-shorten the distant side. This other, the English, gives the view more straight, but here is no relief; and I cannot tell how far it is an accurate copy of the original medal; it makes everything pretty and everything good; it makes it all in one relief; there is no gradation of tint, as you see in this.

5995. Are you of opinion that the same effect is not to be produced by the machine called Mr. Bate's as is produced by the French machine?—I am of that opinion; but if it was possible to unite the two, that would be the perfection of the thing.

5996. Mr. *Ridley Colborne.*] It is your opinion, that if there could be an union of the two machines, a much more perfect one could be made than we possess at present?—Certainly I am of that opinion; because what is deficient in the one is good in the other. The one, the English, is deficient in effect, and the other, the French, though not deficient in outline, does not give the objects straight.

5997. Mr. *Hawes.*] Is it your opinion that the difference consists in this, that in the one case the medal is accurately engraved, and in the other case the effect of the medal to the eye of the spectator is accurately given?—I cannot say that the English engraving agrees accurately to the medal, because I have not the medal before me to compare with it, and see whether it gives the proportion correct to the original.

5998. Sir *Philip Egerton.*] Cannot you arrive at a correct comparison by comparing one engraving with the other?—If you compare the one with the other, you only find the measures in the two are not exactly alike.

5999. *Chairman.*] To what do you attribute that?—I attribute it to the different point of view taken by the French machine, with which to produce effect; the tracer in passing over the relief makes longer lines than the English machine. The English machine has been contrived to overcome the necessity of lengthening the line, as it follows roundness of the work, and gives it more correctly in diameter; and that is the reason why it is deficient in effect, because the lines do not enlarge and swell out as in the French one; but still it gives the outline more straight.

6000. Sir *Philip Egerton.*] Supposing you were to place one of your own works in the hands of an artist to engrave by hand, should you instruct him to give you a correct copy of the medal, or to give you a perspective view of it?—A correct copy of the medal.

Mr. *John Wilson*, called in; and Examined.

6001. Mr. *Hawes*.] YOU are a gem engraver?—I am.

6002. And successor to the late Mr. Fássie?—I am.

6003. Have you had much practice in taking casts of gems and medals in glass and plaster of Paris, as well as other substances?—Considerable experience.

6004. Have you found that casts in enamel escaped the effect of the contraction which occurs in other casts, and give a more accurate representation of the original?—Yes. I was not aware that the others will contract; but enamels in glass give a very accurate representation of the original.

6005. Have you executed for Mr. Bate casts in enamel, and particularly two of the Cheselden medal?—I have.

6006. What was the cost of those casts?—£. 1 each side.

6007. Did you take a cast from the Napoleon and Marie Louise medal?—No, we could not take one so large.

6008. Will you be so good as to look at the two engravings upon the table from the medal of Henry the Fourth, and compare them, and give the Committee your opinion as to which you prefer as an engraving of the original?—The English engraving appears to me to give an exact representation of the medal, which the other does not; but the French engraving has the most pleasing effect; but I cannot tell well without seeing the medal.

6009. Have you seen the engravings of medals published in Paris?—I have seen one or two.

6010. Did you ever compare them with the original?—Never.

509

— Appendix No. 1. —

OFFICE COPY of the WILL of Sir *Hans Sloane*, Bart., extracted from the Registry of the Prerogative Court of Canterbury.

Appendix No. 1.

Will of Sir Hans Sloane, Bart.

I, SIR HANS SLOANE, of the parish of Saint George in Bloomsbury, in the county of Middlesex, doctor in physic and baronet, being in health of body and mind (thanks be to God), but having before me more than most men the great uncertainty of life, and having, by the blessing of God, acquired a considerable real and personal estate, requiring some care in the disposition of them, do make this my last Will and Testament: In the first place I do very willingly resign my soul unto my Almighty, merciful and wise Creator, whenever it shall please Him to remove me out of this troublesome life, not doubting the forgiveness of what failings or transgressions, either of omission or commission through passions, inadvertencies or otherways I may have been guilty of, and thereby offended God or man, firmly hoping for a better life hereafter, having earnestly besought of God in this dark and ignorant state to direct my belief and actions according to His will, and endeavoured to inform my conscience (as much as my necessary affairs and civil duties would give me leave, and to conform my actions to it), and in doubtful cases striving to make this my rule, to do to others as I thought I should desire to be done to me in like circumstances; I will that my body shall be buried in a decent manner in the church-yard at Chelsea, about noon, or at a convenient time of the day, and I will that there be invited to my funeral such persons as I shall leave in a list by me signed, or if no such list be left then such persons as my executors shall know to have been my most intimate friends and acquaintance, and that they shall have rings of 20 *s.* value given to each of them. Whereas, from my youth, I have been a great observer and admirer of the wonderful power, wisdom and contrivance of the Almighty God appearing in the works of His creation, and have gathered together many things in my own travels or voyages, or had them from others, especially my ever honoured late friend William Courten, esq., who spent the greatest part of his life and estate in collecting such things in and from most parts of the earth, which he left me at his death, subject to several debts and legacies, which have been long since satisfied and paid, and his collections kept entire; and whereas I have made great additions of late years, as well to my books, both printed and manuscript, and to my collections of natural and artificial curiosities, precious stones and books of dried samples of plants, miniatures, drawings, prints, medals, and the like, with some paintings concerning them, now placed in my house and gardens, amounting in the whole to a very great sum of money, reckoning them at first costs to at least 50,000 *l.* Now, desiring very much that these things, tending many ways to the manifestation of the glory of God, the confutation of Atheism and its consequences, the use and improvement of physic, and other arts and sciences, and benefit of mankind, may remain together, and not be separated, and that chiefly in and about the city of London, where I have acquired most of my estates, and where they may by the great confluence of people be of most use; now I do give and devise the same unto Charles Lord Cadogan, my nephew William Sloane, esq., and the Rev. Doctor Sloane Elsmere, rector of Chelsea, whom I make executors of this my last Will and Testament; nevertheless such my bequest and gift to them is upon this special trust and confidence, that they shall as soon as may be after my decease, sell and dispose of the same, to be settled for the public uses aforesaid, at the rate of 20,000 *l.* of lawful money of Great Britain; and my will and desire is that his Grace the Duke of Richmond, the Lord Cadogan, Sir Robert Walpole, Sir Paul Methewen, Mr. Edgcomb, or any other proper persons I have the honour to be known to, who understand matters of this nature, may have access to His most Excellent Majesty King George the Second, and are willing to promote so public a good, may be humbly desired to offer them to His Majesty at the rate above-mentioned for the purposes aforesaid; but if His Majesty shall not think fit to accept of the same within six months after such overture made, then my will is, that they be offered at the same price to the President, Council and Fellows of the Royal Society of London for Improving Natural Knowledge, and upon their refusal to the Chancellor and Scholars of the University of Oxford, and upon their refusal, then successively to be offered to the College of Physicians at Edinburgh, the Royal Academy of Sciences at Paris, that at Petersburgh, Berlin and Madrid, who have done me the honour to make me one of their members; and my will is that every one of them shall have one month's time, to be accounted from the time of the respective offer made to them, which offer or intention of mine may be signified to all or any of them for the acceptance of such offer soon after my death; and in case none of the persons or public bodies aforesaid shall think fit to buy them at the price of 20,000 *l.*, then my will is that my said executors do sell or dispose of them, either entirely to any person or body of men, or in parcels by auction, printed catalogues

Appendix No. 1.

Will of Sir Hans Sloane, Bart.

logues of them being timely dispersed, and that in selling or disposing of them, and their catalogues or observations upon them, they take the advice of such persons as are skilled in natural knowledge, medals, &c., allowing him or them what my executors and they think reasonable for their care and trouble in perusing, &c., correcting my catalogues, which have been taken generally in great haste. I will that the money arising by such sale be disposed of by my executors, as hereafter is appointed and directed: I give and bequeath unto my dear sister Alice Elsmere 50 *l.*, and to her son Sloane Elsmere 50 *l.*; item, I give unto each of her two daughters 200 *l.*, to be paid them one year after my decease; item, I give unto my grandson Hans Stanley 100 *l.*, and to John Roberts, of Lincoln's Inn, esq. 50 *l.*; item, I give unto my nephew William Sloane 50 *l.*; item, I give and bequeath unto Henry Darlington and Martha Katling, my servants, 10 *l.* per annum each during their natural lives, and to all my domestic servants, who shall be in my service at the time of my death, one full year's wages over and above such wages as shall be then due to them respectively, and 5 *l.* each to buy them mourning; item, I will that my debts, legacies and funeral expenses shall be first paid and discharged out of my personal estate, if that shall be sufficient, if not, then I will that my real estate shall come in aid thereof and be charged for the same. And I hereby devise and bequeath all that my manor of Chelsea, in the county of Middlesex, with its rights, members and appurtenances, and also all my messuages, lands, tenements and hereditaments in Chelsea aforesaid, and elsewhere, in the kingdom of Great Britain, and all other my estates of inheritance and personal whatsoever, together with the residue of my personal estates above mentioned, unto my aforesaid executors, upon the trusts following; that is to say, as to one-third part (the whole in three equal parts to be divided) of the said manor of Chelsea, in the county of Middlesex, with its rights, members and appurtenances, and also one-third part of all my messuages, lands, tenements and hereditaments in Chelsea aforesaid, and elsewhere, in the county of Middlesex, to the use of my eldest daughter Mrs. Stanley and her assigns, for and during the term of 99 years, if she shall so long live, and from and after the end or sooner determination of that estate, then to the use of the said Charles Lord Cadogan, William Sloane and Sloane Elsmere, and their heirs, during the natural life of my said daughter Stanley, in trust to preserve and support the contingent uses and estates hereinafter limited from being destroyed and defeated, and for that purpose to make entries and bring actions, as the case shall require; but nevertheless to suffer and permit her my said daughter Stanley, or her assigns, during her life, to receive and to take the profits and rents thereof to and for her or their own use and benefit, and from and after her decease, then to the use of her two daughters and their lawful issue, share and share alike; provided always that such daughters, if they marry, it shall be with the consent and approbation of their mother or guardian, and if they do not marry with such consent or approbation, then my will is that such share or shares shall go to the other sister: and as to the other two-thirds of the same manor, messuages, lands, tenements, hereditaments and premises at Chelsea aforesaid, to the use of my youngest daughter Lady Cadogan (now wife of Lord Cadogan) and her assigns, for and during the term of 99 years, if she shall so long live, and from and after the end or sooner determination of that estate, then to the use of Charles Lord Cadogan, Willian Sloane and Sloane Elsmere, and their heirs, during the natural life of my said daughter Lady Cadogan, in trust to support and preserve the contingent uses and estates hereinafter limited from being defeated and destroyed, and for that purpose to make entries and bring actions, as the case shall require; but nevertheless to permit her my said daughter Lady Cadogan and her assigns, during her natural life, to receive and take the rents and profits thereof to and for her and their own use and benefit, and from and after her decease, then to the use of the heirs of her body lawfully issuing; and in case either of my daughters shall die without issue, then as to the share of her so dying without issue to the use of the survivor of them my said two daughters, or her assigns, for and during the term of 99 years, if she shall so long live, and from and after the end or sooner determination of that estate, then to the use of the said Charles Lord Cadogan, William Sloane and Sloane Elsmere and their heirs, during the life of such surviving daughter, in trust to support and preserve the contingent uses and estates hereinafter limited and appointed from being defeated or destroyed, and for that purpose to make entries and bring actions, as the case shall require; but nevertheless to permit or suffer such my said surviving daughter, or her assigns, during her life, to receive and take the rents and profits thereof, to and for her or their own use or benefit; and from and after the decease of my daughter Stanley (if she survives her sister Cadogan), then to the use of her two daughters and their heirs lawfully issuing; and for default of all such issue of both my said daughters, then as to the whole of the said manor, messuages, lands, tenements and premises at Chelsea aforesaid, to the use of my nephew William Sloane and his assigns, for and during the term of 99 years, if he shall so long live, and from and after the end or other sooner determination of that estate, then to the use of the said Charles Lord Cadogan, William Sloane and Sloane Elsmere, during the natural life of my said nephew William Sloane, in trust to support and preserve the contingent uses hereinafter limited from being defeated and destroyed, and for that purpose to make entries and bring actions, as the case shall require; but nevertheless to permit and suffer my said nephew and his assigns, during his life, to receive the rents and profits thereof to and for his own use and benefit, and from and after his decease, then to the use of the heirs of his body lawfully issuing, and for default of such issue then to the use of my niece Fowler and her assigns, for and during the term of 99 years, if she shall so long live, and from and after the end or sooner determination of that estate, then to the use of the said Charles Lord Cadogan, William Sloane and Sloane Elsmere, during the natural life of my said niece Fowler, in trust to preserve and support the contingent uses and estates hereinafter limited from being

defeated

defeated and destroyed, and for that purpose to make entries and bring actions, as the case shall require; but nevertheless to permit and suffer my said niece and her assigns to receive the rents and profits thereof during her life, to and for her and their use and benefit; and from and after her decease, then to the use *Mrs.** Hodges, her daughter, and her lawful issue, and for default of such to the use and behoof of my sister Elsmere and her heirs for ever; provided always, nevertheless, and it is my mind and will that in case my personal estate shall fall short and not be sufficient to pay and satisfy my daughter Stanley's portion, and all my debts and legacies, that then my trustees and executors before named, and the survivor or survivors of them, his executors or administrators, shall in the first place receive and take all the rents and profits of my said estate at Chelsea for so long time and until they shall thereout have received a sufficient sum for the payment of what shall then remain to be paid, and which they are to pay and satisfy with all convenient speed from and after my decease; but if any overplus shall remain after the sale of my personal estate and the payment of my daughter Stanley's portion, debts and legacies, that then my will and mind is that such overplus and remainder shall be divided between my said two daughters, share and share alike; nevertheless, I will that such share or part as comes to my daughter Cadogan shall not be paid till such further proportional jointure and settlements are made as are mentioned in the deeds or settlements on the marriage of my daughter Cadogan, as near as the circumstances of the estates of the Lord Cadogan will permit; and in case no such settlements can be made, then such part or share to be in trust to buy lands to be settled to the same purposes as is above directed concerning the two-thirds of the manor of Chelsea coming to her by this my will; at the same time that I thus leave to my daughters, relations and friends what I have, I earnestly recommend to them the practice of moral and religious duties, as being of greater use to them than anything I can leave them not only in the life to come but even in this, by helping them through the difficulties of it with more inward quiet satisfaction and better health than otherways, and with the esteem and respect of their friends and acquaintance. Item, my will is, and I hereby declare my mind to be, that it shall and may be lawful to and for my said daughters, or any other person or persons who shall be in actual possession of my said estate by virtue of the limitations of this my will before expressed from time to time by any deed or writing under his or their hands and seals, to devise, let or lease all or any part of the said premises or elsewhere in the county of Middlesex or any part thereof, to any person or persons for any term or terms of years not exceeding 21, to take effect in possession, not in reversion, reserving the same or such yearly rents which can be reasonably got for the same; and may likewise lease and devise any part of the said premises to build upon for any term or number of years not exceeding 61, to be computed from the time of making such lease or leases, so as at the time of making such lease or leases the best yearly rent be reserved which can be reasonably got for the same. Item, my will is, and I do hereby confirm all leases or deeds made by me concerning my estate at Chelsea or elsewhere. Item, I desire his Grace the Duke of Richmond to accept of such live rare animals as I may have at the time of my decease; and I will and appoint that it shall be lawful for my said executors to satisfy themselves from time to time out of the estates hereby to them devised, all such costs and expenses as they shall or may be put unto in the execution of any or all the said trusts hereby in them reposed; and I do hereby declare that my said executors and trustees shall not be chargeable with any more moneys than they shall actually receive, nor for the loss of any moneys that shall happen without their wilful default, and shall not be answerable the one for the acts of the other of them. In witness whereof I have to every one of these five sheets of paper, fastened together with a black riband and black wax, set my hand and seal this 9th day of October 1739.

Hans Sloane (L. S.)

These five sheets of paper written by me, were all of them signed and sealed by me, and all of them published and declared to be my last Will and Testament in the presence of the persons under-written, who at my request and in my presence have subscribed their names as witnesses thereunto.

John Sharpe.
George Jackson.
Raymond Payne.

Hans Sloane (L. S.) Signed, sealed and published again this 26th December 1751, as the last will of Sir Hans Sloane, in the presence of us, who at his request have set our hands in his presence as witnesses thereunto.

Andrew Suatt.
Charles Shapley.
Thomas Bookham.

A codicil to be annexed and taken as part of my will. I give and devise unto James Empson, over and above the legacy left him by any *former* codicil, the sum of 10 *l.*, for and during his life, and likewise the porphyry vessels which I used to make my medicine for the eyes in, together with all my drugs and bottles in the shagreen case, and also those which I have made use of in my private practice to the poor; and forasmuch as he may be of great use to my executors by his knowledge and understanding of my curiosities, I do give and devise unto the said James Empson the further sum of 40 guineas a year, to be paid him quarterly by my executors, or the survivor of them, to oversee and take care of my collections of rarities and curiosities, until they be fully disposed of, and to advise and

*Orig. so.

And whereas I have by my Will or former codicils given unto Martha Katling and Henry Darlington my servants, 10 *l.* a year, for and during their respective lives, I do hereby give to them instead thereof, the sum of 20 *l.* a piece for and during their respective lives; and whereas I have given unto James Empson, the sum of 10 *l.* for his life, I do hereby give and devise unto him the sum of 20 *l.* instead thereof, for and during his life, and do hereby charge all my lands, tenements and hereditaments with the payment of the said several annuities or yearly payments, the first payment to begin on the first usual quarter-day after my decease. In witness whereof I have hereunto put my hand, this 5th day of July 1749.

I, Sir Hans Sloane, of Chelsea, in the county of Middlesex, baronet, do make this codicil to be annexed to my last Will and Testament as follows: Whereas I have in and by my said will given some directions about the sale and disposition of any museum or collection of rarities herein more particularly mentioned; now I do hereby revoke my said will as far as relates thereto, and I do direct and appoint concerning the same in the following manner: having had from my youth a strong inclination to the study of plants and all other productions of nature, and having through the course of many years with great labour and expense gathered together whatever could be procured either in my own or foreign countries that was rare and curious, and being fully convinced that nothing tends more to raise our ideas of the power, wisdom, goodness, providence and other perfections of the Deity, or more to the comfort and well-being of his creatures, than the enlargement of our knowledge in the works of nature, I do will and desire that for the promoting these noble ends, the glory of God and the good of man, my collection in all its branches may be, if possible, kept and preserved together, whole and entire, in my manor-house, in the parish of Chelsea, situate near the physic garden, given by me to the Company of Apothecaries for the same purposes; and having great reliance and confidence that the right honourable, honourable, and other persons hereafter named, will be influenced by the same principles, and faithfully and conscientiously discharge the trust hereby reposed in them, I do give, devise, and bequeath unto the Right Honourable Charles Sloane Cadogan, esq., Hans Stanley, esq., William Sloane, esq., the Rev. Sloane Elsmere, doctor in divinity, and the Rector of Chelsea for the time being, Martin Folkes, esq., and the President of the Royal Society for the time being, Sir Paul Methuen, James West, esq., and the Treasurer of the Royal Society for the time being, the two Secretaries of the Royal Society for the time being, Samuel Clarke, esq., the Honourable Richard Arundell, esq., Joseph Andrews, esq., Mr. Joseph Ames, Mr. Henry Baker, the Rev. James Bradley, doctor in divinity, Astron. Reg., Sir Thomas Burnett, knight, Mr. Peter Collinson, Sir John Evelyn, baronet, John Fuller of Sussex, esq., the Rev. Stephen Hales, doctor in divinity, Theodore Jacobson, esq., Smart Lethieullier, esq., Sir James Lowther, bart., George Littleton, esq., the Rev. Charles Littleton, doctor in divinity, dean of Exeter, the Rev. Henry Miles, doctor in divinity, David Papillion, esq., Sir George Saville, bart., Sir Hugh Smithson, bart., the Rev. Thomas Shaw, doctor in divinity, Charles Stanhope, esq., the Rev. William Stukeley, James Theobald, esq., Sir Peter Thompson, knight, the Hon. Horatio Walpole, jun., esq., the Hon. Philip York, esq., Sir William Codrington, bart., Henry Gough, esq., Charles Gray, esq., General James Oglethorpe, John Ranby, esq., Mr. George Bell, the Right Rev. George Lord Bishop of Exeter, the Right Rev. Zachary Lord Bishop of Bangor, the Right Hon. Edward Southwell, esq., Sir William Heathcote, bart., Sir John Heathcote, bart., John Milner, esq., Mr. James Empson and Mr. William Watson, all that my collection or museum, at, in or about

Appendix, No. 1.

Will of Sir Hans Sloane, Bart.

about my manor-house at Chelsea aforesaid, which consists of too great a variety to be particularly described; but I mean all my library of books, drawings, manuscripts, prints, medals and coins, ancient and modern, antiquities, seals, &c., cameos, and intaglios, &c., precious stones, agates, jaspers, &c., vessels, &c. of agate, jasper, &c., chrystals, mathematical instruments, drawings and pictures, and all other things in my said collection or museum, which are more particularly described, mentioned and numbered, with short histories or accounts of them, with proper references in certain catalogues by me made, containing 38 volumes in folio and eight volumes in quarto, except such framed pictures as are not marked with the word (collection), to have and to hold to them and their successors or assigns for ever, to the intent only that the same and every part and parcel of my said collection or museum may be vested in the said right honourable and honourable and other persons, upon the trusts and for the uses and purposes and subject to the several limitations and directions hereafter particularly specified concerning the same; and for the rendering this my intention more effectual, that the said collection may be preserved and continued entire in its utmost perfection and regularity, and being assured that nothing will conduce more to this purpose than placing the same under the direction and care of learned, experienced and judicious persons, who are above all low and mean views, I do earnestly desire that The King, his Royal Highness the Prince of Wales, his Royal Highness William Duke of Cumberland, the Archbishop of Canterbury for the time being, the Right Hon. Philip Lord Hardwicke, and the Lord High Chancellor for the time being, the Lord President of the Council for the time being, the Lord Privy Seal for the time being, the Lord Steward of His Majesty's Household for the time being, the Lord Chamberlain of His Majesty's Household for the time being, his Grace Charles Duke of Richmond, his Grace John Duke of Montague, his Grace Holles Duke of Newcastle, his Grace John Duke of Bedford, and the two principal Secretaries of State for the time being, the Right Hon. John Earl of Sandwich, and the Lord High Admiral, or the First Lord Commissioner of the Admiralty for the time being, the Right Hon. Henry Pelham, and the Lord High Treasurer or First Lord Commissioner of the Treasury for time being, and the Chancellor of the Exchequer for the time being, the Lord Chief Justice of the King's Bench for the time being, the Lord Chief Justice of the Common Pleas for the time being, the Lord Chief Baron of the Exchequer for the time being, the Lord Bishop of London for the time being, the Lord Bishop of Winchester for the time being, the Right Hon. Archibald Duke of Argyle, the Right Hon. Henry Earl of Pembroke, the Right Hon. Philip Earl of Chesterfield, the Right Hon. Richard Earl of Burlington, the Right Hon. Henry Lord Montford, the Right Hon. Arthur Onslow, esq., and The Speaker of the House of Commons for the time being, the Hon. Lord Charles Cavendish, the Right Hon. Charles Lord Cadogan, the Right Hon. John Earl of Verney and the Right Hon. George Lord Anson, will condescend so far as to act, and be visitors of my said museum and collection; and I do hereby, with their leave, nominate and appoint them visitors thereof, with full power and authority for any five or more of them to enter my said collection or museum at any time or times to peruse, supervise and examine the same and the management thereof, and to visit, correct and reform from time to time, as there may be occasion, either jointly with the said trustees or separately, upon application to them for that purpose or otherwise, all abuses, defects, neglects or mismanagements that may happen to arise therein, or touching or concerning the person or persons, officer or officers, that are or shall be appointed to attend the same. And my will is, and I do hereby request and desire that the said trustees, or any seven or more of them, do make their humble application to His Majesty, or to Parliament at the next session after my decease, as shall be thought most proper, in order to pay the full and clear sum of 20,000 *l.* of lawful money of Great Britain, unto my executors, or the survivor of them, within 12 months after my decease, in consideration of the said collection or museum, it not being, as I apprehend or believe, a fourth of the real and intrinsic value; and also to obtain such sufficient and effectual powers and authorities for vesting in the said trustees all and every part of my said collection or museum before-mentioned in all its branches; and also my said capital manor-house, with such gardens and outhouses as shall thereunto belong and be used by me at the time of my decease, in which it is my desire the same shall be kept and preserved, and also the water of or belonging to my manor of Chelsea, coming from Kensington, subject- *Sic.* ing to furnishing or supplying the Lord Bishop of Winchester's house, as is now used; and also all that the advowson, presentation or right of patronage of the church of Chelsea; to the end the same premises may be absolutely vested in the said trustees for the preserving and continuing my said collection or museum in such manner as they shall think most likely to answer the public benefit by me intended; and also obtain, as aforesaid, a sufficient fund or provision for maintaining and taking care of my said collection and premises, and for repairing and supporting my said manor-house, water-work and premises, to be vested in the said trustees for ever. And I do hereby further direct and appoint that my executors do and shall, upon payment of the said sum of 20,000 *l.*, deliver or cause to be delivered unto the said trustees, or any seven or more of them, for and in the name of all of them, in the presence of the said visitors, or any five or more of them, as well the possession of my said manor-house and gardens at Chelsea aforesaid, and also all my collection or museum aforementioned and described, and every part thereof in all its branches, whole and entire as the same shall be found in my said manor-house according to the said catalogues, and together with the several volumes of catalogues thereunto belonging. And further my will is, and I do hereby also direct and appoint, that in case His Majesty or the Parliament do accept the said offer, and do pay the said sum of 20,000 *l.* unto my executors, or the survivors of them, that then my said executors, within six months after such payment as aforementioned,

Appendix, No. 1.

Will of Sir Hans Sloane, Bart.

tioned, and obtaining proper powers for effectually vesting in the said trustees all my said collection and my said capital house and gardens, with their appurtenances, water and advowson, presentation or right of patronage of the church of Chelsea as aforesaid, together with my heir or heirs-at-law, and all other proper parties, do and shall join in and execute such acts, deeds or conveyances as shall be thought necessary and requisite for the more perfect and absolute vesting, conveying and assuring the said premises in and to the said trustees, and their assigns or successors, for ever, for the uses, intents and purposes herein mentioned and intended. And my will is, and I do hereby empower and direct, that the said trustees, or any seven or more of them, do and shall in convenient time, after payment of the said sum of 20,000 *l.* unto my said executors, or the survivors of them as aforesaid, meet together from time to time, as often as shall be thought fit, and there make, constitute and establish (to be afterwards ratified and approved by the visitors hereby appointed, or any five or more of them) such statutes, rules and ordinances, and to make and appoint such officers and servants for the attending, managing, preserving and continuing of my said museum or collection and premises for ever, with such salaries, payments or allowances to them respectively as shall seem meet and necessary. And further my will is, and I do hereby order and direct, that in case any difference or dispute shall happen to arise by or between the said trustees touching the said premises, which cannot be adjusted or settled among themselves, then and in such case, and as often as the same shall happen, the visitors hereby appointed, or any five or more of them, shall and are hereby authorized and empowered to hear and determine in the most summary way such difference or dispute, whose order or determination shall be final. And it is also my will and desire, that all such other powers and authorities may be added or vested as well in the said intended trustees as in the visitors hereby appointed, as shall by the Legislature be thought most proper and convenient, for the better management, order and care of my said collection and premises. And further it is my will, and I do hereby declare and direct, that the said advowson, presentation and right of patronage of the church of Chelsea shall be filled up from time to time, as often as the same shall become vacant, by such person or persons as the trustees hereby appointed, or the major part of them, shall elect, present, nominate or appoint. And I do hereby further request and desire, that the trustees hereby appointed, or the major part of them, with the consent of the visitors, or the major part of them, and also all my heirs and executors, and every of them, will concur, as far as in them respectively lies, in promoting this my intention, and of perpetuating my said collection as afore-mentioned with their best endeavours, and for obtaining payment of the said sum of 20,000 *l.* as aforesaid, and for settling and assuring the said museum or collection and premises, manor-house and garden, with their appurtenances, water and advowson upon the trustees hereby appointed, and for making a provision for fund for maintaining and supporting the same for ever, as before-mentioned. And in order that there may be always sufficient number of trustees subsisting, as far as may be, my will is, and I do direct and desire, that within convenient time after the decease of any seven of the said trustees hereinbefore particularly named, or any other seven of the trustees for the time being, or any less number if they so please, then and in such case, and so often as the same shall happen, the survivors of such trustees, or any seven or more of them, shall and may at their meetings proceed to the election of choice of such other person or persons as they shall think fit, to be trustees in the room of such of them as shall happen so to die, and the person or persons so elected and chosen shall be invested with the same powers and authorities in and over the premises as the trustees hereby named, so as that the number of trustees never exceed 50 at any one time; and my will also is, and I do direct that (for continuing a sufficient number of visitors upon or after the decease of any five of the visitors hereinbefore particularly named, or any five of the visitors for the time being, or of any less number if they so please) then and in such case, and so often as the same shall happen, the survivors of such visitors, or any five or more of them, shall and may elect and choose such other person or persons as they shall think fit, provided they be not trustees, in the room of such of them as shall happen to die, and the person or persons so elected and chosen, shall be invested with the same powers and authorities in and over the premises as the visitors hereby named, so as the number of visitors never exceed more than 30 at any one time. And I do hereby declare, that it is my desire and intention, that my said museum or collection be preserved and kept in my said manor-house at Chelsea aforesaid, by the said trustees and visitors, and that the same may be from time to time visited and seen by all persons desirous of seeing and viewing the same under such statutes, directions, rules and orders, as shall be made from time to time by the said trustees, or any seven or more of them (to be afterwards ratified by the said visitors, or any five or more of them as aforesaid), that the same may be rendered as useful as possible, as well towards satisfying the desire of the curious, as for the improvement, knowledge and information of all persons, and it is for this purpose I hereby reposed a sincere trust and confidence in my right honourable, honourable, and other trustees and visitors hereby appointed; but in case the payment of the said sum of 20,000 *l.* shall not be had and obtained and made unto my executors or the survivor of them within 12 months next after my decease, and no such Act of Parliament shall be obtained for settling, preserving, establishing, maintaining and continuing my said collection and premises in manner aforesaid, then and not otherwise my will is, and I do in such case hereby direct that my said executors or the survivors of them, do and shall sell and dispose of, or cause to be sold and disposed of, all and every part of my said collection or museum as before described, together with the catalogues thereto belonging, unto or for the use of the Royal Academy of Sciences at Petersburgh, provided that the said Royal Academy of Sciences at Petersburgh, or the managers and directors thereof, or

others

others on their behalf empowered to do, shall within twelve months next, after notice thereof signified or given to the ambassador, resident or envoy of or from the Czarina or Empress of Russia, or of the Emperor of Russia for the time being, by my said executors or survivors of them, pay or cause to be paid unto my executors, or the survivor or survivors of them, and to be deemed as part of my personal estate, the full and clear sum of 20,000 *l.* of lawful money of Great Britain; and in case payment of the said sum of 20,000 *l.* shall not be made at or within the time mentioned above for that purpose, by the managers or directors of the said Royal Academy of Sciences at Petersburgh, or any other on that behalf empowered, then my will is, and I do hereby direct and appoint, that my executors or the survivors of them, do and shall sell and dispose of, or cause to be sold and disposed of, all and every part of my said collection or museum before described, with the catalogue thereunto belonging, unto or for the use of the Royal Academy of Sciences at Paris, provided that the said Royal Academy of Sciences at Paris, or the managers, directors, or others empowered in their behalf, do and shall within 12 months next, after notice thereof signified or given to the ambassador, resident or envoy of or from the Court of France, by my said executors or survivors of them, pay or cause to be paid unto my executors or the survivor or survivors of them, and to be deemed in like manner as part of my personal estate, the full and clear sum of 20,000 *l.* of lawful money of Great Britain; and in case payment of the said sum of 20,000 *l.* last mentioned, shall not be made at or within the time above mentioned in that behalf, then my will is, and I do hereby direct that my executors or survivors of them, do and shall sell and dispose of, or cause to be sold and disposed of, all and every part of my said collection or museum as before described, with the catalogues thereunto belonging, unto or for the use of the Royal Academy of Sciences at Berlin, provided that the said Royal Academy of Sciences at Berlin, or the managers or directors thereof, or others empowered on their behalf, do and shall, within 12 months next after notice thereof signed or given to the ambassador, resident or envoy of or from the King of Prussia, by my executors or survivors of them, pay or cause to be paid unto my executors or the survivor or survivors of them, and to be deemed in like manner as part of my personal estate, the full and clear sum of 20,000 *l.*, of lawful money of Great Britain; and in case payment of the said sum of 20,000 *l.* last mentioned shall not be made at or within the time before mentioned for that purpose, that my will is, and I do hereby direct my said executors or survivors of them, do and shall sell and dispose of, or cause to be sold and disposed of, all and every part of my said collection or museum as before described, with the catalogues thereto belonging, unto or for the use of the Royal Academy of Sciences at Madrid, provided that the said Royal Academy of Sciences at Madrid, or the managers or directors thereof, or others empowered in their behalf, do and shall, within 12 months next after notice thereof signified or given to the ambassador, resident or envoy of or from the Court of Spain, by my executors or survivors of them, pay or cause to be paid unto my executors, or to the survivors or survivor of them, and to be deemed in like manner as part of my personal estate, the full and clear sum of 20,000 *l.* of lawful money of Great Britain; and my will is, and I do hereby further direct, that such notice or notices shall be given and signified to the respective ambassador, resident or envoy of or from the Court of Russia, France, Berlin and Madrid, within three months next after failure or default of payment of the sum of 20,000 *l.* aforementioned from the Parliament as aforementioned. And in case the said respective offers shall not be accepted by Parliament, nor by any of the said foreign academies, nor any such payments well and truly made by any others on their respective behalf, within the respective times before mentioned, unto my executors or the survivors of them as aforesaid, then my will is, and I do hereby further direct or appoint that my executors or the survivors or survivor of them, do and shall be at liberty, with all convenient speed, to sell and dispose of, or cause or procure to be sold and disposed of, all and every part of my said collection or museum, in the most speedy and advantageous manner; and the monies arising by such sale or disposition I do hereby direct, will and appoint, shall be paid to my executor or to the survivors or survivor of them, and shall be considered as part of my personal estate; provided always, and my will is, that the trustees or executors hereby intended and appointed for any of the purposes herein mentioned, shall not be answerable for or chargeable with the acts or deeds of each other, but with or for his own wilful acts and deeds only. And further my will is, and I do hereby direct, that in case my said collection shall be sold or disposed of to either of the said foreign academies before mentioned, or in case of their refusal or non-acceptance by my executors or the survivors of them, that then my said manor-house and garden, with their appurtenances, and the water and advowson, shall go to and belong to such person or persons, and in such manner, as I have given and devised the rest of my said manors, lands and tenements at Chelsea or elsewhere. In witness whereof I, the said Sir Hans Sloane, have to this codicil, contained in two skins or pieces of parchment, set my hand and seal this 10th day of July, in the year of our Lord 1749.

Hans Sloane (L. S.)

Signed, sealed, published, pronounced and declared by the said testator, Sir Hans Sloane, as and for a codicil to, and to be taken as part of the last Will and Testament of the said Sir Hans Sloane, in the presence of us who, in his presence, have subscribed our names as witnesses thereto.

Will of Sir Hans Sloane, Bart.

Hans Sloane (L. S.) Signed, sealed and published again this 26th December 1751, as and for a codicil, by the said Sir Hans Sloane, in our presence, who, at his request, and in his presence, have set our names as witnesses thereunto.

Andrew Suatt.
Charles Shapley.
Thomas Bookham.

I, Sir Hans Sloane, bart., do make this codicil, and do hereby revoke my last will, as far as the same is inconsistent herewith; that is to say, I give and bequeath unto my nephew William Sloane, esq., all my manor of Chelsea, and all other my messuages, lands, tenements and hereditaments in Chelsea, and to his heirs, upon trust to pay and apply the rents and profits thereof, from time to time, to the use and behoof of my daughter the Lady Cadogan, for her sole and separate use for and during her life, and my will is that her receipt or receipts alone shall be a sufficient acquittance and discharge to my said nephew; and after her decease, upon trust to pay and apply the rents and profits of my said manor and premises to the use and behoof of my grandson William Cadogan, esq., for and during his life; and after his decease, to the use and behoof of my great grandson Charles Henry Cadogan and his heirs, and that as soon as my said great grandson Charles Henry Cadogan shall attain his age of one-and-twenty, and in case his father be then dead, my will is that my nephew William Sloane, esq., do and shall convey the said manor, and all other my estate in Chelsea, unto the said Charles Henry my great grandson, and to his heirs for ever; upon this condition nevertheless, that my said nephew Sloane, and my daughter Lady Cadogan, and my said grandson and great grandson, or some or one of them, do raise and pay, or cause to be raised and paid unto my daughter Mrs. Stanley, the full sum of 9,000 *l.*; and I do hereby charge my said manor and premises with the payment thereof, over and above the sum or sums already due to her for her marriage portion, and the interest that shall happen to be due thereon at the time of my death; and my will is that the interest of the said 9,000 *l.* shall from time to time be paid unto my daughter Stanley, for her own use and benefit for and during her life, and after her decease, to the use and behoof of her children, in such shares and proportions and at such time and times as my daughter Stanley, by her last will and testament, or by any deed or deeds in her life-time, shall limit, direct or appoint, and, for want of such appointment or direction, to be divided equally between them; but I do declare this to be in full satisfaction of all and every pecuniary legacy given to my said daughter Stanley or her children, by will or any former codicil. And I do hereby give unto my two nieces Mrs. Elsmeres the sum of 300 *l.* apiece, over and above such sum and sums already given them by my will or any former codicil. And I do give and bequeath unto James Empson the further sum of 20 *l.* a year for and during his life, over and above what I have already given unto him by will, or any former codicil or codicils, and I do charge my said manor and premises with the payment thereof. In witness whereof I have hereunto put my hand and seal this 21st day of July 1750.

Andrew Suatt.
Charles Shapley.
Thomas Bookham.

Whereas I have, by codicil, appointed his Grace Charles Duke of Richmond, John Duke of Montague, and Henry Earl of Pembroke, all lately deceased, amongst others, visitors of my museum or collection of curiosities, upon certain trusts therein mentioned; now I, Sir Hans Sloane, do hereby name and appoint, in their stead, the Right Hon. the Earl of Macclesfield, the Earl of Shelburn, and the Right Hon. Sir John Strange, Master of the Rolls, and the Master of the Rolls for the time being; and I do desire that they will accept of the said trust; and I do also desire that Sir John Bernard, Sir William Calvert, and Slingsby Bethell, esq., may be added to the other trustees by me formerly named in my said codicil, or in the list thereunto annexed. And whereas I have in and by the said former codicil, or by some other, given and devised my advowson of the rectory and parish church of Chelsea to my said visitors and trustees, or to some of them, upon trust to present a proper person thereto when the same shall become vacant; now I do by this my codicil revoke that part of my said former codicil concerning the said advowson, and do hereby give and devise the said advowson to such person or persons as shall from time to time have and enjoy my manor of Chelsea, and that he, she or they from time to time shall present thereunto whenever the same shall become vacant. In witness whereof I have hereunto signed my name this 18th September 1750.

Hans Sloane (L. S.)

Signed by the said Hans Sloane in the presence of us, and published as a codicil.

Hans Sloane (L. S.) Signed, sealed and published again this 26th December 1751, as the codicil of Sir Hans Sloane, in the presence of us, who at his request have set our names in his presence as witnesses thereunto.

Andrew Suatt.
Charles Shapley.
Thomas Bookham.

I, Sir Hans Sloane, baronet, do make this further codicil to be taken as part of my last will, in the manner following: instead of what I have given to my daughter, Mrs. Stanley, by my will or any former codicil, in satisfaction of what remains unpaid of her portion, which I do hereby revoke, I do give and devise unto my said daughter, all the rest and residue of my personal estate that shall arise or remain by sale of my collection of rarities, or otherwise, except leaseholds of my houses in Chelsea, which I will shall be deemed real estate, and go and descend with the rest of my real estate, to my daughter, the Lady Cadogan, and to the heirs male of her body successively, as directed by my former codicil, after payment of all my debts, funeral expenses and legacies; provided nevertheless, that my daughter Stanley do dispose thereof to some of her children, but in such shares and proportions, and at such times as she pleases; and I do make and appoint Mr. James Empson to be one of my executors, and to have the immediate care and management of my collection of curiosities and museum, in the same manner as he does or did in my life-time; and I do give and devise unto the said James Empson 100 *l.* per annum, over and above what I have already given or left him by any other codicil or codicils, to be paid him quarterly, so long as my said collection of curiosities and museum shall remain undisposed of, and as long as he continues in the care and management thereof, and until they shall be entirely sold and disposed of, pursuant to my former codicils; and my will is, that my said collection or museum shall be, continue and remain in my mansion-house at Chelsea, as they now are until they shall be entirely sold and disposed of. In witness whereof I have hereunto set my hand and seal, this 14th day of April, in the year of our Lord 1751.

Hans Sloane (L. S.)

Signed, sealed and declared as the codicil of the said Sir Hans Sloane, in the presence of us, who in his presence have set our names as witnesses thereto.

Winifred Empson.
Mary Downing.
John King.

And I do hereby give unto my executors the further sum of 50 *l.* a piece for their trouble, over and above what I may have given them by will or any former codicil.

Hans Sloane (L. S.)

Signed, sealed and published again this 26th December 1751, as a codicil, in the presence of us, who, at his request and in his presence, have set our names as witnesses thereto.

Andrew Suatt.
Charles Shapley.
Thomas Bookham.

I, Sir Hans Sloane, do make this codicil to be considered as part of my last will: Whereas I have, by my will, or some former codicil, given my manor, lands, tenements and hereditaments, and other real estate, to my daughter, the Lady Cadogan, and her heirs, in the manner and for the uses therein mentioned, and the greatest part of my personal estate, after payment of my debts, legacies and charges thereon, unto my daughters Stanley, as therein mentioned. Now I do revoke my said will and codicils, as far as they are contrary to and inconsistent herewith, and I do devise and bequeath by this my codicil as follows; that is to say, I give and devise one moiety of my said manor, lands, tenements and hereditaments at Chelsea, or elsewhere, unto my daughter Stanley, and to her heirs and assigns for ever, and after payment, satisfaction and discharge of all my debts, legacies or charges and incumbrances affecting the same, or any part of my said estate, real or personal; I do, moreover, give and devise unto my said daughter Stanley, one moiety of all the rest, residue and remainder of my personal estate, and of such other sum or sums as shall or may arise by sale of my museum or collection of curiosities, and as soon as the same shall be sold, pursuant to my will or former codicils, to hold to her, and to her executors, administrators and assigns, for her and their own use and behoof; and I do, by this my codicil, give and devise the other moiety of my said manor, lands, tenements, hereditaments and personal estate unto my nephew William Sloane, esq., and to his heirs, executors, administrators and assigns, in trust for the sole and separate use, benefit and behoof of my daughter, the Lady Cadogan, and for the use of such person or persons, and in such manner and form, and for such estate or estates as she by any deed or by her last will, or by any writing purporting to be a will, signed by her, and attested by three witnesses, shall direct, order, limit or appoint; and for want of such appointment, order or direction, in trust for and to the use of her heirs, executors, administrators and assigns for ever. In witness whereof I have hereunto put my hand and seal this 22d day of September 1751.

Hans Sloane (L. S.)

REPORTS OF SPECIAL COMMITTEES OF THE TRUSTEES OF THE BRITISH MUSEUM.

REPORT of a Sub-Committee of the Trustees, 14th February 1807, as to new Arrangements then expedient.

Appendix, No. 2.

Reports from the Museum.

14 February 1807.

THE Sub-committee appointed to consider of the most beneficial arrangements for employing the under-librarians and their assistants, and with whom the Sub-committee on Accounts was directed to communicate, have agreed upon the following Report:

And, in order to give a distinct view of the several considerations which have occurred to them in the course of this inquiry, they beg leave to state them under three several heads:

1st. The Establishment of Officers, and their distribution into Departments.
2dly. Their Duties in each Department respectively, as at present constituted.
And,
3dly. Expediency and Means of obtaining a more Constant and Extended Emp oyment of their Services.
4thly. Proposed Regulations and Arrangements.

I.—Sect. 1. The powers and duties of the principal librarian, and his superintendence over the whole establishment, are explicitly declared in the 11th chapter of the statutes and rules of the house; and in his capacity of expenditor, all issues of money for defraying the salaries and incidental disbursements of the house pass through his hands.

The officers subordinate to him are at present distributed into three departments; viz. 1st. MSS.; 2d. Printed Books; 3d. Natural History and Antiquities. And in each of these departments there is an under-librarian and an assistant librarian, besides an extra assistant-librarian in the department of Printed Books. To these departments a fourth was added in 1803, by separating the coins and medals from the MSS. and placing them under the care of an additional officer, as keeper, with apartments in the house, and the salary of an assistant-librarian.

Besides these there are three attendants, who are wholly employed in showing the Museum to strangers.

And also a secretary and an accountant, the duties of secretary having been formerly executed by one of the under-librarians, with an extra salary for that service; and the duties of accountant having been performed by the expenditor, until the growing concerns of the trust led to the appointment of a separate officer for this purpose.

Sect. 2. Upon reviewing this distribution of officers and departments, it appears to your Sub-committee that it would be more beneficially formed if the department of MSS., which at present comprises the original drawings, were also to comprehend the engravings, which are at present classed with the printed books; the department of MSS. having been reduced in extent by taking away from it the coins and medals, will conveniently admit of this additional charge; and the engravings and drawings may then be more easily viewed together. And if this arrangement is adopted it will of course become an important consideration, in the appointment to future vacancies amongst the officers of this department, that one of them at least should possess a competent knowledge of this branch of the collection, which is in itself so valuable and extensive. The department of Printed Books is necessarily an increasing care, and will be much relieved by this arrangement; and your Sub-committee being further informed that a continual interruption is experienced by the under and assistant-librarians in their particular duties of arranging and cataloguing the printed

printed books, by the continual demands upon their time for books wanted for the use of the reading-room, they think it would be advisable to appoint a person of inferior degree, with an inferior salary, as an attendant in the library, to be daily and constantly in waiting for this separate purpose, and to keep the books and shelves free from dust; in which case under and assistant-librarians would be relieved from the interruption which they now suffer, and the office of extra-librarian might be discontinued, promoting the officer himself (if desirous of it) to the situation of assistant-librarian in another department, to which, for the reasons hereinafter stated, he may be advantageously transferred.

The collections of natural history and antiquities were originally placed in one department, from the accidental reason of their having been under the same keeper in the time of Sir Hans Sloane, and they have so continued, with the addition of modern artificial curiosities from the South Seas, &c. But the qualifications requisite for the due care of collections so little connected with each other, are obviously so different, that your Sub-committee have no hesitation to recommend that the antiquities should now be separated from the rest.

The department of Coins and Medals is that to which the antiquities may with perfect propriety be transferred; and the recent accession of the Egyptian antiquities and Townleian Marbles will, together with Sir William Hamilton's Greek and Roman antiquities, form one large and splendid department, when combined and deposited in the new building.

Of this department the keeper of the coins and medals would at all times (and more especially in the present instance) become the proper head; and it will then be fit to consider, whether if he be constituted under-librarian in this department, it may not also be necessary to appoint an assistant-librarian in this as in the other departments; since, whenever the artists are admitted to study in this department, whatever may be the proper regulations for the purpose, such an additional officer will obviously be necessary to provide for the facility of access, and for the security of the collection itself. Should the creation of this new office be deemed advisable, your Sub-committee would recommend that it should be placed upon an equal footing of salary with that of the other assistant-librarians, and that the present extra assistant in the department of Printed Books should be appointed to it, under the name of assistant-librarian of antiquities, coins and medals. And possibly an additional attendant also may be required for exhibiting the gallery of antiquities to visitors, as well as artists, who may be desirous of viewing it separately from the rest of the Museum.

Amongst the offices not attached to any particular department, your Sub-committee think that the duties of secretary might be advantageously united with those of accountant; the knowledge which the secretary must, from his situation, necessarily acquire of the pecuniary concerns of the trust, rendering him the most competent person to state the accounts; and as the separate salary of each is very moderate (viz. the secretary at 60 *l.* and the accountant at 20 *l.*), this junction of the two offices appears to be the most economical, as well as the most advantageous mode of providing respectably for the execution of both.

II.—The duties of the several officers in each department, and the degree of attendance required of them, appear to have undergone very considerable changes since the first establishment of the Museum; and your Sub-committee, aided by the principal librarian, have endeavoured to trace these changes minutely, by referring to the original minute-books.

It is material towards any further arrangement, that the progress of these changes should be clearly understood.

Sect. 1. In the earliest period of the institution, the three under-librarians and the three assistant-librarians were required to attend five days in every week, and six hours each day. This was afterwards, about the year 1761, relaxed to an attendance of two days in one week, for two hours each time, and three days in the following week, for two hours each; and so by alternate weeks throughout the year. And the attendance upon the reading-room, which was originally under the care of a separate officer, called keeper of the reading-room, was divided, in the year 1778, between the three assistant-librarians; and upon the death of the keeper in 1802, no further appointment for executing the duties of the reading-room was thought necessary, the attendance of the three assistants being deemed to be sufficient for that purpose.

See Minute Book 10th April, 3d & 15th May 1778.

See Minute, General Meeting, 12th Feb. 1803.

In the year 1801, the Trustees, taking into consideration the great rise in the cost of all the necessaries of life, made a large increase in the salaries of all their officers.

The salary of the principal librarian was raised at that time from 212 *l.* to 320 *l.*; each under-librarian from 108 *l.* to 200 *l.*; and each assistant-librarian from 69 *l.* 6 *s.* 8 *d.* to 120 *l.*

And at the same time it was recommended by the same committee, upon whose report the increase of salaries took place, that three new officers of an inferior degree should be added to the establishment, as attendants to show the Museum, in order that by relieving the under-librarians and assistants from this daily duty, they might be the better enabled to employ themselves upon what were deemed more important services. And the duties to be performed were thus described:—

See Minute Book, 3d June 1801.

For the Under Librarians. "1st. That they should arrange carefully the collections in their several departments, and make catalogues of the articles under their care; and that where catalogues of some parts of the collection were already made, they should incorporate those catalogues, with the necessary additions, into one system for each department.

"2dly. That they should report annually, to a general meeting of the Trustees, the progress

they had made in these necessary works, and the time it would require, in their judgment, to complete them; specifying in each year the progress they had made in that year."

For the Assistant Librarians. "That they should attend two at a time in rotation; one of them in the reading-room, which he should never on any account quit during the hours when it is open to visitors; that he there observe the conduct of those who read or copy, notice all irregularities or improper behaviour, and give immediate attention to all requests for books or other things. The other of them to be in those parts of the library where he could best employ himself in correcting catalogues, marking books, or in other matters beneficial to the trust, and giving directions to the attendant in waiting to bring to the readers such books as might be asked for by them."

In 1802, three attendants were accordingly appointed to relieve the under and assistant-librarians from the daily duty of showing the Museum.

But it does not appear that the under or assistant-librarians received at that time, any particular injunctions to execute the several duties proposed for them by the Report of 1801; nor does it appear by their subsequent conduct, that they understood themselves to be under any definite obligation to do any specific duties of that description. And so the matter rested till the formation of the present statutes.

In 1805, by the regulations then laid down, the duties which had been recommended by the Report of 1801 were at length fully established.

The under and assistant-librarians were appointed in the first place, to act in rotation as directing officers for superintending the admission of strangers, and to attend to the duties of the reading-room. And moreover, in consideration of their having been exonerated from the duty of showing the house, they were strictly enjoined to bestow their time in arranging the collections, and in correcting and completing the catalogues of their respective departments; with an order that they should accurately report their progress to the Trustees at their general meeting in May.

Sect. 2. Of the duties thus prescribed, those which respect the admission of strangers, and the attendance upon the reading-room, have been regularly and sufficiently discharged.

Since the new plan for admitting strangers has been in force, a very considerable number has been annually admitted, without any material complaint of delay, irregularity, or impropriety. The number admitted last year was 12,460.

The business of the reading-room has also been conducted, apparently, to the satisfaction of those who frequent it; and of this the large number of applications for access to it, is a sufficient proof.

But the regulations for exacting the important duties of arranging the contents and correcting the catalogues of the three great departments of the Museum, have been wholly disregarded ever since the period when the increase of salaries and the exoneration from the labour of showing the house took place; and this, notwithstanding the positive injunction of the statutes.

For, although, in the department of Natural History, the late Dr. Gray employed himself with great diligence in cataloguing some parts of that collection; and although Mr. Beloe, during the last few months of his continuance in office, occasionally took some part in superintending the correction of the catalogues of printed books; and though Mr. Nares, in the department of MSS., has been employed and paid by the Commissioners of Public Records for correcting the catalogue of the Harleian MSS.*, and these matters have been noticed sometimes in the monthly reports; yet only one annual report was ever made by Dr. Gray, viz. when called for in June 1805; none whatever by Mr. Beloe; and none by Mr. Nares, of any such duty executed by him in respect of his appointment as a Museum officer; nor has Dr. Shaw or Mr. Maurice ever performed any duty whatever of this description.

So that the public has been and is at an annual expense of 1,425*l.* in salaries to 11 persons as officers and attendants, and the further expense of lodging seven of these officers in apartments rent and tax free, and maintained for them in tenantable repair, which cannot be estimated at less than 700*l.* a year more, making in the whole above 2,000*l.* a year, for the mere purpose of showing the house to strangers, and providing an attendance upon the reading-room. And it is to be observed, that this statement does not include the charges for maintaining the office of principal librarian, as chief of the whole establishment, nor the wages of the inferior servants, nor the incidental expenses of the house.

III.—Sect. 1. This state of things your Sub-committee conceive requires alteration, and they submit it to the serious consideration of the Trustees.

What will be the best mode for insuring in future a more effectual execution of the entire duty of the office of under and assistant-librarian may be matter of some doubt.

The portion of time which the present officers undertook to devote to the use of the Museum, when they first entered upon their respective offices†, was only two days for two hours each in one week, and three days for two hours each in the next; and so by alternate weeks throughout the year, as has been already stated. And, the increase of salary in 1801 not having been accompanied with any stipulation for an increased number of days to be devoted to the house, it may not be proper that any such should be now required; but it

* For the additional aid given to Mr. Nares in the prosecution of this work, at the expense of the Museum, *see* his Reports, January, 14th February, 9th May 1801.

† Dr. Shaw appointed in 1791; Mr. Nares, 1799; Mr. Maurice, 1799; Mr. Combe, 1803; Mr. Ellis, 1805; Mr. Bedford, 1805; Mr. Baber, 1806.

it is not too much to expect that, with that increase of salary, and the subsequent exoneration from the duty of secretary and the trouble of showing the house since 1803, at least the same number of days should be substantially devoted to the duties which were at that time recommended, and have since been positively enjoined.

Your Sub-committee, therefore, think it not unreasonable that the more punctual execution of these duties should be enforced, by requiring that henceforth each of these officers should in his monthly report accurately state the nature and progress of his labours, and that a specific course of employment should be marked out for that purpose.

The aggregate of these monthly reports will then form the proper foundation for the annual report, which, by the statute of 1805, c. 2, s. 13, is required to be made to the general meeting; and thus the Museum may at length derive some visible degree of benefit from the liberal increase of salary to its officers, and the extension of its establishment by the appointment of the additional attendants.

Towards determining the specific course of employment which it may be fit to propose for each department, your Sub-committee beg leave to refer to the report made on the 13th July 1805, in which several works are enumerated as fit to be undertaken; and as those which press the most, in point of time and importance, are "The Consolidated Alphabetical Catalogue of all the Printed Books" (in which great progress is already made), and "The Revision of the Catalogue of Sir William Hamilton's Collection," which will require much attention when the collection itself is removed into the new building, your Sub-committee have, upon consultation with the principal librarian, settled a particular rotation of duties amongst the officers, which will allow, to those whose time is most wanted for these works, the means of employing it with the least interruption.

Appendix (A) p. 518.

A summary description of the several works upon which the officers might be beneficially employed in the several departments of the Museum is annexed to this Report *, together with a copy of the plan proposed for a rotation of duties amongst the officers, as adapted to the more immediate execution of those particular works which are the most urgent; and subject, of course, to alteration from time to time, as any change of circumstances may suggest.

* Appendix (B) p. 519, and *see* Appendix (A).

Sect. 2. With respect to the ulterior advantages to be derived from a more constant and extended employment of the under-librarians and their assistants, beyond the application of those two days of ordinary duty, your Sub-committee, upon the fullest reflection, are confirmed in the opinion stated by them in their report of the 12th of July last, that persons appointed on account of their literary qualifications, and lodged in the house for the convenience of having them personally attendant, should have their situation turned to more practical use for advancing the interests and honour of this institution.

The rotation at present in force, demonstrates that each of these officers has four days in the week wholly unemployed; and allowing that the Museum should continue to be shut upon Saturdays, there remains still a full half of every week (that is, in other words, half the whole year), and seven persons resident and qualified, whose extra time might be employed in extra services for extra allowances; and if any works whatever are wanting to render the collections in the Museum more accessible or useful to the public, it is evident that, from persons so circumstanced, such services are to be expected.

If the individuals now holding these offices are either unqualified, or from any cause whatever, averse to undertake such employments, it will become the more important, that upon every future vacancy some specific stipulation should be made, by which such extra services may be obtained, if required. And to this end your Sub-committee beg leave to recommend that every new officer should be expressly required to give up the whole of his extra time for the first year after his first appointment, and again after any subsequent promotion, without any extra allowance, to be employed in such duties as the principal librarian shall judge to be most necessary in the department to which that officer is appointed. Such a regulation will render him more immediately and thoroughly acquainted with the collections in his own department, will contribute to fix his habits of diligence in the outset, and become at once a test of his willingness to undertake, and of his ability to execute, works of that description.

The nature of the works so to be undertaken must be defined by the Trustees from time to time, and the list subjoined to this report contains articles, some or all of which it may be deemed important to accomplish progressively, either by the ordinary rotation of duties, according to the present usage of attendance, or by the means of these extra services. And your Sub-committee have endeavoured to distinguish those which may be most suitably allotted to the two days of ordinary duty, from those which are fitter for separate undertakings.

See Appendix (B) p. 519.

As the nature, extent and difficulty of such undertakings must, in many respects, be very different in different instances, it is evident that no fixed scale of remuneration can be previously determined upon as applicable alike to all such extra services; but each separate undertaking must be recompensed upon its own *quantum meruit*, a practice which has obtained in this house for many years, and of which there are numerous instances specified in the report of July last with respect to strangers so employed, as well as to officers whose supernumerary hours have been so appropriated.

At the same time it is obviously necessary that all ordinary and extra services to be performed by the same persons should be so distinctly applied to different undertakings, or be rendered so clearly distinguishable, if applied to the same undertaking, that the work done under each head should be clearly referable to its proper account of ordinary and fixed salary, or of extra remuneration.

Appendix, No. 2.

Reports from the Museum.

14 February 1807.

IV.—Sect. 1. The several measures resulting out of the preceding statement, and recommended by your Sub-committee for the consideration of the Trustees as regulations fit to be adopted for the permanent benefit of this institution, are the following:

1. To transfer the collections of engravings from the department of Printed Books to the department of Manuscripts.

2. To abolish the office of extra assistant in the department of Printed Books, and appoint an additional attendant, there to be in waiting every day but Saturday, in the library, and to answer all demands for books wanted in the reading-room, and to employ himself at all intervals in keeping the books in their proper places, and dusting the books and shelves.

3. To separate the antiquities from the department of Natural History, and transfer them to a new department, comprising these and the coins and medals, to be placed together under the present keeper of coins and medals, who shall have the rank and salary of an under-librarian, with an assistant-librarian under him, as in the other departments.

And that no prejudice may be done to the officer whose office of extra assistant it is proposed to abolish, it may be fit that (if desirous of it) he should in the first instance become the assistant.

4. To appoint another attendant in respect of the additional duties to be performed in the department of Antiquities.

5. To frame regulations for the admission of strangers to view the gallery of antiquities, either separately from, or together with, the rest of the Museum; and also for the admission of artists, for which purpose it may be fit that a sub-committee should be specially appointed.

6. To unite the offices and salaries of secretary and accountant.

7. To establish, until further order, a rotation of duty amongst the officers of the house, for their ordinary days of attendance, according to the form proposed in the Appendix to this Report; each officer reporting annually to the Trustees (according to the Statutes and Rules already in force, c. 2, s. 13) the progress made by him in such works or services as he shall have been employed upon in the course of such ordinary duty.

Appendix (A.) p. 518.

8. To require hereafter of every under-librarian and assistant-librarian, upon his appointment or promotion, that he devote during the first year the whole of his extra time, without any extra allowance, to the service of the Museum, in such manner as the Trustees, or the principal librarian, shall direct; and to employ his extra time, in subsequent years, upon such extra work as the service of the trust may require, allowing for it an extra recompence according to its nature and amount.

9. To ascertain which of the present under-librarians, or assistant-librarians, are willing to employ the whole, or any and what part of their extra time, in any and what extra service, for an extra recompence, to be paid according to the nature and amount of the work.

10. To require that the several persons who shall be employed upon, or who shall undertake such extra services, do report their progress therein from time to time to the principal librarian, who shall certify the same in writing to the Trustees at their four general meetings in every year, together with his opinion thereupon as to the sufficiency of the execution of such extra services.

And that the principal librarian do in like manner certify his opinion in writing at the foot of the annual report, which (by the statutes already in force) every officer is required to make of his progress in any works performed by him in the discharge of his ordinary duty.

11. And inasmuch as it is always of great importance that some of the superior officers should have a sufficient knowledge of modern languages, not only for the purposes of the library, but for the convenience also of exhibiting the Museum to learned or distinguished foreigners, your Sub-committee take the liberty of calling the attention of the Trustees to this subject.

At present, indeed, the Museum possesses this advantage in an eminent degree, by having for its principal librarian a person qualified to converse fluently in several of the foreign modern languages; but having recently lost Dr. Gray, the only other officer capable of speaking German or Italian, and having only one other who is able to converse in French, your Sub-committee recommend that, in future, upon every vacancy in the offices of principal, under or assistant-librarian, the secretary, at the time when he notifies such vacancy to the three Trustees, in whom the nomination or appointment is vested, do (for the better enabling them to supply the place of such officer) acquaint them also of the particular loss to the establishment, in respect of his knowledge in modern languages, and his ability to converse in them.

These are the principal measures which your Sub-committee have thought it their duty to submit to the consideration of the Trustees, for the more beneficial employment of the under and assistant-librarians.

Sect. 2. In the course of this investigation, they have been already led to notice some general points of importance to the trust, as essentially connected with the matters referred to them; and there still remain some further points for consideration, arising out of the communications which they were directed to hold with the sub-committee of accounts, and leading to further arrangements.

1. An increase of annual expense to some extent will necessarily result from these arrangements, and principally in respect of the new department of Antiquities, and for which the new building has been erected.

The

The particulars of this increase are as follow:—

	£.	s.	d.
Department of Antiquities and Coins.			
Under-librarian	200	–	–
Assistant-librarian	120	–	–
Attendant	75	–	–
Department of Printed Books.			
Attendant on the reading-room	75	–	–
	470	–	–
Deduct,			
Suppressed office of extra assistant to the Printed Books £. 120	240	–	–
Keeper of Coins and Medals – 120			
Increase £.	230	–	–

If it is thought ultimately desirable, in concurrence with the strong recommendation of your Sub-committee, that any of these officers should also be employed upon extra services, either some further annual provision should be made for this purpose in the annual grant*, or demands of this nature must be left outstanding as a contingent expense, for which a special application must be made to Parliament from time to time. Your Sub-committee think the former course, if practicable, would be most expedient; but what the amount of such provision should be, must necessarily be very conjectural, and cannot be satisfactorily ascertained without some length of experience.

In considering the salaries to be given to these officers, it should be further remarked, that, according to the present plan, neither the extra assistant has now, nor would his substitute, the new assistant in the department of Antiquities, have the advantage of being lodged within the walls of the Museum; and it will be for the Trustees to determine, whether it is fit to make any special allowance to this officer, in respect of this inequality in his situation. The appointment being in itself new, leaves the question free of difficulty as to the individual who may be appointed to it, and perhaps it may be enough that whosoever is the junior officer of the house, shall enter at first into its service without this benefit, but with the expectation of succeeding to it upon the first vacancy, if he shall be not undeserving of that promotion.

2. Another circumstance has attracted the observation of your Sub-committee, of a different nature indeed, but very important to the safety of the house, and the collections which it contains, in respect to the present mode and extent of providing for its protection at night; and having received a full representation upon this subject from the principal librarian, they have annexed it to this Report. At present there are only two watchmen, and those are stationed in the front of the house; but the propriety of stationing at least one other at the back of the house and putting them all upon a footing of pay equal at least to the parochial watchmen, appears to be demonstrated. And if this measure should be adopted, another article, though not large, must be added to the increase of annual expense.

Appendix (C.) p. 520.

	£.	s.	d.
Present pay of two watchmen at 27 *l.* each	54	–	–
Three watchmen at 31 *l.* 10 *s.*	94	10	–
This increase	40	10	–
Increase of officers' salaries, as above	230	–	–
Total increase £.	270	10	–

3. In concluding this review of the present establishment of the British Museum, its officers, their duties, and their emoluments, your Sub-committee think they should be wanting in justice to the character of this trust, and a due attention to its public importance, if they did not submit to the Trustees, that with the increase of buildings and collections, which of late years have added so largely to the usefulness and magnificence of the institution, and with the consequent extension of its establishments in scope and number, there has necessarily arisen a large increase in the responsibility, duties, and occupations of its principal librarian, as charged with the chief custody of the whole, and expected by his constant residence and controlling authority, to exercise a vigilant superintendence over the conduct of all the officers, attendants, and servants, in the execution of their various duties; a superintendence which will now require further and continual exertions on his part, if, according to the measures above suggested, he shall be charged with the important trust of directing and reporting upon the due exaction of all extra services, as well as of the works performed by them in their ordinary course of employment. And your Sub-committee therefore think they do not depart from any principle of wise and liberal economy, when they suggest the propriety of placing his salary upon a more adequate footing.

In

* Some consideration on this head is now due to the extra services of Mr. Ellis, Mr. Bedford, and Mr. Baber, who have been unceasingly employed for some months upon the Consolidated Alphabetical Catalogue; and whose remuneration for these past and continuing labours should be provided for in the grant for the current year.

Appendix, No. 2.
Reports from the Museum.
14 February 1807.

In 1801, they find that the salary of every other officer was raised in a much larger proportion. The assistant-librarians were raised from 69*l.* 6*s.* 8*d.* to 120*l.*; the under-librarians from 108*l.* to 200*l.*; and the principal librarian from 212*l.* to 320*l.*, an increase obviously not made according to the same scale with the rest. It is not, however, that they now question the propriety of what was then settled, but the subsequent extension of duty and responsibility already described as attaching upon this office of public librarian, together with his increased trouble as expenditor in the management of multiplied and growing disbursements, afford, in their judgment, a sufficient ground for recommending that his salary be now raised from 320*l.* to 500*l.**

	£.	s.	d.
Making thereby a further increase of - - - - - -	180	–	–
Which, with the articles already enumerated - - - -	270	10	–
Making a final total of (increase) - - - £.	450	10	–

No further observations occur to your Sub-committee as necessary to be offered upon the head of accounts.

And they now submit the whole matter of this report to the serious consideration of the Trustees, presuming only to add, that whether these suggestions, or others more beneficial and effectual shall be adopted, it is manifestly injurious to the interests and honour of the Museum, that the present system should be suffered to remain any longer in force. For they feel strong apprehensions lest the munificence of Parliament should be checked, if, when applied to in the present session for an enlargement of its annual grant, it should think fit to inquire into the nature and extent of the duties now executed by the officers of the Museum, and should find that the Trustees have considered the present system, and sanctioned its continuance, as an adequate execution of the trust reposed in them for the benefit of the public.

14 February 1807.

Appendix (A.)—*Ordinary Attendance of Officers.*

Present Rotation.

Rotation of Officers.	House.	Library.	Reading-Room.
Monday - -	Mr. Ellis, Under Librarian, Printed Books.	Mr. Bedford, Assistant Librarian, Printed Books.	Dr. Shaw, Assistant Librarian, Nat. Hist.
Tuesday - -	Mr. Ellis, Ditto.	Dr. Gray, Under Librarian, Nat. Hist.	Dr. Shaw, Ditto.
Wednesday -	Mr. Nares, Under Librarian, MSS.	Mr. Bedford, Assistant Librarian, Printed Books.	Mr. Bedford, Assistant Librarian, Printed Books.
Thursday - -	Mr. Combe, Keeper of Coins.	Dr. Gray, Under Librarian, Nat. Hist.	Mr. Maurice, Assistant Librarian, MSS.
Friday - -	Mr. Combe, Ditto.	Mr. Nares, Under Librarian, MSS.	Mr. Maurice, Ditto.

Proposed Rotation.

Rotation of Officers.	House.	Library.	Reading-Room.
Monday - -	Under Librarian, Nat. Hist.	One constant Library Attendant.	Assistant Librarian, MSS.
Tuesday - -	Under Librarian, Ditto.		Assistant Librarian, Ditto.
Wednesday -	Under Librarian, MSS.		Assistant Librarian, Antiq. and Coins.
Thursday - -	Ditto.		Assistant Librarian, Ditto.
Friday - -	Under Librarian, Antiq. and Coins.		Assistant Librarian, Nat. Hist.

* *N.B.* To this sum is to be added annually the estimated amount of the recompence for extra services in each current year.

MEMORANDUM.

1. This plan will leave to the under and assistant-librarians, in the department of Printed Books, their two entire days of ordinary duty undisturbed, for completing the Consolidated Alphabetical Catalogue, on which they are now occupied.

2. It will leave to the under and assistant-librarians, in the department of Antiquities and Coins, one of their two days of ordinary duty undisturbed, for correcting the Catalogue of Sir William Hamilton's Collections, which will require considerable attention, upon its removal into the new building; and upon the other of their ordinary days the under-librarian, when attending as directing officer, will have no difficulty in employing himself upon some of the other works belonging to his part of the Museum.

3. In the MSS. department the under-librarian may employ himself usefully, upon the days of his attendance as directing officer, in completing Mr. Ayscough's printed Catalogue of the Sloane and Birch MSS., by inserting the additional articles (amounting to about 1,000), and afterwards, upon any other of the works mentioned in the following list of desiderata in his department, which would furnish employment for the time of ordinary attendance during a long period, without superseding the necessity of extra services, whenever they could be obtained, especially for a General Classed Catalogue of all the MSS. in the Museum, which would be a work of singular utility and curiosity.

4. In the department of Natural History all the catalogues are represented to be so defective that the under-librarian here will have a choice of labours, in which he must be directed (under the sanction of the Trustees and the principal librarian) by the joint consideration of his own peculiar qualifications and the urgency of the particular work.

The assistant-librarians, whose ordinary attendance, according to this plan, is devoted to the duties of the reading-room, cannot be expected to contribute much towards any particular undertakings in their respective departments, except upon the footing of extra services.

Appendix (B.)—LIST of WORKS fit to be executed, either in Discharge of the Ordinary Duties of the House, or as Extra Services.

I.—*MSS. Department.*

1. Hand catalogues, for the use of the Trustees at their visitation.—*N. B.* Such as are in use at the annual visitation of the Bodleian Library at Oxford, and other college libraries.

2. Completion of Ayscough's printed Catalogue of the Sloane and Birch MSS., by cataloguing the additional articles, which are about 1,000.

3. Revision of Ayscough's Catalogue of Rolls and Charters (three folio volumes); supposed to need correction.

4. Catalogue of the Oriental MSS., recommended by Mr. Nares, in his Monthly Report, 8th June 1805.

5. A General Classed Catalogue of the whole Collection of MSS. in the Museum, distinguishing such as are already printed.—*N. B.* Such a catalogue alone can give a ready knowledge of this collection, and if planned in conformity with a classed catalogue of the printed books, would be most convenient and useful.

II.—*Printed Books.*

1. Hand catalogues for the use of the Trustees at their annual visitation.

2. A Revision and Enlargement of the Synthetical Arrangement of the Library; drawn up by Ayscough, in 1793, and corrected by Mr. Ellis in 1806. [See a copy of it, Appendix (C) to Report, 12th July 1806.]—*N. B.* This might be hereafter printed, with the Manual of the several Departments, for public use, after the Antiquities have been transferred to their separate gallery.

3. The Alphabetical Catalogue of the whole Library, consolidated into one series.—*N. B.* This is now proceeding; and the alphabet having been divided, two parts of the work may soon be put to press conveniently.

4. A General Classed Catalogue; the principle, and most approved plans for executing such a work, are stated in detail in the Report, 12th July 1806.

III.—*Natural History.*

1. Some general Inventory of the contents of this department, for the purpose of the annual visitation.

2. Making a new Catalogue of Sir Hans Sloane's Collection.—The original catalogue of 20 vols. in folio is very inaccurate, but may be occasionally used for this purpose.

3. Cataloguing the Insects, Zoophytes, Lithophytes, &c.—*N. B.* It is doubted whether some parts of this collection deserve a catalogue. Dr. Solander compiled a Catalogue of the Insects, in 5 vols.

4. To arrange the general mass of Botanical Collections, postponed by former officers.

5. To compile a classed catalogue of all the printed books in the Museum, belonging to subjects of Natural History, according to the plan of Sir Joseph Banks's, but in a more compressed form.

Appendix, No. 2.

Reports from the Museum.

14 February 1807.

IV.—*Antiquities and Coins.*

1. A Manual or Inventory for the Gallery of Antiquities, when placed in the new building.
2. Cataloguing the Egyptian Antiquities.
3. Correcting the Catalogue of Sir William Hamilton's Collections, supposed to be very inaccurate.—*N. B.* There are four printed folio vols. of a Catalogue of Urns, and two quarto MSS. Catalogues of the Bronzes.
4. To complete the catalogue of Coins and Medals.—N.B. This, it is supposed, will be a work of very considerable length.

Appendix (C.)—LETTER from *Joseph Planta*, Esq.

Sir, British Museum, 22 January 1807.

HAVING received your direction to report to you concerning the manner in which the Museum is guarded at night, I have the honour to state,

That the house has hitherto been guarded by two watchmen, who are both bound to attend all night; that they are stationed in a lodge near the great front gate; and that they are strictly directed to go the rounds alternately every hour, and in these rounds to see particularly to the safety of the back of the house, the part most exposed to danger; that they are paid at the same rate as the parochial watchmen, about 27 *l.* per annum, but that the latter receive Christmas-boxes from the parishioners, which makes their situation somewhat preferable to that of the Museum watchmen.

I am bound to acknowledge, that notwithstanding all the pains I have taken, and am continually taking to keep our watchmen to their duty, having even dismissed one of them for neglect, I have reason to think that it is not always performed in a satisfactory manner; and I cannot say that I expect to be much benefited by further changes, as our wages offer no inducement to the good parochial watchmen to enter into our service.

As the new building now erecting will considerably extend the duty of the watchmen, I cannot help suggesting, whether it would not be proper to engage a third man; and if the wages were raised to an equality with those of the parochial watchmen, we might then have our choice among the best of the latter. Should this be approved of, I would have one, or perhaps two of them, always stationed in the new building; two of them relieving each other at every hour, at the time they go their rounds, which duty would have then a better chance of being completely performed.

I am sure I need not intimate to you how important a strict watch is to the safety of the Museum; so important indeed, that several foreign museums have even a military guard assigned them.

I have the honour, &c.

To the Right Hon. The Speaker, &c. &c. &c.

(signed) *J. Planta.*

REPORT of a SPECIAL COMMITTEE of the Trustees of the BRITISH MUSEUM, 13th July 1805, as to Manuals for the use of Visitors, and Desiderata in the several Departments.

Report from the British Museum, 13 July 1805.

YOUR Committee, to whom it was referred to consider of the manuals proposed by the under-librarians by way of instruction for the exhibiting officers of each department of the Museum, and to whom it was also referred to consider of the several reports of the under-librarians upon the matters wanting in their several departments, have inspected the said departments and taken with them each of the under-librarians to compare and explain the contents of their manuals and reports, as applied to each part of the Museum.

In order to lay the result of this inspection more completely before the Trustees, your Committee think it will be convenient to state, in the first place, such particular observations as relate to each department separately, and afterwards such other observations as apply generally to the present state of the Museum.

Particular Observations.

In the department of printed books, it appears to your Committee,

1st. That this part of the house, comprising almost the whole of the lower floor, and which heretofore was annually exhibited to strangers, ought still to be so exhibited.

2dly. That for this purpose it will be proper that suitable inscriptions should be affixed upon the several cases in each room, according to a list and distribution which has been agreed upon by your Committee, and which they have hereunto annexed.

See Appendix (A.)

3dly. That such of the rooms as are not now provided with wire fronts to the bookcases, should be forthwith furnished with them; five of the twelve rooms are at present so fitted up, but the rest are not, and the security of the Museum seems to require that the books should be so inclosed.

4thly. That

4thly. That some interchange and transfers of books might be made between some of the rooms where the books are at present heterogeneously mixed, so as to bring more completely into view such books as relate to the same subject. Such single books as have accidentally been misplaced should be forthwith removed into the classes to which they belong; but in order to ascertain the expediency of any larger transfer, your Committee recommend that the under-librarian for this department be directed to make a separate report upon it, specifying the classes of books which are now too much separated, and also the places into which they might be most advantageously removed.

5thly. Your Committee, finding that materials for a complete catalogue of all the printed books have been recently compiled, and that a very considerable proportion of the printed books is not comprised in the present printed catalogues, recommend that the whole be incorporated into one alphabetical series, and printed for the use of the House and of the public. They are informed that of the present imperfect catalogues there are about 200 copies still on hand, but your Committee are nevertheless of opinion that this consideration ought not to prevent the publication of such a catalogue as may comprise all the contents of the printed library in one regular series, and that when this is completed, the copies remaining on hand should be cancelled.

6thly. With a view to give effect to the proposed annual visitation of the library, your Committee are of opinion, that so soon as such transfers are made as the Trustees shall direct (if any transfers are thought proper) the under-librarians and their assistants should proceed immediately to make hand-catalogues of the contents of each case and shelf of books, noting the distinctive mark of each compartment; the number of books upon each shelf, and the short title of each book; and they recommend this with the more confidence, as they are informed that by the aid of such hand-catalogues an annual visitation is made of the Bodleian Library at Oxford, and it is found upon experience to be practicable and satisfactory, although the number of books there is supposed far to exceed that of the printed and MSS. department of the British Museum.

7thly. Your Committee, in the course of inspecting this department, have made such corrections and additions as appeared to them to be necessary or useful* in the manual and report of the under-librarian; and they have annexed corrected copies of each to this report, together with a prospectus or outline† of an analytical arrangement of the contents of the printed library, drawn up by the late Mr. Ayscough in the year 1793, to which they request the attention of the Trustees, as containing a very convenient and distinct view of those stores of literature, and such as it may be proper hereafter to correct and enlarge for publication. *See* App. (A.) & (B.)

II. In the department of MSS., which consists only of four rooms, the same remarks apply as are noted in the 2d, 5th and 6th articles relative to the printed books; namely, as to inscriptions, printed catalogues and hand-catalogues.

1st. Your Committee are not enabled to say whether the MSS. in the two rooms, in which there are not at present any inscriptions denoting their contents, will, from their miscellaneous nature, admit of any inscriptions which would afford any correct information.

2dly. As to catalogues; that for the Cottonian was made by Mr. Planta in 1802; that for the Sloanian collection and the MSS. of Dr. Birch was made by Mr. Ayscough, in two volumes, four years ago; and that for the King's library, by Mr. Casley; the latter is understood to have been well executed. With respect to the Harleian MSS., the Commissioners for Public Records having especially employed Mr. Nares, the under-librarian in this department, to complete the defective part of the catalogue of MSS., and that work being now recently completed at the public expense, it will be for the consideration of the Trustees in what mode it should be recommended to be printed; but your Committee have no hesitation in recommending it to be done, as a very large proportion of these MSS. is defectively described, or wholly omitted in the present printed catalogue.

3dly. Your Committee have also annexed a copy of the corrected manual for this department. *See* Appendix (D)

4thly. Your Committee are of opinion that an analytical prospectus of the contents of the MSS. library, like that sketched out for the printed library, would be a valuable addition to the means of consulting this part of the Museum. An index to the complete catalogue, if executed upon the principle of the index to the present catalogue, would in a great degree supply this desideratum, or facilitate the means of forming such an analytical catalogue.

5thly. In this department there is also a large collection of ancient rolls and charters; the total number is about 16,000. Those belonging to the Royal, Cottonian and Sloanian collections, are preserved in drawers under the windows, in the same room with the Royal and Cottonian MSS., and under one of the windows in the smaller Harleian room. Those which came to the Museum as part of the Harleian library were formerly in the room allotted for the South Sea curiosities, but are at present in one of the upper garrets. They are placed in presses, of which the locks and bolts are very defective, and the rolls themselves are much exposed to dust. Your Committee think that immediate measures should be

* Portions of the Appendixes to this and the following Report have been omitted, containing matter which is to be found either in the Synopsis, ed. 1808, or in the printed catalogues to which these portions refer.

† *N.B.* This outline, corrected by Mr. Ellis in 1806, is inserted in the Appendix to the Report upon the Catalogue of Printed Books, Appendix 6; Report 12th July 1806.

Appendix, No. 2.
Report from the British Museum, 13 July 1805.

be taken for remedying these defects; and that it would be desirable to place them upon one of the principal floors, if room should be found for them when the Etruscan antiquities are removed into the new building.

A large sum of money was paid to the late Mr. Ayscough for making a catalogue of this collection. It forms three volumes in folio, and is furnished with ample indexes of reference to the names of persons and places.

See Appendix (E.)

III. The department of natural history, antiquities and artificial curiosities, which consists of five rooms for natural history, and four rooms for antiquities and artificial curiosities, appears to your Committee to require some measures of the same nature as those recommended for the other departments.

See Appendix (F.)

1st. Inscriptions are wanting upon the cases in some of the rooms; and your Committee have annexed a list of such as appear to them best suited to their respective places.

2dly. There are no printed catalogues for any branch of this department, nor perhaps is it very fit to be attempted, on account of the present nature and condition of its contents.

There is indeed an imperfect catalogue of Sir William Hamilton's collection, which will require to be compared and corrected at some convenient opportunity; and it may be best to undertake it when this collection is placed, together with Mr. Townley's, in the new building.

The catalogue of Sir Hans Sloane's collection is very incorrect. That of Mr. Cracherode's minerals is corrected, and that of his shells is now completing.

Of the insects, zoophytes, lithophytes, &c., and of the preparations in spirits, there is no catalogue whatever, though their several names are affixed to most of the articles.

3dly. For the reasons above stated it may be difficult to form complete hand-catalogues for the annual visitation, but some sort of general inventory for the articles in this department seems to be absolutely necessary.

4thly. There are other matters separately relating to this department which require the speedy interference of the Trustees.

Notwithstanding the diligent and constant attention of Dr. Gray to exclude the dust, which is so destructive to most parts of the collections of natural history, it seems necessary that further measures should be taken without delay to secure such parts as are most exposed to it. This remark particularly applies to the room inscribed Nos. III. and IV. of the Sloanian collection; and your Committee earnestly recommend that speedy directions should be given for this purpose. The particulars most wanting attention are described in the annexed Report.

See Appendix (F.)

5thly. Your Committee have also subjoined the copies of the manual and report of the under-librarian of this department, which appears to them to have been prepared with so much care and attention, as to have required very few alterations or additions on the part of your Committee.

See App.(G) & (H.)

IV. With respect to the department of coins and medals, your Committee have annexed Mr. Combe's report of its contents and their arrangement, by which it appears that he has nearly completed the arrangement of the whole collection of coins, in such a manner that each particular coin may be immediately found, and each series be seen to the greatest advantage; and he expects to complete the arrangement within the space of two months.

See Appendix (I.) 1 & 2.

The cabinets in which the coins and medals are contained are said to be ill-constructed and unfit for this purpose; and there is no complete catalogue of this collection.

V. Your Committee have also thought it right upon this occasion to direct that an inventory be made of all the pictures, busts and other like articles, at present dispersed about the house, there not having hitherto been any regular inventory of them. A copy of this inventory they have also annexed.

See Appendix (K.)

General Observations.

In the course of this inspection, the principal objects which your Committee had in view were, first, the devising of such means as might render the exhibiting of the Museum at present more satisfactory to strangers; and, secondly, such as might tend to its better arrangement and preservation in future.

1st. It is obvious that strangers will view the Museum with more satisfaction in proportion as they are more readily and correctly informed of the nature of the collection which they are inspecting, and this your Committee are of opinion will be best accomplished,

First, by putting suitable inscriptions upon the cases in the different rooms, denoting their general contents, in the manner above mentioned; and, secondly, by putting into the hands of the exhibiting officer some concise explanation of the contents of each room; such, for example, as the manuals annexed to this Report. These will give the officer a more accurate knowledge of his duty, and it may be for future consideration (upon a balance of the conveniences or inconveniences) whether if printed for distribution, or sale, they might not be serviceable in apprising those who come to see the Museum of what they may expect to find there.

Thirdly, it may also be desirable that some additional specimens of the rarer MSS. and also of the printed books, should be exhibited in their proper apartments, protected nevertheless from injury by glass-frames or cases.

Beyond these regulations it does not appear to your Committee that anything more can be necessary to facilitate the ordinary inspection of the Museum. But it may be useful to subjoin to the printed extract of the statutes, which point out the rules of admission and the regulations of the reading-room, that article which also explains in what manner persons

Statutes, chap. 3, sec. 15.

engaged

engaged in works of literature, or in the prosecution of useful designs, and desirous of having a more particular access to the contents of the Museum, may be accommodated in a more special manner.

Your Committee also recommend, that a copy of these rules of admission, printed in large character, should be hung up somewhere in every apartment.

2dly. Respecting the better arrangement and preservation of the Museum in future, there appears to your Committee to be wanting some legislative provision, which shall enable the Trustees to exchange or sell, under whatever restrictions may be thought proper, not duplicates only, but all such articles as they from time to time shall think unsuited, either as to their sort or condition, to have a place in the Museum.

Unfit articles have been, and will from time to time be accidentally admitted, and which ought to be got rid of. Many such are now to be seen in the second room of the collection of artificial curiosities, as well as in the basement story and other parts of the house.

Other articles there are of a nature curious and valuable in themselves, but unsuited (for different reasons) to this collection; such as many of the anatomical preparations, which under a proper authority might be advantageously exchanged with the Trustees of the Hunterian Museum for other articles which are as unsuitably placed in that collection.

In the last place, it may be proper to remark, that if the laws were amended which require new publications to be entered at Stationers' Hall, and copies to be furnished to the British Museum, in right of the King's library and Universities, a very valuable accession might be gradually made to the library of printed books, by requiring only that to be done substantially and *bonâ fide* which the letter of the law does now require, though it is for the most part fraudently evaded.

Appendix (B.)—Printed Book Department. 13th July 1805.

Mr. Beloe being required to give a list of the desiderata necessary to complete the printed book department, is obliged from the shortness of the time to confine himself to a few general observations.

The difficulty of enumerating the deficiencies of the Museum library, will appear from referring to Sir Joseph Banks's catalogue in the branch of natural history, to Mr. Marsden's catalogue of lexicons, grammars, &c., to Bunan's catalogue to Gli Scrittori de Italia, the Bibliothèque Historique de la France, Lipsius de re Nummaria, and other similar works. The Museum library contains but a small proportion of the books described in the above catalogues.

Mr. Beloe generally recommends the purchase of all lexicons and dictionaries of languages, arts and science, of the editions of the classics republished on the Continent, particularly the Dupont classics, with such of the variorum classics as are not in the Museum.

The Museum collection of divinity is very imperfect, which may be observed also of the department of natural history.

It is worthy of consideration what attention shall be given to the completion of the law department, which is represented as containing but few of the more valuable works.

If a more specific detail shall be required, it can only be given from a careful examination of various extensive and classed catalogues.

(signed) *W. Beloe.*

Appendix (E. No. 1.)—REPORT, British Museum, 2d July 1805.

Manuscript Department.

The under-librarian for the manuscript department does not know of anything that is at present wanted in that part of the collection, except a particular description of the mss. lately brought from Egypt by Colonel Turner.

They consist chiefly of liturgies and other devotional books, in the modern Coptic or corrupted Greek: copies of the Koran and other works in the Arabic and Turkish languages. But an exact description of each volume cannot be given without the aid of some person well skilled in those dialects.

(signed) *Robert Nares.*

Appendix (E. No. 2.)—REPORT on the Charters and Rolls contained in the British Museum.

The charters belonging to the different collections in the British Museum amount nearly to 16,000. Those belonging to the Royal, Cottonian and Sloanian collections, are preserved in drawers, under the windows in the same room with the Royal and Cottonian manuscripts, and under one of the windows in the smaller Harleian room.

The Harleian collection of charters is kept in presses in one of the garrets.

The Trustees some time ago employed Mr. Ayscough to form a catalogue of these charters, which extends to three folio volumes, with ample indexes of names and places; and all the charters and rolls are so marked that they may be referred to from the catalogue with great ease.

In Mr. Planta's report, printed in the volume of Reports on the Public Records, these charters are thus generally classed.—See page 389.

Appendix, No. 2.

Report from the British Museum, 13 July 1805.

1. Royal charters, from Canwulf, King of Mercia, to the reign of Charles 1; in all upwards of 200.

2. Ecclesiastical charters, being grants of archbishops, bishops, deans, abbots, &c., from about the year 1185.

3. Private deeds; by far the most numerous articles in the collection, and consisting of feoffments, deeds of bargain and sale, of lease and release, and all manner of contracts from the reign of Richard 2 to that of Charles 1.

4. Rolls; consisting of surveys, rentals, inventories, court-rolls, &c., embracing nearly the same period as the deeds in the preceding article.

5. Foreign documents. Among these are classed, as they preceded the Union, about 200 charters relating to Scotland, from Alexander 2 or 3, to 1532. Also Popes' bulls, indulgences, dispensations, mandates, &c., from 1194 to late in the reign of Henry 8.

(signed) *R. Nares.*

Appendix (F.)—AGENDA in the Department of Natural History, &c.

Second Room Miscellaneous:—Doors of cases to be tongued and grooved, glazed doors to the tops of the cases; mummies to be put in cases.

South Sea Room:—Doors of cases to be tongued and grooved.

Mineral Room:—Bolts to the doors of cases; inscriptions on cases; in pediments; minerals; Derbyshire, Siberia, America, &c.; Germany; volcanic productions.—Inscriptions on tables; Mr. Cracherode's name on door; earths, spars, &c.; marbles, fluors, &c.; zeolite, barytes, &c.; rock crystal, gems, &c.; jasper, puddingstone, &c.; agate, gypsum, &c.; asbestos, porphyry, &c.; marcasites, antimony, &c.; zinc, iron, &c.; copper, tin, &c.; lead, silver, gold, &c.; fossil fish, shells, &c.

Tablet of strata of Derbyshire to be put on a stand.

Shell Room:—Bolts to the doors of cases; inscriptions on cases; in pediments, fossils, corals, &c.; cornua ammonis, &c.; shells, fishes, &c.; quadrupeds, vegetables.—Inscription on tables; Mr. Cracherode's name; fossil corals; encrini; fossil crabs, &c.; fossil fish, &c.; cornua ammonis, &c.; belemnites, &c.; fossil echini, &c.; fossil shells.

Insect Room:—Inscriptions on cases; vegetables, corals, sea fans, &c.; zoophytes, sponges, insects, marine animals, &c.—Inscriptions on tables; beetles, locusts, butterflies, moths, dragon-flies, &c.; bees, wasps, &c.; lobsters, crabs, &c.; scorpions, spiders, &c.; chrysalides, &c.; wasps' nests, &c.; star-fish, echini, &c.; cuttle-fish, &c.

Bird Room:—Some new cases to be made, others to have new fronts. Many birds from South America and some from New Holland to be introduced.

Spirit Room:—Labels to be renewed.

Appendix (H.)

As the consideration of what can be done to improve that part of the collection which is under my care necessarily requires that its present state should be known, it appears to me that I cannot better fulfil the intentions of the Committee, than by giving a brief account of the condition in which each room now is.

The first Room and the Saloon:—Contain the collection of Sir William Hamilton. The vases of that collection were cleaned and repaired about two years ago; and at that time, the contents of the two rooms were re-arranged, the cases were painted afresh, and every means (particularly what is called tonguing and grooving) were adopted, that could be suggested for preventing the dust from entering them.

The Second Room:—Contains a mixture of various articles, many of which are scarcely worthy to be placed in this or any other Museum. They are at present very dirty; as the doors of the cases let in so much dust, it is highly proper to consider of some means to prevent, or at least to diminish, that evil.

It is also worthy of consideration whether the upper parts of the cases (now without doors) should not have glazed doors added to them.

The South Sea Room:—The condition of this room is pretty good, except that I find it impossible to keep the fur and feather articles in the two large cases in the corners free from moths. The doors of the cases in this room keep out the dust better than those of the preceding, because they are better made; but they are not (like those of the first room) tongued and grooved.

The Mineral Room:—This room (except that many of the old specimens want cleaning) is nearly in as good condition as it is in my power to put it. The tables and cases have been tongued and grooved, but the doors of the latter, on account of their great height, close very ill, and consequently let in dust very rapidly. I have more than once conferred with the surveyor on this subject, but have not been able to fix upon any convenient method of remedying the above defect.

The Shell Room:—This is in a state of forwardness. It has been painted, and the tables and cases have been tongued and grooved. I have separated the duplicates from the shells and fossils, and distributed the former into their respective genera; but the determination of the species, and adding the names to them, still remain to be done. I have affixed numbers to all Mr. Cracherode's shells, referring to a catalogue I have made of them, but that catalogue (being merely a copy of the catalogue and loose papers sent with them) wants correction.

The

The Insect Room:—The principal part of the contents of this room (namely the insects, zoophytes, lithophytes, marine and other animals, in spirit) I examined and arranged about 18 years ago. The room was not then painted, nor was anything done to the tables and cases to enable them to keep out the dust; from which circumstance, and the unavoidable wear and tear of so many years, it now requires some revision.

Appendix, No. 2.

Report from the British Museum, 13 July 1805.

The Bird Room:—This room I arranged and made great alterations in about 20 years ago; since that time many new birds have been introduced; and there are now, from the liberality of Lady Spencer, about 40 curious and valuable South American birds to be added; and 18 or 20 from Sir Joseph Banks; to do this it will be necessary to remove some of the others. Many of the cases, particularly of the larger ones, are so ill made that it is difficult, not to say impossible, to keep insects out of them.

Spirit Room:—This room I arranged about 22 years ago, and it is still in pretty good order, except that the labels on the bottles are dirty and require to be renewed. It may not be improper to observe, that the contents of this room are not (like those of the others) enclosed in cases, but are merely placed on shelves.

Some other observations might be made, but they would be made to much greater advantage in the respective rooms to which they refer; I trust, therefore, I shall be excused if I beg leave to defer them till I have the opportunity of making them there.

(signed) *E. W. Gray.*

Appendix (I. 2.)

British Museum, 12 July 1805.

Mr. Combe, in submitting to the Committee the contents of the different cabinets in the medal room, begs leave to state, that he has very nearly completed the arrangement of the whole collection of coins, in such a manner, that not only any particular coin may be immediately found, but that each series may be seen to the greatest advantage. He has no doubt of being able to finish this arrangement within the space of two months.

He takes occasion to remark, at the same time, that many of the cabinets are ill-constructed, and unfit for the purposes to which they are applied, and trusts that this imperfection may in process of time be entirely removed. For the present, it appears to him, that the thing most wanted is a complete catalogue of the collection.

(signed) *T. Combe.*

EXTRACT from a REPORT of a Sub-Committee of the Trustees of the BRITISH MUSEUM, 12 July 1806, as to Catalogues of Printed Books.

The Sub-committee appointed to direct the form of the new catalogue of the printed books, properly classed, with an alphabetical index, and who were also directed to inquire and report the progress already made in the completion and arrangement of materials for the printed catalogue, and what assistance can be derived towards completing or correcting it from the time which can be spared by the under-librarians and their assistants, from their ordinary duties in the Museum,

Have proceeded upon the several matters referred to them, and having informed themselves thereupon, as well as they were able, by inspecting the present printed catalogue, and the materials prepared for completing it, and by examining the most approved classed catalogues of other nations, in order to form such an opinion as might be fit for the consideration of the Standing Committee respecting the best model for such a work, in the whole or in part; and lastly, by inquiring into the duties and actual employment of the several officers abovementioned, for the purpose of ascertaining the means which might be derived from their assistance towards completing the present catalogue, and also towards the formation of a classed catalogue;

Have agreed upon the following report.

* * * * * * *

II. Your Sub-committee proceeded in the next place to consider of the best means of forming a classed catalogue with an alphabetical index.

1. Towards enabling themselves to form a satisfactory judgment on this head, they obtained a catalogue of the particular contents of each room in the department of Printed Books, distinguishing each class of books, and referring to each room, press and compartment. This catalogue was compiled by Mr. Ellis, under Mr. Planta's directions, and is subjoined to this report as a memorial of the distribution of the library at this date. Appendix (B.)

2. With the same view, they obtained also a copy of the prospectus of Synthetical Arrangement of the whole contents of the library of Printed Books, as drawn up by Mr. Ayscough in 1793, and now revised and corrected by Mr. Ellis, referring also to each room and compartment. This, for the like reason, they have also subjoined. Appendix (C.)

Appendix, No. 2.

Report from the British Museum, 13 July 1805.

Appendix (D. 1.)

(D 2.)

(D 3.)

3. They have also directed a statement to be prepared by Mr. Ellis, under Mr. Planta's advice and assistance, giving a summary account of the several systems proposed for the distribution of human knowledge, and the classification of literature, from the days of Lord Bacon to the present times; and a summary view of the contents of the three most celebrated classed catalogues, namely, the Bibliotheca Bunaviana*; the Bibliothèque du Roi; and the Bibliothèque du Conseil d'Etat, recently printed at Paris; in addition to which, specimens are given of some detached parts of literature, which appear to have been more completely methodized and exhausted; viz. a particular exemplification of National History, from the Bibliothèque Historique de la France; An Outline of Civil History at large, drawn up by Mr. Ellis; and an Outline for a Catalogue of Works in Divinity, proposed by Mr. Beloe. All these are subjoined to this report.

Sir Joseph Banks's printed catalogue of works on Natural History is justly deemed the most perfect model of that class. Mr. Planta has also prepared materials for a detailed catalogue of British History and Topography.

4. Having obtained this general view of the proposed undertaking, and taken these papers into our consideration, we concur in the opinion suggested by Mr. Planta, that the surest way to obtain the most complete execution of a general classed catalogue is, to proceed by directing the separate compilation of classed catalogues of particular heads; these to be distributed into different hands; to be printed separately at first in an abridged form, for circulation, like the Pinelli or Crevenna catalogues, postponing the final arrangement and combination of the whole into a general catalogue until the particular catalogues are supposed to have been sufficiently examined, corrected and enlarged.

5. Amongst the first specimens, Mr. Planta recommends that the Trustees should begin with British History and Topography; a detailed catalogue of Natural History might proceed concurrently, upon the model of Sir Joseph Banks's Outline, though, perhaps, it may not be advisable to attempt so minute a detail. The class of Belles Lettres, it is conceived, might be well distributed according to the outline of the Bibliotheca Bunaviana or the Bibliothèque du Conseil d'Etat. Other heads, such as Mathematics, Natural Philosophy, &c. &c. &c. might be proceeded upon in like manner.

6. During the time which this laborious process would necessarily occupy—an undertaking which would nevertheless amply repay the time and expense to be employed upon it, by the increased facilities which it would afford to learned persons, and the prosecution of learned works—it appears to your Sub-committee that an abridged form of alphabetical index (such as must ultimately accompany any classed catalogue) might be prepared without difficulty or delay, by transcribing the titles contained in the present catalogue and MS. materials, incorporating them all into one series. Such alphabetical index or catalogue to be printed in a form and type corresponding with what shall be chosen for the publication of the separate fasciculi or detached classed catalogues, the determination of which need not take place until the transcript is prepared for the press.

Such is the result of the inquiries which have been made upon this subject. If more time could have been allowed to it conveniently, at this season, the information might certainly have been rendered more detailed and precise; but your Sub-committee, under all the circumstances which they have yet to state, have thought that even these suggestions might sufficiently serve to point out the general course fit to be pursued, earnestly hoping that the further prosecution of this subject will be resumed at an early period.

Appendix (D.)—CONSIDERATIONS towards forming a Classed Catalogue, with an Alphabetical Index; according to a Resolution of the General Meeting of the Trustees of the British Museum, 19th April 1806.

Introductory Remarks on the Classification of Literature.

The tables laid down by Lord Bacon and M. D'Alembert are very excellent as far as they exhibit the general distribution of human knowledge, but are of too theoretical a cast to form the groundwork of a classed catalogue of books. Even the leading outline is objectionable. History, poetry and philosophy are grand divisions, the propriety of which, as dividing knowledge, will not be disputed; but with none of these will either law or the belles lettres in general naturally coalesce. Lord Bacon's first division of natural history, likewise, into narrative and inductive, is not suited to books. The arrangement of natural history should rather follow the kingdoms of nature. Nor does M. D'Alembert's application of natural history in arts and manufactures comprise all the arts, mechanical and elegant. Poetry, divided into narrative, dramatic and allegorical, is equally objectionable. For the greater number of poets have tried their skill in different kinds of verse; so that with the exception of the drama, poetry can only be separated according to the language it is written in. Lastly, in the division of philosophy, many classes may be easily found to which

---

* This is a catalogue of the library formerly belonging to Baron Bunau, of Dresden, and now forming part of the Electoral library. It was compiled by Franckins in 1750.

which no books can, in the strictness of arrangement, be referred; and many books will be found, the contents of which will not fall in with any of the classes.

Under such impressions, neither excluding nor implicitly adopting the arrangement, the following outline has been drawn, the parts of which, though they materially follow Lord Bacon's plan, have been principally selected from the best classed catalogues in the Museum library.

Of the catalogues raisonné which have appeared upon the Continent, that of the King of France's library is probably the best. The six volumes, folio, however, in the Museum collection contain only theology and belles lettres, with as much of the jurisprudence as comprises ecclesiastical law and the law of nations. The purchase of the continuation of this catalogue as far as it may have been carried would be very desirable for the work in agitation.

Another catalogue which will be found extremely useful, and from which some of the best subdivisions of the present outline have been taken, is that of the Bunau library, "Catalogus Bibliothecæ Bunavianæ," Lips. 1750, 4to.

A third is the "Catalogue des Livres de la Bibliothèque du Conseil d'Etat, Par. An. XI." folio; many of the general heads of which seem to have been borrowed from that of the Crevenna library. Hints have been obtained from various others, the names of the principal of which are subjoined:

Catalogue des Livres de M. Pierre-Antoine Bolangaro. Crevenna; 5 tom. 1789, 4to.
Bibliotheca Hoblyniana. 8vo, Lond. 1769.
Bibliothèque Historique de la France. 5 tom. folio, 1768.
Conspectus Bibliothecæ Regiæ Hanoveranæ. Folio, 1727.
Systema Bibliothecæ Collegii Parisiensis Societ. Jesu. 4to, Par. 1678.
Bibliotheca Prustelliana. 4to, Aur. 1721.
Catalogue des Livres de la Bibliothèque de feu Monsieur le Mareschal Duc d'Estrées. 2 tom. 8vo; Par. 1740.

In regard to catalogues of particular classes, the following seem most worthy of attention: for history in general, Mensel's Bibliotheca Historica; for local history in our own country, Mr. Gough's British Topography; and for the particular history of France, the great work entitled, "Bibliothèque Historique de la France." For that part of jurisprudence which comprises English law, a few, though perhaps a very few, hints may be obtained from Worral's "Bibliotheca Legum Angliæ." From Lincoln's Inn, however, where the law library is at present classing, some good information may be had. A large portion of the belles lettres is already collected in Marsden's "Catalogue of Dictionaries, Vocabularies, Grammars and Alphabets. 4to, Lond. 1796." A separate list of the editions of the English version of the Bible was published some years ago. In one or two of the foreign catalogues the books relating to the Jesuits have been classed by those who understood them. And for natural history, Sir Joseph Banks's catalogue is unquestionably the best, though it is probably carried to too minute an extent for the present undertaking.

Outline.

The classed catalogues which have been made upon the Continent, from Father Garnier s, of the Jesuit's Library at Paris, 1678, to that of Monsieur De La Moignon's, 1791, have been primarily divided into four or five great classes or facultés, Theology, Philosophy, History and Jurisprudence; the second comprising, in some instances, what has been more frequently distinguished as a separate class, the Belles Lettres. This last distinction is particulary pointed out in the "Coup d'Œil eclairé d'une Bibliothèque," published at Paris in 1773, 8vo. Father Garnier's "Conspectus" gives the reasons for this general division in very intelligible Latin.

Without differing from the intent of this arrangement, it is submitted whether the history and rudiments of knowledge would not more naturally form, as it were, the portal of a systematic catalogue, and then the leading classes,

1. Belles Lettres.
2. History.
3. Science.
4. Theology.
5. Jurisprudence.

The general subdivisions of these greater classes, if clearly stated, may be placed in various hands without difficulty or inconvenience. The more minute and numerous ramifications of each should be drawn out at length, that uniformity may be preserved in the plan, and copies of each part submitted to the consideration of those who may be employed upon the different divisions.

Appendix, No. 2.

Report from the British Museum, 13 July 1805.

PARTICULAR SPECIMEN, No. 2, of Appendix (D).

CIVIL HISTORY.

I.—WORKS ON THE COMPOSITION AND STUDY OF HISTORY.

II.—CIVIL HISTORY IN GENERAL, under the titles of—

In the Museum Library these are intermixed with the works on Universal History.

[Room IV. T*. W*. Y*. *AA* below BB. EE]
[IV. *AA* below, *et seq.*]
[IV. FF—KK]
- Geography.
- Cosmography.
- Chronology.
- Universal History, and the general writers on the antiquities of ancient nations, their dispersion, &c.

III.—ANCIENT HISTORY:

[IV. *A.*]
- Jewish.
- Egyptian.
- Assyrian, Median, Babylonian, Chaldaic, &c.

[IV. B.]
- Grecian.
- Carthaginian.

[IV. C—G.] Roman.

[IV. L.] Byzantine.

(Each of these to be subdivided, as their respective cases, or the number of books upon them, may require.)

Jewish:—

[V. *AA.*] Travels in and Topography, &c. of Palestine.
general writers.
particular writers.

[IV. *A.*] National History, general.
particular.

[IV. *A.*] Manners, Customs, Antiquities, &c.

Egyptian:—*

* This subdivision to be confined only to the Ancient History. The Modern History to be sought for under Turkey.

[IV. A.]
- Geography, Topography, &c.
- Civil History.
- Customs, Antiquities, Mysteries and Monuments.

Assyrian, Median, &c.:—

These forming altogether but a small class, may have only the simple distinction of—Ancient Writers.
Modern Writers.

Grecian:—

[*IV. BB.] Geography*, Topography, &c. of Ancient Greece—general.
particular.

[IV. *A.* below B.]
- On the general and particular Antiquities, Chronology, &c.
- Civil History of Ancient Greece—general.
particular.
- Collectiones Scriptorum.
- History of the different States.
- Writers on Macedonia.
- on the modern state of Greece.

Carthaginian:—

[These form no class in the Museum Library at present.] General and special writers.

Roman:

* The Roman is classed with General Geography in the Museum, as well as that of every other library.

Geography* and Topography—general.
particular.

[IV. C—G.]
- Civil History—general.
under the Kings.
Republic.
Emperors.

[IV. G—I.]
[*VI. Q. R.]
- Antiquities, Miscellaneous Customs, Inscriptions, &c. to be again subdivided into—
1. General writers on Antiquities.
2. Sacred Antiquities.
3. *Military Antiquities.
4. Manners, Customs, Clothing, Furniture, &c.

Byzantine:

* Among the General Geography.

Geography* and Topography—general.
particular.

[IV. L.] Civil History—general.
particular.

IV.—History of the Tribes who by War and Emigration overran the Roman Empire: (forming an intermediate Class between the Ancient and Modern History.*)

[*In the Museum Library the History and Antiquities of the Northern Tribes may be found in Room V. X. Y. The rest are scattered among the different Nations to whose early history they seem properly to attach.]

V.—Modern History.

Europe:—

[V. H—S., inclusive.] England and Wales. Scotland. Ireland. — To form a separate consideration, as well in civil as in natural and literary history.

[IV. Q—T. V. *BB. A. E.*] France.

[V. *F. G.*] Spain.

[V. *H.* above.] Portugal.

[IV. K—O. Italy.

[IV. P.] Naples. Sicily.

[V. S—V.] Sardinia. Germany.

[V. V. above W.] Holland. Belgium.

[V. *x. y.*] Prussia. Denmark. Sweden and Norway. Russia.

[V. *Z. AA.*] Turkey.——Turkey is here placed at the close of the European list, more easily to connect some part of her possessions with the next subdivision of Modern History into the Asiatic class.

Turkey will of course include the modern Voyages and Travels, and History of Egypt.

Asia:—

[V. *AA.*] China. Tartary.

[V. Z. *AA.*] Persia.——The principal works on the ancient condition of Persia Arabia. in Room IV. Press A. They are, however, very few.

[VI. H. I.] Hindostan. Ava, Ceylon, and the smaller kingdoms, islands, &c.

Africa:—

[VI. Z.] Morocco, followed by smaller sections of

[V. I.] Tunis, Tripoli, Algiers, &c.

[V. Z.] Nubia.

[VI. I.] Abyssinia.——[Bruce's Travels are among the general Voyages, and Caffraria. Lobo's Voyage to Abyssinia among The Cape of Good Hope. the Travels.] Isles of Bourbon and Mauritius. St. Helena. Guinea. Sierra Leone.

America:—

General Writers.
Writers on the first Voyages to America.
South America.
North America.
Works on New England, Pennsylvania, Virginia, and the other provinces which form the Anglo-American republic, divided into General and Special Writers.

The subdivision of the Modern History must be entirely guided by the state of the Library; the materials for a classed catalogue being more numerous in some cases than others. Whatever objections may arise to parts of the plan, will be easiest and best remedied at the moment. Slight difficulties may in course arise which cannot be foreseen in the present prospectus of arrangement.

Appendix, No. 2.

Report from the British Museum, 13 July 1805.

Appendix (D.), No. 3.

British Museum, 7 July 1806.

Mr. Beloe having carefully examined the different classed catalogues in the Museum Library, perceives that they vary considerably in the mode of arranging the class of Divinity. He therefore submits his own ideas on the subject with some hesitation.

Perhaps the following sketch, subject to future correction, and obviously to be improved from a familiar examination of the books themselves, may in some degree meet the ideas of the Committee.

Mr. Beloe proposes to begin with Bibles.

* Polyglott portions have been published.

*1. Polyglotts.
2. Hebrew Bibles.
3. Oriental Versions.
4. Greek.
5. Latin.
6. Translations in various languages.
7. English Bibles.

† Of these perhaps it may be desirable to give a kind of catalogue raisonné.

In this last class the Museum is remarkably rich.†

The next place seems properly to belong to the New Testament in various languages, Concordances, Sacred Lexicons, Indexes, Phrases, Extracts, &c.

‡ Commentators on the Bible only. Commentators on the N. T. only.

I would next place commentators on the Bible and Testament;‡ critical writers who propose emendations, various readings, and different interpretations; Scholiasts, Paraphrases, Harmonies, Rabbinical Commentators, Writers on the Jews.

The next place seems to belong to The Fathers; Greek, Latin, in chronological order; Theological writers of doubtful periods, Theological collections, Thesauri, Spicilegia, &c.

Mr. B. has in some catalogues observed the class of Theological writers subdivided into Scholastic, Moral, Ascetic and Polemic.

Moral Theology appears to have been limited to such books as Taylor's "Ductor Dubitantium," or "Cases of Conscience."

Mystical Theology comprehends writers on the Trinity, the Worship of Saints, the Virgin, &c.

Polemic Theology embraces writers in defence of Christianity against Atheists, Infidels Heretics; writers in defence of Popery; writers against Popery; writers in defence of Protestantism; writers against Protestantism; Controversial Writings between the Papists; Controversial Writings between the Protestants.

The next place seems to be occupied by Councils; Councils, General Councils, National Councils, Provincial Councils.

Next in order to Councils the place may be assigned to Canon Law; writers and commentators on Canon Law in chronological order.

Nothing seems to intervene between the last subject, and the Popes, Cardinals, Legates, Bishops, Abbots, Concordats, &c.; Ecclesiastical Discipline, the Inquisition, Church Offices and Rites, Liturgies.

It does not appear to be important in what particular branch of this class we place Sacred History; that is, the Chronology and Sacred History of the Old and New Testament; writers on Ecclesiastical History in chronological order; Greek Church, Roman Church, &c.

Perhaps we may here insert the various Monastic Orders, Ecclesiastical, Military, as Knights of Jerusalem, Malta, &c.; Lives of Saints, Martyrs; Miracles, Relics, Heresies.

Sacred Geography.—This last branch, which of course will be more or less extensive as it may be found expedient to make interchanges and assign fixed places to books of a doubtful description, will be Miscellaneous. This will comprehend Sermons, and may extend, if thought necessary, to books on the subjects of the religion of the Chinese, Hindus, &c. &c.

It may be a query whether the religion of Mahomet is to be considered as belonging to this class, as also whether we shall insert or reject the religion of Greeks, Romans, &c.

Remarks.

The above sketch will, I believe, be found, with some trifling variations, nearly to correspond with the arrangement adopted in the Public Library at Cambridge.

The class of Divinity in the catalogue du Conseil d'État commences with works relating to Liberty of Conscience and Modes of Worship.

The Crevenna catalogue commences the class of Divinity with Polyglott Bibles.

The catalogue of the Library of the King of France begins the Divinity class with Hebrew Bibles.

The catalogue of Sion College Library begins the class with Polyglotts.

The Bodleian catalogue is alphabetical.

The Bunau catalogue introduces the Divinity class with works on the Usefulness, &c. of the Study of Divinity.

It may not be improper to observe, that the Bunau, Crevenna and French King's catalogues have all a Roman Catholic bias in their mode of arrangement. The works of the Jesuits, and their several missions, are very skilfully arranged in the catalogue of the Crevenna Library; whilst the Bibliotheca Bunaviana contains some ingenious sub-divisions in what relates to the Early German Controversies.

— Appendix, No. 3. —

CORRESPONDENCE of the Trustees of the British Museum with the Lords of the Treasury, in regard to the New Buildings.

Appendix, No. 3.

Correspondence respecting New Buildings.

My Lords, British Museum, 15 December 1831.

The Trustees of the British Museum, in reply to a communication from the Office of Works, have acquainted the Surveyor-general that they are desirous to commence the north side of the new buildings in the course of the ensuing year.

The Trustees are aware that for this purpose a considerable grant will be necessary, and therefore feel themselves called upon to state to your Lordships the circumstances which render it highly inexpedient to defer the commencement of this part of the buildings.

The old house in which the library is now deposited may be made to afford room for the ordinary accessions of books for two or three years to come; but if any bequest or purchase should be made of a collection to the amount of 2,000 or 3,000 volumes only, which it might be desirable to keep together, there is no place for their reception even at present; and as several years must elapse before the new side can be completed and rendered fit for the reception of books, the accumulations of the library during this period must, under any circumstances, cause much inconvenience and disorder in the arrangement of the volumes, and materially obstruct, what is very essential to the well-conducting of a public library, the prompt production of any volume which may be required for reference.

The present reading-rooms, likewise, scarcely supply sufficient accommodation for the students who daily resort to them; and the rapid increase of applications for admission, render it imperative upon the Trustees to provide, with as little delay as possible, more ample space for the convenience of the readers, which space can only be found in the part of the buildings now intended to be commenced.

There is another consideration operating strongly on the minds of the Trustees, the insecurity of the present old house, in the construction of which combustible materials have been used to an extent and in a manner which render it particularly liable to accidents by fire; and the bare possibility of the destruction of a library, which, combined with the King's collection, is more intrinsically valuable, perhaps, and more extensively used than any other in Europe, cannot be contemplated without feelings of uneasiness.

The Trustees have directed the architect of the Museum not to make his estimates for the service of this year larger than is absolutely necessary. I have the honour to enclose this estimate.

So soon as the Trustees are informed that your Lordships have resolved to submit the grant here mentioned to Parliament, they will direct the plan and estimate of the north side of the new buildings to be laid before you for your Lordship's sanction.

I have, &c.

The Right Hon. the Lords of His Majesty's Treasury. (signed) *J. Forshall*, Secretary.

My Lords and Gentlemen, Treasury Chambers, 27 December 1831.

I am commanded by the Lords Commissioners of His Majesty's Treasury to acquaint you that my Lords have given the fullest consideration to the representation contained in your secretary's letter of the 15th instant, regarding the commencement of the north side of the new buildings of the British Museum in the course of the ensuing year; but it does not appear to their Lordships to be expedient that any vote should be proposed to Parliament for the commencement of any new works at the Museum, until after the final completion of both the wings which have been already sanctioned.

I am, &c.

The Trustees of the British Museum, &c. (signed) *J. Stewart.*

My Lords, British Museum, 24 January 1832.

I am directed by the Trustees of the British Museum to acknowledge your secretary's etter of the 27th December, acquainting the Trustees, in reply to their communication of the 15th December, that it does not appear to your Lordships to be expedient that any vote should be proposed to Parliament for the commencement of any new works at the Museum until after the final completion of both the wings which have already been commenced.

Upon an ordinary occasion the Trustees would have great reluctance in requesting your Lordships' recurrence to a subject upon which your Lordships had expressed a deliberate opinion.

But the Trustees feel the method of proceeding with the new buildings at the Museum to be a matter which so strongly affects both the interests and convenience of literary men, and the safety of the literary treasures committed to the charge of the Trustees, that they think it their duty to press again upon your Lordships' attention some of the more important circumstances which induce the Trustees to desire the commencement of the north side in preference to the final completion of the wings which have been already commenced.

The east wing is indeed at present complete in all its material parts; it will only require the addition of the balustrade of the staircase at its northern extremity.

Appendix, No. 3.

Correspondence respecting New Buildings.

The question, therefore, is as to the priority to be given to the final completion of the west wing or the commencement of the new north side.

In order to judge of the question, it will be necessary for your Lordships to understand clearly the present state of the new buildings, and the purposes to which certain parts, both of the old and new buildings, are applied or designed.

The west wing may be considered as divided into three portions: 1st, a completed portion comprising two galleries connected with the body of the wing; 2d, a portion of which the shell only has been raised; 3d, a portion not yet commenced, and for which, having been considered a part of the new buildings not immediately necessary, the Trustees have made no arrangements with a view to its early execution.

By the completion of the first part, a receptacle has been provided for the Elgin and Phigaleian Marbles, and the Trustees, having caused these marbles to be removed thither from the temporary shed in which they had remained for several years, exposed to accidents from inclement weather, are now relieved from all anxiety as to the preservation of these precious remains of ancient art.

With regard to the second, or northern portion of the new west wing, of which portion the shell is already raised, the Trustees feel that it would be desirable to finish it with as little delay as possible, and they wish to defer its completion only in consideration of the urgent necessity for the new north side. This portion of the building, it should be remarked, is in a state in which it will suffer no injury from the weather.

The site of the third or south portion of the west wing, which has not yet been commenced, is in a great measure occupied by the building raised about 25 years ago for the antiquities of the Museum, and before the south part of the west wing can be conveniently laid, the building occupying its site must be taken down; this building is substantial and fire-proof; and though it does not afford space for the proper display of its contents, it is sufficient for their safe preservation. It contains the Egyptian marbles and antiquities, the Townley and general collection of marbles, the Hamilton collection of vases, and the chief part of the bronzes and gems. In case of this building being taken down previously to the completion of the front of the new museum, no space could possibly be found for the due exhibition of these important collections.

A more serious difficulty would arise from the circumstance that the room in which the coins and medals are deposited is situated in this building, and as the medal-room, in order to provide sufficiently for the safety of its contents, must be constructed in a peculiar manner, it would be impossible to be responsible for the custody of this part of the museum collections, if the present medal-room were destroyed before a new one were prepared for the reception of its cabinets.

Upon these grounds the Trustees are clearly of opinion, that the southern part of the west wing must be deferred until the other parts of the Museum are completed.

The urgent necessity for the new north side arises, as has been fully stated to your Lordships in the letter of the Trustees of the 15th December, from the want of increased accommodation for the readers, the want of more ample space for the books, and the insecurity of the building where the library is deposited.

The want of accommodation for the increasing number of readers may readily be conjectured by your Lordships from the facts, that upwards of 40,000 visits are now annually made to the library of the British Museum for the purpose of research, and that the increase of students is so rapid, that while in a week of March 1830, they amounted to 564, in a week of April 1831, they were 650, and in a week of December no less than 839.

As the Trustees are aware that it is impossible for your Lordships to be made acquainted with all the bearings and details of the case by means of a letter, they have directed Mr. Smirke, the architect employed upon the new buildings of the Museum, together with the principal Librarian and the Secretary of the establishment, to produce to your Lordships, if your Lordships should think it necessary, the plans of the buildings, and to be prepared to offer any explanations which your Lordships may require.

Upon a review of all the circumstances, your Lordships will, it is trusted, sanction the immediate commencement of the north side of the Museum buildings, as proposed by the Trustees in their letter of the 15th December.

I have, &c.

The Right Hon. the Lords Commissioners of His Majesty's Treasury.

(signed) *J. Forshall*, Secretary.

My Lords and Gentlemen, Treasury Chambers, 1 February 1832.

With reference to your Secretary's letter of the 24th ult., I am commanded by the Lords Commissioners of His Majesty's Treasury to acquaint you, that they have given the fullest consideration to your representation on the subject of the propriety of commencing immediately the new works on the north side of the British Museum, and although my Lords are ready to admit, that advantages would follow in many respects from the immediate prosecution of that part of the works, yet, they do not think that they would be justified at the present moment in giving their sanction to any increased expenditure upon this building, beyond that already fixed for 1832, or in commencing any other portion of the new buildings until those in course of progress shall have been completed.

I am, &c.

The Trustees of the British Museum.

(signed) *J. Stewart.*

RETURN from the ROYAL COLLEGE of SURGEONS, as to the transfer of certain Objects from the British Museum to the Hunterian Collection.

Appendix, No. 4. (A.)

Extracts from Minutes of the British Museum.

EXTRACTS from the MINUTES of the TRUSTEES of the BRITISH MUSEUM.

BRITISH MUSEUM, Thursday 20th April 1809.

AT a Special Meeting under the Act 47 Geo. 3, sess. 2, c. 36; present, the Archbishop of Canterbury, the Speaker of The House of Commons, the Marquis of Stafford, Lord St. Helens, Sir Joseph Banks, Mr. Sloane, Mr. Annesley, Mr. Rose, Mr. Towneley.

The Minutes of the Extraordinary General Meeting on the 15th were read.

The Report of the Principal Librarian and of the Under and Assistant Librarians in the department of Natural History, made on the subject referred to them by the order of the above general meeting, were also read.

It was unanimously adjudged that the following articles are unfit to be preserved in this Museum; viz. the whole of the osteological collection, the monsters in spirit, the anatomical preparations, injections and paintings, the stuffed quadrupeds and other animals, and all the articles of natural history of animals at present deposited in the basement story of the Museum (except the collection of horns, which is to be moved up stairs,) and in the rooms above. It was also adjudged that all the calculi, human and brute, and all duplicates of natural history, are unfit to be preserved in this Museum.

Sir Joseph Banks having stated to the Meeting that himself and Mr. Home consider Mr. Lochee of King-street, Covent-garden, a fit person to put a value on the above-mentioned articles,

Resolved, That the same be valued by Mr. Lochee with a view to the same being purchased for the Hunterian collection.

Ordered, That this valuation be made previous to the next general meeting.

Ordered, That a copy of these minutes be sent to the Hunterian Trustees.

(Copy.)

Royal College of Surgeons, 9 March 1836. } *Wm. Clift.* *Edward Bray*, Secretary.

BRITISH MUSEUM, Saturday 13 May 1809.

AT a General Meeting, Mr. Home having communicated to the Trustees the valuation of Messrs. King and Lochee, of the articles proposed to be purchased by the Trustees of the Hunterian collection, amounting to 180 *l.*

Ordered, That the articles included in that valuation be delivered to the Trustees of the Hunterian collection, under the direction of Mr. Planta and Dr. Shaw, on payment of 180 *l.*, deducting half the expense of the valuation.

Royal College of Surgeons, 9 March 1836. } *Wm. Clift.*

Extracts from Minutes of the British Museum.

EXTRACTS from the Minutes of the Trustees of the British Museum, April and May 1834, as to New Catalogue of Printed Books.

Extract from the Minutes of a Committee, 12 April 1834.

The Trustees conferred with Mr. Baber at much length on the nature of the interleaved catalogue, and the necessity for a third copy, and more particularly as to the expediency of correcting the interleaved catalogue for the press, before this third copy was made.

A volume of the interleaved catalogue was also laid before the Board.

Ordered,

That Mr. Baber report to the Sub-committee, appointed at the last special meeting, the general principles upon which he proposes to form the new alphabetical catalogue of the whole library; what progress has been made towards such a catalogue; how far the existing catalogues, both printed and in MS., can be rendered available for this purpose, and how far they will require alteration, and what number of volumes and titles, so nearly as he can ascertain, are at present wholly undescribed; that he further report, what time it would take, with the present establishment at his disposal, to complete the MS. of such a catalogue, and what further time would be occupied in printing it; and lastly, that he lay before the committee a statement of the manner in which the officers and other persons of his department are severally employed, and of the specific duties assigned to each.

Mr. Baber's report of this day, on the several existing catalogues of the library of printed books, was referred to this Sub-committee.

(Extracted from the Minutes.)

British Museum, 8 August 1836. *J. Forshall,* Secretary

EXTRACT from the Minutes of a Special Committee, 26 April 1834.

Mr. Baber's Report of this day was read.

(Extracted from the Minutes.)

British Museum, 8 August 1836. *J. Forshall,* Secretary.

REPORT from the Rev. *H. H. Baber,* Keeper of the Department of Printed Books, 26 April 1834.

Mr. Baber having been desired by an order of the Trustees made at a Committee April 12th, 1834, "to report to the Sub-committee appointed at the last special meeting the general principles upon which he proposes to form the new alphabetical catalogue of the whole library, what progress has been made towards such a catalogue, how far the catalogues, both printed and manuscript, can be rendered available for this purpose, and how far they will require alteration, and what number of volumes and titles, so nearly as he can ascertain, are at present wholly undescribed; that he further report, what time it would take, with the present establishment at his disposal, to complete the manuscript of such a catalogue, and what further time would be occupied in printing it; and lastly, that he lay before the Committee a statement of the manner in which the several officers and other persons of his department are severally employed, and of the special duties assigned to each," he respectfully submits to the consideration of the Trustees the following answers to their inquiries.

The general principles upon which Mr. Baber proposes to form a new alphabetical catalogue.

In the compilation of a catalogue of this description, the whole series of the titles of the books in the library should be, in the first place, arranged alphabetically, according to the surnames

surnames of their several authors, as far as their works justified such an appropriation. The author's surname to be followed by his christian name, included in brackets; afterwards by a specification, in italics, of his rank in society, in cases in which he enjoyed any eminent honorary distinction; then should follow the contents of the title, expressed in as few words (and those of the author's) as would with perspicuity exhibit all which the author meant to convey in that description of his book. The title, thus described, to be followed by the number of volumes or parts, if more than one; the specification of the size, whether folio, quarto, &c., the place, and the time when it was printed; and in some instances, the printer's name, after the place at which the work was printed, should be inserted when the book was in peculiar estimation, as being the production of the press of some of the earliest or otherwise distinguished typographers, as Fust & Schæffer, Caxton, the Aldi, &c. &c. In instances in which the book was printed upon vellum, or in gothic letters, or had manuscript notes, these particulars should be specified at the end of each title.

That in the works which were the production of the same author, the surname should be prefixed, and that title only which took precedence in the enumeration of each author's works as far as they were recorded in the Museum Catalogue; and that in all subsequent titles arranged under the same name, a short line be substituted for the same, to save a repetition which would not only be needless, but perhaps distracting; that in the order of the publications assigned to the same author, his collected works in their editions, chronologically arranged, together with their editor's name, should take the lead in this assemblage of titles, and then should follow the translations in the order of their dates, together with the name of the translator; that when the publication consisted of two or more works of the same author, they should follow next, and that then should succeed the single works, in the order which circumstances may render it most expedient to adopt. The same rule should be observed with respect to the editions and translations of the separate, as laid down for the collected works. That in the instance of the anonymous publications, there should be prefixed to the title, for want of the surname of the author, some such principal word, selected from the author's title, as would most immediately direct the student to that place in the catalogue, in which a production so published would be most likely to be entered, and that the name of the author, included in brackets, should be specified at the end of the title, should it be certainly known to, or be reasonably conjectured by the librarian. That in the case of pseudonymous publications, the book be arranged under its author's feigned names, and that his real name, if discovered, be inserted within brackets at the conclusion of the title.

In the long series of printed works which embrace the collected productions of various authors upon particular subjects, and in which numerous most valuable treatises are contained, some of them existing only in the printed form in such collections, and others, though they may have been previously or subsequently printed, not having as yet found a place in the Museum Library, it would be highly advantageous to the student that the titles of such collected productions should be in some way specified, and the readiest way to do this would be to insert, in as concise a manner as possible, a syllabus of all such treatises, after the general title of the work in which they are respectively contained.

As in the plan now proposed the productions of very many writers, such as commentators, translators, &c. &c., will be entered in the alphabetical series under the name of the author whose works they may have commented upon, or translated, &c., it will hence be requisite that a cross reference from the commentator, &c. &c.'s name be made to that of the original author, under which such productions may be in the alphabetical series arranged. It would be desirable also, in the instances in which an author varies his name, either in the orthography, or by sometimes using it in the title-page of his work, in his vernacular tongue, and sometimes in Latin, or some other language, to select one of these names for the heading or leading word under which all his works should be assembled, and then make a cross reference from each variety used to the name under which his publication might happen to be catalogued. The same rule should be observed with respect to titles of rank, by giving a reference from the titular to the family name, under which a noble author's works would be entered; and also in the case of anonymous and pseudonymous writers, and the collected works of various authors, a cross reference should be made from the author's name when discovered, to the entry under which, in the proposed catalogue, his production would be found. The adoption of the plan of cross references, to its greatest extent, would materially facilitate research; more particularly so, if there were specified with all practical brevity in such reference so much of the title of the publication wanted as would identify it immediately.

What progress has been made towards such a catalogue, how far the catalogue, both printed and manuscript, can be rendered available for this purpose, and how far they will require alteration?

In the construction of a catalogue, which it is intended should embrace the entire number of the printed works in the Museum (yielding at least 300,000 titles), the aggregate contents of three considerable libraries, viz. the old collection in the Museum, that of his late Majesty King George III., and that of Sir Joseph Bankes, each having a catalogue of its own, the titles of these respective catalogues will have to be incorporated into one alphabetical series; and as these catalogues have been formed by librarians of distinct establishments, who, in their respective works, have been guided by different principles of construction, and have acted upon special views of their own, it would be impossible to blend them together without revision of the whole mass of titles which form the catalogue of the whole library in its present state. In the process of this examination it would probably be found that above two-thirds, perhaps three-fourths of these titles might, with comparatively little

trouble, be rendered available for the purpose of a catalogue, upon the plan above proposed; but till the whole series of titles were more or less strictly scrutinized, it could not be ascertained which would be the titles it might be necessary to arrange in a place in the new catalogue very different from that they may now occupy in the alphabetical series of each of the three catalogues above-mentioned; and it would be equally impossible to state how far, previously to examination, the remaining third, or fourth portion, as the case may be, would require alteration: but when it is considered that the transcribed titles of the whole library amount, as above stated, to 300,000, and that this great mass has been the production of librarians of different establishments, and consequently not acting in concert with each other; of persons too, who, notwithstanding all their varied learning and ability, have been, in frequent instances, totally ignorant of or imperfectly acquainted with very many of the numerous languages in which the books that have passed through their hands have been written, and that they have not all been equally careful and exact in the accomplishment of that which they were more or less competent to have done, and that some again have described their titles with an unsatisfactory brevity, and others with a minute exactness and unnecessary redundancy, the varieties in the mode of describing a title, together with the amount of errors in language, &c., must obviously be so great as to render revision and correction indispensably necessary, if it should be determined upon to print a new catalogue of the whole of the Library of Printed Books.

What number of volumes and titles, as nearly as Mr. Baber can ascertain, are at present wholly undescribed?

The estimated number of titles at present undescribed are about 30,000, being those almost exclusively of the tracts purchased of Mr. Croker relating to the history of the French Revolution, in the course of being catalogued by Mr. Panizzi.

What time it would take, with the present establishment at Mr. Baber's disposal, to complete the manuscript of such a catalogue?

From the details which will subsequently, in their required order, be given to the Trustees, in reply to the questions respecting the manner in which the officers and various persons employed in the library are employed, it will, it is hoped, be obvious to the committee, that with no other aid than that derived from the persons at present employed in the Printed Book department, no commencement at present can be made in the formation of a new alphabetical catalogue, embracing the whole of the titles of the books now to be found in the library, without a stoppage to, or at least a suspension of many of the works now in hand, one of the evil consequences of which would be, that arrears of business to an overwhelming extent would accrue. If the Trustees think that it might be possible to begin the proposed catalogue without altogether stopping or suspending the works in progress, by allowing them to proceed at a slower rate, and thus wish to know within what time such a work might be accomplished, Mr. Baber must in truth confess that he would only eventually be disappointing the Trustees, if he ventured to name any period which it would take to bring to a conclusion a catalogue proceeded upon under these circumstances, and without any other aid than what the present establishment would supply. Should the Trustees deem it expedient that a new alphabetical catalogue, upon the plan above specified, should be begun without delay, and executed in the shortest time possible that the work, to be accurately and in every respect creditably performed, would admit of, it could only be done by appointing a competent officer of the Printed Book department to be exclusively occupied upon this work, aided by three sufficiently qualified assistants, one of whom should be well versed in the German and other northern languages; and by further placing at their disposal the whole series of the titles, as at present transcribed, whether classed or unclassed, it being the duty of the assistants to compare the transcribers' titles with their original in each printed book, and to make therein all necessary alterations; and it being further the duty of the officer appointed to this special business to superintend and to be responsible for the proper execution of the whole work, revising and correcting, where necessary, the titles, as fast as they passed from the assistants' into his own hands, and finally arranging them according to the plan proposed for the formation of a new alphabetical catalogue. In this state, the titles on slips might be sent to press as soon as the whole series, but not before, had been corrected and finally arranged, without incurring the expense of a transcribed copy for the purpose, and the slips, when returned by the printer, might be replaced, with little trouble, in that systematic order in which they are to a considerable extent at present arranged.

Mr. Panizzi's age, activity of mind, and various literary acquirements, eminently qualify him as the superintending officer of this work; which employment he would cheerfully accept, and engage to accomplish in five or six years from its commencement, provided that he should have the assistance of three well-educated young men, such as the gentlemen employed upon the catalogues under Mr. Forshall's superintendence, in the Manuscript department. If this extensive and desirable work were thus taken in hand, Mr. Baber feels confident that it would be performed creditably to the parties engaged upon it, and hence to the satisfaction of the Trustees, eminently useful to the public, and worthy to rank with the most justly celebrated productions of its kind.

What further time would be occupied in printing it?

Mr. Woodfall, the printer, informs Mr. Baber that, supposing that the catalogue should extend (as it is calculated it would) to 18 volumes octavo, containing 40 sheets each, it might be accomplished in one year, provided that the copy were ready for the compositor, and that a quick return of proofs could be promised. To supply the printer with copy to any extent

extent which he might require would, when the revision of the catalogue was completed and the titles alphabetically arranged, be very practicable. But Mr. Baber very much doubts whether any printer could carry through the press 14 octavo sheets per week, or 18 volumes, of 40 sheets, in a year, of catalogue-work, which, on account of the extra care and time such works require, are always charged for at a higher rate than printer's work in general; and he is confident that a return of proofs, sufficiently quick to keep the press going at the rate above mentioned, could not be made, if they were to be revised with all becoming care. If the catalogue should be three years in going through the press, it would have proceeded with as much dispatch as it ought, consistently with its being performed correctly and creditably.

The manner in which the several officers and other persons of the Printed Book department are severally employed, and of the special duties assigned to them?

The officers employed in the department of Printed Books are, Mr. Baber, Mr. Cary, Mr. Panizzi, Mr. Carlisle, Mr. Armstrong, Mr. Glover. The three first are the regular officers of the establishment; the three last are attached to it for the present, as having been librarians to his late Majesty King George the Third.

Mr. Baber gives five days in every week to the service of the Museum; upon him devolves, as keeper of the Printed Books, the general superintendence of the department committed to his care; and he assigns to the officers and other persons connected with the library their respective duties and employments, as circumstances may require: he attends sales, and resorts to booksellers' shops to inspect and purchase such books as are immediately wanted, or as it may be desirable, when opportunity offers, to secure for the Museum: he arranges on their appropriate shelves all the books acquired, whether by purchase, by donation, or by the privilege of the Copyright Act: he makes, occasionally, such changes in the locality of the books already arranged, as may best economise the little space at present remaining for the reception of the perpetually increasing stores of the library: he classes the numerous tracts received in the course of every year, that they may be bound in volumes according to their subjects: he supplies the bookbinder with the various work wanted to be done for the library; and in his turn as directing officer of the day, which is every Friday, he visits every portion of the Museum open to the public, to see whether the warders are at their respective posts, and that the visitors are observant of all due order and decency.

Mr. Cary gives five days in every week to the service of the Museum; during which he writes out on slips of paper (in order to their being entered in the general catalogue) the titles of all books, pamphlets and maps, that are added to the library, as soon after they come into his hands as possible, and as much at length as seems to him to be necessary; marking on each in what way it is obtained, whether by Copyright Act, by purchase, or by gift, and in what year. With respect to foreign periodical works, and other foreign books published in parts, besides thus writing out their titles, he keeps a register of them as long as they are in progress, entering the names of the booksellers from whom they are bought, and noting any mistakes or omissions which he discovers on their part; for which purpose he finds it requisite to refer to foreign journals, &c., containing notices and advertisements of such books: he supplies the binder with the lettering of all the books that are bound.

Mr. Panizzi gives six days in each week to the service of the Museum. The occupation allotted to him is, as it has been for some time past, the cataloguing the tracts purchased of Mr. Croker, relating to the history of the French Revolution, and calculated to yield near 50,000 titles, which, on account of their peculiarities, require more consideration and reading to catalogue intelligibly than is the case with the titles of books in general. This collection may continue to give employment to Mr. Panizzi for some time to come ere it is completed.

Such are, at present, the specific duties of the above-mentioned three officers; but besides these they have, in common with each other, various other occupations, which make considerable demands upon their time; such as perpetually perusing catalogues of books for sale, in order to note such as it may be desirable to purchase; examining whether books so marked, or whether others offered for purchase, are not duplicates; preparing for the printer, and correcting the sheets during their progress through the press, of the annual list of additions made to the library; in occasionally attending upon visitors in the library, or through the whole Museum; in facilitating the researches of readers, and in a variety of correspondence connected with the business of the establishment.

Mr. Carlisle gives two days in each week to the service of the Museum. He is at present employed in cataloguing a collection of French Tracts, embracing some thousand articles relating to the times and history of Cardinal Mazarin. When he terminates this work, he will be engaged upon other business connected with the Royal Library.

Mr. Armstrong gives three days in each week to the service of the Museum. The work assigned to him is entering for general use, in the margin of a printed copy of the geographical catalogue of the Royal Library, and opposite to the titles of the views, plans, maps, &c., described in that catalogue, the references to the cases and tables in which these prints are contained. It will be two years before this work will be completed.

Mr. Glover gives five days in each week to the service of the Museum. Though attached to the Royal Library, he performs no duties connected therewith; he is exclusively engaged in superintending the business arising out of the provisions of the Copyright Act, viz. in examining the contents of the monthly parcels of books received under this Act from Stationers' Hall; in keeping, as far as is practicable, a register of the several publications constantly issuing from the press in the United Kingdom; and procuring the delivery of such books as have not been previously entered at Stationers' Hall, and in taking charge of

Appendix, No. 4.

Extracts from Minutes of the British Museum.

all the periodical publications and works in progress, till a volume of each is completed, then delivering it to the bookbinder to be bound, before it is transferred permanently to the general collection of books.

The persons employed in the Museum, whose appointments are temporary are, Mr. Horne, Mr. Yeates, Mr. Coke.

Mr. Horne gives six days in the week exclusively to the formation of the classed catalogue.

Mr. Yeates serves in the library six days in the week, compiling the hand catalogue.

Mr. Coke is employed upon transcribing titles into a third copy of an interleaved catalogue of the printed books.

Mr. Grabham gives six days in each week to the service of the library.

Mr. Grabham, as clerk, is generally occupied in transcribing and re-arranging the contents of those pages in the interleaved catalogues of the printed books, which had got into a disordered state, in consequence of their being over-crowded with titles. He is occasionally employed on the first revision of the proof sheets of the printed list of annual additions to the library.

Mr. Cowtan serves in the library six days in each week.

He is engaged in collecting from the bookseller the works not entered at Stationers' Hall, and in making out lists of books so obtained, with their prices affixed to them, and in assisting Mr. Glover in keeping his various registers.

The attendants attached to the library are,

J. Bygrave, sen., who serves five days in each week, during which he is for the most part occupied in searching for books required by the readers, and at intervals of leisure entering titles into the interleaved catalogue in use in the library.

C. W. Kellet gives six days in the week to the service of the library; it is his duty to enter titles into both the interleaved catalogues; he is however frequently called away from that employment to assist the attendants when there is an excessive demand of books for the readers.

W. Turner, sen., Joseph Phillips, D. Buckland, H. Adams, J. Bygrave, jun., all serve six days in each week. The two first have the special duty assigned to them of verifying the return of the books sent from the old library into the reading-room; of sorting them according to their references, that they may be replaced with the greatest possible despatch, and when not so occupied, in providing books for the reading-room. The four other attendants are also engaged in attending to the wants of the readers, in looking out books wanted by Mr. Horne for the classed catalogue, or by the officers in their respective departments, and in acting under the directions of the officers of the library, as each has frequent need of their manual assistance in a great variety of ways.

J. Birchell serves six days in the week in the lobby, between the library and the reading-rooms, receiving sticks and umbrellas, and seeing that no improper person obtains admission into either of the above-mentioned places. When unoccupied by this duty, he assists in cleaning the books, &c. &c.

H. Carston is engaged to give six days in the week to the service of the Museum, for nearly half of which time he is employed as a warder in the department of Antiquities; the remainder of his time is given to the library, where he is engaged in cleaning the books.

The attendants attached to the King's Library, and all of whom serve six days in the week, are J. Williams, employed in supplying the readers with books, ascertaining that the same are returned to the library when done with, and then replacing them upon their proper shelves. During three days in the week his time is principally engaged in attending upon Mr. Armstrong during the time he is employed in inserting the references to the prints, maps, &c., in the geographical catalogue.

W. Leach is similarly engaged. He is further occupied in cleaning the books in the Royal Library. J. Griffiths serves every day the Museum is open to the public, as a warder in the department of Antiquities; the remainder of his time is taken up in cleaning books and sweeping the Royal Library.

In addition to these employments, many of the attendants are, as occasion requires, called upon to act as warders in various parts of the Museum on public days, when any regular warder is absent from illness or any other cause; they are also not unfrequently engaged in fetching and carrying parcels of books, conveying letters and messages, and in the performance, under the direction of the officers, of a great variety of labour which is perpetually required in the order and management of a library which is already of vast extent, and is daily increasing in its magnitude, and in the number of readers who have occasion to consult its literary stores.

British Museum, 8 August 1836. *J. Forshall*, Secretary.

EXTRACT from the MINUTES of a SPECIAL COMMITTEE, 30 April 1834.

THE Minutes of the last Special Committee were read:

A report was read from Sir Henry Ellis, as to the method of proceeding when the last catalogue of the printed books was printed, and the time occupied in completing it.

Mr. Baber was called in, and stated that in his opinion a classed catalogue of the whole library, if completed, would not be extensively useful, nor frequently consulted; that the titles formed for an alphabetical catalogue, might after this was printed, be made available for

for a classed catalogue, without any other alteration than that of arrangement; that it would be inexpedient to print any portion of the new alphabetical catalogue before the whole of it was complete in manuscript; that if Mr. Horne's labours on the classed catalogue were suspended, his services might be very advantageously transferred to the new alphabetical catalogue; that if the catalogue of the pamphlets purchased from Mr. Croker were suspended, Mr. Panizzi's services might be transferred to the same undertaking; that a person inferior in abilities and attainments might sufficiently well perform the duties connected with the Copyright Act, at present entrusted to Mr. Glover; and in this case Mr. Glover might be employed on the new catalogue; that he was ready to take upon himself the general superintendence and responsibility of the plan of the whole work; and that so far as he could judge at the moment, the most advisable method of proceeding with the new catalogue, would be that of beginning with one or more particular room or rooms, and advancing shelf by shelf until the whole of the library was finished.

It was Ordered,

That Mr. Baber report as to the best method of preparing a complete alphabetical catalogue of the library of printed books, in the shortest possible time, upon the supposition that Mr. Panizzi, Mr. Glover, and Mr Horne can be simultaneously employed, with a sufficient number of assistants to each, in correcting and collating the titles of different portions of the library: the classed catalogue and Mr. Panizzi's catalogue of tracts being suspended during the progress of the work, and the duties now peformed by Mr. Glover, being entrusted to some other person in the service of the Museum.

That the secretary summon a meeting of the Committee to receive Mr. Baber's report for Tuesday next at 12 o'clock.

(Extracted from the Minutes.)

British Museum, 8 August 1836. *J. Forshall*, Secretary.

EXTRACT from the MINUTES of a SPECIAL COMMITTEE, 6 May 1834.

THE Minutes of the last special Committee were read:

A Report ordered by the last Committee to be made by Mr. Baber, as to the best method of completing a new alphabetical catalogue, was read:

Mr. Horne being called in, stated that the titles corrected by him were fit for the press, and that it would not be necessary once in 50 times to collate the proof-sheets with the books; that, as he presumed, the titles collated by the other gentlemen were likewise fit for the press, but that on this point he could not speak positively; and lastly, that he had himself collated about 50,000 titles, or so far examined them as to be responsible for their correctness.

Sir Frederick Madden stated that the class of history upon which he had been employed, contained, as he roughly computed, about 60,000 titles, of which he had collated about 15,000, and that these were all prepared for the press and would require no alteration.

Mr. Panizzi was called in, and stated to the Trustees, that, in his opinion, all the titles should be collated with the books; that the plan proposed by Mr. Baber in the first instance, was preferable to that suggested in Mr. Baber's report of this day, inasmuch as it would produce a more uniform catalogue, and that in a shorter time, and with less expense.

Mr. Glover stated to the Board, that his time was occupied in collecting information from advertisements, notices in periodical publications and other sources, as to the works to which the Museum had a claim under the Copyright Act; in keeping a register of such books, of the demands made for them, and of the volumes received; in corresponding with booksellers both in town and country, when the claims of the Museum were neglected or refused; and in directing the collector in making his demands in these disputed cases. Mr. Glover further stated, that when Mr. Cowtan had obtained a little more experience he would be competent to undertake the several duties now performed by Mr. Glover.

Mr. Baber was examined as to the possibility of Mr. Grabham assisting in the correction of the English titles in the new catalogue. Mr. Baber stated, that at present Mr. Grabham was necessarily employed in several other duties; that though the English titles were probably more numerous than any of the other three classes, they would require less correction; and that the gentlemen whose titles were first completed, might without inconvenience assist those who were less advanced in their work.

It was Resolved,

1. That the plan of a new alphabetical catalogue, proposed in Mr. Baber's Report of April 26th, be generally approved.

2. That Mr. Baber be responsible for the plan and conduct of the work; and that he and Mr. Cary give to it their superintendence and so much of their assistance as the other duties entrusted to them will permit.

3. That Mr. Horne suspend his arrangement of titles for the classed catalogue, and proceed with their collation and correction only, with a view to the new alphabetical catalogue.

4. That the titles already prepared and arranged for the classed catalogue be numbered in their respective classes, so that at some future time they may be readily restored to their present order, in the manner mentioned by Mr. Horne to the Committee of April 26.

5. That the catalogue of the tracts on the French Revolution, upon which Mr. Panizzi is now employed, be suspended, and his labours exclusively given to the new catalogue.

Appendix, No. 4.

Extracts from Minutes of the British Museum.

6. That after Midsummer next, Mr. Glover devote his time to the new catalogue.

7. That, following Mr. Baber's recommendation, the gentlemen to be employed on the new catalogue commence with the revision of the titles belonging to the King's Library; that Mr. Panizzi collate and correct those in the language of the southern part of Europe, Mr. Glover those in the English language, and Mr. Horne the productions of ancient Greek and Roman authors, as well as those by authors of all nations in the Latin tongue.

8. That Mr. Baber make inquiries with a view to the temporary engagement of a gentleman conversant in the languages of North Europe; his remuneration to be 10*s.* a day.

9. That steps be immediately taken to carry this plan for a new alphabetical catalogue into execution.

10. That the foregoing minutes be communicated to Sir Henry Ellis, and that he be requested to make any suggestions on the subject of them which he may think desirable for the information of the Trustees.

(Extracted from the Minutes.)

British Museum, 8 Aug. 1836. *J. Forshall*, Sec.

REPORT from the Rev. *H. H. Baber*, Keeper of the Department of Printed Books, 6 May 1834.

Mr. Baber having been ordered again to report to the Special Committee upon the subject of a complete alphabetical catalogue of the printed books, and presuming that the plan for the catalogue which he has had the honour to submit to their approbation is to be adopted, and further, taking into consideration the qualifications of the librarians nominated by the Trustees to be employed upon the new catalogue, he respectfully states, that the best method which he can now suggest for preparing the desired catalogue, and that in the shortest possible time, is thus to divide the labour of the same amongst the librarians to be simultaneously employed upon this undertaking, viz. to assign to Mr. Glover all the titles in the English language, to Mr. Panizzi all those in French, Italian, and other languages prevalent in the southern half of Europe, and to Mr. Horne all that embrace the productions of ancient Greek and Roman authors, as well as those written by authors of all nations in the Latin tongue. That the titles of works written in German, Danish, and all the various languages used in the northern half of Europe be reserved for the inspection of a foreigner of sufficient qualifications, hereafter to be appointed for this special purpose. That it be the duty of the librarians so to be employed, to compare the titles respectively assigned to them with the books from which they have been transcribed, and to correct, alter and make cross references to and from the same, in conformity with the plan already proposed for the formation of a complete alphabetical catalogue. That Mr. Baber and Mr. Cary, as far as their time (which is pretty fully occupied with the ordinary duties of their department) will admit, so far inspect from time to time the work of the librarians thus employed as to see that the proposed plan is duly observed. That the titles, as far as they are corrected, be alphabetically arranged by some one or more competent attendants, previously to their being put into the hands of some one of the librarians, to whom may hereafter be confided the management of preparing, with the greatest possible despatch, the copy of the catalogue for the press.

If it should be the intention of the Trustees to suspend for the present the classed catalogue, in order that the slips upon which the titles are written may be, as soon as possible, available for the purpose of forming an alphabetical catalogue, it will then be requisite that the slips already classed be, previously to their distribution into an alphabetical series, so numbered and marked that they may, by the manual operation of a common attendant, be reassembled in their present systematic order. Mr. Baber here suggests that the librarians who may be so far at leisure as to commence the new alphabetical catalogue, begin with the revision of the titles of the books in the King's Library, as they can be soonest got ready for immediate use.

If it should also be the intention of the Trustees, towards furthering the plan for preparing a new alphabetical catalogue, to entrust the duties now performed by Mr. Glover to some other person in the Museum, Mr. Baber respectfully states, that for the present it would not be to the benefit of the interests of the Museum altogether to release Mr. Glover from his present duties till some person had been so trained to the business connected with the enforcement of the provisions of the Copyright Act, as to be fully qualified to manage the same. As Mr. Cowtan, the recently appointed collector, becomes better acquainted with the routine of this business, there is a just expectation, from the mode in which he conducts himself, that he may eventually be qualified to relieve Mr. Glover from the research, the correspondence and the various labours which have hitherto most completely occupied his time. If Mr. Glover should be permitted to devote two days in the week (for the present) to the business connected with the Copyright Act, he would then be at liberty to give three days in each week to the preparation of the new catalogue; and if, as Mr. Cowtan gets more experienced, the Trustees should be disposed to withdraw their warrant from Mr. Glover, and to empower, under their seal as a corporate body, Mr. Cowtan to demand and enforce the delivery of all such publications which are due to the Museum under the Copyright Act, they may then, perhaps, with more advantage than at present, transfer the legally authorized power and the duties of Mr. Glover to Mr. Cowtan.

(signed) *H. H. Baber.*

549

— Appendix, No. 5. —

No. 5. Conditions of depositing the Hunterian Collection.

TERMS and CONDITIONS on which the HUNTERIAN COLLECTION, purchased by Parliament, was delivered to the late Corporation of Surgeons; which Corporation having become dissolved, the Members thereof were re-incorporated by Charter, dated the 22d day of March 1800, under the title of THE ROYAL COLLEGE OF SURGEONS IN LONDON.

1. THE collection shall be open four hours in the forenoon two days every week, for inspection and consultation of the Fellows of the College of Physicians, the Members of the Company of Surgeons, and persons properly introduced by them; a catalogue of the preparations, and a proper person to explain it, being at those times always in the room.

2. That one course of lectures, not less than 24 in number, on Comparative Anatomy and other subjects, illustrated by the preparations, shall be given every year by some Member of the Company.

3. That the preparations shall be kept in a state of preservation, and the collection in as perfect a state as possible, at the expense of the Corporation of Surgeons, subject to the annual inspection and superintendence of the Trustees.

4. That there shall be a Board of Trustees, to consist of 16 members, by virtue of their public offices, and of 14 others, to be appointed in the first instance by the Lords of the Treasury, and afterwards to be elected, as vacancies may happen, by a majority of the remaining Trustees.

5. That the Museum shall always be open for the inspection of all or any of the said Trustees, who are to take care that the Corporation of Surgeons perform their engagements respecting the said collection. That a day be appointed for the annual inspection of the Museum, by the Trustees acting collectively as a Board, and that they are also to have quarterly meetings, for the transacting of any business relative to the Museum, and for the filling up of such vacancies as may happen in the number of the Trustees; and that the Corporation of Surgeons shall engage some person to officiate as secretary to the Board, upon such occasions, and to issue previous notices to the members, in which he is to state particularly whether any vacancies are to be filled up by new elections.

LIST OF TRUSTEES.

Trustees by Office:—Lord Chancellor, First Lord of the Treasury, Chancellor of the Exchequer, First Lord of the Admiralty, Speaker of The House of Commons, Secretary at War, President of the Royal Society, President of the College of Physicians, Four Censors of the College of Physicians, Professor of Physic in the University of Oxford, Reader in Anatomy in the University of Oxford, Regius Professor of Physic in the University of Cambridge, Professor of Anatomy in the University of Cambridge.

Trustees by Appointment:—Duke of Grafton, Lord St. Helens, Lord Arden, Lord Farnborough.

Trustees by Election:—Duke of Somerset *vice* Lord Auckland; Davies Gilbert, Esq., *vice* Sir Charles Blagden; Robert Peel, Esq., *vice* Dr. Matthew Baillie; Bishop of Chester *vice* Sir Archibald Macdonald, Bart.; Charles Hatchett, Esq., *vice* Lord Colchester; Sir Astley P. Cooper, Bart., *vice* Sir Everard Home, Bart.; The Duke of Wellington *vice* Lord Grenville; Sir Robert H. Inglis *vice* Marquis of Stafford; Sir George T. Staunton, Bart., *vice* Earl Spencer.

At a MEETING of the TRUSTEES on the 18th day of June 1805,
LORD ST. HELENS, in the Chair.

IT was resolved, That the annual inspection of the Museum by the Board of Trustees be on the first Saturday in May, at 12 o'clock precisely.

That the quarterly meetings of the Trustees be upon the first Saturdays in February, May, August and November, at 11 o'clock precisely, for the transacting of any business relative to the Museum, and for the filling up such vacancies as may happen in the number of the Trustees, and that the secretary issue previous notice to the Trustees, in which he is to note particularly whether any vacancies are to be filled up by new elections.

That seven Trustees be a quorum for the purpose of elections, and three Trustees for a quarterly meeting and for a committee.

The chairman of the Board of Curators of the Museum acquainted the Trustees that, by the bye-laws of the college, it was ordained, that the secretary to the college shall be secretary to the Trustees of the Hunterian collection.

At a MEETING of the TRUSTEES on the 6th day of May 1809,
LORD AUCKLAND, in the Chair.

IT was resolved, That the secretary do summon a special meeting of the Trustees, at any time, upon the request of three Trustees, signified in writing for that purpose.

Edmund Belfour, Secretary.

— No. 6.—

INFORMATION ON FOREIGN PUBLIC LIBRARIES OF PRINTED BOOKS.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

IN obedience to the commands of the Committee of the House of Commons appointed to inquire into the affairs of the British Museum, I have the honour to submit the following information respecting foreign public collections of printed books. Although one or two of these collections be not, strictly speaking, *public*, as they are the private property of sovereigns who allow them to be used by students, with very few restrictions, as much as public libraries generally are, I have thought it desirable that the knowledge which I have procured respecting them should not be withheld from this Committee. I beg to add, that my information was privately obtained by requesting, through the means of several friends, answers to a string of questions circulated for the purpose, and put, generally speaking, to the librarians of the several institutions, who have uniformly favoured me with all the intelligence required, with one single exception, that of a Mr. Schrettinger, of Münich, who declined answering, in terms strongly contrasting with the urbanity and courtesy by which the answers from other librarians are distinguished. Through the kindness of an English friend this deficiency has been partly supplied. In visiting some of the libraries abroad, I have taken pains to ascertain all I properly could respecting their management; and I shall therefore add these particulars to those which may be gathered from the several answers to the above-mentioned questions. It will, perhaps, put this communication into a clearer light if the identical questions themselves be here transcribed, followed by the substance of the several answers to each of them.

Question 1.—By what name is the library designated?

1. Basle, *Public Library.*
2. Berlin, *Royal Library* [1]).
3. Berne. *City Library.*
4. Bruxelles, Ditto.
5. Buda, *Library of the Royal University.*
   ——, *Széchenyi Library* [2]).
6. Cassel (Hesse), *Granducal Library.*
7. Copenhagen, *Great Royal Library* [3]).
8. Dresden, *Royal Library.*
9. Florence, *Private Library of the Grand Duke*, or *Palatina.*
   ————, *Magliabecchiana.*
   ————, *Riccardiana.*
   ————, *Marucelliana* [4]).
10. Frankfort, *City Library* [5]).
11. Geneva, *Public Library.*
12. Göttingen, *University Library.*
13. The Hague, *Royal Library.*
14. Leyden, *University Library.*
15. Lisbon, *Royal Public Library.*

16. Madrid,

[1]) Kilian, in his "Short view of the German Universities," states, that, besides this, there are two more libraries at Berlin; one of the University with 78,000 volumes, and the other of the Academy with 80,000.

[2]) Besides these two libraries, there is a medical library at Buda connected with the *lectorium medicum*, accessible to all professors, physicians, surgeons, apothecaries, &c., who pay 10 florins a year. They are allowed to take books home. There is, moreover, the library of the Academy, but accessible to members only. It contains about 30,000 volumes, said to be very well selected.

[3]) Besides this library, there are several more at Copenhagen. 1st. The library of the University, especially intended for the use of students, containing about 100,000 volumes. It is open every day from ten to two; books are lent out to persons also who do not attend the university. It is rich in Indian literature, and the zoological class is much increased by purchases made yearly out of a fund especially bequeathed to this library for the purpose. 2dly. The Classenian Library, in the neighbourhood of the hospitals, has a fine collection of books belonging to medicine, rural economy, technology and mathematics. It contains about 35,000 volumes, and is open four times a week, from twelve to two. There, moreover, are the Comunitets-Library, the Surgical Academy Library, the library of the Botanic Garden, that of the Athenæum, and others, more or less open to the public.

[4]) The library of the Academy of Fine Arts is also public, and kept open, alternately with the Marucelliana, three days in the week. The Laurenziana contains only manuscripts, besides the collection of rare editions bequeathed to it a few years ago by Elci.

[5]) There are two more public libraries at Frankfort. 1st. of the Academy of Fine Arts, called *Stadel.* It has an alphabetical catalogue, according to authors' names, of works belonging to fine arts, and a sum of about 160 *l.* a year is laid out in the purchase of books. The other library, that of Senckenberg Institution, contains only books belonging to natural history and medicine. Books are never lent out from either of these two libraries.

16. MADRID, *Her Majesty's Public Library* (1).
17. MILAN, *Library of Brera.*
———, *Ambrosiana.*
18. MÜNICH, *Royal Library.*
19. NAPLES, *Royal Borbonic Library.*
20. ORLEANS, *City Library.*
21. PARIS, *King's Library.*
———, *Library of the Arsenal.*
———, *Library of Ste. Geneviève.*
———, *Mazarine Library*, (from the name of its founder, Card. Giulio Mazarini).
———, *Library of the Institut* (2).
22. PARMA, *Ducal Library.*
23. PRAGUE, *Royal Imperial Library* (3).
24. TURIN, *Library of the Royal University* (4).
25. VENICE, *Library of S. Marco*, or *Marciana.*
26. VIENNA, *Imperial Royal Library*, or *Augusta Palatina* (5).
27. WOLFENBÜTTEL, *Ducal Library.*

Observations on Question 1.

I was induced to ask particularly for the name of the library, to be able to judge whether it was a national institution, strictly speaking, or whether it was merely intended as a library of education, and for what object. The libraries of Berlin, Copenhagen, Dresden, &c. are the property of the Crown, and I apprehend the Sovereign of the country might subject them to any regulation he pleased. Whatever use the public make of them is to be considered rather as a matter of favour than of right.

Question 2.—How many thousand printed volumes does it contain? How many thousand works, titles of works, or articles?

1. BASLE. About 60,000 volumes. The number of works cannot be specified.
2. BERLIN. About 320,000 volumes. No answer to the second part of the question (6).
3. BERNE. About 36,000 volumes, or 16,000 works.
4. BRUXELLES. About 140,000 volumes. Number of works unknown.
5. BUDA, *University Library.* About 65,000 volumes. No answer to the second part of the question.
———, *Széchenyi Library*, from 18,000 to 20,000 volumes. The plan of its founder, Count Francis Széchenyi, is to collect all works relating to Hungary, or written by Hungarians, or in the Hungarian language, or in Hungary. No number of titles specified.
6. CASSEL. About 85,000 volumes and 260,000 articles. (This is an exaggeration, but I believe that by a profuse number of cross-references, the *entries* may approach the number here specified.)
7. COPENHAGEN. Supposed to contain about 400,000 volumes. No answer as to the number of works (7).
8. DRESDEN. About 250,000 volumes. No number of works specified (8).
9. FLORENCE, *Palatina.* About 70,000 volumes; that of works about the same.
———, *Magliabecchiana.* About 140,000 volumes.
———, *Riccardiana.* About 55,000.
———, *Marucelliana.* About 35,000. No answer from these three as to the number of articles.
10. FRANKFORT. About 50,000 volumes, or 80,000 works.
11. GENEVA. About 32,000 volumes, or 20,000 works.
12. GÖTTINGEN. About 200,000 volumes, or 300,000 articles (9).
13. THE HAGUE. About 100,000 volumes, or 50,000 articles.
14. LEYDEN. About 70,000 volumes. No answer as to articles.
15. LISBON. About 51,000 volumes. The second part of the question cannot be answered.

16. MADRID.

(1) It is called Royal *Public* Library, to distinguish it from the Royal *Private* Library, kept in the palace for the use of the royal family only.

(2) Besides these, there are several other public libraries at Paris. One of them, at the town-hall, contains about 40,000 volumes; and about 280*l.* a year are spent in purchasing books to add to it. It is open daily for six hours; comfortable and well warmed. There is a classed catalogue of it now compiling.

(3) There are, moreover, two other libraries. One in the monastery of Præmonstratenses, rich in old books; the other attached to the National Museum, founded and supported by private contributions, but confined to works relative to Bohemian history, natural history, language, topography, statistics, &c.

(4) The Royal Academy of Sciences has also a collection of books, to which readers are admitted on being introduced by a member.

(5) The library of the University of Vienna contains more than 100,000 volumes; that of the Theresian College about 30,000 volumes; that of the Academia Josephina, 6,000. The two last numbers are given by Balbi. Kilian gives instead 80,000 volumes to the first, and 48,000 to the second! The readers at the University library are from 120 to 200 daily. It was formed with books taken from suppressed convents by Joseph II., and is rich particularly in works on medicine, natural history and ancient theology.

(6) Balbi gives it only 280,000 volumes. My information is from the most authentic source possible.

(7) According to some authorities quoted by Balbi, the number of works might be reckoned at 500,000.

(8) Balbi says, 260,000 vols. Ebert, who was librarian at Dresden, published a history of the library in 1822, in which he reckons the number of volumes at 220,000. Kilian, in 1828, says more than 200,000, and less than 260,000.

(9) It is very singular, that in almost all accounts, the number of the articles is given for that of the volumes contained in this collection.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

16. MADRID. About 120,000 volumes, or 50,000 works.

17. MILAN, *Brera*. About 200,000 volumes. The number of works cannot be specified (1).

———, *Ambrosiana*. About 100,000 volumes. No answer to the second part of the question (2).

18. MÜNICH. Perhaps 500,000 volumes, if the enormous mass of duplicates in the collections be included. To the other part of the question no answer can be given.

19. NAPLES. About 160,000 volumes, or more than 200,000 articles.

20. ORLEANS. About 30,000 volumes, or 14,549 articles.

21. PARIS, *King's Library*. About 650,000 volumes. It is impossible to state, even by approximation, the number of works.

———, *Arsenal*. About 200,000.

———, *Ste. Geneviève*. About 200,000 (3).

———, *Mazarine*. About 100,000.

———, *Institut*. About 90,000. (No answer from these libraries as to the number of works.)

22. PARMA. About 82,000 volumes, or 40,000 works.

23. PRAGUE. About 90,000 volumes. No answer as to the number of works.

24. TURIN. About 85,000 volumes. No answer as to the number of articles.

25. VENICE. At the end of 1833 the library contained 85,602 volumes, or 50,334 works.

26. VIENNA. About 300,000 volumes. No answer as to the number of articles.

27. WOLFENBÜTTEL. About 140,000 volumes, or nearly 400,000 titles.

Observations on Question 2.

I HAVE tried to collect the most correct information I could on the subject, by framing my question in so distinct a manner that no mistake should occur as to the number of *works* and that of *volumes* contained in a collection; two things quite distinct, and which are the most common source of error. I am not certain of the correctness of the answers I have received when any number of volumes or of works is given by approximation only. On the whole, however, I am more disposed to rely on the information I have collected than on any other I am acquainted with, knowing as I do the high character and the intimate acquaintance with the subject possessed by the parties by whom that information was communicated.

Question 3.—Are MSS. as well as other collections, such as medals, prints, statues, paintings, &c. annexed to it under the same officers or keepers; or are these objects entrusted to other keepers?

1. BASLE. Medals, prints, &c. entrusted to the care of the same officers.

2. BERLIN. Only MSS. (about 10,000 vols.) placed under the care of the same librarians.

3. BERNE. The librarians have also care of the MSS., coins, and of a collection of Etruscan vases.

4. BRUXELLES. MSS. (about 10,000) confided to separate keepers.

5. BUDA, *University*. MSS. under the care of the same librarians; and coins entrusted to one of them.

———, *Széchenyi*. MSS. of the same class with printed books, as well as maps of Hungary, and portraits of illustrious Hungarians, under the same custody.

6. CASSEL. Only MSS. (about 1,200) under the care of the same librarian, with printed books.

7. COPENHAGEN. MSS. (about 15,000 vols.) and prints (about 77,000 in number) entrusted to the same keepers.

8. DRESDEN. 2,700 volumes of MSS., under the same keepers (4).

9. FLORENCE, *Palatina*. Only printed books.

————, *Magliabecchiana*. About 12,000 vols. of MSS. under the same keepers (5).

————, *Riccardiana*. About 3,500 vols. of MSS. under the same keepers.

————, *Marucelliana*. A few MSS. under the same keepers.

10. FRANKFORT. MSS. (about 500), and medals (about 6,000), and other objects of fine arts, under the same keepers.

11. GENEVA. MSS., and a few objects of art, under the same keepers.

12. GÖTTINGEN. MSS. (about 1,500) and coins only, under the same keepers. Objects of fine arts, natural history, &c. entrusted to distinct keepers.

13. THE HAGUE. MSS. and prints only under the same keepers. Coins separate.

14. LEYDEN. MSS. only under the same keepers.

15. LISBON. MSS. only under the same keepers. Coins separate.

16. MADRID.

(1) Balbi says 169,000, on the authority of the librarian, Mr. Gironi. My authority is, however, very good; and yet such is the difference!

(2) According to Mr. Gironi, quoted by Balbi, this library contains only 40,000 volumes. The librarian, Mr. Amati, agrees with my informant that they are more than 100,000.

(3) In the Appendix to last year's Evidence 176,000 volumes are given to the Arsenal, and 160,000 to the Ste. Geneviève.

(4) The number here stated is that given by Ebert, the librarian, by Balbi, and in the returns in the Appendix to last year's Evidence on the British Museum. In the "Proceedings of the Records Commissioners," we are told that the manuscripts amount to 16,000 *volumes*. Did the writer mean *works* or *articles*?

(5) In the "Proceedings of the Records Commissioners," we are told that the Magliabecchiana "possesses but few manuscripts." This is certainly wrong: and yet the writer speaks *de visu*. He does the same with respect to Berlin.

16. Madrid. MSS., medals, and antiquities, under the same keepers.

17. Milan, *Brera.* A few MSS. only under the same keepers; all other objects under distinct officers.

———, *Ambrosiana.* MSS. (4,633 vols.) under the same keepers (1).

18. Münich. MSS. only under the same keepers (not certain).

19. Naples. MSS. only under the same keepers.

20. Orleans. MSS. and prints under the same keepers.

21. Paris, *Royal Library.* Divided into four departments: 1st. Printed books. 2d. MSS. (more than 80,000 vols.) 3d. Medals, coins, gems and antiques. 4th. Engravings, divided into two sections, one of which of maps, &c. with distinct keepers.

———, *Arsenal.* MSS. under the same keepers (about 6,000 vols).

———, *Ste. Geneviève.* MSS. under the same keepers (about 3,500 vols).

———, *Mazarine.* MSS. under the same keepers (3,437 vols).

———, *Institut.* MSS. under the same keepers.

22. Parma. MSS. only (more than 3,000 vols.) under the same keepers.

23. Prague. MSS. only (about 3,000 vols.) under the same keepers.

24. Turin. MSS. (about 3,250 vols.), prints and drawings, under the same keepers.

25. Venice. MSS., drawings, medals, pictures, engravings, all under the same keepers.

26. Vienna. MSS. (about 16,000 vols.) and other objects, form part of the establishment, but are entrusted to other keepers.

27. Wolfenbüttel. Prints, MSS., paintings, and other rarities, under the care of the same keeper.

Question 4.—What are the number and titles of officers, keepers or librarians; of clerks, amanuenses, &c.; of attendants, servants, &c.?

1. Basle. One librarian, two under-librarians, two attendants.

2. Berlin. One principal librarian, one librarian, four keepers, two assistants, one secretary, three attendants.

3. Berne. One librarian, two under-librarians, one keeper and one attendant.

4. Bruxelles. One librarian, one attendant.

5. Buda, *University.* One principal librarian, two librarians, two copyists, one servant.

——, *Széchenyi.* One librarian, one assistant, one servant.

6. Cassel. One librarian, one secretary. No information as to the number of inferior servants. An inspector has charge of the whole establishment, as responsible keeper (not librarian). He has the keys of the place, and superintends the work *(not scientific or literary)* of the servants.

7. Copenhagen. One principal librarian, three under-librarians, one inspector of reading room, one vice-inspector, one amanuensis, two servants.

8. Dresden. One librarian, one under-librarian, two secretaries, one officer more (station and duties unknown), two servants.

9. Florence, *Palatina.* One librarian, one amanuensis, one servant.

————, *Magliabecchiana.* One librarian, one under-librarian, one assistant, one clerk, four servants.

————-, *Riccardiana.* One librarian, one under-librarian, one servant.

————-, *Marucelliana.* One librarian, one under-librarian, one servant.

10. Frankfort. Two librarians, two amanuenses, one servant.

11. Geneva. Three librarians, two attendants.

12. Göttingen. Three librarians, three under-librarians, one secretary, five assistants, two servants.

13. The Hague. One librarian, one under-librarian, one assistant, one servant.

14. Leyden. One librarian, one under-librarian, two keepers, one amanuensis.

15. Lisbon. One head-librarian, one librarian, one chief keeper, 16 officers of various descriptions, one porter, four servants.

16. Madrid. One head librarian, six librarians, 10 attendants; servants (number unknown).

17. Milan, *Brera.* One librarian, two under-librarians, two keepers, two amanuenses, three attendants, two servants.

———, *Ambrosiana.* One principal librarian, three librarians, two keepers, two amanuenses, two servants.

18. Münich. No information.

19. Naples. Four librarians, three copyists, six keepers, two clerks, four servants.

20. Orleans. One librarian, one servant.

21. Paris, *Royal Library.* Two librarians, two under-librarians, 18 assistants of various descriptions, 10 or 12 servants.

——–, *Arsenal.* Eight librarians and under-librarians; (no information as to the other persons attached to this library).

——–, *Ste. Geneviève.* Seven librarians, one under-librarian, five assistants, two servants.

——–, *Mazarine.* One principal librarian, five librarians, two under-librarians, six attendants and servants.

Paris,

(1) How can this be reconciled with the "Proceedings of the Records Commissioners," in which the number of volumes is said to be 15,000, and that of articles between 30 and 40,000? The librarian, Mr. Amati, gives the precise number of volumes of manuscripts, 4,633, containing about 18,000 articles.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

PARIS, *Institut.* One librarian, two under-librarians; (no answer to the rest of the question).

22. PARMA. One librarian, one under-librarian, one secretary, two assistants, four attendants and servants.

23. PRAGUE. One librarian, one keeper, three amanuenses, four servants.

24. TURIN. One librarian, two under-librarians, two assistants, four attendants and servants.

25. VENICE. One librarian, one under-librarian, one assistant, three attendants and servants.

26. VIENNA. Four librarians, four amanuenses, one assistant, three servants.

27. WOLFENBÜTTEL. One librarian, one amanuensis, one servant.

Question 5.—Are the printed books all catalogued, and how? Alphabetically, according to the authors' names, or classed, according to subjects, or both? Are such catalogues, or any part of them, printed? In what form, when and where were they printed?

1. BASLE. The catalogues are not complete. The books are divided into four great classes (faculties), viz. theology, jurisprudence, medicine, and philosophy. There is a special catalogue for antiquities, numismatic and literary history. A general alphabetical catalogue, however, is now making. Not printed.

2. BERLIN. A complete alphabetical catalogue in 294 fol. vols. A classed catalogue also complete in 202 fol. vols. A catalogue of accessions from 1812, consists of 9 vols. These several catalogues are kept up. Not printed.

3. BERNE. An alphabetical catalogue, with supplements to 1832, has been printed. A classed catalogue has been long wished for.

4. BRUXELLES. A classed catalogue of some sort or other exists; the alphabetical catalogue is in progress. Not printed.

5. BUDA, *University.* There is a general alphabetical catalogue, according to the authors' names, and also special catalogues according to subjects. No part of these has been printed; but in 1781 a catalogue of the rarest books in the collection was published.

———, *Széchenyi.* All books and manuscripts are catalogued alphabetically according to the authors' names, and this catalogue has been printed in 10 vols. 8vo. between 1799 and 1815.

6. CASSEL. A classed catalogue in several fol. vols., and an alphabetical in slips; how far they are complete I cannot say. Neither printed.

7. COPENHAGEN. All foreign books are systematically catalogued, and this catalogue, not printed, consists of 199 vols. fol. The alphabetical catalogue in slips is in hand. Danish books, and books relating to that country, are not catalogued at all, but are systematically arranged in a separate room. A special collection of Danish books presented to the library by Hielmstierne, has a particular catalogue printed in 2 vols. 4to.

8. DRESDEN. No information on the subject.

9. FLORENCE, *Palatina.* An alphabetical catalogue, according to the authors' names; then one of the Classics; one of the rare and Elzevirian editions; one of works on natural history; one of those on geography and travels; one of those on the fine arts. None printed.

————, *Magliabecchiana.* A classed catalogue, with an index of authors. Not printed. Fossi published a catalogue of the rarest books in the collection in his days.

————, *Riccardiana.* A manuscript catalogue according to the authors' names.

————, *Marucelliana.* Ditto.

10. FRANKFORT. There is a classed catalogue, begun about the middle of last century, consisting of 21 fol. vols.; six for theology, one for medicine, two for jurisprudence, six for history, one for literature, three for philosophy and miscellaneous, two for works in French, Italian, Spanish, English, Dutch and MSS. There is also a general alphabetical catalogue of the works, entered according to the names of the authors, consisting of 50 fol. vols. It was compiled in 1815 and 1816. Moreover, there are catalogues of some collections of books formerly belonging to suppressed convents. But as these catalogues, more particularly the system of classification, do not answer to the modern scientific improvements, a general recompilation of all these catalogues is now in progress. The plan to be followed is that of the Münich Royal Library, considered the best in this part of Germany. All in manuscript.

11. GENEVA. There was a complete classed catalogue, with an index of the authors' names, in manuscript. As the system was not in harmony with the modern scientific improvement, a new one has been compiled on a better plan, which has been published in two 8vo. vols., in August 1834.

12. GÖTTINGEN. The printed books (as also the MSS.) are all catalogued: 1, alphabetically, according to the names of the authors; 2, according to the subjects. No printed catalogues.

13. The HAGUE. There is a catalogue in slips arranged according to subjects. A new classed catalogue is now in hand, which is to have an index of authors at the end. (I do not comprehend why this second catalogue is now compiling. If not a copy of the slips, these must be considered defective, or the system bad.) No catalogue printed.

14. LEYDEN. A complete catalogue, alphabetically arranged according to the authors' names. It is three years since preparations have been making for compiling a catalogue *raisonné* according to subject. There are some very old printed catalogues of the library, now of no use.

15. Lisbon. There is an alphabetical catalogue of printed books, as well as of manuscripts, according to the names of the authors, and another according to subjects, in parts; each part placed in the room in which are the corresponding books. None printed.

16. Madrid. There is a complete catalogue, distributed according to the names of the authors, of all books in the library to 1790, and supplements for the following years. A general amalgamation of these is now taking place. There is likewise a catalogue so arranged for each of the classes into which generally all human knowledge is divided. None printed.

17. Milan, *Brera*. There are two general catalogues of the library, one distributed according to the authors' names, the other according to subjects. Then there are special catalogues of the editions of the fifteenth century, of Aldines, of music, of transactions of learned societies. No catalogue is printed.

———, *Ambrosiana*. There is an alphabetical catalogue according to the authors' names, and a classed one is now compiling. None printed.

18. Münich. Two catalogues, one according to subjects, the other according to the authors' names, are compiling. None is printed.

19. Naples. There are two catalogues, one alphabetical according to authors' names, and one according to subjects. Both printing.

20. Orleans. A manuscript catalogue according to the four subjects mentioned in answer to Question 2. Then, for each class, an arrangement at the end according to Brunet's system. These are manuscript. A catalogue of the library was published in 1721; and again in 1777.

21. Paris, *Royal Library*. There are schemes of catalogues, both alphabetically arranged according to authors' names and according to subjects. Of the latter, nearly seven volumes were printed off, six of which were published from 1733 to 1753. There are some manuscript supplements to it, and that catalogue is the basis on which the others are carried on. A transcript of the old alphabetical catalogue also is now taking place; and there are, moreover, perhaps 400,000 titles on slips not yet arranged. But the number of works absolutely uncatalogued is still enormous.

———, *Arsenal*. There is a manuscript catalogue, very much on the plan of that of the *Bibliothèque du Roi*, old-looking and evidently wanting recompiling; but I do not think there is any idea of so doing.

———, *Ste. Geneviève*. There is a manuscript catalogue according to authors' names, but many tracts are not inserted in it, although I have been told the titles of a good number of them are written out on slips. There is also a manuscript classed catalogue of medicine and history. Daunou drew up a catalogue of editions of the fifteenth century in a chronological order. It contains short titles of all remarkable editions he was acquainted with. The titles of such as are in the library are written with black ink, on the right hand page; the remainder are entered in red, on the opposite page. A classed catalogue of this library was once begun, and probably completed by St. Leger, Pingré, and Bernier; but a few volumes only are now in existence. Daunou imagined to substitute synoptical tables to a classed catalogue by entering, under the head of any branch of science, the names of the authors who have written on it. For instance, under the head Astronomy, followed simply the names Ptolomeus, Riccioli, Flamsteed, &c. Whether these tables were to contain only a few of the names of all writers known, whether they were intended to relate only to the books in the library, or to all works ever written on a subject, I am not able to state, since only a few tables (which were pasted on boards and intended to be hung up in the reading-room) are now extant, the others having been destroyed through carelessness. Nor am I informed how far Daunou had proceeded in his work.

———, *Mazarine*. A catalogue according to authors' names, and another according to subjects; neither of which are published.

———, *Institut*. Ditto.

22. Parma. There is an alphabetical catalogue according to the names of authors, in ten manuscript volumes, as also in slips. There is likewise a double manuscript catalogue of books printed in the fifteenth century. The classed catalogue is begun, but very little advanced. Of the De Rossi collection, a catalogue was published by its former proprietor, 8vo., 1812.

23. Prague. There is a kind of classed catalogue, bound in several manuscript volumes; and, moreover, the titles of books written out on slips are kept on alphabetical order according to the authors' names.

24. Turin. As many alphabetical catalogues, according to the names of authors, as are the subjects into which the books are divided. These are only in manuscript, and nearly complete.

25. Venice. An alphabetical catalogue, according to authors' names only, in manuscript.

26. Vienna. A general alphabetical catalogue, according to authors' names, bound in 60 volumes, and also in slips. There are, moreover, special catalogues of incunabula, of practical works on music, of Hebrew works, of certain Slavonic works, of all the bibles, and of certain parts of them. There is also an historico-statistical-geographical-renvoi catalogue (I suppose a kind of catalogue according to places and the entries connected with cross-references) of all works added since 1822. The classed catalogue and some more special catalogues are in progress.

27. Wolfenbüttel. The alphabetical catalogue, according to the authors' names, was interrupted in 1770. There are separate catalogues of several libraries annexed to the one in question, and after these are incorporated with the former, a general alphabetical catalogue, as well as one classed, is to be compiled. No information as to whether any be printed.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

Question 6.—Are the catalogues accessible to the readers as a matter of course, and always within their reach, or are they to be asked for if the readers wish to consult them? Is there any objection to a reader asking for them? Can his request of perusing the catalogues be refused?

1. Basle. The catalogues are accessible to any reader, without any restraint whatever.

2. Berlin. The alphabetical catalogue is always in the librarian's hands; it seems not to be allowed to be perused by readers. The readers may ask, and be allowed to consult, under the librarian's eye, any volume of the classed catalogue they may want. All catalogues are kept in the librarians' room.

3. Berne. Accessible to the public without restriction.

4. Bruxelles. Readers are allowed to consult catalogues on asking (1).

5. Buda, *University*. Readers are allowed to consult catalogues on asking.

——, *Széchenyi*. Accessible to every one.

6. Cassel. Not accessible, except by special indulgence of the librarian (2).

7. Copenhagen. The indulgence of granting the use of catalogues to the readers depends wholly on the head-librarian's will.

8. Dresden. No information.

9. Florence, *Palatina*. Catalogues may be freely consulted.

————, *Magliabecchiana*. Catalogues freely accessible (3).

————, *Riccardiana*. Ditto.

————, *Marucelliana*. Ditto.

10. Frankfort. The catalogues are not freely accessible to the readers at present.

11. Geneva. The catalogues are freely accessible to every reader.

12. Göttingen. Catalogues may be consulted, if properly asked for (4).

13. The Hague. The catalogues may be used under the eye of the librarians.

14. Leyden. At present the catalogues are used without any restriction; but as the readers are not always very discreet in the exercise of this privilege, the time may come when some restraints may be thought necessary.

15. Lisbon. On the slightest wish being expressed by the readers, they would be allowed immediately to consult the catalogues.

16. Madrid. On application to the officers, there is not the slightest difficulty in allowing the readers to peruse the catalogues.

17. Milan, *Brera*. The readers are not allowed to consult the catalogues.

———, *Ambrosiana*. Ditto.

18. Münich. Readers are not allowed to consult the catalogues; except as a special indulgence from the librarians.

19. Naples. Freely accessible to the public without asking.

20. Orleans. Ditto.

21. Paris, *King's Library*. All the catalogues may be perused by readers on permission being granted, not as a matter of right (5).

———, *Arsenal*. Ditto (6).

———, *Ste. Geneviève*. Freely perused by the readers.

———, *Mazarine*. Catalogues are not allowed to be consulted (7).

———, *Institut*. Consulted by the members of the Institut only (8).

22. Parma. The catalogues are not allowed to be consulted by readers; except on special leave being granted by the librarian.

23. Prague. Catalogues only of special parts of the library allowed to be consulted; and even this indulgence may be refused.

24. Turin. No reader can consult the catalogues, except on obtaining a special permission from the librarian.

25. Venice. Catalogues may be consulted on applying to the librarian, in whose private room they are kept.

26. Vienna. Access to the catalogues is only granted on particular occasions, and by special permission.

27. Wolfenbüttel. There is no objection to allow readers to peruse the catalogues on their asking leave for so doing.

Question 7.—

(1) I never saw them consulted by readers when I was there.

(2) The librarian was absent when I visited the Library. On my asking the attendant, who accompanied me, to allow me to look at the Catalogue, he seemed much surprised at my request, and said it could not be complied with. I was, however, allowed to see it, on the Inspector coming and telling the attendant, that as I was myself attached to a public library, the indulgence ought to be granted.

(3) I have, however, reason to think that the free accessibility here spoken of, is more theoretical than practical. I believe that the case is the same in the two following libraries.

(4) I have been the greatest part of two days in the Library, and a long time near where the catalogues stand; I never saw any reader consult them.

(5) Of course the volumes which are printed are to be perused as freely as any other printed book. I never saw a reader examine a volume of the catalogue in manuscript. When I consulted any volume of it, one of the gentlemen belonging to the library stood by my side.

(6) When, as a stranger, I asked to peruse them, the favour was denied; when known, there was no limit to the courtesy with which I was treated.

(7) The reason assigned is, that this is putting thieves in the way of stealing good books.

(8) I could just glance at a volume of the alphabetical catalogue, upon an article of which my opinion was asked.

Question 7.—Is the library of printed books kept on increasing? Who supplies the funds?

1. Basle. Kept increasing at the government's expense.
2. Berlin. Ditto.
3. Berne. Kept increasing partly with the revenues of the library, partly with funds voted by the corporation, as well as by the government of Berne.
4. Bruxelles. Increasing at the expense of the corporation of Bruxelles.
5. Buda, *University*. Increasing out of the University fund; a sum is yearly set apart for purchasing books.
——, *Széchenyi*. Increased annually; the funds coming out of property belonging to the institution.
6. Cassel. Augmenting; the funds are supplied by the country.
7. Copenhagen. The library is kept increasing with the funds supplied by the State for the purpose.
8. Dresden. Kept increasing; the government supplies the funds.
9. Florence, *Palatina*. Kept on increasing with the funds supplied by the Grand Duke.
——, *Magliabecchiana*. Increasing with the funds supplied by government, who has taken possession of some property left by Magliabecchi to the library.
——, *Riccardiana*. Ditto.
——, *Marucelliana*. Ditto.
10. Frankfort. Increasing, partly with funds voted by the republic, partly with an annual income left to the library to buy German historical works.
11. Geneva. Increasing, partly with funds voted by the republic, partly with a portion of the fees paid by students to the university for their matriculation.
12. Göttingen. The library is kept on increasing with a share specially appropriated to this purpose by government, out of the general university fund.
13. The Hague. Increasing, with funds voted for the purpose by the nation, and still more with what comes directly to it from the Sovereign's generosity.
14. Leyden. Increasing, with an annual sum allotted for this purpose out of the university funds by the curators.
15. Lisbon. Increasing annually with funds allowed by the nation for the purpose.
16. Madrid. Ditto.
17. Milan, *Brera*. Increasing with funds assigned by government.
——, *Ambrosiana*. Increasing; the income of the library supplies the means.
18. Münich. The king gives annually a certain sum to the library for the purchase of books.
19. Naples. Increasing with funds allotted to it by government.
20. Orleans. Increasing with presents made to it by government, and partly with funds allowed by the corporation of the city.
21. Paris, *Royal Library*. Increasing; a sum is voted annually by the Legislature for the purpose.
——, *Arsenal*. Increasing by the application to this purpose of a small part of the funds yearly voted by the Legislature for keeping up the establishment.
——, *Ste. Geneviève*. Ditto.
——, *Mazarine*. Ditto.
——, *Institut*. Increased by the sum allowed yearly by the Institut out of the general fund paid over to it by the nation.
22. Parma. The public treasury furnishes the means for augmenting the library.
23. Prague. Ditto.
24. Turin. The library is increased by a sum allowed to it out of the general University fund.
25. Venice. Increased by an annual sum allowed by government for the purpose.
26. Vienna. Ditto.
27. Wolfenbüttel. The sovereign of Brunswick provides the funds for increasing the library.

Question 8.—What sum is annually spent, on an average of the last ten years, 1823—1832 inclusive, in adding to the collection of printed books; and what is the yearly average number of volumes so added?

1. Basle. About 150 *l.* sterling are spent annually. No answer can be given to the rest of the question.
2. Berlin. His Majesty allows 1,200 *l.* sterling for buying and binding books, and gives large extra grants from time to time for purchasing expensive works. The number of volumes thus annually added to the library may average, for the last ten or twelve years, 5,000 or 6,000 volumes. The number of works (not volumes) entered in to the Accession-Catalogue since 1812 to the 28th of January 1834 amounts to 47,835.
3. Berne. The annual sum generally spent (that is, exclusive of extra grants from the city) amounts to about 150 *l.* sterling, which causes an increase of about 150 works, or about 400 volumes.
4. Bruxelles. About 55 *l.* sterling are annually laid out in books; small extra grants are sometimes voted; the last was to the amount of 40 *l.* sterling, in 1833.
5. Buda, *University*. About 85 *l.* sterling are annually laid out in the purchase of books. The other part of the question cannot be answered.
——, *Széchenyi*. Unknown.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

6. Cassel. About 230 *l.* sterling annually laid out in the purchase of books. The other part of the question cannot be answered.

7. Copenhagen. About 450 *l.* sterling annually laid out in books. The number of volumes added may be about 3,000 a year.

8. Dresden. About 300 *l.* sterling spent annually to purchase books. No answer to the remainder of the question.

9. Florence, *Palatina.* At least 1,200 *l.* a year are laid out in the purchase of books. No answer can be given to the second part of the question.

———, *Magliabecchiana.* About 130 *l.* a year spent in books. No answer as to the number of volumes purchased.

———, *Riccardiana.* No answer.

———, *Marucelliana.* No answer.

10. Frankfort. About 180 *l.* sterling are annually spent in books, which causes an increase of about 400 volumes.

11. Geneva. About 110 *l.* sterling are annually laid out in books, with which about 500 works, or 800 volumes, are bought.

12. Gottingen. About 1,000 *l.* sterling are annually laid out in the purchase of books. Second part of the question not answered.

13. The Hague. No answer.

14. Leyden. No answer.

15. Lisbon. About 45 *l.* sterling [?] annually laid out in books, which produces an increase of 670 volumes a year [?].

16. Madrid. About 260 *l.* sterling annually laid out in books, with which about 250 works, or 1,000 volumes, are bought.

17. Milan, *Brera.* About 175 *l.* sterling annually laid out in books. The second part of the question cannot be answered.

———, *Ambrosiana.* No answer.

18. Münich. No information.

19. Naples. About 450 *l.* sterling are annually laid out in books. No answer to the rest of the question.

20. Orleans. About 30 *l.* sterling annually laid out in books. No answer can be given to the remainder of the question.

21. Paris, *Royal Library.* About 1,256 *l.* sterling a year are spent in books. No answer to the remainder of the question.

———, *Arsenal.* About 100 *l.* a year are spent in books. No information as to the number of volumes or works.

———, *Ste. Geneviève.* Ditto.

———, *Mazarine.* Ditto.

———, *Institut.* About 240 *l.* sterling a year spent in books. No information as to the number of works or volumes.

22. Parma. About 240 *l.* sterling a year laid out in augmenting the collection of printed books, which produces an increase of about 600 volumes.

23. Prague. About 100 *l.* sterling annually spent in books; from 1823 to 1832, 700 volumes were purchased.

24. Turin. No answer.

25. Venice. About 180 *l.* sterling yearly spent in books; about 1,000 volumes, or 800 works, annually bought.

26. Vienna. About 1,000 *l.* sterling a year laid out in books; the number of volumes added to the library (those included which are received by virtue of the copy-right law) amount to about 5,000 a year.

27. Wolfenbüttel. About 32 *l.* sterling annually laid out in books; in 1831 about 350 volumes were thus bought.

Question 9.—Has the library any right to a copy or copies of books, engravings, &c. which are published within the state or town in which it is situated? Have publishers or authors ever complained of having to give copies of their works to the library?

1. Basle. The right which was once possessed was abolished when the abolition of the censorship of the press took place.

2. Berlin. Every bookseller is bound to give a copy of any work he prints to the library, and a second copy to the library of the university within whose province he carries on business. As to maps and prints, the right is contested. There is no complaint against the system.

3. Berne. The right once existed; but after the revolution of 1798, it has become obsolete. Steps have been taken to have it revived, but hitherto without success.

4. Bruxelles. No claim whatever.

5. Buda, *University.* The library has a right to a copy of every book published in Hungary. No answer as to complaints being made.

———, *Széchenyi.* Ditto.

6. Cassel. Ditto.

7. Copenhagen. The library has a right to two copies of every book or print, printed or engraved within the kingdom, to be delivered by the printer or engraver; one of them on writing paper, the other on common paper. No answer as to complaints.

8. Dresden. No information received.

9. Florence, *Palatina.* No right

559

FLORENCE, *Magliabecchiana.* The library has a right to a copy of every work published in Tuscany. No answer as to complaints.

———, *Riccardiana.* No right.

———, *Marucelliana.* Ditto.

10. FRANKFORT. Ditto.

11. GENEVA. The library has a right to two copies of every new work printed within the canton, and to one copy of every new edition of books printed before. The copies are left by the printers with the Chancery of State. No complaint was ever made.

12. GÖTTINGEN. The library has a right to a copy of every work published within the kingdom of Hanover; and the bookseller for whom it is published, or else the printer, are bound to deliver it. No answer as to complaints.

13. THE HAGUE. Persons who wish to secure their property are bound to deliver a copy of their work to the library; else they may be pirated.

14. LEYDEN. The library has no right to a copy of any work, except such towards which the establishment has contributed the materials.

15. LISBON. Printers within the kingdom are bound to deliver to the library a copy of every article they print, else they are fined the value of 20 copies. No complaints were ever heard on the subject.

16. MADRID. The library has a claim to a copy of every book which is published in Spain; and no dissatisfaction is known to exist against this law in any quarter.

17. MILAN, *Brera.* The library has a claim to one of the five copies of every book which printers in the Lombard-Venetian kingdom are bound to deliver gratis at the office of the censorship of the press. There have been disputes, particularly with proprietors of works with coloured plates, who wanted to deliver the copies with the plates not coloured; but their objections were overruled.

———, *Ambrosiana.* No claim.

18. MÜNICH. No information.

19. NAPLES. The library has a right to two copies of every book published in the continental provinces of the kingdom. They are deposited at the offices for the censorship of the press. No positive complaint.

20. ORLEANS. The library has no right of this sort.

21. PARIS, *Royal Library.* Every publisher is bound to give two copies of every work he publishes to a special office attached to the Ministry of the Interior. One of these copies goes to the King's library, the other to the library attached to the *Chancellerie.* No complaint.

———, *Arsenal.* No right.

———, *Ste. Geneviève.* Ditto.

———, *Mazarine.* Ditto.

———, *Institut.* Ditto.

22. PARMA. The library has a right to two copies of whatever is printed in the State. There were complaints, not only on account of these two copies, but of three more that publishers are bound to deliver at the office of the censor of the press.

23. PRAGUE. The library has a right to a copy of every work published in the kingdom of Bohemia, which is received through the censors of the press. No information as to complaints.

24. TURIN. The library has a claim to a copy of every book printed within the province of the university; (that is, Piedmont, properly speaking, exclusive of the Duchy of Genoa, Savoy and Sardinia). No complaint ever heard of.

25. VENICE. The same right as the Brera at Milan; and no complaint known.

26. VIENNA. The library receives one of the best copies of every book, map, print, &c. published in any part of the Austrian dominions; and no complaint was ever heard of by the directors of the library.

27. WOLFENBÜTTEL. No claim.

Question 10.—Is there any restriction as to giving the books to read when asked for, or may the officers withhold a book from a reader if they deem it expedient? or give it only in certain cases?

1. BASLE. Books of prints and expensive works in general are not usually lent out: the librarian judges of the exceptions. (This is no answer to the question.)

2. BERLIN. Novels, poems, plays, &c. are not allowed to be read in the library, if no special reason be given for departing from the rule.

3. BERNE. Rare and expensive books are not obtained by readers, except by addressing themselves to the librarian.

4. BRUXELLES. No information.

5. BUDA, *University.* To young students particularly, forbidden books are not given to read. The librarians have a private catalogue of books to be thus kept back.

———, *Széchenyi.* Some books are refused to the readers; particularly those relating to the history of Hungary during the sixteenth and seventeenth centuries.

6. CASSEL. No information.

7. COPENHAGEN. No restriction.

8. DRESDEN. No information.

9. FLORENCE, *Palatina.* No restraint.

———, *Magliabecchiana.* Forbidden books may be refused to persons who do not exhibit a licence to read them.

———, *Riccardiana.* Ditto.

———, *Marucelliana.* Ditto.

10. Frankfort. No restriction, except as to immoral works; of which there is no recollection of one being asked for.

11. Geneva. Well-known individuals, or persons particularly well introduced, can peruse any books without restriction.

12. Göttingen. There is no restriction; the officers may, however, if they think it proper, withhold certain books from certain readers.

13. The Hague. No restriction.

14. Leyden. Ditto.

15. Lisbon. Ditto.

16. Madrid. If, from the age of the reader, the officer has reason to think that the book asked may be prejudicial to him, it may be refused: there is no other restriction.

17. Milan, *Brera.* Forbidden or immoral books not given to read, except to persons especially authorized, and with prudent discrimination.

———, *Ambrosiana.* Ditto.

18. Münich. No restriction.

19. Naples. Forbidden books are denied.

20. Orleans. No book refused, except novels; to obtain which a good special reason must be assigned.

21. Paris, *Royal Library.* Romances, novels, new theatrical compositions, political pamphlets, and other such light publications, are not given to readers, except on cause being shown for the want of such works: nor are readers, generally, and without special leave from the librarians, allowed more than one work at a time.

———, *Arsenal.* There are restrictions in certain cases at the librarians' discretion.

———, *Ste. Geneviève.* Ditto.

———, *Mazarine.* Books can be refused.

———, *Institut.* No restriction to persons properly presented.

22. Parma. Forbidden books are refused to persons who are not provided with a licence; and even to them downright immoral books are refused, according to circumstances. Rare and costly books are not indiscriminately given to read.

23. Prague. Prohibited books are not allowed to be perused; but this rule admits of exceptions. Rare and precious works are only given to read to well known persons.

24. Turin. Prohibited books are not generally allowed to be read; and even for others, such as costly or rare works, the librarians exercise a proper discretion.

25. Venice. No work entered in the catalogue can be refused.

26. Vienna. Prohibited books not granted to those who have no licence to read them; rare and valuable books are not put into the hands of mere idle readers; novels, and other such light publications, as well as books of education, are not generally allowed to be perused in this library; nor journals and other periodical publications, before they are bound; nor is any book given to read to a person who has not procured one of the forty-five seats, which are in the reading-room. If the whole of them be occupied, a reader must wait, standing, till one has been vacated; and on his having procured a seat, he is furnished with books.

27. Wolfenbüttel. Without good reason, no book can be refused.

Question 11.—Is the admission to the library entirely free, or is any leave required to be admitted? Can it be denied without any reason being assigned? Is the leave perpetual or for a certain time?

1. Basle. The public are freely admitted two days every week; the other four days, only professors, doctors, &c. are admitted.

2. Berlin. Any person wishing to be admitted to read in the library must apply to one of the librarians, who delivers him a card of admission; upon receiving which the applicant signs a printed declaration that he will obey all rules and regulations prescribed for the management of the library. To this declaration he adds his address. The card of admission is valuable so long as the person who obtained it continues to dwell in Berlin.

3. Berne. Admission entirely free.

4. Bruxelles. Ditto.

5. Buda, *University.* Ditto.

——, *Széchenyi.* Ditto.

6. Cassel. Ditto.

7. Copenhagen. Admission to the reading-room is granted by the librarians to all well-known persons or those well introduced.

8. Dresden. Admission to read in the library entirely free.

9. Florence, *Palatina.* A permission from the Sovereign is necessary previous to being admitted to this library.

————, *Magliabecchiana.* Access entirely free.

————, *Riccardiana.* Ditto.

————, *Marucelliana.* Ditto.

10. Frankfort. Ditto.

11. Geneva. The admission is free to every one who wishes to see the library. To peruse any book it is requisite to be known or well introduced.

12. Göttingen. Admission entirely free.

13. The Hague. Admission entirely free.

14. Leyden. Ditto; but students are recommended to the librarians with a note from a professor.

15. Lisbon. Entirely free.
16. Madrid. Ditto.
17. Milan, *Brera*. Ditto.
———, *Ambrosiana*. Ditto.
18. Münich. Ditto.
19. Naples. Admission to the reading-room entirely free.
20. Orleans. Admission free.
21. Paris, *Royal Library*. Ditto[1].
———, *Arsenal*. Ditto.
———, *Ste. Geneviève*. Ditto.
———, *Mazarine*. Ditto.
———, *Institut*. Leave is granted on the recommendation of a member of the Institut, sanctioned by the librarian. The permission must be renewed every year.
22. Parma. Entirely free.
23. Prague. Ditto.
24. Turin. Ditto.
25. Venice. Ditto.
26. Vienna. Ditto.
27. Wolfenbüttel. Ditto.

Question 12.—What are the rules for a reader who wishes to peruse books in the library? Does he ask for them in writing, or how?

1. Basle. Books are asked for verbally.
2. Berlin. Books are asked for in writing by readers, who deliver to the officer in the reading-room a ticket, signed with their name, and containing the title of the works wished for.
3. Berne. Books are verbally asked for from the officers.
4. Bruxelles. No information.
5. Buda, *University*. Readers ask verbally the officers in the reading-room for the works they want to peruse.
——, *Széchenyi*. Ditto.
6. Cassel. No information.
7. Copenhagen. The title of any book wanted by a reader is written by him on a ticket, which is delivered to the inspector, who procures the book, and puts it into the reader's hands.
8. Dresden. No information.
9. Florence, *Palatina*. Books are verbally asked for from the librarian.
————, *Magliabecchiana*. No information.
————, *Riccardiana*. Ditto.
————, *Marucelliana*. Ditto.
10. Frankfort. Books are asked for verbally.
11. Geneva. Ditto.
12. Göttingen. Ditto.
13. The Hague. No information.
14. Leyden. Ditto.
15. Lisbon. Books are asked for verbally.
16. Madrid. Ditto.
17. Milan, *Brera*. Books are asked for by the reader signing his name to a ticket containing the title of the book.
———, *Ambrosiana*. Books are asked for verbally.
18. Münich. The reader is required to write down on a ticket the title of the book, and to give it, signed with his name, to the officer in the reading-room; when an attendant brings to him the book from the library.
19. Naples. Books are asked for either verbally or in writing. They are brought to the readers, together with a printed ticket, previously dated and filled with the title of the book.
20. Orleans. Books may be asked for either verbally or in writing.
21. Paris, *Royal Library*. Books are to be asked for in writing, the reader being required to deliver to the librarian a ticket, signed with his name and address, and containing the title of the work wanted to peruse.
———, *Arsenal*. Books are asked for verbally.
———, *St. Geneviève*. Books are asked for verbally.
———, *Mazarine*. No answer.
———, *Institut*. Books are asked for verbally.
22. Parma. The title of the book given to read is entered in a reading register, and the reader is obliged to sign his name to the entry. Books are asked for verbally.
23. Prague. Readers in general are obliged to ask for books in writing; whilst distinguished personages ask for them verbally.
24. Turin. Books are asked for verbally, but readers are obliged to enter them in a register, signing their names.
25. Venice. Books are asked for verbally, and entered in a reading-register.
26. Vienna. Ditto.
27. Wolfenbüttel. Books may be asked for either in writing or verbally.

Question 13.—

[1] This *free admission* must be understood with respect to the reading-room. The public are admitted to see the library only twice a week, for five hours each time.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

Question 13.—Supposing readers to be admitted without any leave whatever being requisite, has ever any inconvenience arisen from such a practice? for instance, are books damaged, soiled or mutilated, in a way not likely were not strangers admitted indiscriminately?

1. Basle. No inconvenience.
2. Berlin. Notwithstanding the precautions taken, disorders occasionally happen.
3. Berne. No inconvenience.
4. Bruxelles. No information.
5. Buda, *University*. It happens that books are sometimes damaged, and even stolen.
——, *Széchenyi*. No inconvenience.
6. Cassel. No information.
7. Copenhagen. Although readers are not indiscriminately admitted, and seldom others than scientific and learned men, yet disorders have occasionally happened.
8. Dresden. No information.
9. Florence, *Palatina*. No inconvenience, the persons admitted being very few.
————, *Magliabecchiana*. Seldom any disorder happens.
————, *Riccardiana*. Ditto.
————, *Marucelliana*. Ditto.
10. Frankfort. No inconvenience.
11. Geneva. Ditto.
12. Göttingen. Ditto.
13. The Hague. Ditto.
14. Leyden. Ditto.
15. Lisbon. Ditto.
16. Madrid. Every day fewer disorders occur.
17. Milan, *Brera*. No inconvenience.
———, *Ambrosiana*. Ditto.
18. Münich. No information.
19. Naples. Ditto.
20. Orleans. Very few abuses.
21. Paris, *King's Library*. It is to be hoped that the serious disorders which have happened may be put a stop to by the new regulations (1).
——, *Arsenal*. Disorders of a serious nature occur.
——, *St. Geneviève*. Disorders of a serious nature occur.
——, *Mazarine*. No answer.
——, *Institut*. Abuses are prevented.
22. Parma. No inconvenience.
23. Prague. Notwithstanding all precautions disorders are not uncommon.
24. Turin. Disorders, which sometimes took place, are now completely checked.
25. Venice. No disorder since the institution of the reading register.
26. Vienna. In former times disorders occurred, when readers unaccommodated with chairs were allowed books; now every thing proceeds correctly.
27. Wolfenbüttel. No inconvenience.

Question 14.—Are readers quite free to leave the library without complying with any rule previous to their so doing? or are they under any restraint, or obliged to conform to any regulation before they depart?

1. Basle. No formality whatever.
2. Berlin. Readers must return the books given to them to read; and by placing in them their papers, they find the books left in the reading-room presses for next day.
3. Berne. No formality whatever.
4. Bruxelles. No information.
5. Buda, *University*. Readers must return the books to the officers in the reading-room.
——, *Széchenyi*. No formality whatever.
6. Cassel. No information.
7. Copenhagen. No formality.
8. Dresden. No information.
9. Florence, *Palatina*. No formality at all.
————, *Magliabecchiana*. Ditto.
————, *Riccardiana*. Ditto.
————, *Marucelliana*. Ditto.
10. Frankfort. Ditto.
11. Geneva. Ditto.
12. Göttingen. Ditto.
13. The Hague. The readers must return the books to the officer in the reading-room.
14. Leyden. No formality.

15. Lisbon.

(1) Des éditions uniques ont disparu, des pages ont été coupées, des gravures dérobées, des autographes arrachés. [This happened before the new regulations.]—Sur vingt ouvrages demandés, on n'en a pas toujours deux complets.—Allez à la Bibliothèque du Roi, demandez une des cent éditions de Rabelais; on vous trouvera peut-être, à grand peine, comme échantillons, plusieurs volumes différents d'édition et de format. *Livre des Cent-et-un*. Bibl. Publ.

15. Lisbon. No formality.

16. Madrid. The only formality required is that of returning the books to the officer from whom they were received. At the door of the reading-room the sentinel prevents any one leaving with books; and the military at the gates would stop any person attempting to leave the place wrapped up or carrying any parcel in a suspicious manner.

17. Milan, *Brera.* On leaving the library the reader returns the book he has perused, and receives back his ticket.

———, *Ambrosiana.* No formality.

18. Münich. Ditto.

19. Naples. Readers on leaving must return the books, and the ticket on which they were described.

20. Orleans. No formality.

21. Paris, *King's Library.* On leaving the reading-room the reader must return the books to the librarians, from whom he receives back his ticket, which he is to leave with the doorkeeper as a voucher that he has returned the book (1).

———, *Arsenal.* No formality.

———, *Ste. Geneviève.* Ditto.

———, *Mazarine.* Books are to be returned to the librarian on leaving.

———, *Institut.* No formality.

22. Parma. The readers must return the books to the officer in the reading-room, and wait to see that he marks them as returned in the reading-room register.

23. Prague. The reader on leaving must return his book, and he receives back his ticket; but he must give a card, with the number under which the book is entered in the reading register. If at the end of the session this card be wanting, the book is supposed not to have been returned.

24. Turin. Readers must return the books to the officers, and may cross over the entry in the reading-room register, or see that the officers do so.

25. Venice. Ditto.

26. Vienna. Books must be returned to the same officer from whom they were received.

27. Wolfenbüttel. No formality.

Question 15.—What is the daily average number of readers? To what class belong the works mostly asked for?

1. Basle. A very few strangers only. No answer as to the remaining part of the question.

2. Berlin. Readers are mostly students, young lawyers, physicians, architects, &c. No further answer.

3. Berne. Very few readers. No answer as to the rest of the question.

4. Bruxelles. About 12 readers a day on an average. The students of the University, in the same building, never enter the library, which they might do as freely as any one else. This will give an idea rather what are the books *not* mostly used, than what are.

5. Buda, *University.* The number of readers varies very much: sometimes so few as ten, sometimes so many as sixty a day. The students of the University are the most numerous class of readers; among them prevail the students of medicine, who peruse medical works; and the students of philosophy, who read historical and philosophical works, but more particularly modern Hungarian authors, who have written in their native tongue.

——, *Széchenyi.* The books most in request are those belonging to history and philology, especially in the Hungarian language.

6. Cassel. No information.

7. Copenhagen. About from five to eight readers daily, mostly to consult scientific works; as books on *belles-lettres*, chiefly novels and poems, are not bought; and if even bought are not given to read.

8. Dresden. No information.

9. Florence, *Palatina.* About three or four readers daily. There never were six at one time. The works most in request are those on natural history, as the library is particularly rich in costly works on this subject, which are not to be met with in the public libraries.

————, *Magliabecchiana.* No answer.

————, *Riccardiana.* Ditto.

————, *Marucelliana.* Ditto.

10. Frankfort. Never more than 12 readers a day. The works mostly asked for are classics, and works on jurisprudence and history.

11. Geneva. About 10 or 12 daily readers; either strangers engaged on historical researches, or students at the University, who consult such works as they may want in their literary, theological or legal studies.

12. Göttingen. From 20 to 30 daily readers, who come especially to consult scientific works, or voluminous works, or books with costly prints (2).

13. The Hague. From 10 to 15 readers daily, mostly to peruse historical works, and those belonging to elegant literature.

14. Leyden.

(1) I do not believe this regulation to be strictly enforced. But no person can leave the library with books, without a permit in writing from a librarian.

(2) I did not see a single reader in the library during the two days I was in it. The excessive cold was probably the cause of this non-attendance.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

14. Leyden. No answer could be given.

15. Lisbon. Lately the number of readers has been very fluctuating; it may be reckoned at about 70 a day, who peruse chiefly books belonging to history, the natural sciences and jurisprudence.

16. Madrid. The average daily number of readers may be taken at 105. Many youths read novels, and a good number of persons journals; next to them medical, historical and law books are perused, in the order here set down.

17. Milan, *Brera.* About 120 readers a day on an average. No answer as to the rest of the question.

———, *Ambrosiana.* The number of readers cannot be ascertained even by approximation. Law, historical and theological books are more in request than others.

18. Münich. No information.

19. Naples. About 300 readers daily. Generally medical and law books are most read.

20. Orleans. From 15 to 20 readers daily; mostly professors or students belonging to the college.

21. Paris, *King's Library.* From 300 to 500 readers daily. The other parts of the question cannot be answered (1).

———, *Arsenal.* From 25 to 50 readers daily. No answer as to the remaining part of the question.

———, *Ste. Geneviève.* Readers about 50 a day. No answer as to the sort of books most read (2).

———, *Mazarine.* No answer.

———, *Institut.* About 30 readers daily on an average, besides the members of the Institut. The books most in request are those belonging to erudition and natural history.

22. Parma. From 40 to 50 readers daily. Physical sciences, mathematics, history and belles-lettres, are the subjects of reading most pursued.

23. Prague. About 74 readers a day on an average of 365 days in the year. The works most in request are the following: poetical, legal, philological, technical, medical, Roman classics, and historical.

24. Turin. About 60 readers daily; sometimes even so many as 150. The works most perused are those more immediately connected with the branches of knowledge taught at the University.

25. Venice. About 50 readers daily, who mostly peruse books on *belles-lettres,* history, geography, medicine, law, fine arts and antiquities.

26. Vienna. Never more than 45 readers are accommodated. Sometimes not so much as half the number present themselves; sometimes every seat is occupied throughout the day. No answer as to the rest of the question.

27. Wolfenbüttel. In winter one, two, or no reader: in summer six, or even ten have been known to attend in a day. No answer as to the other parts of the question.

Question 16.—Supposing leave to be required for persons who want to become readers, how many yearly, on an average of the last ten years, have applied to obtain such leave? Is leave granted to ladies? Is any qualification as to age requisite?

1. Basle. No permission necessary.

2. Berlin. From the beginning of January 1830 to the 28th January 1834, the number of persons who have got permission either to read in the library or to borrow books thence amounts to 3,200. Ladies are not excluded, but very seldom go to the library to read, as they can always get some gentlemen to borrow books for them from the library. Boys attending the schools are never admitted.

3. Berne. Free admission.

4. Bruxelles. Ditto.

5. Buda, *University.* Ditto.

———, *Széchenyi.* Ditto.

6. Cassel. Ditto.

7. Copenhagen. Admission is granted without distinction of age or sex. No further answer.

8. Dresden. Free admission.

9. Florence, *Palatina.* The number of persons who have obtained leave to read in the library, from the 14th of July 1827 to the 5th of December 1833, amounts to 55.

————, *Magliabecchiana.* Free.

————, *Riccardiana.* Ditto.

————, *Marucelliana.* Ditto.

10. Frankfort. Ditto.

11. Geneva. Free; but books would not be given to youths under 15 or 16 years of age, unless they had entered as students at the University.

12. Göttingen. Free.

13. The

(1) I visited this library about a dozen times in January last. The lowest number of readers I have seen there has been 27, the highest 57.

(2) Many young students from the colleges or schools in the neighbourhood frequent this library. Les élèves en droit et en médecine se donnent rendezvous à Sainte Geneviève ainsi que les collégiens: on demande l'Encyclopédie, Hippocrate, Pothier, et les classiques Latins avec traduction. *Livre des Cent-et-un.* Bibl. Pub.

13. The Hague. Free.
14. Leyden. No precise answer to this question.
15. Lisbon. Entirely free.
16. Madrid. No ladies admitted.
17. Milan, *Brera*. Free.
———, *Ambrosiana*. Ditto.
18. Münich. Ditto.
19. Naples. Free; if ladies want to read (which case seldom happens), they are admitted into the library instead of the reading-room.
20. Orleans Entirely free.
21. Paris, *King's Library*. Free admission to ladies as well as gentlemen. Boys under 15 admitted on exhibiting a kind of certificate, with their name, age and address, signed by either of their parents or by a head master of a public school, who answers that the bearer is trustworthy, and may be allowed to peruse the books he may want. Young men, from 15 to 20, are admitted either on the same terms, or on producing a ticket of admission to any special school.
———, *Arsenal*. Free.
———, *Ste. Geneviève*. Ditto.
———, *Mazarine*. Ditto.
———, *Institut*. On an average about 200 permissions are yearly granted.
22. Parma. Free; but very young boys are not admitted, in general.
23. Prague. Free.
24. Turin. Ditto.
25. Venice. Ditto.
26. Vienna. Ditto.
27. Wolfenbüttel. Ditto.

Question 17.—Are books ever lent out to read? if so, under what regulations? What is the yearly number of volumes so lent, on an average of the last ten years? Has any inconvenience been felt from this practice, such as of books being lost or injured? Has any complaint ever been made against this practice? Does it interfere with the literary pursuits of readers, who go to the library with a view of consulting works which are found to be lent out?

1. Basle. The number of books lent out cannot be precisely stated. No inconvenience has ever been felt from the practice.
2. Berlin. Persons may have a right to borrow books from the king's library, either on account of their station, or on the strength of a power or warrant received from persons who can themselves borrow books. These powers or warrants are generally for six months, never for a longer period. Books borrowed must be always returned at least twice a year, in March and August. Only one book at a time is lent, never to be taken out of Berlin; and never books of reference and large works; nor are books lent out which are in actual use in the reading-room. Few books have ever been lost by lending; and if a book be found spoiled or damaged, he who borrowed it last is answerable for it; being especially warned of his liability if he does not, before taking the book away, examine it carefully and point out any defect he may thus discover in the volume. About 5,000 volumes are lent out yearly.
3. Berne. Books are lent out under certain printed regulations, which it would be needless to insert here. About 2,200 volumes are lent annually. Books do certainly suffer by being thus put into circulation, without it being possible to make any person individually answerable for it; and it happens, also, that books are not to be had in the library because they are lent out.
4. Bruxelles. No information.
5. Buda, *University*. Books are lent out to professors and distinguished individuals or authors, for a couple of months, or less. Rare books are never lent. No other answer.
———, *Széchenyi*. Ditto.
6. Cassel. Books are lent out to well known individuals for a fortnight or so. No further answer.
7. Copenhagen. Books, not merely amusing works, are lent out to every respectable person for a fortnight; not more than two volumes at once are generally lent. But to professors and men of science, even 30 or 40 scarce books are lent at one time. Many inconveniences are the consequence of such a practice; books are sometimes kept for years, are lost, &c.; but the king prefers to submit to these evils, rather than diminish the use of his collection. From 3,000 to 4,000 volumes are thus yearly circulated.
8. Dresden. Books are lent out to certain persons on certain conditions, and even, by special permission, out of Dresden, for one or two months. Dictionaries, books of reference, voluminous works, and costly volumes, very seldom lent. No information as to the consequences of this system.
9. Florence, *Palatina*. Only two or three persons have ever obtained permission to borrow books from the library. Never more than one or two volumes at a time, and never allowed to keep them for more than three months.
———, *Magliabecchiana*. Never lent out.
———, *Riccardiana*. Ditto.
———, *Marucelliana*. Ditto.
10. Frankfort. Books, not very costly or not very rare, are lent out to well known and responsible individuals, for one month; and even two or three, if the borrower wants the books for

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

for some scientific purpose. If, however, a work be asked for by other parties, it may be called in in a week after having been lent. Books are not entirely lost, but are often damaged. The number of volumes annually lent amounts to about 1,000.

11. GENEVA. Books are lent very liberally to any respectable person, one volume at a time, for six weeks or less. About 8,000 or 9,000 volumes yearly are thus lent, and it is owing to it that books are lost and damaged; yet these disorders are fully compensated by the usefulness of the circulation. Professors, clergymen and other select individuals, who may have occasion for a larger number of volumes for a longer period, can easily obtain them; and it so happens that readers in the library are deprived of perusing these books so lent out, when they want them. It is sometimes difficult to get back the books from these privileged few.

12. GÖTTINGEN. Books are lent out on the guarantee of professors, who answer for them, and none but professors can give orders for borrowing. Princes and counts can borrow without any recommendation. Strictly speaking, no student can have more than six volumes at a time, nor can any one borrow several works at once, or keep books for more than one month; but practically, much is left to the discretion of librarians, who make it a point never to lend costly and rare works. No further answer.

13. THE HAGUE. Books are now lent out to persons who can reasonably be supposed deserving this mark of confidence, on condition that they be returned in a fortnight, or sooner, if asked for to be perused in the library. If the rules were observed, no inconvenience could arise; but books so lent are often kept a very long time. During 1833, 500 persons have borrowed 942 volumes.

14. LEYDEN. Books are lent to professors, and to students recommended by a professor, for not more than three weeks. A book may, however, be called in at a moment's notice. There are sometimes more than 2,000 volumes in circulation. No further answer.

15. LISBON. It is forbidden, not only to lend books out of the library, but even to peruse them out of the room in which they are placed.

16. MADRID. Books are never lent out.

17. MILAN, *Brera*. Books are lent to members of the institute, to the Brera astronomers, and to professors either at the Academy of fine arts or at any public school. Generally speaking, books are not injured; but readers are often disappointed in not finding a work in the house which forms part of the collection, but happens to be lent out. No further answer.

———, *Ambrosiana*. Books are never lent out, owing to a formal strict prohibition of the founder of the library.

18. MÜNICH. Books are lent out, under certain restrictions and formalities, with the particulars of which I am not acquainted.

19. NAPLES. Books are lent for one month to members of the Royal Borbonic Society, who apply in a certain form. This is often the case. Proper care is taken to prevent abuses. No further answer.

20. ORLEANS. Sometimes books are lent out (very seldom, however,) on an order from the mayor of the city. No other answer.

21. PARIS, *Royal Library*. Books are lent under certain restrictions and according to certain rules, which it is hoped will prevent the great losses and just complaints of the public, which took place in former times (1).

——, *Arsenal*. Books are never lent out, except on a ministerial order.

——, *Ste. Geneviève*. Books are lent out according to the discretion of librarians; but the principle is acknowledged to be liable to many abuses.

——, *Mazarine*. Books are lent out as little as possible, to well known individuals. Yet the system is found very dangerous at times.

——, *Institut*. Books are lent to members of the Institut only, to a considerable extent. The system is highly pernicious, and practically liable to the objections implied in the question.

22. PARMA. Books are lent to persons in office, to professors in the university, and other individuals, always upon an authorization from government. Neither rare, nor costly books, not books of reference, are ever lent out. As they are lent for a short period, and diligently looked after, none is ever lost and few slightly damaged. The average number of volumes annually lent is about 800. Readers do often complain of being disappointed of perusing works which they know to be in the library, but happen to be lent out, when asked for.

23. PRAGUE. Books, provided they be not too rare, too costly, or of reference, are lent out to professors for a period of three months. But borrowers keep them longer, and readers have often to complain of being disappointed. No number specified.

24. TURIN. Books are lent to professors relating to the science which they teach. A few other persons may be authorized by the heads of the university to borrow books for a period not exceeding one month. By causing these rules to be strictly observed, about 350 volumes yearly are lent out, and no inconvenience is felt.

25. VENICE. Only professors and members of the Institut can borrow books, on condition of calling for them in person, and of returning them in a fortnight at the utmost. By these means no inconvenience is felt in this library (2).

26. VIENNA.

---

(1) Souvent tous les ouvrages qui ont rapport à une histoire, à une biographie, ou tout autre sujet special, sont confies à un seul auteur, qui les accapare durant des mois, des années.—Cela explique pourquoi on a retrouvé jusqu'à trois cents volumes au timbre royal dans la succession de plus d'un savant, lequel s'érigeait bibliothécaire *in petto*. *Livre des Cent-et-un*. Bibl. Pub.

(2) The respondent however continues: "If librarians were asked all over the world, and they would candidly answer the question, one and all would deprecate the system of lending, being liable to every one of the abuses mentioned in the question."

26. VIENNA. Books are lent only to the Imperial Court, or to the offices of Court and State. No further answer.

27. WOLFENBÜTTEL. Books and manuscripts are lent from this library to literary men all over Germany. From 400 to 500 volumes are thus annually lent. All the inconveniences mentioned in the question are the consequence of the system.

Question 18.—How many days in the week is the library open, and how many hours each day?

1. BASLE. The library is open on Mondays and Thursdays, from one to three o'clock; and from one to two on other days.

2. BERLIN. The library is open every day, (Sundays and holidays excepted,) from nine to twelve in the morning; from two to four in winter, and from two to five in summer. The reading-room is opened only in the afternoon.

3. BERNE. The library is open daily, (excepting upon Sundays and holidays,) from two to four in winter, and from two to five in summer.

4. BRUXELLES. The library is open every day in the week, (Sundays, Wednesdays and holidays excepted,) from ten to two (1).

5. BUDA, *University*. The library is open every day in the week, (Sundays and Mondays, as well as holidays, excepted,) from nine to twelve, and from two to five in winter, or three to six in summer.

——, *Széchenyi*. Open to readers every day in the week during the above hours. It is shown to strangers on Mondays and Thursdays.

6. CASSEL. Open every day (Sundays and holidays excepted) from ten to one o'clock.

7. COPENHAGEN. The library is open every day (Sundays and holidays excepted) from eleven to two.

8. DRESDEN. The library is open on Mondays, Tuesdays, Thursdays and Fridays, from ten to twelve and from three to five, excepting during holidays and on special occasions.

9. FLORENCE, *Palatina*. Open every day (except Sundays and holidays) from nine to three.

————, *Magliabecchiana*. Open every day (Sundays and holidays excepted) from nine to two.

————, *Riccardiana*. Ditto.

————, *Marucelliana*. Open on Mondays, Wednesdays and Fridays (holidays excepted) from nine to half-past twelve.

10. FRANKFORT. The library is open on Tuesdays and Thursdays from eleven to twelve, and on Wednesdays and Fridays from two to four.

11. GENEVA. The library is open on Mondays, Tuesdays and Wednesdays, from one to four.

12. GÖTTINGEN. Open to the public on Wednesdays and Saturdays from two to four, and on Mondays, Tuesdays, Thursdays and Fridays, from one to two (2).

13. THE HAGUE. Open every Monday, Wednesday and Friday, from ten to two.

14. LEYDEN. The library is open every day in April, May, June and September (Sundays and holidays excepted) for three hours, and thrice a week for the same time during the rest of the year, except 12 weeks of vacations, when it is open only twice a week for two hours.

15. LISBON. Open every day (Sundays and holidays excepted) at nine in the morning, and closed at three, excepting on Thursdays, when it is closed at one, and re-opened from three to five, from October to the end of March, and from four to six, from April to the end of September.

16. MADRID. Open daily (Sundays and holidays excepted) from eleven to four.

17. MILAN, *Brera*. Open every day (with the exception of Sundays and holidays) from ten to three.

———, *Ambrosiana*. The same, Wednesdays also excepted.

18. MÜNICH. Open three days in the week from nine till two (3).

19. NAPLES. The library is open every day (Sundays and holidays excepted) for six hours from October to May, and for seven hours from May to October.

20. ORLEANS. Open every day (Sundays, Thursdays and holidays excepted) from ten to four.

21. PARIS, *Royal Library*. Open every day (Sundays and holidays excepted) from ten to three, for readers.

———, *Arsenal*. Ditto.

———, *Ste. Geneviève*. Ditto.

———, *Mazarine*. Ditto.

———, *Institut*. Open every day (Sundays excepted) for the members of the Institut, and on Mondays, Thursdays, Fridays and Saturdays for persons who have got leave to read there. The hours are from eleven to five.

22. PARMA. Open every day (Sundays and holidays excepted) for six hours (nine to three) from the 5th of November to the 30th of April; and for eight hours (nine to two, and four to seven) from the 1st of May to the 15th of August.

23. PRAGUE.

(1) The librarian, being generally in the library till eight o'clock in the evening, allows his friends to remain so long as he does, as a special favour.

(2) Readers well known to the librarians are allowed to remain in the library about five hours a day, as a favour.

(3) Readers well known to the librarians are allowed, as a personal indulgence, to study in the library even on private days.

23. PRAGUE. With the exception of Sundays, Fridays and holidays, the library is open five hours every day.

24. TURIN. Open (Sundays and holidays excepted) every day, from nine to three in winter, and from nine to four in summer.

25. VENICE. Open every day (Sundays, Wednesdays and holidays excepted) from nine to one, for readers.

26. VIENNA. Open (with the above exceptions) from nine to two.

27. WOLFENBÜTTEL. In winter, the library is open thrice a week, two hours a day; in summer, six days a week, four hours a day.

Question 19.—Are there any holidays, besides Sundays, as for instance, at Christmas, Easter, or on Saints' days? Any vacations in the autumn or summer? if so, how many days in the week is the library closed, besides Sundays? which are the days? and on the whole (supposing the library to be opened only on certain days in the week), how many days, out of 365, is the library open, (stating how many hours each day) and how many days it is closed, no matter for what cause, during the same period of 365 days?

1. BASLE. The library is closed, besides Sundays, from Christmas to New Year's Day, and four weeks in summer.

2. BERLIN. Eighteen days' vacation, besides Sundays; altogether 70 days a year.

3. BERNE. The library is closed, besides Sundays, on Christmas Day, Good Friday, fast days, &c. During the vacation of the university, viz. the first three weeks in October, it is open only on Tuesdays and Saturdays.

4. BRUXELLES. No information.

5. BUDA, *University*. Closed at Easter for a fortnight, and during the autumn for two months.

———, *Széchenyi*. No vacations, or holidays. (I have no doubt that on Sundays the library is closed, and that in a country where the Roman-catholic creed is preponderant and professed by the sovereign, there must be several holidays and saints' days during which it is not opened).

6. CASSEL. No information as to the precise time; there are vacations at Christmas and other times, but not in autumn or summer.

7. COPENHAGEN. Besides sundry holidays (such as Good Friday, two days at Christmas, two days at Easter, &c.) the library is not opened for a fortnight at the beginning of the year, and for three weeks in summer. Including Sundays, this library is closed 94 days and open 271.

8. DRESDEN. The library is not opened in the afternoon during the months of December and January, nor for three weeks during the high festivals (I suppose Christmas, Easter and Whitsuntide), nor when other festivals fall on week days.

9. FLORENCE, *Palatina*. No vacations; but holidays (not specified).

———, *Magliabecchiana*. About 35 holidays, besides Sundays, and the long vacation, from the 1st of October to the 11th of November. The library is therefore closed altogether for about 116 days in the year.

———, *Riccardiana*. Ditto.

———, *Marucelliana*. Ditto.

10. FRANKFORT. A few holidays, and three or four days a year vacations, besides Sundays (1).

11. GENEVA. The library is closed for a week at the beginning of June, and during the two months of September and October, as well as on any solemnly-kept fast or thanksgiving day. It may therefore be said that it is open about 126 days in the year.

12. GÖTTINGEN. The library is closed only for one week in summer (2).

13. THE HAGUE. The library is closed for one week at Christmas, another at Easter, and a third at Whitsuntide. It is open altogether 149 and closed 216 days, out of the 365.

14. LEYDEN. The answer to this question is included in the answer to question 18.

15. LISBON. Including Sundays, saints' days and other festivals, this library is not opened for about 105 days out of the 365.

16. MADRID. Ditto.

17. MILAN, *Brera*. Not open for one week at Christmas, one at the end of carnival, one at Easter, besides the whole of the month of October, Sundays and saints' days.

———, *Ambrosiana*. Besides Sundays and saints' days, this library is not opened during one week at Christmas, another at the end of carnival, another at Easter, three days at Whitsuntide, and from the 1st of September to the 12th of November.

18. MÜNICH. No information.

19. NAPLES. The library is not opened for a few days at Christmas, Easter and carnival, besides Sundays, saints' days, and the last fortnight in October; altogether about 105 days in the year.

20. ORLEANS. The library is kept closed for about 12 holidays, besides Sundays, and the two months of September and October.

21. PARIS.

(1) Although the library be open, the librarians are in turn allowed vacations in autumn.

(2) The librarians are required to attend daily for five hours; but they are in turn allowed vacations in autumn.

21. Paris, *King's Library.* Besides Sundays and a few holidays, this library is not opened for a fortnight at Easter, and from the 1st of September to the 15th of October; altogether about 115 days in the year.

——, *Arsenal.* Ditto.

——, *Ste. Geneviève.* Besides Sundays and saints' days, the library is closed one week at Christmas, another at Easter, and six weeks in autumn.

——, *Mazarine.* Besides holidays and Sundays, the library is not opened for one week at Easter and for five in the autumn.

——, *Institut.* Never closed, Sundays excepted.

22. Parma. Besides Sundays, the library is not open for about a week at Christmas, one at carnival and one at Easter, on saints' days and from the 15th of August to the 5th of November; altogether 147 days out of the 365.

23. Prague. Besides Sundays and saints' days, the library is closed one week at Christmas, three days at carnival, one week at Easter, on the emperor's birth-day, &c. In the autumn the long vacation lasts two months.

24. Turin. Sundays and holidays, as well as for three days at the end of Carnival, one week at Easter, three days at Whitsuntide, five days at Christmas, and the long vacation (from the 18th of August to the 5th of November), the library is not opened; 142 days out of the 365.

25. Venice. This library, including Sundays and Wednesdays, saints' days and long vacation, is closed during 155 days in the year (1).

26. Vienna. This library is closed during the whole month of August, from the 25th of December to the 6th of January, and during holy-week, Easter week and Whitsuntide week.

27. Wolfenbüttel. Besides Sundays, this library is closed only three or four days in the year.

Question 20.—Are candles or fire allowed in the library, or the building in which it is situated, supposing the climate to require it? Is the library, or at least the reading-room, heated so as to render it comfortable? If not, are not the readers prevented from frequenting the library during part of winter, owing to the cold to which they are exposed? Are the librarians' rooms warmed?

1. Basle. There is a room warmed, in which the librarian sits, and in which readers may consult books. No answer as to lights.

2. Berlin. Fire and candles strictly forbidden in the library, but not so strictly in the reading-room, which communicates with the library, but is not in the same building, and the communication is cut off by an iron-door. The librarian's room, as well as reading-room, are warmed and comfortable.

3. Berne. The reading-room and the officers' room are warmed with chafing-pans (poëles), two other rooms with chimneys. Lights are not forbidden, but very seldom introduced into the library.

4. Bruxelles. Candles and fire are freely used in the reading-room (which is in fact the first room of the library), but not in the library itself.

5. Buda, *University.* No lights ever admitted. The reading-room as well as the officers' rooms are warmed by stoves, lighted from outside the rooms.

——, *Széchenyi.* Ditto.

6. Cassel. Reading-room and officers' room warmed and comfortable. Not so the library.

7. Copenhagen. Reading-room as well as officers' rooms warmed. Candles also are allowed whenever it is requisite to use the library at night.

8. Dresden. No information.

9. Florence, *Palatina.* Lights never used, and seldom a chafing-pan (poële) wanted.

————, *Magliabecchiana.* Ditto.

————, *Riccardiana.* Ditto.

————, *Marucelliana.* Ditto.

10. Frankfort. The officers' and readers' rooms are warmed. No lights are ever introduced into the library.

11. Geneva. Neither lights nor fire allowed, except a chafing-pan (poële) in the room used by the readers.

12. Göttingen. No lights or fire ever admitted into the library: the librarians' room is warmed and comfortable.

13. The Hague. Neither fire nor lights forbidden in Dutch libraries.

14. Leyden. The officers' room is warmed; not so the reading-room, for want of proper apparatus, and not owing to an over-anxious precaution.

15. Lisbon. Fires and lights are strictly forbidden in the library, although other parts of the building are occupied by public officers, who freely use both. Librarians are nearly crippled by cold sometimes; and readers are obliged to give up their studies, being unable to bear it.

16. Madrid. The officers' houses, which are part of the library building, are warmed and lighted, as every other house; but in the library itself only chafing-pans (poëles) are introduced during winter, a quarter of an hour before it opens, and are carried out a quarter of an hour before it closes.

17. Milan,

(1) Out of pure kindness, the librarian allows students to make use of it on any of the closed days. On Sundays and holidays it is open from twelve to two, for those who choose to visit the building; but no book is allowed to be read on the occasion.

Appendix, No. 6.

Foreign Public Libraries of Printed Books.

17. Milan, *Brera.* Officers' rooms and reading-room are warmed, but neither fire nor artificial light can ever be introduced into the library.

———, *Ambrosiana.* There is a chafing-pan in the reading-room. The librarians' rooms are well warmed.

18. Münich. Candles are not allowed; the whole library is well warmed.

19. Naples. Fire is not wanted, and lights are forbidden.

20. Orleans. The reading-room is warmed by a chafing-pan (poële); but neither candles nor fire are ever allowed in the library.

21. Paris, *Royal Library.* No fire or lights ever permitted in the library or reading-room. There are stoves in some of the ground-floor rooms, for the use of the officers; and, even on the first-floor, stoves are introduced in the manuscript rooms.

———, *Arsenal.* Reading-room and some parts of the library well warmed. Although lights be not introduced into it, there must be many used in the different parts of the building allotted as private residences for the officers.

———, *Ste. Geneviève.* Reading-room well warmed: not so the library. With respect to lights, the same observation applies as to the library of the Arsenal.

———, *Mazarine.* The rule is never to introduce lights into the library; but in case of necessity, there are safety-lamps used for the purpose. The place for reading is not warmed, nor are the officers' rooms warmed: the officers have stone-bottles with hot water brought to them to warm their feet with.

———, *Institut.* The officers' rooms, and the private rooms for the members of the Institut, are well warmed and comfortable. The heat from them extends to the library, in which the generality of the readers are admitted to study, but still it is cold. The Mazarine Library and this are in the same building, other parts of which are occupied by different establishments, in every one of which lights and fire are freely used.

22. Parma. No lights or fire allowed. The officers' rooms are warmed, and the library is in a building occupied by different inhabitants, who of course make free use of both.

23. Prague. Lights and fire forbidden in the library, but the reading-room as well as officers' studies are warmed; and when public illuminations take place, lights are introduced in the library for the occasion.

24. Turin. Neither fire nor lights permitted in the library: both the reading-room and librarians' apartments are warmed.

25. Venice. Fire is forbidden in the library, but that is no inconvenience at Venice. As to lights no answer is given.

26. Vienna. Neither lights nor fire are ever allowed in the library: the reading-room as well as the officers' rooms are heated.

27. Wolfenbüttel. Both fire and lights strictly prohibited in the library. There is but one room indifferently warmed by a stove.

A. Panizzi.

Appendix, No. 6*.

Appendix, No. 6*.

Royal Library at Dresden.

SUPPLEMENTARY INFORMATION ON THE ROYAL LIBRARY AT DRESDEN.

In addition to the information already submitted respecting the Royal Public Library at Dresden, I have the honour to lay before the Committee the following answers to my question, on the correctness of which may be placed entire confidence.

Answer 1. Royal Public Library; to distinguish it from His Majesty's Royal *private* library.

2. The number of volumes is about 300,000, besides as many thousand dissertations. The number of articles may be calculated at 500,000 at least.

3. About 3,000 volumes of manuscripts, as also about 25,000 maps and charts under the same keepers.

4. One principal librarian; one librarian; two secretaries, *i. e.* under librarians; eleven literary gentlemen who, since 1835, volunteer, without any emolument whatever, to assist, under the sole direction of the principal librarian (who has the entire control and responsibility), in compiling the classed catalogue; one copyist; two servants.

5. All the works in the library are catalogued alphabetically, according to the name of the authors. The classed catalogue is in progress, and the following classes are already completed: Classical Literature; Mathematics; Glossology and Philology; Botany; Zoology; Musical Art; Pædagogy; Saxon, Turkish and Greek Modern History; Medicine; Surgery; Jurisprudence; Metallurgy. Some of these classes are only as yet arranged in slips, but are now transcribing with all possible despatch. The classed catalogue was commenced about six years ago, but did not proceed as quickly as might be wished, owing to various causes. It was taken up with renewed vigour in 1835; and there is reason to hope that, if the assistance be not failing, in about 12 years, or certainly not less than 10, the whole will be brought to a conclusion. None are printed but those of the Bünavian and Brühalian collections.

6. The catalogues are not accessible to readers in general. Their use may be granted or withheld, according to circumstances, as the librarians may deem proper.

7. The library is kept increasing at the national expense. The Legislature votes the funds.

8. The

Appendix, No. 6*.

Royal Library at Dresden.

8. The sum yearly spent in the purchase of books amounts to about 2,000 thalers (about 300 *l.*).

9. No right to a copy of any publication. The library must buy even Saxon newspapers.

10. The librarians may refuse the use of certain books to certain persons, according to their discretion.

11. The admission to the reading-room is entirely free.

12. Any servant of the State, from the minister to the lowest clerk, has a right to have books home to read, and can give a *warrant* for persons not qualified, enabling them to borrow books. The same is done by ambassadors, for foreigners. The principal librarian, or the officer who acts for him in his absence, grants the leave regularly asked to take books home; and the authorization for borrowing, as well as this leave, are perpetual, if nothing be done against the rules by the person who enjoys the privilege. Books are asked for verbally to read in the library; but in writing, by those who wish to take them home.

13. No inconvenience from the free admission to the reading-room.

14. Readers are obliged, before leaving the reading-room, to return the books to the servant in attendance for the day, who enters them in a special reading-register, kept by him for that purpose.

15. The readers are from 40 to 60 daily; the works most in request, besides classics, are those on history, the arts, technology and jurisprudence.

16. The number of readers in the library is not known; that of persons who can borrow books from the library was, at the end of 1835, 2,485, ladies included.

17. The number of readers is annually increasing. That of volumes lent out is from 60,000 to 70,000 annually. Books are sometimes lost; but the persons to whom they have been lent are made to pay their value. They are always more or less damaged; there is no complaint, however, against the system.

18. The library is open every day, Sundays excepted, from nine to one.

19. The library, besides Sundays, is closed for one week at Easter, one at Whitsuntide, and one at Christmas.

20. The reading-room and librarians' room are warmed, but not any other part of the library. Candles are not allowed to be used.

N. B. No reader or visitor can enter the library (excepting the reading-room) without the permission of an officer; and then either accompanied by one of them or by a servant of the house.

A. Panizzi.

Appendix, No. 8.

Communication from Dr. Gregory.

OBSERVATIONS connected with Dr. *Gregory*'s Evidence of May 12th, and separate from which that Evidence is defective and in part unintelligible.

In addition to the general outline of his plan relative to an extensive library, which Dr. Gregory gave in evidence before the honourable the Museum Committee, and the drawings and elucidatory remarks in reference to part of that plan which he had the honour to leave with the Committee, he feels that the essential parts of his general scheme still remain unexplained, and therefore takes the liberty of laying before the honourable Chairman and Committee such remarks, transcribed from the papers which he intended to put in, as will, he trusts, render his views intelligible.

In order to decide in what manner the library should be enlarged, its precise state at present must first be ascertained. I think six gentlemen, properly selected for the purpose, and assisted by three intelligent porters to take down and replace the books in small portions, by occupying seven hours each day in separate parts of the library, might, as the first step towards a classed catalogue and classed library, make out a complete list of the printed books at present in the institution in about a year.

Per hour.		Hours.		Days per week.		Weeks.		Persons.		
20	×	7	×	6	×	52	×	6	=	262,080 vols.

Double the number of persons engaged would of course accomplish this portion of the work in half the time; three times the number in a third of the time; and so on.

The essential part (at least) of the title page of each work, with its date, sized page, and number of volumes (when more than one), should be entered upon a separate slip, previously prepared and ruled in four columns: one to receive the title, &c., another to contain an abbreviated guide to its present place in the library, the two remaining columns for the subsequent reception of notes, fixing the place of the work in both the catalogue and the library, when properly classed. The actual process of classification may at once be explained, if indeed it does not suggest itself, should the principle for regulating the classification be admitted.

But first, I would propose the divisions and sections. Bearing in mind that deviations from a strictly logical arrangement would occasionally be required on practical considerations, as well as probably suggest themselves when the present contents of the library apartments are correctly ascertained; the following may be presented as a hasty outline.

There should, besides the manuscripts and charters, which are sufficiently numerous (about 40,000) to constitute at least a separate department in two sections, be six divisions of printed books, if not more. They might be thus constituted:—

I.—Intellectual Sciences.

Sect. 1. Theology and morals, and ecclesiastical history.
2. Law, jurisprudence, government, politics, political economy.
3. Metaphysics.
4. Logic and dialectics.
5. Pure philosophy and its history from Pythagoras to Kant, Brown, &c.

II.—Natural Sciences.

Including the various departments of natural history; as geology, oryctology and mineralogy, crystallography, zoology, vertebral animals in four classes, molluscous animals in six classes, articulated animals in four classes, zoophytes in four classes; anatomy of man, anatomy of other animals; physics, including cosmology and geography, chemistry, magnetism and electricity, medicine, applications to pharmacy, surgery, &c.

[Memoirs of scientific societies at home and abroad, partly in Div. II. and partly in Div. III.]

III.—Exact Sciences.

Pure, mixed and applied.

[Their division to be given farther on.]

Appendix, No. 8.

Communication from Dr. Gregory.

IV.—Arts.

In two sections: Fine arts, useful arts and manufactures.

[Might not commerce, so intimately connected with arts and manufactures, have its place here?]

V.—History, Chronology, Biography.

Universal history, ancient history, ancient monarchies, Grecian, Roman, &c., middle ages, modern history, European states, Great Britain, England, Scotland, Ireland, Wales.

[Aids to history, as chronicles, parliamentary debates, &c., antiquities, topography, county and city histories, naval history, military history, commercial, America, India, &c., biography, &c. &c.

VI.—General and Miscellaneous Literature.

Including origin and progress of languages, bibliography, grammars, lexicons, Eastern languages, Greek, Latin, Saxon, modern, &c. &c.; poetry, lyric, dramatic, &c.; voyages and travels; periodical and miscellaneous literature, including every respectable periodical published in Britain, Europe, America, the Colonies.

[It is a question of moment whether the Greek and Latin languages, and all that tends to their elucidation and extension, including the stores of German classical literature, should not have a separate division assigned to them.]

The third division, or that of the Exact Sciences, pure, mixed and applied, might perhaps be thus subdivided.

Sect. 1. Mathematical lexicons and dictionaries, together with histories of mathematics in general, or of specific branches; complete courses of mathematics.

2. Arithmetic and book-keeping.

3. Geometry, trigonometry, mensuration.

4. Euclid's Elements, in part or entire, and other ancient books on spherics and conics, as Theodosius, Menelaus, Pappas, Archimedes, Apollonius, Proclus, &c.

5. Trigonometry, plane and spherical, applied to ordinary and maritime surveying; treatises on geodesy and geomorphy, or the refined trigonometrical surveying applied to the figure and dimensions of the earth, &c.

6. Algebra and diophantine analysis.

7. Higher analysis and geometry, including fluxions, differential and integral calculus, the residual analysis, calculus of variations, of partial differences, of functions, &c.

8. Logarithms, logarithmic and trigonometrical tables, mathematical tables generally.

9. Mechanics, including statics, dynamics, hydrostatics, hydrodynamics, pneumatics.

10. Optics, catoptrics, dioptrics, perspective, optical instruments.

11. Astronomy, physical astronomy, cosmography, physical and mathematical geography, gnomonics, projections, navigation, hydrography, nautical almanacs, and similar publications of France, Germany, Italy, &c.; accounts of nautical and astronomical instruments.

12. Acoustics and music; *vide* fine arts.

13. Architectural and other applications, as to civil, military and naval architecture, fortification, mill-work, steam-engines, locomotive machinery, civil engineering, aërostatics, &c.

[The memoirs and transactions of scientific societies at home and abroad, should probably be arranged partly in a section of Div. II. Natural Sciences, and Sect. 1, of Div. III. Exact Sciences.]

In the bibliothecal or library arrangement of these, there should be assigned to each larger division a separate apartment, capable of containing about 100,000 volumes, as well as to yield space and convenient accommodation for from 50 to 60 (or more) persons, who may wish to consult the books in that division in any one and the same time.

Specific character of Dr. Gregory's proposal for a classified library and catalogue, both upon the same principle.

A classification both of library and of catalogue, in which the subject, the size, the epoch of publication, and the name of the author, shall each have its influence in assigning the place of every book, may, I think, be effected without difficulty.

In each division the books should be divided, first, into English and Foreign, (and in some classes indeed into English, Greek, Latin, German, French, &c.), then classed according to size (folio, quarto, octavo, 12mo. and *infra*), then according to date of publication, and, when any number of books of the same subject, or section, and size, and in the same language, were published in the same year, (as will often be the case with regard to modern books), let the numbers 1 A, 2 A, 3 A, 4 A, &c., 1 B, 2 B, 3 B, 4 B, &c., [A. B. C. &c. being

Appendix, No. 8.

Communication from Dr. Gregory.

being the initial letter of the author's name, when known], stand immediately after the year of publication. Then leaving large portions of each compartment of the division and section vacant, either in horizontal spaces or probably still better in vertical spaces* from the top to the bottom of the room (in most cases, indeed, leaving about two-thirds of the whole unoccupied), the books in the library, as well as in each division, each section, and, in judiciously assigned portions of time, in reference to dates of books, may be increased to any proposed extent, either by slow or by rapid accessions, without at all disturbing the adopted arrangement; while supplementary catalogues, however often they are needed, will occasion no confusion.

In the annexed slip, I take the oldest English edition of Euclid, as an example, at once of the general character of the proposed arrangement, and of the manner in which such slips, in four columns, would essentially facilitate the entire arrangement, in passing, by a simple plan of ready operation, from hand to hand of the different gentlemen who should be engaged in the work.

Slip.

Present Place.	Title of the Work.	Division, Section, Class, &c.	References for Alphabetical Catalogue.
Billingsley's Euclid, quarto. Room. Compartment. Shelf. &c. No. from top or bottom.	- - The Elements of Geometrie of the most ancient Philosopher Euclide of Megara. Faithfully (now first) translated into the English toung. By H. Billingsley, citizen (afterwards Lord Mayor) of London, with a very fruitfull Preface made by M. J. Dee. Imprinted at London by John Daye, A.D. 1570. †††† Fifteen books, with an additional book by Flussas.	Div. III., § iv. Eng. [1570.] 1 B. Fol. pp. liv. 465.	E. Euclid. B. H. Billingsley's Euclid. D. J. Dee's Preface to Billingsley's Euclid.

I have here supposed that Billingsley's is the first book of the specified division, section and size, whose author's name, or in this case editor's name, begins with B, published in the year 1570. If it were the 2d or 3d book, in B, let the corresponding indication be 2 B, or 3 B, &c.

Another example, partially exhibited, will, I trust, suffice to render this plan obvious.

In second column of the slip, Tables de Tous les Diviseurs des Nombrés, calculées depuis un jusqu'à cent deux mille, par M. N. J. Lidonne, Paris, 1808.

In third column:—Div. III. sec. viii. For [1808] 6 L. 8vo., pp. 40, ccxviii.

In the book here noted down, the pages of the introduction are marked by the Arabic numerals, those of the tables themselves, by the Roman notation. This peculiarity is shown above.

It is here supposed that Lidonne's is the sixth book of the specified division, section and size, published in 1808, whose author's name has the initial letter L.

The advantages of such a joint and mutually corresponding classification of the library as well as the catalogue in six or it may be seven divisions would be very considerable Such a measure would greatly facilitate all actual reference to the books; if, as is especially desirable, instead of having only one reading-room, and that inadequately small, each division were open to the admission of readers, and had a sufficient number of attendants† to reach down books, restore them to their places, to see that the rules are observed, and to prevent injury to books or furniture.

Supposed advantages of a general classification of books, in precise accordance with that of the library itself, not excluding, but consistent with, a concise alphabetical index.

If the books in the King's Library were permitted to be thrown into the general library arrangement, so as to fall into the apartments assigned to their respective divisions; the King's arms either upon or within the cover of each book would show to what they really belonged. And, even if they should remain in a separate apartment, as now, they might be subjected to a new arrangement in divisions, according with the rest of the Museum Library. One and the same catalogue might, notwithstanding, serve for the entire library in all its departments. The books in the King's Library, might each be indicated by the printed character of a crown, and falling under their respective divisions and sections in the general catalogue, would still tell their specific places in the separate apartment in which they now are.

The King's library whether kept apart or blended with the other would present no difficulty in a classified catalogue.

The

* The vertical vacant spaces thus interspersed may, until they become the receptacles of books, be covered with light ornamental net-work or other tracery.

† A matter that would soon be ascertained by actual experiment.

Reference to plan, &c. of library apartments, *en suite*.

The ground plan and section, with elucidatory remarks, which I had the honour to deliver in during my examination, were also intended to elucidate the observations which immediately follow.

It would be exceedingly desirable to have the various apartments of the library, for the several proposed divisions, and that of manuscripts and records, arranged *en suite*, with doors opening from one into the next, in either direction, for the occasional transit of the functionaries of the institution, but also with a gallery running along by the side of the whole, from which the visitors should enter each apartment by its separate door.

[I have mentioned in my other paper just referred to, that the space above this gallery of communication might be appropriated to other useful purposes.]

Recording turnstiles to ascertain how many persons were at one time in either of the divitions; also within the walls of the institution.

No person (except as above-mentioned, or, by special arrangement, in company with one or more of the higher functionaries,) should be permitted to pass from one apartment or division of the library to another, but by the side doors. To regulate the number of persons at once allowed to consult books in either division, the side doors might be double valve-doors, one for admission into the apartment, the other for quitting it. In each partition of the door there might be placed some mechanism analogous to a recording turn-stile, which should always register, and at any time show, the number of persons who had entered the apartment, and retired from it, during the day; and when their difference amounted to a certain prescribed number (40, 50, 60, &c., commencing with a small number, and increasing weekly, as may be found safe and practicable) a board should be hung upon the door of admission, indicating that no more persons could be admitted into that apartment for the present.

A similar plan would show whether all who had entered the institution had quitted it at night.

A similar plan might be adopted to regulate admission into any department as well as into the library; and, of course into the institution generally: and thus at night, the numbers shown by the recording turn-stiles at the outer gates, would tell whether or not all who had entered the establishment had also retired.

The catalogue of the library should be published in divisions, and copies for the convenience of visitors, as well as three, four or more copies of the entire catalogue should be placed in the apartment appropriated to each division.

Supplementary catalogues, whenever necessary, by being prepared upon the same general principle, the numbers annexed to A, B, &c. being in sequence from the preceding catalogue, would unite with their predecessor in utility, and be equally convenient in use.

Appointment of committees to complete the library.

So soon as the present state of the library is ascertained, committees should be appointed, consisting partly of men of distinction in different departments of literature and science (the same principle obviously applying equally to antiquities, to geology, to zoology, &c. &c.), and partly selected from the present functionaries of the institution, to point out what entire proportionate augmentation is requisite in each division of the library, to render it truly efficient and beneficial; as well as to ascertain what books ought to have duplicates, triplicates, and even quadruplicates, for the ready reference of those who consult the library; or of what books duplicates (if possessed) may, by exchange or donation, be appropriated to other British institutions.

The same committee should also suggest the proportionate annual supply, in each division, as well as the best means of making the selection for each succeeding year. For these ends, other catalogues, British and Foreign, should be periodically procured and examined; communications might be invited from persons who had frequented the Museum, as to the deficiencies which they had noticed in the library; and communications might be opened and kept open with the directors of foreign libraries and other foreigners, as well as individuals in our own universities, &c. who are distinguished for their love of knowledge, or their success in its promotion.

Royal Mil. Academy, 13 May 1836. *Olinthus Gregory.*

Appendix, No. 9.

Appendix, No. 9.

A REPORT concerning the more valuable Parts of the COLLECTIONS deposited in the Basement Story of the BRITISH MUSEUM; made 27 February 1809.

Collections deposited in the Basement Story of the British Museum.

IN obedience to the request of the Standing Committee of the Trustees of the British Museum, I have at last found myself able to examine and report upon the nature of the multifarious matters which from time to time have been deposited in the basement story by successive officers of the house, in consequence of their having been deemed either unworthy of a place in the apartments above, or improper to be exhibited to the companies that attend. I was prevented till now from entering on this business by a fit of gout, which seized me a few days only after I received the commands of the Trustees, by the necessity of spending the

the autumn in the country, and by a second fit of the gout soon after my return to London, from which I am now only beginning to recover.

Appendix, No. 9.

Collections deposited in the Basement Story of the British Museum.

I found the deposit multifarious indeed, but among the various articles it consists of few, if any, which, in my judgment, are deserving of a place in the great collection; there are, however, some things of considerable value in other points of view.

The most interesting articles are those which have been removed from the apartments above, on account of their being unpleasant to the view, or in some way disgusting to the generality of mankind. The officers of the house have, from its first institution, considered the show part of the Museum as a collection of matters not only curious and instructive, but agreeable also to the visitors, and consequently likely to lead them, by the paths of amusement, to information and instruction, and no doubt in some cases to the developement of talents and the application of genius, to pursuits advantageous to the progress of science and the enlargement of the sphere of human knowledge.

Among them are the following articles, which form indeed a very considerable part of the whole mass. As I mean to submit to the Committee my opinion of a method of disposing of these, advantageous both to the interests of the public and to the credit of the Trustees, I shall begin with enumerating them. It will be easy if these are taken away, to dispose of the remainder in a short time, and to clear the apartments of all the rubbish and umber, which is at present an obstacle to their more useful and advantageous occupation.

Osteological Collection,

Consisting of human bones, many of them extremely interesting, from the diseases of which they are examples; also many bones of animals, and some skeletons, both human and comparative.

Monsters preserved in Spirits.

Of these there are many, both human and brute, which never ought on any account to be exposed to public view, lest the fancies of pregnant females might attribute to them the blemishes and mis-conformations of their future offspring.

Calculi, Human and Brute.

A collection from which no amusement can be derived, and little instruction, unless they are submitted to chemical analysis.

Anatomical Paintings, Preparations and Injections.

Matters admirably suited to assist the lessons of teachers in anatomy, but in no other point of view advantageous to the public.

Egyptian and Teneriffe Mummies.

Are damaged parts of the collection of these matters which is exhibited above stairs, and are clearly of no use to the collection.

Birds and other Animals in Spirits.

These consist of such specimens as are, from the length of time they have remained in the collection, and possibly from a failure of renewing the spirits as they wasted by evaporation, no longer in a condition to be so prepared as to become a part of the collection of stuffed animals. On this subject it is further submitted, that the whole of what is called the spirit collection above stairs is regarded by the visitors rather as an object of disgust than of curiosity; the room where they are kept must unavoidably smell strongly of spirits, and the snakes, fishes, &c. in the bottles, are very frequently designated by the opprobrious appellation of "hobgoblins."

A considerable Collection of the Horns of various Animals.

It may be a doubt whether this collection should be parted with. Natural historians make use of the horns of animals in distinguishing the species; and it sometimes happens that horns are the only proof we have of the existence of an animal, as in the case of the arnee, of the interior of Bengal, in this collection. It is however submitted, that if it is judged expedient to retain them, some means should be found of exhibiting them as parts of the collection, which was done not many years ago, by fixing them on the cornices of the rooms where objects of natural history are preserved.

That there are in the basement story many articles of value and importance, the above enumeration fully proves; but if the Trustees agree in opinion with the successive officers of the house, that a museum for exhibition ought to be a collection framed for the purpose of administering instruction in the form of amusement, and thus endeavouring to awake latent curiosity, they will agree also in thinking that nothing ought to be exhibited there to create disgust, or even repugnance. If these positions are admitted, it follows, as a consequence, that

Appendix, No. 9.

Collections deposited in the Basement Story of the British Museum.

that the officers who withdrew these articles from public exhibition, judged well, and that the Trustees will act properly by disposing of them in some manner more likely to tend to public advantage, than suffering them to decay and be consumed in the damp apartments where they are now deposited.

At the time when these collections were removed from the apartments above, there was no institution in being to which they could be transferred with advantage to the public; that difficulty is now removed: the munificence of the legislature has most judiciously purchased the late Mr. John Hunter's anatomical and physiological collections, provided an ample depository for their safe custody, and confided the care of the whole to the Royal College of Surgeons, on condition that lectures are annually read there for the advancement of medical knowledge and the illustration of human and comparative anatomy.

To this collection the articles enumerated above, except perhaps the horns, appear naturally to belong; and it is submitted, that it is almost a duty incumbent on the Trustees of the British Museum, who are in fact the Trustees of the public, to transfer these things from an establishment on which they are an evident burthen to one where they will be of eminent utility, in promoting the best purposes for which it was originally endowed, that of furnishing public lectures for the advancement of medical knowledge in a city where, from the abundance of hospitals, clinical experience is more easily obtained than perhaps in any other, and where of course lectures on anatomy and physiology cannot fail to be productive of the most advantageous consequences.

The osteological collections and the preparations, which afford examples of uncommon diseases, will evidently be of the utmost importance to the intended lectures. The monsters also are highly interesting to anatomists: much has already been discovered, and more will hereafter be learned, by studying the arrangement of the parts of these aberrations of nature. Calculi cannot in the Hunterian Collection be too numerous, as the improving state of chemistry has already rendered it necessary to submit these substances to analysis twice within a few years, and as it will no doubt be necessary to repeat chemical experiments upon them as often as new principles are developed by the sagacity of future operators.

The anatomical paintings will in the Hunterian Collection serve as illustrative ornaments, while here they are wholly useless. The spirit collections (as the muscles, blood-vessels bones of the animals preserved are always in their places, and in many cases the intestinal canal has not been removed) will furnish an abundant source of research in comparative anatomy to the surgeons, while here their use is chiefly confined to the researches of the naturalist, whose interest in their external structure will not be diminished by the anatomical examination of the internal. We have had many applications for leave to examine these specimens by dissection, and some discoveries of importance have been the fruit of the liberality of the Trustees in granting this permission; how much more likely are these collections to prove useful, if the whole are opened to the researches of the able comparative anatomists who are now the ornaments of their profession here, free from all interruption, difficulty or delay.

Much more might be added on this subject, in proof of the propriety of endowing the Hunterian Collection with articles useless to the British Museum, and infinitely interesting to that hopeful institution; but I trust little if anything of argument can be adduced on the opposite side. I shall therefore close this Report, lest I should trespass too much on the valuable time of my brethren, and leaving to their wisdom and discretion the whole of the arrangements necessary for the completion of the busines if approved of, subscribe myself

Their obedient and faithful humble servant,

Soho-square,
27 February 1809.

Communications respecting Literary Institutions or Libraries in Foreign Countries.

19. AUSTRIA.

(19.)—AUSTRIA.

The Hon. *W. Fox Strangways* to Viscount *Palmerston.*

My Lord, Vienna, 5 May 1835.

IN reference to your Lordship's circular of the 29th October 1834, I have the honour of enclosing the accompanying Answers to the Queries, respecting museums and libraries, therein transmitted to this embassy, which information I have not until lately been able to complete.

I am informed by Count Maurice Dietrichstein, Prefect of the Imperial Library, that the Queries, Nos. 6, 8 and 9, in Enclosure No. 2, have already been answered, in a detailed statement, consisting of 20 points, which was forwarded to London on the 10th of December 1833, through the secretary of the imperial ambassador, Prince Esterhazy.

All the salaries and expenses mentioned in the enclosed papers are stated in Austrian silver florins, at nearly 10 to the pound sterling. A correct account of the Imperial Library has recently been published by Mr. Mosel.

I should add, that the officers of the university elect annually, from among themselves, a governor, who has the title of Rector Magnificus, to whom the superintendence of the finances of their library, museums and other establishments belongs.

I have, &c.

Viscount Palmerston, &c. &c. &c. (signed) *W. Fox Strangways.*

(First Enclosure in No. 19.)

Answer to Query 1.

MUSEUMS.

In Vienna have existed, for many years, the following public museums:

(A.) The Imperial Museum of Antiquities, Medals and Coins, including the Egyptian Collections.

(B.) The Imperial Gallery of Pictures.

(C.) The Imperial Museum of Natural History.

(D.) The Imperial Treasure.

(E.) The Imperial Museum, called the Collection of Ambras, containing various objects of interest for history and the arts.

(F.) The Museum of Arts and Manufactures, annexed to the Polytechnic School.

(G.) Different collections belonging to the University, the Theresian and Chirurgical Academy.

2. These collections are all kept up by the public revenue, under different directions; the imperial collections under that of the great officers of the imperial household; the others under the government commission of public instruction.

3. For each of these museums there is a director and several keepers. The salaries are from 2,500 florins silver to 600.

4. The museums are of course divided differently, according to their different objects.

5. The general annual expenses vary, but are considered sufficient: *ex. gr.* The Museum of Natural History has, per annum, 10,000 florins; that of Antiquities, 3,000 florins.

6. The museums and other collections before mentioned are all maintained out of the public revenue.

7. The present directors of the principal museums are as follows:

Of the Museum of Antiquities, Mr. Steinbüche; Pictures, Mr. Kraft; Natural History, Mr. Schreiber; Polytechnic School, Mr. Pœchte; Academy of Arts, Mr. Petter.

8. All these collections are gratuitously accessible to the public on certain days of the week; and there are other days and hours set apart for scientific persons who wish to make particular objects their study.

(Second Enclosure in No. 19.)

Answer to Query 1.

LIBRARIES.

There are two public libraries in Vienna:

(A.) The Imperial Court Library, including a celebrated collection of prints.

(B.) That of the University.

Also the fine private library of the emperor, an heirloom in the imperial family, which is accessible to the public.

2. The personnel of the Imperial Court Library consists of one prefect; salary, 5,000 florins per annum.

Four keepers, of whom the first is an aulic councillor, whose respective salaries are, 4,000, 2,000, 1,400 and 1,000 florins per annum.

Four librarians, or under-keepers, with salaries of 900, 800, 700 and 600 florins per annum; and three servants, at 240 florins per annum each.

At the University Library there is a chief librarian, with 2,000 florins per annum, besides two custodes, and two scriptores, and three servants.

3. The yearly expenditure for books at the Imperial Court Library amounts to 11,000 or 12,000 florins per annum; and that for the collection of prints attached to it comes to about 2,000 or 3,000 florins per annum.

The expenditure of the University Library is about 4,000 florins per annum for the same purpose.

4. The general annual expenses of the Imperial Library amount to 19,000 florins per annum.

5. The whole of the above expenses and salaries are paid out of the imperial treasury.

6. These libraries are open to the public gratuitously from the morning until two P. M. The Imperial Library is closed every year during the whole month of August, for cleaning, &c., and during some other holidays. No candles are allowed; they are partially heated by stoves. From that of the University professors may take books.

7. The prefect of the Imperial Library is now Count Maurice Dietrichstein; the first keeper, Mr. V. Mosel. The place of librarian to the University is now vacant.

8. The Imperial Library is reckoned at 300,000 volumes; that of the University at 100,000.

9. The MSS. in the Imperial Library are reckoned at 1,300; the Incunabula at 8,000.

10. The administration of the Imperial Library is official (bureaucratisch.)

11. There are no annual accounts published.

12. There are libraries attached to all the lyceums and universities in the empire, 15 in number.

13. These, with the institutions to which they belong, are under the charge of the respective provincial governments, and finally under the direction of the commission of public instruction.

They are situated at the

Lyceums of		Universities of	
Linz - -	Upper Austria.	Gratz -	Styria.
Salzburg -			
Clausenburg,	Transylvania.	Prague -	Bohemia.
Laybach -	Illyria.	Ollmütz	Moravia.
Gorizia - -	Ditto.	Innsbrück,	Tyrol.
		Pesth -	Hungary.
		Leopol -	Gallicia.
		Padua -	Lomb. Venⁿ Kingdom.

And in the Ecclesiastical Establishments of

S. Ambrose, Milan.
S. Mark - } Venice.
S. Lazzaro }

(20.)—AUSTRIA.

The Hon. *Henry Edward Fox* to the Hon. *W. Fox Strangways.*

Sir, Vienna, 14 January 1836.

WITH reference to the instructions contained in Mr. Backhouse's letter to me, of July 24th, 1835, I have to inform you, that I have caused an application to be made to Count Dietrichstein, the Prefect of the Imperial Library, upon the subject of that letter; and I have now the honour to transmit to you, in original, a note which I have received from the Count, forwarding the desired statement, which is also enclosed, together with a translation.

I have, &c.

To the Hon. W. Fox Strangways, &c. &c. &c. (signed) *Henry Edward Fox.*

(First Enclosure in No. 20.)

Count *Dietrichstein* to the Hon. *Henry Edward Fox.*

Les 20 *Réponses* suivantes à autant de *questions*, adressées à la *Bibliothèque Imperiale de Vienne*, ont été envoyées à Londres: 1° par l'entremise du *Bibliothécaire* de M. le Prince Esterhazy;—2° le 10 Décembre 1833, par son *Secrétaire.*

Ces éclaircissemens n'étant point parvenus à leur destination, le Soussigné s'empresse d'en renouveler la Copie, avec quelques additions.

Il est nécessaire d'observer que *les trois questions*, contenues dans une *note*, communiquée par Monsieur *Fraser*, se rapportent *à d'autres chiffres* du Mémoire annexé; savoir:

No. 6. What bye-laws regulate the admission of the public?—Aux Nos. 10, 11, 12, 15, 16, 18, et 19.

No. 8. What is the number of volumes?—Au No. 2.

No. 9. What the number of manuscripts?—Au No. 2.

Vienne, le 20 Décembre 1835. Le Comte *Maurice de Dietrichstein*, Préfet de la Bibliothèque I. R.

(Second Enclosure in No. 20.)

BEANTWORTUNG der 20 FRAGEN aus *London.*

1. *Bibliotheca Aug. Palatina*, oder *K. K. Hofbibliothek.*

2. Gegen 300,000 Bände, (worunter über 12,000 *Incunables*)—mehr als 16,000 Handschriften;—dann 988 Folio-Bände, und 14 grosse Portefeuilles mit verschiedenen Kupferstichen, nebst 245 Cartons in Folio, mit Portraiten; im Ganzen zwischen 200 bis 300,000 Kupferstiche.

3. Mit der Bibliothek ist die Handschriften-Sammlung und jene der Kupferstiche vereinigt; ihre Erhaltung, Catalogisirung und Vermehrung aber eigenen Individuen anvertraut.

4. Die Beamten der Hofbibliothek bestehen aus: 4 *Custoden*, 4 *Scriptoren*, und 1 *Adjuncten.* Der erste *Custos* ist K. K. wirklicher *Hofrath.* Unter den anderen 8 Bibliothek-Beamten findet, mit Rücksicht auf ihre Dienstjahre und Gehalte, eine natürliche Rangordnung Statt, welche aber auf die Vertheilung der Geschäfte keinen Einfluss hat, die nach den Fähigkeiten der Einzelnen denselben zugewiesen werden.

Zur Verrichtung der nöthigen Commissionen, so wie zum Herbeiholen und Zurückstellen der Bücher für den Gebrauch der Beamten und des Lesepublikums, und zur Reinigung der Bibliothek-Localitäten, sind 3 *Bibliothekdiener* vorhanden, von welchen keine andere Kenntniss, als die des Lesens und Schreibens, aber vorzügliche Treue und Genauigkeit gefordert werden.

Das sämmtliche Bibliothek-Personal steht unter dem Bibliothek-*Præfecten*, dermal: Herrn Grafen *Moriz von Dietrichstein.*

5. In der Bibliothek bestehen folgende *abgesonderte Cataloge*:

a. Ueber Kupferstiche und Landkarten.
b. —— Handschriften, worunter *die Orientalischen* einen *eigenen* Catalog haben.
c. —— Incunabeln (alle Druckwerke bis zum Jahr 1,500 *inclusive*).
d. —— Praktische Musikwerke.
e. —— Hebräische Werke.
f. Ueber solche *Slavische Werke*, welche mit cyrulischen oder glagolitischen Lettern gedruckt sind.
g. Ueber sämmtliche *Bibeln* und einzelne Theile derselben.
h. Alle übrigen Druckwerke sind in dem *grossen Alphabetischen General-Cataloge* enthalten, der nach den auf dem Titel des Buchs angegebenen Beziehungen so eingerichtet ist, dass jedes Werk, dessen Titel genau bezeichnet wird, auf der Stelle aufgefunden werden kann.

In diesem Cataloge ist zugleich die *Signatur* beigefügt, d. i. die genaue Angabe des *Kastens*, des *Faches*, und des N^ros^ unter welchen sich das Buch befindet, so, dass das verlangte Buch nach dieser Signatur ohne Schwierigkeit durch *jeden* Bibliothekdiener aufgesucht, und nach dem Gebrauche wieder zurückgestellt werden kann.

Dieser Catalog ist *doppelt* vorhanden, nämlich: in circa 60 *Foliobänden*, die zum Einschalten der neuen Acquisitionen eingerichtet sind, und zum gewöhnlichen Gebrauche dienen; und dann auf einzelnen *Quartblättern* (*Zettelcatalog* genannt) welche in streng alphabetischer Ordnung *in Kästchen* aufbewahrt werden.

Ueber alle, seit dem Jahre 1822 neu acquirirten Werke, ist ein historisch-statistisch-geographischer *Renvoi-Catalog* vorhanden.

Uebrigens wird, so wie es Zeit und Localität erlauben, an *Special-Catalogen*, und am *grossen Real-Cataloge* gearbeitet.

Gedruckt sind nur die *älteren* Handschriften-Cataloge, von Lambecius, Kollar, Nessel, und Denis, und in Bezug auf *orientalische*, von Hammer.

Nächstens erscheint ein *neuer* recensirender *Catalog aller lateinischen philologischen Manuscripte*, durch Hrn. *Endlicher*, und später von den *orientalischen* durch Hrn. *von Gevay*.

6. Die Cataloge sind in der Regel nur zum Gebrauch der Beamten, und die Einsicht derselben wird nur in ausserordentlichen Fällen mit besonderer Bewilligung gestattet.

7 & 8. Es werden stets die wichtigeren Werke der älteren und neueren Literatur angekauft, zu welchem Behufe, so wie zum Ankaufe der Kupferstiche, jährlich 19,000 f. Conv. Münze aus der Staatskasse verabfolgt werden. Davon ist nur noch der Einband zu bestreiten;—denn für den Gehalt der Beamten, das Ameublement und für die Reinigung sind andere Fonds angewiesen.

Mit Einschluss der *Pflicht-Exemplare* (wovon aber das Unwichtige bei Seite gelegt wird) kann man die *jährlich* eingehenden Artikel auf 5,000 anschlagen.

9. Die Hofbibliothek erhält von allen Druckwerken, die in den sämmtlichen Provinzen der oesterreichischen Monarchie herauskommen: es seyen, Bücher, Landkarten, Kupferstiche, Lithographien, u. s. w. 1 Exemplar *gratis*, und zwar von der besseren Ausgabe.

Von Klagen der Verleger weiss die Hofbibliothek nichts.

10. Es werden alle Bücher hergegeben, mit folgenden 5 Beschränkungen:

a. Durch die Censur verbotene Bücher nur an solche Personen, welche hierzu die Erlaubniss haben. (Die Hofbibliothek unterliegt jedoch beim Einkaufe keiner Censur.)

b. Prachtwerke und sonst kostspielige Bücher werden nicht der blossen Neugier preisgegeben, sondern, nach kurzer vorläufiger Erkundigung nur an Jene, bei denen sich voraussetzen lässt, dass sie nicht nur als Bilderbeschauer die Bibliothek besuchen.

c. Deutsche Belletristik, blosse Romanen-Lectüre, und Handbücher, welche für die studierende Jugend an der Universität vorgeschrieben sind, werden *gegenwärtig wegen Mangel an Raum im Lesezimmer*, in der Regel verweigert. Für Studierende sorgt die Universitäts-Bibliothek.

d. *Journale* in *einzelnen Heften* werden *nicht* gegeben; jedoch ohne Anstand, wenn sie *gebunden* sind.

e. Wenn *alle* Sitze besetzt sind, so wird *dem Stehenden* kein Buch verabreicht, sondern er muss warten, bis durch einen Abgehenden ein Platz frei wird.

11. Der Eintritt ist *unentgeldlich* für Jedermann, Einheimische, oder Fremde, und ohne vorläufiger Erlaubniss.

12. Die Bücher werden *mündlich* verlangt. Der mit der Bedienung der Lesenden beauftragte Beamte schreibt die *Signatur des Buches* auf einen *Zettel*, welches dann durch einen Bibliothekdiener geholt wird.

Jedem Lesenden ist es gestattet, sich Auszüge zu machen. Dinte und Streusand findet er dazu in Bereitschaft. Für Federn und Papier hat er selbst zu sorgen.

Foliowerke können nur an den eigens dazu bestimmten Pulten benützt werden; eben so Kupferstiche.

Ein durch den Leser beschädigtes Buch muss durch diesen ersetzt werden. So wie er sein Buch aus der Hand des Beamten empfängt, hat er es auch wieder an denselben abzuliefern, und es findet zwischen Leser und Bibliothek-Diener kein unmittelbarer Verkehr Statt.

13 & 14. Seit ungefähr *sechs* Jahren, in wechen die *sub* No. 10. *c*, *d*, & *e* angezeigten Veränderungen bestehen, haben sich nur zwey Fälle von Beschmutzung mit Dinte ergeben, und da nur bei nicht kostpieligen Büchern;—jedoch keiner von Entwendung. Früher, als die Zahl der *stehenden* Leser grösser war, als jene der *sitzenden*, und dadurch die Aufsicht auf jede Art erschwert wurde, ergaben sich öfters Beispiele von Entwendungen.

15 & 16. Die Zahl der Lesenden lässt sich nicht genau bestimmen. Von den 45 Sitzen sind an manchem Tage *alle* durch volle 5 Stunden besetzt; an anderen kaum zur Hälfte.

Ein grösserer Raum würde aber auch mehr Leser herbeiziehen.

Frauen ist zwar der Besuch des Lesezimmers nicht untersagt; doch ist es nicht üblich.

17. Bücher werden *nur* an den Allerhöchsten Hof, dann an die Hof-und Staatstellen *zum Amtsgebrauche*, immer gegen Recepisse, ausgeliehen. Im zweiten Falle ist der Empfangschein vom Chef der betreffenden Stelle zu unterfertigen.

18. Die Bibliothek is *täglich*, mit Ausnahme der Sonn-und Feiertage, und der gewöhnlichen Ferien, von 9 Uhr Morgens bis 2 Uhr Nachmittags, für Jedermann offen.

19. *Geschlossen* ist die Bibliothek *während des ganzen Monats August*:—*vom* 25 *December bis* 6 *Jänner*, dann in der *Char-*, *Oster-*, und *Pfingst-Woche*.

20. In die Büchersäle wird niemals Kerzenlicht gebracht; sie werden auch im Winter nicht geheitzt. Das Lesezimmer wird aber geheitzt, wie auch jenes des Präfekten.

Die übrigen Beamten haben ihre Arbeitkästen im Lesezimmer.

Da keine besonderen Bibliothek-Gesetze bestehen, sondern diese theils in mehreren Decreten aus früherer und und späterer Zeit, theils in den, für die einzelnen Beamten erlassenen Instructionen enthalten sind, so sieht man sich ausser Stande, diesem letzten Wunsche

zu enstsprechen, insofern er nicht schon in den vorausgegangenen Aufklärungen befriedigt wurde.

Mehrere Erläuterungen über die Verfassung dieses Institutes, und die bestehende Geschäfts-Manipulation, befinden sich in der: *Geschichte der K. K. Hofbibliothek zu Wien*, von Ig. Fr. *Edlen von Mosel*, K. K. wirkl: Hofrathe und erstem Custos der Hofbibliothek. *Wien*, 1835, 8vo. mit 2 Kupfern. viii. und 398 Seiten.

(Translation of Second Enclosure in No. 20.)

ANSWERS to the Twenty QUERIES from *London*.

1. Bibliotheca Augusta Palatina, or I. and R. Court Library.

2. About 300,000 volumes, (of these 12,000 Incunabula), above 16,000 autographs, 988 folio volumes and 14 large portfolios, with various prints, together with 245 cartons, containing portraits; altogether between 200,000 and 300,000 prints.

3. The collection of autographs and that of prints are united to the library; the preservation, augmentation and the keeping of the catalogues, is however entrusted to separate individuals.

4. The officers of the Court Library are: four custodes, four scriptores and one adjunct; the first custos is an I. and R. actual aulic councillor.

There is a natural classification of the eight other officers of the library, with reference to their length of service and to their salaries, but this classification has no effect whatever upon the distribution of employment. The latter is assigned to each individual according to his capacity.

There are three library servants, whose business it is to carry messages, and to take out and replace the books required for the use of the officers of the library, and of the reading public. No other knowledge besides reading and writing is required in these servants, but it is necessary that they should be of well-proved fidelity and punctuality.

The whole *personnel* of the library is placed under the prefect of the Court Library, at present the Count Maurice de Dietrichstein.

5. There are the following separate catalogues at the library:

a. Of prints and maps.
b. Of autographs. (There is a separate one for Oriental autographs).
c. Of incunabula. (All works printed up to the year 1500, inclusive).
d. Of practical works upon music.
e. Of Hebrew works.
f. Of such Sclavonic works as are printed in Cyryllic and Glagolitic characters.
g. Of all the Bibles, and of certain parts of them in particular.
h. All other printed works are contained in the Great Alphabetical General Catalogue, which is so arranged, with reference to the description given upon the title-page of each book, that every work, the title of which is correctly given in, can be procured upon the moment.

To this catalogue is annexed the signatur, *i. e.*, the correct account of the case, shelf and number under which each book is to be found, in such a manner as that, by means of this signatur, any book required may, without difficulty, be sought out and replaced after use by any library servant.

This catalogue exists in two shapes; viz., in about 60 folio volumes, which are arranged for the insertion of new acquisitions, and which serve for ordinary use; and upon loose 4to. sheets (called zettel catalog), which are kept in strict alphabetical order, and in cases.

There exists an historico-statistical-geographical-renvoi (reference) catalogue of all works acquired since 1822.

Further, special catalogues, and the Great Real Catalogue, are proceeded with as far as time and space will admit.

The only printed catalogues are the older catalogues of autographs of Lambecius, Kollar, Nessel and Denis, and, as regards Oriental autographs, that of Hammer.

There will shortly appear a new supplementary catalogue of all Latin philological manuscripts, by M. Endlicher, and a later one of the Oriental manuscripts, by M. de Gevay.

6. The catalogues are, properly speaking, only for the use of the officers, and access to them is only granted upon particular occasions, and by special permission.

7 & 8. The more important works of ancient and modern literature are always purchased, and for this end, as well as for the purchase of prints, the sum of 19,000 florins, current money, yearly, is assigned out of the public coffers; the expense of binding the books is to be paid out of this sum. Other funds are assigned for the salaries of the officers, and for the furnishing and keeping in repair of the library.

The yearly accession of articles, including the obligatory copies (of which last the least important are laid aside), amounts to 5,000.

9. The Court Library receives gratis one copy of the best edition of every printed book which appears in any one of the provinces of the Austrian empire, whether books, maps, prints, lithographics, &c. &c. &c.

The Court Library has no knowledge of complaints on the part of the editors.

10. All books are produced for readers, with the following five limitations:

a. Books forbidden by the censorship are given only to such persons as have the necessary permission; the library is not subject to any censorship, as far as regards purchases.

b. Sumptuous and costly works are not put into the hands of the idle and curious, but only of those of whom, after previous inquiry, it is presumed that they do not visit the library for the sole purpose of looking at pictures.

No. 10. Communications respecting Literary Institutions or Libraries in Foreign Countries.

20. AUSTRIA.

c. German works on belles-lettres, novels and the manuals prescribed for the youth studying at the university, are at present, properly speaking, refused, on account of the want of space in the reading-room.

The library of the university provides for students.

d. Periodicals, in separate sheets, are not given, but there is no objection to producing them when bound.

e. When all the seats are occupied, books are not given to those who are standing, but they must wait until places become vacant by persons withdrawing.

11. Admission, without payment, is free to every person, native or foreigner, without previous permission.

12. Books are called for verbally. The officer, whose department it is to attend to the readers, writes the signatur of the book upon a slip of paper, and it is then sought out by a library servant.

Every reader is allowed to make extracts. Ink and sand are always at their service, but they must provide themselves with pens and paper.

Folio works can only be used at desks provided for the purpose; the same is the case with regard to prints. A book damaged by a reader must be replaced by him. He must receive his book from the hands of the officer, and must also restore it to the same person; no direct communication takes place between readers and library servants.

13 & 14. In the last six years, during which the regulations specified, *sub.* No. 10, *c. d.* and *e.*, have been in force, there have been only two instances of books being soiled with ink, and in those the books soiled were not of a costly description; but in no instance have books been pilfered.

Formerly, when the number of readers unaccommodated with chairs was greater than the number of those who were seated, and superintendence was consequently rendered in every way more difficult, books were not unfrequently purloined.

15 & 16. The number of readers cannot be accurately fixed. Upon some days the whole 45 seats are occupied throughout the five hours. Upon others scarcely the half are occupied. Increase of room would, however, attract a greater number of readers.

Admittance to the reading-room is not refused to women, but they do not usually frequent it.

17. Books are lent out only to the Imperial Court, or to the offices of Court and State, for official use; but a receipt is always required. In the second case the receipt must be signed by the head of the office in question.

18. The library is open to everybody from nine o'clock in the morning to two o'clock in the afternoon, upon all days excepting Sundays and holidays, and the usual vacations.

19. The library is closed during the whole month of August, from the 25th of December to the 6th of January, and during Holy-week, Easter-week and Whitsuntide-week.

20. Candle-light is never permitted in the rooms where the books are placed, nor are they heated in winter; the reading-room is, however, heated, as well as that of the prefect.

The other officers have their desks in the reading room

As there exists no special laws for the library, and as those by which it is governed are contained partly in a variety of decrees issued at different periods, and partly in the instructions which are issued to each of the officers, it is found impossible to answer the wish last expressed further than is already done in the above explanations.

Further particulars relative to the constitution of this establishment, and to the management of its affairs, are to be found in the history of the I. R. Court Library at Vienna, by Jq. Fr. Edler Von Mosel, I. and R. aulic councillor, and first custos of the Court Library, Vienna, 8vo., with two prints, and 398 pages.

(21.)—HANOVER.

21. HANOVER.

Baron *Ompteda* to Viscount *Palmerston.*

London, 8 December 1835.

THE undersigned, &c. has the honour of forwarding herewith to Lord Palmerston, &c. a translation of the answers which he has received from his government to the questions contained in the memorandum of Mr. Hawes, chairman of the Committee of the House of Commons, with regard to the public libraries and museums of the Kingdom of Hanover, a copy of which was annexed to his Excellency's note of the 23d July last.

The kingdom of Hanover contains institutions of the above description in two only of its towns; viz. Hanover, and more particularly Göttingen, with its university; and the answers abovementioned have been only required from the persons at the head of the same.

Several other libraries, not exclusively devoted to the use of private individuals, as, for intance, the Beverin Library, at Hildersheim, those of the Supreme Court of Appeal at Celle, of the Chancery of Justice at Hanover, and of several other public offices, can, considering their extent and purpose, hardly be accounted for to belong to the number of those institutions which concern the question under consideration, and can moreover be considered in parts only as public libraries. Provincial libraries as specified in the 12th of the proposed queries, do not exist in the kingdom of Hanover.

The answers sent in from the University of Göttingen refer, it is true, to several circumstances, not strictly perhaps included in the memorandum abovementioned, but as the same are internally connected, and can, to a certain extent, be considered as single parts of an entire whole, the undersigned is of opinion, that it will appear neither inappropriate nor undesirable to leave the answers undivided as he has received them.

With

With regard to the access to the University Library, and to the Botanical Garden, particular regulations exist, which have approved their utility, and are, as mentioned in the respective answers to the questions 5 and 8, appended to the Academical Laws.

If it should in any manner appear desirable for the purpose intended, the undersigned will have especial pleasure in forwarding these regulations to the Lord Viscount Palmerston *in extenso*, and he avails himself with much satisfaction of the present opportunity to renew to his Excellency the assurances of his highest consideration.

44, Grosvenor-place. (signed) *Ompteda.*

(First Enclosure in No. 21.)

ANSWERS of the QUESTIONS in regard of Museums and Libraries in Foreign Countries, especially in the Kingdom of *Hanover*.

1. The Royal Library is the only public library in the city of Hanover.

2. By this library are, a librarian, with a salary of 532 rix-dollars; two secretaries, with salaries of respective 300 and 250 rix-dollars.

3 & 4. The library receives a yearly sum of 666 rix-dollars, for the purchase of books and bookbinding, the salary of a clerk, a messenger and stationeries.

5. The expenses and salaries of the servants of the library are at present paid out of the royal civil list.

6. The library is open for public inspection two days in the week, in the summer, from 10 to 12, and in the winter from 11 to 12 o'clock. According to the rules of the library, the inspection of books is allowed to every person, and permission granted to keep a book in possession for four weeks, against signing a receipt for the same.

7. The principal librarian is at present the counsellor of the archives, Dr. Pertz.

8. The number of books is about 70,000.

9. The library is in possession of about 2,000 volumes in manuscripts and hand-writings.

10. Annual printed accounts or reports are not in use.

(Second Enclosure in No. 21.)

(Translation.)

MUSEUMS.

1. Is there a national museum devoted to the arts, antiquities, or natural history in Hanover?

At Göttingen are the following collections, which, particularly destined for the university, are employed in the instruction of the students.

1. The Museum, founded in 1773. It contains a mineralogical, zoological and ethnographical collection. The botanical collection has been transferred to the Botanical garden.

2. The Physical Cabinet, erected in 1787, with its apparatus of instruments used in lectures on experimental physics.

3. The Observatory, founded in 1751, and rebuilt in 1815–20; and the Magnetic Observatory, built in 1833, containing a collection of instruments for astronomical and magnetical observations.

4. The Chemical Laboratory, founded in 1783, with a collection of instruments and apparatus used in lectures on chemistry and pharmacy.

5. The Anatomical Theatre, founded in 1738, and rebuilt in 1824–28; containing a collection of anatomical preparations.

6. The Botanical and Œconomical Garden.

7. The Herbarium, and the collection of vegetable productions therewith connected, arranged since two years.

8. The Academical Hospital, besides its apparatus employed by the physicians, contains a collection of diseased bones.

9. The Surgical Infirmary, with its collection of surgical instruments, machines and bandages.

10. The Lying-in Institution, with a collection of preparations regarding the delivery of women and comparative anatomy.

11. The Collection of Models, relating to the study of the art of war, mining, civil engineering and machinery, as also a collection of instruments referring to practical geometry.

12. A Collection of Casts from statues, engraved stones and medals, &c., for archæological lectures.

13. A Collection of Paintings and Engravings.

2. Under whose control and direction are they placed?

The supreme direction and control of the several institutions above enumerated, is exercised by the royal curatory of the university at Hanover. The special superintendence and direction of each institution is entrusted to individual professors, as described in the answer to the following question.

3. How many directors are attached to them, and what are their salaries?

1. Museum. One general director, one superintendent of the mineralogical, and one of the zoological and ethnographical collections, and one assistant.

None of the above receive a salary in their above capacity.

2. Physical Cabinet. Director, the professor of physics for the time being, without receiving salary as such.

3. Observatory and Magnetic Observatory. Director, the professor of astronomy, with one assistant. The former receives no remuneration as such; the latter 300 dollars per annum; both a free residence attached to the observatory.

4. Chemical Laboratory. Director, the professor of chemistry and pharmacy, receiving as such no other remuneration than a free residence in the institution. One assistant.

5. Anatomical Theatre. Director, the professor of anatomy, receiving no salary as such. Under him, one prosector.

6. Botanical and Œconomical Garden. Director, the professor of botany, without salary as such, one inspector of gardens, with a salary of 800 dollars. Both enjoy a free residence at the garden.

7. Herbarium. Committed to the care of a professor, without remuneration.

8. Academical Hospital. Director, one of the professors of medicine, without salary, and one assistant physician, with a remuneration of 44 dollars and free residence.

9. Surgical Infirmary. Director, the professor of anatomy and surgery, without salary as such; one assistant, with a salary of 50 dollars.

10. Lying-in Institution. Superintended by the director of the same for the time being, who derives no emolument from this office.

11. Models, &c. Director, one of the professors of mathematics, without salary as such. Under him, one inspector, in receipt of 50 dollars per annum.

12. Archæological Collection. Superintended gratis by one of the professors.

13. Collection of Paintings and Engravings. The same as No. 12.

4. Into what departments are they divided?

1. Museum, as described in the answer to question 3.

2. Physical Cabinet. No subdivision.

3. Observatory and Magnetic Observatory. The director superintends the whole, and appoints the several duties to be discharged by the assistant.

4. Chemical Laboratory. No subdivision.

5. Anatomical Theatre. No subdivision.

6. Botanical and Œconomical Garden. The director has the general superintendence The inspector attends more particularly to the cultivation of the garden.

7. Herbarium. No subdivision.

8. Academical Hospital. The director superintends the whole institution. The assistant physician acts according to his direction.

9. Surgical Infirmary. As No. 8.

10. Lying-in Institution. No subdivision.

11. Models, &c. No subdivision.

12. Archæological Collection. No subdivision.

13. Collection of Paintings and Engravings. No subdivision.

5. What are the general annual expenses?

In the last budget of the University Fund, the following sums have been devoted to the different departments, as follows:

	Dollars.
1. Museum, including for models	450
2. Physical Cabinet	
3. Observatory and Magnetic ditto	150
4. Chemical Laboratory	800
5. Anatomical Theatre	2,200
6. Botanical and Œconomical Garden	2,700
7. Herbarium	100
8. Academical Hospital	3,000
9. Surgical Infirmary	2,175
10. Lying-in Institution	2,750
11. Models, &c. included in No. 1.	
12. Archæological Collection.	
13. Collection of Paintings, &c.	

No fixed sums have been appropriated under these last two heads.

The above-mentioned sums are not to be considered as permanently fixed; they are, on the contrary, regulated annually by consideration of the pecuniary resources disposable.

Each director makes the necessary purchases and directs the expenses incurred thereby, subject to the approbation of the royal curatory of the university, to whom the accounts are annually submitted.

6. Out of what funds are they defrayed?

Out of the Royal University Fund at Hanover.

The Academical Hospital possesses also a donation of about 5,000 dollars, and a house.

7. Who are the principal directors at present?

1. Museum. Director, the Supreme Counsellor of Medicine, Blumenbach; superintendants, Aulic Counsellor Hausmann and Professor Osiander; assistant, Dr. Herbst.

2. Physical Cabinet. Director, Professor Weber.

3. Observatory

3. Observatory and Magnetic Observatory. Director, Aulic Counsellor Gauss; assistant, Dr. Goldschmidt.
4. Chemical Laboratory. Director, vacant by the late decease of Aulic Counsellor Stromeyer.
5. Anatomical Theatre. Director, Aulic Counsellor Langenbeck.
6. Botanical and Œconomical Garden. Director, Aulic Counsellor Schrader; inspector, Mr. Fischer.
7. Herbarium. Director, Professor Bartling.
8. Academical Hospital. Director, Aulic Counsellor Himly; assistant physician, Dr. Ruete.
9. Surgical Infirmary. Director, Aulic Counsellor Langenbeck; assistant, Dr. Pauli.
10. Lying-in Institution. Director, Professor von Siebold.
11. Models, &c. Professor Ulrich.
12. Archæological Collection. Aulic Counsellor, Müller.
13. Collection of Paintings and Engravings. Professor Oesterlei.

(Third Enclosure, in No. 21.)

(Translation.)

LIBRARY.

1. How many public libraries are there in Hanover?

The library of the University of Göttingen, as far as regards literary curiosities, is in possession of a considerable number of specimens of ancient typography, but less rich in rare manuscripts, which are principally to be sought in collections commenced during the middle ages. On the other hand, this library is perhaps the only one which, from its first foundation, has not been accumulated by chance, but planned with an undisturbed view to everything necessary, useful and available in every department of science, and uninterruptedly increased and completed in the same spirit.

The works contained in this library are arranged according to their contents. A scientific catalogue states what books are in the library, in each department of science and its subdivisions. An alphabetical catalogue, arranged according to the names of the authors, or the principal word of the titles of anonymous publications, answers the several questions, whether a certain book is in the library, where it is to be found in the scientific catalogue, and where, consequently, in the library itself. These two principal catalogues are complete in the strictest sense, and are kept so by the immediate insertion of the new books continually coming in. References facilitate the use of both catalogues, and several subsidiary catalogues exist for the use of the internal administration.

In this manner the library has obtained the name of the Palladium of the University, and has, to the present hour, asserted its right to this honourable designation, to the great advantage of native and foreign literati.

2. How many librarians are there attached to the library, and what are their salaries?

The library at Göttingen has at present, 1 librarian in chief, 2 librarians, 3 sub-librarians, 1 secretary, 1 superintendent of the collection of prints, illustrative of the history of the arts. The salaries of the officers of the library are of different amount, and cannot with reference to their office as such, be here stated with certainty, as the greater part of them are at the same time professors.

3. What is the annual expense of books?

From 6,000 to 7,000 dollars are annually expended in the purchase and binding of books.

4. What the general annual expenses?

On account of what has been observed with regard to salaries in answer to query 2, and of the building expenses from time to time incurred, it is impossible to give a general answer to this question.

5. Out of what fund are they paid?

Principally from the Royal University Fund. The extra income derived by the library from matriculation fees, from those of academical promotions, and from interest on capital belonging to it, amounts to about 350 dollars per annum.

6. What bye-laws regulate the admission of the public?

Sundays excepted, the library is open every day during the whole year, during one hour on four, and during two hours on two days in each week.

Free admission is, during these public hours, allowed gratis to every person. Inhabitants of the town, as well as strangers, can ask for any book which they wish to see or refer to.

(As the number of officers of the library is too small to superintend these public hours, they are on such occasions assisted by several young resident literati, worthy of confidence, who receive a trifling remuneration for their services, or who consider the opportunity which they thus acquire of enlarging their knowledge of books, as a sufficient recompense for the time and labour thus by them expended).

No. 10. Communications respecting Literary Institutions or Libraries in Foreign Countries.

21. HANOVER.

It should here be observed, that far from facilitating depredations, the daily access thus allowed to the university library has proved itself to be the best safeguard against anything of the kind.

The professors &c. of the university, as well as literary strangers, have, moreover, access to the library from nine o'clock in the morning until four o'clock in the afternoon of each week-day, during which time all the officers of the library attend for the discharge of their several duties.

In addition to the above-described daily free access, a separate room has been especially adapted for the daily loan of books, during the aforesaid public hours, without pledge or remuneration whatsoever. The students, who avail themselves of this arrangement, are bound to have the receipts, which they give for the books they obtain, countersigned by a professor, and are obliged to return the books after a lapse of four weeks at latest.

A regulation for the guidance of students, doctors and private tutors, with regard to the use of the library, dated 14th April 1830, has been printed and annexed to the academical laws.

7. Who are the principal librarians at present?

Present librarian in chief, Aulic Counsellor Reuss.
Librarians, Aulic Counsellors Benecke and Grimm.
All three are also ordinary professors.

8. What is the number of volumes?

The number of printed books at present exceeds 300,000.

9. What is the number of manuscripts?

The number of manuscripts amounts to about 1,500, among which a manuscript, on vellum, of the Roman books of law, and several Oriental manuscripts, are the most remarkable. *Vide* answer to query 1.

10. What is the nature of the government of these institutions generally?

The answer to this question, as far as regards the library, is contained in what has been above observed.

11. Are there any annual printed accounts or reports relating to them?

Separate printed reports, with respect to the library, do not appear. Occasional notices relating to the same are contained in the "Göttingische Gelehrte Anzeigen," (Literary Advertiser of Göttingen) which, since the year 1753, is annually published in two volumes 8vo., of which work, besides the annual detailed index, a general register exists, extending to the year 1822, in 11 volumes 8vo.

12. What is the number of provincial libraries?

13. Are they under the superintendence of any government authority?

Like the other institutions of the university, the library at Göttingen is under the supreme control of the royal curatory of the university.

(22.)—NETHERLANDS.

22. NETHERLANDS.

G. S. Jerningham, Esq. to Viscount *Palmerston*.

My Lord, The Hague, 25 September 1835.

I HAVE the honour to transmit to your Lordship herewith the information furnished to me by this government, in consequence of my application of the 13th of last November, respecting the museums and libraries of the Netherlands.

I have, &c.
(signed) *G. S. Jerningham*

(First Enclosure, in No. 22.)

In de Stad *'s Gravenhage* wordt gevonden een *Koninklijk Kabinet van Schilderijen* een *Koninklijk Kabinet van Zeldzaamheden*, en een *Koninklijk Kabinet van Penningen*. Te *Amsterdam* bestaat een *Rijks Museum voor schilderijen en prentwerken* en te *Leijden* is gevestigd, behalve de verzamelingen der Hooge School een *Rijks Museum van Natuurlijke Historie* en een *Kabinet van Oudheden*. Omtrent elk dezer inrigtingen zal men alhier eenige berigten vermeld vinden, opgemaakt in den geest der vragen, welke door het Engelsch Gouvernement omtrent inrigtingen bekend onder de benoming van *Museum* gedaan zijn.

Alle deze inrigtingen staan onder het algemeen beheer van het Departement van Binnenlandsche Zaken, zijnde bovendien het algemeen opzigt over de Koninklijke verzamelingen en voormerpen van kunsten zeldzaamheden door Zijne Majesteit opgedragen aan den Baron van *Nagell tot Ampsen*, Minister van Staat, vroeger Minister van Buitenlandsche Zaken.

Koninklijk Kabinet van Schilderijen te 's Gravenhage.

Deze verzameling, tot welke de grond is gelegd door de na de omwenteling van 1795 naar Frankrijk en van daar in 1815 terug bekomene verzameling van wijlen den Stadhouder Willem V., en die sedert door aankoop van dele goede en daaronder zeer voorname schilderijen aanmerkelijk is uitgebreid, staat teganwoordig onder toezigt van Jhr. *Steengracht van Oost Capelle* die den titel van Directeur draagt, doch geene bezoldiging geniet. Bovendien zijn bij dit Kabinet een onder Directeur, *Heideloff* genaamd, en twee mindere bedienden tot het houden van opzigt.

De bezoldiging dezer drie personen worden even als de kosten van aankoop van schilderijen, en van dagelijksche uitgaven voor de verzameling door 's Rijks kas gedragen. Van deze verzameling bestaat een Catalogus, welke 423 nummers telt. Bovendien zijn er eenige stukken, die nog niet op den Catalogus zijn vermeld.

Behalve op Zon- en feestdagen en des Zaturdags, wanneer het lokaal wordt schoongemaakt, wordt het publiek dagelijks tot de bezigtiging van het Kabinet toegelaten van tot 3 uren. Aan vreemdelingen, wordt, wanneer zij dit verlangen, ook veelal buiten de gewone uren de bezigtiging vergund. Bovendien is het onder zekere bedingen, welke de directie voorschrijft, gevorloofd om van gedeelten van schilderijen of van geheele stukken kopijen te nemen, mits in het laatste geval, niet van gelijke grootte, worden de van deze vergunning veel gebruik gemaakt.

Koninklijk Kabinet van Zeldzaamheden te 's Gravenhage.

Deze verzameling, welke om haren aard en hare strekking, en om haren hoofd-inhoud ook zoude kunnen genoemd worden *Ethnographisch Kabinet*, met uitzondering van zoodanige voorwerpen, welke voornamelijk tot de vaderlandsche oudheden en vaderlandsche zeldzaamheden behooren, is ontstaan door het verkrijgen van een zeker aantal Chinesche en Japansche voorwerpen, toebehoord hebbende aan wijlen den Heer *Roijer* te *'s Gravenhage*, die dezelve aan het Huis der Vorsten van Orange had gelegateerd. Na de herstelling van zaken in 1814, zijn op gunstige beschikking van Zijne Majesteit, van 's Rijks wege fondsen toegelegd tot aankoop van meerdere voorwerpen, ook zijn aan dit Kabinet toegevoegd voorwerpen, welke zich bij andere verzamelingen bevonden, en meer eigenaardig tot dit nieuwe Kabinet behoorden. Voorts is de verzameling verrijkt door vele geschenken van particulieren, zoo hier te lande als in 's Rijks overzeesche bezittingen, terwijl eindelijk eene groote aanwinst is verkregen door den aankoop van 's Rijks wege der belangrijke Collectien. Japansche voorwerpen door de Heeren *Cock Blomhoff* en van *Overmeer Fischer* op het eiland *Decima* in *Japan* verzameld en herwaards overgebraght. Door dit een en ander is het Cabinet zeer uitgebreid geworden, en levert eene verzameling op welke zeer byzonder is in hare soort.

Aan het hoofd van het Kabinet staat als Directeur de Heer *R. P. van de Kasteele.* Bovendien is er een onder Directeur Genaamd *A. A. van de Kasteele*, en een minder bediende. De jaarwedden dezer personen, worden met de kosten tot aankoop van voorwerpen, en van dagelijksche uitgaven voor het onderhoud door 's Rijks kas gedragen.

Het Kabinet kan, behalve op Zon- en feestdagen, en ook niet des Donderdags, wanneer het locaal wordt schoongemaakt, dagelijks bezigtigd worden van elf tot een uren. Vreemdelingen kunnen ook daarom aanvrage doende, op andere uren toegang bekomen.

Koninklijk Kabinet van Penningen te 's Gravenhage.

Ten aanzien van deze verzameling vermeent men niet beter te kunnen doen, dan te verwijzen tot het voor eenige jaren uitgegeven *Notice sur le cabinet des médailles et des pierres gravées de sa Majesté le Roi des Pays-Bas*, waarvan een exemplaar hiernevens gaat, en uit welke de belangrijkheid dier collectie genoegzaam zal kunnen worden afgeleid.

Men heeft er bijtevoegen, dat de Heer Rijks archivarius *de Jonge*, die nog steeds aan het hoofd de verzameling staat als opzigter van het Penning Kabinet, geene jaarwedde geniet, en dat de kosten van een minder bediende, worden gedragen door s' Rijks Kasse, uit welke 's Jaarlijks ook eene somme voor kleine aankoopen en voor huishoudelijke uitgaven wordt toegestaan.

De verzameling kan bezigtigd worden des Maandags, Woensdags en Vrijdags van 10 uren voormiddags tot 2 uren na den middag. Vreemdelingen worden op hun verlangen ook op andere tijden toegelaten.

Rijks Museum te Amsterdam.

Dit Museum is in den jare 1808 opgerigt, en bevonden zich aldaar aanvankelijk alle schilderijen, teekeningen, voorwerpen van Beeldhouwkunst, gedreven werken, gesneden steenen, oudheden, kunststukken en zeldzaamheden, welke na het overbrengen in 1795 naar *Parijs* van het meerendeel dier voorwerpen, hier te lande waren overgebleven of sedert 1795 door het Gouvernement waren aangekoept. Na de vestiging der verzamelingen, van welke hiervoren is gesproken, is de omvang van het Museum beperkt tot schilderijen en prenten, in welke beide vakken het thans eene uitgebreide en merkwaardige collectie bezit, bevattende de in 1833 herdrukte catalogus der schilderijen een getal van 415 nummers.

Aan het hoofd van het Museum is als Directeur gesteld de Heer *C. Apostool* welke die betrekking sedert 1808 heeft beekleed. Bovendien zijn er twee opzigters, een minder bediende en assistenten voor de dagen der publieke bezigtiging, wier jaarwedden, even als

alle andere uitgaven tot onderhoud en uitbreiding van het Museum, door 's Rijks kas gedragen worden.

Het Museum is ter publieke bezigtiging open Donderdags and Vrijdags van iedere week van 10 uren voormiddags tot 3 uren na den middag. Op byzondere aanvragen wordt ook toelating gegeven op andere dagen, behalve des Zaturdags en met uitzondering der Zon- en feestdagen.

Ook wordt aan de genen die zulks begeren, veroorloofd om van gedeelten van schilderijen of van geheele stukken kopijen te nemen, mits en het laatste geval niet van gelijke grootte.

's Rijks Museum van Natuurlijke Historie te Leijden.

Dit Museum is opgerigt in het yaar 1820, en is zamengesteld door de bijeen brenging van de voorwerpen, welke tot dien tijd het Akademisch Kabinet van Natuurlijke Historie der Hooge School te *Leijden*, uitmaakten, en welke zich bevonden in een rijks Kabinet van Natuurlijke Historie, hetwelk te *Amsterdam* bestond, doch alstoen is opgeheven. Die verzameling is vermeerderd door den aankoop van het bekende kabinet van den Heer *C. J. Temminck* te *Amsterdam*, en heeft sedert hare vestiging te *Leijden* groote aanwinsten verkregen door het aankoopen van voorwerpen het doen van ruilingen met andere collectien, en vooral door het bekomen van talrijke en belangrijke bezendingen uit 's Rijks Kolonien, in de Oost en West-Indien, gelijk ook uit andere wereldstreken, ten gevolge zoo van de reizen, welke deswaards door Natuur onderzoekers op 's Rijks Kosten zijn ondernomen, als van de betrekkingen, welke met aldaar gevestigde Naturalisten worden onderhouden. Uit een en ander is voortgevloeid, dat het Museum in weinige jaren tot eene groote uitgebreidheid is gekomen, en, volgens het getuigenis van bevoegde beoordeelaars, met de belangrijkste Europesche verzamelingen van dien aard op gelijke lijn kan worden gesteld.

Aan het hoofd van het Museum is als Directeur geplaatst de Heer *C. J. Temminck*. Aan de inrigting zijn verbonden drie conservateurs zijnde de Heer *Schlegel* voor de zoölogie en osteologie, de Heer *de Haan* voor de invertebrata en insecten, en de Heer *van Hoorn* voor de mineralogie. Bovendien bevindt er zich een Administrateur de Heer *Susanna*, en is er aanwezig een zeker aantal preparateurs en mindere bedienden.

Alle de jaarwedden dier personen met de vrij aanzienlijke kosten van onderhoud en verdere uitbreiding dezer belangrijke inrigting worden door 's Rijks kasse gedragen.

Het Museum kan bezigtigd worden des Maandags, Woensdags, Vrijdags en Zaturdags van elke week. Aan vreemdelingen wordt op hunne aanvrage, ook op andere dagen, behalve op Zon- en feestdagen toegang verleend.

Kabinet van Archaeologie te Leijden.

Dit Kabinet, hetwelk ten grondslag heeft eene zekere verzameling van oudheden, welke door den Heer *Papenbroek* in der tijd aan de Hooge School te *Leijden* is gelegateerd, heeft eene aanzienlijke uitbreiding verkregen door de belangrijke verzameling Egijptische oudheden van den Zweedschen Consul te *Alexandrie* den Ridder *Anastasij*, welke in den Jare 1827 door Zyne Majesteit is aangekoept. Hierdoor en door andere kleinere aankoopen, is deze verzameling zoo uitgebried geworden, dat dezelve, wanneer eemnaal in de behoefte van een goed lokaal zal zijn voorzien, gerekend wordt de meest bekende collectien van dien aard op zijde te zullen kunnen streven.

Het kabinet werd tot op deze dagen beheerd door den onlangs overleden Heer *Reuvens*, Hoogleeraar in de Archaeologie aan de Hooge School te *Leijden* die zich ten aanzien dezer verzameling vele verdiensten heeft verworven, en wiens verlies ook in dit opzigt zeer te betreuren is. Aan hetzelve is verbonden een Amanuensis en een mindere bediende. De Jaarwedden van dit personeel, zoo wel als alle uitgaven van uitbreiding en onderhoud der verzameling zijn ten laste van 's Rijks kas.

Deze verzameling kan dagelijks bezigtigd worden.

Openbare Bibliotheken.

Te *s' Gravenhage* is gevestigd de koninklijke Bibliotheek. Men gedraagt zich aan de inlichtingen, welke ten aanzien dezer inrigting, op verzoek van het Engelsch Gouvernement, zijn gegeven in Junij 1834. Bij dezelve heeft men naar aanleiding der thans gedane vragen alleen te voegen, dat tegenwoordig Bibliothecaris is de Heer *Flament* en onder Bibliothecaris de Heer *Holtrop*, gelijk mede dat alle uitgaven ter zake van deze boekverzameling gedragen worden door 's Rijks kas.

Er bestaan voorts openbare boekerijen bij de Hooge Scholen te *Leijden, Utrecht, Groningen* en bij de Athenaea te *Franeker, Amsterdam* en *Deventer*. Ten aanzien van die te *Leijden* gedraagt men zich evenzeer aan de in Junij 1834 gegeven inlichtingen, daar bijvoegende dat tegenwoordig Bibliothecaris is de Professor honorarius *Geel*, en adjunct Bibliothecaris de Heer *Bergman*, en dat alle de kosten dezer inrigting komen voor rekering van 's Rijks kas. Ook is te *Leijden* nog aanwezig eene boekverzameling welke aan de Hooge School gelegateerd is door den Hoogleeraar *Thijsius* zijnde dezelve afzonderlijk geplaatst en bekend onder den naam van *Bibliotheca Thijsiana*.

De Bibliotheken te *Utrecht, Groningen* en *Franeker* zijn mede inrigtingen ten laste van 's Rijks kas.

Te *Utrecht* is Bibliothecaris de Hoogleeraar *J. H. van Heusde*. Voorts bevindt zich aldaar een Custos, een knecht, en twee schrijvers, welke laatsten zich meer bepaald bezig houden met het werk van den Catologus.

Het getal boekwerken is aldaar 27,000. Dat der handschriften 864.

Van de boekwerken is onlangs eene nieuwe Catalogus vervaardigd en in druk uitgegeven. Van de handschriften wordt de Catalogus, op dit oogenblik vervaardigd.

Deze bibliotheek staut dagelijks voor een ieder open, des middags van een tot twee uren, en 's Woensdags en Zaturdags van een tot vier uren. In de vacantien der Hooge School alleen des Donderdags van een tot twee uren, gedurende die uren kan ieder de boeken naslaan of in de leeskamer aanteekeningen daaruit nemen. Hoogleeraren, Studenten en wel bekende personen, kunnen voor een bepaalden tijd, ook boeken aan huis verkrijgen.

Te *Groningen* is Bibliothecaris de Hoogleeraar *van Eerde*, aan wien een Amanuensis is toegevoegd.

Het getal der boekwerken is aldaar 7560. Dat der handschriften 200.

Van de boekwerken en handschriften bestaat een catalogus. Dezelve is in het Jaar 1833 op nieuw in druk uitgegeven.

Van den tijd gedurende welken de Bibliotheek open staat, is geene opgave gedaan. Alleen is vermeld, dat de Curatoren, Professoren en Studenten der Hooge School, gelijk ook geletterde personen tot dezelve toegang hebben. Vroeger werden ook boekwerken uitgeleend, daar door zijn er echter vele voor de Bibliotheek verloren gegaan, en bepaalt men zich nu met de boeken in het lokaal der Bibliotheek ter lezing te geven. Om verdere verliezen van boekwerken voor te komen, is de plaats, waar dezelve staan, afgesloten, en behoort de geen die een werk verlangt te bekomen daarom aanvrage te doen aan den bediende, die over de uitgifte is gesteld. De Curatoren en professoren genieten evenwel ten dien aanzien meerdere vrijheid.

Te *Franeker* is Bibliothecaris de Hoogleeraar *de Greve*, en bevindt zich een Custos der Bibliotheek.

Het getal boekwerken is aldaar 12,200. Dat der handschriften 54.

Van deze Bibliotheek bestaan verscheiden gedrukte Catalogus.

De laatste is van 1712 in folio met twee vervolgen; het eerste van 1749, het tweede op het eind der 18 Eeuw. Men houdt zich bezig met het vervaardigen van een nieuwe Catalogus, waaraan echter, ofschoon reeds een gedeelte is afgedrukt, nog veel te doen is.

De bibliotheek staat voor het publiek twee malen per week gedurende twee uren open. Boekwerken worden uitgeleend aan de Hoogleeraren en Studenten en ook aan welbekende personen.

De Bibliotheken te *Amsterdam* en *Deventer*, zijn stedelijke inrigtingen. De Kosten worden alzoo gedragen door de Stedelijke Kassen.

Te *Amsterdam* is Bibliothecaris de Hoogleeraar Mr. *D. J. van Lennep* aan wien een custos toegevoegd.

Het getal boekwerken it aldaar 3150. Dat der handschriften 88.

Van de Bibliotheek bestaat een gedrukte Catalogus, die ten Jare 1796 is uitgegeven. Van de boekwerken en handschriften, na dien tijd verkregen, is een geschreven Catalogus aanwezig.

De Bibliotheek is, met uitzondering der vacantien, en van eenige andere bepaalde tijden, open twee maal in de week van twaalf tot drie uren. Aan de Hoogleeraren Studenten en welbekende personen worden boeken van de Bibliotheek uitgeleend.

Te Deventer is Bibliothecaris de Secretaris van het Athenæum *P. C. Malhuijsen*. Ook is er een onder Bibliothecaris.

Het getal boekwerken is aldaar 1750. Dat der handschriften 130.

Van de Bibliotheek bestaat een gedrukte Catalogus, die in 1832 is uitgegeven.

De Bibliotheek staat twee malen per week voor het publiek open, terwijl het gebruik van boeken aan huis aan de Hoogleeraren, Studenten, autoriteiten, Godsdienst Leeraren, en wel bekende personen vergund is.

Bovendien zijn hier te Lande, te *Arnhem, Breda, Enschede, Gouda Haarlem, Leeuwarden* en *Zutphen*, boekverzamelingen aanwezig welke de eene meerder de andere minder als openbare bibliotheken kunnen worden aangemerkt; doch welke in het algemeen van te weinig omvang en belang zijn, om nopens dezelve in bijzonderheden te treden.

Eindelijk behoort te worden vermeld, dat hier te Lande bestaat een vrij aanzienlijk getal boekverzamelingen, behoorende aan geleerde en wetenschappelijke instellingen, gelijk ook aande onderscheiden Departementen der Maatschappij: *tot not van't algemeen.* Die verzamelingen zijn echter alleen ten dienste van de leden dier Instellingen en van genoemde Maatschappij en kunnen dus bij de optelling der openbare boekerijen met in aanmerking komen.

(Second Enclosure in No. 22.)

NOTICE sur le Cabinet des Médailles et des Pierres Gravées de Sa Majesté le Roi des Pays-Bas.

Le Cabinet des Médailles et des Pierres Gravées est placé dans une des salles de la Bibliothèque Royale à la Haye. Les Médailles et Monnoyes en argent et bronze se trouvent dans des Médaillers ou armoires fermées, et sont classées par ordre géographique et chronologique; les Antiques le sont d'après le systême d'Eckhel. Les Médailles et Monnoyes en or, ainsi que les Pierres Gravées, sont exposées au milieu de la salle sur un grand Bureau sous des montres.

Le nombre des Médailles du Cabinet est de 33,675 pièces.

Les Grecques sont au nombre de 5,800, dont 197 en or.

Les Romaines sont au nombre de 11,380, dont 880 en or.

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

Les Médailles Modernes sont au nombre de 5,760 en tout métal.
Les Monnoyes Obsidionales sont au nombre de 640.
Ecus ou Thalers, 2,137.
Monnoyes proprement dites, en or, argent et cuivre, 7,958.
Les Pierres Gravées sont au nombre de 1,325.
Pour bien faire connoître la Collection, je décrirai dans le première partie de cette Notice* les Médailles les plus intéressantes, qui se trouvent dans les Médaillers, et les Médailles remarquables en or, exposées sur le grand Bureau. Dans la seconde partie je ferai connoître les principales Pierres Gravées.

(23.)—SARDINIA.

23. SARDINIA.

Sir *Augustus Foster* to Viscount *Palmerston*.

My Lord, Turin, 30 January 1836.

I HAVE the honour to forward the enclosed paper, containing some additional information, which arrived too late for me to send it with my separate despatch of the 20th instant, on the subject of the museums and libraries of this country.

I have, &c.
(signed) *A. Foster.*

(Enclosure in No. 23.)

Supplementary Information.

L'Académie Royale des Sciences a aussi une Bibliothèque pour l'usage particulier des membres de cette compagnie savante. Elle n'est pas pourtant tout à fait fermée au public. Toute personne qui désire y être admise pour étudier, ou faire des récherches, ne rencontra aucune difficulté, pourvoir qu'il soit présenté par un membre de l'Académie. Cette Bibliothèque renferme de dix à douze mille volumes, et est surtout composée des actes de toutes les Académies de l'Europe, des auteurs classiques Grecs et Latins, et des principales productions littéraires anciennes et modernes: Elle s'accroit tous les ans, soit par des échanges de les actes, avec ceux des autres Académies, que par des achâts, qui sont ordonnés par le Conseil Académique, qui, à cet effet, porte sur son budget annuel une somme de 2,000 livres. Elle n'a que très peu de manuscrits. Depuis deux ans, l'Académie a aussi un Musée Numismatique, très riche en monnaies Grecques, et Romaines, qui lui a été légué de son vivant par le Chevalier Philippe Lavy, membre de la classe des sciences morales, historiques, et philologiques. Le nombre des pièces monte a environ 30 mille: et il s'accroit tous les jours: le public studieux y est admis dans des jours déterminés.

Les Archives Royaux ont aussi une Bibliothèque, d'environ 3 mille volumes, historiques, et diplomatiques. Elle y a aussi une belle collection de manuscrits, sur papier, et sur parchemin. On peut y étudier sous présentation aux archivistes, qui l'accordent assez facilement.

Alexandrie.

Dans la ville d'Alexandrie il y a une Bibliothèque communale, aux frais de la ville. Elle se compose de 15 a 20 mille volumes, de toutes les sciences. Elle est cependant plus riche en livres anciens, ayant été formée par un fond de la Bibliothèque du Séminaire, et par les livres tirés des bibliothèques des couvens lors de la suppression, qui a eu lieu sous la domination des Français. La ville lui a fait batir un local exprès pour la placer, ainsi que pour l'habitation du bibliothécaire et d'un bedeau, et fait une assignation annuelle pour achat de livres. Le nombre des manuscrits n'est pas bien considerable, il y en a 200 environ; le bibliothécaire a un honoraire de 1,000 livres.

Coni.

A Coni il y a une petite Bibliothèque, ou collection de livres anciens, reste des livres de couvens supprimés. La ville ne fait presque aucune dépense pour l'entretenir et pour l'augmenter, ce qui fait qu'elle manque de tous les ouvrages les plus modernes, et est en conséquence très peu frequentée. Il y a cependant un gardien salarié, qui l'ouvre aux curieux, et à ceux qui désirent y faire des récherches.

Verceil. [*Vercelli.*]

Un bon curé, Jean Baptiste Moroyone, recteur jadis de l'eglise de Ste. Agnes, légua à la ville de Verceil sa Bibliothéque, pour qu'elle fût rendue publique: Il la plaça sous la direction d'une congrégation des curés, et à cet effet, il leur laissa sa maison, dans laquelle on placerait les livres, et de la rente du reste, on entretenerait un gardien, et on acheterait des livres pour l'augmenter annuellement des meilleurs livres, et des plus utiles. Elle doit être ouverte au public, et se regler pour cela sur le modèle de la Bibliothèque Ambrosienne de Milan. Actuellement elle est composée d'environ 3,000 [volumes?], et est très peu frequentée.

Le

* Notice sur le Cabinet des Médailles et des Pierres Gravées de sa Majesté le Roi des Païs-Bas, par J. C. De Jonge, Directeur. A La Haÿe, chez A. H. Bakhuÿzen. 12 mo.

Le chapitre de la Cathédrale de Verceil est possesseur d'une riche Bibliothèque de manuscrits, très anciens, la plus part ecclésiastique, mais trés précieuse, et sur parchemin : et une autre pareille est chez le chapitre de Novare. Elles sont connues des savants, surtout par une notice, qu'en a donné le P. Andrés. Il n'est pas facile d'y être admis.

(24.)—MEXICO.

Richard Pakenham, Esq. to Viscount *Palmerston*.

My Lord, Mexico, 19 November 1835.

I have the honour herewith to enclose a copy and translation of a note which I have received from the acting Minister for foreign affairs, accompanied by a memorandum, containing the information respecting the public museum and libraries of this capital, and, as far as it has yet been obtained, respecting those of the states (now departments) of this republic; for which I was instructed by your Lordship's circular despatch of 29th October 1834 to apply to the government of Mexico.

From this memorandum it will be seen that, according to the information as yet collected by the government, the only public museum existing in this country is that of the city of Mexico; and that of the states or departments, only those of Guanaxuato, Zacatecas, Durango, New Leon, Chihuahua and Yucatan, possess libraries, some of which cannot, strictly speaking, be called public libraries.

From the departments of Mexico, Puebla, Oaxaca, Coahuila and Texas, and Sinaloa, the reports called for by the government have not yet been received. A fresh requisition has, however, been sent upon the subject, and as soon as the answers are received I shall have the honour to transmit them to your Lordship.

I have, &c.

R. Pakenham.

(Enclosure in No. 24.)

M. de Monasterio to Mr. *Pakenham*.

Palacio del Gobierno General, Mejico, Novre 12 de 1835.

El Ynfrascrito, Oficial mayor de la Secretaria de Relaciones, encargado de su despacho, tiene el honor de acompañar á S. E. el Señor D. Ricardo Pakenham, la adjunta noticia de los Museos y Bibliotecas que ecsisten en la República, formada en esta Secretaria con arreglo á las relaciones, que sobre la materia se pidieron á los Gobernadores de los estados, y á las Corporaciones y establecimientos respectivos, segun el interrogatorio que se sirvió dirijir el Señor Pakenham á este ministerio con su nota de 12 de Marzo ultimo. El deseo de completar esta noticia, esperando las que faltan ha demorado su remision á S. E. el Sr. Ministro Plenipotenciario de Ynglaterra, pero por no retardarla mas tiempo, el Ynfrascrito la incluye ahora, sin perjuicio de que cuando se reciban aquellas se dará á S. E. el debido conocimiento.

El que suscribe al tener la satisfaccion de dejar obsequiados por su Gobierno los del de S. M. Britanica, disfruta la de repetir á S. E. el Sr. Dn. Ricardo Pakenham las seguridades de su muy distinguida consideracion.

Firmado *José Mª. Ortiz de Monasterio.*

(Enclosure in No. 24.)

(Translation.)

Palace of the General Government, Mexico, 12 Nov. 1835.

The undersigned chief clerk of the department of foreign affairs, provisionally charged with the direction of the department, has the honour to enclose to Mr. Richard Pakenham the accompanying memorandum respecting the museums and libraries which exist in the republic, drawn up at this office according to the information which has been collected upon the subject from the governors of the several states, corporations, and public establishments, in the form pointed out by the list of queries which Mr. Pakenham was pleased to transmit to this department with his note of 12th March last. The desire to complete this report, by waiting for the information which is still wanting, has been the cause why it has not sooner been delivered to the English minister; but in order no longer to delay it, the undersigned now encloses it to Mr. Pakenham, without prejudice to communicating to him hereafter the reports which are still wanting, as soon as they are received.

The undersigned, while he has the satisfaction of thus fulfilling on the part of his government the wishes of the Government of his Britannic Majesty, has also the satisfaction of repeating, &c.

(signed) *José Maria Ortiz Monasterio.*

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

24. Mexico.

(Sub-Enclosure in No. 24.)

NOTICIA de los Museos y Bibliotecas que ecsisten en la República Mexicana.

Museos.

En el Distrito Federál ecsiste uno en la Ciudad de México, empezado á formar el año de 1825, y regularizado por un Decreto del Congreso General de Nov. de 1831.

Su direccion está encargada á una Junta compuesta de cinco individuos, que se nombran por el Supremo Gobierno.

Está dividido en tres Departamentos: Antigüedades Mexicanas, Productos de la Industria, é Historia Natural de la República. En cada uno de ellos hay una seccion de antigüedades de otros paises, productos de la industria estrangera, y coleccion de diversos ramos de historia natural de ambos continentes y sus islas. Además son anecsos al Museo el jardin botánico de palacio y el depósito de plantas ecsóticas, situado en el Bosque de Chapultepec.

Este establecimiento está al inmediato cargo de un conservador con el sueldo anual de 1,200 p^s., y á la vez es director de los ramos de antigüedades é industria. El gabinete de historia natural y el jardin botánico son dirigidos por el catedrático de botánica. Este y el conservador son tambien individuos de la Junta.

Hay dos catedráticos, uno de antigüedades y otro de historia naturál, con 1,200 p^s. anuales cada uno.

Los gastos anuales del establecimiento son 6,000 pesos, en los cuales se incluyen los sueldos de sus empleados subalternos, la compra de obgetos, papel, &a.

Estos gastos se cubren por el Erario Publico.

Los individuos que actualmente componen la junta directiva son los ciudadanos siguientes: José Gomez de la Cortina, diputado al Congreso Generál, José Sanchez Mora, Ygnacio Cubas, archivero generál, Ygnacio Mora, coronel de yngenieros, D^n. Rafael Olaguivel, Miguel Bustamante, catedrático de botánica, Ysidro Rafael Gondra, conservador.

Por acuerdo de la Junta se permite al público la entrada al Museo todos los dias, que no son festivos, de las 12 del dia á las tres de la tarde.

Bibliotecas:

Guanajuato.

Hay una biblioteca establecida en el colegio de aquella ciudad.

Se sirve por dos alumnos de las catedras superiores, á quienes el ayuntamiento gratifica con 150 pesos, que paga por cada uno de colegiatura.

El gasto anual de libros no es fijo, y se hace segun la necesidad que hay de ellos.

Sus gastos generales son, el sueldo de los bibliotecarios, libros que se compran, y lo preciso para papel, tinta, luces, &c.

La biblioteca se franquea al público todos los dias de trabajo, por la mañana de 10 á 1, y por la tarde de 3 á 7 de la noche. Se dá á todos tintero y papel, para que hagan si gustan, apuntes pero no se consiente sacar de allí ningun libro.

Tiene 1,237 volúmenes.

No hay ningun manuscrito, impresos ni relaciones.

Su principal obgeto es la ilustracion pública.

Está bajo la inmediata inspeccion del rector del colejio, pero sin-embargo hay una junta, compuesta de tres catedráticos, que cuida de su fomento, y el gobierno del estado tiene en ella su suprema intervencion.

Zacatecas.

Hay una recientemente formada.

Tiene 3,033 volúmenes.

Se sirve por un individuo que disfruta 600 pesos de sueldo anual.

No tiene asignacion para la compra de libros, y depende inmediatamente de la legislatura.

San Luis Potosi.

Se trata de poner una biblioteca y un museo, pero aun no se verifica.

Durango.

Hay dos bibliotecas, pero ninguna se puede llamar rigorosamente pública. Una es del Colejio Seminario de aquella ciudad.

El bibliotecario es un colejial á quien se agracia con una beca.

Otra etra del obispo de allí.

Está á cargo de un eclesiastico empleado en el coro de la catedrál.

No tienen ninguna cantidad asignada para gastos.

No hay disposiciones sobre la admision del público en ellas, y solo se permite á aquellas personas que lo solicitan.

La del seminario tiene 3,000 impresos y 20 manuscritos.

La otra tiene 3,903 impresos y 1 manuscrito.

Ambas están bajo la inspeccion de la autoridad eclesiastica.

Nuevo Leon.

Hay una que pertenece esclusivamente al Colejio Seminario de Monterrey.
Está al inmediato cuidado de uno de los alumnos.
Tiene mas de 2,000 volúmenes.
No tiene asignacion alguna para libros, ni otros gastos.
Se formó con los libros que en beneficio del colejio han cedido los obispos de aquella mitra.
Su obgeto fué la mejor instruccion de los alumnos.
Está bajo la inspeccion del rector de dicho colejio.
No se permite á cualquiera la entrada, sino con permision del referido rector.

Chihuahua.

Hay una que se empieza à formar perteneciente á la legislatura.
Tiene 1,000 volúmenes.
Se sirve por el archivero de la Secretaria del Congreso, no tiene ningun fondo para compra de libros, sino que la legislatura segun los desahogos del Erario del Estado le decreta algunas sumas.

Yucatan.

No hay mas que una libreria perteneciente al seminario de la ciudad de Merida, cuyas obras son muy antiguas.

En Mexico.—Distrito Federál.

Ecsiste la del cabildo metropolitano.
Está al cargo de uno de sus capitulares.
Tiene 11,385 volúmenes.
Tiene tambien 187 tomos de á folio de manuscritos.
Se creó con un fondo de $ 20,000 que hoy está reducido á 2,787. 4.
Sus gastos anuales de custodia, aseo, reparo de la fábrica, &a. son 300 p^s. anuales poco mas.
Se cubren estos por la mesa capitular en favor del público por haberse diminuido sus fondos.
Tiene un reglamento particular sobre las horas en que se permite la entrada al público.
Su obgeto fué la instruccion del público.
Está bajo la inspeccion del cabildo yá citado.

En el Colejio Seminario hay una biblioteca privada de él.
Está á cargo en la actualidad del Bachiller D^n Jose Maria Martinez Carballido que tiene pagada su colegiatura por los fondos del colejio.
Sus gastos anuales no son de consideracion.
No hay cantidad determida para compra de libros, y se hace segun la necesidad de ellos.
Los fondos del colejio cubren estos gastos.
Tiene 7,390 volúmenes.
No es pública y por consiguiente solo entran los alumnos.
Está bajo la inspeccion de la mitra, la cual formó ésta establecimiento para estender la instruccion principalmente en lo eclesiastico.

En el de S^n Gregorio hay una biblioteca para el uso de sus alumnos.
Está bajo el cuidado de un colegial sin sueldo alguno.
Se fomenta suscribiendose, de los fondos del colejio, á las obras notables que se reimprimen en México, y por consequencia el gasto no es fijo.
El número de volúmenes es el de 1645.
Tiene 30 manuscritos todos de cosas misticas.
Está bajo la inspeccion del rector.

El Convento de San Francisco tiene una particular suya, y en los 19 conventos de esta orden establecidos en distintos puntos de la República, hay tambien la particular de cada uno.
Estan á cargo de un religioso del respectivo convento.
Las obras que tienen son todas sobre materias eclesiasticas.
No tienen ninguna cantidad para compra de libros.

En el Convento de S^n Diego hay la suya, que consta de mas de 5,000 volúmenes, todos sobre materias cientificas.
Está bajo la inspeccion de su prelado.

En el de S^n Fernando hay una tambien particular, que tiene 7,000 volúmenes; y tratan de teologia, moral, azetica, historia sagrada, derecho canonico y civil.

Notas.—De los Estados de México, Puebla, Oajaca, Coahuila y Téxas y Sinaloa, no se han recibido las noticias que se pidièron.
En los Estados de Vera Cruz, Queratáro, Jalisco, Michoacan, Tabasco, Chiapas, Sonora y Tamaulipas, no ecsiste biblioteca alguna pública.

México, Noviembre 12 de 1835. *José Maria Ortiz Monasterio.*

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

24. Mexico.

(Sub-Enclosure in No. 24.)

(Translation.)

ACCOUNT of the Museums and Libraries which exist in the *Mexican* Republic.

Museums.

In the Federal District, there exists one in the city of Mexico, begun to be formed in the year 1825, and organized by a decree of the General Congress of November 1831.

Its direction is entrusted to a board of five individuals appointed by the Supreme Government.

It is divided into three departments: Mexican Antiquities, Products of Industry, and the Natural History of the Republic.

In each of these departments there is a section appropriated to the antiquities of other countries; products of foreign industry; and collection of different branches of the natural history of both continents and their islands. Besides, annexed to the Museum, are the botanical garden of the palace, and the deposit of exotic plants situated in the wood of Chapultepec.

This establishment is under the immediate charge of a conservator, with an annual salary of 1,200 dollars a year, who is also director of the branches of antiquities and industry. The cabinet of natural history and the botanical garden are under the direction of the professor of botany.

The latter and the conservator are also members of the board.

There are two professors, one of antiquities and the other of natural history, with 1,200 dollars each.

The annual expenses of the establishment are 6,000 dollars, in which are included the salaries of its subaltern employés, the purchase of articles, paper, &c.

These expenses are defrayed by the public treasury.

The individuals who now form the board of direction are the following citizens: Jose Gomez de la Cortina, deputy to the General Congress; José Sanchez Mora, Ignacio Cubas, keeper of the archives; Ignacio Mora, colonel of engineers; D. Rafael Olaguivel; Miguel Bustamante, professor of botany; Isidro Rafael Gondra, conservator.

By resolution of the board the public is admitted to the Museum every day, holidays excepted, from 12 o'clock in the morning until three in the afternoon.

Libraries:

Guanajuato.

There is a library established in the college of that city.

It is attended to by two pupils of the head professors, to whom the municipality allows a gratuity of 150 dollars towards their college expenses.

The annual expense of books is not fixed, and depends upon the want which there may be for them.

Its general expenses are, the salary of the librarians, books which are bought, and the necessary outlay for paper, ink, lights, &c.

The library is open to the public on all working days from ten to one in the morning, and from three in the afternoon until seven at night. Ink, paper, &c. are allowed to every one, in order that they may take notes if they please; but no book is suffered to be taken out of the room.

It contains 1,237 volumes.

There are no manuscripts, pamphlets or narratives.

Its principal object is public enlightenment.

It is under the immediate inspection of the rector of the college; but, nevertheless, there is a board, composed of three professors, who look to its improvement, and the government of the State have a leading voice in the said board.

Zacatecas.

There is a library lately established.

It contains 3,033 volumes.

It is attended to by a person who enjoys an annual salary of 600 dollars.

There is no money set apart for the purchase of books, and it depends immediately on the legislature.

San Luis Potosi.

It is intended to establish a library and museum, but as yet it has not been carried into effect.

Durango.

There are two libraries, but neither of them can strictly be called public ones. One o them belongs to the Seminary College of that city.

The librarian is an under-graduate, who receives a "Beca" (a species of scholarship) as the recompense of his services.

The other belonged to the bishop of that diocese.

It

It is under the charge of an ecclesiastic who is employed in the choir of the cathedral.
There is no sum assigned for expenses.
There are no rules respecting the admission of the public to the above libraries, and those persons only are allowed to visit them who ask permission.
That of the seminary contains 3,000 printed works, and 20 manuscripts.
The other contains 3,903 printed works and one manuscript. Both are under the inspection of the ecclesiastical authorities.

New Leon.

There is a library which exclusively belongs to the Seminary College of Monterrey.
It is under the immediate care of one of the pupils of the said college.
It contains more than 2,000 volumes.
There is no sum whatever assigned for books or other expenses.
It was established with the books which, in benefit of the college, the bishops of that mitre have bestowed upon it.
Its object was the better education of its pupils.
It is under the inspection of the rector of the said college.
The entry to it is not open to everybody, save only with the permission of the aforesaid rector.

Chihuahua.

There is a library which is begun to be established, belonging to the legislature.
It contains 1,000 volumes.
It is attended to by the keeper of the archives of the State Congress. It possesses no funds for the purchase of books; but the legislature, when the circumstances of the State treasury allow of their so doing, decree the money necessary for the above purpose.

Yucatan.

There is only one library which belongs to the seminary of the city of Merida, the works of which are very ancient.

In Mexico.—Federal District.

There is the library of the metropolitan chapter.
It is under the charge of one of its canons.
It contains 11,385 volumes.
It contains besides 187 folio volumes of manuscripts.
It was established with a capital of 20,000 dollars, which is now reduced to 2,787. 4.
Its annual expenses for watching, cleaning, repairs of the building, &c. are rather more than 300 dollars.
The chapter, in favour of the public, in consequence of the capital being diminished, defray those expenses.
It has a particular set of rules respecting the hours at which the public is allowed to visit it.
Its object was the public instruction.
It is under the inspection of the chapter already mentioned.

In the Seminary College there is a private library.
It is under the charge, at this moment, of the Bachelor Don José Maria Martinez Carballido, who has received his collegiate expenses from the funds of the college.
Its annual expenses are inconsiderable.
There is no fixed sum assigned for the purchase of books, which are bought as they may be required.
The funds of the college defray these expenses.
It contains 7,390 volumes.
It is not public; the pupils of the college alone have free admission.
It is under the inspection of the mitre, which founded this establishment principally with the intention of extending the knowledge of ecclesiastical matters.

In the college of San Gregorio there is a library for the use of its pupils.
It is looked after by an under-graduate without any salary.
It is kept up by subscribing, from the funds of the college, to works of eminence, which are reprinted in Mexico, and consequently the expenses are not determined.
The number of volumes is 1,645.
It contains 30 manuscripts, all relative to religious subjects.
It is under the inspection of the rector.

The convent of San Francisco possesses a library of its own; and in the 19 convents of this order, established in different points of the republic, there is a private library to each.
They are under the charge of a friar of the respective convent.
The works which they contain are all upon ecclesiastical subjects.
They possess no sum assigned for the purchase of books.

In the convent of San Diego there is a library which contains more than 5,000 volumes, all upon scientific matters.
It is under the inspection of its prelate.

In the convent of San Fernando there is also a private library which contains 7,009 volumes,

No. 10. Communications respecting Literary Institutions or Libraries in Foreign Countries.

volumes, which treat of theology, moral science, ascetics, sacred history, canon and civil law.

Notes.—From the States of Mexico, Puebla, Oajaca, Coahuila and Texas and Sinaloa, the information demanded has not yet been received.

In the States of Vera Cruz, Queretaro, Jalisco, Michoacan, Tabasco, Chiapas, Sonora and Tamaulipas, no public library whatever exists.

Mexico, 12 Nov. 1835.

(25.)—PORTUGAL.

25. Portugal.

Lord *Howard de Walden* to Viscount *Palmerston.*

My Lord, Lisbon, 30 January 1836.

With reference to the instructions conveyed to me in your Lordship's circular despatch of 29th October 1834, desiring me to endeavour to procure information respecting the state of the national museums and libraries in Portugal, I regret that it has hitherto been out of my power to obtain such information as could be considered in any way complete or satisfactory in point of accuracy.

I have, &c.
Howard de Walden.

(26.)—THE HAGUE AND LEYDEN.

26. The Hague and Leyden.

Sir, Hague, June 17, 1834.

I have the honour to transmit to you herewith replies to the questions respecting the Public Libraries of the Hague and Leyden, required by your Despatch of the 25th of last March, which information has been furnished me in consequence of a written application, in the usual form, to Baron Zuylen.

I have, &c.

John Backhouse, Esq., &c. &c. &c. (signed) *G. Jerningham.*

QUESTIONS sur les Collections Publiques de Livres Imprimés.

1. Sous quelle dénomination la bibliothèque de .... est-elle connue?

2. Combien de milliers de volumes imprimés a-t-elle? Combien de milliers d'ouvrages (ou titres d'ouvrages), ou articles?

3. Les bibliothécaires auxquels sont confiés les livres imprimés, sont-ils chargés aussi du soin, &c. des MSS., des medailles, des estampes ou gravures, des statues ou peintures? Ces différentes branches ont-elles des gardes séparés? Forment-ils partie du même établissement?

4. Quels sont le rang, nombre et titres des bibliothécaires élèves, attachés, copistes, concièrgers, porteurs des livres, etc.?

5. Y a-t-il un catalogue complet des livres imprimés de la bibliothèque de ....? Ou en quel état se trouve-t-il? Est il rédigé par alphabet selon le nom des auteurs, ou par ordre de matières? On gena-t-il un de chaque espèce? Ce catalogue ou ces catalogues ont-ils été imprimés? Quand et où?

6. Les catalogues sont-ils à la disposition des personnes qui fréquentent la bibliothèque? Le sont-ils toujours et sans restrictions, ou faut-il les demander quand on veut les consulter? Peut-on en refuser l'usage?

7. La collection des livres imprimés augment-t-elle d'année en année? Qui fait les fonds pour l'achat des livres?

8. Quelle est la somme dépensée annuellement pour cet objet en moyenne pendant 1823 à 1832? Quel est le nombre des volumes achetés annuellement come ci-dessus?

9. La bibliothèque a-t-elle droit à un ou plusieurs exemplaires des livres, estampes, gravures, etc., qui sont publiés dans l'état ou le ville où la bibliotheque est située? Ce droit une fois admis, les auteurs éditeurs, libraires, graveurs, imprimeurs, etc., ont-ils portées des plaintes contre ce droit le trouvant une charge onéreuse?

10. Peut-on refuser ou suspendre la lecture d'un livre à celui qui le demande? Ou peut-on l'accorder seulement à des certaines conditions?

11. L'entrée de la bibliothèque est-elle tout-à-fait libre, on faut-il obtenir une permission? En supposant une permission nécessaire, qui a le pouvoir de l'accorder? Peut-elle être réfusée sans en donner des raisons? Le permis est-il temporaire ou pour toujours? Peut-il être révoqué à volonté?

12. Quelles sont les formalités ou les conditions auxquelles les lectures doivent se soumettre pour l'usage des livres? Doivent-ils les demander par écrit ou comment?

13. Supposé

13. Supposé que l'éntrée de la bibliothèque soit tout à fait libre, a-t-on trouvé qu'il en resulte quelque desordre? Par exemple les livres ont-ils été mutilés, salis ou volés de manière à faire supposer que de tels désordres n'auroient pas en lieu si l'admission n'eut pas été publique?

14. Les lectures peuvent-ils à leur gré et sans aucune formalité quitter la bibliothèque?

15. Combien de lecteurs à peu près fréquentent journellement la bibliothèque, et à quelle classe appartiennent pour le plupart les livres consultés?

16. En supposant une permission requise pour être admis à la bibliothèque, combien de permis par an a-t-on accordés dans les dix dernières années 1823–1832?

17. Les livres de la bibliothèque sont-ils jamais prêtés à lire au déhors? S'ils le sont, à quelles conditions? Quel est le nombre des livres prêtés de la sorte en moyenne sur les dix ans ci-dessus? La coutume de prêter ainsi des livres a-t-elle jamais été trouvée prejudiciable? Les livres sont-ils rendus en mauvais état ou perdus? Y a-t-il des plaintes contre ce système? Est-il arrivè que les lecteurs ayent été privés de consulter des livres dont-ils avoient besoin, parceque ces mêmes livres avaient été pretés au déhors?

18. Combien de jours dans la semaine et combien d'heures par jours la bibliothèque est-elle ouverte?

19. La bibliothèque est-elle fermée, outre les Dimanches pour un certain temps à Noël en à Pâques, en été ou en automne? Combien des jours sur les 365 la bibliothèque est-elle ouverte et pour combien d'heures par jours, et combien de jours est-elle fermée quelle qu'en soit la cause?

20. Est-il jamais permis pour un motif quelconque d'introduire des lumières ou du feu, soit dans la bibliothèque, soit dans tout autre local du bâtiment où elle se trouve? Supposé que l'apreté du climat l'exige, la bibliothèque ou du moins le local ou le public est admis à la lecture, est-il assez chauffé pour pouvoir y étudier commodement? S'il ne l'est pas, les lecteurs ne sont-ils pas empêchés par le froid de fréquenter la bibliothèque pendant l'hiver?

N.B.—On regardera comme une faveur tout particulière la transmission d'une copie des loix d'organisation et des règlemens qui concernent la bibliothèque.

(First Enclosure in No. 26.)

1. La Bibliothèque Royale à la Haye.

2. La bibliothèque possède au moins 100,000 volumes, nombre que peut repondue à celui de 50,000 numeros ou titres particulièrs à porter du catalogue; mais il faut alors ne compter que pour un titre ou numero même les grandes collections d'ouvrages ou d'opuscules historiques, diplomatiques, littéraires et autres recueils, dont la bibliothèque est assez bien pourvue.

3. Le bibliothécaire est chargé des livres imprimées, des manuscrits, des estampes et des gravures.

Le cabinet de medailles occupe une salle separée sous une direction particulière.

4. Le personnel de service est composé d'un bibliothécaire, d'un sous-bibliothécaire, d'un assistant et d'un homme de peine.

5. Depuis 1800 jusqu'à 1810 la bibliothèque n'eut d'autre catalogue que son catalogue primitif et les differens supplemens qui le suivirent; à cette époque on songea moins à en faire imprimer un nouveau, qu'à en former un bon, qui put être imprimé plus tard et d'une manière plus honorable pour la bibliothèque elle-même; l'on substitua alors aux registres ou listes manuscrites ordinaires l'usage d'un catalogue mobile, destiné par ordre de matières, avec toutes les divisions et sous-divisions nécessaires et où chaque numero inscrit séparément sur un billet de 5 à 6 pouces de long, sur 2 pouces de l'arge et collé sur un carton de mêmes dimensions est reporté en suite à telle ou telle division qui lui convient, selon l'ordre de la classe à la quelle il se rattache; tous ces billets etant mobiles et placés succesivement d'après le système de classification qu'on a adopté forment vraiment un catalogue perpétuel où qui pourrait toujours être imprimé à volonté, si les titres en avaient été bien faits, et on a continué de s'en servir jusqu'ici.

On est occupé à former un nouveau catalogue celui-ci se redige par ordre de matières, par classes, par divisions, sous divisions, etc., comme il a déjà été dit; le dernier volume sera suivi d'une liste alphabetique des noms d'auteurs, et des titres des ouvrages anonymes, avec des renvois aux numéros du catalogue générale.

6. Les catalogues sont toujours à la disposition du public, mais à condition d'en faire usage dans le local même, sous les yeux du bibliothécaire ou du sous-bibliothécaire, dans aucun cas ils ne peuvent être prêtés au dehors.

7. La collection de livres imprimés s'augmente d'année en année d'une manière assez sensible, ce qu'on achête de livres en ventes publiques, ou ailleurs, les ouvrages modernes que fournissent nos libraires, les souscriptions les journaux littéraires, scientifiques et autres de l'étranger, les frais de relure, se payent chaque année sur le budget, qui est alloué à la bibliothèque pour cette année là, mais ce qui se paye sur le budget n'est pas ce qui à contribué le plus à l'accroissement de la bibliothèque; la bienveillance de sa majesté est pour elle un fonds plus riche encore, puisqu' après lui avoir fait don de trois grandes collections particulières qu'elle possedait tant en Allemagne qu'en Hollande, elle daigne continuer de faire remettre et deposer chaque année à sa grande bibliothèque, presque toutes les productions de la presse, dont on lui fait hommage, ou pour lesquelles elle a fait souscrire.

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

26. The Hague and Leyden.

9. La bibliothèque reçoit un exemplaire des livres, estampes, gravures, etc., qui sont publiés dans l'étendue du royaume. Ce depôt demandé par la loi tend à assurer légalement à l'éditeur la propriété de son ouvrage, contre les contrefaiteurs, plagiaires. Cette loi n'a pas d'autre sanction pénale que celle de laisser l'éditeur, qui n'y a point obéi courir à ses risques et périls les chances, dont sa propriété pourrait être menaceé plus tard.

10. Quiconque se présente à la bibliothèque est admis à y demander tel ouvrage, qu'il lui plait de voir ou de lire, si cet ouvrage se trouve à la bibliothèque, on le lui procure sur le champ, et s'il veut en faire usage, il faut qu'il le fasse dans le local même, dans la salle particulière occupée par les lecteurs, où il n'est astreint à aucune autre condition que celle de ménager le lire, qui lui est confié, et d'éviter tout ce qui pourrait nuire à l'integrité ou à la condition du volume.

11. La bibliothèque royale est une bibliothèque publique, et aussi publique qu'elle puisse l'être relativement à tous ceux qui paraissent aptes à en profiter dans un genre quelconque des connaissances humaines. Les jours de la semaine, et aux heures de la journée, où elle est ouverte, c'est-à-dire, les Lundi, les Mercredi et les Vendredi, depuis 10 heures du matin jusqu'à 2 heures après midi, toutes personnes, assez honnêtement mites, peuvent se presenter à la chambre des lecteurs, et même si elles ne sont venues que par un motif de curiosité, pour jetter un coup d'œil sur l'ensemble de la bibliothèque, elles peuvent en traverser les salles sous la conduite d'un employé de l'établissement, sans néanmoins avoir la permission de tirer un volume quelconque du rayon où il se trouve placé, et comme l'affluence des lecteurs et des curieux n'est jamais trop grande, il n'est jamais trop à craindre, qu'il en resulte quelque desordre.

12. Repondu à la question 10.

13. Idem à la question 11.

14. Les lecteurs peuvent toujours à leur gré quitter la bibliothèque, sans autres formalités que celle de remettre eux-mêmes le volume dont ils ont fait usage, à celui qui préside la chambre.

15. Le nombre des lecteurs qui se presentent à chaque séance de la bibliothèque pour en faire usage au local même, n'est pas à beaucoup près aussi grand, qu'il devrait l'être, peut-être même dans une ville moins considérable que la Haye (10 à 15 personnes) et les ouvrages que l'on demande, le plus generalement appartiennent à la classe de littérature étrangère et nationale et à celle d'histoire.

16. On a déjà repondu a cette demande reponse 10 et 11.

17. On prête des livres au dehors. D'abord cela se faisait en faveur des hautes autoritées constituées. En suite il a été adopté qu'aucun ouvrage ne serait prêté au dehors à qui que ce put être. C'était là sans doute une mesure conservatrice pour la bibliothèque, mais elle n'était rien moins que libérale pour la haute société de la Haye et tant d'autres personnes instruites, pour qui cette bibliothèque était devenue inutile, puisque leurs emplois, leur fonctions habituelles, leur âge, et souvent même leurs infirmités ne leur permettaient pas de s'y rendre aux heures indiqués, il a donc fallu en revenir doucement à la première habitude.

Les livres que l'on prête hors de la bibliothèque ne se donnent qu'à des habitans de la ville même et à qui l'on puisse raisonnablement accorder cette confiance, tous les ouvrages ne se pretent pas ou ne peuvent être prêtés que pour 15 jours sur un reçu et avec engagement de le restituer dans le tems donné, signé de la main de l'emprunteur, et même dans l'intervalle de ces 15 jours, s'il en est requis; car, si ce même ouvrage venait à être demandé, dans la salle des lecteurs par un particulier quelconque qui désire rait en faire usage dans le local même, il a droit de demander qu'on le lui fournisse pour la séance suivante.

Les emprunteurs étant obligés de rendre leurs livres dans les 15 jours et de les rendre en bon état, ce système de pret, s'ils étaient exacts à s'y conformer, ne presentérait aucun inconvénient, mais malheureusement il n'y en a que trop qui les gardent trop long tems.

En 1833, 500 personnes ont emprunté des livres de la bibliothèque, et le nombre des volumes prêtes a été de 942.

18. Voyez reponse 11. La bibliothèque est ouverte trois jours par semaine, la Lundi, le Mercredi et le Vendredi, depuis 10 heures du matin jusqu'à 2 heures de l'après midi.

19. La bibliothèque est fermée, outre les Dimanches, pour 8 jours de suite à Noël, à Pâques à la Pentecôte et au 15 Août; sur les 365 jours de l'année est elle donc ouverte 149 jours et fermée 216. S'il survient une cause quelconque de la tenir fermée aux jours où elle devrait être ouverte, ce ne pourrait être que dans une circonstance domestique ou autre, qui obligerait d'en agir ainsi.

20. On ne saurait defendre d'introduire du feu ou même des lumières dans une vaste bibliothèque en Hollande. Il faut même du feu pour la conservation des livres, et comment faire sans lumières les rondes nocturnes dans l'etendue du bâtiment, pour savoir si tout est en ordre.

D'ailleurs c'est une nécessité pour les pays du nord. Cependant il n'y a dans la bibliothèque que les foyers absolument indispensables pour le service public et le besoin de ceux qui sont chargés de sa conservation et de celle du cabinet de medailles. L'essentiel est, que la surveillance y soit bien exercée.

(Second Enclosure in No. 26.)

1. La Bibliothèque de l'Université de Leyde.

2. Environ soixante dix mille volumes, y compris les livres imprimés, notés en marge, ont plusieurs ont valeur de manuscrits.

Trois mille manuscrits Grecs, Latins et Orientaux.

3. La bibliothèque de Leyde ne contient que des livres et des manuscrits.

Les musées de statues, antiquitées, estampes, medailles, etc. forment des etablissemens séparés, et ne sont pas du ressort des bibliothécaires.

4. Il y a un bibliothécaire en chef, ayant titre de professeur: un bibliothécaire adjoint: deux employés, avec le rang de premier et second gardien, et un copiste. Le bibliothécaire en chef est chargé de la direction de tout l'etablissement, et spécialement de la conservation des MSS. Grecs et Latin. Les MSS. Orientaux sont sous la garde d'un des proseurs de langues Orientales.

5. Il y a un catalogue alphabétique écrit complet. On s'occupe depuis trois ans des travaux préparatoires pour la confection d'un catalogue raisonné, arrangé par ordre de matières. Le dernier catalogue imprimé de la bibliothèque de Leyde est de l'an 1716. Luyd. Bet. in f°, avec un supplément de 1741, ibidem f°.

6. On permet l'usage le plus libre possible des catalogues, sans des précautions à prendre, et la surveillance d'un des employés. Mais on n'en est encore dans ce moment, qu'à faire un essai. Il n'y a pas longtems que le catalogue alphabétique que est achevé. Il serait possible, qu'on se vit bientôt obligé d'en restreindre plus ou moins l'usage, la discrede ceux qui le consultent n'étant pas toujours à toute épreuve.

7. La collection des livres et MSS. augmente annuellement. M^rs les curateurs de l'academie désignent les fonds pour chaque année, en partie aux différentes facultés, en partie au bibliothécaire en chef.

Les présidens des facultées font l'achat des livres et MSS. qu'ils desirent placer dans la bibliothèque. Le bibliothécaire en chef de son côté, a soin des journaux et autres ouvrages périodiques, qu'il complete successivement.

8. —

9. La bibliothèque n'a aucun droit à un exemplaire de livres imprimés, si non de ceux, aux auteurs des quels elle a fourni des matériaux.

10. On accorde toujours l'usage d'un livre, démandé par un professeur où étudiant de l'université.

11. L'entrée de la bibliothèque est libre, pendant les heures qu'elle est ouverte. Aux heures de clotûre, où les employés travaillent, on réfuse rarement une demande pressante. On admet soudent un membre de l'université, qui desire faire quelque recherche, et l'on ne renvoye presque jamais un étranger. Le bibliothécaire en chef décide toutes les questions de ce genre, en se tenant aux réglemens d'usage.

12. Il n'y a presque point de formalités. Ou connait les professeurs, et les étudians viennent munis d'un billet de recommandation aux bibliothécaires, écrit par un de leurs professeurs.

13. Il est tout à fait clair, que des livres, qu'on laisse dans un repos continuel, en les garantissant toujours de l'humidité, des vers, etc. pourront durer des siècles. A mesure qu'on s'en sert, ils deperiront sensiblement. La direction, d'une bibliothèque le trouve donc placée dans l'alternative, de rendre nuille l'utilité d'un tel etablissement, en entravant les savans par toute sorte de formalités et restrictions, ou de remettre, dans les mains d'une generation suivante, ce précieux dépot, mais peut-être dans un état moins brillant, et plus usé.

La direction doit prevenir les malheurs, autant qu'il est en son pouvoir, et elle doit réparer les dommages avec le plus grand soin. Mais elle ne saurait assurer une durée éternelle à la matière, qui doit se deteriorer suivant les loix de la nature.

Ce raisonnement pourrait paraître trop libéral et inquiéter ceux qui s'occupent de fonder un tel etablissement. Mais les livres d'un usage journalier et qui en souffrent le plus, ne sont pas les plus rares.

Les articles de grande valeur, les MSS., etc., sont si peu consultés qu'il en résulte peu de danger.

14. La bibliothèque n'étant fréquentée que par des gens comme il faut, on ne les gêne par aucune formalité quelconque. S'il arrivait des gens suspects, on serait sur les gardes.

15, 16, 17. Il est difficile de donner des réponses précises à ces trois questions. Les livres sont consultés en proportion de l'étendue des branches de savoir, et du nombre de ceux qui les cultivent. Il y a une trentaine de professeurs et sept à huit cent étudians.

Le nombre des livres demandés dans la bibliothèque ne peut pas être fixé ou n'a pas le tems d'en tenir compte. Sont ceux que l'on prête hors de la bibliothèque il y en a constamment mille jusqu'à deux mille et d'avantage en circulation. Le professeur ou étudient donne un reçu avec indication du terme auquel il promet de rendre le livres emprunté. Ce terme ne dépasse jamais trois semaines ; mais l'on sous entend l'obligation de les rendre à la première demande durant ce délai, dans des cas extraordinaires, où un article serait demandé par plusieurs personnes à la fois.

Les pertes sont bien rares et quant même un livre se serait égaré hors de la bibliothèque, il reviendrait tôt ou tard ; l'empreinte du sceau de la bibliothèque qu'il porte sur le titre et sur les deux tranches le faisant toujours reconnaitre.

18, 19. La bibliothèque est fermée les Dimanches et les autres jours de fête. Pendant les

vacances

No. 10. Communications respecting Literary Institutions or Libraries in Foreign Countries.

26. The Hague and Leyden.

vacances de l'université (12 semaines dans l'année) elle est ouverte deux fois la semaine pendant deux heures. Tout le reste de l'année, elle est ouverte trois fois la semaine pendant trois heures ; aux mois d'Avril, Mai, Juin et Septembre, elle est ouverte tous les jours pendant trois heures.

20. La chambre de lecture n'est pas chauffée. Cet inconvenient tient à la localité presente de l'établissement, mais pas à un système de précaution méticuleuse. On fait du feu à la chambre, où les employés travaillent ; on espère avec le tems pouvoir également chauffer la chambre de lecture. Cette réponse explique en même tems, la grande circulation dont il est parlé dans les Nos. 15, 16, 17. Si, dans l'avantage de la conservation des livres, on désire en restreindre une trop grande circulation, il convient de mettre ces lecteurs à leur aise, surtout dans un climat froid, et où les hivers sont d'une longue durée.

Il est clair qu'on a soin, de ne pas multiplier les feux sans nécessité, et d'empêcher l'introduction de lumières, cigares, etc.

(27.)—SARDINIA.

Sir *Augustus Foster* to the Hon. *W. T. Fox Strangways.*

Turin, March 10, 1836.

27. Sardinia.

Sir Augustus Foster presents his compliments to Mr. Strangways, and encloses two pamphlets, which should have accompanied others in his despatch of 20th January 1836, on the subject of Museums, Libraries, &c. at Turin, Genoa, &c.

(First Enclosure in No. 27.)

Prospectus.

La Galerie Royale de *Turin* illustrée par *Robert D'Azeglio*, directeur de cet établissement, Membre des Académies de Beaux-arts de Turin, de Milan, etc. dédiée à S. M. le Roi *Charles Albert*.

Quoique, dès les tems les plus reculés, la peinture ait été en honneur dans les provinces formant l'ancien héritage de la Maison de Savoie, toutefois il ne s'y forma jamais une école distincte comme dans d'autres partie de l'Italie, et Gaudenzio Ferrari est le seul peintre né dans ces provinces, que l'histoire de l'art place au premier rang.

Des circonstances impérieuses, produites par la position géographique du Piémont, placé à l'extrémité septentrionale de l'Italie, entre deux grandes puissances toujours prêtes à en faire le champ de bataille où venaient se résoudre leurs querelles, exigèrent long-tems que les Princes qui le gouvernaient, étrangers aux loisirs de la paix, fussent exclusivement occupés de pensées de guerre, et de cet art qui maîtrise les chances des combats. Ces circonstances, auxquelles nous devons tant de souvenirs glorieux, engagèrent les Princes de Savoie à appeler auprès d'eux des artistes étrangers ; et c'est ainsi qu'ils consacraient encore à l'embellissement de leur patrie les courts instants qu'ils n'employaient pas à la défendre.

De son côté, vivant les armes à la main, et vouée à la défense des Alpes, ce gigantesque boulevard de la patrie Italienne, sur lequel elle se trouve jetée comme un poste avancé, la Nation Piémontaise abandonnait à d'autres plus heureusement placées le soin de manier le ciseau et le pinceau, et semblable aux anciens Romains à l'égard des Grecs, elle s'appropriait ces vers de Virgile,

> Excudent alii spirantia mollius æra,
> Credo equidem, vivos ducent de marmore vultus, etc.
>
> Virg. Æneid, lib. VI.

Il arriva rarement aux grands hommes qui gouvernèrent cette contrée, qu'après avoir remis l'épée dans le fourreau ils pussent se livrer à loisir aux préoccupations du gouvernement intérieur ; et la paix était de trop courte durée pour que l'éducation académique prît ces développemens qui amènent de grands résultats. Le siècle de Périclès, celui de Philippe et d'Alexandre, ceux plus rapprochés de Léon X et de Louis XIV prouvent, à la vérité, que le culte des Muses n'est pas incompatible avec le bruit des armes ; mais pour qu'il en soit ainsi, il faut que ce culte ait pu exercer long-tems son action sur les habitudes et le génie d'un peuple.

Souvent distraits par les guerres, auxquelles ils prenaient une part glorieuse, de la pensée protectrice qu'ils accordaient aux arts, et qui n'avait pu obtenir encore que de faibles progrès, les Princes de la Maison de Savoie appelèrent auprès d'eux les artistes étrangers les plus célèbres, dont plusieurs chefs-d'œuvre s'exécutèrent d'après leur inspiration.

C'est

C'est ainsi que la demeure de ces Princes s'enrichit des ouvrages classiques de Gaudenzio, Guido, Guercino, Paolo Veronese, Giorgione, Tiziano, Bonifazio, Francia, Albani, Domenichino, Bassano, Canaletto, et bien d'autres peintres de l'école Italienne. C'est ainsi que leur palais s'embellit des plus séduisantes productions de l'école Flamande, et que les chefs-d'œuvre de Mieris, Gérardow, Vowermans, Poussin, Claude, Potter, Rembrand, Vanderwerf, Dürer, Téniers, Rubens, Vandyck, Salaërt, Nestcher, Holbein, Sprangher, et de tant d'autres enchanteurs aux magiques couleurs vinrent parer ses murs : c'est ainsi enfin que les faits d'armes des guerriers de cette auguste race, retracés par des mains habiles, sont remis sous nos yeux, et que le pinceau de Hughtembourg, dirigé par le Prince Eugène de Savoie, nous fait assister aux victoires de ce grand capitaine.

Lanzi remarquait déjà, avec raison, que les chefs-d'œuvre des grands maîtres des différentes écoles Italiennes, rassemblés dans les palais de nos rois, rendaient la collection, formée par leurs soins, égale à la plupart de celles que l'on admirait de son tems en Italie, mais que même plusieurs de celles-ci prises collectivement ne pouvaient égaler en nombre et en mérite les tableaux de l'école Flamande réunis à Turin. Depuis lors la munificence du roi est venue ajouter encore à la richesse de cette collection les tableaux qu'il avait successivement acquis, et étaient sa propriété personnelle. On peut citer parmi ceux-ci la Vierge de la Tente, magnifique tableau sorti de l'étude de Raphaël ; deux tableaux du Guide, les batailles du Prince Thomas de Vander Meulen, un portrait du Prince Eugène de van Schippen, et une collection de copies d'après les meilleurs originaux de l'école Italienne, exécutées sur émail par Constantin.

La patrie qui donna le jour à Cassini, Lagrangia, Saluzzo, Cigna, Berthollet, Caluso, Alfieri, Emmanuel Philibert, le Prince Eugène, Victor Amé II, Charles Emmanuel III, Colombo, Massena, Denina, Chiabrera, Beccaria, Napione, Baretti, Gerdil, Favre, Giobert, Vernazza, Allioni, Rolando, les frères Galliari, Porporati, Bodoni, Viotti, Pugnani, etc. etc., ne pouvait citer qu'un seul peintre de premier ordre, né dans son sein, Gaudenzio Ferrari.

Le Roi Charles Albert s'inspirant des souvenirs d'Emmanuel Philibert et de Charles Emmanuel I, a voulu ouvrir une nouvelle carrière au talent, et que les arts eussent au centre de ses états un temple toujours accessible à ceux qui les cultivent.

Le sacrifice que S. M. s'est imposé en consacrant à l'instruction de ses sujets le plus précieux ornement de sa royale demeure, a comme rappelé à une nouvelle vie ces grands maîtres, et rouvert le cours interrompu de leurs sublimes leçons. Un jour viendra, peut-être, où la contemplation de ces chefs-d'œuvre de l'art inspirera parmi nous un digne émule de ces beaux génies.

La collection des tableaux de S. M., de simple propriété particulière qu'elle était, s'est ainsi élevée à la dignité de monument national, et a pris place parmi les premières galeries d'Europe. Par là se trouve réellement prolongée jusqu'aux Alpes cette Italie, berceau de l'art moderne, que l'étranger ne saluait que sur les bords du Taro, ou en franchissant le Tésin.

Cette institution révèle aux étrangers comme aux nationaux des richesses à peine entrevues jusqu'ici, et doit allumer dans notre patrie cette flamme sacrée qui valut à l'Italie l'hommage dont elle est environnée depuis des siècles. La muette éloquence d'une galerie est bien plus instructive que celle des plus habiles professeurs, parce que le style des grands modèles, dans sa prodigieuse variété, offre à un chacun ce qui convient spécialement à l'originalité de son talent, et devient ainsi pour chaque artiste un appel plus direct, et une indication lumineuse de la voie qu'il doit parcourir.

La détermination royale est donc pleine d'avenir pour les destinées de l'art, et pour ceux qui y consacrent leurs travaux. A mesure que les avantages d'une éducation perfectionnée filtrent dans les masses, les productions des arts deviennent une source de jouissances, de prospérité, et de gloire pour les pays où ils sont cultivés. Les étrangers, mûs par une curiosité éclairée, affluent bientôt là où ils trouvent à l'alimenter dignement, et ils concourent ainsi à l'accroissement des richesses matérielles, et au développement des richesses intellectuelles. Les musées, les bibliothèques, et tous les autres établissemens de même nature sont autant de titres d'honneur pour un pays, et ajoutent à l'attrait qu'il offre aux étrangers.

C'est à nous assurer ces avantages que doit coopérer la nouvelle galerie installée solennellement dans le bâtiment somptueux élevé au centre de la ville, et qui après bien de vicissitudes a reçu ainsi une destination digne de sa masse imposante, des arts qu'il honore, et de la capitale qu'il embellit.

L'éclat de ces peintures, que l'art d'un autre siècle nous a léguées, n'aura plus à lutter avec les somptueux décors d'une demeure royale ; et, cessant d'être soumis aux conditions symétriques d'un ameublement, ces tableaux, dont rien n'altère désormais la beauté, se trouveront classés dans l'ordre que leur assigne, non leur dimension, mais leur mérite réel.

Un devoir que la reconnaissance impose envers le Prince, créateur de cet établissement, et le désir plusieurs fois exprimé par des étrangers éclairés, ayant engagé le directeur de la galerie à en entreprendre l'illustration, il s'empresse d'en annoncer la publication à tous ceux qui aiment et cultivent les arts ; heureux si, grace à des soins assidus, cette œuvre peut être profitable à ses concitoyens, et devenir pour les étrangers un appel hospitalier.

Le bienveillant accueil fait par S. M. à cet ouvrage, dont elle a agréé la dédicace, est un gage assuré que le directeur ne négligera rien de ce qui pourra le rendre honorable au pays, profitable au talent, et digne d'être offert en hommage à son souverain.

La manière caractéristique des différens maîtres, la précision des contours, les effets du clair-obscur, seront imités avec d'autant plus d'exactitude, que les talens multiples du graveur seront appropriés au caractère distinctif de chaque tableau. Les gravures, compo-

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

27.
SARDINIA.

sant la collection, seront exécutées à *mezza-macchia*, et poussées au burin, et à la pointe-sèche. L'exécution en est confiée aux artistes les plus renommés de l'Italie. Il suffira de nommer le Cher Anderloni, directeur de l'école de gravure de Milan; Giovita Garavaglia, directeur de celle de Florence; Michel Bisi et Samuel Jesi, élèves distingués de Longhi; le Cher Lasinio fils, déjà connu en Europe par maint succès, qui a concouru avec gloire à la publication de plusieurs galeries et musées, et à la direction du grand ouvrage sur l'Egypte et la Nubie publié en Toscane; Pierre Palmieri, qui se montre digne de son maître, le célèbre Porporati; François Rosaspina, membre de l'Institut de France, nom cher aux lettres comme aux arts; Antoine Perfetti, continuateur de la manière de Morghen; le Cher Ricciani, qui prête au cuivre le prestige de la couleur; et le Cher Toschi, membre de l'institut de France, directeur de l'école ducale de Parme, qui à sa propre coopération joindra celle de son école qu'il s'engage à diriger dans ce travail avec l'intérêt qu'il apporte à tout ce qui est Italien.

Le frontispice et le texte dans chaque livraison seront ornés de vignettes représentant les façades, et l'escalier intérieur du Palais où se trouvent les Galeries.

Bâti par les anciens Princes d'Achaïe, agrandi au XIV siècle par Amé VIII, cet édifice conserve, du côté de l'est, sa façade d'ancien style. La façade qui regarde au couchant, a été élevée, et l'escalier construit pendant la régence de Madame Royale Jeanne-Baptiste de Savoie Némours, veuve de Charles Emmanuel II., d'après les dessins de D. Philippe Juvara, qui y prodigua toutes les pompes de l'architecture.

Ces trois vignettes seront dessinées par le Cher Migliara, peintre de genre de S. M., qui veut bien se charger de dessiner aussi quelques-uns de nos plus beaux intérieurs de l'école Flamande.

Le portrait de S. M. à cheval passant une revue, peint d'après nature par Horace Vernet, qui en a admirablement saisi l'expression et la ressemblance, sera gravé par le Cher Toschi, et placé en tête de cet ouvrage, où tous le artistes les plus distingués de l'Italie sont appelés à déposer successivement le tribut de leurs talens comme un hommage dû au Souverain qui dans sa munificence fit briller d'un nouvel éclat le Piémont et l'Italie.

Le Directeur Général de la Galerie Royale,

Robert D'Azeglio.

SOCIÉTÉ DES ÉDITEURS.

Conditions de L'Association.

1°. Cette collection se composera d'environ 80 livraisons. Chaque livraison contiendra quatre gravures de sujets variés et de différentes dimensions, d'après les meilleurs tableaux de la galerie royale. Chaque gravure sera accompagnée de son illustration.

2°. Les artistes les plus renommés de l'Italie seront chargés de l'exécution des dessins et des gravures, dont plusieurs devant être terminées près des originaux par Cher Lasinio fils, cet habile graveur est aussi chargé de la surveillance nécessaire pour que l'exécution calcographique offre toute l'exactitude et la netteté possible.

3°. Les illustrations seront publiées en Italien.

4°. Le format est le grand in-folio sur papier velin impérial, première qualité. Le texte sera imprimé en beaux caractères, expressément fondus.

5°. Le prix de chaque livraison est de 12 fr. Il y aura quelques exemplaires avant la lettre, et en papier de Chine, dont le prix est fixé à 20 fr.

6°. Les livraisons paraîtront tous les 40 jours à dater du mois de Septembre 1835.

7°. L'Auguste Promoteur de cet ouvrage ayant daigné l'honorer de sa signature, la souscription se trouve maintenant ouverte au public. Les premiers associés recevront les premières épreuves, dans l'ordre numérique de leur association. La liste des souscripteurs paraîtra dans la courant de la publication. Les associations seront reçues à la direction de la Société des Éditeurs au Palais de la Galerie Royale, chez les principaux libraires d'Europe, et chez les distributeurs du présent prospectus.

8°. Les frais de port et les droits à l'étranger sont à la charge des souscripteurs.

9°. Les lettres relatives à l'association provenant du dehors, ou des provinces du royaume, doivent être adressées, franc de port, ou Directeur de la compatabilité et correspondance au Palais de la Galerie Royale, ou à l'Imprimerie Chirio et Mina, rue du Po.

Chirio et Mina.

Formule de Souscription.

Je sousigné déclare de m'associer à l'ouvrage qui a pour titre: La Galerie Royale de Turin Illustrée; et je m'oblige d'accepter et de payer, à leur consignation, le montant des livraisons au fur et à mesure que chacune d'elles paraîtra, d'après les conditions insérées au Prospectus en date du 2 Mars 1835.

(Second Enclosure in No. 27.)

ESTRATTO dal CALENDARIO GENERALE per l'Anno 1835.

Biblioteca dell' Universita'.

LA biblioteca della Regia università degli studi deve la sua prima origine ai libri che in ogni tempo i principi reali di Savoia, per l' amore che tutti e sempre portarono alle scienze, alle arti ed alle buone lettere avevano raccolti nelle camere attigue al Palazzo Ducale; e menzione di libri, di stampe, di manoscritti, e di somme pagate per la compera, o per legatura di essi si trova sovente nei rotoli e nei conti piu antichi della Real Casa. I primi, cui per le favorevoli circostanze de' tempi fosse dato di poter volgere il pensiero a riunirli in istabile dimora, ed a formarne una vera e compiuta biblioteca, furono i due celebri principi il Duca Emmanuele Filiberto e Carlo Emmanuele I. Grande in guerra e munifico in pace il Duca Emmanuel Filiberto non si tosto ebbe ricuperata la capitale de' suoi dominii che richiamatavi l' università, e fornitala d' uomini insigni in ogni facoltà scelti da tutte le parti dell' Italia, pose mano eziandio ad innalzare quel sontuoso teatro che era insieme biblioteca e galleria d' antichità, di monumenti di belle arti, e di cose naturali, del quale fanno onorata menzione gli scrittori nostri, Pingone, Chiesa, Tonso, ec. e che viene pure cotanto magnificato da molti letterati stranieri di quel tempo.

Bibliotecario del Duca Emmanuel Filiberto fu Lodovico Nasi suo segretario e padre di quella Laura Nasi coltissima ed intemerata fanciulla la cui morte venne compianta dai primi ingegni di quella età in una rarissima raccolta di poesie in lingua Latina: In Lauræ Nasiæ virginis ornatissimæ tumulum diversorum poetarum epigrammata, ec. Aug. Taur. Cavalleri MDLXXXIX, 8°. I componimenti ivi contenuti sono di quaranta poeti, dei quali venti Piemontesi, e venti delle altre provincie Italiane, oltre alla dedica e ad alcune prose e poesie dell' editore Jacopo Cortellia. Il Nasi fu uno dei fondatori della Compagnia di s. Paolo.

Carlo Emmanuele I. suo figliuolo e successore il quale in un regno non troppo tranquillo, in mezzo allo strepito delle armi, ed alle difficili cure dello Stato trovava pure il tempo da impiegare nella coltura delle lettere che protesse efficacemente, non dimenticò la biblioteca. Terminò ed abbellì con pitture e scolture, la più parte disegnate colle proprie mani, la galleria incominciata dal padre, e collocò in essa la libreria già doviziosa d' ogni maniera di libri, di codici manoscritti e di stampe, e dal medesimo accresciuta assai, alla custodia della quale deputò il molto diletto oratore D. Carlo Ravano Cremonese, da molti anni professore di leggi nell' università. Grandi encomi alla biblioteca del Duca Carlo Emmanuele I. vennero compartiti dal Botero in varie delle sue opere e in particolar maniera nel suo poema La primavera dicendo:

Librerie, delle quai non fu più piena
L' Alessandrina nè la Pergamena;

dai due Tesauri Alessandro ed Emmanuele, il primo nelle note al predetto poema del Botero, e il secondo nel panegirico la Fenice; dal medico di corte Bertaldi che nel suo libro Medicamentorum apparatus, Taur., Cavalleri 1611, la chiama Bibliotheca omni genere scripturarum ac librorum undique magnis ac pene incredibilibus expensis conquisitorum refertissima; dal Conte s. Martino d' Agliè nel suo poema l'Autunno, e da Anastasio Germonio nel dotto e curioso suo libro Pomeridianæ sessiones. Fra gli esteri la celebrarono Aquilino Coppini, che nelle sue Lettere fa la più intiera ed ampia descrizione della Galleria; il Padovano Gio. Andrea Pauletti nella Historia di Torino con una succincta descrizione di tutti gli stati della Casa di Savoia, Padova, 1676, 4°, ove dice le gallerie sono numerose nelle quali si vede impetrita la maraviglia in un popolo di statue, rauiuate dall' industre scalpello de' moderni Prasitelli. Le mura sono state uestite di pitture, ne quali suenorno con sudati pennelli l' arte, gli Apelli piu accreditati di Europa . . . . la sontuosa Libreria è ripiena di manoscritti e libri molto stimabili. Ed in fine il cavalier Marino nel suo Panegirico in uersi di Carlo Emanuello. Tor. 1614, in 12°. Non soffrendo poi questo gran Principe, che inutili, ed a vano ornamento rimanessero i molti codici scritti nelle lingue Ebraica, Caldaica, Siriaca e Greca, de' quali era abbondantemente fornita la Libreria, incaricava il suo bibliotecario Ravano di instradare colle sue lezioni alcuni giovani di svegliato ingegno nello studio di quelle lingue, perchè ne venisse così propagato nell' avvenire a lustro e decoro sempre maggiore della patria.

Atterrata la galleria, affine di dar luogo alla fabbrica del nuovo e grandioso palazzo fatto innalzare dal Duca Carlo Emmanuele II., la biblioteca ebbe onorato ricovero in alcune sale non molto discoste dal palazzo stesso; ed ivi rimase sino a che salvata a gran stento, e non senza qualche danno, dalle fiamme di un violento incendio, se ne rinchiusero i libri ed i codici in una vasta camera, ove stettero per alcuni anni ammontichiati, ed a fascio, aspettando che fosse condotto a termine il nuovo ricovero loro destinato, al quale si era posto mano. Ciò accadeva in quel tempo nel quale i due eruditissimi Maurini Mabillon e Montfaucon scorrevano la penisola, per visitare e studiare le preziose reliquie dell' antico sapere Italiano. Non farà maraviglia perciò se non facevano onorata menzione della ducale biblioteca, e se nulla poterono trarre dai molti codici nostri, che dissero aver ritrovati in cumulo, e tra loro e coi libri mischiati e confusi. Del sovra indicato incendio appiccatosi alla Galleria Ducale, il quale distrusse eziandio non pochi libri e manoscritti, in alcuni dei quali, tra quelli che ripararono poscia nella biblioteca dell' università, si scorgono tuttora i funesti indizi, non era conosciuto il tempo preciso. Questo ci è indicato da un contemporaneo Pier Francesco Terraneo, avolo del celebre storico nostro Gian Tommaso, in una sua cronichetta manoscritta: 1667 a dì 6 di Decembre giorno di s. Nicolò in martedì alle ore 4 di notte si accese il fuoco nella Galleria di S. A. R. e si abbruciò la metà cioè del palazzo nuovo sino alla galleria dove

27.
SARDINIA.

si mostra il SS. Sudario, con morte ed abbruciamento di molte persone, e con perdita di tre guardarobe piene di scritture antiche e di libri. Bibliotecari sotto il Duca Carlo Emmanuele II, e della madre sua Maria Cristina furono il protomedico Pietro Boursier, Giulio Torrini, il suo figliuolo il protomedico conte Gio. Bartolomeo, ed il celebre storico delle alpi marittime abate Pietro Gioffredo. Bella e lodevole inspirazione, e da essere imitata, fu quella del sopradetto bibliotecario conte Gio. Bartolomeo Torrini, per la quale, con suo testamento del 7 di Gennaio 1706, legava alla città di Torino tutti i suoi libri di medicina, chimica e matematica, e nell'esortare il suo erede a far lo stesso degli altri libri che ritroverà avere alla sua morte, seppure non lascia figliuoli incamminati alle lettere, continua: In una città così ferace di buoni ingegni la maggior parte de' quali si perdono per mancanza di libri e di comodità d' accattarne, non penso che possa farsi un opera più pia che di concorrere quanto si può a fondare una pubblica Biblioteca per l' uso de' poveri letterati, il che non può ottenersi salvo che qualche anime pie la vadino formando poco a poco. Riparato con sollecitudine ai danni cagionati dall' incendio, non si dimenticarono i libri, che tolti dallo stato di confusione e di disordine nel quale da quel tempo si rimanevano furono fatti collocare in alcune camere annesse a quelle degli archivi di Corte, ove nell' anno 1709 il letteratissimo marchese Maffei trovò i libri non più in massa ed alla rinfusa, ma in bell' ordine nelle sue scansìe per opera del bibliotecario abate Machet.

Ma una sede d' assai più adatta, ampia e principesca le stava destinando il gran Re Vittorio Amedeo II. Questo celebre e munifico principe cui nulla mai sfuggì di quanto potesse accrescere lustro e decoro al reale diadema, del quale primo si era cinto la vittoriosa fronte, coll' innalzare il magnifico palazzo dell' università, che aveva pure rinnovata, e con liberalità veracemente regale dotata, ne destinò una parte, nella quale in istabile dimora fosse collocata la biblioteca, che volle aperta al pubblico, e per uso precipuo de' professori e degli studiosi. A tale intento ed acciò si fosse in grado di poter sollecitamente fruire della nobile e proficua istituzione comandava che la massima parte dei libri stampati, dei codici manoscritti e delle stampe che componevano la Ducale privata biblioteca annessa agli archivi di Corte, fosse transferita nelle sale dell' università che l' erano destinate, e con la maggior possibile prontezza disposta ed aperta al pubblico. I libri ed i manoscritti che dagli archivi di Corte passarono a far parte della biblioteca della Regia università sono, oltre a non poche opere correnti concernenti ad ognuna delle quattro facoltà Teologica, Legale, Medico-chirurgica e Filosofica, la più parte delle edizioni del secolo della stampa, che accresciute poscia di ulteriori doni ed acquisti fanno tuttora bella mostra e sono un altro e non ultimo pregio della biblioteca: tutti quasi quei codici manoscritti pergameni e cartacei d' ogni età e di svariati argomenti che in lingua ed in carattere Ebraico, Caldaico, Siriaco, Greco, Latino, Francese ed Italiano furono descritti nei due volumi dell' indice stampato. Oltre ai predetti s' inviarono all' universatà i libri restanti che dal conte Gio. Bartolomeo Torrini erano stati legati alla città di Torino il trasporto dei quali incominciato il cinque di maggio 1723 finiva al 28 dello stesso. Quelli dei regi archivi non vennero rilasciati al bibliotecario P. Roma che nel corrente dell' anno 1732. I primi, cui venisse affidata la cura della nuova biblioteca furono l' abate Bencini professore di sacra scrittura, l' abate Palazzi che fu poi preside di Superga ed il P. Roma. Nato questi in Pau del viscontado di Bienna nella Francia, fu in pria professore di fisica sperimentale, poscia bibliotecario e direttore degli studj del giovine Principe Eugenio de Soissons, e dotato, come dice il Pasini, di maravigliosa prontezza di spirito e di una acutezza non ordinaria d' ingegno morì il 4 di Marzo 1736 nella fresca età di 49 anni. Di altri numerosi e pregiati aumenti fu poscia e successivamente accresciuta la libreria. Quivi vennero i pochi libri lasciati alla sua morte dal Giannone, pagatone il valore a' suoi eredi, quivi i libri della soppressa abazia di Casanuova, quivi quelli provenienti dal castello di Agliè, del medico professore Fantoni, ec. Maggiore eziandio divenne poi il numero delle opere stampate, e dei codici manoscritti, il quale va ognora grandemente aumentando mercè dell' annuo sussidio assegnatole dalla liberalità sovrana, e per la spontanea liberalità di alcuni privati. Fra questi ultimi non deve esser passato sotto ingiurioso silenzio l' insigne dono fatto, non ha molti anni, dal celebre abate Tommaso Valperga di Caluso, di oltre a seicento preziosissimi volumi, e delle più rare edizioni, di opere in lingue Esotiche Araba, Persiana, Ebraica, Caldaica, Indostanica, ec. oltre a parecchi codici manoscritti singolari, e a non poche fra le meno ovvie edizioni del secolo decimoquinto. Di un buon numero di opere scelte in ogni parte dell' umano sapere, tra quelle che si ritrovarono alla morte del professore di eloquenza Italiana nella R. università Ab. Biamonti si arricchì pure, e per legato in questi ultimi anni la bibliotica.

Abbondante di oltre a cento e dieci mila volumi di opere stampate in ogni maniera di lettere, di scienze e di arti, particolarmente compiute sono le classi della scienza legale e politica, quella della facoltà medico-chirurgica e della teologica, alle quali si può dire che nessuna manchi di quelle opere che tra esse vengono universalmente stimate classiche. Oltremodo numerosa è poi la parte concernente alla storia naturale ed alla botanica, per arricchire le quali non mai venne risparmiata la spesa di opere costosissime, a tal che la raccolta delle Flora si può dire compiuta.

Non mediocre è pure, come abbiam detto qui sopra, il numero delle edizioni del secolo della stampa, molte delle quali sommamente pregiate, ed alcune anche di prima rarità. Non poche quelle in membranis, tra cui la celebre poliglotta stampata in Anversa per cura di Arrias Montano, munifico dono di Filippo II, re di Spagna al Duca Emanuel Filiberto suo cognato. Osservabile altresì è la classe dei libri di belle arti, e non piccola la raccolta di stampe di autori antichi e moderni, di accademie e disegni, fra i quali ultimi, alcuni d'insigni maestri.

Principale ricchezza delle biblioteche sono i codici manoscritti, e di questi, da quanto si è per noi antecedentemente ragionato, non n'è priva, di gran lunga, la nostra, che in buon

dato

dato anzi ne conta, venutile dall' antica libreria Ducale; tutti preziosi per venerabile vetustà, per varietà e moltiplicità delle lingue in cui sono scritti e delle materie che vi sono contenute, dei quali sino dall' anno 1749 venne pubblicato colle stampe un indice, in due volumi in foglio dai dotti e benemeriti bibliotecari Pasini, Berta e Rivautella.

Non contando i molti acquisti fatti posteriormente a tal epoca di bei codici d'ogni maniera, non ha molto che per cura di due saggi ed illuminati ministri di S. M., S. E. il conte Prospero Balbo, ed il conte Roget-de-Cholex, vennero redenti, conservati alle lettere e collocati nella biblioteca più di 100 codici membranacei antichissimi, appartenenti una volta al rinomato monasterio di Bobbio, e registrati tutti nel catalogo di quelli che conservava tuttora nel secolo XV., fatto di pubblica ragione dal professore Peyron, in 4°, Tubinga, 1824.

Non è poi a dire che a solo ozioso ornamento si conservino codesti codici, e che soverchia gelosia li renda inaccessibili agli occhi dei dotti, chè massima è anzi la facilità che venne loro ognora apprestata di visitarli, studiarli, collazionarli o prenderne copia; talchè poterono venire giustamente celebrati nei loro scritti dai molti letterati nazionali ed esteri, cui la facoltà conceduta di fare uso dei medesimi espresse spontaneo il tributo di gratitudine. Di fatto già fin dal tempo nel quale dal marchese Maffei venne fatta pubblica la sua lettera sulla regia biblioteca di Torino (giornale dei letterati d'Italia, vol. 6, pag. 449, Venezia 1709), il Wurtemburghese Pfaff aveva copiato l'intiero compendio delle istituzioni divine di Lattanzio, opera creduta acefala sino dai tempi di s. Gerolamo, e conservatasi nel solo codice nostro, la quale pubblicò poscia con altri inediti opuscoli co' tipi Parigini nel 1712. Da essi estrasse pure que' frammenti Greci di s. Ireneo, che inviati dal medesimo Pfaff al Maffei, accompagnati da alcune dotte annotazioni, e pubblicati da questi nel vol. XVI del predetto giornale, furono cagione di lunga e dotta critica discussione tra essi ed altri eruditi oltremontani. La breve ma preziosa chronichetta detta di Rivalta, Chronicon Ripaltæ, stampata dal Muratori, uscì dalla nostra biblioteca. Dalla stessa si trassero e il Chartarium Ulciensis Ecclesiæ dal Berta e Rivautella, ed il Dertonense dato da Lodovico Costa. Il codice creduto del secolo VI. di Sedulio, già del Monastero di Bobbio, venne collazionato con frutto per l'edizione del P. Arevalo, pel quale lo furono pure alcuni altri contenenti opere di s. Isodoro; che anzi da un apografo della stessa biblioteca potè l'Arevalo mandare in luce per la prima volta l'opera, sin allora creduta smarrita, de Numeris dello stesso autore. E il codice Latino de Hippiatria di Giordano Ruffo venne comunicato al dotto editore del medesimo signor Gerolamo Molin prof. di veterinaria nell'università di Padova; e mandato al signor Boissonade a Parigi un esattissimo *fac simile* dell'intiero codice Greco della vita di Proclo scritta da Marino; *fac simile* che nella prefazione dell' edizione procuratane coi tipi di Lipsia, 1814, il chiarissimo editore qualificò per *stupendæ industriæ miraculum*. Le rime inedite di Matteo Bandello, Torino, 1816, 8°, vennero copiate da un codice della biblioteca. Noti sono i lavori fatti dal Mabillon e da altri dotti Francesi e ripigliati a'giorni nostri sul celebre codice De Imitatione Christi detto di Arona, il quale da molti anni è conservato nella nostra biblioteca. Recenti poi sono gli studj del prof. Peyron intorno ad alcuni codici Greci, pe' quali potè ridurre a genuina e sicura lezione alcuni importanti passi del commentario del filosofo Simplicio sull'opera De Cœlo et Mundo di Aristotile; ed altri non meno essenziali del poeta agrigentino Empedocle, i quali in tutte le precedenti edizioni erano di modo viziati da non poterne raccogliere alcun senso. Alcuni opuscoli del platonico Proclo, compresi fra le opere dello stesso filosofo, rese pubbliche non ha guarì dal professor Cousin in Parigi, sono tratti da codici torinesi.

Non poca parte della lode che ridonda su quel ceto di dotti, che in Germania, non sono molti anni, ci ha procurato l'intiero corpo del Gius antico ridotto a sicura lezione, e con eruditi commentarii illustrato, deve altresì ricadere sulla biblioteca torinese, la quale con rara e non frequente liberalità accommodò loro, e sino a Tubinga inviò codici preziosissimi e forniti di ottime lezioni delle instituzioni di Giustiniano e di antichi giuristi. Ultimo e non meno importante lavoro sui medesimi codici fu la scoperta e successiva pubblicazione di vari frammenti di alcune orazioni perdute di Cicerone, e parti essenzialissime del codice Teodosiano tolti da rescritte pergamene ed accompagnati da erudite illustrazioni del Peyron.

Altri e non pochi, oltre i menzionati, sono i codici di questa biblioteca che possono porgere tuttora occasione di studio a chi desideri internarsi nella più squisita erudizione, o voglia indagare nuove o più certe lezioni di testi antichi, o scoprire cose aneddote e sconosciute. Di quest' ultima sorta è un poemetto in lingua romanza o provenzale inedito, copia del quale è stata mandata al Raynouard, noto pe'profondi studj fatti su tali materie. In un codice Latino miscellaneo nostro si è scoperto, non ha molti anni, un esemplare della orazione recitata nelle solenni esequie fatte celebrare dalla città di Padova all'immortal poeta Italiano Francesco Petrarca, la quale menzionata da tutti i biografi del poeta, da nessuno era stata veduta sin qui. Fra i codici Italiani, per non parlare de'rinomati volumi di Pirro Ligorio, già noti all'Europa, i quali unitamente al codice dell'epitome delle instituzioni di Lattanzio, sebbene notati e descritti nel catalogo stampato dei manoscritti della biblioteca, non fanno ora più parte di cotesto stabilimento, ma si conservano, non sapremmo dire il perchè nei Regi archivi di Corte, notabili sono, la quinta parte inedita delle relazioni universali del Benese Bottero, gli autografi di molte produzioni poetiche e prosaiche di Gabriele Chiabrera, di cui alcune non ancora publicate.

Non mancarono poi sino dai primi tempi illustri bibliotecari, i quali colla dottrina, colla erudizione e per via d'opere stampate sapessero mantenere in credito la biblioteca ed accrescerne il lustro. Non facendo menzione nè di Lodovico Nasi, nè del Riccardetto, di Lelio Scaffa, di Claudio Capello, di Pietro Boursier, non del Machet, non del Fortebracci o del Piccono, la scienza de'quali non venne manifestata per opere fatte pubbliche, chiari sono il Ravano, i Torrini padre e figlio, Bartolomeo Cristini, Pietro Gioffredo, l'abate Bencini,

No. 10. Communications respecting Literary Institutions or Libraries in Foreign Countries.

27. SARDINIA.

il Pasini, il Ricolvi, il Rivautella, l'abate Berta, il Roffredo, il Denina, il barone Giuseppe Vernazza di Freney, e l'ultimo in sul finir del 1833 rapitoci da inesorabil morte, l' avvocato professore Bessone.

La biblioteca è frequentatissima. Dessa è aperta al pubblico tutti i giorni non festivi dalle ore 9 matutine alle 3 pomeridiane.

28. BAVARIA.

The Honourable *Richard Bingham* to the Honourable *W. T. Fox Strangways.*

Sir, Munich, 16 April 1836.

I HAVE the honour to transmit to you herewith the collection of documents relating to the Museums, Libraries, and other public scientific Institutions of Bavaria, which Lord Erskine had been instructed to procure from this Government, together with a copy of the note from Monsieur de Gise accompanying the same.

I have been verbally assured by his Excellency, that the Minister of the Interior has personally superintended the formation of this collection, in order to render it as perfect as possible.

I have, &c.

The Honourable W. F. Fox Strangways, *Richard Bingham.*
&c. &c. &c.

(Enclosure 1 in No. 28.)

M. *de Gise* to the Honourable *Richard Bingham.*

Monsieur, Munic, le 9 Avril 1836.

EN me référant à la réponse préalable que j'ai eu l'honneur d'adresser à Lord Erskine, en date du 26 Novembre de l'année dernière, sur l'objet des diverses notes par lesquelles ce ministre m'avait fait connaître le désir de recevoir pour l'usage du Gouvernement de S. M. Brit., des renseignemens sur les musées et les bibliothèques publiques, ainsi que sur l'état des écoles d'arts et métiers existant en Bavière, j'ai l'honneur de vous transmettre, Monsieur, dans la liasse ci-annexée, une collection très-complète des documens, que le Ministre de l'Intérieur vient de me faire passer à cet effet.

Je désire vivement que cette communication réponde en tout point au vœu qui nous a été exprimé itérativement au nom de votre Gouvernement, et c'est avec bien du plaisir que je saisis cette occasion.

Je suis, &c.

à Monsieur Bingham, (signed) *Gise.*
Chargé d'Affaires de S. M. B.
&c. &c. &c.

Sub-Enclosure (A) in No. 28.

BIBLIOTHEKEN.

1. Wie viele öffentliche Bibliotheken giebt es in der Haupstadt von Bayern?

Ad. 1. Ausser der K. Hof-und Staatsbibliothek besteht in München noch die K. Universitäts-Bibliothek, die aber sowohl in ihren literarischen Anschaffungen, als auch in der Mittheilung ihrer Bücher zunächst nur auf die Bedürfnisse der H. Professoren und der Studierenden an der hiesigen Universität Rücksicht zu nehmen hat.

Hof-und Staats-Bibliothek.

2. Wie viele Bibliothekare sind bei einer jeden derselben angestellt, und wie hoch sind ihre Gehalte?

Ad. 2. Bei der K. Hof-und Staatsbibliothek sind angestellt:

a. Ein Oberbibliothekar mit dem Titel und Rang eines Directors und einem jährlichen Gehalt von - - - - - - - 2,320 *f.* 20 *x.*
b. Ein Unterbibliothekar mit - - - - - - - - 1,400 *f.* —
c. Vier Custoden,
der erste mit - - - - - - - - - - 1,176 *f.* 30 *x.*
der 2te und 3te jeder mit - - - - - - - - 1,000 *f.* —
der 4te mit - - - - - - - - - - 786 *f.* 30 *x.*

d. Zwei

d. Zwei Secretäre,
der 1te mit - - - - - - - - - - - 683 *f.* 30 *x.*
der 2te mit - - - - - - - - - - - 584 *f.* 30 *x.*
e. Zwei Scriptoren,
der 1te mit - - - - - - - - - - - 600 *f.* —
der 2te mit - - - - - - - - - - - 487 *f.* 30 *x.*
f. Zwei Diener jeder mit - - - - - - - - - 460 *f.* —

Universitäts-Bibliothek.

Die K. Universitäts-Bibliothek in München hat:
1. Einen Oberbibliothekar, der aber nur Titelträger ist, und nur die Rechnungen mit unterzeichnet.
2. Einen zweiten Bibliothekar.
3. Einen Scriptor.
4. Einen Diurnisten.
5. Zwei Bibliotheksdiener.
6. Einen Lesezimmerdiener.

Der Oberbibliothekar hat als solcher keinen Gehalt:

Der zweite Bibliothekar bezieht jährlich - - - - - - - -	880 *f.*
Der Scriptor - - - - - - - - - - - - -	520 *f.*
Der Diurnist - - - - - - - - - - - - -	200 *f.*
Die zwei Bibliotheksdiener jeder 365 *f.* - - - - - - - -	730 *f.*
Der Lesezimmerdiener - - - - - - - - - -	365 *f.*
	2,695 *f.*

3. Welche Summe wird jährlich für Bücher verwendet?
Ad. 3. *Hof-und Staatsbibliothek.* Der Bücherankaufsfond der K. Hof-und Staatsbibliothek beträgt jährlich - - - - - - - - - - - - - - - 11,000 *f.*
Universitäts-Bibliothek. Aus dem Universitätsfond erhält die Bibliothek jährlich für Anschaffung neuer Bücher - - - - - - - - - - - - - 5,000 *f.*
Womit aber auch die Besoldungen für das subordinirte Personal: Scriptor, Diurnist, 2 Bibliotheksdiener und Lesezimmerdiener im Betrag von - - - - - - 1,815 *f.*
berichtiget werden müssen. Es bleiben also zur Bereicherung der Bibliothek nur noch verwendbar - - - - - - - - - - - - - - - 3,185 *f.*
Zudem hat die Universitäts-Bibliothek noch nachstehende Nebeneinnahmen.

1. Von jedem neu immatrikulirten Studenten - - - - - -	2 *f.*
2. Von jedem neu angestellten Professor - - - - - - -	22 *f.*
3. Von jedem neu geschaffenen Doctor - - - - - - - -	5 *f.*

4. Wie hoch belaufen sich die jährlichen Kosten in Allgemeinen?
Ad. 4. *Hof-und Staatsbibliothek.* Die jährlichen Kosten im Allgemeinen, einschlüsslich des Bücherankauffonds, dann des Regie-Fonds pr. 5,500 *f.* und der Besoldungen und Nebenbezüge pr. 10,958 *f.* 50 *x.* Betragen 27,458 *f.* 50 *x.*
Universitäts-Bibliothek. Die Beantwortung ergiebt sich aus dem oben *ad* 3 Gesagten.

5. Aus welchem Fond werden dieselben bestritten?
Ad. 5. *Hof-und Staatsbibliothek.* Aus der Casse der K. Academie der Wissenschaften *ree* aus dem Fond des K. General-Conservatoriums der wissenschaftlichen Sammlungen, von welchem die K. Hof-und Staatsbibliothek als Attribut betrachtet wird.
Universitäts-Bibliothek. Aus dem Universitätsfond und den angegebenen Nebenbezügen.

6. Welche Bestimmungen existiren über das Zulassen des Publicums?
Ad. 6. *Hof-und Staatsbibliothek.* Es sind darüber eigene gedruckte Gesetze erschienen, von welchen ein Exemplar beiliegt.
Universitäts-Bibliothek. Die Professoren können jedes Buch ein halb Jahr benützen.
Dem Studenten ist der Gebrauch eines Buches gegen Gewährleistung von einem Professor nur auf 1 Monat gestattet. Dagegen steht ihnen täglich von 9–12 and 2–4 Uhr der Zutritt in das Lesezimmer offen.
Auch nicht zur Universität gehörige Litteraturfreunde werden vielfältig befriediget.

7. Wie heissen die gegenwärtigen Bibliotheks Directoren?
Ad. 7. *Hof-und Staats-Bibliothek.* Pfr. Lichtenthaler.
Universitäts-Bibliothek. Oberbibliothekar ist: Dr. und Professor der Exegetic und Hebräischen Sprache, Sebastian Mall: Zweiter Bibliothekar: Dr. Al. Maurus Harter.

8. Wie gross ist die Anzahl von Büchern?
Ad. 8. *Hof-und Staats-Bibliothek.* Mit Einschluss der Doubletten gegen 800,000 Bände.
Universitäts-Bibliothek. Ueber 200,000 Bände.

9. Wie gross die der Manuscripte in jeder derselben?
Ad. 9. *Hof-und Staats-Bibliothek.* 18,600 Bände Manuscripte.
Universitäts-Bibliothek. 644.

10. Was für eine Art einer Verwaltung besteht bei einer jeden derselben?
Ad. 10. *Hof-und Staats-Bibliothek.* Die Bibliotheks-Direction übergiebt ihre Rechnungen

mit den dazu erforderlichen Belegen dem Rechnungsführer der K. Academie der Wissenschaften und des K. General-Conservatoriums, der sie nach genauer Revision an den Oberstrechnunghshof *ree* an die K. Rechnungskammer zur abermaligen Durchsicht abzuliefern hat.

Universitäts-Bibliothek. Der zweite Bibliothekar besorgt die Bestellungen bei den Buchhändlern und Versteigerungen, wobei vorzüglich die Wünsche der Professoren berücksichtiget werden, die derselbe im Postulatenbuche, das zu diesem Zwecke auf dem Lesezimmer der Professoren aufliegt, eingetragen findet.

Derselbe führt ein genaues Tagebuch über alle zur Bibliothek angekaufte Bücher, wozu er für die ältere Litteratur, Georgi, Heinsius und Kaiser, und für die neuere den Leipziger Messcatalog als alphabetische Hinweisung benützt.

Er hält ein Tagebuch für Buchbinder, ein Ausleihmanual und ein Defecten-Verzeichniss.

Die Zahlungen werden von der Administration gemacht, Die beiden Bibliothekare haben hiezu nur die Quittungen zu unterschreiben.

Der Scriptor besorgt die Cataloge und das Eintragen der verliehenen Bücher.

Der Diurnist schreibt den Blätter-Catalog ins Reine, wovon bereits 36 foliobände gefertiget sind. Der ganze Nominal-Catalog ist für dermalen auf 85 foliobände angelegt.

11. Werden jährliche Berichte oder Rapporte über dieselbe gedruckt?

Ad. 11. *Hof-und Staats-Bibliothek.* Die Bibliotheks-Direction erstattet am Schlusse eines jeden Etatsjahres (Ende September) einen allgemeinen Rechenschaftsbericht. Sie verbreitet sich in demselben über die amtlichen Verhältnisse des Personals, über die von demselben im Jahreslauf gelieferten, und für das nächstfolgende Jahr ihm zugewiesene Arbeiten, über die bei demselben durch Todesfälle, Beförderungen und dergleichen eingetretenen Veränderungen, ferner über die, die Anstalt selbst betroffenen Ereignisse, über nothwendig gewordene Einrichtungen und Abänderungen, über merkwürdige literarische Acquisitionen, &c. und schliesst dann mit den aus der Lage und den Bedürfnissen der Anstalt sich ergebenden Anträgen und Wünschen.

Dieser jährliche Rechenschaftsbericht wird dann an das K. Staatsministerium des Innern, dem die K. Bibliothek unmittelbar untergeordnet ist, geschickt aber nicht gedruckt.

Universitäts-Bibliothek. Jährliche Berichte oder Rapporte werden nicht gedruckt, desto mehr aber ist man bedacht, den Wünschen eines Jeden zu genügen, der auf die Benützung der Bibliothek rechtlichten Anspruch zu machen hat.

12. Was ist die Anzahl der Bibliotheken in den Provinzen?

Ad. 12. *Provincial-Bibliotheken.* In jeder Kreis-Hauptstadt befindet sich eine, bei den höheren Gymnasien und Lyceen befinden sich an jedem eine Bibliothek, ausserdem bestehen auch bei den zwei übrigen Landes-Universitäten Erlangen und Würzburg, bei jeder eine bedeutende Bibliothek, auch wurden den neu errichteten Klöstern, namentlich in Augsburg, Bibliotheken gegeben.

13. Stehen dieselben unter der Leitung und Aufsicht irgend einer Staatsbehörde?

Ad. 13. Diese Provincial-Bibliotheken stehen unter der Leitung der Kreisregierungen, und respective unter der Oberleitung des Staatsministeriums des Innern.

Museum.

1. Giebt es in der Haupstadt von Bayern, ein den Künsten, Alterthümern und der Naturgeschichte gewidmetes National-Museum?
2. Unter welche Controle und Direction ist dieses gestellt?
3. Wie viele Directoren sind bei demselben angestellt, und was sind deren Besoldungen?
4. In was für Abtheilungen (oder Departements) ist es abgetheilt?
5. Wie hoch beläuft sich der jährliche Aufwand für dasselbe?
6. Aus welchem Fond wird dieser Aufwand bestritten?
7. Wer sind gegenwärtig dessen Haupt-Directoren?
8. Welche Bestimmungen sind vorhanden über die Zulassung des Publicums zu diesem National-Museum?

Ad. 1 bis 8. Ein National Museum in dem fraglichen Sinne gibt es in München und überhaupt in Bayern nicht. Die vorhandenen wissenschaftlichen und nuturgeschichtlichen Sammlungen anlangend, so gehören diese mit zu den Attributen der Köngl. Academie der Wissenschaften.

Hier sind sie unter der Benennung: *General-Conservatorium der wissenschaftlichen Sammlungen* zu einem Ganzen verbunden, und stehen zuförderst unter der Oberaufsicht des jedesmaligen Vorstandes dieser Academie (gegenwärtig Geheimerath v. Schelling, Professor der Philosophie an der K. Ludwig-Maximilians-Universität in München) welchem als solchen, der Titel eines General-Conservators der wissenschaftlichen Sammlungen beigelegt ist. Die Aufsicht über die verschiedenen Abtheilungen ist einzelnen Conservatoren, Mitgliedern der Academie der Wissenschaften und ausgezeichneten Männern vom Fache anvertraut.

1. *Münz-und Medaillen-Cabinet.* Conservator, Franz Ignaz von Streber.
2. *Antiquarium.* Conservator, Hofrath Friedr. Thiersch.
3. *Etographische Sammlung.* Conservator, Hofrath Gotth. Heinr. v. Schubert.
4. *Sternwarte.* Conservator, Johann Lamont.
5. *Mathematisch-physicalische Sammlung.* Conservatoren, Professor Thad. Siber und Professor Carl August Steinheil.

6. *Mineralogische*

6. *Mineralogische-Sammlung.* Conservator, Joh. Nep. Fuchs, Hofrath.
7. *Botanischer Garten.* Conservatoren, Franz v. Schrank, Professor Carl. Fried. Phill. v. Martius.
8. *Zoologisch-Zootomische-Sammlung.* Conservator, Hofrath Gotth. Heinr. v. Schubert.

Der Kostenaufwand für die Erhaltung und den Zuwachs aller dieser Sammlungen (im Betrage von jährlichen 40,000 *f.* inclus. der Besoldungen), wird aus der Dotation der Academie der Wissenschaften bestritten.

Auch zu allen diesen Sammlungen ist dem Publicum ein freier, von jeder Abgabe entledigter Zutritt gestattet. Doch muss dabei, wegen der fortlaufenden Arbeiten der Academie der Wissenschaften, in Ansehung der Zeit, nothwendig eine grössere Beschränkung eintreten. Es sind daher die wissenschaftlichen Sammlungen wöchentlich nur Einmal (jeden Sonnabend) öffentlich zu sehen, welche Beschränkung jedoch für Studierende oder für Fremde, nach Umständen, ebenfalls ganz wegfällt. Desgleichen sind während der ganzen Dauer des grossen landwirthschaftlichen National-Festes im Monat October jeden Jahres, diese, wie alle übrigen Sammlungen und Sehenswürdigkeiten der Hauptstadt, dem Publicum unausgesetzt geöffnet.

ACADEMIE der bildenden Künste und Kunstsammlungen.

1. Wie viele Academien für das Studium und die Beförderung der schönen Künste im höheren Sinne giebt es in Bayern? Und zu welchen Zeitepochen wurden sie gegründet?

Ad. 1. In Bayern besteht, streng genommen, nur eine Academie der bildenden Künste. Diese hat, als solche, eine zweifache Bestimmung zu erfüllen, vorerst ist sie: "Eine Allgemeine Lehr-und Bildungs-Anstalt; eine eigentliche hohe Schule der Kunst," fürs andere bildet sie, nach der Analogie gelehrter Gesellschaften: "Eine Kunstgesellschaft zu gemeinsamer Pflege und Fortpflanzung der Künste durch persönliche Ueberlieferung." Gegründet wurde dieses Institut im Jahre 1808 durch König Maximilian Joseph von Bayern; nachdem bis dahin an dieser Stelle nur eine, in ihren Zwecken und Mitteln gleich beschränkte Zeichenschule sich vorgefunden hatte.

2. Was für eine Organisation oder Constitution haben diese Academien?

Ad. 2. Gleichzeitig mit dem Entstehen der Kunstacademien in Bayern, wurde ihre Form so wie ihr Bestand durch eine ihr eigens verliehene Constitution festgestellt und garantirt.

(Beilage A. Constitutions-Urkunde der Academie vom Jahre 1808.)

In dieser Constitution der Academie ist zugleich auch ihre Organisation mit begriffen. Beide bestehen noch bis heute fort; jedoch nicht ohne seitdem manche wesentliche Modificationen erfahren zu haben.

3. Von wem werden die dazu gehörigen Mitglieder angestellt oder erwählt?

Ad. 3. Die bayerische Academie der bildenden Künste ist, vermöge ihrer Enstehung eine Königl. Stiftung. Die Berufung und Wahl aller ihrer Mitglieder unterliegt daher jederzeit einem unmittelbaren königlichen Entscheide.

4. Aus welchen Fonds werden diese Academien erhalten?

Ad. 4. Der Kostenaufwand für dieselbe ist von Anfang an ganz aus Staatsmitteln bestritten worden. Seit dem Jahr 1819 wurde jedoch zur allgemeinen Förderung der bildenden Künste ein eigener Kunst-Fond von jährlichen 50,000 *f.* finanzgesetzmässig verwilligt, und auch zeither durch alle Budgets der verflossenen Finanz-Perioden auf dieser Höhe erhalten.

Die Verwaltung dieses allgemeinen Kunst-Fonds kam späterhin ganz an die Academie der bildenden Künste. Doch ressortiren zu derselben, ausser ihr, auch noch die königl. Central-Gallerie-Direction, so wie auch die Pensionen zur Unterstützung ausgezeichneter Künstler. Die Repartition ist dabei wie folgt:

Academie der bildenden Künste - - - - -	22,000 *f.*
Central-Gallerie-Direction - - - - - -	19,000 *f.*
Künstler-Pensionen - - - - - - -	6,500 *f.*
Jährlich - - -	47,500 *f.*

Der Ueberschuss bildet einen Reservefond, der unter dem Vorbehalte königl. Sanction, zur Deckung unvorgesehener Ausgaben oder für ausserordentliche Bewilligungen disponibel bleibt.

5. In welchen Abtheilungen der Kunst oder der mit der Kunst in Verbindung stehenden Wissenschaft wird in denselben Unterricht ertheilt?

Ad. 5. Der an der Academie zu ertheilende Kunst-Unterricht umfasst zunächst die drei Hauptdisciplinen der bildenden Künste: Malerei, Bildhauerei und Baukunst, woran noch als ein Hauptnebenzweig die Kupferstecherkunst sich anschliesst, zugleich erstreckt sich derselbe auch auf alle für den Künstler unentbehrliche oder förderliche Hilfswissenschaften, als; Geschichte der Kunst in nothwendiger Verbindung der Mythologie und Alterthumskunde, Anatomie, descriptive Geometrie, Perspective und Schatten-Construction.

6. Wie viele Professoren für die verschiedenen Abtheilungen giebt es bei derselben?

Ad. 6. Neben dem Director der Academie, welchem die Leitung des Ganzen so wie eine allseitige persönliche Theilnahme an dem Unterrichte zusteht, zählt die Academie gegenwärtig 8 active Professoren; nämlich, 4 Professoren der Malerei, 1 Professor der Bildhauerei,

1 Professor der Baukunst, 1 Professor der Kupferstecherkunst, 1 Professor der Kunstgeschichte. Die Lehrer der Anatomie so wie der mathematischen Hilfswissenschaften sind nicht definitiv bei der Academie angestellt. Es werden vielmehr irgend verfügbare, tüchtige Männer des einen oder anderen Faches, gegen festgesetzte Remunerationen dazu verwendet.

7. Wie oft ertheilen dieselben Unterricht oder halten sie ihre Vorlesungen?

Ad. 7. Der Unterricht an der Academie ist als permanent gedacht. Sie steht daher, mit Ausnahme der Sonn und Feyertäge, den Zöglingen der Anstalt zu ihrem Studium den ganzen Tag offen, und diese sind gehalten sich regelmässig einzufinden. Doch treten hiebei, zumal bei den Eleven der höhern Abtheilungen (weil diese häufig bereits selbst für ihren Unterhalt zu sorgen haben) die nöthigen persönlichen Rücksichten ein. (Beilage B. Satzungen für die Schüler der K. bayerischen Academie der bildenden Künste in München 1828). Die Professoren ihrerseits, sind zwar im Allgemeinen nicht an bestimmte Unterrichtsstunden gebunden; nur dass Jeder von ihnen zweimal täglich (einmal Vor-das anderemal Nachmittags) seine Abtheilung zu besorgen hat. Einer von den 4 Professoren der Malerei is für immer mit der Gesammtaufsicht über die Anstalt beauftragt, und führt in dieser Eigenschaft zugleich den Titel eines Inspectors der Academie. Für gewisse Studien, namentlich für das Zeichnen, Modelliren oder Malen nach dem Modell-Acte, was während einiger Sommer- und Wintermonate, unter abwechselnder Leitung der Professoren täglich statt findet, sind bestimmte Lehrstunden festgesetzt; desgleichen für die wissenschaftlichen Vorträge je nach den verschiedenen Lehrgegenständen 1 bis 4 mal wöchentlich.

8. Wird dieser Unterricht (oder Vorlesungen) für die daran Theilnehmenden unentgeltlich gegeben, oder müssen sie dafür bezahlen?

Ad. 8. Der Genuss des Unterrichts in allen Zweigen mit Einschluss der wissenstchaftlichen, so wie die Benützung aller der Academie zu Gebote stehenden Unterrichtsmittel (ihrer Kunstsammlungen, ihrer Bibliothek u. s. w.) ist sowohl für die Zöglinge als für Hospitanten von jeglicher Abgabe, unter was immer für einen Namen, völlig befreit.

9. Wie viele Zöglinge befinden sich in diesen Academien, und wie sind sie in denselben eingetheilt?

Ad. 9. Die Anzahl der gegenwärtig bei der königl. bayerischen Academie inscribirten Zöglinge beläuft sich auf beinahe Vier hundert. Mehr als ein Drittheil davon sind Ausländer. Die Eintheilung geschieht sowohl nach *Classen* als nach *Schulen*. Die Rudimente des Zeichnens werden an der Academie selber nicht gelehrt. Bei der Aufnahme ist daher, als Bedingung, eine gewisse Vorschule vorausgesetzt. Der Aufzunehmende muss es mindestens bereits dahin gebracht haben einen Kopf nach dem Runden, mit Licht und Schatten, gehörig zeichnen zu können, Für Inländer biethen hiezu die drei polytechnishen Schulen des Landes, wo dem Elementarzeichnungs-Unterrichte eine vorzügliche Sorgfalt gewidmet wird, die nöthigen Hilfsmittel, zur Erlangung einer solchen Vorschule, dar. Jeder Eleve, mit Ausnahme der angehenden Architecten so wie der Ausländer, falls diese schon weiter gefördert sind, tritt anfänglich in die Classe III. Diese gilt als die allgemeine Vorbereitungsclasse und ist vorzugsweise für das Zeichnen nach dem Runden (nach der Antike) eingerichtet. Hat der Zögling diese Classe absolvirt, so steht es in seiner freien Wahl zu was immer für einer bestimmten Schule überzugehen. Die Schule der Malerei zerfällt wieder in zwei getrennte Classen. Die Classe I., wohin diejenigen, welche sich für das Fach der Malerei bestimmt haben, zuerst übergehen, ist ausschliesslich zur Erlernung des Technischen der Oelmalerei, eingerichtet; die Classe II., hingegen zum Versuchen in Ausführung eigener Compositionen als blosse Cartons oder als Gemälde.

Die Classen der Bildhauer, der Architecten, der Kupferstecher, bilden hinwieder eben so viele gesonderte Abtheilungen oder Schulen. Das Studium nach dem Nakten, so wie auch der wissenschaftliche Unterricht ist für alle Zöglinge, wie sie, je nach ihrer besonderen Bestimmung daran Theil nehmen wollen, gemeinschaftlich.

10. Werden von dem Gouvernement Prämien zur Beförderung der höheren Abtheilungen der Kunst (oder der Kunst im höheren Sinne des Wortes) gegeben? und welche?

Ad. 10. Zufolge der Constitution der Academie waren allerdings für Bayern periodisch wiederkehrende Künstler-Concourse mit entsprechenden Preissvertheilungen (woran auch Ausländer Theil nehmen durften) angeordnet. Auch ist diese Institution durch eine Reihe von Jahren wirklich in Kraft gewesen. Die hiezu bestimmt gewesenen Fonds sind jedoch späterhin ausschliesslich dem Interesse und den Bedürfnissen der jüngeren inländischen Künstler-Generation zugewendet worden. Es werden nämlich je nach den Umständen, unter eine kleinere oder grössere Anzahl inländischer Eleven als Preis der Auszeichnung, Stipendien, ertheilt, deren Genuss sich in der Regel auf den Zeitraum von vier Jahren erstreckt. Zu diesem Zwecke ist der jährliche Betrag von 1,200 f. Rh. ausgeworfen. Reisestipendien oder sonst ausserordentliche Unterstützungen für jüngere Künstler werden aus dem Reservefond der Academie bestritten; bedürfen aber jederzeit einer besonderen höhern Genehmigung.

Ausserdem finden gegenwärtig in Bayern keinerlei Ausschreibungen oder Vertheilungen von Preisen zur Ermunterung für Künstler statt.

Bemerkung. Seit der Thronbesteigung des jetzt regierenden Königs ist inzwischen eine theilweise Reorganisation der bayerischen Kunstacademie eingetreten.

Das ganze Unterrichts-System an derselben ist von da an, sehr verschieden von auswärtigen Academien, durchgehends auf die Principien der strengern historischen Kunst, gemäss ihrer doppelten geschichtlichen Grundlage und Tradition, (sowohl der Kunst des Classischen Alterthums als auch der entwickelten Kunst des spätern Mittelalters) zurückgeführt

 worden.

worden. Was nicht ausdrücklich in den Kreis dieser streng historichen Kunst gehört, namentlich alle sogenannten Genre-Fächer, mussten mithin ausgelassen bleiben.

Zu dem Ende wurde einerseits, schon im Jahre 1825, das Personale der Academie theils erneuert, theils reducirt (z. B. die Professur der Landschaftszeichnung ganz eingezogen) andererseits erhielt, besonders durch die Fürsorge der jetzigen Staatsverwaltung, die Academie als allgemeine Bildungsanstalt, vermöge einer Reihe neuer Bestimmungen und Verordnungen, eine ungleich breitere Basis. Durch die Mitglieder der erst in den letzten Jahren errichteten polytechnischen Schulen hängt Sie jetzt auf das genaueste mit der ganzen Kette der Landwirthschafts-und Gewerbschulen, durch diese aber wieder mit der Gesammtheit der Volksschulen zusammen; indem alle diese Lehranstalten, was den überall eingeführten Zeichnungs-Unterricht und namentlich die Einheit des Systemes so wie der hieher gehörigen Unterrichtsmittel anlangt, zulezt überall an die Academie der bildenden Künste gewiesen sind, und von ihr, als einer höhern Instanz in Sachen der bildenden Künste, die nöthigen Bestimmungen, so wie den erneuerten Anstoss zu weiterer Entwickelung zu empfangen haben. Gleichzeitig ist der Einschluss der Academie auch als Kunstgesellschaft zur allgemeineren Ausbreitung eines reinen Kunstsinnes und Geschmacks dadurch wesentlich vermehrt worden, dass eine Königliche Verordnung vom Jahr 1833, es allen Landesstellen, Behörden und Corporationen zur Pflicht gemacht hat, bei allen öffentlichen Kunstunternehmungen (zu kirchlichen oder anderen Zwecken) den jedesmaligen Plan vorerst der Academie zur Prüfung vorzulegen und in Ermangelung geigneter Entwürfe, diese, so wie nach Umständen die ganze Ausführung durch Künstler ihrer Wahl, ihr zu übertragen; zu Folge welcher Verordnung, innerhalb der lezten zwei Jahre, an sechzig grössere und kleinere Oelgemälde, so wie eine verhältnissmässige Anzahl von fresco-Malereien und plastischen Arbeiten (meistens zum Gebrauche für Kirchen), ferner eine Reihe vollständiger Kirchenaltäre und Kirchengeräthschaften unter der unmittelbaren Leitung der Academie, sind ins Werk gerichtet worden. Anlangend alle im Lande sich ereignenden grössern Bau-Unternehmungen so ist, zu ihrer Regulirung und Controle, auf königlichen Befehl seit 1829 ein eigener permanenter Baukunst-Ausschuss niedergesetzt und mit den gehörigen Vollmachten versehen, um (in ähnlicher Weise wie die Academie bezüglich auf öffentliche Werke der Malerei und Plastik) darüber zu wachen und dafür zu sorgen, dass alle dergleichen Bauten möglichst kunstgerecht und zweckmässig zur Ausführung kommen. Die Menge der bereits von diesem königlichen Bankunst-Ausschusse theils revidirten, theils ganz umgearbeiteten, grösstentheils auch schon ausgeführten Bauprojecte, beträgt beiläufig 1030. Endlich sind auch, gleichfalls unter Mitwirkung des Baukunst-Ausschusses zweckmässige Einleitungen getroffen worden, um auch auf die Bauart des Landvolkes (jedoch ohne Anwendung irgend eines Zwanges und mit sorgfältigster Schonung der noch gangbaren Typen, und der unterschiedlichen provincialen Eigenthümlichkeiten) einen Einfluss zu gewinnen.

11. Was für öffentliche Gallerien oder Kunst-Sammlungen (mit Einschluss der Gyps-Abguss-Sammlungen) und was für öffentliche Bibliotheken giebt es in Bayern? und sind sie dem Publicum unentgeldlich geöffnet?

Ad. 11. Der ganze, dem Staate zugehörige Schatz alter und neuerer Gemälde (gegen Achthalbtausend an der Zahl) findet sich in mehreren gesonderten Gallerien vertheilt.

Gemäss einer im Jahre 1827, aus der Villa Colombella (bei Perugia) gegebenen königlichen Verordnung, ist noch, zur Bereicherung und Verherrlichung dieser verschiedenen Gemäldesammlungen eine Auswahl vorzüglichster Bilder im Privatbesitze des Königs, desgleichen was an den verschiedenen Orten der Aufstellung, von werthvollen Gemälden als Städtliches Eigenthum sich vorgefunden hat, damit vereinigt worden, dies jedoch mit Aufrechthaltung der respectiven Eigenthums-Ansprüche. Demnach finden sich in Bayern 9, mehr oder weniger in diesem Sinne zusammengesetzte öffentliche Gemälde-Gallerien; namentlich:

1. die K. Central-Gallerie in München.
2. die vereinigten Gallerien von Schleisheim und Lustheim bei München.
3. die Gallerie von Augsburg.
4. die Gallerie für neuere Gemälde.
5. die Gallerie für altdeutsche Gemälde, in der Moriz-Kapelle.
6. die alterthümlich eingerichtete Gemälde-Sammlung in Verbindung mit Glasmalereien und alten Schnitzwerken auf der alten Burg.

(5. und 6.) in Nürnberg.

7. die Gallerie in Regensburg.
8. die Gallerie in Würzburg.
9. die Gallerie in Aschaffenburg.

Alle diese Gemälde-Sammlungen sind unter die Controle der K. Central-Gallerie-Direction in München gestellt.

Das hier neu errichtete Prachtgebäude der Köngl. Pinacothek hat die Bestimmung, einen Kern derselben (etwa 1,200 Bilder) als Hauptgallerie in sich aufzunehmen.

Zu den fernern Attributen der Central-Gallerie-Direction gehört auch:

A. das K. Kupferstich-Cabinet unter der Aufsicht eines eigenen Conservators oder Inspectors. Unter einer gesonderten Direction steht dagegen:

B. das Königl. Cabinet der Handzeichnungen und der Schnitzwerke von Elfenbein. Die grosse, durch ihre Vollständigkeit ausgezeichnete Sammlung der Gypsabgüsse ist der Academie der bildenden Künste einverleibt, und bildet hier ein eigenes Museum unter der Benennung

c. Antiken-Säle der Academie. Desgleichen besitzt die K. Hof-und Staatsbibliothek einen seltenen Reichthum mittelalterlicher Künstgegenstände. Dyptichen, minirte Handschriften u. s. w.

d. Schatzkammer der Bibliothek.

e. die Glyptothek, ausschliesslich im Privatbesitze des Königs, enthält grösstentheils Bildwerke des klassischen Alterthums in Verbindung einiger moderner Sculpturen.

f. Sammlung antiker Vasen und ähnlicher Alterthümer, ebenfalls ein Privateigenthum des Königs (wird im untern Geschosse der Pinacothek aufgestellt werden).

12. Sind dieselben dem Publicum täglich (Sontags sowohl als an Werktagen) geöffnet? und wenn diess nicht der Fall ist, welche Ausnahmen finden statt?

Ad. 12. Diese sämmtlichen Kunstsammlungen stehen dem Publicum ganz unentgeldlich und in Ansehung der Zeit mit ungleichen Beschränkungen offen. So sind die Gemäldegallerien, mit Ausnahme der Sonntage, desgleichen die Antiken-Säle der Academie, den Sonnabend abgerechnet, täglich zu besuchen, das Cabinet der Handzeichnungen und die Kupferstich-Sammlung dreimal wöchentlich; die Schatzkammer der Bibliothek, jedem der es wünscht, täglich, die Glyptothek einmal wöchentlich. Zu Gunsten der Fremden erleiden jedoch diese Beschränkungen jederzeit Ausnahmen.

13. Was für Zeichnungsschulen oder Anstalten für den Unterricht der Gewerbsleute (Artisans) in den schönen Künsten giebt es in Bayern?

Ad. 13. Es bestehen in Bayern keine isolirte öffentliche Zeichnungsschulen für Gewerbsleute, sondern es ist der Zeichnungs-Unterricht ein integrirender Theil des ganzen durch die anliegende allerhöchste Verordnung vom 16ten Februar 1833, in das Leben gerufenen technischen Unterrichtes.

Vor jener Zeit bestanden in Bayern nur zwei Bildungswege: der rein populäre, und der rein gelehrte. Der Wettkampf zwischen Realismus und Humanismus war in dem Masse lebhafter geworden, in welchem die Mittelstände sich in ihrer Bedeutung hoben, und die staatswirthschaftlichen Interessen, wie in Europa überhaupt, so auch in Bayern insbesondere zu hoher Bedeutsamkeit gelangten. Der Ausweg war schwierig. Ein erweiterter Real-Unterricht an den wissenschaftlichen Anstalten war nur auf Kosten der alten Sprachen möglich, und würde der gelehrten Erziehung ihre eigentliche Basis entzogen haben. Das Fortbestehen der gegenwärtigen Einrichtung dagegen, hätte den eigentlichen Mittelständen nur die Wahl zwischen der einfachen Volksschule und jener Masse philologischer Uebungen offen gelassen, welche in der Natur der wissenschaftlichen Schulenlagen, die, als Vorbereitungs-Anstalten für das Universitäts-Studium, mehr die Entwicklung des Denkvermögens und Gedächtnisses, und die Befähigung zum Verstehen der Quellen, als die Beibringung des positiven Wissens zum Zweck haben. Nach reifem Nachdenken kam das Gouvernement auf die Idee, zwischen die Volksschulen und die gelehrten Schulen eine eigene Scala technischer Bildungsanstalten einzustellen, welche ihre Basis in dem hiernach speciell reorganisirten Realien und dem allgemeinen Zeichnungs-Unterricht der Werktagsschulen der gelehrten sowohl als der populären Erziehung findet; ihr eigenthümliches Daseyn an der Schwelle des Gymnasiums einerseits und der Sonn-und Feyertags-Schule andererseits beginnt; und analog den gelehrten Gymnasien und Lyceen, in technische Gymnasien (Landwirthschafts und Gewerbsschulen) zerfällt, und neben der gelehrten Hofschule in der technischen Hofschule culminirt, wie dieses die anliegende Uebersicht der Unterrichts-Anstalten der bayerishen Monarchie näher zu erkennen giebt.

Dabei wurde von dem Grundsatz ausgegangen:

a. Zur Vermeidung der Kosten und zur Beseitigung der Isolirungs-Tendenzen die technische Schulen mehr auf das Technische zu beschränken, und für die Realien mehr die bestehenden Anstalten zu benützen;

b. Landwirthschaft und Gewerbe nicht zu trennen, sondern zu verbinden, jedoch jeder den ihr nothwendigen Unterricht zuzuwenden, übrigens

c. Die technische Hofschule nur denen zugänglich zu erklären, welche in der Periode der Werktags-Schulpflichtigkeit eine gelehrte Bildung genossen und während ihres Verweilens an einem technischen Gymnasio, die Realien von dem Standpunkte der gelehrten Bildung aus, gehört haben;

d. Die polytechnischen Schulen als technische Lyceen, nicht als nothwendige, sondern nur facultative Mittelglieder zu behandeln, welche durch einen philosophischen Cursus an einer Universität ersetzt werden können.

Es war dabei der grosse Zweck der Regierung:

1. Die technische Bildung allen Classen der Gesellschaft nach Massgabe ihrer Bildungsgrade zugänglich zu machen;

2. Zu bewirken, dass die Jahre, welche die der wissenschaftlichen Erziehung sich Zuwendenden, der Philologie in der Vorbereitungszeit widmen müssen, von den übrigen Staatsbürgern der allgemeineren und der Berufsbildung zugewendet werden können;

3. Leuten ohne Beruf für wissenschaftliche Bildung eine angemessene Bahn zu eröffnen;

4. Diese Bahn recht practisch zu greifen. Damit höhere Bildung möglichst allgemein werde, geht ein vorzügliches Augenmerk dahin, alle Talente in die Werktagsschulen des gelehrten Unterrichts zu bringen; dagegen durch strenge Prüfungen beim Uebertritt an das Gymnasium, die Ausscheidung an der Schwelle desselben recht scharf zu begründen, damit die Jünglinge und die Eltern sich über ihren Beruf klar machen müssen.

Noch ehe die gegenwärtige Anordnung entstand, wurde hierüber die öffentliche Meinung zu Rath gezogen. Als daher das Gouvernement, hierdurch belehrt, zur Ausführung schritt,

kam ihm die öffentliche Meinung entgegen. Die wachsende Frequenz der Anstalten gibt Zeugniss von dem Zutrauen des Publicums, wie denn auch die trefflichen Früchte derselben ihre Zweckmässigkeit bewähren.

Aus der oben angeführten allerhöchsten Verordnung erhellet schon, dass der Unterricht im Zeichnen ein wesentliches Bildungsmittel der populären und technischen Erziehung ist. Die Anstalten, an welchen der Zeichnungs-Unterricht mit Bezug auf die Gewerbe ertheilt wird, sind:

1. *Aus der Reihe der populären Bildungs-Anstalten,*

a. Die Werktags-dann Sonn-und Feiertags-Schulen.

Der Werktags-Schul-Unterricht dauert bei Katholiken vom 6ten bis 12ten, bei Protestanten bis zum 13 Lebensjahre.

Die Kinder aller Staatsangehörigen sind innerhalb dieser Lebensperiode schulpflichtig, entweder zu den Werktagsschulen der populären oder der gelehrten Bildung, es sey denn, dass sich die Eltern über einen geordneten Privat-Unterricht durch einen geprüften Lehrer ausweisen.

Selbst die Kinder aller in Bayern sich aufhaltenden Ausländer sind unterrichtspflichtig, indem Bayern dieses aus dem Standpunkte höherer Civilisation als die erste Pflicht der Gastfreundschaft und der Rücksicht gegen andere Staaten betrachtet. Die natürlichen Inspectoren sind die Pfarrer, welche die Visitationen nach der anliegenden Instruction in der Eigenschaft einer Staatsfunction vollziehen. Auf diese Weise bleiben in Bayern unter 1,000 Kindern nicht 3 ohne Unterricht.

Alle welche nach der Werktagsschule keine höhere Anstalt besuchen, sind gehalten bis zu dem 18ten Lebensjahre an Sonn-und Feiertagen, theils gesteigerten, theils wiederholenden Unterricht zu empfangen.

An diesen Anstalten ist jedem Schüler Gelegenheit gegeben, durch den Schullehrer auch im Zeichnen unterrichtet zu werden.

Die Theilnahme an diesem Unterrichte steht jedem frei. Die Schullehrer qualifiziren sich hiezu an den Schullehrer-Seminarien, wo die entsprechensten Zeichnungslehrer angestellt sind.

b. Handwerks-Feiertags-Schulen.

In den grösseren Städten des Reiches, wo viele Gewerbe vereiniget sich finden, bestehen eigene Handwerks-Feiertags-Schulen. An solchen Orten ist jeder Lehrjunge, welcher vor seinem Uebertritt zum Gewerbe nicht eine Landwirthschafts und Gewerbsschule absolvirt hat, gehalten, während seiner Lehrzeit eine Handwerks-Feiertags-Schule zu besuchen, wo der Unterricht nach den Bedürfnissen der Gewerbe bemessen ist, und wo ihm das Zeichnen, so fern es zu dem beabsichtigten Gewerbe förderlich ist, ein obligater Gegenstand ist.

2. *Aus der Reihe der technischen Bildungs-Anstalten:*

a. Die Landwirthschafts und Gewerbsschulen, deren gegenwärtig 28 bestehen;
b. Die polytechnischen Schulen, deren 3 in der Monarchie begründet sind, und
c. Die K. Academie der bildenden Künste.

14. Welche Organisation oder Constitution haben diese Schulen, oder Unterrichts-Anstalten?

15. Aus welchen Fonds werden sie erhalten?

16. Von wem werden die dazu gehörigen Mitglieder angestellt oder erwählt?

17. In welchen Abtheilungen der Kunst oder der mit der Kunst in Verbindung stehenden Wissenschaft wird Unterricht ertheilt?

18. Wie viele Lehrer in den verschiedenen Abtheilungen sind in denselben?

19. Wie oft ertheilen diese ihren Unterricht oder geben sie ihre Vorlesungen?

20. Wird dieser Unterricht (oder diese Vorlesungen) den daran Theilnehmenden unentgeldlich gegeben? oder muss dafür bezahlt werden?

Ad. 14 bis 20. Die Organisation, der Lehrplan, so wie das Wechselverhältniss der oben angeführten Anstalten, ist aus der angebogenen Instruction zum Vollzug der allerhöchsten Verordnung vom 16ten Februar 1833 vollständig zu erkennen.

21. Wie viele Schüler sind in jeder solchen Zeichnungsschule oder Anstalt?

Ad. 21. Die Schüler Anzahl ist nach der Grösse der Städte und dem Umfang der Gewerbsthätigkeit sehr verschieden. Im lezten Schuljahre war die Anzahl der Schüler in den 28 Landwirthschafts-und Gewerbsschulen 2,056.

22. Wird auch practischer Unterricht in der speciellen Anwendung der schönen Künste auf jede besondere Art der Manufacturen ertheilt?

Ad. 22. Für die specielle Anwendung der schönen Künste auf die wichtigeren Gewerbe bestehen an den Handwerks-Feiertags-Schulen mancher Städte besondere Abtheilungen; z. B. Schlosser-Tischler-Silberarbeiter-Zeichenschulen, &c. &c.

An den Landwirthschafts und Gewerbsschulen wird eben so auf den künftigen Beruf des Schülers bei dem Zeichnungs-Unterrichte die geeignete Rücksicht genommen; der zukünftige Landwirth z. B. wird vornämlich mit dem Zeichnen landwirthschaftlicher Geräthe, Gebäude, &c. beschäftiget, wie dieses das Vorlagewerk, das gegenwärtig die K. Academie der bildenden Künste für die Volkszeichnungs-Schulen, Schullehrer-Seminarien und Landwirthschafts-und Gewerbsschulen bearbeitet, weiter zeigen wird.

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

28.
BAVARIA.

23. Was für andere, mit den Künsten verwandte Anstalten (deren in den vorstehenden Fragen nicht erwähnt wurde, welche aber dennoch bemerkenswerth sind) giebt es in Bayern?

Ad. 23. Wie überhaupt das Gouvernement zur Norm gemacht und als Norm festgehalten hat, in der möglichsten Entwicklung der localen und corporativen Verhältnisse den Aufschwung der Nation zu suchen, jede Regierungs-Massregel zwar als grosses conformes Ganze, aber mit localer und districtiver Färbung hervortreten zu lassen; so ist auch, insbesondere bei der technische Erziehung, den Behörden zur Pflicht gemacht, die Specialitäten des Unterrichts, nach den Specialitäten der Bedürfnisse des Landwirthschafts- und Gewerbsbetriebes der einzelnen Orte und Bezirke zu bemessen. Aus diesem Gesichtspunkte besteht in Nürnberg, der vorzüglichsten Manufacturstadt Bayerns, eine Kunstgewerbs-Schule als Nebenzweig der Landwirthschafts-und Gewerbsschule, die darauf berechnet ist, das Kunstgemässe in die dort eigenthümlichen Gewerbe überzutragen.

Ferner besteht in München eine Bau-Gewerkschule, eine Anstalt, in welche die Gesellen, die Bau-Handwerker sich während der Wintermonate, indessen ihre Gewerbe ruhen, im Zeichnen und Entwerfen von Gebäuden üben und in andern für sie nützlichen Wissenschaften vervollkommen.

24. Was für Ausstellungen von Kunstwerken neuerer Zeit giebt es in Bayern?

25. Wie oft finden dieselben statt und hat das Publicum unentgeldlich zu denselben Zutritt?

26. Auf wessen Befehl und Anordnung werden diese Ausstellungen gehalten?

Ad. 24 bis 26. Die in Bayern eingeführten Kunst-Ausstellungen zerfallen in zwei Categorien. Die eine geht von der Staatsverwaltung aus, und ist öffentlich, die andere besteht durch einen Privat-Verein. Die erstere wiederholt sich alle drei Jahre unter der Benennung: "Grosse Kunst-Ausstellung der K. Academie der bildenden Künste," und dauert vom 12te October bis zum 12 November. Die Leitung und Anordnung derselben ist ganz der Academie übertragen, in deren Localitäten sie auch vor sich geht. Sie umfasst alle Haupt-und Nebenzweige der bildenden Künste.

Es werden dabei ebenfalls auswärtige Kunstleistungen zugelassen. Der Zutritt ist ganz unentgeldlich.

Die Kunstausstellung des Kunst-Vereins in München, welcher unter dem Protectorate des Königs steht, ist permanent, jedoch nur für die Mitglieder dieser Gesellschaft zugänglich.

27. Was für Austellungen von Manufactur-Erzeugnissen giebt es in Bayern?

28. Wie oft finden diese statt, und hat das Publicum unentgeldlich Zutritt zu denselben?

Ad. 27 u. 28. In München findet eine allgemeine Industrie-Ausstellung statt, die sich alle drei Jahre wiederholt, von dem Publicum unentgeldlich besucht werden kann, und deren Kosten einschliesslich der Transportkosten der Ausstellungs-Gegenstände aus der Staatscasse bestritten werden. Der Zeitpunkt dieser Ausstellung trifft mit der Austellung der K. Academie der bilden Künste, und der Ausstellung der Zeichnungs-Schulen und der weiblichen Industrie-Arbeiten zusammen. Hierbei erscheinen die Zeichnungsschulen als Mittelglied zwischen der Industrie und Kunst, was ihrer Bestimmung entspricht.

29. Was für Verfügungen sind in Bayern getroffen worden, um die Rudimente des Zeichnens zu einem Gegenstand der Elementar-Erziehung des Volkes zu machen?

Ad. 29. Die Beantwortung dieser Frage liegt schon in der Auseinandersetzung; *Ad.* 13. Die Verfügungen bestehen, um sie kurz zu recapituliren:

a. in der Einführung des Zeichen-Unterrichts in die Schullehrer Seminarien,
b. in der Bestimmung, dass die Note im Zeichnen, zu den Hauptbefähigungs-Noten des absolvirenden Seminaristen gezählt werden, und
c. hierdurch in der Begründung des Zeichen-Unterrichts in den Werktags-Schulen, selbst auf dem Lande, wenigstens facultativ.
d. In der Vervielfältigung der Handwerks-Feiertags-Schulen,
e. In der Errichtung der Landwirthschafts-und Gewerbs-Schulen, als technische Gymnasien, und der Polytechnischen Schulen als technischen Lyceen, endlich
f. in der Anordnung, dass ein gemeinschaftliches, von der Academie der bildenden Künste zu bearbeitendes Vorlagewerk, für die verschiedenen Categorien der Schulen herausgegeben und allgemein eingeführt werde, welches zugleich auch als Organ und Bildungs-Vehikel dienen soll, um mit der Zeit fortschreitend auf dem Kunstsinn des Volkes zu wirken.

Sub-Enclosure (B.) in No. 28.

GESETZE für den Besuch und die Benutzung der Königl. Bayer. Hof-und Staats-Bibliothek.

Unterzeichnete Stelle bringt hiemit den allerhöchsten Befehl in Erfüllung, die von Seiner Königlichen Majestät gegebenen und bestätigten Gesetze für den Besuch und die Benutzung der königlichen Hof-und Staats-Bibliothek öffentlich bekannt zu machen. Jeder, der in dem Falle ist, von der königlichen Bibliothek Gebrauch zu machen, wird sich hienach von selbst zu achten wissen.

München den 12 Januar 1829.

Königliches General-Conservatorium der wissenschaftlichen Sammlungen des Staates.

v. *Schelling.*

§ 1. Der Zutritt zu der königlichen Hof-und Staats-Bibliothek steht nur zum Zwecke gelehrter Forschungen und Bearbeitungen, nicht aber für Lesen zur Unterhaltung offen.

§ 2. Die Bibliothek soll künftig nur dreymal in der Woche, nämlich, Mondtags, Mittwochs und Freytags, von 8–1 Uhr geöffnet werden, an den übrigen Wochentagen aber, so wie an Sonn-und Feyertagen, geschlossen bleiben.

Besondere Ferien sind: vom Weihnachts-Abend bis zum neuen Jahre; vom Mittwoch der Quinquagesima bis zum Fasching-Dienstag; vom Palm-Sonntag bis Ostermondtag; sodann vom 1 September bis 14 October einschlüssig.

§ 3. Jeder Leser hat Ordnung, Stille, anständiges Betragen und Achtung gegen den Ort und das Bibliotheks-Personale zu beobachten.

In den Lesezimmern darf Niemand im Mantel Platz nehmen.

§ 4. Wer ein oder mehrere Bücher in die Bibliothek mitbringt, muss diese bey'm Ein-und Austritt jedesmal einem Angestellten vorzeigen.

§ 5. Wenn die bestimmte Anzahl der Plätze in den Lesezimmern bereits besetzt ist, so sind die später Eintretenden zu bedeuten, sich zu einer andern Stunde einzufinden.

§ 6. In die eigentlichen Bibliotheks-Localitäten darf Niemand ohne Begleitung eines Angestellten eintreten, auch nicht selbst die Bücher aus den Repositorien herausnehmen und wieder hineinstellen, sondern er hat sich desfalls an einen der anwesenden Bibliotheksdiener zu wenden, und nach gemachtem Gebrauche das Buch demselben wieder zurückzugeben, damit sich die Bücher nicht auf den Tischen anhäufen.

§ 7. Blosse Unterhaltungsschriften, Uebersetzungen von Classikern, Grammatiken, Compendien, Chrestomathien, Bilderbücher, u. s. w. dürfen nicht mitgetheilt werden. Eben so wenig sollen in der Regel ganze Reihen von Bänden für Einen Leser herbeigeholt werden. (Nur in dem Falle, dass ein Gelehrter oder Staatsdiener zu einer wissenschaftlichen, oder Amts-Arbeit mehrere Bände auf einmal zum Nachsehen oder Vergleichen bedarf, kann hievon eine Ausnahme gemacht werden.)

§ 8. Handschriften, vorzügliche Kupferwerke, Pracht-Ausgaben, Urdrucke (Incunabeln), kostbare und seltene klassische Werke, können nur mit besonderer Bewilligung eingesehen und excerpirt werden. Dasselbe gilt auch von uneingebundenen Büchern, besonders Heften oder einzelnen Blättern von literarischen Zeitschriften, officiellen Gesetz-und Intelligenz-Blättern, die noch nicht aus dem Journalzimmer an die Bibliothek abgegeben worden sind.

§ 9. Alles Durchzeichnen von Kupfern und Prachtwerken, besonders auf geöltem Papiere, alles Einschreiben in die Bücher und Manuscripte, alles Umbiegen der Blätter, falsches Brechen der Kupfer, Auflegen eines Buches auf das andere, ist durchaus verboten. Wer sich eine wiederholte Ahndung über diesen Punkt zuzieht, erhält weiter kein Buch zum Lesen.

§ 10. Für die im Laufe des Jahres erscheinenden Zeitschriften und Tagsblätter ist ein besonderes Zimmer bestimmt, zu welchem nur die Mitglieder der königlichen Academie der Wissenschaften und die Professoren und Privatdocenten an der Universität den Zutritt haben.

§ 11. Für das Ausleihen der Bücher sind die Stunden von 9–1 Uhr am Mondtag, Mittwoch, und Freytag, festgesetzt.

§ 12. Zum Entleihen von Büchern sind die hier ansässigen Staatsdiener vom Rathe aufwärts, und königliche Professoren berechtigt. Andere Personen haben hiezu die besondere Erlaubniss des königlichen Staats-Ministeriums des Innern einzuholen. Wer nicht von einem Bibliotheksbeamten gekannt ist, hat für das erste Mahl sein Anstellungsdecret vorzuzeigen, oder sich durch einen Bekannten vorstellen zu lassen.

§ 13. Jedes Buch wird in der Regel nur auf vier Wochen gegen einen gedruckten und deutlich unterschriebenen Recognitionsschein ausgeliehen. Wer Verlängerung dieses Termins wünscht, hat darum besonders nachzusuchen. Ist der angesetzte Termin verflossen, und das Buch noch nicht zurückgekommen, so erhält er eine schriftliche Erinnerung. Bleibt diese unbeachtet, so wird das Buch durch die Polizey abgefordert, und die Begünstigung des Entleihens ist für den Saumseligen verwirkt.

§ 14. Handschriften, Kupferwerke, seltene und schätzbare Ausgaben, werden nur mit besonderer Genehmigung der allerhöchsten Stelle ausgeliehen. Rohe und brochirte Schriften, bändereiche Werke, Wörterbücher die zum Nachschlagen auf der Bibliothek selbst unentbehrlich sind, können in der Regel nur in den Lesestunden auf der Bibliothek mitgetheilt werden.

§ 15. Ausserhalb der Stadt und in's Ausland darf kein Buch ohne allerhöchste Bewilligung, und für den letzten Fall nur unter der Garantie der hier residirenden einschlägigen Gesandtschaft geliehen werden.

§ 16. Wer ein Buch verliert, beschädigt, beschreibt, durch Beschmutzung oder Einbiegung der Blätter verdirbt, ist ohne Rücksicht der Person und des Standes verbunden, den Buchladen-und Einbandpreis desselben, oder, wenn kein Exemplar mehr zu bekommen ist, den Schätzungspreis dafür sogleich baar zu erlegen. In dieser Absicht wird jedes verlangte Buch vor und nach dem Ausleihen vor den Augen des Empfängers durchgesehen, und der jedesmalige Zustand desselben auf dem Recognitionsschein kurz bemerkt.

§ 17. Fremde und Einheimische, welche die Bibliothek zu sehen wünschen, haben sich Mondtags, Mittwochs und Freytags, in den Stunden von 10–1 Uhr, zu melden und ihren Namen und Charakter in das Fremdenbuch einzutragen.

Finden sich mehrere bei einem solchen Besuche beisammen, so wird jeder erinnert, sich nicht von dem Führer zu trennen, nicht selbst Bücher aus den Fächern herauszunehmen, und besonders Gemählde, Kupferwerke und andere vorgezeigte Kostbarkeiten nicht zu betasten.

München, den 31 December 1828.

Sub-Enclosure (C.) in No. 28.

Constitution der Königlichen Academie der bildenden Künste.

Wir Maximilian Joseph, von Gottes Gnaden König von Baiern.

Indem Wir Unsere Aufmerksamkeit auf die zahlreichen und bedeutenden Kunstschätze Unsers Reiches, und auf die ausgezeichneten, durch die Geschichte bewährten Kunstanlagen der unter Unserm Zepter vereinigten Völker, so wie auf die blühenden Talente einzelner, einheimischer Künstler richten; können Wir nicht zugeben, dass die Ersten, ohne öffentlichen Gebrauch zur Fortpflanzung der Kunst, als ein todtes Capital daliegen, und auf die Nachkommen übergehen, ohne Spuren ihrer Wirkung in Unsern Zeiten zurückzulassen, noch auch den Lezten die ihnen gebührende Erweckung, Beschäftigung und Begünstigung versagen.

Es ist vielmehr Unser Wille, dass die wohlthätigen Einflüsse der schönen Künste sich auf Unser gesammtes Volk in einem ausgedehntern Masse, als bisher, verbreiten, und dieses mächtige Bildungsmittel, mit den übrigen zusammenwirkend, die Neigung zum Schönen und Wohlgestalteten vermehre, und so unmittelbar die National-Geschicklichkeit erhöhe, mittelbar aber den Geist, und die Sitten Unsers Volkes veredele. Denn die Liebe für Mass und Schicklichkeit, welche die Kunst einflösst, geht endlich auf das Leben über, und lehrt auch in diesem das Zweckmässige und Gebildete vorzugsweise suchen.

Nach den Verhältnissen Unserer Zeit sind Academien der bildenden Künste, wenn ihrer inneren Einrichtung richtige Begriffe zum Grunde liegen, als das wirksamste Mittel zu betrachten, welches der Staat für die Erhaltung, und allgemeinere Ausbreitung der Künste ergreifen kann. Wir haben daher beschlossen, nach den vielfachen Beweisen Unserer Aufmerksamkeit und Sorgfalt für die Kunst, einen vorzüglichen und besondern Beweis hievon durch die Errichtung einer solchen Academie in Unsern Staaten zu geben, und sowohl die Existenz dieser Anstalt, als ihren Nutzen, durch eine förmliche, den Zwecken derselben, so wie den Resultaten bisheriger Erfahrungen angemessene Verfassung zu sichern.

Diesem Entschlusse gemäss soll nachstehende Urkunde die bleibende Grundlage der Einrichtung und Verfassung Unserer Academie der bildenden Künste seyn; und Wir verordnen zu dem Ende, wie folgt:

1. *Zweck der Academie der bildenden Künste.*

Die Academie der bildenden Künste, welche dem Gesamtstaate angehört, und als eine Central-Anstalt ihren Sitz in der Haupt-und Residenzstadt haben muss, ist von Uns in der doppelten Absicht errichtet: einmal die Erhaltung und Fortpflanzung der Künste, welche nur durch lebendige, ja persönliche Ueberlieferung möglich ist, zu sichern; sodann den Künsten ein öffentliches Daseyn, eine Beziehung auf die Nation und den Staat selbst zu geben, wodurch sie fähig werden, ihrerseits vortheilhaft auf das Ganze zurückzuwirken, den Sinn für Schönheit und den Geschmack an edleren Formen allgemein zu verbreiten.

Ungeachtet der Verbindung dieser Zwecke und der daraus folgenden doppelten Ansicht der Academie als einer Lehr-und Bildungs-Anstalt, und als einer Kunst-Verbindung oder Gesellschaft, soll jedoch der erste Zweck immer als der wichtigste und vornehmste betrachtet werden.

II. *Umfang des in der Academie zu ertheilenden Unterrichts.*

Der Unterricht in der Academie der bildenden Künste soll seinem Umfange nach allgemein seyn, und alle Zweige der bildenden Kunst umfassen; dem Geiste nach aber auf die Erlernung der Künste im höchsten und strengsten Sinne gehen.

Die Academie als Lehr-Anstalt zerfällt daher in vier Hauptschulen in

eine der Mahlerei
— — Bildhauerkunst
— — Baukunst
— — Kupferstecherkunst.

In der ersten bildet die Schule der Landschaft-Mahlerei eine eigene Unterabtheilung.

III. *Art des Unterrichts.*

Wir fordern von der Academie der bildenden Künste nicht die Bildung von Gelehrten, sondern von tüchtigen ausübenden Künstlern, welche fähig sind, das, was sie gedacht, mit Richtigkeit, Wahrheit und Schönheit darzustellen. Gleichwie also die ganze Kunst in Ausübung bestehet, so soll auch der Unterricht sowohl der Form, als der Absicht nach durchaus practischer Natur seyn.

Jedoch keineswegs in dem Sinne, dass eine blos gedankenlose Fertigkeit der Hand und des Auges erzielet werde, sondern dass der Zögling das Wissenschaftliche seiner Kunst zugleich mit der Ausführung erlerne, und sich der Regeln seines Verfahrens nur in der Ausübung bewusst werde.

Uebrigens fordern diejenigen Theile der Kunst, die auf strengwissenschaftlichen Grundsätzen beruhen, namentlich die Perspective, und grossentheils auch die Architectur von selbst einen strenger theoretischen Unterricht.

Wir wollen den Unterricht in seinen verschiedenen Theilen hier, wo es sich mit der Natur der Sache nicht verträgt, durch keinen bestimmten Lehrplan bedingen; vielmehr wollen

Wir,

Wir, dass ihm ganz die Freiheit und Lebendigkeit erhalten werde, die besonders bei der Kunst so nothwendig und wesentlich ist.

Der Lehrer soll daher keinen gleichförmigen Mechanismus aufkommen, sondern vielmehr dem Zöglinge so viel möglich Freiheit lassen, sein besonders Talent, und die Eigenheiten seiner Ansicht der Gegenstände, so wie die Art, sie nachzuahmen, zu zeigen, um das Gute dieser Eigenheiten begünstigen, dem Fehlerhaften aber entgegenwirken zu können.

Erfordert wird indess, dass der Zögling von dem Mechanischen in der Kunst, und nur im gleichen Verhältnisse mit der darin erlangten Gründlichkeit und Fertigkeit, stuffenweise zu dem Geistigern derselben fortgeführt werde, um nicht Halbkünstler zu bilden, welche blos über die Kunst zu räsonniren, nicht aber etwas auszuführen im Stande sind.

IV. *Schule der Historien-Mahlerei.*

Die Zöglinge der Historien-Mahlerei sollen in drei Classen getheilt werden, und über jede derselben ein Lehrer die Aufsicht führen.

Die erste Classe besteht aus solchen, die den ersten Unterricht empfangen, nach Zeichnungen und Gypsabgüssen studieren, und zugleich den Anfang des Studiums nach der Natur machen.

In die zweite Classe treten die, welche zum Gebrauch der Farbe übergehen, und im eigentlichen Sinne mahlen lernen.

Sind die Schüler zu einem gewissen Grade der Fertigkeit gelangt, die Natur treu und mit Geschicklichkeit nachzuahmen, so gehen sie in die dritte Classe über. Hier tritt zu den frühern Studien das der Composition im weitesten Sinne hinzu; hier werden sie eigentlich mit dem Höhern der Kunst bekannt gemacht. Jede Woche sollen sie einen Vormittag von dem Lehrer der Classe auf die Kunstsammlungen begleitet werden, wo er ihnen die Werke der grossen Meister erklärt, solche untereinander vergleicht, und das Eigenthümliche eines jeden bemerklich macht.

V. *Schule der Landschaft-Mahlerei.*

Für die Landschaft-Mahlerei wird Ein Lehrer hinreichend gefunden, der seine Zöglinge, welche jedoch die Regeln der Perspective bei dem besondern Lehrer derselben zu studieren haben, vom ersten Anfange bis zur lezten Ausbildung fortführt.

VI. *Schule der Bildhauerkunst.*

Die Zöglinge der Bildhauerkunst theilen mit denen der Historien-Mahlerei den Unterricht der ersten Classe in der Zeichnung, indem sie zugleich bei dem besondern Lehrer ihrer Kunst das Modelliren lernen.

Auf der zweiten Stuffe folgen sie ihren besondern Zwecken; auf der dritten werden sie eben so, wie die der Historien-Mahlerei, zu dem tiefern Verständnisse musterhafter Kunstwerke durch den Lehrer ihrer Schule geleitet, und können zugleich an den ähnlichen Unterhaltungen des Lehrers der Historien-Mahlerei Antheil nehmen.

VII. *Anatomie.*

Jedem Winter sollen einige Leichname mit Hinsicht auf die Bedürfnisse des Künstlers zergliedert, und den Schülern die Zeit gelassen werden, nach den dargelegten Theilen zu zeichnen. Die Academie soll sich wegen dieses Unterrichts mit einem bereits im Dienste des Staates stehenden Anatomen benehmen, und ihm denselben gegen ein gewisses Gehalt übertragen.

Die Professoren der Mahlerei und Bildhauerei sollen abwechselnd bei diesen Studien die Aufsicht führen, und die Zöglinge auf das zu ihrem Zwecke Bedeutendste besonders aufmerksam machen.

VIII. *Zeichnen und Modelliren nach der Natur.*

Im Winter sollen die Abende zum Zeichnen und Modelliren nach der Natur, wobei sich die Zöglinge aller Classen einfinden; im Sommer aber zum Zeichnen, Mahlen und Modelliren nach der Natur und dem Gewande angewendet werden. Jedoch kann, um aller einseitigen Gewöhnung vorzubeugen, auch im Winter bisweilen bei Tage nach dem Nackten gezeichnet, gemahlt und modellirt werden. Der Director, die Professoren der Historien-Mahlerei, wie auch der Bildhauerkunst, führen bei diesen Uebungen abwechselnd die Aufsicht, und stellen den Act.

IX. *Vorlesungen über Mythologie.*

Jeden Winter sollen zweimal in der Woche für die Schüler der höhern Classen Vorlesungen über die Mythologie, und die allgemeinen Kunst-Gegenstände, verbunden mit einer anschaulichen Geschichte der allmähligen Ausbildung der vornehmsten Kunst-Ideale gehalten werden. Diese Vorlesungen sind einem mit den dazu erforderlichen Kenntnissen versehenen Mitgliede der Academie zu übertragen.

X. *Schule der Baukunst.*

Der Professor der Baukunst ertheilt Unterricht sowohl im theoretischen als practischen Theile seiner Kunst.

Die Wichtigkeit der Architectur für das öffentliche Leben, die nahe Beziehung, die sie

auf den Geist und Geschmack einer ganzen Nation hat, zusammengenommen mit der gegenwärtigen Entartung dieser Kunst, bewegen Uns, zu verordnen, dass dem Unterrichte in derselben eine grössere Ausdehnung gegeben, und von dieser Seite auch die mechanischen Arbeiter und Handwerker mit herbeigezogen werden sollen.

Eine Stunde soll der Lehrer der Baukunst täglich seinen academischen Zöglingen widmen. Alle Sonn-und Feiertage aber soll er während 2 Stunden diejenigen Handwerker unterrichten, deren Arbeiten die Baukunst oder Verzierungen betreffen, und die bereits in der Feiertags-Schule oder sonst eine gewisse Vorbereitung erlangt haben.

XI. *Unterricht in der Perspective.*

Alle Wochen drei Stunden hat der Professor der Baukunst mit der Lehre von Schatten und Licht die Perspective für Mahler und Baukünstler zu lehren; die erstern sollen diesem Unterrichte beiwohnen, sobald sie es in der Zeichnung der Figuren zu einiger Fertigkeit gebracht haben.

XII. *Schule der Kupferstecherkunst.*

In der Kupferstecherkunst und den verschiedenen verwandten Künsten hat ein besonderer Lehrer Unterricht zu geben. Um jedoch auch dieser Kunst ihren alten Ernst, und die nothwendige Strenge, wo möglich, wiederzugeben, wird verordnet, dass die, welche sich ihr in der Academie widmen wollen, nicht eher zur Erlernung derselben übergehen, als nachdem sie in der ersten Klasse der Historien-Mahlerei die Zeichnung soweit, als die Mahler gelernt haben, die in die zweite Klasse übergehen.

XIII. *Eintheilung der Zeit.*

Die nähere Eintheilung und Bestimmung der Stunden bleibt allerdings den Lehrern selbst überlassen; jedoch wird im Allgemeinen festgesezt: das academische Jahr geht vom Anfange jeden Novembers bis Ende Augusts; im September bis zur Mitte des folgenden Octobers sind Ferien. Täglich haben sich die Professoren der ersten und zweiten Classe der Historien-Mahlerei, der Professor der Landschaft-Mahlerei, und der Bildhauerkunst eine Stunde Vor-und eine Stunde Nachmittags auf der Academie einzufinden, um die Arbeiten der Schüler nachzusehen, und den erforderlichen Unterricht zu ertheilen. Auch der Professor der dritten Classe hat ausser dem oben angegebenen Geschäfte die Arbeiten seiner Zöglinge immer nachzusehen, und sie in Allem zu leiten.

XIV. *Aufsicht.*

Damit aber die Zöglinge in der übrigen Zeit des Tages, so wie während der Ferien, wo jedem anwesenden Zöglinge die Academie offen bleibt, nicht ohne Aufsicht seyen, soll einem der Professoren ein Arbeitszimmer in der Academie eingeräumt werden, um die Schüler unter seinen Augen zu haben, und allen Unordnungen sogleich zu steuern.

XV. *Aufnahme der Zöglinge.*

Der Zutritt zu dem Unterrichte der Academie soll im Allgemeinen jedem In-und Ausländer ohne Unterschied freistehen, jedoch mit folgenden nähern Bestimmungen:

Kein Zögling kann unter 13–14 Jahren aufgenommen werden. Jeder, der als Anfänger aufgenommen zu werden wünscht, muss sich nach dem Neujahre mündlich oder schriftlich bei der Academie melden, oder gemeldet werden. Es wird von ihm nichts weiter gefordert, als dass er lesen, schreiben und rechnen könne; und wenn er sich der Baukunst widmen will, einen Anfang in der Geometrie in den öffentlichen Schulen oder durch Privat-Unterricht gemacht habe; ferner, dass er über die erhaltene sittliche Erziehung sich ausweisen könne, und über seine Naturgaben ein wenigstens nicht ungünstiges Zeugniss beibringe. Unter diesen Bedingungen geschieht die vorläufige Aufnahme um Ostern; die Aufgenommenen geniessen den Sommer hindurch täglich eine Stunde Unterricht, welchen die Professoren der beiden ersten Classen abwechselnd, der eine diesen, der andere den folgenden Sommer zu geben verbunden sind. Hat nun der Schüler während dieser Zeit einige Fortschritte gemacht, und Anlage gezeigt, so geschieht die definitive Aufnahme nach einem Beschlusse der Academie; der Schüler erhält die Matrikel, und geniesst von diesem Augenblicke an, die Vortheile eines wirklichen Eleven der Academie.

Diese Verfügungen gelten natürlich nur bei solchen, die den ersten Unterricht auf der Academie nehmen wollen, und fallen bei denjenigen hinweg, die ihre schon erlangte Fertigkeit erproben, oder die auf einer höhern Stuffe eintreten wollen.

Es soll nämlich jeder dazu Befähigte in jede Classe und zu jeder Zeit eintreten können; jedoch muss die Academie zuvor über seine Befähigung erkannt haben.

Der Uebergang von einer Classe in die folgende soll an keine Zeit gebunden seyn, sondern lediglich von den gemachten Fortschritten abhängen, über welche der Director der Academie zu erkennen hat.

Von den vorzüglichsten Eleven der dritten Klasse soll der Direktor der Academie jederzeit einige benennen, die das Recht haben, Anfängern auf Verlangen ausserordentlichen Unterricht zu ertheilen, wofür sie jedoch von diesen oder ihren Verwandten honorirt werden müssen.

XVI. *Verhältniss zu den Provinzial-Kunst-und Zeichnungs-Schulen.*

Eine vorzügliche Pflanz-Schule für die Academie der Künste denken Wir in den Provinzial-Kunst-Schulen herzustellen, deren Errichtung Wir hiemit verordnen. Zum Sitze derselben bestimmen Wir die drei Städte: Augsburg, Innsbruck und Nürnberg.

Wir

Wir wollen zwar keineswegs das Studium auf den Provinzial-Kunst-Schulen durch das Verhältniss derselben zur Academie beschränken, vielmehr mag der mit besondern Talenten begabte auch mit den nothwendig geringern Hilfsmitteln jener Schulen sich fördern, und zu einem gewissen Grade der Vorzüglichkeit gelangen. Jedoch wird in der Regel jeder, sobald er die ersten Stuffen überstiegen hat, sich nach dem Mittelpunkte zu ziehen suchen, wo die vornehmsten Muster-Werke der Kunst in allen Fächern beisammen sind. Wir setzen daher im Allgemeinen fest, dass die Provinzial-Kunst-Schulen mit den zwei ersten Klassen der Academie parallel laufen sollen. Ueber ihre nähere Einrichtung und Besetzung werden Wir das Gutachten der Academie der Künste einholen.

Schränken sich diese Kunst-Schulen von selbst auf einige Hauptorte ein, so wollen Wir dagegen die Errichtung blosser Zeichnungs-Schulen allerwärts, wie bisher, und in dem Masse begünstigen, dass keine nur einigermassen bedeutende Stadt ohne eine solche seyn soll, und wo es nur immer die vorhandenen Mittel gestatten, die Zeichnung als ein Zweig des allgemeinen öffentlichen Unterrichts behandelt werde.

Durch diese Schulen soll höherer Kunst-Fleiss und Geschmack zunächst unter den bürgerlichen Ständen, und den Handwerkern verbreitet werden.

Die Academie der Künste soll mit den Provinzial-Kunst-so wie mit den Zeichnungs-Schulen in Verbindung stehen, und ihnen erforderlichen Falls mit Rath und That an die Hand gehen. Schüler, welche von den Vorständen der Provinzial-Kunst-Schulen officiel empfohlen werden, treten ohne weiteres als Eleven der Academie ein.

XVII. *Verhalten der academischen Zöglinge.*

Die academischen Zöglinge stehen, während ihres Aufenthaltes in der Academie, gänzlich unter den Gesetzen dieses Instituts, und unter der Aufsicht des jedesmal anwesenden Lehrers. Die besondern Statuten für dieselben sollen in der Academie angeschlagen, und jedem bei der Immatriculation mitgetheilt werden.

Gesetzlosigkeit und ungeziemendes Betragen in der Academie, so wie eine notorisch unsittliche Aufführung ausserhalb derselben, haben die Ausschliessung von dem Genusse des Unterrichts zur Folge, welche jedoch nur durch einen Schluss der Academie verfügt werden kann.

XVIII. *Vortheile, welche die Zöglinge der Academie geniessen.*

Wir wollen, dass der Unterricht in der Academie für alle Schüler unentgeldlich sey; dagegen soll kein angehender Künstler, den äusserst seltenen Fall eines ganz ausgezeichneten Talentes, verbunden mit gänzlichem Mangel eigener Mittel, ausgenommen, auf eine Unterstützung aus dem Fonde der Academie Rechnung machen dürfen; es wäre denn, dass er diese als Preis gewänne. Ihm muss es genug Ermunterung seyn, durch den Eintritt in die Academie frühzeitig in Verhältnisse zu kommen, in denen das wirkliche Talent sich entwickeln, und sich der Nation bemerklich machen kann.

Dagegen soll jeder aus dem Institute der Academie hervorgegangene tüchtige Künstler vorzugsweise Aussicht auf Arbeit und Beschäftigung haben; die besten Schüler der Academie werden zu Lehrern der Provinzial-Kunst-Schulen befördert; so wie die vorzüglichsten Meister der leztern die Aussicht haben sollen, zu Lehrern an der Central-Anstalt vorzurücken.

Ueberzeugt, einerseits, dass das grösste Ermunterungs-und Förderungs-Mittel angehender Künstler die frühzeitige Gelegenheit ist, grössere Werke auszuführen; anderseits, dass es Bedürfniss ist, zweckmässige und musterhafte Vorstellungen in Gemählden und andern Kunstwerken allgemeiner zu verbreiten; wollen Wir, dass wenigstens die öffentlichen Gebäude der Kunst geweihet bleiben, und unter Unserer Regierung nicht leicht ein solches von einiger Bedeutung entstehe, woran, ausser der Architectur, nicht auch die Sculptur und Mahlerei ihren Antheil habe. Wir werden die Gemeinde-Vorsteher insbesondere anweisen, bei Bestellungen von Gemählden für Kirchen und andere öffentliche Gebäude, von Büsten oder sonstiger Bildhauer-Arbeit für öffentliche Denkmäler, desgleichen von Grundrissen öffentlicher Gebäude, sich an die Vorsteher der Academie zu wenden, wodurch eines Theils diese Gelegenheit haben, ihre schon mit dem Wesentlichen der Kunst hinlänglich bekannte Schüler unter ihren Augen, oder nach ihren Zeichnungen grössere Werke ausführen zu lassen; andern Theils die öffentlichen Gebäude sich gegen geringe Kosten mit guten, und nach löblichen Mustern ausgeführten Darstellungen schmücken könnten.

XIX. *Preise.*

Alle Jahre sollen die Zöglinge der ersten und zweiten Klasse um einen Preis concurriren. Die Aufgabe hat in einem Acte nach der Natur, und einer Zeichnung nach einer Statue zu bestehen. Der Landschaft-Mahler liefert ein Studium nach der Natur. Der Bildhauer eine Zeichnung oder ein Modell nach einem Kunstwerke. Der Architect die Copie eines Ornaments. Als Prämium soll irgend ein nützliches Kunstbuch die Stelle der ehemals üblichen Medaillen vertreten.

Der Preis-Ertheilung soll jedesmal eine öffentliche Austellung vorangehen, zu welcher alle Künstler ihre Werke zu senden, eingeladen werden.

Alle drei Jahre soll eine grosse und allgemeine Preis-Bewerbung statt finden, zu welcher auswärtige, wie einheimische Künstler mit den Zöglingen der dritten Classe concurriren.

Der Mahler hat den aufgegebenen Gegenstand, der aus der Geschichte oder Mythologie zu nehmen ist, in einer reinlich ausgeführten Zeichnung zu behandeln, der Bildhauer aber

ein Modell in Erde zu verfertigen; der Landschaft-Mahler liefert eine selbsterfundene Landschaft gemahlt.

Der Preis bei dieser Concurrenz soll für den einheimischen Künstler in dem Auftrage bestehen, ein Gemählde, eine Statue oder Büste auszuführen, wozu er ein Arbeitszimmer, die Modelle und Materialien frei erhält. Die auf diese Art unter den Augen der Lehrer entstandenen Werke sollen sodann um einen billigen Preis zur Auszierung öffentlicher Gebäude gekauft werden, nach welcher Rücksicht auch, so weit es thunlich ist, die Wahl der Gegenstände getroffen werden kann.

Für den auswärtigen Künstler soll der höchste Preis von 50 Dukaten im Werthe, oder nach seinem Gefallen in eben soviel an Gelde bestehen; jedoch bleibt der Academie überlassen, den Preis nach Befund der Umstände ganz, oder auch nur zum Theil zuzuerkennen, oder denselben zwischen mehreren zu theilen.

Der Gegenstand der Preis-Aufgabe soll durch ein eigenes Programm der Academie jedesmal nach der Kunstaustellung des zweiten Jahres bekannt gemacht werden; der Termin soll bis Ende Juli des folgenden Jahres gehen; im August hierauf eine öffentliche Ausstellung sämmtlicher Concurrenzstücke in einem Saale der Academie statt finden. Am Ende derselben werden die Preise durch einen Beschluss der Academie zuerkannt, und die Preis-Vertheilung durch ein eigenes Programm bekannt gemacht, welches die motivirten Urtheile über jedes der eingegangenen Concurrenzstücke enthält.

Einerseits wird diese Oeffentlickeit des Urtheils jedem Verdachte von Partheilichkeit begegnen; andererseits werden die Programme der Academie als Jahrbücher der Künste in Unserem Reiche, und als Mittel dienen, das In-und Ausland mit dem jedesmaligen Zustande derselben bekannt zu machen.

Uebrigens sollen jedesmal die einheimischen, im Reiche zerstreuten Künstler, eben so wie auswärtige, eingeladen werden, ihre neuesten, auch ohne Absicht auf Preis-Bewerbung entstandenen Werke zur Austellung einzusenden, um wo möglich zu einer Uebersicht des Zustandes der vaterländischen Kunst überhaupt zu gelangen. Den vorzüglicheren Künstlern werden die Kosten der Her-und Zurücksendung von der Academie vergütet, welche noch überdiess sich angelegen seyn lassen wird, die Theilnahme, welche gebildete Künstler durch Einsendung ihrer Werke ihr erzeigen, durch Achtung und Ehrenbezeugungen zu erwiedern.

Endlich sollen im vierten Jahre die einheimischen Historien-Mahler, Bildhauer, Architecten und Kupferstecher nochmals, und um den lezten Preis concurriren. Die Aufgabe für die Mahler ist eine historische Composition, nach Willkühr durch eine Zeichnung oder ein Gemählde gelösst; die der Bildhauer, eine Figur in Erde; die der Baukünstler, der Plan, Aufriss und Durchschnitt eines Gebäudes; die Kupferstecher aber sollen den Nachstich eines schönen Bildnisses liefern.

Jeder Künstler, der aus den ersten Fächern den Preis erhält, soll zur Belohnung mit einer Pension, auf drei Jahre nach Italien gesendet werden; der Kupferstecher aber auf zwei Jahre eine Unterstüzung erhalten, um während dieser Zeit ein wichtiges Blatt nach einem Gemählde der hiesigen oder jeder andern Sammlung für seine Rechnung zu vollenden; doch soll er jedesmal die Wahl der Bilder der Academie zur Prüfung vorlegen, und ihre Genehmigung einholen.

Die Zuerkennung dieser Preise soll jedesmal in einer feierlichen öffentlichen Versammlung geschehen, wozu alle Freunde der Künste eingeladen werden. Der General-Secretär hat dabei eine dem Gegenstande der Feier angemessene Rede zu halten.

XX. *Obliegenheiten der academischen Pensionärs.*

Die mit einer Pension der Academie in Italien befindlichen Künstler sind verbunden, vierteljährig einen Bericht von ihren Studien an die Academie zu erstatten.

Die Mahler liefern am Ende des ersten Jahres die Copie eines classischen Gemähldes, welches ihnen von der Academie angezeigt wird; am Ende des zweiten Jahres aber ein Bild von eigener Erfindung, Lebensgrösse, und wenigstens zwei Figuren.

Die Wahl der Gegenstände ist ihnen selbst überlassen. Die Academie vergütet die Auslagen für das Material und die Hersendung. Der Bildhauer liefert jährlich zwei Original-Zeichnungen eines Basreliefs oder einer Gruppe; der Architect am Ende des ersten Jahres die Restauration eines alten Gebäudes, welches ihn von der Academie aufgegeben wird, am Ende des zweiten, die Idee zu irgend einem öffentlichen Gebäude im Grundaufrisse und Durchchsnitte.

Der Kupferstecher liefert 20 Abdrücke seiner Platte.

XXI. *Hilfs-Mittel und Attribute der Academie.*

Da die Künstler hauptsächlich durch das praktische Studium älterer und neuerer Meister-Werke gefördert werden, so wollen Wir, dass alle Unsere Kunst-Sammlungen ihnen jederzeit zur Benützung und zum Copiren offen stehen. Jeder Künstler soll, sobald er dazu durch eine von der Academie ertheilte Karte autorisirt ist, auf Unsern Gemählde-Gallerieen zu München und Schleissheim jedes Gemählde copiren können. Von den Vorstehern dieser Institute und ihrer eigenen Liebe zu der Kunst erwarten Wir, dass sie bei der nöthigen Sorge für die Erhaltung der Gemählde zugleich dem Künstler jede zur Erreichung seines Zweckes erforderliche Bequemlichkeit verschaffen werden.

Nicht minder sollen alle Künstler zu der Kupferstich-und Zeichnungs-Sammlung freien Zutritt haben, die Werke, die sie verlangen, sollen ihnen verabfolgt, und zu ihrem Studium, jedoch auf dem Cabinette selbst, überlassen werden.

Indem aber die plastischen Bildwerke des Alterthums für das Studium der Formen die erste und vornehmste Schule des Künstlers sind, so soll die Sammlung der Antiken und

Abgüsse

Abgüsse mit der Academie in unmittelbarer Verbindung stehen, und wie von Uns bereits früher beschlossen worden, als ein unmittelbares Attribut derselben betrachtet, in ihrem Gebäude untergebracht, und der Aufsicht des Lehrers der Bildhauerkunst als eines Mitgliedes der academischen Lehr-Anstalt übergeben werden.

Literarische Werke, die der Künstler zur Hand haben, und öfter nachschlagen muss, z. B. die aus der Architectur, sollen in der Academie aufgeftellt und gegenwärtig seyn.

Doubletten Unserer Hof-und Central-Bibliothek von Kupfer-Werken, welche Kunst-Darstellungen enthalten, sollen der Academie der Künste verabfolgt, und was nicht auf diesem Wege erlangt werden kann, allmählig von der Academie herbeigeschaft werden.

Ausser den eigentlichen Kunst-Büchern soll noch eine Sammlung der vorzüglichsten, classischen Dichter alter und neuer, jener in den besten vorhandenen Uebersetzungen, angeschaft, und diese den Zöglingen geliehen werden, damit sie sich durch Lectüre mit dem poetischen Geiste, hauptsächlich des Alterthums, vertraut machen können, ohne dessen Kenntniss ihnen auch die Kunst-Werke selbst, mehr oder weniger, unverständlich bleiben würden.

XXII. *Verhältnisse der Academie als einer Kunst-Gesellschaft.*

Wir haben bereits erklärt, Unsere Academie der Künste, ausserdem, dass sie eine Lehr- und Unterrichts-Anstalt seyn soll, nach dem Muster aller bisher bestandenen Kunst-Academieen zugleich als eine freie Kunst-Gesellschaft constituiren zu wollen.

Wir wollen den Künstlern Unseres Reichs einen Punkt der Vereinigung, eine Auszeichnung sichern, nach der sie streben, und deren Zuerkennung die öffentliche Erklärung wirklicher Meisterhaftigkeit in sich schliesst.

Wir wollen, dass jener edle, und den Künsten so heilsame Wetteifer, auch unter den Lehrern und schon gebildeten Künstlern erhalten werde, und dass, nach erlangter Reife in der Kunst, der Einzelne durch die Vereinigung mit gleichgebildeten Männern das Mittel finde, seine wissenschaftlichen Begriffe von der Kunst immer mehr zu erhöhen und zu erweitern.

Wir wollen, dass Unsere Kunst-Academie in Wechselwirkung mit allen gleichzeitigen Kunst-Bemühungen trete, und auf das Zeit-Alter wirke, um hinwiederum von ihm gefördert zu werden, und so am sichersten jeder Einseitigkeit oder beschränkten Nationalität, die sich im Unterrichte, oder in der Ausübung einfinden wollte, vorzubeugen.

In dieser Absicht ertheilen Wir Unserer Academie der Künste, alle Rechte und Vorzüge einer gelehrten Gesellschaft. Wir erklären sie als ein freies, selbstständiges Insitut, das unter Unserm unmittelbaren Schutze und von jeder andern Behörde unhabhängig, nur unter dem Curatorium steht, welches jederzeit mit dem Ministerium des Innern unmittelbar verbunden seyn soll.

Wir erklären, die Academie in ihren eigenen Angelegenheiten bei Besetzung von Stellen oder Ertheilung von Pensionen, so wie in anderen Veranlassungen, bei Aufführung öffentlicher Werke, Beurtheilung einheimischer oder fremder in die Kunst einschlagender Erfindungen entweder im Ganzen oder in dem Ausschusse, den Wir weiter unter festsetzen werden, gutachtlich vernehmen zu wollen.

XXIII. *Zweck der Academie als Kunst-Gesellschaft.*

Die Zwecke der Academie als Kunst-Gesellschaft ergeben sich unmittelbar aus den vorhergehenden Bestimmungen.

Sie soll zuvörderst beabsichtigen, was jede gelehrte Gesellschaft beabsichtigen soll, Wechselerregung und gegenseitige Mittheilung erworbener theoretischer und practischer Kenntnisse unter den Mitgliedern selbst.

Sie soll ausserdem suchen, auf den Gemeingeist zu wirken, Liebe zur Kunst und den Geschmack an edlern Formen unter allen Ständen zu verbreiten, die National-Geschicklichkeit zu heben und zu befördern.

Ferner hat sie sich mit anderen Instituten von gleichen Zwecken, mit Künstlern und Kunst-Freunden aller Länder und Völker in thätige Wechselwirkung zu setzen, und so sich immer in der Kenntniss des Merkwürdigsten und Wichtigsten, was überall in den Künsten sich hervorthut, zu erhalten.

XXIV. *Mittel zu diesen Zwecken.*

Zur Erreichung des ersten Zweckes sollen, ausserdem, was der tägliche Verkehr und Umgang der Mitglieder von selbst dazu beiträgt, hauptsächlich die regelmässigen oder ordentlichen Versammlungen dienen, deren in jedem Monate wenigstens Eine seyn soll.

Ausser den laufenden in denselben abzuthuenden Geschäften, soll hier jedes Mitglied seine Ideen und Vorschläge zur Beförderung der Künste überhaupt und des academischen Kunstzweckes insbesondere frei vorbringen, und überhaupt eine liberale Communication der Ansichten und Meinungen statt finden.

Um auf das öffentliche Leben zu wirken, soll sich die Academie öfters mit dem Publicum in Berührung zu setzen suchen, und zu dem Ende zu den Kunst-Ausstellungen und den Preis-Austheilungen das gebildete Publicum einladen. Es soll ausserdem jährlich wenigstens eine öffentliche Versammlung gehalten werden, in welcher eine allgemeine Notiz von den Arbeiten der Academie, und von den neuesten und interessantesten Kunst-Erscheinungen mitgetheilt, auch Abhandlungen vorgelesen werden können.

In Bezug auf den dritten Zweck hat sich die Academie mit den vorzüglichsten auswärtigen Academien, so wie mit den inländischen Kunst-Anstalten, desgleichen mit den berühmtesten Künstlern, Kunst-Freunden, Kennern und Vorstehern grosser Kunst-Sammlungen

in Correspondenz zu setzen, auch solche auf die nachher zu bestimmende Weise sich weiter zu verbinden..

XXV. *Personal der Academie.*

Zur Erreichung der sämmtlichen, aus der doppelten Ansicht einer Kunst-Academie sich ergebenden Zwecke wird folgendes Personal hinreichend gefunden:

Ein Director der Academie,
Ein beständiger General-Secretär,
Fünf Professoren der Mahlerei, mit Einschluss der Landschaft Mahlerei,
Ein Professor der Bildhauerkunst,
Ein Professor der Architectur,
Ein Professor der Kupferstecherkunst.

XXVI. *Pflichten des Directors.*

Dem Director steht die gesammte Leitung der Academie als Kunst-Anstalt zu; er führt die oberste Aufsicht über den in derselben zu ertheilenden Unterricht; er wacht über die Beobachtung der Ordnung und gesammten inneren Einrichtung. Ihm kommt es zu, sämmtliche Mitglieder in ihren Pflicht-und Geschäftskreis einzuweisen, von den Professoren den Handschlag an Eides-Statt zu empfangen, und einen jeden zur Erfüllung seiner Pflichten anzuhalten. Er unterzeichnet alle an Uns zu erstattende Berichte, desgleichen alle im Namen der Academie zu machenden Ausfertigungen. Eben so kömmt ihm die Vollziehung aller von Uns erlassenen Weisungen, Befehle und Verordnungen zu. Jährlich hat er gemeinschaftlich mit dem General-Sekretär einen Bericht über den Zustand der Academie, ihre inneren Verhältnisse, so wie über die vorhandenen Bedürfnisse zu erstatten. Ihm bleibt die Wahl der Modelle so wie die besondere Aufsicht über die unmittelbaren Attribute der Academie überlassen.

Wir werden bei dieser Stelle jederzeit auf einen Mann von ausgezeichneter Geschicklichkeit und entschiedenem Künstler-Ruhme Rücksicht nehmen; versehen Uns aber dagegen zu dem jedesmaligen Director, dass er auch zu dem Unterrichte persönlich mitwirken, ihm wo es erforderlich ist, nachhelfen, ihn ergänzen, und besonders den schon weiter gediehenen Zöglingen mit Rath und That an die Hand gehen werde.

XXVII. *Pflichten des General-Secretärs.*

Der General-Secretär hat die literarischen Verhältnisse der Academie und alle diejenigen Geschäfte zu besorgen, die sich aus dem Begriffe derselben als einer Kunstgesellschaft ergeben. Er hat das Protocoll in den Sitzungen zu führen, gemeinschaftlich mit dem Director der Academie die Berichte zu entwerfen, und diese, so wie alle Ausfertigungen der Academie zu unterzeichnen. Ihm liegt es ob, die Correspondenz zu führen; er verfasst die Programme, in welchen die Preis-Aufgaben, so wie die, in welchen das motivirte Urtheil der Academie, und die Preis-Ertheilungen bekannt gemacht werden. Er hat ferner die bei den jährlichen öffentlichen Versammlungen vorzulesende Notiz von den Arbeiten der Academie nebst dem Auszuge aus ihrer Correspondenz zu verfertigen, und erscheint bei allen feierlichen Gelegenheiten als der Redner der Academie. Siegel und Acten sind in seiner Verwahrung.

Zum General-Secretär soll immer ein Gelehrter ernannt werden, der mit theoretischen Kenntnissen die nöthige literarische Bildung verbindet.

XXVIII. *Pflichten der Professoren.*

Die Professoren haben ausser der treuen und fleissigen Besorgung der ihnen vorgeschriebenen Lehrstunden als Mitglieder der Academie noch die besondere Verbindlichkeit, den Sitzungen derselben regelmässig beizuwohnen, ihre Ansichten nach Pflicht und Gewissen, freimüthig, unpartheiisch und ohne Nebenabsicht zu eröffnen, und über alle in den Sitzungen vorfallenden Aeusserungen das strengste collegialische Stillschweigen zu beobachten.

XXIX. *Ordnung bei den Sitzungen.*

Die ordentlichen, wie die ausserordentlichen und öffentlichen Sitzungen werden von dem Director der Academie zusammen berufen. Ausserordentliche Sitzungen finden besonders zur Bestimmung der Preis-Aufgaben, so wie zur Beurtheilung der Concurrenz-Stücke statt.

In den ordentlichen Sitzungen werden die Gegenstände, welche in Berathschlagung genommen werden sollen, nach der Ordnung, wie sie an die Academie gelangt sind, von dem General-Secretär in Vortrag gebracht. Nach jedem abgelegten Vortrag vernimmt der Director die Meinung der Mitglieder, und fasst nach vollendeter Umfrage nach der Mehrheit der Stimmen den Schluss, oder entscheidet bei vorhandener Gleichheit durch seine Stimme.

Der General-Seeretär hat den Beschluss, jedoch auch mit Bemerkung der abweichenden Stimmen, zu Protocol zu bringen. Nach geendigtem Vortrage hat jedes Mitglied das Recht, Vorschläge oder sonstige Mittheilungen zu machen, die es der Academie nützlich glaubt. Zuletzt werden die eingegangenen Nachrichten und die Correspondenz vorgelegt.

Bei den ausserordentlichen Versammlungen, welche zum Behuf der Preis-Zuerkennung gehalten werden, haben der Director und die Professoren der Schule, die das vorliegende Kunstwerk betrifft, zuerst ihre Meinung zu eröffnen; sich über alles, was ihnen an dem

Werke lobens-oder tadelnswerth scheint, zu erklären; die übrigen Mitglieder, in deren Fach es nicht einschlägt, können hierauf ebenfalls ihre Bemerkungen, jedoch bloss zur Berathung mittheilen, und endlich wird der motivirte Beschluss durch Abstimmung gefasst, und das Protocoll derselben an Uns eingesendet, um Unsere Sanction für die ertheilten Preise einzuholen.

XXX. *Ehren-Mitglieder, ordentliche Mitglieder, Professores honorarii, und Correspondenten der Academie.*

Wir verstatten der Academie der Künste, sich einheimische und auswärtige Ehren-Mitglieder beizugesellen. Als solche sollen eines Theils vorzügliche Beförderer und Liebhaber der Künste, andern Theils wirkliche Künstler vom ersten Range erwählt werden.

Ordentliche Mitglieder sollen nur ausübende Künstler seyn können; von einheimischen diejenigen, welche zu den Kunst-Ausstellungen der Academie alle Jahre eines, oder mehrere ihrer Werke einsenden, oder die ein förmliches Aufnahmstück geliefert haben, das, wenn es ein Gemählde ist, wenigstens 3 Schuhe in der Höhe und Breite haben muss; bei Portrait-Mahlern eine Figur mit Händen, bei Bildhauern eine ganze Figur in Metall oder Stein, in einer Höhe von wenigstens 2 Schuhen, oder ein Basrelief; bei Architecten der Grundaufriss und Durchschnitt eines Gebäudes; bei Kupferstechern eine Platte nach einem vorzüglichen Meister seyn soll.

Auswärtige Künstler sollen nur dann zu ordentlichen Mitgliedern erwählt werden, wenn sie entweder in eine regelmässige Verbindung mit der Academie treten, und diese durch jährliche Einsendung eines oder mehrerer ihrer Werke, oder wenigstens von Zeichnungen derselben, zu den Kunst-Ausstellungen fortwährend unterhalten, oder wenn sie ein förmliches Aufnahmstück nach den obigen Bestimmungen eingesendet haben.

Wir wollen ferner der Academie der Künste verstatten, einheimischen und auswärtigen ordentlichen Mitgliedern, besonders den Lehrern der Provinzial-Kunstschulen, nach zuvor von Uns eingeholter Genehmigung, den Titel von Professoren der hiesigen Academie zu ertheilen, und diese als Professores honorarios in ihrem Etat mitaufzuführen.

Die ordentlichen hier anwesenden Mitglieder werden zu den ordentlichen Versammlungen regelmässig mit eingeladen, bei welchen sie eine berathende Stimme führen können, wenn nicht die Academie selbst zuträglich findet, den ausgezeichnetsten derselben auch das Stimmrecht zuzuerkennen. Bei öffentlichen Versammlungen erscheinen sie eben so, wie die wirklichen Mitglieder der Academie.

Es können endlich auch von einheimischen und auswärtigen Gelehrten oder Künstlern solche Männer zu Correspondenten erwählt werden, von denen sich die Academie überhaupt Beförderung ihres Zweckes, interessante Mittheilungen and literarische Mitwirkung versprechen kann.

Die Wahl der ordentlichen Mitglieder, so wie der Ehren-Mitglieder und Correspondenten soll regelmässig vor Ende der Kunst-Ausstellung stattfinden. Die Aufnahmstücke, welche der Academie als Eigenthum verbleiben, bleiben jedesmal einige Wochen lang ausgestellt, und bei der Beurtheilung derselben wird eben so, wie bei der Beurtheilung der Preisstücke verfahren, überhaupt aber bei den Wahlen streng, und nach der genauesten Unpartheilichkeit zu Werke gegangen, damit die Academie ihre Ehrenbezeugungen nicht durch Verschwendung werthlos mache, und durch die Eigenschaften ihrer Mitglieder mehr, als durch die Menge derselben sich des öffentlichen Beifalls versichere.

XXXI. *Academische Künstler.*

Indem Wir wünschen, die Academie der Künste, soviel möglich, auch für das allgemeine Leben wirksam zu machen, und wenn es möglich wäre, die Zeiten wieder herbeizuführen, wo das Handwerk der Kunst näher stand, und aus der Mitte desselben tüchtige Künstler hervorgiengen, haben Wir der Academie das Recht ertheilt, auch solchen inländischen Handwerkern, deren Arbeiten sich durch geschmackvolle, und schöne Formen auszeichnen können, besondere Aufmunterungen zu ertheilen, und zu dem Ende besonders geschickten Metall-Stein-Schnitzarbeitern und ähnlichen, das Prädicat academischer Künstler zu geben, oder dieselben wenigstens bei den jährlichen Preis-Ertheilungen als vorzüglich geschickte Arbeiter nahmhaft zu machen, und öffentlich zu beloben.

XXXII. *Rang der wirklichen Mitglieder.*

In wiefern Wir die Academie der Künste als eine öffentliche Instanz in Sachen der Künste constituiren, die durch ihre Berathschlagungen und Vorschläge den Wachsthum der Künste fördern und die von Uns auf deren Bestes zu verwendenden Mittel in Wirksamkeit setzen soll, wollen Wir, dass die ordentlichen, wirklichen Mitglieder derselben den Rang von Collegial-Räthen geniessen; dem Director der Academie, als dem mit der obersten Leitung der ganzen Anstalt, so wie dem General-Secretär, als dem mit der Leitung der literarischen Geschäfte der Academie beauftragten Mitgliede, ertheilen Wir den Character und Rang von Collegial-Directoren.

Auch soll den Academischen Mitgliedern, um sie den übrigen Staatsdienern gleichzustellen, eine Uniform nach dem Uns zur Genehmigung einzusendenden Vorschlag des Directors bewilliget werden.

XXXIII. *Benennung des Personals der Academie.*

Die Benennung des ständigen Personals der Academie behalten Wir Uns selbst vor; werden aber bei künftig sich ereignenden Erledigungsfällen jedesmal den gutachtlichen Vorschlag der Academie einholen.

Was die jetzige Ernennung betrifft, so geschieht dieselbe hiemit, wie folgt.

1. Als Director der Academie bestätigen Wir den bereits von Uns dazu ernannten ehemaligen Director der Academie und Gallerie zu Düsseldorf, Peter Langer.

2. Zum beständigen General-Secretär ernennen Wir den Doctor und ehemaligen Professor zu Würzburg, Schelling, mit Beibehaltung seiner Stelle als frequentirendes Mitglied der Academie der Wissenschaften.

3. Zu Professoren der Academie:

A. Für die Historien-Mahlerei.

a. Unseren Hofmahler Kellerhofen, dem Wir die besondere Aufsicht über die Schüler der Academie übertragen.

b. In der dritten Classe den Professor Joseph Langer;

c. In der zweiten Classe den Professor Hauber.

d. In der ersten Classe den Professor Seidl.

B. Zum Professor der Landschaft-Mahlerei den Gallerie-Inspector Johann Georg Dillis, mit Beibehaltung seiner Stelle, und der Aufsicht über das Zeichnungs-Cabinet.

C. Zum Professor der Bildhauer-Kunst, den Director Peter Simon Lammine.

D. Zum Professor der Baukunst, den jetzt in Rom sich aufhaltenden Architect Fischer.

E. Zum Professor der Kupferstecherkunst, den Kupferstecher Karl Hess.

XXXIV. *Errichtung eines besondern Kunst-Comité in Bezug auf die Verwaltung der Kunstschätze*

Um den verschiedenen von einander unabhängigen Kunst-Anstalten einen Vereinigungspunkt zu geben, und in die Anordnungen und gesammte Verwaltung derselben Uebereinstimmung zu bringen, haben Wir schon früher die Errichtung eines besonderen, mit der Academie zwar in Verbindung stehenden, aber doch von ihr verschiedenen, Comité von Künstlern beschlossen. Zur Vollziehung dieses Beschlusses setzen Wir folgende nähere Bestimmungen fest:

Mitglieder desselben sollen seyn,

a. alle Directoren der einzelnen Kunst-Anstalten, als: der Director Unserer Central-Gallerie, Zeichnungs-und Kupferstich-Sammlung, Christian Mannlich; der Director der Antiken-Sammlungen, Lamine, mit dem Director der Academie, Langer.

b. Von jeder Schule der Academie ein Lehrer. Von der Schule der Historien-mahlerei wird der Professor der dritten Classe immer dazu genommen.

c. Einige geschickte Künstler, welche aber die Zahl von vier nie übersteigen dürfen. Für jetzt ernennen Wir dazu die beiden Mahler, Franz und Wilhelm Kobell.

Bei diesem so zusammen gesetzten Comité sollen,

1tens, alle Haupteinrichtungen der Kunst-Sammlungen, und

2tens, alle neue Anschaffungen, Tausche, und ähnliche Gegenstände, welche sich auf die Kunst beziehen, zur Begutachtung gebracht;

3tens die Herstellung genauer und vollständiger Inventarien der verschiedenen Kunst-Sammlungen geleitet und betrieben werden.

Von jedem dieser Inventarien muss ein doppeltes, von den Vorstehern der betreffenden Sammlungen unterzeichnetes Exemplar gefertigt, und das eine derselben an Unser Ministerium des Innern eingesendet, das andere in dem Versammlungs-Orte des Kunst-Comité niedergelegt werden.

4tens. Auch in andern Fällen, als bei Besetzung der vorzüglichsten Kunst-Lehrerstellen, bei Beurtheilung von Planen zu öffentlichen Gebäuden, oder von Vorschlägen, die auf das Ganze der Kunst Beziehung haben, und ähnlichen Veranlassungen behalten Wir Uns vor, dieses Comité, so oft Wir es nöthig finden, zur Deliberation zusammen rufen zu lassen.

Dieses Comité versammelt sich bei den oben angeführten Anlässen auf jedesmaligen Befehl des geheimen Ministerium des Innern. Die Versammlung wird von demjenigen Vorstande zusammen berufen und präsidirt, in dessen Fach der Deliberations-Gegenstand vorgüglich einschlägt, und an welchen daher auch die besondere Ministerial-Weisung zur Eröffnung der Versammlung ergangen ist. Das Protocoll wird von dem Secretär der Academie geführt.

XXXV. *Fond der Academie der Künste.*

Bis für die Academie der Künste ein hinlänglicher Fond bestimmt seyn wird, soll das zur Bestreitung ihrer Bedürfnisse Erforderliche auf Unsere Central-Staats-Casse übernommen werden. Ausser den Besoldungen der Mitglieder haben Wir eine bestimmte Summe für die laufenden Unkosten und die Regie ausgeworfen. Die Casse, aus welcher diese zu bestreiten sind, wird dem General-Sekretär übergeben, und die mit den Belegen versehene Rechnung halbjährig, von dem Director und ihm unterzeichnet, an das Ministerium des Innern eingesendet, von welchem sodann wegen ihrer Justification der Geschäfts-Ordnung gemäss das weitere eingeleitet wird. Der für das Fach der bildenden Künste bestimmte Fond soll zugleich von jedem anderen geschieden, und jedem Zweige der nicht unmittelbar zur Academie gehörigen Kunst-Anstalten, als der Central-Gallerie, dem Kupferstich-Cabinette u. s. w. seine besondere Dotations-Summe angewiesen werden.

XXXVI. *Local der Academie, und untergeordnetes Personal.*

Zum Local der Academie der Künste und der damit verbundenen Anstalten bestimmen Wir vor der Hand einen Theil des Wilhelminischen Gebäudes. Unser Ministerium des Innern wird nach dem durch den Hofbau-Intendanten vorzulegenden Plane der inneren

 Einrichtung,

Einrichtung, die nothwendigen, und den verschiedenen Zwecken der Anstalt angemessenen Veränderungen vornehmen lassen. Die Kosten sowohl der Herstellung als der Hauptunterhaltung des Kunst-Locals werden auf den für die Central-Staats-Gebäude ausgesetzten Fond übernommen.

Für die untergeordneten Dienste der Academie soll das bisherige Personal verwendet werden, und sollte eine Vermehrung desselben nöthig seyn, so sind Uns dazu Individuen aus der pensionirten Dienerschaft in Vorschlag zu bringen. Dem General-Secretär wird zur Fertigung der erforderlichen Abschriften ein Diurnist beigegeben.

XXXVII.

Wir wollen, dass nach diesem neuen Grund-Plane die Academie unverzüglich in Thätigkeit trete, um einstweilen die nöthigen Vorkehrungen zu treffen, damit nach geschehener Einrichtung des Locals der Unterricht sogleich anfangen könne, und um diejenigen Punkte, welche etwa durch die gegenwärtige Constitutions-Urkunde in Absicht des zur Ausführung nöthigen Details noch unbestimmt gelassen wären, zu Unserer endlichen Entscheidung zu bringen.

So gegeben in Unserer Haupt-und Residenz-Stadt München, am dreizehnten Tage des Monats Mai, im Eintausend acht hundert und achten Jahre, Unsers Reiches im dritten.

Max Joseph.

Freyherr von Montgelas.

Auf königlichen allerhöchsten Befehl.

von *Krempelhuber.*

Sub-Enclosure (D.) in No. 28.

Von Seiner Majestät dem Könige Ludwig, am 30ten Januar 1828, allergnädigst genehmigte Satzungen für die Schüler der Königlich Bayerischen Academie der bildenden Künste in München.

Satzungen für die Schüler der Königlichen Academie der bildenden Künste in München.

I. Jeder, der an der Academie der bildenden Künste in München studieren will, muss nach Vorschrift der Satzungen und durch einen Beschluss der Academie förmlich aufgenommen seyn. Keinem, der blos Privatschüler eines Lehrers ist, wird der Zutritt gestattet.

II. Die gewöhnliche Aufnahmszeit ist der Anfang des academischen Jahrs im November und die Zeit um Ostern. Nur aus besondern Rücksichten können Aufnahmen in der Zwischenzeit statt finden.

III. Jeder in die Academie Eintretende muss wenigstens das Alter von 14 Jahren erreicht haben, und wenn er sich dem Fache der Malerey, Bildhauerey oder Kupferstecherkunst widmen will, im Zeichnen so weit vorbereitet seyn, dass er einen Kopf nach dem Runden zu zeichnen vermag. Solche, die noch gar keinen Unterricht im Zeichnen erhalten haben, können nicht in die Academie aufgenommen werden.

Wer in die Bauschule einzutreten wünscht, muss mit den Anfangsgründen der Arithmetic, Geometrie und Stereometrie vertraut und bereits über die ersten Schwierigkeiten der architectonischen Zeichnung hinaus seyn, die Säulenordnungen des Vignola gezeichnet haben, auch die Schattenbestimmungen und die leichteren Holzconstructionen kennen.

IV. Jeder, der aufgenommen zu werden wünscht, hat um die Aufnahme schriftlich, entweder selbst oder durch seine Angehörigen, nachzusuchen. In dem an die Academie gerichteten Gesuch hat er sein Vaterland, sein Alter, und Namen und Stand seines Vaters anzugeben; auch hat er demselben die erforderlichen Zeugnisse über den bisher genossenen Unterricht, die erhaltene Erziehung und sein bisheriges sittliches Betragen beizulegen; er muss sich zugleich für ein bestimmtes Fach erklären und durch vorgelegte Zeichnungen seine Kenntnisse und Fertigkeiten in den oben §. III. angedeuteten Vorbereitungsfächern erweisen.

V. Keiner kann sogleich als Zögling aufgenommen werden, sondern es wird ihm nur der Besuch der Academie verstattet, wo dann der Professor der betreffenden Schule oder Classe seine Fähigkeiten untersucht, und ihm die erste Anleitung ertheilt. Zeigt er nach Verfluss des ersten Halbjahres hinlängliche Fähigkeiten, so wird er durch einen Beschluss der Academie definitiv aufgenommen, und erhält die Matrikel als Schüler derselben. Zeigt sich aber, dass es ihm an natürlichen Talenten fehle, so wird, nachdem hierüber von dem Director und dem Professor der betreffenden Schule oder Classe erkannt worden, der zur Aufsicht bestimmte Lehrer den Eltern oder Vormündern die Anzeige davon machen, und den Anfänger selbst erinnern, dass er ein anderes Fach ergreife.

VI. Lässt es der Schüler nach schon geschehener definitiver Aufnahme an dem gehörigen Fleisse fehlen, oder zeigt sich nach längerer Zeit die Unzulänglichkeit seines Talents erst bestimmter, so soll auf dieselbe Weise verfahren werden.

VII. Bei der ersten Aufnahme hat jeder Zögling dem Director durch Handschlag Gehorsam gegen die Satzungen, Fleiss, ordentliches Betragen und Achtung gegen jeden Professor der Academie anzugeloben. Wer diese Pflichten vernachlässiget, wird von der Academie ausgeschlossen.

VIII. Um Schüler der Academie zu werden, hat er sich nach Ablauf des ersten halben Jahres mit einigen seiner Arbeiten nebst einem Zeugnisse von dem Professor seiner Classe bey dem Director zu melden. Hierauf erhält er die Matrikel und zugleich die Vorrechte eines Schülers der Academie, nämlich:

1. Den Anspruch auf den Platz vor den Nicht-Immatriculirten bei dem Zeichnen nach dem Modell und den Abgüssen, so wie in allen Fällen, wo es an Platz gebrechen sollte:

2. Sobald er in die dritte Classe der Malerey oder auf die entsprechende Stufe in der Bildhauerschule gelangt, von der Academie bezahlte Modelle zu den Cartons, Gemälden und Statuen, welche er zu seinem Studium ausführt:

3. Den Schutz und die Verwendung der Academie in allen bürgerlichen Angelegenheiten.

IX. Die Schüler sind, so lange sie in der Academie bleiben, ganz an die Studienordnung derselben gebunden. Jeder Anfänger hat die vorgeschriebenen Stufen zu durchgehen.

Keiner kann zur Bildhauer- oder Kupferstecherkunst übergehen, ehe er in der ersten Classe die Zeichnung erlernt, und ehe der Director über die Hinlänglichkeit seiner Fortschritte erkannt hat.

Keiner darf sich einer für sein Kunstfach vorgeschriebenen Unterrichtstunde willkührlich entziehen.

X. Jeder Schüler der Academie ist verpflichtet, die Academie täglich und fleissig zu besuchen, auch in den vorgeschriebenen besonderen Unterrichtsstunden sich unausgesetzt einzufinden.

Die Historienmaler, Bildhauer und Kupferstecher müssen überdiess täglich 2 Stunden nach dem Modell studieren. Wer durch Krankheit oder andere Zufälle am Besuch der Academie verhindert wird, hat solches dem die Aufsicht führenden Professor sogleich zu melden.

Wer durch triftige Gründe auf längere Zeit abgehalten ist, die bestimmten Stunden auf der Academie zuzubringen, muss sich desshalb bey dem Professor seiner Classe ausweisen, die Erlaubniss zu Hause zu arbeiten, bei dem Director einholen und davon dem die Aufsicht führenden Professor Anzeige machen.

XI. Solche, die von Anfang an die bestimmten Lehrstunden nicht einhalten wollen, können, wenn sie im Uebrigen die im §. III. festgesetzten Bedingungen erfüllt haben, zwar einen Erlaubnissschein zum Besuche der Academie, aber weder die Matrikel als Zöglinge noch die Vorrechte derselben erhalten. Anfänger, welche noch nicht nach der Antike zeichnen können, werden auch als Dilettanten nicht aufgenommen.

XII. Der Unterricht in der Academie dauert unausgesetzt von Anfang Novembers bis Anfang Septembers des folgenden Jahrs. Die Academie wird im Sommer Vormittags um 6 Uhr, im Winter um 8 Uhr; Nachmittags immer um 1 Uhr geöffnet, dann Mittags um 12 Uhr, und im Sommer Abends um 6 Uhr, im Winter Abends um 7 Uhr geschlossen.

XIII. Jeder tritt in den Unterrichtssaal mit unbedecktem Haupte, legt Hut, Mantel, Stock u. s. w. an den dazu bestimmten Platz ab, beträgt sich ehrerbietig und folgsam gegen die Lehrer, ruhig, still und sittsam gegen seine Mitschüler und beschäftigt sich mit seiner Arbeit, ohne Jemand durch Schwatzen oder auf andere Art zu stören, und wendet sich blos an den anwesenden Lehrer oder den die Aufsicht führenden Professor, wenn ihm ein Mitschüler beschwerlich fallen sollte. Wer dagegen handelt, und auf erhaltene Ermahnungen sich nicht bessert, wird ohne weiters vom Unterrichte ausgeschlossen.

XIV. Jeder Schüler ist gehalten, die letzte Zeichnung, die er vor Ostern und vor den Herbstferien macht, mit seinem Namen bezeichnet an den die Aufsicht führenden Professor abzugeben, damit dieselbe zur Prüfung seiner Fortschritte während des halben Jahres dienen kann.

XV. Jeder Schüler ist verpflichtet, bei der Aufnahme seine Wohnung anzugeben, und sollte er sie verändern, seine neue Wohnung dem die Aufsicht führenden Professor anzuzeigen. Dieser wird auf das Betragen der Zöglinge auch ausser der Academie seine Aufmerksamkeit richten, und im Falle eines ungeziemenden oder unordentlichen Betragens davon in Zeiten bei der Academie Anzeige machen.

XVI. Nur in dem Fall der äussersten Dürftigkeit, verbunden mit einem ganz ausgezeichneten Talente, darf sich ein Schüler, der Inländer ist, auf ein Stipendium oder auf eine andere Unterstützung aus dem Fond der Academie Hoffnung machen. Die Stipendien können nur von Sr. Majestät dem Könige verliehen werden; sie werden immer auf ein Jahr bewilligt, nach dessen Verlauf ihre Verlängerung, im Falle fortdauernder Dürftigkeit und Würdigkeit bei der allerhöchsten Stelle nachgesucht werden kann. Den übrigen Zöglingen muss es Ermunterung genug seyn, den unentgeldlichen Unterricht zu geniessen und in einer Lage zu seyn, wo sie durch Fleiss und Talent frühzeitig sich auszeichnen können.

XVII. Diejenigen Schüler, welche Gemälde oder Bildhauereien auf Bestellung ausführen, haben Anspruch auf einen Platz in der Academie zu diesen Arbeiten, so ferne dieselben nicht den vorhandenen Raum überschreiten; sie müssen jedoch die Kosten der Modelle in den Anschlag der Bezahlung, welche sie für die Arbeit erhalten, aufnehmen und dürfen deren Bestreitung nicht von der Academie verlangen. Nur bei Arbeiten der Zöglinge für Se. Maj. den König oder auch nach erhaltener allerhöchster Bewilligung bei Arbeiten derselben für Staats- und andere öffentliche Zwecke dürfen jene Kosten von der Academie bestritten werden.

XVIII. Zeugnisse werden von der Academie in der Regel nur am Schlusse des Lehr-Jahres, im September, ausgestellt, und blos in ausserordentlichen Fällen öfter ertheilt. Jeder Schüler, der ein Zeugniss über seine Fortschritte und sein sittliches Betragen begehrt, hat dasselbe von dem Professor seiner Classe und dem die Aufsicht führenden Professor zu verlangen, und mit einigen seiner Arbeiten begleitet, dem Director vorzulegen, welcher dasselbe, genehmigt oder mit Zusätzen und mit seiner Unterschrift versehen, an das General-Secretariat zur Ausfertigung sendet.

XIX. Wer sich bey dem Director um Versetzung in eine höhere Classe, oder um die Erlaubniss in der Gallerie copiren zu dürfen, melden will, muss sich ein Zeugniss von dem Professor seiner Classe geben lassen, welches ihn dessen würdig erklärt. Seine Versetzung muss er dem die Aufsicht führenden Professor anzeigen.

XX. Kein Schüler darf ausser der Ferienzeit eine Reise antreten, ohne sich bei dem Director dazu die Erlaubniss zu holen, und es dem Professor seiner Classe und dem die Aufsicht führenden Professor anzuzeigen.

Geht

Geht die Reise in das Ausland, so hat er sich bei dem General-Secretariat mit einem von dem Director unterzeichneten Vorweis zu melden, welcher seinen Namen und das Ziel seiner Reise enthält, worauf ihm eine Reise-Erlaubniss ausgefertiget wird, die er bey der Polizey-Behörde abzugeben hat, um einen Pass zu erhalten.

XXI. Wünscht ein Schüler der Academie zugleich Vorlesungen an der Universität zu hören, so hat er nach Rücksprache mit dem Professor seiner Classe dem Director der Academie Anzeige davon zu machen, damit solches ohne Störung in seinen Studien an der Academie geschehen, und wegen allenfalls erforderlicher Immatriculation das Gehörige eingeleitet werden könne.

XXII. Zöglinge, die während der Ferien ihre Studien auf der Academie fortsetzen wollen, haben vor dem Anfang derselben die Anzeige davon bey dem die Aufsicht führenden Professor zu machen.

XXIII. Die Dauer der academischen Studien ist auf höchstens sechs Jahre bestimmt. Ausnahmen von dieser Regel finden nur mit allerhöchster königlicher Genehmigung statt. Uebrigens steht es jedem Zögling frey sich nach vollendetem academischen Unterrichte als Privatschüler eines oder des andern Lehrers der Academie zu betrachten.

XXIV. Jedem Schüler steht es frey, auch vor der im §. XXIII. festgesetzten Zeit die Academie zu verlassen; jedoch hat er seinen Austritt dem Director persönlich anzuzeigen.

XXV. Diese Vorschriften werden in den Unterrichts-Sälen der Academie angeschlagen; auch wird jedem Zögling bey der Aufnahme ein Exemplar derselben eingehändiget.

Einrichtung und Personalstand der Königlichen Academie der bildenden Künste in München als Lehranstalt.

I.—*Unterricht.*

1. Die Academie, als Lehranstalt, zerfällt in vier Hauptschulen nämlich:
die der Malerey,
Bildhauerkunst.
Baukunst.
Kupferstecherkunst.

2. Die Schule der Malerey theilt sich in drey Classen, über deren jede ein Professor die Aufsicht führt.

Die erste Classe nimmt solche Schüler auf, welche nach Köpfen und leichteren Figuren in Gyps zeichnen, und zugleich den Anfang des Studiums nach der Natur machen.

In die zweyte Classe treten die, welche nach den Gypsabgüssen des grossen Antikensaales so wie nach dem lebenden Modell zeichnen, und zugleich den Anfang im Oelmalen machen.

Aus dieser gehen die Schüler in die dritte Classe über, wo mit der weitern Uebung des Oelmalens zugleich Versuche in der Composition verbunden werden.

3. Die Zöglinge der Bildhauerschule theilen mit denen der Malerschule den Unterricht der ersten Classe in der Zeichnung, indem sie zugleich bey dem besonderen Lehrer ihrer Kunst das Modelliren lernen.

Auf der nächsten und folgenden Stufe stehen sie unter der Leitung des Professors der Bildhauerkunst, indem sie von ihm zum Studium nach vorzüglichen Mustern und nach der Natur, und zu eigenen Compositionen angehalten werden.

4. Im Winter werden die Abende von 5—7 Uhr zum Zeichnen und Modelliren nach der Natur angewandt, wobey sich die Zöglinge der Maler-, Bildhauer- und Kupferstecher-Schule einfinden; im Sommer wird einige Stunden des Tags nach der Natur und dem Gewande gezeichnet, gemalt und modellirt. Zum Behuf besonderer Studien kann auch im Winter bisweilen bey Tage nach dem Nackten gezeichnet, gemalt und modellirt werden.

5. Der Unterricht in der Anatomie für Maler und Bildhauer wird in der Art ertheilt, dass von einem dazu beauftragten Anatomen im Winter einige Leichname mit Hinsicht auf die Bedürfnisse des Künstlers zergliedert, im Sommer aber die Knochen- und Muskellehre am Skelett und anatomischen Modell vorgetragen werden.

6. Der Professor der Baukunst ertheilt Unterricht sowohl im theoretischen als im practischen Theile seiner Kunst. Die Lehren der bürgerlichen Baukunst werden ihrem ganzen Umfange nach vorgetragen, und dienen als Vorbereitung für die der höhern oder schönen Baukunst, welche ganz besonders dem academischen Studium angehören. Der Unterricht im Wasser-, Brücken- und Strassenbau ist ausgeschlossen.

7. Derselbe Professor trägt in besonderen Stunden die Lehre der Beleuchtung und Perspective für Maler und Baukünstler vor. Die ersteren dürfen diesem Unterrichte beywohnen, sobald sie es in der Zeichnung der Figuren zu einiger Fertigkeit gebracht, und die für denselben nothwendigen mathematischen Vorkenntnisse sich erworben haben.

8. Diejenigen, welche sich der Kupferstecherkunst widmen, können nicht eher in die Schule derselben eintreten, bis sie in der ersten Classe der Malerey die Zeichnung soweit als die Maler gelernt haben, die in die zweite Classe übergehen. Auch müssen sie während des Besuchs der Kupferstecherschule in den Abendstunden unausgesetzt nach dem lebenden Modelle zeichnen.

9. Dem Vortrage der ältern und neuern Kunstgeschichte und der damit verwandten Zweige des Wissens sind besondere Vorlesungen gewidmet, an welchen die Zöglinge sämmtlicher Schulen Theil zu nehmen haben.

10. Der Unterricht in der Academie für alle Schüler ist unentgeldlich.

II.—*Personalstand.*

Director, Herr Peter v. Cornelius.

General-Secretär, Herr Martin Wagner (in Rom).

Professor der Historienmalerey, zugleich mit der Aufsicht über die Schulen beauftragt, Herr Moritz Kellerhoven.

Professor der I. Classe der Malerey, Herr Heinrich Hess.
Professor der II. Classe, Herr Clemens Zimmermann.
Professor der III. Classe, Herr Julius Schnorr v. Carolsfeld.
Professor der Bildhauerkunst, Herr Conrad Eberhard.
Professor der Baukunst, Herr Friedrich Gärtner.
Professor der Kupferstecherkunst, Herr Carl Hess.
Professor der Kunstgeschichte, zugleich für den General-Secretär functionirend, Herr Dr. Ludwig Schorn.
Academischer Formator, Georg Kienzler.
Academie-Diener, Joseph Wengenmayer, Anton Braun.

Sub-Enclosure (E. 1.) in No. 28.

REGIERUNGS-BLATT für das Königreich Bayern. Nro. 9. München, Sonnabends den 23ten Februar 1833.

Königliche Allerhöchste Verordnung. Die Gewerb- und Polytechnischen Schulen betr.
Ludwig, von Gottes Gnaden König von Bayern.

Wir haben Unsere ernste Fürsorge für den landwirthschaftlichen und gewerblichen Unterricht bereits durch frühere Verordnungen bewährt, und es gereicht Uns zum beruhigenden Gefühle, schon gegenwärtig in einzelnen Städten des Reiches gedeihliche Erfolge Unserer Anordnungen zu erblicken.

In der Absicht nun, diesen wichtigen Gegenstand zur gleichmässigen Reife zu bringen, und insbesondere das amtliche Inslebentreten der von Uns angeordneten Gewerbeschulen mit genauer Beachtung der budgetmässigen Mittel und mit möglichster Erleichterung der betreffenden Stadtgemeinden und der Kreisfonde zu bewirken verfügen Wir, was folgt:

I. Die polytechnischen sowohl, als die Gewerbsschulen sind nicht bestimmt, Kunstschulen zu seyn, oder in das Gebiet der eigentlichen künstlerischen Ausbildung einzugreifen, ihre Aufgabe ist vielmehr, die Kunst in die Gewerbe zu übertragen, und den Gewerbsbetrieb selbst auf jene Stufe zu bringen, welche den Fortschritten der Technic und der nothwendigen Concurrenz mit der Industrie des Auslandes entspricht.

II. Der Grund einer tüchtigen technischen Ausbildung soll bereits in den Elementarschulen dadurch gelegt werden, dass

(a) Die Zeichnungslehre und die Ausbildung der Schullehramts-Candidaten für diesen Zweig auf die Anfangsgründe des Linear- und Ornamenten-Zeichnens zurückgeführt, und dass
(b) Der Unterricht in den sogenannten, nützlichen Gegenständen nach den einstigen Bedürfnissen gebildeter Landwirthe und Gewerbsleute bemessen und als Vorbereitung zu den künftigen Lehrvorträgen bey den landwirthschaftlichen und Gewerbsschulen behandelt werde.

III. Die erste Stufe und zugleich die Hauptgrundlage des technischen Unterrichtes bilden die Gewerbsschulen. Der Unterricht in diesen Schulen beginnt mit der gesteigerten Rechenkunst, mit der einfachen geometrischen Zeichnung und der Zirkellehre, mit einfachen Ornamenten-Umrissen, mit den Anfangsgründen der Naturgeschichte, und endet mit der architectonischen Zeichnung, mit dem fertigen freyen Handzeichnen, mit der Uebung in dem Geschäftsstyle und in der Buchhaltung, und nach Massgabe des von einem Schüler ergriffenen Berufes auch mit den nöthigen Kenntnissen in der Chemie.

Unser Staatsministerium des Innern wird diese Gegenstände sowohl, als die entsprechenden Uebungen in der Sprache, Geographie und Geschichte auf die drey Jahrescurse der Gewerbsschulen in der Art vertheilen, und die Fleiss- und Fortgangszeugnisse in der Art regeln, dass die Schüler, und namentlich die den Gewerbsunterricht geniessenden Lehrlinge von jeder einzelnen Gewerbsschule in alle übrigen des Kreises ohne irgend einen Nachtheil überzutreten vermögen.

IV. Die Mittel zur Begründung der Gewerbsschulen werden entnommen:

(a) Aus den Fonden der allenthalben in Gewerbsschulen oder mindestens in einzelne Curse der Letztern umzuwandelnden höheren Bürgerschulen;
(b) Aus den etwa dargebotenen und in jeder Weise zu ermunternden freywilligen Beyträgen von Privaten;
(c) Aus dem mässigen Schulgelde der zahlungsfähigen Schüler;
(d) Aus den etwa disponibeln Mitteln der Unterrichts-Stiftungen;
(e) Aus etwaigen Beyträgen der Gemeinden, und
(f) Aus den nach Anhörung der Landräthe etwa bewilligten Kreisfonds-Zuschüssen.

V. Es ist Unser Wille, die Gemeinden in Begründung von Gewerbsschulen auf jede mögliche Weise erleichtert zu sehen. Zu dem Ende gestatten Wir nicht nur unter analoger Anwendung des hinsichtlich der lateinischen Schulen aufgestellten Grundsatzes, dass minder bemittelte Städte sich auf Errichtung unvollständiger, d. i. nur den untersten oder die zwey ersten Curse umfassenden Gewerbsschulen beschränken, sondern Wir wollen auch überhaupt die Lehrkräfte der Volksschulen und der höhern Lehranstalten, soweit es nur immer unbeschadet des Hauptzweckes geschehen kann, für den gewerblichen Unterricht verwendet wissen, und lassen insbesondere auch den nicht als Lehrlinge eingeschriebenen, einer höhern technischen Ausbildung sich widmenden Jünglingen unbenommen, auf den Grund der vollständig absolvirten lateinischen Schule, und mit Unterwerfung unter die Rectoratsgesetze und Disciplin, den Gymnasialunterricht in den sogenannten Realgegenständen gemeinsam mit den Gymnasialschülern zu hören, wodurch jede Nothwendigkeit eines gesteigerten Realunterrichts an den hiezu nicht bemittelten Gewerbsschulen von selbst

 hinwegfällt

hinwegfällt, und für die Lehrlinge neben den Lehrvorträgen der Gewerbsschulen der Besuch der Feyertagsschule und insbesondere der möglichst zu begünstigenden Handwerks-Feyertagsschule genügt.

VI. In jedem Kreise soll jedenfalls und zwar unverzüglich Eine vollständige Gewerbsschule unter dem Namen " Kreis-Gewerbsschule" errichtet werden. Diese Schule erhält ihren Sitz für den Rezatkreis in Nürnberg, für die übrigen Kreise in der Kreishauptstadt.

Ihnen fliessen vorzugsweise die neben den in dem Art. IV. unter a, b, c, d und e erwähnten Fonden auch angemessene Beyträge aus der für Landwirthschaft und Industrie, dann insbesondere für Gewerbsschulen bestimmten und 5,000 fl. betragenden Position jedes einzelnen Kreisbudget zu.

Die Gewerbsschule zu München bildet sich insbesondere aus der von dem dortigen Magistrate längst begründeten Handwerksschule, und tritt demnach auch zu dem Magistrate der Haupt- und Residenzstadt München in das angemessene Verhältniss.

VII. Um neben dem gewerblichen auch den landwirthschaftlichen Unterricht angemessen zu fördern, und auch dem so wichtigen ackerbauenden Stande einen Beweis Unserer väterlichen Fürsorge zu geben, wollen Wir nicht nur jede unvollständige und vollständige Gewerbsschule Unseres Reiches auch jungen Landwirthen hinsichtlich der ihrem Berufe verwandten Unterrichtsgegenstände geöffnet, sondern auch an dem Sitze jeder Kreisgewerbsschule einen eigenen Landwirthschaftslehrer aus dem für Landescultur bestimmten Kreisfonde aufgestellt, und durch ihn alle jene Theile der Bewirthschaftungslehre theoretisch und practisch vorgetragen wissen, welche nicht, wie Chemie, Naturlehre, Productenlehre, Sprachlehre, Zeichnen, Geschichte u. s. w. den gewerbetreibenden und ackerbauenden Ständen gemeinsam, und somit in dem Plane der Kreisgewerbsschule bereits einbegriffen sind.

VIII. Wir legen einen besondern Werth darauf, die technischen Schulen ihrem wahren Standpunkte erhalten, und nicht blosse Theoretiker, sondern auch practische, ihrem künftigen Berufe wahrhaft gewachsene Landwirthe und Gewerbsleute aus selben hervorgehen zu sehen.

Darum soll nicht nur der einzelne Schüler der, seinem speciellen Berufe, fremden Lehrgegenstände auf Verlangen enthoben, sondern es sollen auch die Gewerbsstätten einzelner ausgezeichneter Meister und der Wirthschaftsbetrieb einiger in der Nähe des Schulortes begüterter gebildeter Landwirthe den Schulen zugänglich gemacht werden, damit diese dort unter Anleitung ihrer Lehrer die angewandte Seite der Lehrvorträge erkennen, und mit der Nutzanwendung des Gehörten sich vollkommen vertraut machen können.

Insbesondere ist auch die Benützung der an dem Sitze der Schule etwa befindlichen Modellen-Sammlungen und Musterwirthschaften des landwirthschaftlichen oder polytechnischen Vereins zu erwirken.

IX. Den eine vollständige oder unvollständige Gewerbsschule aus ihren Mitteln begründenden Gemeinden wird das durch ihre Magistrate auszuübende Präsentationsrecht zu erledigten Lehr-Stellen gegen genaue Beobachtung der von Uns festgesetzten oder etwa noch festzusetzenden Qualificationsbestimmungen eingeräumt.

Gleiches Recht gestehen Wir den mit einer Kreis-Gewerbsschule versehenen Gemeinden für den Fall zu, wo die Gesammtdotation mit alleiniger Ausnahme des bewilligten Kreisfonds-Zuschusses aus Stiftungs- und sonstigen Mitteln dieser Gemeinden geschöpft ist.

Den Scholarchaten der mit vollständigen oder unvollständigen Gewerbsschulen versehenen Städte werden für Gegenstände dieser Schulen zwey Gewerbskundige von dem Magistrate gewählte Gemeinde-Mitglieder beygegeben.

Besteht in einem Kreise ein Bezirks-Ausschuss des polytechnischen Vereins, so sendet selber eins, und falls der Verein durch Beyträge oder besondere Mitwirkung sich auszeichnet, zwey seiner Mitglieder in das Ortsscholarchat.

Gleiche Auszeichnung unter gleichen Voraussetzungen werde den landwirthschaftlichen Kreiscomiteen bezüglich auf den landwirthschaftlichen Unterricht zu Theil.

Uebrigens gestatten Wir dem Ministerium, einzelne durch nahmhafte Stiftungen, durch dargebotene Benützung wichtiger Sammlungen oder in sonst einer Weise um die landwirthschaftlichen und gewerblichen Schulen ganz vorzüglich verdiente Privaten, Uns zur Aufnahme im Scholarchat für Gewerbe und landwrithschaftliche Gegenstände in Antrag zu bringen.

X. Der höhere Gewerbs-Unterricht (Unterricht der Bayer. polytechnischen Schulen) beginnt mit der höhern Zeichnungskunde (architectonische, geometrische und perspectivische Zeichnung), mit der Mathematic, der descriptiven Geometrie, der Experimentalphysic und den Anfangsgründen der Civilbaukunde.

Er schliesst mit dem eigentlichen Maschinen- und Architecturzeichnen, mit der Mathematic und Maschinenlehre, mit der technischen Chemie und nach Massgabe des Berufes der Schüler mit Bossieren und Modelliren, dann mit den wichtigsten Kenntnissen aus der Strassen-, Wasser- und Brückenbaukunde.

Unser Staatsministerium des Innern wird auch bey diesen Schulen die Eintheilung der Lehrgegenstände in die dreyjährigen Curse nach den unter Ziffer III. festgesetzten Standpunkten bewirken.

XI. Aus dem durch das Finanzgesetz hiefür bestimmten Fonde werden auch fortan unterstützt: die polytechnischen Schulen zu München, Nürnberg und Augsburg.

Diese theilen sich in den budgetmässigen Aerarialbeytrag von 27,000 fl. nach dem von Uns unterm Heutigen bestätigten Massstabe.

Unser Wille ist es, dass neben den gleichheitlich zu betreibenden allgemeinen Gegenständen jede dieser Schulen jene Industriezweige vorzugsweise behandle, welche der betreffenden Stadt und deren Umgegend zunächst eigenthümlich sind, wonach denn München, vermöge der vielen in der Haupt- und Residenzstadt vorhandenen Hilfsmittel, den

den Baugewerken und den in das Artistische einschlagenden Gegenständen, Nürnberg den Guss- und Metallgewerken, nebst vielen dort einheimischen Industrie-Arten,—Augsburg endlich der Woll- und Baumwollen-Fabrication der Kunstweberey und der Färberey nicht nur in der Gewerbs- sondern auch, so ferne es die höhern Sphären berührt, in der polytechnischen Schule eine vorzugsweise Aufmerksamkeit zuzuwenden hat.

XII. Für die Bildung technischer Beamten und sogenannter technischer Ingenieurs besteht auch fortan in Unserem Staate keine besondere geschlossene Anstalt. Dagegen haben Wir bereits durch Verfügung vom 17 Jänner d. J. an Unserer Hochschule zu München eine eigene Lehrstelle für allgemeine Länder- und Völkerkunde errichtet.

Ferner haben Wir unterm Heutigen Unserm Staatsministerium des Innern aufgetragen, die Lehrvorträge an der Cameralistischen Facultät Unserer Ludwigs-Maximilians-Universität dadurch zu vervollständigen, dass unbeschadet Unserer einstigen Beschlüsse über die allenfallsige Wiedereinführung oder Nichtwiedereinführung von Forstschulen, von den Professoren der aufgelössten Forstschule zu Aschaffenburg mit Beybehaltung des aus den Fonden jener Schule fliessenden Gehaltes für das specielle Lehrfach der Forstwissenschaft nach München versetzt, und einem der höhern Baubeamten neben seinen Berufsgeschäften, und gegen angemessene Gratification aus dem Fonde der polytechnischen Central-Schule das Lehrfach der höhern Mechanic übertragen werde, und indem Wir den mit einem günstigen Absolutorium einer Kreisschule versehenen nach Art. V. über den vollendeten Unterricht der lateinischen Schule und über die Erlernung der sogenannten Realgegenstände an einem Gymnasio sich ausweisenden Gewerbs- und Landwirthschaftsschülern, dann den Bau-Eleven Unserer Academie der bildenden Künste den Besuch der ihrem künftigen Berufe entsprechenden Universitätsvorlesungen einräumen, indem Wir ferner Unserem Staatsminister des Innern beauftragen, die Lehrkräfte sowohl der oben erwähnten Cameralistischen Facultät als der übrigen hiezu geeigneten Lehrstühle, namentlich der Chemie, der Mathematic, der Physic u. s. w. zu einem kräftigen Ganzen zu verbinden, und mit den Modellensammlungen und sonstigen Attributen des landwirthschaftlichen und polytechnischen Vereines, dann der landwirthschaftlichen Schule zu Schleissheim in angemessene Verbindung zu bringen, bieten Wir nicht nur den Landwirthen und Gewerbschulen Unseres Reiches eine Pflanzschule tüchtiger, theoretisch sowohl, als practisch gebildeter Lehrer, den zu ausgedehnterem Guts- und Fabriks-Betriebe sich vorbereitenden Jünglingen Gelegenheit zu vollständiger Ausbildung in ihrem künftigen Berufe, sondern auch den einstigen technischen Beamten und den bisher in Bayern nicht vorhanden gewesenen Privat-Ingenieuren die Möglichkeit dar, all dasjenige ohne Belästigung der öffentlichen Fonde in Unserer Haupt-und Residenzstadt zu erlernen, was in verschiedenen auswärtigen Staaten mit sehr nahmhaften Kosten durch geschlossene Institute bezweckt wird.

XII. Wir beauftragen Unseren Staatsminister des Innern, gegenwärtige Verfügung zum baldigen Vollzuge zu bringen, und vertrauen zu dem Eifer und den Einsichten sowohl Unserer General-Commissäre und Regierungs-Präsidenten, als auch der verschiedenen Gemeinden Unseres Königreichs, dieselben werden namentlich durch eifrige Vollstreckung der erhaltenen Aufträge, so wie durch kluge Benützung aller vorhandenen Lehrkräfte das baldige Zustandekommen jener Institute bewirken, deren Nothwendigkeit Staatsregierung und Stände zu wiederholtenmalen dringend ausgesprochen haben, und durch deren Wirksamkeit das Aufblühen der vaterländischen Landwirthschaft und Industrie wesentlich bedingt wird.

München, den 16ten Februar 1833.

Ludwig, Fürst von Oettingen-Wallerstein.

Auf Königlich. Allerhöchsten Befehl, Der General-Secretär,

Fr. v. Kobell.

Sub-Enclosure (E. 2) in No. 28.

Staatsministerium des Innern.

Als Seine Majestät der König durch allerhöchste Verordnung vom 16ten Februar 1833 (Reggs. Blatt Jahrgang 1833, No. 9. pag. 177. u. ff.) den gesammten technischen Unterricht nach einem umfassenden Systeme zu reorganisiren und auf der breiten Grundlage wohlbemessenen Ineinandergreifens aller verwandten, mit den übrigen Bildungs-Anstalten der Monarchie in entsprechende Wechselwirkung zu setzen geruhten, konnte es den so wohlmeinenden Königlichen Befehlen an freudigem Entgegenkommen nicht fehlen. Und in der That, kaum war der grossartige Gedanke des erhabenen Monarchen durch die Vollzugs-Vorschrift vom 28ten März 1833, durch die Erläuterungen vom 24ten July desselben Jahres, dann durch die generalisirten Weisungen vom 4ten, 5ten and 30ten Dezember 1833. 4ten August und 5ten November 1834. 9ten März, 14ten Juni und 15ten September 1835. Verwaltenden und Verwalteten in seinem vollen Umfange klar geworden, so reiften auch allenthalben seine Folgen zur Seegenvollen Frucht. Die kurze Frist zweier Jahre reichte hin, ohne Erhöhung der öffentlichen Auflagen, ohne Inanspruchnahme des Reichs-Reservefondes, auf dem einfachen Wege möglichst zweckmässiger Verwendung der verfügbaren Mittel eine Schöpfung hervorzurufen, deren sich in gleicher Vollständigkeit kaum ein anderer teutscher Staat erfreuen möchte.

Stolz und Dankgefühl erfüllen jede Bayerbrust bei dem Anblicke solcher Ergebnisse.

Sollte aber dem zu Standegebrachten eine nachhaltige Dauer zugewendet werden, so konnte der primitive Vollzug nicht genügen. Es galt vielmehr die im Ganzen bewährten

Anordnungen

Anordnungen der Gründungs-Epoche auch rücksichtlich ihrer einzelnen Wirkungen einer genauen Prüfung zu unterstellen, und dem Bereiche der örtlichen und provincialen Erfahrungen jene ergänzende Momente zu entnehmen, welche etwa erforderlich seyn konnten, dem Systeme auch in allen seinen Specialitäten eine ächt practische Entwicklung zu gewähren.

Dieser Zweck schien wichtig genug, im Angesichte der II^ten^ Industrie-Ausstellung einen Zusammentritt sämmtlicher Regierungs-Referenten über Gegenstände des Bauwesens, der Landwirthschaft, des Handels, der Industrie, der Gewerbe und der Statistic, dann der Vorstände und Zeichnungs Lehrer sämmtlicher Schullehrer-Seminare und sämmtlicher bis zu jenem Tage entstandenen technischen Schulen in München zu veranlassen; und drey wesentliche Berathungen dieser würdigen in der Beilage I. namentlich aufgeführten Männer setzen das unterfertigte Staatsministerium nunmehr wirklich in die angenehme Lage, die bisher zerstreuten Vollzugs-Directoren durch nachstehende die örtlichen Wahrnehmungen und namentlich aus den Wünschen der Gemeinden billig berücksichtigende, von nun an allein gültige

Vollzugs-Instruction zu ersetzen.

Titel I.—*Von dem Systeme des technischen Unterrichtes in Bayern überhaupt.*

(Zu Ziffer I. II. III. V. VI. VII. VIII. X. XI. und XII. der allerhöchsten Verordnung vom 16^ten^ Feber 1833.)

§ 1.—*Natur des technischen Unterrichtes.*

Der technische Unterricht in Bayern umfängt alle jene Unterrichtszweige, deren Grundlage und Zweck zunächst dem Gebiete der exacten Wissenschaften angehört.

§ 2.—*Hauptzweige des technischen Unterrichtes.*

Dieser Unterricht zerfällt in 4 wesentliche verschiedene Richtungen, nämlich:

I. In das Befähigen zu dem reinen Kunst Berufe.

II. In das Befähigen zu den technischen Zweigen des öffentlichen Dienstes, als

a. Zu den öffentlichen Baudienste, combinirten Land-Wasser-Brücken- und Strassen-Bauwesen;
b. Zu dem Bergwesen;
c. Zu dem Salinenwesen;
d. Zu dem Forstwesen.

III. In das Befähigen zu den technischen Hülfszweigen für das bürgerliche Leben; als: zu dem Stande der Civil-Ingenieure (der Maschine Bauer) u. s. w.

IV. In das Befähigen zu dem rein bürgerlichen Berufe, als:

a. Zu dem rationellen Betriebe von Fabriken und Manufacturen;
b. Zu dem rationellen Betriebe productiver Gewerbe, insbesondere der Baugewerke;
c. Zu dem gesteigerten Betriebe des Grundes und Bodens.

§ 3.—*Gliederung des technischen Unterrichts und Stellung desselben in dem Gesammt-Unterrichts-Systeme des Bayerischen Staates.*

Der technische Unterricht bildet zufolge der, der ureigensten Idee Seiner Majestät entsprossenen allerhöchsten Verordnung vom 16^ten^ Feber 1833, seit drei Jahren einen selbstständigen Ast des bayerischen Gesammt Unterrichtes. Unabhängig von der rein wissenschaftlichen, wie von der rein populären Erziehung, in Mitte zwischen beide hineingestellt, bewegt er sich auf seiner eigenen, klar vorgezeichneten und streng individualisirten Bahn. Seine erste Grundlage sucht er während der Periode der lateinischen Schule und der damit verwandten Werktags-Schulpflichtigkeit, nicht in eigenthümlichen Anstalten, sondern in dem möglichst verbreiteten einleitenden Linear- und Ornamenten-Zeichnungs-Unterrichte, dann in der, den sogenannten gemeinnützigen Gegenständen an den Elementarschulen des wissenschaftlichen sowohl, als des populären Unterrichtes (lateinischen Schulen, teutschen Werktagsschulen) gewordenen mehr practischen Unterlage. Seine gesonderten Anstalten beginnen mit der Periode des Gymnasial-Studiums und der parallel laufenden Sonn- und Feyerstags-Schulpflicht mittelst der, den wissenschaftlichen Gymnasien gegenüber gestellten technischen Gymnasien (Landwirthschafts- und Gewerbsschulen) sie setzen sich so fort in den, den wissenschaftlichen Lyceen correspondirenden technischen Lyceen (polytechnischen Schulen) und culuminiren in der den wissenschaftlichen Hochschulen entsprechenden technischen Hochschule zu München.

Mittelst dieser Combination ist der technische Unterricht bestimmt, den aus der lateinischen Schule tretenden Studirenden die Wahl zwischen der streng wissenschaftlichen und einer gleichfalls höhern aber mehr practischen Lebens-Bildung darzubieten, ebenso den, die Werktags-Schule verlassenden Jünglingen den Doppelweg der gewöhnlichen Sonn- und Feyertags-Schule und eines gesteigerten Berufs Unterrichtes anzubahnen; sonach die früheren (wesentlich planlosen) höhern Bürgerschulen durch wohl bemessene, nach bestimmten Richtpunkten abzielende Reallehr-Anstalten und die oberflächliche Bildung der Mittelstände durch eine der bayerischen Nation und ihres Königs würdige Veredlung, namentlich der gutsbesitzenden und gewerbtreibenden Classen zu ersetzen, die propädeutischen Institute des wissenschaftlichen Unterrichtes hinwieder ungestört ihre spezielle Bestimmung vorbereitender

tender Geistes-Gymnastic zu erhalten, in dieser Weise den langjährigen Kampf zwischen Humanismus und Realismus nicht durch ausschliessende Begünstigung des einen Princips, sondern durch die gleichzeitige Enthaltung beider auf ihren gesonderten Bahnen einer befriedigendern Lösung entgegen zu führen. Dieser seiner Natur und Bestimmung zufolge ist der technische Unterricht:

I. Im Wesentlichen facultativ und nur dort geboten, wo er als unerlässliche Vorbedingung specieller Anstellungen oder Ermächtigungen sich darstellt;

II. In sich selbst abgeschlossen für alles seine Specialitäten Berührende;

III. Bezüglich dieser Specialitäten aber wesentlich conzentrisch in sich, d. h. die Pflege der verschiedenen technischen Unterrichtszweige nicht in der kostspieligen und isolirenden Vervielfältigung der Anstalt; sondern in der Manigfaltigkeit des Unterrichtes an derselben Anstalt suchend;

IV. Bezüglich der allgemeinen Kenntnisse Hand in Hand mit den übrigen Unterrichts-Anstalten gehend, somit die Lehrkräfte der wissenschaftlichen in Volksschulen benützend, wo ein Ueberfluss an Fonden nicht besteht (allerhöchste Verordnung vom 16ten Feber 1833. Ziff XII.) und parallele Lehrmittel nur dort aufstellend, wo die Subsidien zu einer solchen Aufstellung unbeschadet der wesentlichen Zwecke bereits vorliegen, oder von Stiftungen und Gemeinden freiwillig dargeboten werden, wie diess alles die Anlage 2. näher zu entnehmen giebt.

Anl. 2.

Als oberster Leitstern gilt übrigens dem technischen wie allen Unterrichtszweigen in Bayern der feyerlich ausgesprochene und underwiderruflich feststehende Wille Seiner Majestät des Königs, mit dem Bilden auch das Erziehen verbunden, der geistigen die sittliche Veredlung angereiht, den Studien-Ernst durch alle Lehrzweige durchgeführt, und nirgends dem Viellernen das gründliche Lernen geopfert zu wissen.

Der ganze Lehrplan ist demnach dahin gerichtet, mit den Kenntnissen auch sittliches Gefühl und ächte Religiösität in den Schülern zu entwickeln, ihre Herzen fest an Thron, Dynastie, Vaterland und Gesetze zu knüpfen, den industriellen und gutsbesitzenden Classen bei Entwicklung ihrer geistigen Kräften auch das Kleinod teutschen Fleisses und teutscher Sitte zu bewahren, und in den Tugenden, dann in der Intelligenz der Nation die Aufgabe wahrer Tugendbildung und die Bürgschaft einer dauernd glücklichen Zukunft aufzusuchen.

Titel II.—*Von dem einleitenden technischen Unterrichte in der Periode des allgemeinen Elementar-Unterrichtes der teutschen Werktags- und der correspondirenden lateinischen Schule.*

Abschnitt I.—*Von dem einleitenden (Elementar) Zeichnungs-Unterrichte an den teutschen und lateinischen Schulen.*

§ 4.—*Zweck und Richtung des technischen Zeichnungs-Unterrichtes überhaupt.*

Als die wichtigste Grundlage und zugleich als eines der wesentlichsten Elemente der gesammten technischen Bildung erscheint zunächst der Zeichnungs-Unterricht.

Wie das gewöhnliche Schreib-Lehren die Sprachschrift, so soll er die technische Schrift auf alle, namentlich aber auf die der Technic bedürfenden Theile der Nation übertragen, er soll ihnen das richtige Darstellen der technischen Gedanken, und durch dieses Darstellen hinwieder das richtige technische Denken lehren, er soll frühzeitig dem künftigen Künstler die kunstgerechten Formen zu Offenbarung seiner Ideen, dem künftigen technischen Beamten, dem Civil-Ingenieur, dem Architecten das tiefere Verständniss der Constructionen, dann der damit in Verbindung stehenden mathematischen und technischen Aufgaben dem künftigen Fabrikherrn und Manufacturisten das Begreifen der grösseren Maschinerien, dem künftigen Gewerbsmanne das Benützen verbesserter Werkzeuge, dem künftigen Landwirthe die competente Beurtheilung landwirthschaftlicher Gebäude und Geräthschaften; allen endlich das Aufgreifen der Dimensionen und das Eindringen in das Leben der Technic möglich machen; er soll endlich den Uebergang der Kunst in die Gewerbe bewirken, nicht minder durch die glückliche Wahl seiner Vorlagen zur Ausbildung und Vorbereitung richtigen Geschmackes, als durch die Genauigkeit dieser Vorlagen zum treuen Wiedergeben der technischen Anschauungen leitend. Eben darum ist aber auch absolut nöthig, dass dieser wichtige Ast des technischen Gesammt-Unterrichtes:

I. Sich so rasch als möglich über alle Oertlichkeiten verbreite, selbst in der kleinsten Gemeinde dem Talente die Gelegenheit zur Selbsterkenntniss und dem Berufsmanne die erforderlichen Fertigkeiten zu rationellerem Betriebe seines Berufes darbietend;

II. Allenthalben correct behandelt;

III. Mit Beseitigung jeder Spielerey streng innerhalb der Grenzlinien des eigentlichen technischen Hilfs-Gebietes, also innerhalb der Grenzlinien des Linear- und Ornamenten-Zeichnens festgehalten werde.

Zu Erreichung dieses Zweckes wird Folgendes festgesezt:

§ 5.—*Begründung des Elementar Zeichnungs-Unterrichtes.*

Um dem Elementar-Unterrichte in dem Linear- und Ornamenten-Zeichnen die von Seiner Majestät dem Könige angedeutete grossartige Ausdehnung zu sichern, soll dieser Unterricht nicht nur als integrirender Lehrgegenstand der Elementar-Schulen die wissenschaftliche Erziehung (lateinische Schulen) beibehalten, sondern auch auf jede, mit einem solchen Unterrichte zur Zeit nicht versehene Schule (Schul-Sprengel) ausgedehnt werden.

§ 6.—*Organisation des Elementar-Zeichnungs-Unterrichtes an den teutschen Schulen.*

Der Elementar-Zeichnungs-Unterricht an den teutschen Schulen liegt in den mit eigens dotirten Zeichnungsschulen nicht bereits versehenen, und mit solchen nicht freiwillig sich versehenden Gemeinden den Schullehrern *kraft ihres Dienstes* ob, ohne für diese einen Anspruch auf Gehaltsmehrung oder auf sonstige Einnahme zu begründen.

Um die Befähigung der von nun an angestellt werdenden Lehrer zu Erfüllung dieser Verpflichtung zu führen, hat bereits die aus der Anlage 3. ersichtliche Fürsorge statt gefunden. Anl. 3.

Gegenwärtig sind des Zeichnens kundige Adstanten vorzugsweise solchen, eines Adstanten bedürfenden Schulsprengels zuzutheilen, deren bereits angestellte Lehrer der nöthigen Befähigung zum Elementar-Unterrichte in dem Linear- und Ornamentenzeichnen ermangeln, und in deren Mitte kein des Zeichnens kundiger Maurermeister, Zimmermeister oder sonstiger patriotischer Einwohner sich zu interimistischer Fürsorge verpflichtet. Jedenfalls ist, und zwar nöthigenfalles sogar, durch angemessene, keinerley Härte in sich schliessende Versetzungen zu sorgen, dass die Städte und Märkte, dann die durch Gewerbsthätigkeit sich auszeichnenden Gemeinden vor Beginn des Schuljahres 1836–37 in den Genuss eines vollständig organisirten Zeichnungs-Unterrichtes treten. Ebenso ist jährlich bei Vertheilung der aus dem Schullehrer-Seminar neu austretenden Schuldienst-Expectanten auf die, eines organisirten Zeichnungs-Unterrichtes noch entbehrenden Schulorte vorzugsweise Rücksicht zu nehmen.

Alle diesfallsigen Anordnungen werden in mündlichen Benehmen des Kreisschul-Referenten, des Kreisbaurathes und des Regierungs-Referenten für Gegenstände der Landwirthschaft, des Handels, der Industrie, der Gewerbe und der Statistic zur Beschlussfassung des K. General-Commissärs und Regierungs-Präsidenten bereift.

Der Zeichnungs-Unterricht an den teutschen Werktagsschulen ist unentgeldlich; die Vorlagen werden von Seite der Schule angeschaft und der Bedarf dürftiger Schüler an Papier und Material deckt sich nach der in gleichem Betreffe für die übrigen Zweige des teutschen Schulunterrichtes bestehenden Vorschriften.

Die Benützung dieses Unterrichtes selbst bleibt dem freien Willen der Schüler anheimgestellt, den Districts-Local-Polizey- und Schulbehörden, dann den Schullehrern liegt aber ob, die Schüler und deren Eltern bei jeder entsprechenden Gelegenheit und insbesondere bei den jahrlichen Prüfungen über die Wichtigkeit des ihnen Dargebotenen zu belehren, und insbesondere talentvolle Knaben, dann einstige Uebernehmer grösserer Gewerbe oder Güter in jeder Weise zu deren Benützung aufzumuntern; auch liegt ihnen sepeciell ob, die voraussichtlich einem Baugewerbe sich widmenden Jünglinge auf das Bedürfniss dieses Unterrichtes für ihre künftige Berufs-Richtung und darauf aufmerksam zu machen, dass das Unterlassen dieses Unterrichtes in der Periode der Werktagsschulpflicht ein gebotenes Nachholen desselben während der Lehrlings-Jahre, sohin möglicherweise sogar eine Verlängerung der Lehrzeit nach sich ziehen würde.

§ 7.—*Organisation des Zeichnungs-Unterrichtes an den lateinischen Schulen.*

Der Zeichnungs-Unterricht an den Elementar-Schulen des wissenschaftlichen Unterrichtes (lateinische Schulen) wird wie bisher durch eigene Lehrer gegeben, und bleibt schulordnungsgemäss Bestandtheil des dortigen Gesammt-Unterrichtes.

§ 8.—*Umfang des Elementar-Zeichnungs-Unterrichtes.*

Der dem Studio der teutschen Werktags und der damit correspondirenden lateinischen Schule zugewiesene Elementar-Zeichnungs-Unterricht beschränkt sich übrigens auf die ersten Anfangs-Gründe der Linear- und Ornamenten-Zeichnung, sonach:

a. Auf das Darstellen einfacher geometrischer Figuren mit Zirkel und Lineal,
b. Auf einfache Grundrisse,
c. Auf die Contouren einfacher Aufrisse und Ornamente, und
d. Auf das Nachbilden körperlicher Vorlagen (geometrischer Körper, leicht nachahmbarer Reliefs, u. s. w.)

Und zwar bis zu Erscheinen der bereits angeordneten lithographischen und körperlichen Vorlagen nach der unter Ziffer 4. anruhenden näheren Anleitung. Anl. 4

§ 9.—*Prüfung und Befähigungs-Ausweis der Zeichnungs-Lehrer.*

Der Nachweis über die Prüfung und über den Befähigungs-Ausweis der den Zeichnungs-Unterricht gebenden Schullehrer und Schul-Adstanten richtet sich nach der obigen Beilage Ziffer 3. Jener der einen Schuldienst nicht begleitenden Elementar Zeichnungs-Lehrer, bemisst sich sowohl

a. Was die teutschen Schulsprengel betrifft, nach der Anlage 5. Anl. 5.
b. Was die Lehrer an lateinischen Schulen anbelangt, nach der Anlage 6. Anl. 6.

ABSCHNITT II.—*Von dem einleitenden Realien-Unterrichte an den teutschen und lateinischen Schulen.*

§ 10.—*Einleitender Realien-Unterricht an den teutschen Schulen.*

Der früher unbestimmte und jeden practischen Entzweckes entbehrende Unterricht in den sogenannten, gemeinnützigen Gegenständen an den teutschen Schulen der Monarchie ist

ist dem Ziff. II. lit. b, der allerhöchsten Verordnung vom 16ten Feber 1833. kund gegebenen allerhöchsten Befehle gemäss, auf Antrag der für die Abfassung neuer Schulbücher angeordneten Commission in dem zum Theil bereits unter der Presse befindlichen neuen Lesebuch durch einfache positive Notizen in der Art ersetzt worden wie solches die Anlage 7. ausweist.

§ 11.—*Einleitender Realien-Unterricht an den lateinischen Schulen.*

Ebenso ist diese allerhöchst gebotene einleitende Natur desselben Unterrichtes an den lateinischen Schulen nach Massgabe der Anlage 8. geführt worden.

Anl. 8.

TITEL III.—*Von dem technischen Gymnasium (der Landwirthschafts- und Gewerbsschule).*

ABSCHNITT I.—*Allgemeine Bestimmungen über Zweck, Eintheilung und Dotation des technischen Gymnasiums.*

§ 12.—*Von den Landwirthschafts- und Gewerbsschulen (technische Gymnasien).*

Der eigentliche technische Unterricht beginnt in den technischen Gymnasien, d. h. in den vereinten Landwirthschafts- und Gewerbsschulen.

§ 13.—*Specielle Aufgabe der Landwirthschafts- und Gewerbsschulen.*

Die Aufgabe der Landwirthschafts- und Gewerbsschulen ist:

1. Den zu dem technischen Lyceo (polytechnischen Schulen) und zu der technischen Hochschule nicht aspirirenden Schülern die erforderlichen theoretischen Kenntnisse zu einem den Fortschritten der Technic entsprechenden rationellen Betriebe des Ackerbaues und der Gewerbe mit steter Belehrung über die Anwendung dieser Kenntnisse zu geben, und auf solche Weise theoretisch und practisch gleich gebildete ihrem künftigen Berufe wahrhaft gewachsene Landwirthe und Gewerbsleute zu erziehen.
2. Die zu dem technischen Lyceo und zu der technischen Hochschule aspirirenden Jünglinge für ihren höheren Beruf in gleicher Doppel-Richtung vorzubereiten.

§ 14.—*Eintheilung der Landwirthschafts- und Gewerbsschulen.*

Jeder Kreis besitzt jedenfalls eine vollständige, d. h. mit sämmtlichen drei Cursen versehene Landwirthschafts und Gewerbsschule. Dieselbe führt den Namen "Kreislandwirthschafts- und Gewerbsschule," deren Sitz für den Isar-Unterdonau-Regen-Oberdonau- und Obermainkreis die Kreishauptstadt, für den Rezatkreis Nürnberg, und für den Rheinkreis Kaiserslautern festgesezt bleibt.

Neben der Kreislandwirthschaft- und Gewerbsschule sollen wo möglich in jeder grössern Stadt Gemeinde Landwirthschafts- und Gewerbsschulen bestehen, welche nach Massgabe der verfügbaren Mittel den Character entweder einer vollständigen, d. h. mit drei Cursen versehenen, oder unvollständigen bloss auf die untern Curse, oder auf den untersten Curs beschränkter Landwirthschafts- und Gewerbsschulen annehmen. Die vollständigen mit drei Cursen begabten stehen in jeder Beziehung den Kreislandwirthschafts- und Gewerbsschulen parallel und führen den Namen "Landwirthschafts- und Gewerbsschulen Iter Classe;" die bloss mit dem untern und mittlern Curse begabten, werden "Landwirthschafts- und Gewerbsschulen IIter Classe" genannt, und stehen dem Unter- und Mittel-Curse der Kreislandwirthschafts- und Gewerbsschule gleich; die bloss auf den untersten Curs beschränkten, führen den Namen "Landwirthschafts- und Gewerbsschulen IIIter Classe;" und äquipariren dem untersten Curse der Kreislandwirthschafts- und Gewerbsschule. Ein zweiter Curs kann übrigens nur entstehen, wo die vorschriftsmässige Lehr-Aufgabe des untersten Curses gänzlich gedeckt erscheint. Ebenso kann nur zu Errichtung des ersten Curses geschritten werden, wo der erste und zweite Curs in ihrem vollen Umfange begründet sind, und es ist an dieser Bestimmung um so strenger zu halten, als gerade die technischen Schüler einem Wechsel des Aufenthalts-Ortes vorzugsweise unterworfen sind, hier also ein allenthalben gleichförmiger, den Uebertritt von der Anstalt des einen zu der Anstalt des andern möglich machender Stuffengang des Unterrichts durch die heiligsten Interessen der Ackerbauenden und Gewerbtreibenden Classen geboten wird.

§ 15.—*Landwirthschaftliche und Gewerbliche Curse an den lateinischen Schulen der mit keiner Landwirthschafts- und Gewerbsschule versehenen Orte.*

Uebrigens bleibt allerdings gestattet, dass dort, wo aus ganz besonders streng nachzuweisenden Gründen neben der lateinischen Schule weder eine vollständige noch eine unvollständige Landwirthschafts- und Gewerbsschule zu entstehen vermag, an der lateinischen Schule für die der wissenschaftlichen Erziehung nicht bestimmten und deshalb von der griechischen Sprache dispensirten lateinischen Schüler ein umfassenderer Realien-Unterricht begründet werde. Dieser Unterricht muss jedoch:

1. Die Benennung "Landwirthschaftlicher und Gewerblicher Realcurs" führen.
2. Zwar nicht alle Gegenstände des untern Curses einer Landwirthschafts- und Gewerbsschule, wohl aber neben der jedenfalls unerlässlichen Encyclopädie der Landwirthschaft und der Gewerbe nur solche Gegenstände geben, welche in der Landwirthschafts- und Gewerbsschule selbst dem untern Curse der Landwirthschafts- und Gewerbsschule angehören, und
3. Von dem Subrector der lateinischen Schule geleitet werden, ferner darf,

4. Mit

4. Mit Ausnahme der auch Dritten gegeben werden könnende beider Encyclopädien, der Unterricht nur von den zu dessen Uebernahme gegen eine kleine Remuneration bereiten Lehrern der lateinischen Schulen ausgehen.

Auch behauptet dieser vor erfolgtem Austritte aus der lateinischen Schule genossene erweiterte Realien-Unterricht für den betreffenden Jüngling lediglich die Natur des freiwilligen Privat-Unterrichtes, und resp. eines präparatorischen Hospitirens ohne bei etwaiger Fortsetzung des technischen Studiums irgend einen Anspruch auf Dispens von dem untersten Curse der Landwirthschafts- und Gewerbsschule zu begründen.

§ 16.—*Dotation der Landwirthschafts- und Gewerbsschulen, deren Cathegorien.*

Die Dotation der Landwirthschafts- und Gewerbsschulen fliesst:

I. Aus den Fonden der bereits allenthalben in Landwirthschafts- und Gewerbsschulen umgewandelten ehemaligen höheren Bürgerschulen;
II. Aus Kreisfonds-Zuschüssen;
III. Aus den verfügbaren Ueberschüssen der Unterrichtsstiftungen;
IV. Aus den freiwilligen Beiträgen der betreffenden Gemeinde;
V. Aus den etwa dargebotenen, in jeder Weise zu ermunternden freiwilligen Beyträgen von Vereinen und Privaten, endlich subsidiar;
VI. Aus einem jedenfalls sehr mässig festzusetzenden Schulgeld der bemittelten Schüler.

§ 17.—*Etat der Landwirthschafts- und Gewerbsschulen.*

I. *Fonde der höhern Bürgerschulen.*

Die Fonde der höheren Bürger-Schulen sind bereits allenthalben dem technischnen Unterrichte zugewendet, und gewähren laut der Anl. 9, eine jährliche Rente von 23,017, f. 4 kr. Anl. 9.

§ 18.—*Dotation der Landwirthschafts- und Gewerbsschulen.*

II. *Zuchüsse aus Kreisfonden.*

Die Zuschüsse der Kreisfonde sind bei der Unzureichenheit der Kreisschuldotation für den Zweck der rein wissenschaftlichen und der populären Erziehung auf Antrag der Landräthe ausschliessend den facultativen Kreisfonden entnommen worden. Ihre bisherige Grösse erhellet nach der Anlage 10. Ihre bleibende Gestaltung bleibt dem Budget für die IVte Finanzperiode vorbehalten Anl. 10.

§. 19.—*Dotation der Landwirthschafts- und Gewerbsschulen.*

III. *Verfügbare Ueberschüsse der Unterrichts-Stiftungen.*

Die verfügbaren Ueberschüsse der Unterrichts Stiftungen werden nach Massgabe der bestehenden Gesetze von den K. Kreisregierungen K. d. Innern ermittelt und repartirt.

§ 20.—*Dotation der Landwirthschafts- und Gewerbsschulen.*

IV. *Freiwillige Beiträge der Gemeinden.*

Freiwillige Beiträge der, eine unvollständige oder vollständige Landwirthschafts- und Gewerbsschule besitzenden oder erhaltenden Gemeinden, lassen sich um so mehr mit vollstem Rechte erwarten und ansprechen, als diesen gerade aus den technischen Unterrichts-Anstalten neben dem nächsten Vortheile grösserer Frequenz, auch eine Gelegenheit zu höherer Ausbildung ihrer Bürgersöhne, und somit zu agrikolen und industriellen Aufschwunge erwächst. Die Beiträge selbst richten sich, was ihre Feststellung betrifft, nach § 25, und 123. des revidirten Gemeinde-Edictes.

§ 21.—*Dotation der Landwirthschafts- und Gewerbsschulen.*

V. *Freiwillige Beiträge von Vereinen und Privaten.*

Die freiwilligen Beiträge von Seite der landwirthschaftlichen und polytechnischen Kreisvereine, der Gewerbs-Vereine und der Privaten sind angemessen zu vereinbaren, und falls sie statt finden, dem K. Staatsministerium des Innern zur Kundgabe mittelst des Regierungs-Blattes anzuzeigen. Uebrigens ist namentlich bezüglich dieser Hilfsquelle jeder directe oder indirecte Zwang zu vermeiden, und insbesondere Sorge zu tragen, dass nicht der von dem Staate aus so grossartiger Absicht begründete technische Unterricht durch scheinbar freiwillige, der That nach aber abgedrungene Opfer der einzelnen Gewerbsleute, in der öffentlichen Meinung verdunkelt und auf solche Weise vom kräftigen Wurzeln abgehalten werde.

§ 22.—*Dotation der Landwirthschafts- und Gewerbsschulen.*

VI. *Schulgeld.*

Der Lehrunterricht soll unentgeldlich seyn. Die Einführung eines Schulgeldes darf daher bloss:

1. In Ermangelung aller sonstigen Mittel, also wo dessen Einführung die unerlässliche Bedingung der Möglichkeit eines technischen Unterrichtes bildet;

2. Bloss temporär bis zu Auffindung anderer Mittel;
3. In höchst mässigen Sätzen; und
4. Bloss für die Söhne wohlbemittelter Eltern Platz greifen;
Auch fordert dessen Einführung stets eine specielle ministerielle Genehmigung.

§ 23.—*Jährlicher Etat.*

Die Fonds der Landwirthschafts- und Gewerbsschulen müssen von den betreffenden Behörden jährlich, und zwar im Laufe des Sommers für das nächste Schuljahr neu etatisirt, mit den Anforderungen des Unterrichts bilancirt und der betreffenden Kreisregierung spätestens mit Ende Julius vorgelegt seyn. Diese fasst ihre Beschlüsse, unterstellt selbe mittelst einer in der form: Anlage 11. verfassten, spätestens am 10ten August zu dem Einlaufe des Staatsministeriums des Innern gebrachten Uebersicht der höhern Würdigung und hat ihre Anträge als stillschweigend genehmigt zu vollziehen, wenn am 10ten September keine modificirende Weisung eingetroffen ist.

Anl. 11.

§ 24.—*Gesichtspunkte bey Feststellung der Fonde.*

Uebrigens ist bei Feststellung der Dotation fest an den in Abschnitt II. und IV. des gegenwärtigen, dann in Absch. II. und IV. des Vten Titels gegenwärtiger Instruction näher entwickelten Gesichtspunkten der Vermeidung jedes unnöthigen Aufwandes, des ausschliessenden Strebens nach dem wahrhaft Nützlichen, und dann an dem grossen Gedanken festzuhalten, dass Bayern unter der Leitung seines edlen kunstsinnigen Königs der Ruhm vorbehalten ist, zu beweisen, wie ohne wesentliche Belästigung der Gemeinden und mit verhältnissmässig unglaublich geringen Mitteln die grosse herrliche Aufgabe der fortschreitenden Bildung des teutschen Bürger- und Bauernstandes durchgeführt werden kann.

Abschnitt II.— *Von dem Unterrichte und den Unterrichts-Mitteln des technischen Gymnasiums.*

I. Capitel.—*Allgemeiner Gesichtspunkt.*

§ 25.—Der technische Unterricht, als solcher, beschränkt sich allenthalben auf die speciellen Fächer bestimmter technischer Berufsrichtungen. Mit ihm Hand in Hand geht aber zugleich, der Unterricht in den allgemeinen Kenntnissen (Realien).

II. Capitel.—*Von dem rein technischen Unterrichte.*

§ 26.—Der technische Unterricht an einem vollständigen technischen Gymnasio (Kreis-Landwirthschafts- und Gewerbsschule, Landwirthschafts- und Gewerbsschule I Classe) umfasst:

(A.) *Für die Gewerbsschüler:*

I. Die Encyclopädie der Gewerbe, d. h. die systematisirte Uebersicht sämmtlicher Gewerbe,
   a. Nach ihrer Haupt-Abtheilung in productive und nicht productive,
   b. Nach ihrem gegenseitigen Ineinandergreifen, und
   c. Nach dem von jedem Gewerbe verarbeiteten Rohstoffes mit genereller Angabe der speciellen Veredlungsweise dieses Rohstoffes und der Verwendung des veredelten Productes sammt Andeutungen über das grosse Medium und die Wechselfälle des Handels und mit belehrendem Besuche der in dem Orte befindlichen Werkstätten;

II. Die Encyclopädie der Landwirthschaft, d. h. die Uebersicht der verschiedenen animalischen und vegetabilischen landwirthschaftlichen Producte, ihrer Verwendbarkeit (mit Bezug auf die nähern Entwicklungen der Encyclopädie der Gewerbe) der verschiedenen Productions- und Bewirthschaftungsweisen, und der bei der Wahl der Producte und der Methode zu beobachtenden commerciellen und industriellen Combinationen;

III. Die erforderlichen mathematischen Kenntnisse einschlüssig der Elementar-Geometrie, der discriptiven Geometrie und der Algebra bis zu den Gleichungen des IIten Grades;

IV. Den Zeichnungs-Unterricht;

V. Das Bossiren und Modelliren;

VI. Die Anfangsgründe der Bewegungs-Lehre (Mechanic);

VII. Die Naturgeschichte;

VIII. Die Naturlehre;

IX. Die Vorbegriffe der Chemie mit den entsprechenden Andeutungen;

X. Die Buchhaltung in Verbindung mit Styl-Uebung; endlich

XI. Die Gewerbslehre im weitern Sinne, das heisst, die umfassenden Entwicklungen der in der Encyclopädie der Gewerbe bereits generell berühmten Gegenstände.

(B.)—*Für die Landwirthschafts-Schüler.*

I. Die Encyclopädie der Landwirthschaft (siehe oben Gewerbsschüler Ziff II.);

II. Die Encyclopädie der Gewerbe (siehe oben Gewerbsschüler Ziff I.);

III. Die Mathematic;

IV. Den Zeichnungs-Unterricht;

V. Das Modelliren (ohne Bossiren);

VI. Die Anfangsgründe der Bewegungs-Lehre (Mechanic);

VII. Die Naturgeschichte;

VIII. Die Naturlehre;

IX. Die

IX. Die Vorbegriffe der Chemie mit den entsprechenden technischen Andeutungen;
X. Die Buchhaltung mit Styl-Uebungen;
XI. Die Grundzüge der thierischen Anatomie und der Thierheilkunde;
XII. Landwirthschaftslehre im weiteren Sinne (d. h. die umfassendere Entwicklung der in der Encyclopädie der Landwirthschaft bereits generell berührten Gegenstände.)

§ 27. Da dem technischen wie dem wissenschaftlichen und populären Unterrichte als oberster Gesichtspunkt gelten muss, die geistigen und physischen Kräfte des Jünglings zu entwickeln und zu erstärken, nicht zu erschöpfen, und da dem zufolge die Zahl der Unterrichtsstunden in dem technischen Gymnasio mit Einschluss des Realien-Unterrichtes in der Woche nicht über 36 betragen darf, so sind für die einzelnen technischen Unterrichtsfächer folgende Maxima festgesezt:

(A.)—*Für die Gewerbsschüler.*

I. *Curs.*

Um die Landwirthschafts- und Gewerbsschüler schon bei ihrem Eintritte in das speciellere Berufs-Studium mit dem Standpunkte dieses Studiums zu befreunden, ihren Gedanken sogleich an der Schwelle dieser neuen Bildungs-Periode, die in diesem Unterrichts-Zweige so nöthige positive und practische Richtung zu gewähren, und sie namentlich über den Zusammenhang mehr abstract scheinender Gegenstände mit ihrer künftigen Lebens-Aufgabe zu belehren, soll der erste Curs mit einleitenden Vorträgen über das technische Studium überhaupt, und das Bekanntmachen dieser Jünglinge mit dem grossen Gebäude des landwirthschaftlichen, industriellen und commerciellen Lebens, als dem Rahmen beginnen, in welchem alle Speciallehrplane des dreijährigen Cursus ihre Stelle und ihre Bedeutung finden. Diese einleitenden Vorträge welche auch dem Publico oder bei Beschränktheit des Raumes, mindestens den Eltern, den Landwirthen und Gewerbsmeistern, dann den Lehrlingen des Ortes zugängig sein sollen, füllen ausschliessend die I^te und II^te Woche des Unterrichtes wie folgt: die I^te Woche exclusive als Einleitung in das Fachstudium,

1. Encyclopädie des technischen Studiums überhaupt, vorgetragen von dem Rector der Anstalt - - - - - - - - - - - - 1 Tag
2. Encyclopädie der Gewerbe in ihren Grundzügen - - - - - 5 Tage.

II^te. Woche, Encyclopädie der Landwirthschaft in ihren Grundzügen - 4 bis 5 Tage.

Von der III^ten Woche anfangend,

Arithmetic	-	8 Stunden.
Im Linear, und Ornamenten Zeichnen	-	8 —
Modelliren und Bossiren	-	4 —
Naturgeschichte	-	4 —
Specialisirte Encyclopädie der Gewerbe	-	2 —
— — der Landwirthschaft	-	2 —
In Summa	-	28 Stunden.

II. *Curs.*

Geometrie	-	6 Stunden.
Zeichnungs-Unterricht	-	6 —
Modellirung und Bossiren, dann Mechanic	-	3 —
Naturgeschichte	-	3 —
Naturlehre	-	3 —
Vorbegriffe der Chemie mit den entsprechenden technischen Andeutungen	-	2 —
Specialisirte Encyclopädie der Gewerbe	-	2 —
Specialisirte Encyclopädie der Landwirthschaft	-	2 —
In Summa	-	27 Stunden.

III. *Curs.*

Algebra	-	4 Stunden.
Descriptive Geometrie	-	4 —
Zeichnungs-Unterricht	-	6 —
Bossiren, Modelliren, Mechanic	-	4 —
Fortsetzung der Vorbegriffe von Chemie mit den entsprechenden technischen Andeutungen	-	3 —
Buchhaltung mit Styl-Uebung	-	2 —
Gewerbskunde (zugleich Technologie)	-	4 —
In Summa	-	27 Stunden.

(B.)—*Für die Landwirthschaftlichen Schüler.*

I. *Curs.*

I. und II. Woche Einleitung in das Fachstudium wie oben.
Von der III Woche anfangend:

Arithmetic	6 Stunden.
Unterricht im Linear-Zeichnen	8 —
Modelliren (ohne Bossiren)	2 —
Naturgeschichte	4 —
Specialisirte Encyclopädie der Landwirthschaft	2 —
Specialisirte Encyclopädie der Gewerbe	2 —
Specielle Anwendung des täglich gehörten naturgeschichtlichen Unterrichtes auf die Landwirthschaft	2 —
In Summa	26 Stunden.

Die so dringend nöthig und ausdrücklich gebotenen Excursionen unter Leitung des Landwirthschafts-Lehrers zum Besuche grosser Oeconomien, zu specieller Besichtigung der Felder, Wiesen, Weinberge, &c., Wälder, Heerden, u. s. w. sind in dem 1ten Curse als den Abenden und den frühen Morgen-Stunden des Sommers, dann den freien Vacanz-Nachmittagen der übrigen Zeit vorbehalten, in die Stundenzahl des 1ten Curses nicht eingerechnet.

II. *Curs.*

Geometrie	6 Stunden.
Modelliren, Mechanic	3 —
Naturgeschichte	3 —
Naturlehre	3 —
Vorbegriffe der Chemie mit den entsprechenden technischen Andeutungen	2 —
Specialisirte Encyclopädie der Gewerbe	2 —
— — der Landwirthschaft	2 —
Anwendung des täglich gehörten Unterrichtes über Naturgeschichte, Naturlehre, und Chemie auf die Landwirthschaft	6 —
In Summa	27 Stunden.

Die so dringend nöthig und ausdrücklich gebotenen Excursionen unter Aufsicht des Landwirthschafts Lehrers zum Besuche grosser Oeconomien, zu specieller Besichtigung der Felder, Wiesen, Weinberge, &c., Wälder, Heerden, u. s. w. sind auch in dem II. Curse an den Abenden und den frühen Morgen-Stunden des Sommers, dann den freien Vacanz-Nachmittagen der übrigen Zeit vorbehalten, in der Stundenzahl des II. Curses nicht eingerechnet.

III. *Curs.*

An zwei Tagen:

a. Mechanic, insbesondere Landwirthschafts-, Bau- und Maschinen-Kunde	2 Stunden.
b. Fortsetzung der Vorbegriffe der Chemie mit den entsprechenden technischen Andeutungen	3 —
c. Thierische Anatomie und Heilkunde	3 —
d. Specielle Landwirthschaftliche Botanic	2 —
e. Buchhaltung und Styl-Uebungen	2 —
In Summa	12 Stunden.

An vier Tagen Landswirthschaftslehre mit Besuch wohlbewirthschafteter Güter und landwirthschaftliche botanische Excursionen unter Leitung des Landwirthschafts-Lehrers mit stetem Hinblicke auf die Verwendbarkeit der landwirthschaftlichen Producte zu gewerblichen Zwecken und wegen der Excursionen ohne Zeitmass.

§ 28. Der Unterricht der Landwirthschafts- und Gewerbsschüler ist, soferne die örtlichen Wünsche eine Scheidung ausdrücklich erbitten und dotiren unbeschadet der übrigen Zwecke, gemeinsam für alle von beiden gleichförmig zu hörende Gegenstände sonach:

In dem Iten Curs.

In der Iten Woche für die Encyclopädie der Gewerbe, und in der IIten für die Encyclopädie der Landwirthschaft in dem ferneren Verlaufe des Curses:

Arithmetic	8 Stunden.
Zeichnungs-Unterricht	8 —
Modelliren	2 —
Naturgeschichte	4 —
Umfassendere Encyclopädie der Landwirthschaft	2 —
Umfassendere Encyclopädie der Gewerbe	2 —
	26 Stunden.

In dem II. Curse.

Geometrie	6 Stunden.
Modelliren und Mechanic	3 —
Naturgeschichte	3 —
Naturlehre	3 —
Vorbegriffe der Chemie mit den entsprechenden Andeutungen	2 —
Umfassendere Encyclopädie der Gewerbe	2 —
— — der Landwirthschaft	2 —
	21 Stunden.

In dem III. Curse.

Fortsetzung der Vorbegriffe der Chemie mit den entsprechenden technischen Andeutungen	2 Stunden.
Buchhaltung und Styl-Uebungen	2 —
	4 Stunden.

Getrennt ist der Unterricht.

In dem I^ten Curse.

Für die Landwirthschafts Schüler.		*Für die Gewerbsschüler.*	
Specielle Anwendung des täglich gehörten naturgeschichtlichen Unterrichts auf die Landwirthschaft	2 Stunden.	Bossiren	2 Stunden.

In dem II. Curse.

Für die Landwirthschaft Schüler.		*Für die Gewerbsschüler.*	
Anwendung des täglich gehörten Unterrichts über Naturgeschichte, Naturlehre und Chemie auf die Landwirthschaft	6 Stunden.	Zeichnungs Unterricht	6 Stunden.

In dem III. Curse.

Für die Landwirthschaft Schüler.		*Für die Gewerbsschüler.*	
Mechanic, insbesondere Landwirthschafts-, Bau- und Maschinen-Kunde	2 Stun.	Algebra	4 Stun.
Specielle landwirthschaftliche Botanic mit Excursionen	2 —	Descriptive Geometrie	4 —
Landwirthschafts-Lehre	4 Tage.	Zeichnungs-Unterricht	6 —
		Bossiren, Modelliren und Mechanic	4 —
		Gewerbskunde	4 —
			22 Stun.

§ 29. Der technische Unterricht soll nicht bloss theoretisch, sondern auch zugleich, und zwar wesentlich practisch sein. Insbesondere sollen die den Uebergang von der polytechnischen Schule an die technische Hochschule nicht beabsichtigenden Jünglinge in der Art ausgebildet werden, dass sie nach vollendeter Landwirthschafts- und Gewerbsschule als ehrenhafte ihrem Berufe tüchtig gewachsene Staatsbürger und als wahre Lichtpunkte technischen Fortschreitens in das bürgerliche Leben einzutreten vermögen. Kein Landwirthschafts- und Gewerbsschüler ist berechtigt, sich einem oder verschiedenen Unterrichts-Gegenständen willkührlich zu entziehen. Wohl aber muss der technische Unterricht von höherer Hand den zahllosen Specialitäten der technischen Berufsarten und den bürgerlichen Verhältnissen der Familien möglichst angepasst, und von jenem Pedantismus frei gehalten werden, der Talente abschreckt, und oft über dem Zufälligen das Wesentliche zu Grunde gehen lässt. Insbesondere ist Sorge zu tragen dass der so wichtige Stand der Classe und der übrigen bereits in practischen Verpflichtungen begriffenen Jünglinge nicht factisch von den Wohlthaten ausgeschlossen werde, welche der Buchstabe der K. Verordnungen ihnen so grossinnig darbietet. Dispensen sind daher nicht zu verweigern, wo

1. Ein dem künftigen Berufe und über seine volle Zeit verfügender Jüngling ferner den Gegenstand durch verstärkten Zeitaufwand auf einen anderen, z. B. ein künftiger Handelsmann den Unterricht in rein mechanischen Fertigkeiten mit der sorgfältigen Pflege lebender Sprachen, ein kräftiger Zimmermeister der Unterricht in der Chemie, Naturlehre durch verdoppelten Zeichnungs-Unterricht u. s. w. aufwiegen will, oder

2. Ein nur für gewisse Stunden von seinem Meister freigegebener Lehrling nur die seinem Berufe direct verwandten Gegenstände zu hören vermag.

Indispensabel bleibt jedenfalls für die künftigen Landwirthe die einleitende sowohl, als die erweiterte Encyclopädie der Gewerbe, und für die künftigen Gewerbsmänner die einleitende sowohl, als die erweiterte Encyclopädie der Landwirthschaft, da

1. Der Ackerbau auf dem Lande in der Regel ein ergänzendes Element der Familien-Existenz bildet, die Kenntniss der Landwirthschaft sonach häufig das Fortkommenkönnen des industriellen Mannes bedingt, und da

2. Der Landwirth ohne Kenntniss der Verwendung und Veredlung seiner Erzeugnisse, so wie der Gewerbsmann ohne Kenntniss der Entstehungsweise seiner Rohstoffe nie zu einer höheren wahrhaft intelligenten Berufsthätigkeit zu gelangen vermag.

§ 30.—Dem Unterricht in jedem einzelnen technischen Gegenstande ist ein nach Anhörung des betreffenden Lehrers, des Rectorats in gemeinsamen Zusammenwirken des Regierungs-Referenten für Gegenstände der Landwirthschaft der Industrie des Handels und der Gewerbe, dann des Kreis-Schulreferenten von der K. Kreisregierung zu beantragendes und von dem K. Staatsministerium des Innern zu genehmigendes Lehrbuch zu Grunde zu legen.

Der Unterricht in der Encyclopädie hat sich bis zum Erscheinen des angedeuteten Leitfadens nach der von jedem einzelnen Lehrer zu entwerfenden und schleunigst zur Genehmigung vorzulegenden Skizze zu richten.

III. Capitel.—*Von dem Realien-Unterrichte.*

§ 31.—Der den technischen Schülern allenthalben zu sichernde Realien-Unterricht umfasst:

1. Die Religion.
2. Die Geschichte.
3. Die Geographie.
4. Die teutsche Sprache.

Dieser Unterricht wird ausschliesslich des Religions-Unterrichts den technischen Schülern.

1. Den aus den lateinischen Schulen mit einem zum Uebertritte an ein Gymnasium habilitirenden Absolutorio an die Landwirthschafts- und Gewerbsschulen übergetretenen Schülern, an dem Gymnasio gemeinsam mit den Gymnasial-Schülern;

2. Den übrigen Landwirthschafts- und Gewerbsschülern an der betreffenden Sonn- und Feyertags-Schule dargeboten.

§ 32.—Von den auf solche Weise den Realien-Unterricht der Gymnasien theilenden Landwirthschafts- und Gewerbsschülern hören

1. Jene des I Curses der Landwirthschaft- und Gewerbsschulen mit der ersten Gymnasial-Classe, Geschichte, Geographie und teutsche Sprache in den vier schulordnungsmässig dafür festgestellten Wochenstunden;

2. Jene des II. Curses der Landwirthschafts- und Gewerbsschulen mit der 2ten Gymnasial-Classe, Geschichte und Geographie in den Sechs; dann Theorie der redenden Künste mit Uebungen in teutscher Sprache in den vier schulordnungsmässig festgesetzten Wochenstunden; endlich.

3. Jene des III. Curses der Landwirthschafts- und Gewerbsschulen mit der 3ten Gymnasial-Classe, Geschichte und Geographie in den Sechs; dann Theorie der redenden Künste sammt den Styl-Uebungen in den schulordnungsmässig bestimmten Wochenstunden.

Und da der Unterricht in der Theorie der redenden Künste schulordnungsmässig erst in der IV. Gymnasial-Classe sich endet, für welchen die Landwirthschafts- und Gewerbsschule keinen parallelen Jahrcursus darbietet, so ist Vorsorge zu treffen, dass die Professoren der IV. Gymnasial-Classe diesen gesteigerten Unterricht den genannten Schülern in ausserordentlichen gegen eine, ihnen zu bewilligende besondere Remuneration ertheilen.

§ 33.—Da der Realien Unterricht an den Gymnasien schulordnungsmässig jedenfalles von dem Unterrichte in den classischen Sprachen strenge und unbedingt getrennt bleiben muss. Da ferner für diesen Unterricht jedenfalles eigene zusammenhängende Stunden zu bestimmen sind, so bleibt es Obliegenheit des Rectorates der Landwirthschafts und Gewerbsschulen, die technischen Unterrichts-Gegenstände in der Art einzutheilen, dass die den Realien-Unterricht an dem Gymnasium besuchenden Landwirthschafts- und Gewerbs-Schüler zu dem nur einmal des Tages an dem Gymnasium stattfindenden zusammenhängenden Realien-Unterrichte rechtzeitig erscheinen können.

Da übrigens wesentlich daran gelegen ist, dass die technischen Lehrstunden an den Landwirthschafts- und Gewerbsschulen auch den gebildeten Lehrlingen, und Gesellen zugänglich seyen, und da die Stunden, in welchen letztere von ihren Meistern entbehrt werden können, vielfach nach örtlichen Rücksichten wechseln, so haben die Rectorate beider Anstalten die Stunden für den Realien-Unterricht des Gymnasiums in einer Weise zu bemessen welche dem Geber der technischen Lehrgegenstände in der dem Lehrling örtlich verfügbaren Stunde so wenig als möglich hindernd in den Weg trete.

Im Falle nicht eintretender Vereinigung entscheidet die Kreisregierung.

§ 34.—Uebrigens wäre die Absicht der allerhöchsten Verordnung vom 16ten Feber 1833 durchaus verfehlt, wollte der Gymnasial Unterricht in den Realien ob den denselben besuchenden technischen Schüler von seiner edlern Höhe herabgezogen werden. Vielmehr soll gerade die Theilnahme an den minder exclusiven Unterrichts-Gegenständen einer höhern Lehranstalt einerseits diesen mit den Vorbedingungen zu dem Gymnasial-Unterrichte versehenen und deshalb zur Theilnahme an dem Gymnasial-Unterrichte befähigten Jünglingen die Weihe höherer wissenschaftlichen Bildung erhalten, und andererseits bewirken, dass nicht ferner wie bisher auch zu häufig geschah, auch der Realien-Unterricht des Gymnasiums in die Gymnastic der alten Sprache hineingezogen, und der absolvirende Gymnasist sogar ohne gründliche Kenntniss seiner Muttersprache und seines Vaterlandes auf die Universität gesendet wurde. Es ist daher der Realien-Unterricht ohne Rücksicht auf die Theilnahme oder Nichttheilnahme einzelner, die lateinische Schule absolvirt habende Landwirthschafts- und Gewerbschüler an allen Gymnasien mit streng wissenschaftlichem Ernste, aber noch in der schulordnungsmässigen Reinheit zu geben; die teutsche Sprache und die damit

verbundene

verbundene Theorie der redenden Künste in dem durch die Schulordnung gewählten Umfange von dem Unterrichte in der Geographie getrennt zu halten; und der Geographie sowohl, als der Geschichte ist die gebotene Zeit von wöchentlich drei Stunden zu widmen, und der geographische Unterricht in den beiden untern Classen als politische, in den beiden obern als mathematisch-physicalische Geographie von dem Gymnasial Professor der Mathematic gehörig zu concentriren.

§ 35.—Sollte durch den Hinzutritt der aus der lateinischen Schule hervorgegangenen Landwirthschafts- und Gewerbsschüler, die Schülerzahl für die Realien sich wesentlich mehren, so ist der Fall der Errichtung von Parallel-Classen gegeben.

§ 36.—Der Real-Unterricht an der technischen Schule umfasst alle planmässig dem Unterrichte der technischen Sonn- und Feyertagsschule constatirten Gegenstände.

§ 37.—Das Hören der Realien an Sonn- und Feyertagsschulen ist auch denjenigen nicht untersagt, welche nach Absolvirung der lateinischen Schule die Befähigung zu deren Erlernung an dem Gymnasio erworben haben. Da aber der grosse Zweck dahin gerichtet ist, die lateinische Schule sich mehr und mehr als die Werktagsschule der Gebildeteren überhaupt constituiren zu sehen, und namentlich den Notabilitäten des Gutsbesitzes und der Industrie unter der streng positiven Berufsrichtung mittelst einer classischen Unterlage und eines mehr wissenschaftlichen Realien-Unterrichtes auch die entsprechende sociale Entwicklung zu sichern; da ferner dieses Absolvirthaben der lateinischen Schulen und dieser höhere Realien-Unterricht nach Ziff. V. und XII. der allerhöchsten Verordnung vom 16ten Febr. 1833, die unerlässliche Bedingung des Uebertrittes an die technische Hochschule bildet, so bleiben die Vorstände der Landwirthschafts- und Gewerbsschule sowohl, als die Local-Districts-Schulinspectoren und unmittelbaren Schulcommissäre, dann die Rectorate und Subrectorate der Gymnasien und lateinischen Schulen verpflichtet; namentlich die Söhne bemittelter Eltern über die oben berührten Gesichtspunkte auf das Eindringlichste zu belehren, und mit aller Kraft dahin zu wirken, dass sie ihren Söhnen durch die Wahl der Werktagsschule den wissenschaftlichen Realien-Betrieb mindestens die Möglichkeit der Benützung jener höhern Bildungsquelle offen halten, welche der bayerische Staat mit unübertroffener, vielleicht unerreichbarer Grossartigkeit seinem Mittelstande darbietet.

§ 38.—Der Religions-Unterricht wird jedenfalls an der Landwirthschafts- und Gewerbs schule selbst, und zwar in wöchentlichen zwey Stunden für alle den lateinischen und den teutschen Schulen entnommenen Landwirthschafts- und Gewerbs-Schüler durch die besonders remunerirten Ortsgeistlichen, oder durch besonders approbirte Religionslehrer der betreffenden Confessionen gewährt.

§ 39.—Uebrigens wird gerne gestattet, ja inhaltlich des Ziff. V. der allerhöchsten Verordnungen vom 16 Febr. 1833, sogar gerne gesehen, dass an den mit entsprechenden Mitteln versehenen Landwirthschafts- und Gewerbsschulen der Realien-Unterricht des Gymnasiums und der teutschen Schule durch einen eigens organisirten Realien-Unterricht ersetzt werde, soferne

1. Der daher anzustellende, oder gegen Remuneration mit seiner Einwilligung zu verwendende schon angestellte Lehrer die volle Befähigung zum Gymnasial-Lehramte (wenn auch mit Ausnahme der griechischen Sprache) besizt;
2. Der Unterricht streng innerhalb des für das Gymnasium vorgeschriebenen Umfangs und Stundenmasses gegeben wird, und sonach;
3. In jeder Beziehung die Voraussetzungen der Ziff. XII. Abs. 2, der allerhöchsten Verordnung vom 16ter Febr. 1833 erschöpft, in welchem Falle dann dieser auch den Lehrlingen und den aus den teutschen Schulen gekommenen Landwirthchafts- und Gewerbsschülern zugängige Realien-Unterricht, die, die lateinische Sprache absolvirt habenden Landwirthschafts- und Gewerbsschüler aber, so zu dem Uebertritte an die technische Hochschule berechtiget, als hätten sie die gesammten Realgegenstände in einem Gymnasio selbst gehört.

Den zum Besuche der Realien an den Gymnasien befähigten Landwirthschafts- und Gewerbsschülern ist auch die Theilnahme an dem Gymnasial-Unterrichte in lebenden fremden Sprachen in so ferne gestattet, als an der Landwirthschafts- und Gewerbsschule eine eigene unentgeldliche Gelegenheit zu Erlernung dieser Sprachen nicht begründet werden kann.

IVtes CAPITEL.—*Von dem Lehr-Apparate.*

§ 40.—Der unerlässliche aus der Dotation zu bestreitende Lehrapparat einer Landwirthschafts- und Gewerbsschule Iter sowohl als IIter und IIIter Classe besteht:

1. In einer möglichst vollständigen Sammlung entsprechender und der Academie der bildenden Künste vorläufig oder bleibend approbirter Vorlagen für das Linear- und Ornamenten-Zeichnen, insbesondere auch körperliche Vorlagen landwirthschaftlicher Guts- Carton- und Bauplane;
2. In einer Sammlung der erforderlichen Bücher aus besonderen technischen Journalen und Encyclopädien;
3. In einem kleinen Naturalien-Cabinette;
4. In einer Sammlung nach Analogie der Ziff. 1, approbirten, von Modellen für Bossiren;
5. In dem unentbehrlichen physicalischen und chemischen Apparate;
6. In einer Sammlung von Vorlagen für den Unterricht der darstellenden Geometrie und Mechanic.

Die Zeichnungs-Vorlagen sind bis zu Erscheinen des zeug Anlage 12, bereits in der Ausarbeitung behandelten Vorlagewerkes einstweilen aus der grossen Zahl der für das technische Anl. 12.

nische Zeichnen bestimmten Unterrichtswerke zu entnehmen. Auch sind hier die Bauwerke des k. Geheimen-Raths v. Klenze und des k. Professors Gärtner ganz vorzugsweise zu empfehlen. Die unter Ziff. 5. und 6. genannten Sammlungen sind durch Bestellung bei einer der drei polytechnischen Schulen des Reiches zu beziehen. Allmählig, wo es zulässig, soll mittelst Pachtes oder Kaufes eine kleine Muster-Wirthschaft für die Landwirthschaftsschule Behufs des täglichen Unterrichtes, und eben so ein *Herbarium visum* für die Forst- und landwirthschaftliche Botanic angeschaft werden. Auch ist im Wege des Wunsches und freundlichen Uebereinkommens Sorge zu tragen, dass die in dem Orte oder dessen Nähe befindlichen Sammlungen der landwirthschaftlichen und polytechnischen Kreis-Vereine der Modellen-Sammlungen von Corporationen und Privaten, die landwirthschaftlichen Gärten und Muster-Anstalten und die Werkstätten ausgezeichneter Meister, den Landwirthschafts- und Gewerbsschulen und ihren Zöglingen zugängig gemacht werde.

Abschnitt III.—Von der Eintheilung des Schuljahres, der Aufnahme, dem Aufsteigen, der Prüfung und den Reisen der Zöglinge.

§ 41.—Das Schuljahr der Landwirthschafts- und Gewerbsschulen beginnt und endet mit jenem der Gymnasien.

Der Eintritt in das technische Gymnasium (Landwirthschafts- und Gewerbsschule) findet in der Regel nicht vor zurückgelegtem 12ten Lebensjahre statt. Ausnahmen von dieser Regel können nur in Berücksichtigung ganz besonderer Umstände, und auch hier nur von der betreffenden Königl. Kreisregierung K. d. Innern bewilliget werden.

Uebrigens setzt die Zulassung zu den Landwirthschafts- und Gewerbsschulen das Vollendethaben der rein wissenschaftlichen Erziehung (lateinischen Schule) nur bezüglich derjenigen Jünglinge voraus, welche sich das einstige Aufsteigen an die technische Hochschule offen zu halten gedenken.

Jedem diese Absicht nicht hegenden Schüler einer lateinischen-sowohl als teutschen Schule steht von dem Augenblicke des überschrittenen 12ten Lebensjahres, die Meldung zu Admission an die Landwirthschafts- und Gewerbsschule und jeder Admissions-Termin frei, und die erfolgte, dem Subrectorate der betreffenden lateinischen, oder dem Local-Inspector der betreffenden Schule amtlich zu notifizirende Admission zieht (in dem Falle noch nicht erloschener Werktags-Schulpflicht) von selbst deren Suspension bis nach erfolgter erster Communion oder Confirmation und sofort den Uebertritt des betreffenden Jünglings in die Reihe der Sonn und Feyertagsschüler nach sich.

§ 43.—Das Rectorat der Landwirthschafts- und Gewerbsschule ist befugt, die Admission der weder mit dem Absolutorium einer lateinischen noch mit einem Ueberweisungsschein aus der technischen Werk- und der technischen Sonn- und Feyertagsschule versehenen Jünglinge durch das Bestehen einer Admissions-Prüfung zu bedingen, welche sich über die Religionslehre, die Fertigkeit im Lesen, Schreiben und in den 4 Rechnungsarten, dann über die Fertigkeit zur Anfertigung eines einfachen sprachrichtigen Aufsatzes und zur Anwendung der 4 Rechnungs-Regeln auf die gewöhnlichsten Fälle des bürgenlichen Lebens zu erstrecken hat. Ferner ist der Uebertritt aus der nicht absolvirten lateinischen an die Landwirthschafts- und Gewerbsschule durch eine von dem Rectorate den Landswirthschafts- und Gewerbsschulen zu ertheilende Potocollar-Belehrung des Jünglings, seiner Eltern oder Pflegeeltern über die Bestimmungen der Ziffer V. und XII. der allerhöchsten Verordnung vom 16ten Febr. 1833. und über den §§ 37 und 42 gegenwärtiger Instruction und dadurch bedingt, dass sie auf ihrem Entschlusse beharren, nachdem ihnen deutlich erklärt worden ist, dass das Aufsteigen an die technische Hochschule nur auf dem Grunde der absolvirten lateinischen Schule möglich ist.

§ 44.—Der die Admission Nachsuchende ist gehalten ein Zeugniss seiner bisherigen Schulbehörde über den genossenen Unterricht, über den bisher entwickelten Fleiss, Fortgang und über das bisherige sittliche Betragen beizubringen.

§ 45.—Die, kraft ihrer Urkunde (Absolution der lateinischen Schule oder Ueberweisungs-Zeugnisse aus der Werktags-in die Feyertags-Schule) eintretenden sowohl, als die sonst Amittirten erhalten Inscriptions-Zeugnisse nach Anlage 13.

Anl. 13.

Zugleich werden die zum einstigen Aufsteigen an der technischen Hochschule Aspirirenden dem betreffenden Gymnasial-Rectorate mit Angabe der Thatsache, ob selbe den Realien-Unterricht an dem Gymnasium oder an der Landwirthschafts- und Gewerbsschule bei einem für das Gymnasial-Lehramt habilitirten Lehrer hören werden, bekannt gemacht und gleiche Eröffnung mit gleichmässiger Aufklärung über das Hören der Realien an der Anstalt oder an der Feyerstagsschule ergeht bezüglich der übrigen Schulen an den betreffenden Districts-Schul-Inspector oder Local-Schul-Inspector.

§ 46.—Uebrigens bleibt Behufs des genauen und zugleich wohlvollenden Vollzugs der Ziffer V. der allerhöchsten Verordnung vom 16ten Febr. 1833. das bereits angeordnete Transitorium aufrecht erhalten, wonach jedenfalls ein für das Gymnasial-Lehramt habilitirter Lehrer oder Lehramts-Candidat bis zu dem Jahre 1840. jene Landwirthschafts- und Gewerbsschüler, deren Werktags Pflichtigkeit ganz oder zum Theile in die Periode vor Erscheinen der oben erwähnten allerhöchsten Verordnung fiel, in einem gesonderten Locale, unter steter Aufsicht des Gymnasial-Rectors speciell mit den an dem Gymnasio zu hörenden Realien dann soweit möglich, auch mit den Anfangsgründen der lateinischen Sprache vertraut macht, um so mindestens den ausgezeichnetsten unter ihnen auf dem Dispenswege das einstige Aufsteigen an die technische Hochschule möglich zu machen.

§ 47.—Jede Landwirthschafts-und Gewerbsschule legt mit Schluss jedes Jahres, und zwar, wenn die Schule an dem Sitze eines Gymnasiums sich befindet, in Gegenwart des zu dem Gymnasial-Examen abgeordneten in den übrigen aber in Gegenwart eines besonders

ernannten

ernannten Regierungs-Commissärs, dann im Beyseyn des Districts-Polizey-Beamten, des Gymnasial-Rectors und sämmtlicher Ortsscholarchen unter freyem Zutritte des Publicums in förmlicher öffentlicher Prüfung Rechenschaft über ihre Leistungen ab. Die Ergebnisse dieser Prüfung, welche über sämmtliche Curse zu erstrecken und mit der Vorlage sämmtlicher Zeichnungen und schriftlichen Arbeiten zu verbinden ist, entscheiden in ihrem Zusammenhalte mit dem Jahresfortgange über das Aufsteigen in den höheren Lehrcurs.

Dieselbe muss den Character des Ernstes und rücksichtsloser Strenge an sich tragen, und es ist kräftigst darüber zu wachen, dass kein Curs verlassen werde, ohne dass dessen Lehrstoff genügend ergründet und begriffen ist.

§ 48.—Der Prüfung folgt die Vertheilung von Preisen an die durch sittliches Betragen und vorzüglichen Jahresfortgang ausgezeichneten Schüler des Jahres. Die Zahl dieser Preise soll zur Anzahl der Schüler in dem Verhältnisse von 1 zu 10 stehen. Diese Preise können in Gelde (Geschichtsthalern), Büchern oder Instrumenten bestehen. Bei ihrer Auswahl sind die näheren Directiven der Anl. 14. zu beachten. Anl. 14.

§ 49.—Der Austritt aus der Landwirthschafts- und Gewerbsschule findet auf geäusserten Wunsch der Eltern oder der, Eltern Stelle vertretenden Personen zu jeder Zeit, ausserdem

1. Wegen gänzlich unzureichenden Fähigkeiten (§§ 42 u. 43.) oder
2. Aus Strafe §§ 67 u 70., oder
3. Nach absolvirtem Unterricht, d. h. nach vollendetem Besuche der drei Curse, nach genügend bestandener Schlussprüfung des dritten Curses statt.

§ 50.—Die den Unterricht absolvirt habenden Schüler erhalten ein förmliches Absolutorium, welches nach Anlage 15. zu verfassen ist, und sich insbesondere darüber zu verbreiten hat, ob der betreffende Schüler der landwirthschaftlichen oder der gewerblichen Richtung angehört, aus welcher Unterrichts-Anstalt er zu dem technischen Unterrichte übergetreten ist, welches Zeugniss er von jener Anstalt erlangt, wo er während des technischen Curses die Realien gehört, und ob er nach § 31. u. 37 die Vorbedingungen zum Aufsteigen in die technische Hochschule erfüllt oder sich in dem Falle der Subsumtion unter das Transitorium mindestens nach § 46. die Möglichkeit der Dispensation gesichert hat, wobey sich von selbst versteht, dass die Note über den Realien-Unterricht bezüglich der dieselben an dem Gymnasium gehört habenden Jünglinge unbedingt nach Zeugnissen des betreffenden Gymnasial-Rectorates in das Absolutorium bemessen werden muss. Anl. 15.

Abschnitt IV.—*Von den Lehrern des technischen Gymnasiums.*

§ 51.—Jede Landwirthschafts- und Gewerbsschule soll so viel möglich mit vollständigen und tüchtigen Lehrkräften versehen werden.

§ 52.—Als Minimum der selbständig anzustellenden Lehrer sind in der Regel für eine vollständige Schule von 3 Cursen:

1. Zwei Individuen für den Zeichnungs-Unterricht, dann für die Lehr-Vorträge über Mathematic, Physic, Chemie, Naturgeschichte, Encyclopädie der Gewerbe und Gewerbskunde, und

2. Ein Landwirthschafts-Lehrer zu betrachten. Dieses Minimum schliesst jedoch die Aufstellung einer noch geringeren Zahl *eigends angestellter und besoldeter Lehrer* für den Fall nicht aus, wenn in sonstigen Verhältnissen stehende tüchtig befähigte Männer mit der Musse auch die Geneigtheit verbinden sollten, sich unentgeldlich, oder gegen geringere Bezüge die verschiedenen Lehrgegenstände *in dem vollen Masse des vorschriftsmässigen Lehr- und Zeit-Umfanges* zu geben, in welchem Falle wie überhaupt alle Verhältnisse der Schulen so auch insbesondere Zahl und Bezüge der Lehrer, nach den stets vorzugsweise zu beachtenden Local-Verhältnissen und Local-Wünschen zu bemessen sind.

§ 53.—Die Uebernahme eines Lehramtes an Landswirthschafts- und Gewerbsschulen setzt nebst den genügenden Bestehen der Prüfung vom Jahre 1840 anfangend

a. Für Lehrer der gewerblichen Richtung mindestens das Absolvirthaben,
  aa. des gewerblichen Unterrichts an einer Landwirthschafts- und Gewerbsschule, dann,
  bb. einer polytechnischen Schule, und
  cc. ein Jahr Besuches der technischen Hochschule (oder bei Zeichnungslehrern zwei Jahre Elevenstandes an der K. Academie der bildenden Künste)
b. für Lehrer der Landwirthschaft mindestens
  aa. das Absolvirthaben des Landwirthschafts-Unterrichtes an einer Landwirthschafts- und Gewerbsschule,
  bb. ein Jahr Besuches der technischen Hochschule, und
  cc. drei Jahres Betriebes einer Landwirthschafts-Complex oder förmlichen Praxis an rationell verwalteten grösseren Gütern voraus. Bis zu dem Jahre 1840. genügt das entsprechende Bestehen der Prüfung und überdiess bei Landwirthschafts-Lehrern der Nachweis einer Landwirthschafts-Praxis.

§ 54.—Diese Prüfung, welche von den Lehrern der gewerblichen Richtung an eine der drei polytechnischen Schulen für jene der Landwirthschaft an der staatswirthschaftlichen Facultät der K. Ludwig-Maximilians-Universität als Professoren *Gremio* der technischen Hochschule zu bestehen, und jährlich in dem Laufe des Monats September öffentlich auszuschreiben ist, kann sich bei Candidaten für Lehrstellen der gewerblichen Richtung je nach dem Wunsche des Examinaten über eine oder mehrere oder auch über alle Disciplinen des vorgeschriebenen Unterrichtes erstrecken.

Bei den Lehrern der Landwirthschaft *muss* sie die gesammte Landwirthschaft umfassen. Sie bezweckt die Ermittlung

a. des theoretisch und practisch gründlichen Innehabens des betreffenden Gegenstandes, und
b. der Lehrgabe, diesshalb denn auch insbesondere
zu a. auf die technische Fertigkeit in *Anwendung der theoretischen Nationen*, und
zu b. auf die erhöhten Ansprüche zu sehen ist, welche jede Vereinigung verschiedenartig *vorgebildeter Schüler* an die Mittheilungsfähigkeit des Lehrers richten muss.

§ 55.—Das Ergebniss der Prüfung wird stets ohne Aufschub in den Concurs-Noten, "der vorzüglichen" "sehr guten" "guten" Befähigung nach Stimmenmehrheit der die Prüfung vornehmenden Lehrer sogleich ausgesprochen, dem Candidaten durch ein in der Form Anlage 16. abgefasstes Zeugniss bekannt gemacht, und dem Staatsministerium des Innern berichtlich angezeigt. Anl. 16.

§ 56.—Zu Aufstellung als Realien-Lehrer an einer Landwirthschafts- oder Gewerbsschule werden mit Ausnahme der griechischen Sprache dieselben Nachweise erfordert, welche die Uebernahme derselben Fächer an dem Gymnasio bedingen. Will daher ein zu dem Gymnasial-Lehramte nicht bereits habilitirter Lehrer einer Landwirthschafts- und Gewerbsschule nach Erscheinen gegenwärtiger Instruction auch den Unterricht in der teutschen Sprache, oder in der Geschichte oder Geographie übernehmen, so bleibt er verpflichtet, sich bei der laut § 102 u. f. der Schulordnung von 2 zu 2 Jahren regelmässig abgehaltenen werdenden Gymnasial-Lehr-Amts-Prüfung zu stellen, und daselbst die specielle Prüfung über *den von ihm vorzutragenden Realien-Gegenstand* zu bestehen.

§ 57.—Dispensirt von der vorgeschriebenen Prüfung sind kraft ihrer höheren Bildung

a. überhaupt diejenigen, welche den betreffenden Gegenstand an einer Universität als förmlich immatriculirte Hochschüler mit ausgezeichnetem Erfolg-Zeugnisse absolvirt haben, und
b. was insbesondere den Zeichnungs-Unterricht betrifft, die mit günstigen Zeugnissen entlassenen Schüler der K. Academie der bildenden Künste. Ferner wird von dem K. Staatsministerium des Innern auf Aufsuchen dispensirt, wer durch literäre Celibrität oder ausgezeichnete practische Leistungen unzweifelhafte Beweise eminenter Befähigung abgelegt hat.

§ 58.—Die Gehalte und Remunerationen sind dort, wo die Landwirthschafts- und Gewerbsschulen von der Gemeinde dotirt werden möglichst nach deren Wunsche zu reguliren.

In der Regel soll ein eigens aufgestellter, wöchentlich mindestens 24. Unterrichtsstunden gebender Lehrer an Geld und sonstigen Emolumenten in Minimo 500 fl. beziehen.

§ 59.—Uebrigens kömmt nur den gegen blosse Remuneration für einzelne Fächer verwendeten Lehrern ein Anspruch auf ein bestimmtes Maximum von Lehrstunden zu. Der förmlich angestellte Lehrer dagegen ist gehalten, der Anstalt seine volle Thatkraft zuzuwenden, auf Verlangen des Rectors und des Special-Scholarchates mit einzelnen Schülern oder ganzen Classen ausserordentliche Repetitionen abzuhalten und überhaupt alles beizutragen, um die noch zarte Schöpfung schnell und kräftig auf die ihr im Interesse der National-Wohlfahrt Allerhöchst vorgezeichnete Stuffe zu erheben.

§ 60.—Die Anstellung der Lehrer erfolgt je nach den jeweiligen allerhöchsten Bestimmungen durch allerhöchste oder durch Ministerial-Entschliessung und zwar:

1. dort wo nach Artikel IX. der allerhöchsten Verordnung vom 16ten Febr. 1833 ein gemeindliches Präsentationsrecht nicht Platz greift, nach gehörtem Vorschlage,
2. im entgegengesetzten Falle nach gehörten Gutachten der betreffenden Kreisregierung K. d. Innern, d. h. des mit dem gemeinsamen Antrage des Kreisscholarchates des Bau-Referenten und des das Referat für Gegenstände der Landwirthschaft, des Handels, der Industrie, der Gewerbe und der Statistic versehenen K. General-Commissär und Regierungs-Präsidenten.

Unter gleich befähigten Lehrern behaupten die aus der Technologie mit Erfolge geprüften stets den Vorzug.

§ 61.—Die über die Qualificationslisten des Studienlehramts Personals und deren Evidenthalten festgesezten Bestimmungen finden auch auf das Lehrpersonal der Landwirthschafts- und Gewerbsschulen analoge Anwendung. Die nach der Form Anlage 17. geschöpften Qualifications-Noten sind daher, wo es nicht bereits geschehen sollte, alsbald von dem Rectorate primitiv zu schöpfen und vorzulegen, eben so sind dem mit Schlusse jedes Schuljahres zu erstattenden Jahresberichte die etwaigen Aenderungen der Kreisregierung anzuzeigen, und von dieser in gemeinsamem Zusammentritte ihres Kreisscholarchates und ihres Referenten für Bauwesen, dann für Gegenstände der Landwirthschaft, des Handels, der Industrie, der Gewerbe und der Statistic festzustellen. Anl. 17.

ABSCHNITT V.—*Von den Schulbehörden, dem Scholarchate und der Zucht des technischen Gymnasiums.*

§ 62.—Die Aufsicht und Leitung jeder Landwirthschafts- und Gewerbs-Schule ist an dem Sitze der polytechnischen Schulen mit dem Rectorate der letzteren verbunden. An den übrigen Orten wird selbe auf Vorschlag der Kreisregierung von dem Staatsministerio des Innern entweder einem der an derselben angestellten Lehrer oder einem sonstigen achtbaren und sachkundigen Manne übertragen, der, in dieser Eigenschaft, wenn die Schule alle

3 Curse hat, den Titel " Subrector," führt und gleich den Gymnasial-Rectoren der K. Kreisregierung unmittelbar untergeordnet ist. Bei den dissfalligen Vorschlägen ist neben der erforderlichen Bildung auf möglichst unabhängige Stellung des Rectors von dem Lehrpersonal, auf Einklang mit dem Gymnasial-Rectorate, auf regen Eifer für die grosse Sache des technischen Unterrichtes und auf allgemeines Vertrauen zu sehen.

§ 63.—Den Rectoraten und Subrectoraten kommt als Amtssiegel das K. Wappen in der für die Gymnasien vorgeschriebenen Form und Grösse " mit der Ueberschrift zu:" Rectorat der K. Kreislandwirthschafts- und Gewerbsschule zu N.

§ 64.—Dem Rector der Landwirthschafts- und Gewerbsschule liegt die Aufsicht über die ganze Anstalt ob. Er ist ganz vorzugsweise mit der Sorge für Zweckmässigkeit des Unterrichtes, für kräftige Handhabung der Schulzucht beauftragt. Er wacht darüber, dass jede Stunde dem vorgeschriebenen Unterrichte vollständig gewidmet, die Ruhe in dem Schulgebäude und in den Cursen erhalten, die Schulversäumnisse gerügt, die neu eintretenden Schüler strenge geprüft, jede vorgeschriebene Aufgabe sorgfältig corrigirt, das auf jeden einzelnen Schüler sich erstreckende Fortgangs-Buch fleissig und gewissenhaft geführt werde.

Er ist es, der zunächst dafür haftet, dass der Unterricht neben der theoretischen auch die erforderliche practische Richtung behaupte, dass derselbe in den Stunden nicht bloss gewährt, sondern auch begriffen, und dass in diesem so zahllosen Special-Berufe vorarbeitenden Unterrichtszweige auch in der That jeder Jüngling nicht nur zu einem religiös und sittlich edlen Menschen und zu einem gebildeten in dem Ehrenamte des Landes mit Ruhm wirken könnender Staatsbürger, sondern auch zu einer eminenten Specialität des Landwirthschafts und sonst technischen Wesens herangebildet werde.

§ 65.—Der Rector versammelt jährlich mindest viermal das gesammte Lehr-Personal der landwirthschaftlichen und gewerblichen Richtung einschliessend der Religions-Zeichnungs- und Sprachlehrer zu gemeinsamer Berathung, um die Wünsche, Bemerkungen und Anträge im Interesse der Anstalt zu vernehmen und darüber gemeinsame Erörterungen zu pflegen.

Das über diese Berathungen zu führende, die gemeinsam geschöpften Ansichten sowohl, als die erfolgten Rectorats-Beschlüsse nachweisende Protocoll wird von allen Theilnehmern unterschrieben und den Acten einverleibt.

§ 66.—Die disciplinären Vorschriften werden von dem Rector in gemeinsamer Berathung mit dem versammelten Lehrpersonal und dem Special-Scholarchate, und zwar gleich bindend für die Schule der landwirthschaftlichen und für die gewerbliche Richtung festgestellt, der K. Kreisregierung K. d. Innern zur Genehmigung vorgelegt und nach erfolgter Genehmigung in Druck gelegt, und nicht nur den Schülern jährlich mit Anfange des Schuljahres neu bekannt gemacht, sondern auch durch die K. Kreisregierung

a. den übrigen Kreisregierungen für sich und für sämmtliche Kries-Landwirthschafts- und Gewerbsschulen, dann für sämmtliche Landwirthschafts- und Gewerbsschulen I Classe, und

b. in sechs Exemplaren dem K. Staatsministerium des Innern mitgetheilt. Gleiche Vertheilung hat bezüglich des von dem Rectorate oder dem Subrectorate jeder Landwirthschafts- und Gewerbsschule, dann jeder Landwirthschafts- und Gewerbs-Schule I., II. Classe über die Leistungen der Anstalten und über die merkwürdigeren Vorfälle an derselben kund zu gebenden jährlichen nach der Anlage 18. sich richtenden und mit einem Programme zu begleitenden Jahresberichte statt zu finden. Anl. 18.

§ 67.—Die den Realien-Unterricht der Gymnasien besuchenden Landwirthschafts- und Gewerbsschüler sind in Absicht auf diesen Schulbesuch ebenso der Aufsicht und Disciplin des Gymnasial-Rectors, wie in Beziehung auf den technischen Unterricht der Aufsicht und Disciplin des Rectors der Landwirthschafts- und Gewerbsschule untergeben. Erachtet der eine oder der andere dieser Rectoren die Dimission eines Schülers für nothwendig, so veranlasst derselbe einen gemeinsamen Zusammentritt der Professoren und Rectoren beider Anstalten, bei welchem der Gymnasial Rector den Vorsitz führt und den Professoren beider Anstalten eine berathende Stimme zukommt. In dem Nichtvereinigungsfalle beider Rectoren entscheidet, auf gemeinsames Gutachten beider Ortsscholarchate, die K. Kreisregierung K. d. Innern resp. ihr General-Commisär und Regierungs-Präsident auf gemeinsamen Antrag des Kreisscholarchates des Baureferenten und des Referenten für Gegenstände der Landwirthschaft, des Handels, der Industrie, der Gewerbe, und der Statistic. Gegen den Auspruch dieser Stelle findet keine weitere Berufung statt.

§ 68.—Dem Rector der Landwirthschafts- und Gewerbsschule stehen für die Zwecke der Anstalt eigene Ortsscholarchate mit berathender Stellung und mit eben jenem Wirkungskreise zur Seite, welcher den für die Gymnasien angeordneten Scholarchaten bezüglich der letzteren zukommen. Diese Ortsscholarchate führen den Titel " Special-Scholarchat für Landwirthschafts- und Gewerbsschule zu N.;" sie werden von der vorgesetzten Kreisregierung gebildet, und bestehen unter dem Vorsitze des Rectors der Landwirthschafts- und Gewerbsschule aus einem Orts-Geistlichen, einem Abgeordneten des Magistrats, einem Gemeinde Bevollmächtigten, einem angesehenen gebildeten von dem Magistrate gewählten Gewerbsmeister des Ortes. Ferner steht die Theilnahme an den Verhandlungen dieses Scholarchates dort wo die Landwirthschafts- und Gewerbsschüler an dem Realien-Unterricht des Gymnasiums Theil nehmen, dem Rector des Gymnasiums zu.

Auch sind die Landwirthschafts- und polytechnischen Vereine und um die Schule hochverdienten Privaten befugt, under dem im Art. IX. der allerhöchsten Verordnung vom 16ten Febr. 1833. erstere durch Abgeordnete aus ihrer Mitte, letztere in Person an sämmtlichen Scholarchats-Verhandlungen förmlichen und fortgesetzten Antheil zu nehmen.

§ 69.—Jeder Lehrer ist für Zucht und Ordnung der ihm anvertrauten Schüler während des Unterrichtes verantwortlich. Ebenso ist jeder Lehrer verpflichtet über Fleiss und

Sittlichkeit seiner Schüler alles Ernstes zu wachen. Eben deshalb steht ihm auch über sie, während der Unterrichtstunden, die unumschränkte Aufsicht, und die Macht zu, ausgezeichnetem Benehmen angemessene Belohnungen zu ertheilen.

Geringere Ordnungswidrigkeiten innerhalb der Schule durch Verweise, Strafaufgaben und Detention des Schülers in der Schule unter angemessener Beschäftigung zu beahnden. Gröbere während des Unterrichts eintretende Verfehlungen hat derselbe dem Rectorate der Landwirthschafts- und Gewerbsschule sogleich anzuzeigen, damit dieses den Umständen gemäss einzuschreiten vermöge.

§ 70.—Gleiche Meldung an das Rectorat der Landwirthschafts- und Gewerbschule hat statt zu finden, Falls der Lehrer in irgend einem Falle sein Ansehen, gegenüber den Schülern oder ihren Angehörigen verlezt findet, und das Rectorat ist in solchem Falle gehalten, alsbald das Erforderliche zu Aufrechthaltung der Authorität des Lehrers zu verfügen oder zu veranlassen.

TITEL IV.—*Von den Landwirthschafts und den Handwerks-Sonn und Feyertagsschulen.*

§ 71.—Um möglichst auch für die tüchtigere Bildung der der Landwirthschafts- und Gewerbsschule nicht angehörigen Lehrlinge und Gesellen zu wirken, dürfen neben diesen Schulen auch eigene Landwirthschafts- und Handwerks-Feyertagschulen bestehen.

Der Zutritt zu denselben ist jedem jungen Landwirthe einschlüssig der mit ausgezeichneten Zeugnissen versehenen und nach einstigem Selbstbetriebe eines Gutes strebenden, die Erkenntniss ihrer Fähigkeit nachweisenden landwirthschaftlichen Dienstboten, jedem Lehrlinge und Gesellen gestattet, welchen der Mangel an der den Eintritt in die Landwirthschafts- und Gewerbsschule bedingenden Vorkenntnissen, dann der zum Besuche des Werktags-Unterrichts nöthigen Zeit von der Theilnahme an dem Unterrichte der Landwirthschafts- und Gewerbsschule abhält.

§ 72.—Der Unterricht findet in der von der Sonn- und Feyertags-Schule nicht in Anspruch genommenen Zeit statt. Er wird an dem Sitze der Landwirthschafts- und Gewerbsschule unentgeldlich durch die Lehrer dieser Schulen gegeben und erstreckt sich auf die Anfangsgründe der Geometrie, dann auf populäre Vorträge über Physic und Chemie, über einfache Maschinen, über die Landwirthschaft und über die landwirthschaftlichen Gebäude.

§ 73.—Auch dieser Unterricht ist dadurch möglichst zu specialisiren und der künftigen Berufsrichtung der Betheiligten anzueignen, dass nicht jedem Schüler die gleichmässige Theilnahme in allen Unterrichtszweigen zur Pflicht gemacht, vielmehr jedem der vorzugsweise Betrieb des ihm speciell Wichtigen empfohlen und nicht nur die Auswahl der Zeichnungs-Vorlagen für jeden hienach bemessen (z. B. bei jungen Landwirthen auf das Zeichnen landwirthschaftlicher Geräthschaften, bei Gewerbsleuten auf gewerbliche Maschinen und Objecte gerichtet), sondern auch im Plane dann die Zeit, welche der künftige Bau-Gewerbsmann mit modelliren und Bossiren, &c. ausfüllt, dem Landwirth ein anderes nützliches Studium vorgezeichnet werde.

§ 74.—Uebrigens bleibt der Zeichnungs-Unterricht an den Landwirthschafts- und Handwerks-Feyertags-Schulen namentlich auch aller aus der Landwirthschafts- und Gewerbsschule mit einem Absolutorio ausgetretenen Lehrlingen und sonstigen Jünglingen bis zu dem erreichten 25ten Lebensjahr zugänglich, und die Lehrer haben ganz besondere Sorge zu tragen, dass diesen Categorien von Theilnehmern eine möglichst eigenthümliche nach ihrer Zukunft bemessene Wahl von Vorlagen zu Theil werde. Zugleich sind derley junge Leute mit freundlichem Rathe bezüglich ihrer Fortbildung und bezüglich der zu diesem Zwecke zu benützenden Bücher und technischen Zeitschriften zu versehen.

Auch wird es sehr gerne gesehen werden, wenn jede Landwirthschafts- und Gewerbsschule ihre Bibliothek mit der nöthigen Zahl solcher Bücher und Zeitschriften versieht, um ausgetretenen Schülern deren unentgeldliche Benützung in dem Schulgebäude oder ausserhalb desselben gegen Legschein darbieten zu können.

TITEL V.—*Von den polytechnischen Schulen (technischen Lyceen.)*

ABSCHNITT I.—*Von dem Zwecke der Begründung und Dotation der polytechnischen Schulen im Allgemeinen.*

§ 75.—Der polytechnische Unterricht umfasst die höhere Unterrichts-Sphäre des technischen Unterrichts. Sie ist mit Ausschlusse der landwirthschaftlichen Sphäre allen Zweigen der technischen Erziehung gewidmet, und somit als Fortsetzung der Landwirthschafts- und Gewerbsschule für alle Categorien der Gewerbsschule (im weitesten Sinne zu betrachten.

§ 76.—Dieselbe zerfällt wie die Landwirthschafts- und Gewerbsschule selbst in drey Jahres-Curse.

§ 77.—Auf Kosten des Staats bestehen drey Anstalten der Art, zu München, Nürnberg, und Augsburg, deren die erstere dem Baugewerke, die zweite dem Guss- und Metall-Gewerke, die dritte der Woll- und Baumwoll-Fabrication, der Kunst und der Färberey eine vorzugsweise Pflege zuzuwenden hat und deren Dotation über Abzug der freiwilligen Beiträge der betreffenden Gemeinden, dann der Hospitanten-Gelder der zum Hospitiren sich meldenden Ausländern, aus der betreffenden Budget-Position bestritten würden.

Ueberdiess steht jeder Stadt frei, neben obigen von dem Staate gegründeten Anstalten eine eigene unvollständige polytechnische Schule zu errichten. Jedoch darf 1 ein polytechnischer Curs überhaupt nur errichtet werden, wo bereits eine Kreis-, Landwirthschafts- und Gewerbsschule oder eine solche Schule I Classe, mit den erforderlichen drey Cursen, und der entsprechenden Personal-Bestellung besteht.

2. Darf

2. Darf zu Gründung eines höheren polytechnischen Curses nicht übergegangen werden, he die nächstvorangehende vollständig organisirt und gesichert erscheint.

ABSCHNITT II.—*Von dem Unterrichte und den Unterrichts-Attributen der polytechnischen Schulen.*

§ 78.—Die Unterrichts Gegenstände der polytechnischen Schule sind:

1. Das Zeichnen.
2. Reine Mathematic.
3. Angewandte Mathematic.
4. Descriptive Geometrie.
5. Experimental-Physic.
6. Technische Chemie.
7. Baukunde (Civilbaukunde.)
8. Wasser, Brücken und Strassenbau.
9. Bossiren und Modelliren.
10. Geschichte der Gewerbe in Teutschland mit besonderer Rücksicht auf Bayern.
11. National Oeconomie in ihren Grundlinien.

§ 79.—Die Gesammt-Masse dieses Unterrichts-Stoffes wird mit näherer Bezeichnung ihres Umfanges, auf die drei Jahres-Curse vertheilt wie folgt:

Iter Curs:

1. Zeichnungs-Unterricht, als:
   a. Freie Handzeichnung, Zeichnen menschlicher Figuren mit Rücksicht auf Anatomie nach Vorlege-Blättern, in Umrissen und leicht schattirt.
   b. Archetectonische Zeichnung, Antiken, Ornamententheile zur Kenntniss der alten Baustyle.
   c. Geometrische und perspectivische Zeichnung, fortschreitend mit der descriptiven Geometrie (gesammter Zeichnungs-Unterricht in wöchentlich 10 Stunden).

2. Reine Mathematic, Forsetzung der Algebra, die Gleichungen des zweiten Grades-Combinationslehre, binomischer und polynomischer Lehrsatz, Reihen, Logarithmen, Kreisfunctionen, Trigonometrie, Polygonometrie analytische Darstellung der geraden Linien, die Ebenen, Linien und Flächen der zweiten Ordnung (wöchentlich in 5 Stunden).
3. Descriptive Geometrie im weiteren Umfange, (wöchentlich in 10 Stunden).
4. Experimental-Physic in wöchentlich 5 Stunden im ganzen Cursus einschliesslich der Lehre von den Ponderabilien.

Im IIten Curse:

1. Zeichnungs-Unterricht.
   a. Freie Handzeichnung, Köpfe, Hände und Füsse mit vollständiger Schattirung, zuerst nach Vorlagen, dann nach dem Runden.
   b. Architectonische Zeichnung-Architectonische Theile und Ornamente zur Uebersicht mittelalterlicher Baustyle.
   c. Geometrische Zeichnung, Maschinen-Zeichnung nachvorlagen. (Gesammt-Zeichnungs-Unterricht wöchentlich in 10 Stunden.)
   d. Mechanic, Static der festen und flüssigen Anwendungen aus der Static beider (wöchentlich 5 Stunden).

3. Technische Chemie-Affinität und chemischer Prôcess, chemische Operationen, Darstellungen, Eigenschaften und Anwendung der einfachen Stoffe auf die wichtigsten technischen Zwecke, Haupt-Grundsätze der Stöchiometrie und stöchiometrische Zusammensetzungen, organische Verbindungen mit den wichtigsten technischen Verbindungen (wöchentlich 5 Stunden).
4. Bossiren und Modelliren. Modelliren von Ornamenten analog dem Zeichnen der Ornamente.
5. Geschichte der Gewerbe in Teutschland mit besonderer Rücksicht auf Bayern (wöchentlich 3 Stunden).
6. Waarenkunde (wöchentlich in 5 Stunden).

III.—Cursus:

1. Zeichnungs-Unterricht.
2. Maschinen-Zeichnung. Zeichnung nach Modellen, Maschinen, Aufnahme von Maschinen, (ganzer Unterricht in zweckmässiger Eintheilung wöchentlich 10 Stunden.)
3. Mechanic und Maschinenlehre, Dynamik fester und flüssiger Körper, Anwendung derselben auf Maschinen, allgemeine Maschinenlehre. Gesetze der lebendigen Kraft. Eintheilung der Maschinen Ausdrüke der Arbeit und Kraft für verschiedene Maschinen. Durchgehung der wichtigsten Arbeits-Maschinen (in wöchentlich 5 Stunden).
4. Descriptive Geometrie in ihrer Anwendung auf Steinschnitt, Constructionen und andere Gewerbs-Gegenstände (wöchentlich in 5 Stunden).
5. Geschichte der Gewerbe in Teutschland mit besonderer Rücksicht auf Bayern (wöchentlich in 3 Stunden).
6. Waarenkunde (wöchentlich in 5 Stunden).
7. Bossiren und Modelliren von Köpfen und einzelnen Theilen des menschlichen Körpers.
8. National-Oeconomie in ihren Grundlinien.

Der Unterricht in freier Handzeichnung, dann im Bossiren und Modelliren im III. Curse wird an der Academie der bildenden Künste, und zwar lezterer in der Bildhauerschule derselben,

derselben, dann der Unterricht in architectonischen Zeichnen im III. Curse in der Bauschule derselben gegeben.

§ 80.—Jeder Lehrer hat ein Programm über sein Lehrfach auszuarbeiten, welches nach vorgängiger Aeusserung des versammelten Lehrer-Rathes von dem Vorstande festgestellt, sofort dem Unterrichte zum Grunde gelegt wird. Diese Programme sollen nach Massgabe der fortchreitenden Erfahrungen und des Fortschreitens der Wissenschaft selbst von Zeit zu Zeit einer Revision unterworfen und in obiger Weise neuerlich festgestellt, übrigens auch ihre Feststellung stets alsbald auf Kosten des Staats gedruckt und mit Beginne jedes Curses an die Zöglinge vertheilt werden.

§ 81.—Jede der drei auf Staatskosten gegründeten Schulen durch die allerhöchste Verordnung vom 16ten Febr. 1833. vorgezeichnete specielle Richtung wird dadurch verwirklicht, dass:

I. An der polytechnischen Schule zu München den Cadidaten des Baufaches

Im 1ten Jahrescurse, der Unterricht im Ornamenten Zeichnen, reinen Mathematic bis einschlüssig der Differenzial-Rechnung, und discriptive Geometrie,

Im 2ten Jahrescurse, der Unterricht im Situationszeichnen und der Vermessungs-Kunde, in der Static und Mechanic, Chemie, Physic und bürgerlichen Baukunst,

Im 3ten Jahrescurse, nach strenger Uebertrittsprüfung und Ausscheidung der Aspiranten des Baustaatsdienstes, Unterricht in der Baumaterialienlehre, in der Anwendung der Static und Mechanic auf Construction und Maschinen und dem Maschinenzeichnen; in der einen Hälfte des 4ten Jahrescurse der Unterricht im Wasser, Brücken und Strassenbau in der polytechnischen Schule dargeboten;

In der anderen Hälfte derselben aber zur Vollendung seiner Stunden, theils an die Academie der bildenden Künste (für den Unterricht in der höheren Baukunst) theils an die technische Hochschule verwiesen wird. Ferner dass:

II. Die polytechnische Schule zu Nürnberg auf die mit ihr zu verbindende Giesserey und auf die Feuergewerke, dann jene zu Augsburg auf den vorzugsweisen Betrieb der Chemie ein überwiegendes Augenmerk richte und hiernach den Schülern, deren specieller Beruf einer dieser Hauptrichtungen sich zuwendet, einen gesteigerten und nach den Jahrescursen stuffenweise geregelten Unterricht gewähre.

§ 82.—Uebrigens finden die Vorschriften, welche bezüglich der gleichmässig theoretisch und practischen Richtung des Unterrichtes in §§ 29 und 40. gegenwärtiger Instructio bezüglich der Landwirthschafts- und Gewerbsschule ertheilt wurde, auch auf die polytechnische Schule ihre volle Anwendung, und die Vorstände dieser letzteren Anstalten sind speciell dafür verantwortlich, dass die applicative (practische) Seite mittelst öfteren Besuches der betreffenden Werkstätten und Fabriken und mittelst belehrender Beobachtung und Darlegung der Manipulationen ihre volle Pflege erhalte.

§ 83.—Jede polytechnische Schule hat zum Unterrichte anzulegen:

1. Ein physicalisches Cabinet,
2. Ein chemisches Laboratorium,
3. Eine technische Bibliothek,

Eine vollständige Sammlung von Reliefs, und körperlichen oder sonstigen Vorlagen für den Zeichnungs-Unterricht,

5. Eine ähnliche Sammlung von Vorlagen für das Modelliren und Bossiren,
6. Eine Sammlung der nothwendigen Rohstoffe und Producte,
7. Eine mechanische Werkstätte,
8. Eine Modellen-Sammlung, insbesondere für discriptive Geometrie.

Abschnitt III.—*Von dem Schuljahre, der Aufnahme, den Preisen.*

§ 84.—Das Schuljahr an der polytechnischen Schule beginnt, wie an den Lyceen des Königreiches mit dem 2ten November und endigt mit dem 31ten August.

§ 85.—Der Eintritt in die polytechnische Schule wird,

a. Durch das erreichte oder überschrittene 15ten Lebensjahr und
b. Durch das Absolutorium einer Landwirthschafts- und Gewerbsschule oder eines Gymnasiums bedingt.

Die Inscription findet am 2ten November jeden Jahres für Inländer und Angehörige der Zollvereinsstaaten unentegeldlich, für sonstige bemittelte Ausländer gegen ein für jeden einzelnen Jahres Curs zu zahlendes Inscriptions-Geld von 12 fl. statt. Vor der Inscription unterliegt der Aufzunehmende noch einer, zwischen den 24ten und 30ten October über alle Gegenstände des Gewerb-Schulunterrichtes vorzunehmenden strengen Prüfung an der Anstalt.

Hospitanten können nur bei nachgewiesener vollständiger Aufnahmsfähigkeit, oder bei besonders guter Befähigung für die practische Ausübung eines Gewerbes oder einer Kunst zu einzelnen Vorlesungen zugelassen werden, sie zahlen, sofern sie bemittelt sind und ein besondere Ausnahme von dem Rectorate nicht beschlossen wird, für jede ihnen zugänglich erklärte Vorlesung jährlich 6 fl.

§ 86.—Jeder polytechnische Schüler ist verpflichtet auf Verlangen des Rectorates an dem Unterrichte über alle vorgeschriebenen Lehrfächer Antheil zu nehmen.

Hinsichtlich der Dispensationen ihrer Gesichtspunkte und ihrer Förderung soweit die sorgfältig zu beachtende Special-Richtung sie errathlich erscheinen lässt, findet auf die polytechnischen Schüler analoge Anwendung, was in Ziffer VIII. Absatz 2. der allerhöchsten Verordnung und den § 39 gegenwärtiger Instruction hinsichtlich der Dispensationen des gewerblichen Unterrichts fest gesetzt ist, statt.

§ 87.—Der

§ 87.—Der Besuch der polytechnischen Vorträge zu Augsburg und Nürnberg ist auch jenen Landwirthen zu gestatten, welche nach absolvirter Landwirthschafts- und Gewerbsschule die technische Hochschule nicht besuchen, und doch namentlich in der Dynamic Chemie, Mechanic, Maschinenlehre und Waarenkunde, tiefere Kenntnisse zu erwerben gedenken, sie stehen unter der Rectorats-Disciplin, und es ist zu trachten, dass selben auch der Fortbesuch benachbarter grösserer Oeconomien gestattet und Gelegenheit zur möglichsten Ausbildung in ihrem speciellen Fache dargeboten werde.

§ 88.—In jedem Curse der polytechnischen Schule findet vor dem Schlusse des Jahres eine strenge Prüfung statt, nach deren Ergebniss das Rectorat über die Befähigung zum Uebertritte in den höheren Cursus der Schule entscheidet.

Am Ende jedes Curses werden Preise oder Preisdiplome vertheilt. Jeder mit der ersten Fortgangs-Note bezeichnete Schüler erhält einen Preis oder ein Preisdiplom. Das Prüfungszeugniss des III. Curses bildet das Absolutorium der Anstalt.

§ 89.—Diese dasselbe bedingende Prüfung wird an den polytechnischen Schulen, an den Kreislandwirthschafts- und Gewerbsschulen, dann an den Landwirthschafts- und Gewerbsschulen 1ter Classe unter Leitung eines von der staatswirthschaftlichen Facultät der Universität zu München als technische Hochschule abzusendenden, und mit den Befugnissen und Vollmachten der in gleicher Absicht zu den Schlussprüfungen der Lyceen und Gymnasien abgeordneten Universitäts-Professoren versehenen Lehrers der technischen Hochschule vorgenommen.

§ 90.—Die Prüfungen an den Landwirthschafts- und Gewerbsschulen IIter und IIIter Classe finden unter Leitung des Rectors der polytechnischen Schule, oder eines von ihm committirten Professors statt.

Die technischen Anstalten der einzelnen Kreise werden unter die Prüfungs Commissäre der technische Hochschule, dann der polytechnischen Schulen, München, Nürnberg und Augsburg dergestalt vertheilt, dass:

a. Der Isor- Unterdonau- und Regenkreis,
b. Der Oberdonau-, Rezat- und Obermainkreis, dann
c. Der Untermain- und Rheinkreis

als ein selbständiger Prüfungs-Bezirk betrachtet, und einem Commissär der Hochschule, oder der ihnen zunächst gelegenen polytechnischen Schule zugewiesen wird.

Die Prüfungs-Commissäre erhalten als Tag- und Gefährt-Gelder, nach der Entfernung von ihrem Wohnorte zu bemessende Aversa, welche aus den Dotationen der einschlägigen Schulen zu bezahlen sind.

ABSCHNITT IV.—*Von dem Rectorate und den Lehrern der polytechnischen Schulen.*

§ 91.—Jede polytechnische Schule wird in Absicht auf Unterricht und Disciplin durch eine Vorstandschaft (Rectorat) geleitet, welche nach Umständen sowohl einem einzelnen aus den ausserhalb des Lehrer-Gremiums gewählten Männern, oder mehreren durch bewährte Einsichten und lebhafte Theilnahme an den Interessen des technischen Unterrichts aus gezeigneten Individuen übertragen werden kann. Die Vorstandschaft führt in dem ersten Falle den Namen "Rectorat" in dem Letztern die Benennung "Direction" der polytechnischen Schule zu N.

Die Amtsbefugnisse und Verpflichtungen der Vorstandschaft folgen genau der Analogie jener Bestimmungen, welche im § 62, 64 und 65, gegenwärtiger Instruction in Ansehung der Rectorate der Landwirthschafts- und Gewerbsschulen entwickelt worden sind.

§ 92.—Das Minimum des Lehrerpersonals einer polytechnischen Schule besteht aus:

Einem Lehrer für freie Handzeichnung,
Einem Lehrer für geometrisches Zeichnen,
Zwei Lehrern für Mathematic, Mechanic und discriptive Geometrie,
Einem Lehrer für Chemie sammt einem Assistenten,
Einem Lehrer für Bossiren und Modelliren.

Civilbaukunde, die Glundlinien der National Oeconomie, Geschichte der Gewerb- un Waarenkunde werden von einem der vorhandenen Lehrer gegeben, oder einem dafür geeigneten Litteraten des Orts gegen angemessene Remuneration übertragen.

Die Combination der Lehrfächer ist nach subjectiven und objectiven Verhältnissen zu bemessen. Finden sich einzelne patriotisch gesinnte Männer bewogen, Lehrfächer an der polytechnischen Schule ihrer Stadt unentgeldlich, oder gegen geringe Remuneration zu übernehmen, so ist bei vollständiger Befähigung und genügend verfügbarer Zeit ein solcher Entschluss möglichst zu fördern.

Auch sind die sonst an einem Orte vorhandenen Lehrkräfte für den Zweck des polytechnischen Unterrichts in so ferne in Anspruch zu nehmen, als diess unbeschadet ihres Hauptberufes und mit vollem Frommen des so hochwichtigen polytechnischen Unterrichts geschehen kann.

Unter allen Voraussetzungen aber ist streng darauf zu sehen, dass Lehrvorträge an der polytechnischen Schule nur Männern zu Theile werden, welche mit tüchtiger gründlicher Bildung, warmen Eifer für die Sache verbinden, und nicht nur fähig, sondern auch würdig sind, dem Staate einen höheren Gewerbstand und eminente technische Beamten in vollem Sinne des Wortes heran zu bilden.

Eben deshalb soll

§ 93.—In Zukunft und vom Jahre 1842. anfangend Niemand zu einem etatsmässig besoldeten wissenschaftlichen Lehramte der polytechnischen Schule beantragt werden, der nicht

neben einer der drei polytechnischen Schulen auch die technische Hochschule mit Auszeichnung bestanden und in der an der technischen Hochschule zu bestehenden Lehramtsprüfung die Note der sehr guten Befähigung zum Lehramte erlangt hat.

Ebenso soll für Zeichnungs Lehrer-Stellen Niemand vorgeschlagen werden, der nicht den Unterricht an der K. Academie der bildenden Künste erschöpft und in der Schlussprüfung die Note der sehr guten Befähigung errungen hat.

Die Namen der befähigt Erklärten werden nach Analogie des § 60 sämmtlich betheiligten Stellen und Gemeinden kund gegeben.

Ausnahmen greifen nur unter den oben bezüglich der Lehrstellen an der Landwirthschafts- und Gewerbsschule aufgezählten Voraussetzungen Platz.

§ 94.—Die Lehrer an der polytechnischen Schule werden, so ferne sie aus Staatsfonden besoldet werden, von Seiner Majestät dem Könige im Gegenhalt von der betreffenden Gemeinde unter Bestätigung des K. Staatsministeriums des Innern ernannt.

§ 95.—Der Gehalt eines Lehrers an der polytechnischen Schule bleibt in Minimo auf die Summe von jährlichen 600 fl. festgesezt.

Abschnitt V.—*Von der Disciplin und der Stellung der polytechnischen Schulen zu den Staatsbehörden.*

§ 96.—Die Disciplin wird von den Vorständen und Lehrern der polytechnischen Schule in derselben Art und mit denselben Befugnissen wie bei der Landwirthschafts- und Gewerbsschule ausgeübt.

Auch hat jede polytechnische Schule ihre Disciplinar-Vorschriften nach Analogie des § 66. gegenwärtiger Instruction zu verfassen, und selbe nach erfolgter Genehmigung des K. Staatsministeriums des Innern kund zu geben.

§ 97.—Die polytechnischen Schulen sind, wie die Lyceen der unmittelbaren obern Aufsicht und Leitung der einschlägigen Kreisregierung untergeben.

Titel VI.—*Von der Academie der bildenden Künste.*

§ 98.—Die Academie der bildenden Künste greift in das technische Unterrichts-System auf doppelte gleichmächtige Weise ein, indem sie

A. Als reine Kunstschule, den von ihr als befähigt erkannten Schülern des IIten und IIIten Curses der polytechnische Schule den Unterricht in freier Handzeichnung darbietet, und

B. Als Baukunstschule jenen Schülern der polytechnischen Schule, welche den Unterricht des I. Curses im architectonischen Zeichnen bereits erhalten haben, für den Unterricht des architectonischen Zeichnens des IIten und IIIten Curses ihre Bauschule öffnet.

Ausserdem leistet dieselbe dem technischen Unterrichts-System entschiedene Vortheile durch ihre Theilnahme an den Prüfungen für das Lehramt des Zeichnungs-Unterrichtes an den Schullehrer-Seminarien, Landwirthschafts-Gewerbschulen und an den polytechnischen Schulen durch die fortgesezte Controlle des Zeichnungs-Unterrichtes in allen seinen Abstuffungen und die gemeinsam mit den Vorständen der drei polytechnischen Schulen zu bewirkenden und periodisch zu ergänzenden Anordnung der systematischen Zeichnungs-Vorlagen.

Titel VII.—*Von der technischen Hochschule.*

Abschnitt I.—*Von der Bestimmung und innern Einrichtung der technischen Hochschule, dann von ihren Lehrern und der Stellung derselben zu den Universitäts-Behörden und übrigen Facultäten.*

§ 99.—Die technische Hochschule bildet den Schlussstein des technischen Gesammt-Unterrichtes in seiner höchsten Steigerung, und sie ist bestimmt, nicht nur den Landwirthschafts- und Gewerbsschulen eine Pflanzschule tüchtiger theoretisch-sowohl, als practischgebildeter Lehrer zu sichern, sondern auch den zu ausgedehntern Guts- und Fabrik-Betriebe sich vorbereitenden Jünglingen Gelegenheit zur vollständigen Ausbildung für die höheren staatsbürgerlichen sowohl, als für die speciellen Berufs-Aufgaben den einstigen technischen Beamten, und den bisher in Bayern nicht vorhanden gewesenen Privat-Ingenieuren die Möglichkeit zu geben, alles dasjenige ohne Belästigung der öffentlichen Fonde in der Haupt- und Residenzstadt erlernen zu können, was in auswärtigen Staaten noch immer mit sehr namhaften Kosten durch geschlossene Institute berzweckt wird.

§ 100.—Die technische Hochschule concentrirt sich in der staatswirthschaftlichen Facultät der K. Ludwig Maximilians-Universität zu München, welche in Bezug auf den technischen Unterricht in allen seinen Beziehungen eine geschlossene Anstalt bildet, und für die in ihr vereinigten Zweige des Unterrichts nachstehende eigenthümliche Lehrstühle besizt.

1. Für Forstwissenschaft, 2 Lehrstühle.
2. Für höhere Mechanic, 1 Lehrstuhl.
3. Für mechanische und chemische Technologie, 2 Lehrstühle.
4. Für Landwirthschaft, 1 Lehrstuhl.
5. Für Pharmacie, 1 Lehrstuhl.

6. Für Staatswirthschaft, 1 Lehrstuhl.
7. Für Bergbau, 1 Lehrstuhl.
8. Für Polizey Wissenschaft und Polizeirecht, 1 Lehrstuhl.

§ 101.—Ausser diesen rein technischen Vorträgen erfreut sich die technische Hochschule auch noch der mitwirkenden Thätigkeit der philosophischen und juridischen Facultät, in deren ersterer die Vorlesungen über Physic, Mathematic, allgemeine Land- und Völkerkunde, allgemeine Naturgeschichte, Mineralogie, Geschichte Logic, Metaphysic und politische Rechenkunst, in letzterer aber das, aller Erörterungen über juridische und staatswirthschaftliche Theorie sich enthaltende Collegium über die auch dem technischen Beamten und jedem gebildeten Staatsbürger unentbehrlichen Grund-Momente der Polizey und Gesetzgebung des bayerischen Staates bereitwillig den Zöglingen der technischen Hochschule geöffnet hat.

§ 102.—Die ordentlichen Professoren der staatswirthschaftlichen Facultät sind fortan wie bisher Mitglieder der Hochschule im vollsten Sinne des Wortes, bleiben aus den Fonds der Hochschule besoldet, und behaupten ohnehin von Rechtswegen Sitz und Stimme in der Facultät.

§ 103.—Jenen Lehrern der übrigen Facultäten, deren Vorlesungen nach § 101. gegenwärtiger Instruction auch technischen Hochschülern zugänglich erklärt sind, gebührt die Theilnahme an den Verhandlungen der staatswirthschaftlichen Facultät in allen jenen Angelegenheiten, welche das Gesammte des Unterrichts an der technischen Hochschule, oder das specielle Verhältniss ihrer technischen Zuhörer betreffen.

§ 104.—Die staatswirthschaftliche Facultät als Mittelpunkt der technischen Hochschule und die admittirten technischen Hochschüler stehen zu dem Rector und Senat unbedingt und ohne alle Schmälerung in dem der Facultät und der Hochschule überhaupt zur Pflicht gemachten Verhältnisse. Ebenso bleibt es hinsichtlich des jährlichen Wechsels und der Verwaltung des Decanates hinsichtlich des Geschäftsganges der amtlichen Stellung der Facultät zu den übrigen Facultäten und zu der ausserordentlichen Ministerial-Commission bei den bereits stehenden Vorschriften. Gleiches findet endlich auch statt in Ansehung der Verleihung des staatswirthschaftlichen Doctorates, so ferne solches in der Facultät überhaupt herkömmlich ist, und in Ansehuug der zur Ertheilung desselben habilitirten oder sich habilitirenden Professoren.

§ 105.—Die K. Ludwigs Maximilians-Universität bleibt verpflichtet, dafür zu sorgen, dass der Aufgabe der staatswirthschaftlichen Facultät als technischen Hochschule volles Genüge geschehe, dass die nach § 100. gegenwärtiger Instruction den technischen Hochschülern speciell zu widmenden Vorträge in dem Vorlese-Catalog rechtzeitig angekündiget und gewissenhaft gehalten, und dass die sonstigen nach § 101. den technischen Hochschülern zugänglichen Collegien unter sich in jenen Einklang gebracht werden, welcher den erwähnten Hochschülern die Einhaltung einer geregelten Studien-Ordnung auch in der That möglich mache.

ABSCHNITT II.—*Von der Aufnahme der technischen Hochschüler und ihrem Verhältnisse zu den Universitäts-Behörden.*

§ 106.—Die Aufnahme an die technische Hochschule gebührt ausser den mit vollständigen Gymnasial- und Lyceal-Absolutorien versehenen, so mit zum vollen academischen Bürgerrechte befähigten Jünglingen auch

A. Den von der K. Academie der bildenden Künste wirklich aufgenommenen Kunst- und Bau-Eleven;
B. Den bei der K. Academie der bildenden Künste nicht inscribirten und die dortigen Collegien nicht, oder nur hospitando besuchenden Schülern der Bauwissenschaft;
C. Den Candidaten der Forstwissenschaft;
D. Den Candidaten des Bergwesens;
E. Den Candidaten des Salinenwesens;
F. Den Pharmaceuten;
G. Jenen Jünglingen, welche eine Kreislandwirthschafts- und Gewerbs-Schule, oder eine Landwirthschafts- und Gewerbsschule I. Classe vollständig absolvirt haben, und sich mittelst des Absolutoriums dieser Schule sowohl hierüber als darüber ausweisen, dass sie auf den Grund der absolvirten lateinischen Schule, während ihres landwirthschaftlichen oder gewerblichen Unterrichts die Realien an einem Gymnasio, oder bei einem zum Gymnasial Lehramte befähigten öffentlichen Lehrer gehört haben;
H. Den im 4ten Jahrescurse ihres Studiums stehenden Candidaten des Baufaches.

§ 107.—Die Eleven der K. Academie der bildenden Künste werden als einer anderweiten Anstalt nun angehörend nicht förmlich aufgenommen. Sie erhalten bloss auf schriftliche Einladung des Directors jener Academie ein Zeugniss darüber, das ihnen gestattet sey, die in jener Einladung bezeichneten Collegien in so lange zu hören, als sie sich den Gesetzen der Hochschule gemäss betragen. Ihr Recht zur Aufnahme ist durch die Thatsache des Aufgenommenseyns bei der K. Academie der bildenden Künste ohne Zulässigkeit weiterer Vorermittlungen über ihre Vorbildung gegeben.

§ 108.—Das Recht der unter G. aufgeführten Jünglinge zur Aufnahme, geht aus dem Nachweise der dort aufgezählten Prämissen und zwar in der Art hervor, dass für sie der nicht direct, sondern durch die polytechnische Schule betretene Weg der Vorbildung als Empfehlung, nicht aber als Bedingung gilt.

§ 109.—Diesen Jünglingen in jeder Beziehung ganz gleich gestellt sind die unter B. erwähnten Schüler der Bau-Wissenschaft.

§ 110. Die Aufnahms-Fähigkeit der unter D. E. und F. aufgezählten Individuen richtet sich nach den jeweils für ihre Special-Bildung festgesetzten Normen.

§ 111. Die Aufnahme sämmtlicher unter B. C. D. und E. bezeichneten Categorien von Hochschülern findet in eben jener Weise statt, welche satzungsmässig für die Imatriculation der academischen Bürger vorgeschrieben ist. Sie gewährt aber das unvollständige academische Bürgerrecht und zieht eben deshalb nicht die gewöhnliche, sondern die sogenannte kleine, gemäss Formular Anlage 19. ausgestellte Matrikel nach sich.

Anl. 19.

§ 112. Durch diese kleine Matrikel erwirbt der Aufgenommene

a. Das Recht des Aufenthaltes in der Haupt- und Residenzstadt und an der Universität, ferner gewährt sie sämmtlichen Jünglingen dieser Cathegorie

b. Das Recht der Theilnahme an dem Universitäts-Unterrichte über die in § 100. gegenwärtiger Instruction aufgezählten eigenthümlichen Vorlesungen der technischen Hochschule, dann den in § 101. erwähnten special Collegien der philosophischen und juridischen Facultät.

Endlich gewährt sie insbesondere

c. Den Pharmaceuten das Recht der Theilnahme an den Universitäts-Vorlesungen über medicinische Botanic und über die verschiedenen pharmaceutischen Gegenstände;

d. Den Forstcandidaten insbesondere das Recht der Theilnahme an den Universitäts Vorlesungen über das ganze Gebiet der theoretischen und practischen Forstwissenschaft, über Landwirthschaft, Staatswirthschaft, Polizey-Wissenschaft und Polizey-Recht, über höhere Mechanic und Technologie;

e. Den obenerwähnter Weise vorbereitet " Befliessenen der Landwirthschaft" das Recht der Theilnahme an den Universitäts Vorlesungen über das ganze Gebiet der Landwirthschaft über Staatswirthschaft, über theoretische und practische Forstwissenschaft, Civil-Baukunde, Strassen-Brücken- und Wasserbaukunde, höhere Mechanic und Technologie;

f. Den in obenerwähnter Weise vorbereitet " Befliessenen der Industrie," das Recht der Theilnahme an den Universitäts Vorlesungen über das ganze Gebiet der Land- und Staatswirthschaft über Civilbaukunde, Strassen-Brücken und Wasserbaukunde, höhere Mechanic und Technologie;

g. Den Candidaten der Bauwissenschaft das Recht der Theilnahme an den Unterricht der Academie der bildenden Künste für die höhere Baukunst. Ferner das Recht der Theilnahme an den Vorlesungen über Archäologie, Kunstgeschichte, Naturgeschichte, allgemeine Weltgeschichte und National-Oeconomie.

§ 113. Dagegen unterwirft aber auch diese kleine Matrikel die technischen Hochschüler unbedingt der Disciplin und Aufsicht des Senates, des Directoriums, der Universitäts Polizey und des ausserordentlichen Ministerial-Commisärs, und überhaupt dem Gesammtumfange der bestehenden Disciplinar-Vorschriften und Strafbestimmungen, und ihre Stellung zu den genannten Behörden ist den mit den grösseren Matrikel versehenen Individuen in jeder Beziehung absolut gleich gestellt.

§ 114. Bezüglich des Facultäten Verhältnisses, sind die Pharmaceuten der medicinischen, die Forsteleven und die der Landwirthschaft, Industrie und Bauwissenschaft Befliessenen, der staatswirthschaftlichen Facultät zur besonderen Respicirung zugewiesen.

ABSCHNITT III.—*Studien-Ordnung für die Zöglinge der technischen Hochschule.*

§ 115. Ueber die Studien der Zöglinge der technischen Hochschule wird mit Berücksichtigung der besonderen Berufsarten und Bestrebungen Nachstehendes verordnet:

A.—*Civil-Ingenieurs.*

Der künftige Civil-Ingenieur vollendet seine Studienzeit an der Hochschule in 2 Jahren, und hört

Im Iten Studienjahre:

1tes Semester, Logic, Metaphysic, Naturgeschichte, Mathematic.

2tes Semester, Moral, allgemeine Land- und Völkerkunde, populäres Collegium über bayerische Civil-Staats-Verfassungs- und Verwaltungsrecht, practische Geometrie und Forstbotanic;

Im IIten Studienjahr:

1tes Semester, höhere Mechanic, Strassen-Brücken und Wasserkunde;

2tes Semester, beide Lehrfächer fortgesetzt, und Staatswirthschaft.

B.—*Candidaten der Forstwissenschaft.*

Für die Candidaten der Forstwissenschaft bleibt es bei der dreijährigen Studienzeit und die innerhalb derselben zuhörenden Lehrfächer werden auf die einzelnen Studienjahre und Semester in folgender Art vertheilt:

Ites Studien-Jahr:

1tes Semester, Logic, Metaphysic, Naturgeschichte, Mathematic, Chemie;

2tes Semester, Moral, Botanic, Mineralogie, Physic, Mathematic.

IItes Studienjahr:

1tes Semester, Forstwissenschaft, Mathematic auf Forstwissenschaft angewendet, populäres Collegium über bayerisches-Civil-Verfassungs- und Verwaltungsrecht, Zoologie, Situations-Zeichnungen;

2tes Semester, Mathematic, desgleichen Land- und Völkerkunde, Landwirthschaft, Fortsetzung der Forstwissenschaft und des Planzeichnens.

IIItes Studienjahr:

1tes Semester, Geschichte, dann Fortsetzung der Forstwissenschaft, der Mathematic, dann des allgemeinen und besonderen Planzeichnens;

2tes Semester, Polizey-Wissenschaft, Polizeyrecht, Jagd-Wissenschaft, Fortsetzung der Mathematic in Verbindung mit Civilbaukunde und des Planzeichnens.

C.—*Candidaten des Bergwerk und Salinen Wesens.*

Hinsichtlich der Studien- und Studien-Ordnung dieser Candidaten wird besondere Entschliessung noch erfolgen.

D.—*Candidaten der Industrie.*

Der Studiencurs der Candidaten der Industrie umfasst einen Zeitraum von zwei Jahren wie folgt:

Ites Studienjahr:

1tes Semester, Logic, Metaphysic, Naturgeschichte, Mathematic und Chemie, Analysis und Differenzial- und Integral-Rechnung, im

2ten Semester, desselben Studienjahres, Moral, Botanic, Fortsetzung der Analysis mit Differenzial- und Integral-Rechnung; im

IIten Studienjahre:

1ten Semester, höhere Mechanic, Technologie der Gewerbe, Staats-Wissenschaft, allgemeine und besondere Geschichte, populäres Collegium über Privat-Staats-Verfassungs und Verwaltungsrecht; im

2ten Semester, Fortsetzung der höheren Mechanic, Landwirthschaft, Strassen, Wasser- und Brückenbau-Civilbaukunde, Land- und Völkerkunde gehört werden.

E.—*Candidaten der Landwirthschaft.*

Die von den Candidaten der Landwirthschaft zu besuchenden Lehrvorträge gehen durch 2. Jahre wie folgt:

Ites Studienjahr:

1tes Semester, Logic, Metaphysic, Naturgeschichte, Physic, Chemie;

2tes Semester, Moral, Botanic, Mineralogie, allgemeine und besondere Geschichte.

IItes Studienjahr:

1tes Semester, Landwirthschaft, Staatswirthschaft, Civil-Baukunde, populäres Collegium über bayerische Civil-Staats-Verfassungs und Verwaltungs-Recht, Oeconomie des Landbaues.

2tes Semester, Landwirthschaft, Fortgesezte Vermessungen, Encyclopädie der Forstwissenschaft, allgemeine Land- und Völkerkunde.

F.—*Die Candidaten der Bauwissenschaft,* welche in einer der Hälften des 4ten Jahres-Curses ihr Studium an der technischen Hochschule vollenden, hören in derselben an letzterer, Naturgeschichte, Weltgeschichte National-Oeconomie, Archäologie, und an der Academie der bildenden Künste höhere Baukunst.

§ 116. Die vorgezeichneten Lehrweisen sind sowohl in Ansehung der allgemeinen Studien als auch in Ansehung des besonderen Fachstudiums strenge einzuhalten, und insbesondere sind die allgemeinen Lehrfächer in der vorgeschriebenen Ordnung jederzeit in dem 1ten Studienjahre vollendet, der Uebergang in das Fachstudium wird durch eine aus dieser von der staatswirthschaftlichen Facultät zu erstehende und von den Professoren jener Lehrfächer in dieser vorzunehmenden Prüfung bedingt. Jede willkührliche Nichtbefolgung dieser Vorschriften zieht die Verweigerung des Schlusszeugnisses nach sich.

§ 117. Nach dem Schlusse des zweiten (bei den Forstcandidaten des dritten) Studienjahres tritt die Schluss-Prüfung ein, welche über alle in diesem Zeitraume vorgeschriebenen Gegenstände sich verbreitet, und genau nach Analogie des § 47. gegenwärtiger Instruction vorgenommen wird. Das in Folge der Schlussprüfung durch Facultäts-Beschluss zuerkannte Schlusszeugniss wird von dem Rector der Universität und dem Decan der staatswirthschaftlichen Facultät unterzeichnet, und mit dem Siegel der letzteren versehen.

§ 118. Die technischen Hochschüler sind gehalten, die vorgeschriebenen Lehrgegenstände bei den Professoren dieser Hochschule zu hören. Werden dieselben gleichzeitig von mehreren Lehrern dieser Facultät gegeben, so ist die Wahl des Schülers frei. Der Besuch der Vorträge über einzelne, dem künftigen Beruf des technischen Hochschülers mehr oder minder verwandte oben in den §§ 101. 112. nicht erwähnte Lehrfächer, findet ausnahmsweise auf vorgängiges Gutachten des Senats mit Genehmigung des Staatsministeriums des Innern statt.

§ 119.—Die technischen Hochschüler sind nicht gehalten, Gegenstände, welche sie bereits an der polytechnischen Schule mit Erfolg gehört haben, an der technischen Hochschule zu wiederhohlen. Ebenso sind dieselben von dem Besuche der Vorlesungen über allgemeine Naturgeschichte befreit, wenn sie mittelst Specialprüfung nachweisen, dieselbe bereits in der Gewerbsschule sich vollständig angeeignet zu haben.

§ 120.—Civil-Ingenieure, welche Physic, allgemeine und technische Chemie, Analysis, Differenzial- und Integral-Rechnung, und Civilbaukunde an der polytechnischen Schule nicht vollständig gehört haben, sind gehalten, den fehlenden Unterricht auf der Hochschule zu ergänzen.

Desgleichen sind auch die Befliessenen der Industrie, welche Brücken-Strassen- und Wasserbaukunde hören wollen, gleich den Civil-Ingenieurs verpflichtet, den Unterricht in diesen Disciplinen zwei Semester hindurch zu hören.

§ 121.—Nicht minder werden

a. Die Vorträge über National-Oeconomie und Finanzen,
für die Forst- und Landwirthschafts-Schüler;
b. Ueber Encyclopädie der Forstwissenschaft,
für die Bau- und Industrie-Eleven;
c. Ueber allgemeine und technische Chemie, oder vielmehr chemische Technologie für Landwirthschafts-Schüler und Civil-Ingenieure;
d. Ueber mechanische Technologie
für die Bauschüler und Civil Ingenieure; als verbindlich erklärt.

Abschnitt IV.—*Von den applicativen Vorträgen, und der Benutzung der Attribute.*

§ 122.—Auch von den technischen Hochschülern ist der Standpunkt gleichmässig theoretischer und practischer Ausbildung in allen Phasen des Unterrichtes festzuhalten, und eben deshalb der theoretische Unterricht (die eingentlichen Vorlesungen) jederzeit mit applicativen Vorträgen zu verbinden, die einschlägigen Attribute der Hochschule sind auch zu diesem Theil des Gesammt-Unterrichtes verfügbar. Insbesondere sind die Lehr-Vorträge über Chemie und Physic durch Versuche zu unterstützen, die Vorlesungen über Forstwirthschaft und Landwirthschaft durch den Besuch des in München anzulegenden—auch für Versuche der Schule selbst bestimmten Forst- und öconomischen-botanischen Gartens, und bis dieser zu Stande gebracht seyn wird, des grossen botanischen Gartens, der benachbarten Feldfluren und Forste, des landwirthschaftlichen Vereins-Gartens, der k. Obstbaum-Schule, des Muster-Gutes Schleissheim, grösserer, den technischen Schülern zugänglich erklärter Oeconomien, und der Modellen-Sammlung des landwirthschaftlichen Vereins jener über Industrie aber, durch Besuch der Werkstätten und Fabriken der Stadt und Umgegend, dann der Modellen-Sammlung des polytechnischen Vereins recht eigentlich anschaulich und fruchtbar zu machen. Durch gegenwärtige Instruction treten die Vollzugs-Vorschriften zur allerhöchsten Verordnung vom 16ten Febr. 1833. vom 28ten März und 24ten Julius: die Entschliessung vom 28ten März und vom 14ten Juni 1833, die Prüfung der technischen Lehramts-Candidaten betr: die Entschliessung vom 14ten Julius 1833, die Aufnahme der technischen Zöglinge an die Hochschule betr: die Entschliessung vom 24ten July 1833, die Errichtung der Gewerbsschulen in den Kreisen betr: die Entschliessung vom 1ten December 1833, die von den Gewerbsschülern zu absolvirende landwirthschaftliche Schule betr: die Entschliessung vom 4ten December 1833, den Realien-Unterricht der Gewerbsschüler: die Entschliessung vom 5ten December 1833, die Begründung von Landwirthschafts-Feyertags-Schulen betr: dann die Entschliessung vom 4ten August 1834. die technische Hochschule betr: so wie alle jenen besonderen Anordnungen über Gegenstände, über welche die gegenwärtige Instruction dispositive Bestimmungen enthält, ausser Wirksamkeit.

Der durch die allerhöchste Verordnung vom 16ten Febr. 1833, und durch g egenwärtige Vollzugsweisung vollständig geregelte technische Unterricht zählt würdig unter die vielen unschätzbaren Wohlthaten, welche der erhabene Geist des edeln Monarchen der bayerischen Nation zugewendet hat. Der ureigendsten Idee Seiner Majestät des Königs entsprossen und durch Ihn bis in die Einzelnheiten des Vollzuges entwickelt, öffnet dem Talente bisher kaum geahnte Bahnen, und gewährt dem bayerischen Volke als Ausfluss freyen Herrscher-Entschlusses in dem grossartigsten Masse, was in so vielen Ländern noch immer Gegenstand unerreichbar geglaubter Wünsche ist. Um somehr werden die Gesammtheit des Lehrpersonales, dann die zum Vollzuge berufenen Stellen und Behörden sich berufen fühlen, lebendig zu vollziehen, was lebendig und mit der Wärme eines väterlichen Wohlwollens von dem Throne ausgieng, und den grossen Königlichen Gedanken zu voller Blüthe der Entfaltung zu bringen, und thätig an einer Schöpfung mitzuwirken, welche auf Veredlung des Menchen abzielend, dauernder als Erz und den spätesten Geschlechtern noch Gegenstand aufrichtiger Verehrung und ungeheuchelten Dankes seyn wird.

München den 4ten April 1836.

Auf Seiner Königlichen Majestät Allerhöchsten Befehl

An sämmtliche Kreisregierungs-Kammern des Innern also ergangen.
An die K. Regierung des ——— Kreises K. d. Innern. Die technischen Unterrichts-Anstalten betr.

Sub-Enclosure (E. 3.) in No. 28.

UEBERSICHT der Anlagen.

1. Verzeichniss der zu den Berathungen über die Angelegenheiten der technischen Schulen einberufenen Reggs-referenten, Lehrer, &c. &c.

2. Uebersicht der Unterrichts-Anstalten der bayer :Monarchie und ihrer Wechselbeziehungen, &c. &c.

3. Auszug aus der Entschliessung vom 31ten Jänner 1836, die Bildung der Schullehrer resp : den Zeichnungs Unterricht betr :

4, 5, 6. Stufengang bei dem Zeichnungs Unterrichte, &c. &c.

7. Den Vorbereitenden Unterricht auf Gewerbs und landwirthschaftliche Schulen betr :

8. Auszug aus der Schulordnung für die Gymnasien und lateinischen Schulen des Königreichs, &c. &c.

9. Uebersicht der Renten aus den Fonden der höheren Bürgerschulen.

10. Uebersicht der Zuschüsse aus Kreisfonden für die Landwirthschafts- und Gewerbsschulen.

11. Exigenz der Landwirthschafts- und Gewerbs-Schule zu . . . . . .

12. Ministerial-Entschliessung vom 3ten December 1835. die Herausgabe eines Vorlage-Werks für den Zeichnungs-Unterricht betr:

13. Inscriptions-Zeugniss.

14. Directiven für die Auswahl der Preisbücher.

15. Absolutorium für den Landwirthschafts- (Gewerbs) Schüler N. N. aus N. im N. Kreise.

16. Prüfungs-Zeugniss für die Candidaten des Lehramts der Landwirthschafts- und Gewerbs-Schulen.
Prüfungs-Zeugniss für die Candidaten der polytechnischen Schulen.

17. Qualifications-Tabelle.

18. Formular für die Abfassung der Jahres-Berichte.

19. Matrikel für die Candidaten der technischen Hochschule.

Anlage 1.

Verzeichniss der im Monate October voriges Jahres zu den Berathungen über die Angelegenheiten der technischen Schulen einberufenen Regierungs-Referenten, Vorständen und Zeichnungslehrern der Schullehrer-Seminarien, dann der Vorstände und Zeichnungslehrer der bis zum Tage der Einberufung bestandenen technischen Lehranstalten.

I. Der K. Regierungs-Director Graf von Giech zu Würzburg.
Die K. Regierungs- und Bauräthe von Kraft, Ott, Beyschlag, Schierlinger, Ohlmüller.
Die K. Regierungs-Assessoren Freih:von Duprel, von Welden, Edel, Hänlein, Stichaner, Hohe.
Regierungs Secretär *cum voto* Freih : v. Lindenfels.
Die K. Kreisbau-Ingenieure Windscheid von Regensburg v. Chlingensperg v. Passau.

II. Die Vorstände der Schullehrer Seminarien :
Mayer, von Freysing, Haindel von Dillingen.
Strobl, von Altdorf, Emmerling, von Bamberg.

III. Die Vorstände der polytechnischen Schulen :
Rector Pauli, von München.
— Dr Leo, von Augsburg, Scharrer, v. Nürnberg.

IV. Die Rectoren der Landwirthschafts- und Gewerbsschulen :
Dr Rüttinger, von Bamberg, Dr Horn v. Würzburg.
Dr Kettel, v. Aschaffenburg, Saher v. Bayreuth.
Dr Wandner, von Regensburg.
Die Subrectoren der Landwirthschafts- und Gewerbsschulen : Dr Riederer von Freysing, Mendler von Kempten, Dr v. Liederskron von Erlangen, Dr Schüler von Fürth, Laubmann, von Hof, Grossgebauer, von Schweinfurt.
Der Lehrer der Landwirthschaft,
Zerzoch von Bayreuth.

V. Die Zeichnungs-Lehrer der Landwirthschafts- und Gewerbsschulen und Schullehrer-Seminarien.

Schöpf, von München; Frey, von Freysing, zugleich am Schullehrer-Seminar.
Eichler, von Passau; Stoessel, von Straubing, nur am Schullehrer-Seminar.
Elsperger, von Regensburg, Gruber, von Regensburg.
Geyer, von Augsburg, Kurz, von Augsburg.
Weiss, von Dillingen, zugleich am Schullehrer-Seminar.
Weiss, von Kempten; E. Heideloff v. Nürnberg.
Hollenbach, von Ansbach, Gareis, von Erlangen.
V. Reider, von Bamberg, } zugleich am Schullehrer-Seminar.
Scharnagel, von Bamberg, }
Breit, von Würzburg; Stumpf von Würzburg, zugleich am Schullehrer-Seminar
Louis, von Aschaffenburg.
Von Heffner, von Aschaffenburg.

Anlage 2.

Uebersicht der Unterrichts-Anstalten der bayer:Monarchie und ihrer Wechselbeziehungen, &c. &c.

Anlage 3.

Auszug aus der Entschliessung vom 31ten Januar 1836, die Bildung der Schullehrer resp: den Zeichnungs-Unterricht betreffd.

ABSCHNITT II. § 8.

Ferner ist den Schuldienst-Präparanden der sorgfältige Betrieb des Music- und Zeichnungs-Unterrichtes zur Pflicht gemacht, und nach Beilage II. haben sich dieselben bei den jährlichen Prüfungen von der Districts-Schul-Inspection am Ende des ersten Jahres darüber auszuweisen, dass sie die verschiedenen einfachen Linien und Körper nachbilden und über deren gegenseitige Verhältnisse Rechenschaft zu geben vermögen.

Im zweiten Jahre bildet,

Fortgesetzte Linear-Zeichnung und Formenkenntniss, und

Im dritten Jahre,

Uebung im Ornamentenzeichnen und nähere Auskunft über die verschiedenen Formen der Körper, den Gegenstand der bezeichneten Prüfung.

Nach ABSCHNITT III. Abtheilung I. § 16, No. 8.

Hat der um Aufnahme in das Schullehrer-Seminar nachsuchende Schuldienst-Präparand sich in der Prüfung hinsichtlich des Zeichnungs-Unterrichtes in derselben Art, wie in der Prüfung vor der Districts-Schul-Inspection am Schlusse des ersten Präparanden-Jahres auszuweisen, und nach

ABSCHNITT III. Abtheilung III. § 37. Ziffer.

ist der Unterricht im Zeichnen und in der Formenlehre ein vorzüglicher Unterrichts-Gegenstand des Schullehrer-Seminars, und hat sich nach den über den Vollzug der allerhöchsten Verordnung vom 16ten Febr. 1833, erschienenen Vorschriften zu richten, &c. &c.

Anlage 4, 5, 6.

Bei dem Zeichnungs-Unterrichte ist nachfolgender Stufengang methodisch zu beobachten.

1. Allgemein vorbereitende Uebungen der Hand wie des Augenmasses. Es sind vorerst, zur blossen Uebung der Hand, die einfachsten, durch gerade Linien begrenzte Figuren aus freier Hand zu zeichnen, und zwar ausschliesslich mit Beibehaltung der wag-oder senkrechten Richtung. Diese Figuren sind sofort mit wagrechten, senkrechten oder schiefliegenden Parallellinien auszufüllen; wobei es besonders darauf ankommt, dass diese Linien möglichst rein, parallel und in gleichen Abständen, doch ohne sich zu durchkreuzen, gezogen werden.

Hierauf folgt das Zeichnen solcher, ebenfalls einfacher Figuren, welche theils durch gerade, theils durch krumme Linien begrenzt sind. Auch diese sind mit Parallellinien, und zwar nach der, die Figur begrenzenden krummen Linie, auszufüllen.

Weiterhin sind zur Uebung des Augenmasses (womit die Uebung der Hand fortwährend verbunden bleibt) die Seiten einfacher Figuren der oben erwähnten Art aus freier Hand durch Punkte in mehr oder weniger Theile zu theilen. Durch Verbindung dieser Punkte mittelst gerader oder krummer Zwischenlinien und durch symetrische Ausfüllung einzelner Felder mit engeliegenden Parallellien sind parquettartige Muster der manichfaltigsten Art herzustellen. Hierauf wird übergegangen zum Nachzeichnen von (in Pappe) ausgeschnittenen Dreyecken und Vierecken, welche, auf einer Ebene in möglichst verschiedenen Lagen gruppirt, von dem Lehrer senkrecht aufzustellen sind, dergestalt, dass alle Schüler gleichzeitig darnach zeichnen können.

2. Nach diesen Vorübungen ist zum Ornament-Zeichnen überzugehen und dabey ein genauer Stufengang vom Allereinfachsten zum Zusammengesetztern einzuhalten.

Gleichzeitig wird mit Vorübungen im Gebrauch von Cirkel und Lineal der Anfang gemacht.

Diese Vorübungen zielen vorzugsweise auf Genauigkeit und Reinheit bei Handhabung von Cirkel und Lineal. Sie bestehen z. B. in Eintheilung von Rechtecken in gleiche Quadrate, im Ziehen von gleichen Kreisen aus den Quadratecken, so, dass die Kreise sich berühren oder beliebig durchschneiden, u. s. w.

3. Zur

3. Zur Vervollständigung des Freihandzeichnens wird übergegangen zur Darstellung von Körpern mit Schatten und Licht.

Dabei sind vorerst einfachere cubische Formen, als Würfel, Prismen, Pyramiden, Kugeln, Cylinder und Kegel; sodann plastisch dargestellte Ornamente in Anwendung zu bringen.

Zur Vervollständigung des Linearzeichnens ist zu architectonischen Darstellungen mittelst Grundriss, Aufriss, und Durchschnitten, und ebenso zur Darstellung von Maschinen überzugehen, womit in möglichster Ausdehnung das Vorzeigen von Modellen verbunden werden soll.

Die Prüfung jener Elementar-Zeichnungs-Lehrer, welche nicht zugleich Schullehrer sind, ist ganz von derselben Behörde vorzunehmen, welche die Qualification der Schullehrer, in ihrer Eigenschaft als Zeichnungslehrer festgestellt.

Anlage 7.

Den vorbereitenden Unterricht auf Gewerbs- und landwirthschaftliche Schulen betr:

§ 1. Durch die allerhöchste Verordnung vom 16ten Febr. 1833 (Reggsblatt 179) wird bestimmt, dass der Grund einer tüchtigen technischen Ausbildung schon in den Elementarschulen und zwar dadurch zu legen sey, dass

a. Die Zeichnungslehre und die Ausbildung der Schullehr-Amts-Candidaten für diesen Zweig auf die Anfangsgründe des Linear- und Ornamenten-Zeichnens zurückgeführt, und

b. Der Unterricht in den sogenannten nützlichen Gegenständen nach den einfachen Bedürfnissen gebildeter Landwirthe und Gewerbsleute bemessen und als Vorbereitung zu den künftigen Lehrvorträgen bei den landwirthschaftlichen und Gewerbsschulen behandelt werde.

§ 2. In Gemässheit dieser allerhöchsten Bestimmung wurde von Seiten des K. Staatsministeriums des Innern bei verschiedenen Veranlassungen (z. B. unter dem 28ten März 1833. 24ten July 1833. 11ten December 1834. 31ten Januar 1836.) theils durch Entschliessung, theils durch mündliche Verhandlung nachstehende Vorschrift ertheilt.

1 Ad. a. 1. *Den Zeichnungs-Unterricht in den Volksschulen betreffend.*

a. Der Zeichnungs-Unterricht ist möglichst zu verbreiten. Wo sich die erforderlichen Mittel dazu finden, sollen eigene Lehrer dafür verwendet werden; wo sie fehlen, müssen die Lehrer der teutschen Schulen ihn ertheilen.

b. Der Zweck derselben ist nicht blos Weckung und Ausbildung des Formsinnes überhaupt, sondern zugleich eine tiefe Einprägung der Regeln, innerhalb deren sich späterhin die Individualität der Schüler frei entfalten soll.

c. Es soll diesem Ende die so häufig bei diesem Unterrichte sich einschleichende Spielerey beseitigt, auf eine bestimmte Richtung und auf vollständige Correctheit gedrungen und die Grenzlinie des Anfangsunterrichtes in Linear- und Ornamentenzeichnung durchaus nicht überschritten werden.

d. Demnach hat der Lehrer schon in den untern Classen der teutschen Schulen die Kinder mit den verschiedenen Arten der Linien- und Körperformen bekannt zu machen, ihnen dieselbe an Zeichnungen und Naturkörpern möglichst zu veranschaulichen und sie in deren Nachbildung zu üben, so weit Zeit und Gelegenheit es gestatten. Der eigentliche Unterricht für diejenigen, welche sich dem gewerblichen oder landwirthschaftlichen Berufe zuwenden, beginnt jedoch erst in der obersten Classe, und beschränkt sich auf freies aber correctes Nachzeichnen einfacher Körperformen, als auf die Grundlage des Linear- und Ornamentenzeichnens.

e. Als Hilfsmittel werden dienen: eine Sammlung von Vorlagen, eine Sammlung von Körperformen, eine Wandtafel mit den Grundlinien und deren Verbindung.

2. Ad. a. 2. *Die Ausbildung der Schuldienstpräparanden, Seminaristen und Lehrer betreffend.*

a. Der Unterricht im Zeichnen bildet sowohl für Präparanden als Seminaristen einen wesentlichen Theil des ihnen vorgeschriebenen Unterrichtes überhaupt, und es sollen dieselben wenigstens so weit gebracht werden, dass sie den eigentlichen Elementar-Unterricht in den Volksschulen zu ertheilen vermögen.

b. Er ist für Präparanden und Seminaristen auf gründliche Behandlung des Linear und Ornamenten-Zeichnens zurückgeführt, und nur denjenigen, welche sich in beiden als vollkommen befähigt ausweisen, wird gestattet, ihre ausgezeichnete Anlage in gesteigerten Uebungen weiter auszubilden.

c. Bei der Behandlung des Gegenstandes soll auf Concentrirung aller Kräfte für den beabsichtigten Zweck, auf unbedingte Correctheit und auf möglichste scharfe und richtige Umrisse gesehen werden.

d. In dieser Absicht müssen die Präparanden des ersten Curses die verschiedenen einfachen Linien und Körper mit möglichster Genauigkeit nachbilden und deren gegenseitige Verhältnisse klar zu erkennen suchen.

Die Präparanden des 2ten Curses setzen diese Uebungen, soweit es unbeschadet der Gründlichkeit geschehen kann, fort, und die des 3ten Curses fügen den Anfang des Ornamentenzeichnens bei.

Im Seminar selbst beschäftigt sich der untere Curs mit einer gesteigerten Wiederhohlung der frühern Uebungen, wobei er zugleich auf die Methode hingewiesen wird, deren Anwen-

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

28.
BAVARIA.

dung er selbst späterhin zu machen hat; der obere Curs aber setzt die Linearzeichnung fort, und bildet sich unter beständiger Erklärung der Formverhältnisse und Hinweisung auf die künftig zu beobachtende Methode darinnen soweit als möglich aus.

e. Lehrvorschriften und Uebungs-Vorlagen unterliegen noch der Bearbeitung; Naturkörper und Körperformen, sowie einzelne Sammlungen von Vorlagen, finden sich vor (Klenze, Normann, Unger &c.)

3. Ad. b. *Den Unterricht in den sogenannten gemeinnützlichen Gegenständen (Anschauungs-Unterricht, Realien, Weltkunde. u. d. gl.) betreffend.*

a. Je grösserer Missbrauch in neuerer Zeit mit diesen Unterrichts-Gegenständen getrieben worden ist, desto ernstlicher hat sich die Staatsregierung angelegen seyn lassen, der eingerissenen Spielerei und Vielwisserei entgegen zu arbeiten; Alles was bisher unter dem Namen von Geologie, und Cosmologie, von Physic und Naturkunde, von Anthropologie und Psychologie, von Technologie und Völkerkunde u. s. w. sich als eigentlicher Lehrgegenstand in die teutschen Schulen eingeschlichen hatte, aus denselben zu verbannen, und ausdrücklich zu verbieten, dass die weniger nothwendigen Kenntnisse aus dem Bereiche der Natur und der Geschichte nach eigentlichen Compendien und Lehrbüchern vorgetragen werden.

b. Vielmehr soll es die Aufgabe der teutschen Schule seyn, die Jugend früh möglichst auf den Standpunkt zu führen, von welchem aus die innern und äussern Erscheinungen der Welt, des eignen Lebens und des künftigen Berufes angesehen und beurtheilt werden müssen, wenn sie zur Begründung tiefer Religiosität, ächt sittlicher Gesinnung, wahrer Liebe zu Beruf und Leben, treuer Pflichterfüllung gegen Gott und Obrigkeit und ausdauernden Fleisses beitragen sollen.

c. Hiezu bietet dem Lehrer vor allen Dingen der Religions-Unterricht, namentlich die biblische Geschichte eine feste und sichere Grundlage. Ausserdem wird ihm in dem Leitfaden zu Schönschreibübungen und Dictaten das erforderliche Material in ganz kurzen, Inhalt reichen Sätzen dargeboten, und endlich dient ihm das Lesebuch, welches sich zu jenem, wie das Compendium zum Handbuche, verhält, dazu, die hauptsächlichsten Erscheinungen in der Natur und im Menschenleben der Jugend im Zusammenhange vorzuhalten und so einzuprägen, dass nicht sowohl das Gedächtniss mit Nahmen und Zahlen bereichert, und der Verstand zu kalter Beurtheilung gereizt, sondern dass vielmehr das jugendliche Gemüth dadurch ergriffen, das Herz erwärmt, und der Wille zur Bekämpfung des Schlechten und zur Erringung des Guten belebt und gestärkt werde.

d. Der Stufengang ist selbst dabei, abgesehen von dem, was dem Religionsunterrichte angehört, folgender:

1. In der Vorbereitungs-Classe benützt der Lehrer die in der biblischen Geschichte, beim Lesen und Schreiben oder sonst vorkommenden Worte und Bezeichnungen, um den Kindern eine klare Ansicht ihrer nächsten Umgebung und ihrer Lebensverhältnisse zu verschaffen.

2. In der untern Classe setzt er in derselben Weise den Unterricht belebend und belehrend fort, und erweitert allmählig den Gesichtskreis dahin, dass die Kinder eine allgemeine Uebersicht über die allerwichtigsten dieser Erscheinungen und Verhältnisse gewinnen.

3. Nunmehr führen die Dictaten und die 1te Hälfte des Lesebuchs den Schüler in der Mittelclasse dahin, dass er die Welt und ihre Erscheinungen, aber immer mit vorzugsweiser Beachtung seines Vaterlandes, genauer kennen lernt,

4. Bis endlich die 2te Hälfte des Lesebuchs sammt der Dictaten u. d. gl. in der obern Classe den Unterricht dadurch vollendet, dass er auch mit den wichtigsten fremden Ländern und deren Erzeugnissen, sowie mit einzelnen Denkwürdigkeiten aus der Geschichte bekannt gemacht wird, und den ganzen Kreis seines bisherigen Unterrichtes nochmals im Zusammenhange und in der Art überblickt, dass er weiss, wie er sie für seinen künftigen Lebensberuf zu seinem und dem allgemeinen Besten benützen und anwenden soll.

Anlage 8.

Auszugaus der Schulordnung für die Gymnasien und lateinischen Schulen des Königreichs Bayern, dann der Vollzugs-Vorschrift vom 3ten Febr. 1835, in Betreff des Fortbestandes der IVten Gymnasial-Classe; den Unterricht in der teutschen Sprache und der Realien an der lateinischen Schule betr:

§ 19.—In der teutschen Sprache sollen die beiden untersten Classen mit Rücksicht auf die Kenntnisse, welche die Schüler schon mitgebracht haben einen fortschreitenden gramaticalischen Unterricht erhalten Mit diesem theoretischen Unterrichte soll durch die vier Classen ein practischer, mit Hilfe eines in angemessener Stuffenfolge fortschreitenden teutschen Lesebuches verbunden werden, damit bei den Schülern ein richtiger Ausdruck im Lesen, ein fliessendes Nacherzählen des Gehörten, guter Vortrag auswendig gelernter Stücke, Bildung zuerst einfacher, dann zusammengesetzter Sätze, endlich zusammenhängender Aufsätze (namentlich Uebersichten und Auszüge des Gelesenen) erzielt werde. Ueberdiess wird von den Lehrern erwartet, dass sie bei jeder andern Art des Unterrichtes und der Uebung, auch auf die Bildung ihrer Zöglinge in der Muttersprache angemessen hinarbeiten, jeden, wenn auch gelegenheitlich anderer Arbeiten eingeschlichenen Fehler gegen die teutsche Grammatik angemessen bemerken und berichtigen, und besonders bei den schriftlichen Uebungen in dieser Beziehung eine wirksame Censur üben.

§ 20. Dem

§ 20.—Dem Sprach-Unterrichte soll, der Unterricht in der Arithmetic, Geographie, und Geschichte zur Seite gehen und nach folgenden Normen ertheilt werden.

§ 24.—Der Unterricht in der Arithmetic soll in der ersten Classe der lateinischen Schule nach Wiederholung der einfachen Rechnungsarten mit der Buchstaben-Rechnung anfangen, und in den übrigen Classen bis zur Buchstaben-Rechnung ausschliesslich durchgeführt werden, mit besonderer Hervorhebung des practischen und des Kopfrechnens.

§ 25.—In der I. Classe der lateinischen Schule soll allgemeine Geographie, in der IIte Classe Geographie von Teutschland, in der IIIten Classe allgemeine Geschichte, in der IVten Classe teutsche mit der vaterländischen Geschichte gelehrt werden.

Der Vortrag der Geschichte soll hauptsächlich beabsichtigen, die wichtigsten Begebenheiten, Nahmen und Jahrzahlen dem Gedächtnisse einzuprägen, nur von dem fasslichsten und zugleich Anziehensten eine ausführliche Erzählung geben, diese aber auch dazu benützen, dass der freie Vortrag der Schüler überhaupt gebildet werde.

Auch wird den Lehrern zur Pflicht gemacht, den Geschichts-Vortrag stets mit Hinweisung auf vorhandene Carten zu begleiten, so wie in den geographischen Unterricht, die Mittheilung auch anderer Sachkenntnisse, namentlich aus der Naturgeschichte einzuflechten.

§ 26.—Für die beiden untern Classen der lateinischen Schule, soll ein in der Regel von allen Schülern der Classe zu besuchender Unterricht in der Calligraphie ertheilt, und besonders dabei auf reines, richtiges und fertiges Schreiben des Dictirten gesehen werden.

In den beiden obern Classen wird ein Unterricht in der Calligraphie nicht mehr ertheilt, jedoch bleibt es dem Lehrer überlassen, Schüler, welche hierin einiger Nachhilfe bedürfen, dem Schreiblehrer zum Unterricht und zur Uebung in ausserordentlichen Stunden zuzuweisen.

Unterricht in den neueren Sprachen, besonders in der französischen, in Gesang und Tonkunst soll nach Massgabe des Begehrs, der Mittel und der Gelegenheit gegeben werden.

Anlage 12.

Staats-Ministerium des Innern.

Die Nothwendigkeit der raschen Herstellung entsprechender Zeichnungs-Vorlagen ist durch die eingesendeten der Landwirthschafts- und Gewerbsschulen, dann der Schullehrer-Seminar, noch mehr aber durch die zur Ausstellung gebrachten Leistungen der Volks-Zeichnungs-Schulen zur vollsten Evidenz gelangt. Niemand kann mehr an der Wahrheit zweifeln, dass schriftliche Belehrungen allein nicht genügen, wo Vollzugs-Organe der manichfachsten Art und der verschiedensten Bildungsgrade das Geschriebene ins Leben übertragen sollen, und dass gebotene Vorlageblätter der materiellen applicativen Theile der Instructionen, der einzige Weg zur Einheit der Bestrebungen, zur zweckmässigen Abstufung des Unterrichts und das einzige Mittel sind, der Sache das Uebergewicht über die Speculationen der Kunsthändler zu sichern.

Es wird daher verfügt was folgt:

I. Es sollen schleunigst vollständige Vorlagen für die Zeichnungsschulen aller Categorien hergestellt werden.

II. Die Entwerfung derselben wird der K. Academie der bildenden Künste, als dem gesetzlichen Mittelpunkte der künstlerischen Bildung im Staate, im Vereine mit den Vorständen der drei K. polytechnischen Schulen Oberingenieur und Rector Pauli, Rector Scharrer und Rector Leo übertragen.

III. Druck und Verlag sind dem K. Central-Schulbücher-Verlag zur Pflicht gemacht, welcher seiner Bestimmung gemäss die desfalls nöthigen Ausgaben, inclusive der Honorare, aus seinen Fonden vorschiessen, durchaus keinen Profit nehmen, wohl aber in dem gesicherten Absatze an alle Zeichnungsschulen, den vollen Ersatz, seiner Auslagen finden wird.

IV. Da der Zweck des so umfassend gestalteten Zeichnungs-Unterrichtes dahin geht, das Zeichnen als technische Sprache, gleich der Schriftsprache, über alle Classen der

Nation auszudehnen und durch diese technische Sprache die bessere Ausbildung der Handwerker, dann neben der Befähigung der Fabrikbesitzer zum Verständnisse der Maschinen, die Gutsbesitzer zu Beurtheilung von Bauplanen und verbesserten Ackerwerkzeugen, auch erhöhten Kunstsinn und den ächten Uebergang der Kunst in die Gewerbe und in das Leben zu bewirken, so muss vor allem die Wahl der (ausschliessend dem Gebiete des Linear- und Ornamentenzeichnens zu entnehmenden) Gegenstände in der Art bemessen werden, dass neben den allgemeinen Erfordernissen auch jede specielle Richtung ihren speciellen Bedarf vollständig gedeckt finde, dass sonach landwirthschaftliche mit industriellen Maschinen und Gebaüden, Blumen-Ornamente (wichtig für die künstigen Katundrucker, die Tapeten Fabrikanten u. s. w.) mit rein architectonischen Ornamenten abwechseln, und dass diese Manichfaltigkeit der Objecte durch die zweckmässige Ordnung des Ganzen in die gehörige Harmonie gesetzt und durchgehends von jenem Ernste durchdrungen werde, welcher den Character des Werkes bilden muss. Auf die weiblichen Arbeiten ist in dem Werke keine specielle Rücksicht zu nehmen. Vielmehr sind für den Punkt, wo der allgemeine Zeichnungs-Unterricht bei Mädchen in jenen Behufs der feineren Handarbeiten sich scheidet, zu Gunsten der weiblichen Arbeitschulen eigene Vorlagen durch einen Zusammentritt verständiger Personen ausarbeiten zu lassen, und diese als gesonderte Vorlags-Artikel zu behandeln und zu debitiren.

V. Das Werk soll in zwei Hauptheile zerfallen.

a. In die Vorlagen für die Elementar-Volksschulen, und

b. In die Vorlagen für die Landwirthschafts- und Gewerbsschulen, dann für die Schullehrer-Seminare.

VI. Jeder dieser Hauptheile soll nach Cursen eingetheilt werden, und für jeden Curs in eine Reihe von Heften zerfallen, deren jedes ein gewisses Gebiet von Gegenständen zum Zwecke hat, z. B. Wohngebäude überhaupt, landwirthschaftliche Geräthe, industrielle Gebäude u. s. w.

VII. Die einzelnen Blätter jedes Heftes sind durch eigene Bezeichnungen, in solche, welche jede Schule absolut haben muss, und in solche auszuscheiden, deren Anschaffung oder Nicht-Anschaffung nach Massgabe der Mittel jeder einzelnen Schule anheim gegeben bleibt. Ferner sind die Blätter jedes einzelnen Heftes in sich selbständig zu numeriren, damit in Zukunft von 2 zu 2 Jahren die entsprechenden Nachträge gehörig angereiht, und durch diese die jeweiligen Fortschritte, sowohl der Kunst als der landwirthschaftlichen- und industriellen Technic unbemerkt, aber um so sicherer und wirksamer in die Schulen und durch diese in die Masse der Nation übertragen werden können.

VIII. Da übrigens der Zeichnungs-Unterricht stets unvollständig bleiben würde, wenn mit der bildlichen Darstellung von Körpern nicht auch die Anschauung derselben verbunden würde, und da sowohl des Verständnisses der Vorlagen (von Seite oft ganz ungebildeter Knaben) als auch der practischen Richtung des gesammten technischen Unterrichts wegen, von absoluter Nothwendigkeit und eben deshalb unbedingt geboten ist, dass das Zeichnen nach Vorlagen von der einfachsten Dorf-Schule bis zu den vollständigen Landwirthschafts- und Gewerbsschulen mit gleichzeitigem Nachbilden körperlicher Vorlagen gebildet werde, so ist gleichzeitig mit dem Inslebentreten der Vorlagen-Sammlung auch das Inslebentreten einer Sammlung körperlicher Vorlagen zu bewirken, deren Verlag gleichfalls der Central-Schulbücher-Verlag zu übernehmen hat, und bezüglich deren Eintheilung nach Cursen u. s. w. dasjenige in analoge Anwendung zu kommen hat, was oben unter Ziffer V. VI. u. VII. in Absicht auf die Zeichnung-Vorlagen festgesetzt wurde.

IX. Die körperlichen Vorlagen sind in der Art zu bemessen, dass bei mathematisch begrenzten, und folglich durch Grundriss, Aufriss und Durchschnitt darstellungsfähigen Gegenständen durch den Nachweis der zu zeichnenden Flächen, und bei Körpern von weniger gesetzmässiger Begränzung zu deren möglichst klaren Darstellung, Licht und Schatten zu Hilfe genommen werden müssen, durch den practischen Nachweis des Schattens, dem Vorstellungs-Vermögen der Jugend aufgeholfen und den Schülern der richtige Tact in dem Gebrauche der zur Darstellung nothwendigen Hilfsmittel gewährt werde.

Die K. Academie der bildenden Künste im Vereine mit den Vorständen der drey polytechnischen Schulen des Reichs wird sich von selbst berufen fühlen, diesem grossen nicht nur für Bayern, sondern auch für das gesammte teutsche Vaterland hochwichtigen Werke die sorgfältigste Behandlung zu widmen, wo möglich das gleichzeitige Erscheinen einzelner Blätter aus allen Heften, und somit die gleichseitige Regelung des Zeignungs-Unterrichts in allen seinen Abstufungen zu bewirken, und in der möglichst kürzesten Frist das Ziel zu verwirklichen, welches die erhabene Idee des Königlichen Beschützers der Künste und Wissenschaften in deren würdige Hände niedergelegt hat.

München den 3ten December 1835.

An

Die K. Academie der bildenden Künste also ergangen.

Die Herausgabe eines Vorlage-Werkes für den Zeichnungs-Unterricht betreffend.

Der N. N. ist (auf dem Grunde des von ihm producirten Schlusszeugnisses der vollendeten lateinischen Schule)—(des Ueberweisungs-Zeugnisses aus der Werk- und Feyertagsschule) bei der Kreis-Landwirthschafts- und Gewerbsschule zu N. N. (Landwirthschaft und Gewerbsschule I. u. der II. Classe) als Schüler des I. (II. III.) Curses inscribirt und ihm hierüber gegenwärtiges Zeugniss zu seiner Legitimation ausgestellt worden.

K. Rectorat der Schule zu N.

Anlage 14.

Directiven für die Auswahl der Preisbücher.

Das numerische Verhältniss der Preise, sowie die Gegenstände derselben sind durch § 48. der Instruction festgesetzt. Bezüglich der Auswahl wird bestimmt was folgt:

1. Aus jedem technischen Lehrgegenstande soll, so viel möglich ein Preis ertheilt werden.

2. Was die Realien betrifft, so concurriren in der Preisbewerbung diejenigen Landwirthschafts- und Gewerbsschüler, welche die Realien an den Gymnasien hören, mit den Gymnasial-Schülern in jenen Realien-Gegenständen, für welche schulordnungsmässig besondere Preise gegeben werden;

3. Aus den Realien, welche an der Landwirthschafts- und Gewerbsschule selbst gelehrt werden, wird an jenen Schüler, der sich in allen, oder den meisten derselben durch Kenntnisse vor den übrigen Schülern ausgezeichnet hat, in jedem Curse ein Preis vertheilt.

4. Um das religiöse Gefühl zu beleben und dem Religions-Unterrichte an der Landwirthschafts- und Gewerbsschule seinen wohlthätigen Einfluss und seine Würde zu sichern, soll auch in dem letzten Curse für jede Confession ein, in einem Erbauungsbuche oder sonst einer Schrift moralischen Inhalts bestehenden, Preis demjenigen Schüler zuerkannt werden, welcher in den drei Jahrescursen ein ausgezeichnet sittliches Betragen gepflogen, und die gründlichsten Kenntnisse in der Religion bewährt hat.

5. Die Auswahl der Preisbücher steht dem Rector im Vernehmen mit dem Lehrerrathe zu.

6. Die Auswahl selbst richtet sich theils nach der Grösse der verfügbaren Geldmittel, theils nach den besonderen Studien und Berufs-Verhältnissen des Preisträgers. Bücher und Instrumente allzuhohen, die Grenze verfügbarer Mittel überschreitenden, Preises, eignen sich nicht zur Auswahl. Auch ist jeder Zeit auf besondere Brauchbarkeit des Buches für den Preisträger zu sehen, und daher soviel wie möglich ein solches Buch zu wählen, welches entweder als Hilfsmittel für das Studium (z. B. ein Lehrbuch für den nächst höheren Curs) oder als Beförderungsmittel der weiteren theoretischen oder practischen Ausbildung dient, und dann noch vom wesentlichen Vortheile ist, wenn der Schüler die technische Schule vollendet, und in einen practischen Beruf bereits eingetreten ist.

7. Werke inländischer Verfasser, oder Verlags-Artikel inländischer Buchhandlungen sind hiebei vorzugsweise zu berücksichtigen, und Schriften ausländischer Schriftsteller, oder Verlags-Artikel ausländischer Buchhandlungen nur dann zu wählen, wenn das Innland Schriften von gleichem Werthe nicht darbietet.

8. Werden die Preise in Geld bestimmt, so sind hiezu die Geschichtsthaler verordnungsmässig zu wählen.

Es sind jedoch bei jenen Landwirthschafts- und Gewerbs-Schülern, bei welchen die Gemeinden selbst den Aufwand für die Preise übernehmen, deren Wünsche bei der Auswahl möglichst zu berücksichtigen. Insbesondere sollen da, wo von den Gemeinden bezüglich der Preise mit Genehmigung der Kreisregierung bereits Verfügungen getroffen worden sind (z. B. dass den Preisträgern statt der Preise Capital, Briefe kleineren Betrags mit jährlicher Verzinsung zugestellt werden) aufrecht erhalten werden.

9. Jeder bei der Auswahl sich ergebende Anstand oder Collisionsfall ist der vorgesetzten Kreisregierung zur Entscheidung anzuzeigen.

Anlage 15.

Absolutorium für den Landwirthschafts- (Gewerbs-) Schüler N. N. aus N. im N. Kreise.

Nachdem der obengenannte Schüler, welcher aus der . . . . Schule in die Kreislandwirthschafts- und Gewerbsschule zu N. mit dem Zeugnisse der . . . . Befähigung versehen, eingetreten und daselbst als Landwirthschafts- (Gewerbs) Schüler unterm . . . ten . . . . . inscribirt worden ist, in der unter Leitung eines Commissärs der technischen Hochschule (der polytechnischen Schule zu N.) vorgenommenen Schlussprüfung aus den technischen Lehrgegenständen, dann aus den in Folge vorgelegten Zeugnisses an dem Gymnasio zu N. (der Landwirthschafts- und Gewerbsschule) mit Benützung (des Transitoriums) gehörten Real-Gegenständen solche Fortschritte gezeigt und über Fleiss und Betragen solche Zeugnisse erlangt hat, dass er an eine höhere technische Lehranstalt aufgenommen zu werden für würdig erklärt werden konnte, so wird demselben die Erlaubniss zum Uebertritt an eine polytechnische Schule oder (auf den Grund der Ziff. V. u. XII. der allerhöchsten Verordnung vom 16ten Febr. 1833. in Folge des § 46. der Instruction im Wege der Dispensation) an der technischen Hochschule hiedurch ertheilt, und ihm darüber gegenwärtiges von dem Prüfungs-Commissär und Rector unterzeichnetes Zeugniss ausgestellt.

Formular für die Abfassung der Jahresberichte.

Damit in den Jahresberichten der Landwirthschafts- und Gewerbsschulen eine gewisse Gleichförmigkeit und Uebereinstimmung fühlbar werde, sollen dieselben so viel möglich nach folgenden Haupt-Abschnitten abgefasst werden.

I. Nach einem kurzen, die Lehrcurse der Schule und die in jedem derselben Unterricht gebenden Professoren bezeichnenden Vorworte, beginnt der Jahresbericht, mit Aufzählung

a der in dem Schuljahre behandelten Lehrgegenstände (der technischen und Realien) und der hiebei gebrauchten Lehrbücher, sodann werden

b. die Namen der Schüler nach der Ordnung der Lehrcurse, in alphabetischer Reihenfolge mit Bemerkung des Geburtsortes, des Alters und Standes der Eltern aufgeführt, und der Fortgangsplatz eines jeden mit besonderer Hervorhebung der mit Preisen beschenkten Schüler bezeichnet, und endlich am Schlusse,

c. Diejenigen Vorfälle und Veränderungen, welche sich während des Schuljahres in Ansehung des Lehrpersonals, der innern und äusseren Verhältnisse der Schule, ihren Dotation, u. s. w. ergeben haben, so wie jedes merkwürdige Ereigniss und jede die Schule betreffende specielle Anordnung der Staatsregierung aufgeführt.

II. Dem Jahresbericht wird ein Programm angefügt.

Dasselbe ist der Bearbeitung eines dem technischen Lehrstoffe der Landwirthschafts- und Gewerbsschule entnommenen Gegenstandes gewidmet.

Die Abfassung desselben wechselt unter den Lehrern, nach einer jährlichen, durch Einverständniss derselben unter sich, oder durch den Schulrector zu bestimmenden Reihenfolge. Die Wahl des Gegenstandes bleibt jedem Lehrer überlassen, jedoch ist dieser gehalten, sein Elaborat noch vor dem Drucke dem Rector zur Einsicht und Erinnerung vorzulegen.

Auch darf das Programm einen und einen halben Druckbogen nur dann überschreiten, wenn die Exigenz der Anstalt eine Mehr-Ausgabe gestattet.

Anlage 19. *a.*

Zeugniss.

Dem Kunst (Bau) Eleven der bildenden Künste, Herrn aus wird auf den Grund des § 5. der allerhöchsten Verordnung vom 16ten Feber 1833 bezeugt, dass ihm der Zutritt zu nachstehenden ihm von dem Directorio jener Academie bezeichneten Collegien der K. Ludwig Maximilians-Universität, ... in so ferne und in so lange gestattet worden sey, als er in den Collegien und in dem Universitäts-Gebäude den Gesetzen und Vorschriften der Hochschule und den jeweils bestehenden Verordnungen vollkommen und vollständig nachlebt, und sich so benimmt, wie es von einem an dem Unterrichte der Hochschule theilnehmenden Jünglinge gefordert werden kann und muss.

Sub-Enclosure (F. 1.) in No. 28.

No. 21,865.—ABSCHRIFT.

Auf Befehl.

DIE für 1832–33 zum erstenmale an das Staatsministerium des Innern gelangten Jahresberichte sämmtlicher Districts und Local-Schul-Inspectionen haben zu der Wahrnehmung geführt, dass in dem Schulfache unendlich viel geschrieben wird, und dass, insbesondere die Schulbehörden sich jährlich nur über Dinge verbreiten müssen, deren Stetigkeit eine Wiederholung durchaus unnöthig macht.

In dieser Erwägung und im Hinblicke auf die nunmehr allenthalben vollendete Schulstatistic wird hiemit verfügt wie folgt:

I. Die bisherigen Jahresberichte der Districts- und Localschul-Inspectoren haben fürohin zu unterbleiben.

II. An deren Stelle treten einfache in nachstehender Weise zu verfassende Visitations-Protocolle.

III. Die Districts-Schulbehörde setzt jährlich gemeinsam mit der Districts-Polizeybehörde die Tage der Schulvisitationen in der Art fest, dass die Visitation des Gesammtbezirkes jedenfalls mit Ablaufe des Winterschulsemesters vollständig geschlossen sey. Die Visitation selbst wird in den Local-Schulcommissionen versehenen Städten durch diese, in den übrigen Bezirken durch die Districts-Schul-Inspectoren im Beysein des Vorstandes der Districts-Polizeybehörde (Landgerichts, Herrschaftsgerichts, und mittelbaren Magistrates) vollzogen. Im Verhinderungsfalle ersetzt den Districts-Schul-Inspector ein von der K. Kreisregierung im Voraus zu bestimmender Stellvertreter, den Districtspolizey-Beamten aber ein Polizey-Nebenbeamter.

IV. Die festgesetzten Tage werden sämmtlichen Local Schul-Inspectionen, dann in gutsherrlichen Gerichtsorten den gutsherrlichen Beamten, in den übrigen Gemeinden aber der Gemeinde-Verwaltung kundgegeben, und es erfolgen sofort diejenigen Bekanntmachungen, Einladungen und Vorbereitungen, welche durch die Verfügung vom 1ten April 1832, für die Visitationen der Kreisscholarchen angeordnet wurden.

V. Der Local-Schul-Inspector übergiebt dem visitirenden Districts-Schulvorstande bey seiner Ankunft eine nach Anlage I. verfasste kurze Uebersicht der Schulverhältnisse, in welcher auch bereits so wohl er (als Local-Inspector), als jeder einzelne Lehrer seine etwaigen Beschwerden, Wünsche, Anträge bereits eigenhändig eingetragen hat.

VI. Die Visitation beginnt mit einer kurzen Anrede des Local-Inspectors mit der in Gegenwart aller anwesenden Eltern und Zuhörer stattfindenden Prüfung der schulpflichtigen Jugend; sodann folgt in einem Nebenzimmer die Durchsicht der Censurbücher und Absentenlisten, dann Bestätigung oder Modificirung der von den Local-Inspectoren beabsichteten Schulvorrückungen, Schulüberweisungen, und Schulentlassungen, die Besichtigung der Localitäten und der Schuleinrichtung, und die Anhörung und Bescheidung der etwaigen Anbringen.

Endlich wird zur nähern Würdigung und Bescheidung der von dem Local-Inspector überreichten Uebersicht und zur Ergänzung der Schulstatistic, d. h. zum Eintrag der Veränderungen geschritten, welche sich nicht auf die stets wandelbare Zahl der Einwohner des Schuldistricts, und auch die ebenso stets wandelbare Zahl der Schüler, sondern auf die bleibende Verhältnisse der Schule und ihres Einkommens, auf den Umfang des Schulsprengels auf die Zahl der Classen, der Lehrer und Gehülfen, auf den Bestand der Schul-Localitäten, und auf den bleibenden Gehalt der Lehrer beziehen.

VII. Die Ergebnisse der Verhandlung gelangen in ein nach Anlage II. doppelt verfasstes Visitations-Protocoll, wovon ein Exemplar dem Local-Inspector zu seiner Nachachtung und zu Ergänzung der Inspections-Acten verbleibt, das andere aber in die Hände des Districts-Inspectors und des Districtspolizey-Vorstandes übergeht, um statt des Jahresberichtes an die Kreisregierung und an das Staatsministerium des Innern, und von dort seiner Zeit wieder zu den Districts-Inspections-Acten zu gelangen.

VIII. Das Protocoll wird von dem Districts-Schul-Inspector nach vorgängigem vertraulichem Benehmen mit dem Districts-Polizey-Beamten dictirt. Abweichende Ansichten des leztern ziehen bey rein pädagogischen Fragen eine besondere schriftliche Bemerkung des Polizeybeamten *in fine* des Protocolls under der Rubric:

> " Besondere Bemerkungen des Districts-Polizey-Beamten und des Districts-Schul-Inspectors über den Inhalt vorstehenden Protocolls und über die Qualification der Lehrer und des Gehülfenpersonals,"

bey Gegenständen des gemeinschaftlichen Wirkungskreises aber Aufschub des Visitationsbescheides über den streitigen Punkt bis zu erfolgter Regierungs-Entscheidung nach sich.

Jedenfalls haben aber solche Ansichtsverschiedenheiten Geheimniss beyder Vorstände zu bleiben, und sind nicht zur Kenntniss der übrigen Anwesenden zu bringen.

Die

Die Schreiberey liegt dem Schullehrer und seinem Adstanten oder Präparanden dort ob, wo ein zahlreicheres Lehrer-Adstanten- und Präparanden-Personal sich befindet. Sollte die Zahl der Lehrer, oder Adstanten nicht hinreichen das Protocoll in Duplo auszufertigen, oder sollte der vorhandene Lehrer zu alt seyn, oder zu langsam schreiben, und kein sonst befähigtes Individuum anwesend und geneigt seyn, so sind die im Dictando schreiben und in der Moralität gleich ausgezeichnetesten Schüler zum Schreiben zu berufen. Dieser Berufung darf auch als Auszeichnung bey genügender Befähigung der Lehrer, Adstanten und Gehülfen verfügt werden, übrigens versteht sich von selbst, das diese Zuziehung der Schüler nicht zulässig ist, sobald das Protocoll etwas enthalten müsste, was sich nicht zur Kenntniss der Schuljugend eignete. Dieses Protocoll wird im Beyseyn des Districts-Polizey und Schulbeamten, des etwa anwesenden Gutsherrn, des Patrimonialrichters, des Local-Inspectors, des Lehrerpersonals und der Gemeinde Verwaltung verlesen, und von sämmtlich diesen Anwesenden unterzeichnet; das Urtheil des Districts-Polizey-Beamten und des Districts-Schul-Inspectors über Fleiss und Fortgang wird auch insbesondere noch der versammelten Schuljugend, und den dort anwesenden Eltern und Zuhörern durch den Districts-Inspector oder durch den Local-Inspector bekannt gemacht.

IX. Um übrigens den Districts- und Local-Inspectoren die Erfüllung dieser Aufgabe im höchsten Grade zu erleichtern und zu bewirken, dass die Abfassung des Visitations-Protocolls in keinerley Weise hemmend auf die eigentliche practische Prüfungs- und Visitations-Aufgabe einwirke, werden eigene Formulare, sowohl der Uebersichtsbogen, als der Protocolle, in der Art hergestellt, dass alles sich Gleichbleibende bereits lythographirt erscheine, und die Arbeit lediglich auf Ausfüllung des Speciellen beschränke und es folgend anliegend

a. für jeden Local-Inspector unentgeldlich 24 Exemplare bereits lythographirter Nachweisungen, und für jede Districts-Schul-Inspection 200 Exemplare bereits lythographirter Protocolle, mit dem Bemerken dass auch in Zukunft dem Bedarfe an solchen lythographirten Formbogen unentgeldlich von Seite des Amts genügt werden wird.

X. Sämmtliche hier angeordnete Arbeiten sind in möglichster, beynahe lapidarer Kürze und mit Vermeidung jedes unnöthigen Wortgepränges zu verfassen, und es ist Sorge zu tragen, dass sowohl die in gedrängterer Form die Stelle der bisherigen Local-Inspections Jahresberichte versehenden Uebersichten des Local-Inspectors, als die, die Stelle der bisherigen Districts-Inspections-Jahresberichte vertretenden Visitations-Protocolle, das treue Bild der Schulverhältnisse mit jenem Ernste, und in jener einfachen lebendigen Sprache darbiethen, worauf vorzüglich der hochwichtige Zweig der Volksbildung einen so entschiedenen Anspruch behauptet.

XI. Uebrigens wird bey diesem Anlasse wiederholt darauf aufmerksam gemacht, dass die Schule nicht blos zur Ausbildung des Verstandes, sondern auch, und zwar vorzugsweise zur Entwicklung und richtigen Leitung des Gemüthes errichtet ist, dass in der Aufgabe des Schulmannes das Erziehen auf gleicher Linie mit dem Lehren steht, dass tiefe Religiosität, ächtes sittliches Gefühl, und festes Durchdrungenseyn von den Pflichten gegen Gott und die Obrigkeit, die ersten und heiligsten Zwecke jeder Volksbildung, und die unentbehrlichsten Vorbedingungen des Glückes der Einzelnen wie der Nationen ausmache; dass demnach die Schule die gute häusliche Erziehung unterstützen, die mangelhafte ergänzen, die schlechte verbessern muss.

Es wird ferner darauf aufmerksam gemacht, dass die Aufgabe des Erziehens nur von jenen erfüllt werden wird, welche in sich selbst die Prämissen einer solchen Erziehung tragen, und dass demnach auch der talentvollste Lehrer für wahre Volksbildung untauglich ist, sobald er selbst des Gehorsams gegen seine Obern, also zunächst gegen die mit einer höhern wissenschaftlichen Bildung und mit der Weihe des priesterlichen Amtes versehenen Local-Schul-Inspectoren des reinen Gemüthes und wahrhaften religiöser Gesinnung entbehrt, und dass in Ländern, wo der Schulbesuch auf gesetzlichen Zwang beruht, unzeitige Nachsicht, Dulden eines oberflächlich verbildenden Unterrichts, oder Belassen eines schlechten Lehrers auf seiner Stelle, einen offenbaren Verrath nicht nur gegen den Staat, dessen ganze Zukunft auf der heranwachsenden Generation beruht, sondern auch gegen die Eltern in sich schliesst, deren edelstes Gut in solchem Falle frevelhaften Händen überantwortet wird.

Es ist von höchster Wichtigkeit, dass die k. Districts-Schul-Inspectoren und die sie begleiten, den Districtspolizey-Beamten innig von dieser Wahrheit durchdrungen seyen. Es ist insbesondere unentbehrlich sie zu überzeugen, wie die Zeit der unreifen Bildung, des Spielens mit sogenannten gemeinnützigen Gegenständen, und des Verachtens alles Positiven in Kirche und Staat verschwinden muss; wie es sich darum handelt, nicht Rückschritte in der Volksbildung zu machen, wohl aber gründliche Kenntnisse an die Stelle des Auswendiglernens und der Paradeprüfungen treten zu lassen, und das Nützliche nur als Folgerung des Nothwendigen zu betrachten, und ein ernstes, wahrhaft gebildetes Geschlecht dem Vaterlande zu erziehen, und wie die Aufgabe der Schulleitung sowohl als der Schulvisitationen nur dann im Sinne Seiner Majestät gelöset erscheint, wenn obiger Gesichtspunkt durch sie auch wirklich in die That und ins Leben übergeht.

XII. Gegenwärtige Verfügung tritt, wo die Schulvisitationen fur $18\frac{32}{33}$ noch nicht vollzogen sind, mit dem Tage ihres Erscheinens in Wirksamkeit. Für jene Orte und Bezirke, wo die Schulvisitationen pro 1832–33 bereits statt gefunden haben, erfolgt noch die Vorlage der üblichen Jahresberichte, und der Terminus *a quo* für jene Orte und Bezirke ist das Schuljahr $18\frac{33}{34}$.

Die k. Kreisregierungen werden hiernach gemeinsam mit dem Kreisscholarchate das Geeignete alsbald anordenen; die nöthigen Détail-Instructionen erlassen, und die erlassenen binnen 14 Tagen abschriftlich zur Anzeige bringen.

München am 24ten July 1833.

An

sämmtliche Kreis-Regierungen ergangen.

Die Schuljahresberichte, und die damit in Verbindung stehenden jährlichen Haupt-Visitationen der Districtspolizey-Beamten und der Districts-Schul-Inspectoren, oder der bey den Behorden repräsentirenden Local-Schul-Commissionen, der den k. Kreisregierungen unmittelbar untergeordneten magistratischen Städte betrf.

Sub-Enclosure (F. 2.) in No. 28.

Exemplificirter Nachweis der Local-Inspectionen. Erläuterungen.

a. Die beispielweisen Einträge des Local-Inspectors sind durch Unterpunctiren bemerklich gemacht.

b. Diese Conspecte werden dem Districts-Inspector bei seiner Ankunft in dem Schulorte überreicht, wenn er nicht deren frühere Einsendung verlangt. Wünscht derselbe aber die Nachweise schon früher zu erhalten, um sich auf die Visitation noch gründlicher vorzubereiten, so sind ihm selbe in dem festgesetzten Termine pünktlichst zuzusenden.

c. Der Local-Inspector ist nicht zu doppelter Ausfertigung der Nachweise gehalten; die einfach eingereichten werden dem bei der Districts-Schul-Inspection hinterlegten Protocolle beigefügt. Dagegen steht dem Local-Inspector frei, den Nachweis durch den Lehrer, oder durch einen ausgezeichneten Schüler abschreiben zu lassen, und in diesem Falle wird das Duplicate resp. Concept dem bei den Local-Inspections-Acten bleibenden Protocolls-Duplicate beigefügt.

Districts-Schul-Inspection Altenberg.

Local-Schul-Inspector Ludwigsruh.

Nachweisung des Local-Inspectors über den Stand und die Verhältnisse der Werk- und Feyertags-Schule für den Zeitraum vom 1ten Mai 1833 bis 30ten April 1834.

I. *Eingetretene Veränderungen in Bezug auf die Schulstatistic.*

Ad Columne 1, Etwaige Veränderungen des Schulortes und Schulsprengels.

Ad Columne 2, Entfernung der etwa neu hinzugekommenen Orte vom Sitze der Schule nach bayerischen Stunden.

Ad Col. 3, Etwaige Aenderungen in der Zahl der Schul-Abtheilungen und Classen.

Ad Col. 4, Etwaige Aenderungen in der Zahl der
a. Haupt.
b. Nebenlehrer.

Seit 1ten October is die Zahl der Lehrer durch einen Hülfslehrer vermehrt.

Ad Col. 5, Etwaige Veränderungen der Localitäten.

Im Dartstuhle wurde ein Zimmerchen für den Hülfslehrer gebaut, die Schulstube wurde durch eine Bretterwand in zwei Hälften getheilt.

Ad Col. 6, Etwaige Veränderungsabsicht auf die Baupflicht.

Ad Col. 7, Etwaige Mehrung, Minderung oder Vertauschung der dem Schulzwecke gewidmeten Gründe.

Ad Col. 8, Etwaige Veränderungen in dem Fundations-Vermögen
a. in Absicht auf den Activstand,
b. in Absicht auf die Schulden und Lasten,
c. in Absicht auf das reine Vermögen.

Ad Col. 9, Etwaige Veränderungen des Lehrer-Einkommens und zwar
a. durch bleibende Erhöhung oder Schmälerung des ständigen Gehalts,
b. auf Mehrung, Minderung oder Auswechslung der Qualitäten,
c. durch Mehrung, Minderung oder Aenderung der nutzbringenden Rechte,
d. durch Entzug oder Einkommens-Mehrung oder Minderung der mit dem Lehrer-Einkommen verbundenen Nebenverdienste.

Kraft Decrets vom 18ten August 183 , wurde der Gehalt des Hilfslehrers mit 150 fl. auf die Renten des Schul-Vermögens und mit 50 fl. auf die Kreis-Dotation fundirt.

II. *Sonstige Veränderungen in den Schulverhältnissen.*

a. In dem Personale der Local-Schul-Inspection.

In Folge des am te erfolgten Ablebens des früheren Pfarrers und Local-Schul-Inspectors, ist der gegenwärtige Pfarrer und Local-Schul-Inspector am in seine Function getreten.

b. In dem Personale des Schullehrer-Personals.

Als erster Hülfslehrer wurde Georg Erb aufgenommen, geboren den te geprüft mit der Note jüngst in Bischofsheim angestellt.

c. In der Schul-Einrichtung.

III. *Kurze Schulchronik für die Dauer der obbezeichneten Periode.*

Tag der vorjährigen Schulvisitation, ob und wie alle damal ertheilten Bescheide vollzogen wurden.	14ten März 1833. Vollzogen nach Ausweis der Acten.
Schluss des vorigen Wintersemesters.	Am 15ten und incl. der Ferien am 30ten April.
Beginn des vorigen Sommersemesters.	Am 1ten Mai.
Schluss derselben.	Am 15ten September und incl. der Ferien am 30ten September.
Beginn des gegenwärtigen Wintersemesters.	Am 1ten October 1833.
Tage der speciellen Visitationen des Districts-Inspectors, während des Jahres.	Am 11ten December 1833, und 14ten März 1834.
Stattgehabte besondere Ereignisse und Vorfälle.	
Besondere Feyerlichkeiten.	Der Amtsantritt des gegenwärtigen Pfarrers und Local-Inspectors, wurde durch eine feyerliche Rede an die Schuljugend bezeichnet.
Besondere Unterbrechungen.	Die Krankheit des vorigen Local-Inspectors hat den Religions-Unterricht 6 Wochen hindurch unterbrochen.
Sonst Bemerkenswerthes.	Die Gutsherrschaft hat ihren schon oft bewährten Sinn für das Beste der Schule neuerlich durch ein Geschenk von 22 fl. Behufs der Preise-Vertheilung bewährt.

IV. *Stand der Schule und des Schulbesuches.*

——	Stand mit Schlusse des vorigen Schul-Jahres.	Abgang.	Zugang.	Gegenwärtiger Stand.	Schuldbare Abwesenheit.	Ertheilte Strafen.	BEMERKUNGEN.
a. Werktagsschule:							
1. Knaben-Classe incl. der Vorbereitungs-Classe.	20	-	17	30	12		Unter den Ab- und Zugegangenen befinden sich
2. Knaben-Classe - -	24	2	-	20	26		*a.* gestorbene.

Bemerkung.—Sind mehrere Lehrer oder Adstanten vorhanden oder findet es der Local-Inspector bequemer, so kann er die Columne, "von wem gegeben" mittelst einfacher Buchstaben ausfüllen als Pfarrer Local-Inspector (Pfr.) 1te Lehrer (L. 1.) Adstant (A.) u. s. w.

IX. *Sonstige Verhältnisse.*

Haüsliche Erziehung, ob derselben in der Schule nachgeholfen wurde.

Die häusliche Erziehung lässt noch vieles zu wünschen übrig. Die Gemeinde-Verwaltung unterstützt den Pfarrer in dieser Beziehung nur schwach. Die Schule sucht nachzuhelfen nach Kräften.

Sittligkeit der Schul-Jugend, Betragen derselben in / ausser } der Schule.

Im Ganzen zu loben.

Entferntbleiben von den Wirthshäusern, Tanzplätzen und sonstigen öffentlichen Belustigungsorten.

Die Verordnungen werden genau vollzogen. Uebertretungen werden vorschriftsmässig geahndet.

Gesundheits-Verhältniss der Jugend.

Die Jugend im Hauptorte ist gesund und kräftig, grösstentheils von blühendem Ansehen. In der Filiale Ottmann, wirkt die dürftige Kost (meist sauere Milch u. Käse) nachtheilig auf den physischen Zustand der Kinder.

X. *Stand des Schulfondes, der Schul-Einnahmen und Schul-Ausgaben, Rechnungs-Abschluss für das Jahr* 1832–33.

XI. *Wünsche*

XI. *Wünsche und Anträge des Local-Inspectors.*

1. Belobung des Hilfslehrers und der Schüler, Haupt, Mark, Prell und Loos wegen grossen Fleisses.
2. Ermahnung an die Schüler, Holz, Bär Maurer und Harmann, die Schule fleissiger zu besuchen.

XII. *Wünsche, Anträge und Beschwerden des Lehrer-Personals.*

Wünsche, Anträge und Beswerden des Lehrer-Personals liegen an unter Ziffer. . . .

Sub-Enclosure (F. 3.) in No. 28.

Exemplifizirtes Visitations-Protocoll.

Erläuterungen.

a. Die beispielweisen Einträge sind durch Unterpunctiren bemerklich gemacht.

b. Wo der Local-Inspector ein Duplicat seines Nachweises zu den Acten bringt, kann die Entschliessung auf die Anträge desselben wesentlich abgekürzt und beziehungsweise auf den Nachweis gefasst werden. Wo der Local-Inspector ein Duplicat resp. Concept seines Nachweises zu den Local-Inspections-Acten nicht bringt, muss die Entschliessung auf die Anträge, wie diess in dem exemplifizirten Eintrage geschah, in der Art gefasst seyn, dass sie auch ohne Zuhandnahme des Nachweises verständlich sey. Gleiches gilt von den, den Nachweisen des Local-Inspectors beizulegenden Wünschen, Anträgen und Beschwerden der Lehrer.

c. Die Rubric V. Etwaige Anbringen der Betheiligten, bezieht sich blos auf die etwaigen Anbringen der dem Lehrer-Personal nicht angehörigen Individuen, als der Eltern u. s. w., da die Anträge des Lehrer-Personals bei Prüfung des Nachweises des Local-Inspectors unter Rubric VII. des Protocolls, ihre gesonderte Erledigung erhalten.

d. Wo sowohl der Vorstand als der Nebenbeamte der Districts-Polizey-Behörde durch besondere erhebliche Geschäfte, erweislich ausser Stand gesetzt sind, der Visitation sämmtlicher Schulen des Bezirkes beizuwohnen, wird die Abwesenheit des Districts-Polizey-Beamten in der Prüfung mittelst des Wortes "verhindert," bemerkt, die Visitation durch den Districts-Schul-Inspector allein vorgenommen und die Rubric: Besondere Bemerkungen des Districts-Polizey-Beamten und der Districts-Schulbehörde über den Inhalt vorstehenden Protocolls und über die Qualification des Lehrer und Gehülfen "Personals," später in gemeinsamen Benehmen der Vorstände der Districts-Polizey und Districts-Schulbehörde, auf den Grund des von dem Districts-Schul-Inspector aufgenommenen Protocolls, ausgefüllt. Bei Ausfüllung dieser Rubric sind auch die Gründe des Nichterscheinens des Districts-Polizei-Beamten nachzuweisen. In keinem Falle jedoch darf der Districts-Polizei-Beamte oder dessen Vertreter bei Visitation jener Schulen fehlen, deren Zustand etwa

a. zweifelhaft ist, oder wo
b. eine Spannung zwischen dem Local-Inspector und dem Lehrer besteht, oder wo
c. Diffidien zwischen der Local-Inspection und der Gemeinde obwalten, oder wo
d. aus sonstigen Ursachen der Districts-Schul-Inspector auf das Miterscheinen des Districts-Polizei-Beamten dringt.

Hierauf ist bereits bei gemeinsamer Ausmittlung der Visitations-Tage Rücksicht zu nehmen, da der bestimmte Wille der Staatsregierung ist, würdige Geistliche in ihrem ohnehin mühesamen Schulwirken von der Polizei-Behörde, nicht nur auf dem Papiere, sondern auch der That nach, und insbesondere in dem Angesichte der Betheiligten unterstützt zu wissen.

e. Hinsichtlich der Vorrückung in eine höhere Classe wird nur jene Weisung in das Protocoll eingetragen, welche der Districts-Inspector, abweichend von dem Antrage des Local-Inspectors ertheilt, und worüber beide ihre Ansichten nicht vereinigen konnten. Die von dem Local-Inspector selbst beabsichteten, oder in Folge der Besprechung mit dem Districts-Inspector gutgeheissenen Nicht-Vorrückungen von einer niederen in eine höhere Classe der Werk- oder der Feyertagsschule, berühren das Protocoll nicht, dagegen sind alle von dem Local-Inspector beantragte und nicht beantragte Nichtvorrückungen von der Werk in die Sontagsschule, und alle von dem Local-Inspector beantragte und nicht beantragte Zurückbehaltungen von Sonn- und Feyertagsschülern über das Pflichtigkeits-Alter in dem Protocolle anzuführen, da es sich hier von einer allerdings in den Verordnungen begründeten Ausnahme von der Regel handelt, welche nur bei nachgewiesener Unzulänglichkeit des Fortganges zulässig ist, und welche in jedem einzelnen Falle einer Aufzeichnung zu den Acten und eines förmlichen Ausspruches der Districts-Inspection bedarf.)

Districts-Schul-Inspection Altenberg. Local-Schul-Inspect: Ludwigsruh.

Protocoll, über die zu Ludwigsruh, Districts Altenberg am 14ten März 1833, Vormittags 8–12 Uhr stattgehabte Schul-Visitation.

Gegenwärtige.

Von Seite der Districts-Polizei-Behörde,
Landrichter Maier.
Die Gutsherrschaft,
Baron von Mitterfels.
Von Seite des Patrimonialgerichts,
Patrimonialrichter Klein.
Die Gemeinde Verwaltung bestehend aus
Johann Kurz, Vorsteher zu Erlach.
Michael Braun, Vorsteher zu Ludwigruh.
Bernhard Orb
Georg Brandt } Ausschussmitglieder.
Caspar Grünwald

Von Seite der Districts-Inspection,
Districts Inspector Feder.
Der Local-Inspection,
Pfarrer Hildner.
Des Lehrer Personals, nämlich
Lehrer Bauer,
Hilfslehrer Erb.

Nachdem der heutige Tag zur Schul-Visitation für die hiesigen Schulen festgesetzt und in dessen Folge die vorgeschriebene Bekanntmachung erlassen worden war, versammelten sich heute die Obgenannten und es wurde verhandelt, wie folgt:

I. *Uebergabe des Ausweises.*

Der Local-Inspector übergab den visitirenden Polizei- und Schulbeamten die vorgeschriebene Uebersicht der Schul-Verhältnisse, welche gegenwärtigem Protocolle unter Ziffer 1. beigefügt wurde. Die Vorlage erfolgte in Gemässheit der Weisung des k. Districts-Inspectors vor- bei dessen Ankunft in dem Schul-Orte.

II. *Schulprüfung und deren Ergebniss.*

Sofort eröffnete der Districts-Inspector durch eine kurze Rede die Schulprüfung, welche nachstehende Resultate darbot:

CLASSE.	GEPRÜFT.	RESULTATE.	VERFÜGUNGEN.
A.—WERKTAGS-SCHULE:			
Ite Classe der Knabenschule einschlüssig der Vorbereitungs-Classe.	von 8 bis 9½ Uhr -	Religion, gut. Lesen, fertig und mit Ausdruck - Schönschreiben, fest und gut. Dictandoschreiben, theilweise genügend. Rechtschreiben (Sprachlehre.) Tafelrechnen, fertig, aber zu mechanisch. Kopfrechnen, mehr practisch als das Denken erregend. Biblische Geschichte, sehr gut. Geschichte u. Erdbeschreibung (noch ungeübt.)	- - Künftiger fleissiger zu üben. - - Dem Lehrer wurde. Scholz Rechenbuch zum Studium empfohlen.
IIte Classe der Knabenschule.	von bis Uhr -	Religion. Lesen. Schönschreiben. Dictandoschreiben. Rechtschreiben (Sprachlehre.) Tafelrechnen. Kopfrechnen. Biblische Geschichte. Geschichte u. Erdbeschreibung.

Ite Classe der Mädchenschule einschlüssig der Vorbereitungs-Classe.	von bis Uhr -	Religion. Lesen. Schönschreiben. Dictandoschreiben. Rechtschreiben (Sprachlehre.) Tafelrechnen. Kopfrechnen. Biblische Geschichte. Geschichte u. Erdbeschreibung.	
IIte Classe der Mädchen Schule.	von bis Uhr -	Religion. Lesen.	

CLASSE.	GEPRÜFT.	RESULTATE.	VERFÜGUNGEN.
II^te Classe—*fortgszt.*		Schönschreiben. Dictandoschreiben. Rechtschreiben (Sprachlehre.) Tafelrechnen. Kopfrechnen. Biblische Geschichte. Geschichte u. Erdbeschreibung.	
III^te Classe der Mädchenschule.	von bis Uhr -	Religion. Lesen. Schönschreiben. Dictandoschreiben. Rechtschreiben (Sprachlehre.) Tafelrechnen. Kopfrechnen. Biblische Geschichte. Geschichte u. Erdbeschreibung.	
B.—Feyertags-schule:			
Männlich - -	von bis Uhr -	Religion, hinreichend. Lesen, grossentheils noch geläufig. Schönschreiben, mittelmässig. Dictandoschreiben, ziemlich richtig. Rechtschreiben (Sprachlehre.) Tafelrechnen, geläufig. Kopfrechnen. Biblische Geschichte, man erkennt die fleissige Uebung. Geschichte u. Erdbeschreibung.	
Weiblich - -	von bis Uhr -	Religion. Lesen. Schönschreiben. Dictandoschreiben. Rechtschreiben (Sprachlehre.) Tafelrechnen. Kopfrechnen. Biblische Geschichte. Geschichte u. Erdbeschreibung.	

III.—*Censur-Bücher, Absenten-Listen.*

Die Durchsicht der Absenten Listen ergab folgende

Wahrnehmungen.	Bescheide.
1. Das Censurbuch ist fleissig, aber mit Correcturen versehen.	Ad. 1. Correcturen haben künftig zu unterbleiben.
2. Die Absenten-Listen enthalten zwar die Versäumnisse, aber nur selten den Grund.	Ad. 2. Der Versäumnissgrund ist vorschriftsmässig bei jedem Falle anzuführen.

IV.—*Vorrücken der Werk- und Feyertags-Schüler aus einer Classe in die andere. Uebertritt aus der Werk, in die Feyertags-Schule,*

Entlassungen.

Hinsichtlich der Vorrückung- Schul-Ueberweisung und Schul-Entlassung, setzte der Districts-Inspector fest, was folgt:

Zum Uebertritte in eine höhere Classe fand er nach dem Prüfungs-Resultate gegen die Ansicht des Local-Inspectors nicht befähigt.	Gottfried Arner, Veit Keil, Maria Bälz.
Zum Uebertritte in die Sonn-und Feyertagsschule fand er ohngeachtet des erreichten Ueberweisungsalters nicht befähigt, und verwies somit noch für ein Jahr in die Werktagsschule.	Johann Bauer, Magnus Graf, Georg Adam.
Zur Entlassung aus der Sonn- und Feyertagsschule, fand er trotz des zurückgelegten 18^ten Lebensjahres nicht befähigt, und verwies somit noch für ein Jahr in diese Schule.	Nicolaus Artbauer.

V.—*Einsichtsnahme von den Schul-Localitäten und von den Schul-Geräthen.*

Wahrnehmungen.	Bescheide.
1. Das Dach des Schulhauses leidet.	Ad 1 und 2. Vorsteher wurde angewiesen, die Herstellung binnen 14 Tagen zu bewirken.
2. Das Schulzimmer muss ausgeweisst werden und zwei neue Fensterrahmen erhalten.	
3. Der Schulgarten liegt aus Mangel einer Umzäunung noch immer brach.	Ad 3. Local-Inspector hat über den Gegenstand besondern Bericht zu erstatten.

VI.—*Etwaige Anbringen der Betheiligten.*

NAME Der Erschienenen.	KURZER INHALT DES ANBRINGENS.	BESCHEID.
1. Lehrer Bauer - -	- - Bitte um Vermehrung des bestimmten Quantums Schulholzes.	- - Abgeschlagen, weil bereits das Maximum bewilligt ist.
2. Adam Lentz - - -	- - Bittet, seinen Sohn von der Werktagsschule zu dispensiren, da er ihn zu Hause bedarf.	- - Abgeschlagen, da derselbe weder das gesetzliche Austritts-Alter noch durch besondern Fortgang die Schulenaufgabe erschöpft und den Fall einer Dispense möglich gemacht hat.

VII. *Durchsicht der von dem Local-Inspector vorgelegten Nachweise.*

Die von dem Local-Inspector übergebenen Nachweise gaben zu folgenden Verhandlungen Anlass:

Sowohl die in dem Nachweise enthaltenen, als die etwa noch ferner entdekten Veränderungen der Schulstatistic wurden mit Ausnahme dessen, was die jährliche wandelbare Zahl der Schüler betrifft in die Original-Statistic der Schule, der Gemeinde und des Districtes gleichlautend eingetragen, und zwar die in den Nachweisen des Local-Inspectors nicht enthaltenen, wie folgt:

Rubra.

Zu I. nämlich zu den Veränderungen der Schul-Statistic,
wurde verfügt.

Zu II. nämlich zu sonstigen Veränderungen der Schul-Verhältnisse,
wurde verfügt.

Zu III. nämlich zu der kurzen Schulchronic,
wurde verfügt, dass künftig die Ferien möglichst in die Erntezeit verlegt werden sollen.

Zu IV. nämlich zu dem gegenwärtigen Stande der Schule und des Schul-Unterrichts,
wurde verfügt; Die Ortsvorsteher haben bei eigener Verantwortlichkeit den Strafbefehl des K. Landgerichtes binnen 3 Tagen zu vollziehen.

Zu V. nämlich zu dem Stande der Censurbücher und der Schullisten,
wurde verfügt, den Fleiss des Lehrers zu beloben.

Zu VI. nämlich zu den Anstalten für Fortbildung der Lehrer,
wurde verfügt.

Zu VII. nämlich zu dem Umfang des Unterrichts,
wurde verfügt.

Zu VIII. nämlich zur Zahl der Lehrstunden und der Lehrmethode,
wurde verfügt.

Zu IX. nämlich zu den sonstigen Verhältnissen,
wurde verfügt.

Zu X. nämlich zu dem Abschlusse des Schulfondes und der Schulrechnungen,
wurde verfügt, dass der Schulpfleger den Cassenbestand mit 30 fl. 3 x^{r} sogleich verzinslich anzulegen habe.

Zu XI. nämlich zu den Wünschen und Anträgen des Local-Inspectors,
wurden sämmtliche Anträge des Local-Inspectors bestätigt:

a. durch das angeordnete Ausweissen des Schulzimmers,
b. durch die genehmigte Anschaffung einer neuen Carte von Bayern,
c. durch Feststellung des Betrags für die jährlichen Preisbücher auf 11 fl.

Zu XII. nämlich zu den Wünschen und Anträgen des Lehrer-Personals,
kann der Holzbeitrag für Beheitzung des Schul-Locals nicht unterstützt werden, da schon früher 2 Zimmer geheizt wurden, also der Betrag des 2ten Zimmers in dem Lehrergehalte begriffen ist:

Nach dem Schlusse dieser Verhandlungen wurde das doppelt ausgefertigte Protocoll verlesen, richtig befunden und von allen Anwesenden unterschrieben.

N. N. Landrichter (Assessor).
N. N. Districts-Inspector.
N. N. Gutsherr.
Johann Kurz, Gemeindevorsteher.
Michael Braun, Gemeindevorsteher.
Bernhard Orb, Georg Brandt, Caspar Grünwald.
Pfarrer Hildner, Lehrer Bauer.
Hilfslehrer Erb.

Besondere Bemerkungen der Districts-Schulbehörden über den Inhalt vorstehenden Prot ocolls und über die Qualification des Lehrer- und Gehülfen-Personals.

Die Districts-Polizei-Behörde und die Districts-Schul-Inspection haben nach beschloss ener Visitation des Gesammt-Bezirkes in gemeinsamem Zusammentritte über die Qualificati on des Local-Inspectors und des Lehrers, sodann über die sonstigen Wahrnehmungen berath en und beschlossen, folgende

Anträge

an die höchste und allerhöchste Stelle zu bringen:

I. *Würken des Local-Inspectors.*

In jeder Beziehung vorzüglich.

II. *Qualification des Lehrer-Personals.*

Bauer: heinreichend.
Erb: sehr gut.

III. *Sonstige Bemerkungen und Anträge.*

Landrichter Maier
Districts-Inspector Feder.

Sub Enclosure (G. 1.) in No 28.

Die Heranbildung tüchtiger Lehrer für die teutschen Schulen war längst für die bayerische Staatsregierung ein Gegenstand besonderer Fürsorge.

Mehrere allerhöchste Verordnungen, namentlich jene von 11 Juny 1809, sind dessen Zeuge, und neuerlich noch hat die von Seiner Majestät dem Könige allergnädigst bewilligte Errichtung eines eigenen Schullehrer-Seminars für den Regenkreis bewiesen, dass der edle Sinn des Wittelsbachischen Herrscherstammes für diesen wichtigen Zweig des öffentlichen Lebens nicht erkaltet sey.

Eben diesem Königlen Sinn konnten aber auch jene mannigfaltigen Lücken und Gebrechen nicht entgehen, welche die bisherige Vorbildungsweise zum Schullehreramte an sich trug.

Hat nämlich, wie diess gegenwärtig in Bayern der Fall ist, der Staat einmal erkannt, dass wahre Volksbildung das Erziehen und das Lehren in gleichem Masse umfasse, und ist zugegeben, dass in einem den Schulbesuch gebietenden Lande die Eltern einen rechtsbegründeten Anspruch nicht nur auf sorgfältige Entwicklung des Verstandes, sondern auch auf gewissenhafte Pflege des Gemüthes und auf religiös sittliche Veredlung ihrer Kinder haben; so kann die Regierung nicht umhin, auch die Vorbildung der Lehrer dieser erklärten Richtung gemäss zu leiten und anzuordnen.

Um unterrichten zu können, muss der Schullehrer selbst gründlich unterrichtet seyn; um Herz und Gemüth zu veredeln, muss die edlere Gesinnung in ihm selbst herrschen, um endlich Unterricht und Erziehung gehörig zu verbinden, muss vor Allem er selbst zur richtigen Erkenntniss des kindlichen Characters, so wie auch zu jener Reife und Gediegenheit des Urtheils und Benehmens gelangt seyn, welche allein zu lenken, zu gestalten und bleibende Eindrücke hervorzubringen vermag.

Der Schullehrer muss die Ueberzeugung in sich tragen, dass die Schärfung des Gedächtnisses nur einen Theil des Unterrichtes bilde, und dass seine eigentliche Aufgabe nur da erfüllt werde, wo das Erlernte in die Begriffe und in das Gemüth des Kindes übergeht; er muss hoch genug stehen, um zu erkennen, dass die sittliche Veredlung nicht bloss in der Anwendung gewöhnlicher Schulzucht in dem äusserlichen Verwischen vorkommender Jugendfehler, sondern in deren Entwurzelung bestehe; er muss mit väterlichem Ernste kindlichen Sinn und Liebe zur Jugend verbinden, mit einem Worte, sein ganzes Wesen muss dafür bürgen, dass die ihm einst anzuvertrauende Schule dem schon mehrfach kundgegebenen Willen Seiner Majestät des Königs gemäss die gute häusliche Erziehung fortsetze und unterstütze, die mangelhafte ergänze, und die schlechte möglichst verbessere.

Eine solche Befähigung aber wird nicht in dem kurzen Zeitraume zweier im Seminar zugebrachter Jahre erworben werden, sie kann nur das Ergebniss einer folgerechten schon mit dem Austritt aus der Werktagsschule beginnenden und ohne Unterbrechung bis zur Uebernahme des Lehrfaches fortgesetzten Erziehung zum Lehrer und Erzieher seyn.

Damit nun der Schullehrerstand im Königreiche Bayern in der That auf diesen Standpunkt sich erhebe, damit er im vollsten Sinne des Wortes den k. Absichten entspreche und in reichem Segen wirke, wird hiemit, nach Einvernahme sämmtlicher Kreisregierungen und Kreisscholarchate, dann nach Anhörung der in die Haupt und Residenzstadt berufenen Seminar-Vorstände, in Folge reifer Berathungen der aus der Mitte des k. obersten Schulrathes gebildeten Commission für das teutsche Schulwesen in Gemässheit speciellen allerhöchsten Auftrages und mit Aufhebung aller früheren Bestimmungen, namentlich des Regulativas vom 11ten Juny 1809 (Reggsblatt, No. 43. S. 953. u. f.) Nachstehendes angeordnet.

Abschnitt I.—*Allgemeine Bestimmungen.*

§ 1. Die Bildung zum Berufe des Schullehrers umfasst drey Zeiträume;

1. den Zeitraum der Vorbildung für den Eintritt in das Schullehrer-Seminar,
2. den Zeitraum der Ausbildung in dem Schullehrer-Seminar, und
3. den Zeitraum der Fortbildung nach dem Austritte aus dem Seminar.

Abschnitt II.—*Von der Vorbildung für das Schullehrer-Seminar.*

§ 2. Die Vorbildung für das Schullehrer-Seminar hat bei jenen Jünglingen, welche die teutschen Schulen besucht haben, in der Regel sogleich, spätestens aber 2 Jahre nach dem Austritte aus der Werktagsschule zu beginnen und mindestens 3 Jahre zu umfassen.

Bey den aus höheren Lehranstalten, aus der lateinischen Schule oder aus dem Gymnasium, aus einer Landwirthschafts- und Gewerbsschule u. dgl. übertretenden Jünglingen kann die Aufnahme später erfolgen und es richtet sich die Vorbereitungszeit nach jenem Curse des Präparanden-Unterrichtes, für welchen die nöthige Reife nachgewiesen wird.

Die in dieser Vorbereitungszeit begriffenen Jünglinge heissen Schuldienst-Präparanden.

§ 3.—Die Aufnahme unter die Schuldienst-Präparanden setzt in allen Fällen eine vor der einschlägigen Districts-Schul-Inspection oder Local-Schul-Commission zu bestehende Prüfung voraus, welche sich über alle Lehr-Gegenstände des IIIten Curses der Werktagsschule erstreckt, und auf Anmelden im Monat Juli oder spätestens August abzuhalten ist.

§ 4.—Behufs der Zulassung zu dieser Prüfung hat sich der angehende Präparand nicht nur über seinen vollständigen Namen, über die Zeit und den Ort seiner Geburt, über den Stand und Aufenthalt seiner Eltern, über seine Vermögens-Umstände und Unterstützungs-Mittel, dann über den Lehrer, bei welchem er den Präparanden-Unterricht zu nehmen gedenkt, sondern auch darüber auszuweisen, dass er mindestens

a. die Werktagsschule oder einen diesem gleichgeltenden Unterricht als vollständig befähigt verlassen,
b. ein gesittetes Betragen gepflogen, und
c. kein körperliches Gebrechen an sich habe, welches ihn für den Lehrberuf untauglich machen könnte.

§ 5. Das Ergebniss der Prüfung wird in der Form der Anlage I. und unter Beifügung sämmtlicher Actenstücke der einschlägigen königlen Kreisregierungs-Kammer des Innern vorgelegt, welche durch ihr Kreisscholarchat über die Aufnahme oder Zurückweisung des Geprüften ohne fernere Berufung entscheidet.

§ 6. Die Präparanden treten von dem Tage ihrer Aufnahme an unter die besondere Aufsicht des von ihnen gewählten Lehrers, so wie unter die Oberaufsicht der einschlägigen Local- und Districts-Schulinspection und haben sich bey diesen sowohl, als bey der betreffenden Districts-Polizeybehörde persönlich vorzustellen.

Diese Behörden sind verpflichtet, nicht bloss den Unterricht, sondern auch das religiös sittliche Betragen, und die religiös sittliche Character-Entwickelung des Präparanden auf das Genaueste zu beaufsichtigen, und Seine Majestät versehen sich in Ausübung dieser Pflicht um so mehr der gewissenhaftesten Strenge, als Tugend und Sitte nur von einem tugendhaften und gesitteten Menschen auf Andere übertragen werden können, als ferner, was in der Jugend kaum bemerkbarer Fehler ist, später nur allzu rasch zu auffallendem Laster sich ausbildet, und als eine schwere Verantwortung auf Behörden lasten müsste, welche sich entschliessen könnten, aus übelverstandenem Mitleide einen Menschen in das Lehrfach eindringen zu lassen, der rechtzeitig einem anderen Stande zugewiesen, vielleicht ein brauchbarer Staatsbürger werden könnte, der aber aller Wahrscheinlichkeit nach als Lehrer, in den Schoos zahlreicher Familien, ja ganzer Gemeinden namenloses Unheil streuen, und am Ende von dem Dienst weggewiesen, mit Weib und Kind die Urheber seines Unglückes verwünschen wird.

§ 7. Die Districts-Schul-Inspectionen sind befugt, die Präparanden ihres Bezirkes von dem Besuche der Sonntags-Schule frey zu sprechen, jedenfalls aber bleiben letztere allen Verpflichtungen der Feyertags-Schüler, insbesondere dem Gebote des Besuchens der Christenlehre und dem Verbote des Betretens von Wirthshaüsern und Tanzböden um so mehr unterworfen, als gerade der fortgesetzte Religions-Unterricht, die unausgesetzte Theilnahme an den Gottesdienstlichen Uebungen, die Mitwirkung bei der Kirchenmusic und bei dem Kirchengesange und das Angewöhnen eines stillen, eingezogenen Lebens wesentliche Bestandtheile der Vorbildung zum Lehrerstande und zu dem damit häufig verbundenen Messedienste sind.

§ 8. Der den Präparanden zu ertheilende Unterricht umfasst die sämmtlichen Lehrfächer der teutschen Schulen und unterscheidet sich von dem gewöhnlichen Unterrichte der Werk-Sonn- und Feiertagsschule bloss durch das gründlichere, ernstere Eindringen in die betreffenden Gegenstände.

Ferner ist den Präparanden der sorgfältige Betrieb des Music- und Zeichnungs-Unterrichtes, so wie auch der ersten Kenntnisse der Landwirthschaft nach einem demnächst festzusetzenden Lehrbuche zur Pflicht gemacht.

Bei dem Präparanden-Unterrichte ist jede ungeeignete Steigerung auf das sorgfältigste zu vermeiden, und der Gesichtspunkt nicht ausser Augen zu verlieren, dass die Präparanden-Periode blos Vorbereitung für dass Schullehrer-Seminar ist, dass es hier nicht so wohl dem Viellernen, als dem Gründlichlernen und dem Erziehen für den Lehrerberuf gilt und dass der Präparanden-Lehrer seiner Aufgabe nur dann in vollem Masse genügt, wenn er gründlich durchgebildete, nach Herz und Gemüth treffliche und für ihr künftiges Fach begeisterte Jünglinge dem Schullehrer-Seminar, Behufs der speciellen Berufsbildung übergiebt.

§ 9. Der

§ 9. Der Präparanden-Unterricht darf nur von jenen Geistlichen und Lehrern ertheilt werden, welche von der betreffenden Kreis-Regierung, d. h. von dem betreffenden General-Commissär und Regierungs-Präsidenten auf Antrag des Kreisscholarchates als solche benannt werden.

Die Kreisstellen werden sich von selbst berufen fühlen, diesen wichtigen Beruf nur Männern zu übertragen, welche noch in den kraftvolleren Lebensjahren stehen, sich durch sittliche Würde auszeichnen, die Gabe der Anregung und Mittheilung im vollen Masse besitzen, ihrer eigenen Schule musterhaft vorstehen, und dem Unterrichte, wie der Erziehung der ihnen anzuvertrauenden Jünglinge unbeschadet ihrer übrigen Berufsgeschäfte obliegen können. Die Eigenschaft eines Präparandenlehrers ist widerruflich, und erlischt sobald die betreffende Kreisregierung aus irgend einem Grunde Anlass findet, den betreffenden Geistlichen oder Lehrer in das alljährlich neu festzusetzende Verzeichniss nicht wieder aufzunehmen.

§ 10. Ausgezeichnete Leistungen für diesen wichtigen Zweck sind besonders vorzumerken und bei Vergebung einträglicherer Dienstesstellen, dann bei Vertheilung von Remuneration nach Massgabe der vorhandenen Mittel und des Verdienstes zu berücksichtigen, oder höheren Ortes geltend zu machen.

§ 11. Da ausschliessendes Hinwirken auf einen Beruf an und für sich schon in dem Geräusche grösserer Städte schwerer zu erzielen ist; da ferner jeder Schullehrer in den Fall kommen kann, einer Landschule vorstehen zu müssen, und der an das Städteleben gewöhnte Jüngling nur allzu leicht dem einfachen Landleben entfremdet, und unfähig zum Erziehen schlichter Landleute wird; da endlich die Tüchtigkeit des Lehrers in der Gediegenheit seines Wissens und in seinem Berufsernste besteht, und dieses nicht im Umgange mit der städtischen Jugend, sondern in dem steten, herzlichen Verkehre mit dem Lehrer erworben wird: so ist Sorge zu tragen, dass der Präparanden-Unterricht vorzugsweise bey ausgezeichenten Lehrern auf dem Lande und in kleineren Städten statt finde.

Jedenfalls ist Sorge zu tragen, dass kein Präparandenlehrer mehr Zöglinge übernehme, als er in Zucht und Aufsicht zu halten vermag, und dass nirgends sogenannte Präparandenschulen sich bilden, in welchen ob der grossen Schülerzahl die eigentliche individuelle Einwirkung und Entwickelung mehr oder minder verloren und die Präparanden-Erziehung in einen fabrikmässigen Betrieb umgewandelt wird.

Ferner ist Sorge zu tragen, dass jeder Präparand mindestens das letzte Jahr öfters einen Präparandenlehrer beobachte, welcher allein oder mit einem Adstanten drey Classen zu versehen hat.

§ 12. Die Aufsichtsbehörden sind gehalten, und zwar die Local-Schul-Inspectionen bei ihren täglichen, die Districts-Schul-Inspectionen bei ihren periodischen Berührungen mit der Schule, von dem Fleisse, dem Betragen, und den Fortschritten der Präparanden geeignete Kenntniss zu nehmen, nach Umständen ermunternd, belehrend, ermahnend und warnend einzuschreiten, und nöthigen Falles bei der Kreisregierung auf schärfere Ahndung oder auch auf Entlassung anzutragen.

Ueberdiess aber müssen sich die Präparanden am Schlusse eines jeden Schuljahres einer besondern Prüfung unterwerfen.

Zu diesem Behufe ist jede Kreisregierung in einzelne Districte zu theilen, und für jeden derselben ein ausgezeichneter Districts-Schul-Inspector als Prüfungs-Commissär zu ernennen. Die Prüfung selbst hat jährlich im Monat August oder September statt zu finden, und dem unter Ziffer II. bezeichneten Stufengange als Anhaltspunkt zu folgen. II.

Das Ergebniss sammt dem treffenden Acte wird der K. Kreisregierung nach Formular Anlage III. vorgelegt und von dieser, d. h. dem k. General-Commissär und Regierungs-Präsidenten im Einklange mit dem Kreis-Scholarchate, ohne weitere Berufung beschieden. III.

§ 13. So wünschenswerth es ist, dass die Präparanden schon früher durch eigene Anschauung die Behandlung der Jugend und die Kunst erlernen, mehrere Classen-Abtheilungen zugleich auf eine zweckmässige Art zu beschäftigen, und dass sie selbst auch ihre Lehrfähigkeit durch einzelne Hülfsleistungen erproben, so wenig darf beides jedoch auf Kosten ihres eigenen Unterrichtes oder der schulpflichtigen Jugend bezweckt werden. Es soll ihnen daher lediglich gestattet seyn, die durch ihre sonstige Ausbildung, und namentlich durch ihre Privatstudien nicht in Anspruch genommenen Stunden in der öffentlichen Schule zuzubringen.

Auch hier hat sich ihre Thätigkeit darauf zu beschränken, dass sie den Lehrer beobachten, und unter seiner besonderen Aufsicht kleine Dienstleistungen und Versuche in Ertheilung des Unterrichtes vornehmen, nie aber darf ein blosser Präparand den Unterricht selbst statt des Lehrers ertheilen, noch weniger kann ihm irgend ein Strafrecht über die Schuljugend übertragen werden, und endlich muss er auch vom Besuche der obern Classen, so wie der Feiertagsschule für das weibliche Geschlecht entfernt gehalten werden.

ABSCHNITT III.—*Von der Ausbildung der Präparanden in dem Schullehrer-Seminar.*

ABTHEILUNG 1.—*Von der Aufnahme in das Schullehrer-Seminar.*

§ 14.—Es besteht in jedem Kreise wenigstens ein Schullehrer-Seminar als specielle Bildungs-Anstalt für künftige Schullehrer.

Der vollständige Besuch dieser Anstalt bildet die unerlässliche Vorbedingung jeder provisorischen oder definitiven Anstellung im Schulfache für jeden Jüngling ohne Unterschied des Standes und Bekenntnisses mit alleiniger Ausnahme der Geistlichen und der Candidaten des höheren Lehramtes, bei denen theils die bestandene höhere Prüfung, theils ein aus Auftrag der Kreisregierung vor einem Kreisscholarchen oder ausgezeichneten Districts-Schul-Inspector mit vollem Erfolge abgehaltenes Colloquium als genügender Nachweis

Nachweis der Befähigung zur Uebernahme einer Lehrerstelle an einer teutschen Schule und resp. eines Schulbeneficiums gilt.

§ 15.—Allgemeine Bedingungen zur Aufnahme in das Schullehrer-Seminar sind:

1. das zurückgelegte 16te und nicht überschrittene 20te Lebensjahr,

2. physische Gesundheit, und insbesondere das Nichtvorhandenseyn von leiblichen Gebrechen, welche irgend einen störenden Einfluss auf den Lehrberuf zu äussern vermögen,

3. Deckung des Aufwandes aus eigenem Vermögen, oder ausreichend gesicherte Unterstützung unter Vorbehalt der in § 24, vorhergeschehenen Ausnahmen.

4. Entsprechende Zeugnisse über die wohlbenützte Vörbereitungszeit und über einen durchaus untadelhaften sittlichen Wandel.

§ 16. Neben diesen allgemeinen Bedingungen muss der die Aufnahme in ein Seminar Nachsuchende noch insbesondere in der jährlich von der Kreisregierung durch das Kreisntelligenzblatt auszuschreibenden und von dem Kreisschulreferenten oder einen Kreisscholarchen zu leitenden Prüfung sich darüber ausweisen;

1. dass er den eingeführten Catechismus genau kenne und verstehe, und die wichtigsten biblischen Erzählungen, Gleichnisse und Beweisstellen, so wie gute Lieder aus der für die betreffende Confession eingeführten Sammlung aus dem Gedächtnisse vorzutragen vermöge;

2. dass er fertig und richtig lesen, einen leichten Aufsatz ohne erhebliche Schreib- und Sprachfehler verfassen und über die darin zur Anwendung kommenden Sprachregeln Rechenschaft geben könne;

3. dass er von der örtlichen Beschaffenheit der Heimath und des Vaterlandes genaue, von fremden europäischen Ländern und von den bekanntern Erzeugnissen der Erde, so wie von den allgemeinen Erscheinungen der Natur die allgemein nöthigen Kenntnisse besitze;

4. dass ihm aus der Geschichte, namentlich aus jener des Vaterlandes, die merkwürdigsten Personen und Begebenheiten nicht fremd geblieben seyen;

5. dass er im mündlichen Rechnen die gewöhnlich vorkommenden, im schriftlichen aber auch schwierige Aufgaben aus der Dreysatzlehre im ganzen und gebrochenen Zahlen mit Gewandtheit löse;

6. dass er eine deutliche, geläufige und feste Handschrift besitze;

7. dass er in der Music Tact und Notenkenntniss sich erworben habe, die Töne richtig treffe, eine leichte Messe oder einen einfachen Choral zu singen, auf der Orgel bei leichter Applicatur ein Stück zu spielen im Stande sey, auf der Violine einige Fertigkeit sich angeeignet und im Generalbasse mit der Lehre von den Intervallen, vom Dreyklange, von den hauptsächlichen Versetzungen, von den Accorden und von den einfachen Uebergängen sich bekannt gemacht habe, und

8. endlich, dass er im Zeichnen die erforderliche Fertigkeit besitze, und den Umriss einfacher Ornamente oder geometrischer Körper aus freier Hand nachzubilden, und darüber genügende Auskunft zu geben verstehe.

§ 17.—Wer diesen Anforderungen nicht entspricht, ist je nach Befund der Umstände entweder auf die Prüfung des nächst folgenden Jahres hinzuweisen, oder sofort ganz vom Lehramte auszuschliessen. An die Präparanden israelitischen Bekenntnisses sind dieselben Bedingungen mit Ausschluss dessen zu stellen, was Bezug auf die christliche Religion oder Kirche hat.

§ 18.—Die Ergebnisse der Prüfung werden von der aus dem Inspector und den Lehrern IV. des Schullehrer-Seminars bestehenden Commission durch Stimmenmehrheit geschöpft, und in der aus Beilage 4 ersichtlichen Form an die Kreisregierung des Innern gebracht, deren Präsident ohne weitere Berufung auf Antrag des Kreisscholarchates über die Befähigung oder Nichtbefähigung somit über die Aufnahme oder die Abweisung entscheidet.

§ 19.—Die erstmalige Zurückweisung hat eine verstärkte Aufsicht und eine einfache Hinweisung auf die Prüfung in dem nächsten Jahre,—die zweite hat Abmachung und Androhung des Ausschliessens von dem Lehrerberufe, die dritte aber den wirklichen Ausschluss zur Folge.

§ 20.—Die aufgenommenen Präparanden heissen Schulseminaristen, nehmen ihren Aufenthalt in dem Seminargebäude und verweilen daselbst während eines Zeitraumes von 2 Jahren.

§ 21.—Ergiebt die Prüfung eine grössere Anzahl befähigter Präparanden, als das Seminar zu fassen vermag, so werden die Minderbefähigten und Jüngeren vorerst mit dem Vorzuge zurückgestellt, bei wiederholt mit Erfolg bestandener Prüfung im nächsten Jahre Anspruch auf Zulassung vor denjenigen neueren Bewerbern zu erlangen, mit welchen sie gleiche Kenntniss und Sittlichkeitsnote theilen.

§ 22.—Sollte ein aussergewöhnlicher Bedarf an Adstanten in einem Jahre ausnahmsweise die Aufnahme einer in dem Semeninar nicht vollständig unterzubringenden Zahl von Jünglingen unerlässlich gebieten, so bleibt die betreffende Kreisregierung im Einklange mit ihrem Kreisscholarchate zwar ermächtigt, einigen, von dem Seminar-Inspector als durchaus verlässig bezeichneten Jünglingen das einstweilige Wohnen ausser dem Seminar zu bewilligen, in solchem Falle sind jedoch

1. die betreffenden Schul-Seminaristen gehalten, nur jene Miethwohnungen zu beziehen, welche der Seminar-Inspector ihnen bezeichnet;

2. der Inspector selbst ist verpflichtet, für diesen Zweck nur solche Wohnungen zu ersehen,

a. deren Besitzer sammt ihren Familien, durch Frömmigkeit, Sittlichkeit und musterhafte Hausordnung sich auszeichnen,

b. in welchen keine zahlreiche Dienerschaft und kein Zusammenfluss von Miethsleuten besteht,

c. welche

c. welche sich durch einen schriftlichen Revers bei Verlust des Miethgeldes und bei bedeutender conventioneller Strafe sich verpflichten, für die strengste Aufsicht auf die ihnen anvertrauten Schulseminaristen und für das rücksichtslose Anhalten derselben zu Erfüllung jeder ertheilten Vorschrift zu haften;

3. endlich sind die mit einer solchen Erlaubniss versehenen Schul-Seminaristen verbunden, wie die übrigen, den ganzen Tag über im Seminar zu verweilen, die Haus und Tagsordnung in allen Stücken zu beobachten und bei unfehlbarer Entfernung von dem Lehrberufe aus dem Seminar unmittelbar nach der Miethwohnung und von dort wieder unmittelbar in das Seminar sich zu begeben, und Abends beim Eintreffen im Hause, so wie Morgens bei der Rückkehr in das Seminar sich bei dem Hausherrn zu melden.

§ 23. Für Unterricht, Wohnung, Beheitzung und Beleuchtung, für Beischaffung und Reinigung der Bettwäsche, für Arzneyen und ärztliche Behandlung, so wie für Reinigung des Seminar-Gebäudes darf den Seminaristen unter keiner Voraussetzung eine Bezahlung abgefordert werden; ihre übrigen Bedürfnisse aber haben sie aus eigenen Mitteln zu bestreiten. Ueberdiess sind sie zu Reinhaltung der Zimmer, zur Schonung der ihnen zum Gebrauche überlassenen Inventarstücke, und zum allenfallsigen Schaden-Ersatz verpflichtet.

Säumige Zahlung des Kostgeldes hat nach Ablauf der festgesetzten Fristen und nach wiederholt fruchtlosem Mahnen Ausschliessung zur Folge.

§ 24.—Vermögenslose, durch sittliches Betragen und gute Fortschritte sich empfehlende Jünlinge werden nach dem Grade ihrer Dürftigkeit und Würdigkeit aus dem Kreisschulfonde, oder aus andern dafür geeigneten Hilfsquellen nach Massgabe der verfügbaren Mittel unterstützt.

Die diessfallsigen Bittgesuche sind der betreffenden Kreis-Regierungs-Kammer des Innern durch die Inspection vorzulegen, und von dieser zu bescheiden.

§ 25.—In der Regel kann kein Seminarist länger als zwei Jahre in der Anstalt verweilen und ein weiterer Aufenthalt von höchstens einem Jahre kann nur aus ganz besonderen Gründen und lediglich unter der Voraussetzung von der betreffenden Kreis-Regierung bewilligt werden, wenn dadurch der Eintritt anderer reifer Präparanden in keiner Weise beeinträchtiget wird, und die zur Verlängerung des Aufenthaltes von dem Seminar-Inspector Empfohlenen ihren Unterhalt aus eigenen Mitteln zu bestreiten vermögen.

Wiederholung des Unterrichts wegen mangelhafter Befähigung oder als Strafe, ist in keinem Falle zulässig.

Abtheilung 2.—*Von dem Vorstande, den Lehrern, und dem übrigen zum Seminar gehörigen Personale.*

§ 26.—In dem Schullehrer-Seminar ist ein von Seiner Majestät dem Könige ernannter Inspector vorgesetzt. Ihm ist die gesammte Leitung der Anstalt anvertraut; und auf ihm ruht die Verantwortlichkeit für das Ganze.

Er berichtet unmittelbar an die betreffende Kreisregierung, und empfängt von derselben die entsprechenden Entschliessungen und Befehle.

Seine Amtsbefugnisse im Einzelnen richten sich ausschliessend nach gegenwärtigem Regulative, falls nicht die betreffende Kreisregierungs-Kammer des Innern auf Antrag ihres Kreis-Scholarchates für nöthig erachtet, ihm eine, diese Bestimmung noch näher entwickelnde Dienstes-Instruction zu ertheilen.

Ihm kommt freye Wohnung, Beheitzung und Beleuchtung, dann eine in Standes- und Dienstesgehalt ausgeschiedene Besoldung von jährlich 8—1,200 fl. zu.

§ 27.—Ein zweiter Inspector besteht nur, wo besondere Umstände dessen Aufstellung wünschenswerth machen.

Den übrigen Schullehrer-Seminarien sind lediglich zwey von der betreffenden Kreisregierungs-Kammer des Innern ernannte Lehrer beigegeben, welche die von dem Inspector selbst nicht vorgetragenen Lehrgegenstände zu übernehmen, denselben in der Aufsicht zu unterstützen, und hierin, wie in allen Beziehungen, dessen Aufträge und Weisungen pünktlich zu vollziehen haben.

Der erste dieser Lehrer soll, zumal da wo der Inspector selbst nicht ein Geistlicher ist, dem geistlichen Stande angehören, den Namen Präfect führen und auf gleicher Linie mit den Vorbereitungslehrern der lateinischen Schulen stehen.

Sein Verhältniss zu dem Seminar-Inspector unterscheidet sich in keiner Weise von jenem des zweiten Lehrers, wohl aber kömmt ihm im Verhinderungsfalle des Erstern die Vertretung der Stelle zu.

Er muss im Seminar wohnen und geniesst, neben der freyen Wohnung, Beheitzung und Beleuchtung, einen jährlichen Gehalt von 5—800 fl.

Der zweite Lehrer ist dem Kreise der verdientesten Schullehrer zu entnehmen, hat jährlich einen Gehalt von 4—600 fl. zu beziehen, und, wenn der Raum des Gebäudes es gestattet, eine freye Wohnung darin zu erhalten.

Das Verhältniss des Inspectors, falls er dem geistlichen Stande angehört, dann des in gleichem Falle befindlichen Präfecten, zu der kirchlichen Behörde, richtet sich, was den Religions-Unterricht, die kirchliche Aufsicht und den Rücktritt in die Seelsorge betrifft, nach §§ 38. 39. der II^{ten} Verf: Beil: und in den übrigen Beziehungen nach der allerhöchsten Verfügung vom Juny 1834.

§ 28.—Reichen die beiden Seminarlehrer zu Ertheilung des gesammten Unterrichtes nicht aus, so ist die Zahl derselben nach Umständen zu vermehren oder es sind für einzelne Unterrichts-Gegenstände wohlbefähigte Lehrer aus der Stadt beizuziehen.

§ 29.—Zur Unterstützung der Lehrer in den Uebungsstunden und zur Mitwirkung bei der ununterbrochenen Aufsicht auf die Zöglinge, sind ausserdem noch einige der tüchtigsten

Schuldienst-Expectanten gegen eine verhältnissmässige Remuneration als Gehülfen zu verwenden.

Sie werden von der k. Kreisregierung einberufen, rücken in Bezug auf künftige Anstellung mit ihrer Altersclasse fort, und gehen bei Meldungen um Schuldienste nach dreijähriger vorzüglicher Dienstleistung im Seminar andern, übrigens gleichbefähigten Mitbewerbern vor.

§ 30.—Die für denselben Zweck etwa noch erforderliche Anzahl von Monitoren ernennt der Inspector selbst aus der Mitte der durch Religiosität, Sittlichkeit, Gediegenheit des Characters und Fortgang ausgezeichneten Schul-Seminaristen.

§ 31.—Der Oeconom oder Kostgeber wird nach Vernehmung des Inspectors von der Kreisregierung aufgenommen. Er hat freie Wohnung im Seminar-Gebäude, aber weder auf Gehalt und Remuneration, noch auf freie Beheitzung und Beleuchtung Anspruch. Ihm liegt ob, in Gemässheit des mit ihm abgeschlossenen Vertrages für gesunde, hinreichende und wohlzubereitete Kost zu sorgen, sich mit seiner Familie und seinen Dienstboten in jeder Beziehung der Hausordnung zu fügen, und sich und die Seinigen von aller Einmischung in die Angelegenheiten des Seminars, so wie von allem Verkehre mit den Zöglingen entfernt zu halten.

In dem Vertrage mit ihm ist die Widerruflichkeit auszusprechen, insbesondere aber festzusetzen, dass jedes heimliche Zutragen von Speisen und Getränken, von Briefen und Nachrichten, jedes Geben oder Annehmen von Geschenken, jeder versuchte oder vollbrachte Unterschleif und jedes Zuwiderhandeln gegen die Hausordnung, alsbaldige Entfernung aus der Anstalt mit Verlust jedes Entschädigungs-Anspruches nach sich ziehen.

§ 32. Der Hausmeister wird von dem Inspector mit Zustimmung der k. Kreisregierung aufgenommen, und nach Umständen entlassen.

§ 33. Kein in dem Seminargebäude wohnender Lehrer, Kostgeber und Hausmeister darf Dienstboten bei sich aufnehmen, ohne dem Inspector den Nachweis ihrer Sittlichkeit vorgelegt, und dessen Zustimmung zu der getroffenen Wahl erlangt zu haben.

Eben so wenig darf einer von ihnen Fremde beherbergen, und selbst zur Aufnahme naher Verwandten ist die ausdrückliche Genehmigung des Inspectors erforderlich.

Jeder haftet für seine Angehörigen.

Abtheilung 3.—*Von dem Unterrichte in dem Schullehrer-Seminar.*

§ 34. Der zweijährige Aufenthalt in dem Seminar ist nicht sowohl bestimmt, die Zöglinge mit vielerley neuen Kenntnissen auszustatten, als vielmehr in ihnen das Erlernte zu grösserer Gediegenheit und klarer Anschauung zu bringen, sie auf den rechten Standpunkt des Schullehrers zu stellen, sie mit der Unterrichtkunst im wahren Sinne des Wortes vertraut zu machen, und in ihnen jene einfache, prunklose, aber gründliche Mittheilungsgabe zu entwickeln, welche allein über das kindliche Gemüth eine bleibende Herrschaft auszuüben vermag.

§ 35. Dazu bedarf es auch von Seite der Seminar-Vorsteher keiner wissenschaftlichen Vorträge, welche nur dazu dienen würden, die Schul-Seminaristen von der wahren Methode ab- und dahin zu verleiten, dass sie sich selbst als eine Art von Professoren und die Schulstube als einen academischen Hörsaal betrachten. Es muss ihnen vielmehr der Unterricht gerade in der Weise ertheilt werden, in welcher sie selbst späterhin unterrichten sollen, und es ist Sorge zu tragen, dass ihr ganzes Leben hindurch Unterricht und Lehrgabe der Seminarlehrer ihnen als Muster einer einfachen, klaren, bestimmten und der Fassungskraft der Lernenden ganz anpassenden Mittheilungsweise vorschweben.

Uebrigens soll die Erziehungslehre dazu benützt werden, um die Seminaristen mit den Vorzügen und Mängeln der verschiedenen Lehrarten bekannt zu machen.

Die k. Kreisregierungen haben diesem Gegenstande eine ganz besondere Fürsorge zu widmen und namentlich alles Ernstes darüber zu wachen, dass die Lehrmethode in dem Schullehrer-Seminar sich möglichst an die für die teutschen Schulen vorgeschriebenen anreihe, und dass Abweichungen von dieser Regel nur mit Genehmigung des k. Staatsministeriums des Innern statt finden.

§ 36. Damit übrigens der theoretische Unterricht mit dem practischen Hand in Hand gehe, sind die teutschen Schulen am Seminar-Sitze durchaus nur mit ausgezeichneten, die volle Befähigung von Musterlehrern an sich tragenden Schullehrern zu besetzen, und diese bey ihrer Anstellung zu verpflichten, dass sie nach den gemeinsamen Anordnungen der Seminar und Local-Inspectoren sich fügen und den Seminaristen es möglich machen, wöchentlich zu bestimmten Stunden die Orts-Schulen besuchen, und unter steter Aufsicht erst einzelne Schüler, dann einzelne kleinere oder grössere Abtheilungen und zuletzt vereinigte Classen in denjenigen Lehrgegenständen unterrichten, in welchen sich die Kunst der Begriffsentwicklung, der Fragestellung und des methodischen Verfahrens am besten erlernen und einüben lässt.

Unterlassen oder laues Aufgreifen dieser Verpflichtung zieht nach fruchtlosen Ermahnungen die Versetzung der betreffenden Schullehrer nach sich.

§ 37. Als Lehrgegenstände des Schullehrer-Seminars sind fortan zu betrachten.

I.—*Der Religions-Unterricht.*

Der Zweck desselben ist, die Seminaristen mit den Lehren und Vorschriften ihrer Confession in einem Grade vertraut zu machen, welcher nicht nur das eigene Durchdrungenseyn, sondern auch die Fähigkeit zur lebendigen Uebertragung des Lehrstoffes auf Andere verbürgt und mit der Glaubenslehre die Liebe zum Guten auf das innigste in das ganze Wesen des künftigen Lehrers verwebt. Dabei ist

a. der

a. der eingeführte Catechismus nach seinem ganzen Inhalte genau und gründlich, mit vorzüglicher Beachtung des Wortverständnisses und so zu erklären, dass die Seminaristen daraus lernen, wie sie als künftige Lehrer theils vorbereitend, theils nachhelfend auf das Gedeihen des Religions-Unterrichtes einwirken, Liebe zu Gott und ächten religiösen Sinn erwecken, und den einzelnen Glaubenslehren eine fruchtbare Anwendung auf das Leben gewinnen sollen,

b. der Unterricht in der biblischen Geschichte, welcher zugleich die Kenntniss des Hauptinhaltes der heiligen Schrift umfasst, ist so zu behandeln, dass der Schul-Seminarist in den Stand gesetzt werde, die biblischen Geschichten, Gleichnisse und Reden in einer für Kinder angemessenen Sprache vorzutragen, daraus die für das Leben wichtigen Momente hervorzuheben, und dieselben in das Gemüth der Kinder zu übertragen. Mit ihm ist auch die Erklärung der sonn- und festtäglichen Epistel und Evangelien, so wie eine kurze Uebersicht über die festlichen Zeiten und über die Geschichte des Christenthums zu verbinden.

c. Das Auswendiglernen biblischer Beweis-Stellen und geistlicher Lieder muss in der Art zur Anwendung kommen, dass dieselben nicht nur dem Gedächtnisse tief einprägt, und mit Würde und Anstand vorgetragen, sondern auch von den Zöglingen in ihrem ächten Sinne aufgefasst und beim Religionsunterrichte an der rechten Stelle eingeflochten werden.

II. *Der Sprach-Unterricht.*

Dieser Unterricht bezweckt das gründliche Bekanntwerden mit der Muttersprache und zerfällt

a. in den Lese-Unterricht, welcher neben der Lese-Fertigkeit in teutscher und lateinischer Schrift den schmucklosen, deutlichen, wohlklingenden und ausdrucksvollen Vortrag beabsichtigt,

b. in den teutschen Sprach-Unterricht im engern Sinne des Wortes, nämlich in die Angewöhnung, sich in der Muttersprache sowohl mündlich, als schriftlich mit Klarheit, Bestimmtheit und Fertigkeit auszudrücken, wobei die Grundsätze und Formen der Sprache zwar vollständig, aber nicht in wissenschaftlich grammatischer Form, sondern in der ganz einfachen Weise fortlaufender, mündlicher Uebungen und solcher schriftlicher Aufgaben vorzutragen sind, welche sich auf das Berufsleben künftiger Schullehrer, und namentlich auch auf die mit den Schuldiensten häufig verbundenen Gemeinde-Schreiberei beziehen.

III. *Der Unterricht in der Weltkunde.*

Dieser Unterricht soll den Seminaristen die richtige Ansicht und Kenntniss der Aussenwelt, soweit dieselbe ihnen nöthig ist, und zwar mit jener Bestimmtheit der Begriffe gewähren, welche das verständige Wiedergeben des Gelernten möglich macht.

Er umfasst:

a. die Geographie, d. h. Kunde von dem Vaterlande, von den wichtigsten fremden Ländern und von der Erde als Weltkörper, wobey zugleich auf die merkwürdigsten, am häufigsten vorkommenden, in das menschliche Leben am tiefsten eingreifenden Erscheinungen der Natur hinzuweisen, vornämlich aber zu zeigen ist, wie der Mensch alle erschaffene Dinge nach den ewigen Zwecken der Vorsehung und zu Erreichung seiner eigenen Lebensaufgabe beachten und gebrauchen soll;

b. die Naturkunde, d. i. das Wichtigste aus der Naturgeschichte, die allgemeinen Kenntnisse der Productenlehre, eine kurze Encyclopädie der Landwirthschaft und Gewerbe, so weit sie nach Anleitung des für die Schulen bearbeiteten Lesebuches als Vorunterricht für die Landwirthschafts- und Gewerbsschule gelegenheitlich des Schön und Dictandoschreibens gelehrt werden soll.

c. Die Geschichte, welche nicht das Erlernen blosser Namen und Jahrzahlen erfordert, sondern vielmehr den Schulseminaristen eine kurze, auf den Grund der biblischen Geschichte ruhende Uebersicht über die wichtigsten Weltbegebenheiten und eine genauere Kenntniss der Geschichte des Gesammtvaterlandes gewähren und in ihnen die Ueberzeugung erwecken soll, dass Gottes heiliger und ewiger Wille über den Geschicken der Völker waltet, und dass von jeher wahre Wohlfahrt und dauernde Macht nur in der sittlichen und geistigen Veredlung der Nationen und in treuem Festhalten an Recht und Pflicht zu finden war.

Dabei ist auf die speciellere Vaterlandskunde, d. h. auf die Kenntniss der Heimath und deren Einrichtungen vorzugsweise Rücksicht zu nehmen, das staatsbürgerliche Verhältniss hervorzuheben und insbesondere auf dasjenige hinzuweisen, was den künftigen Wirkungskreis der Schulseminaristen berührt, und beitragen kann, in ihnen Treue gegen den König, Liebe zum Throne und Vaterland zu befestigen, und sie gegen Verirrungen jeder Art sicher zu stellen.

IV. *Der Unterricht im Rechnen*, dessen Ziel nicht blos das mechanische Zählen, Zusammensetzen und Behandeln der Ziffer, sondern vielmehr die Schärfung des Denkens ist.

Er zerfällt

a. in das sogenannte Kopf oder mündliche Rechnen und

b. in das Tafel oder schriftliche Rechnen, welche beide im Unterrichte so viel möglich zu verbinden, und durch die Wahl passender, auf das Leben wohl anwendbarer Aufgaben, doppelt erfolgreich zu machen sind.

V. *Der Unterricht im Zeichnen* und in der *Formenlehre*, welcher sich nach den über den Vollzug der allerhöchsten Verordnung vom 16ten Feber 1833. erschienenen Vorschriften zu richten hat.

VI. *Der Unterricht im Schönschreiben*, welcher die Verbreitung einer ungekünstelten festen, deutlichen, und gefälligen Handschrift über alle Schulen der Monarchie bezweckt, die Formen der für die deutschen Schulen bearbeiteten Vorschriften zur Grundlage hat, und bis zu jener Präcision und Festigkeit geübt werden muss, ohne welche die Schriftzüge in eine gänzliche Unbestimmtheit und Unleserlichkeit ausarten. Dabey ist an dem Grundsatze festzuhalten, dass nur die in der teutschen, lateinischen und englischen Currentschrift, dann in dem Schnitte in der richtigen Handhabung der Feder und in der gehörigen Körperhaltung beim Schreiben sich auszeichnenden Seminaristen zur Uebung in künstlicher Fractur übergehen dürfen.

VII. *Der Unterricht in der Music.*

Die Aufgabe dieses Unterrichtes ist, die Schullehrer in den Stand zu setzen, dass sie ihre Dienste als Organisten mit Auszeichnung versehen, und den dem teutschen Volkscharacter eigenen Volksgesang und musicalischen Sinn fortzupflanzen und zu veredeln mögen.

Er zerfällt

a. in den Gesang-Unterricht, bei welchem nicht sowohl auf Schmuck, als vielmehr auf Gründlichkeit zu sehen und der Uebergang zu schwierigeren Gesängen nur jenen Schulseminaristen zu gestatten ist, welche im Choral und in dem einfachen, aber ächt nationalen Vortrage teutscher Lieder vollkommene Ausbildung besitzen;

b. in das Clavier und Orgelspiel, wobei der Unterricht und die Uebungen im Figural-Spiel sich vorzugsweise auf richtigen und fertigen Vortrag der Choral-Melodien, auf Präludien, Versette, Fugen u. s. w. sich zu beziehen haben;

c. in den Unterricht im Generalbasse, welcher weniger die eigentliche Composition, als vielmehr die genaue Entwickelung der Accorde in den verschiedenen Tonarten, die Kenntniss von dem Contrapunkte und von der richtigen Bezifferung von Versetzungen u. s. w. bezweckt;

d. das Violinspiel, welches als nothwendiger Behelf zu dem Gesangunterrichte zu betrachten, bei den mehr befähigten Zöglingen in gesteigerten Uebungen fortzusetzen; bei den übrigen aber, wenigstens so weit zu betreiben ist, als es die Leitung des Gesangunterrichtes und für die Catholiken die Aufführung einer leichten figurirten Messe erfordern;

e. in den Unterricht auf andern Instrumenten, welche keinem Seminaristen geboten, wohl aber den mit Vorkenntnissen versehenen, hauptsächlich dadurch zu verschaffen ist, dass wöchentlich zweimal in einer dafür festgesetzten Stunde grössere Musicstücke unter Instrumentalbegleitung eingeübt und bei schicklichen Veranlassungen, z. B. an Geburts und Namensfesten Ihrer Majestäten, öffentliche Musicproductionen gestattet werden.

VIII. Die Erziehungslehre endlich, welche ihrer Bestimmung nach die Schulseminaristen mit der Natur des Kindes und den verschiedenen Einwirkungen auf dasselbe, mit dem sorgsamen Beobachten der Individualitäten und mit der grossen Wahrheit bekannt machen soll, dass nur durch Beachtung der Eigenthümlichkeiten jedes einzelnen Kindes und durch zweckmässige Entwicklung derselben bleibende Veredlung möglich ist, zerfällt,

a. in die allgemeinen Erziehungs-Grundsätze,
b. in die Unterrichts-Kunst und Methodenlehre,
c. in die Schulzucht, und
d. in die Schulverwaltung.

Sie ist gleichfalls nicht als blosses trocknes Regelwerk, sondern vielmehr fasslich und möglichst practisch vorzutragen.

An den Abschnitt über die Schulverwaltung hat sich zugleich ein kurzer Unterricht über diejenigen Dienstesverrichtungen anzureihen, welche den Schullehrern, neben ihrem Schulamte, übertragen zu werden pflegen.

Auch sind die nöthigen Kenntnisse über den Unterricht blinder, taubstummer, oder sonst nur theilweise für den Unterricht fähiger Kinder mit Benützung der an jedem Seminarsitze befindlichen oder zu errichtenden Musterschulen bei der Methodenlehre und Unterrichts-Kunst anzureihen.

§ 38.—Die Vertheilung der Lehrfächer unter dem Seminarpersonale kömmt auf Antrag des Inspectors und des Kreis-Scholarchates der Kreisregierung zu.

Der Inspector selbst, welchem neben der ihm übertragenen Verwaltung und Leitung der Gesammt-Anstalt vorzüglich das Nachsehen in allen Lehr- und Arbeits-Sälen obliegt, hat in der Regel täglich nur zwei Unterrichts-Stunden zu ertheilen.

Die Aufsicht während der Uebungs-Stunden führen die Lehrer gemeinschaftlich mit den Unteraufsehern.

Kein Lehrer darf sich weigern, ausser den ihm durch die Kreis-Regierung übertragenen Lehrgegenständen und Functionen auch noch allen denjenigen Obliegenheiten nachzukommen, welche der Inspector ihm zuweist, und es findet gegen die Verfügungen des Letztern keine Berufung mit Suspensivkraft, sondern lediglich neben der Befolgung des erhaltenen Auftrags die Beschwerdeführung statt.

§ 39.—Als Lesebücher dienen zunächst die in den teutschen Werk- und Feiertagsschulen eingeführten Schriften, und zwar um so mehr, als es von Wichtigkeit ist, die künftigen

Lehrer schon während ihrer Vorbildungs-Periode mit dem Inhalte und mit dem Geiste derselben genau bekannt zu machen. Die übrigen werden von dem Staatsministerium des Innern vorgeschrieben.

Das Dictiren von Heften für die einzelnen Lehrgegenstände und das willkürliche Abweichen von den einmal vorgeschriebenen Lehrbüchern ist bei strengster Verantwortlichkeit des Inspectors verboten.

§ 40.—Zu Anschaffung der nöthigen Lehrmittel, für Anlegung und Unterhaltung einer Schulbibliothek und anderer nöthigen Sammlungen ist in dem jährlichen Etat durch Einstellung einer angemessenen Summe Sorge zu tragen, zugleich aber auch dahin zu wirken, dass die Seminaristen sich selbst allmählig einen kleinen Vorrath solcher Lehrmittel bereiten, deren sie später zum Unterrichte und dessen Versinnlichung bedürfen.

§ 41.—Der Gesammt-Unterricht bleibt nach Beilage V. in zwey einjährige Curse abgetheilt. V.

Auf den Grund dieser Abtheilung entwirft der Inspector nach Anhörung der gutachtlichen Vorschläge des Lehrerpersonals die Tages und Stundenordnung, bei welcher 12 Stunden als Schlaf-, Essens- und Erholungszeit, die übrigen 12 Stunden aber für den Unterricht und die Uebungen in Anrechnung kommen, und die Vertheilung so getroffen werden muss, dass die Geisteskräfte nicht durch zu lange anhaltende, einförmige Thätigkeit abgestumpft, sondern vielmehr durch zweckmässige Abwechslung in steter Regsamkeit erhalten werden.

Dieser Entwurf unterliegt auf Antrag des Kreis-Scholarchates der Genehmigung des Königl[n] General Commissärs und Regierungs-Präsidenten.

§ 42.—An Sonn- und Feyertägen, so wie mindestens an zwei andern Tagen der Woche, ist den Zöglingen unter Aufsicht des Vorstandes oder eines Lehrers, bei günstiger Witterung, ein angemessener Spaziergang ins Freie zu gestatten.

Diese Spaziergänge sind insbesondere zu benützen, um die Schul-Seminaristen mit dem rationellen Betriebe der Landwirthschaft vertraut zu machen und eben deshalb ist es sehr erwünscht, dass neben dem Seminar-Inspector oder Lehrer auch der Landwirthschaftslehrer der im Orte befindlichen Landwirthschafts-Schule an diesen Excursionen Theil nehme, und dass dieselben öfters zu Besichtigung zweckmässig verwalteter Landgüter benützt werden.

§ 43.—Das Aussetzen einzelner Unterrichtsstunden, oder das Freygeben ganzer Arbeitstage ist weder dem Lehrer, noch dem Inspector gestattet. Krankheitsfälle oder sonst dringende Verhinderungen einzelner Mitglieder des Personals sind dem Vorstande zu Anordnung der erforderlichen Stellvertretung anzuzeigen.

§ 44.—Die Ferien, welche sich zu Ostern nicht über 14 Tage und im Herbste nicht über 6 Wochen ausdehnen dürfen, werden nach Zeit und Umfang von der Kreisregierung, d. h. von dem General-Commissär und Regierungs-Präsidenten unter Beirath des Kreisscholarchates festgesetzt. In gleicher Weise wird jährlich über die Frage entschieden, ob die Zöglinge während der Ferien nach Hause entlassen, oder in der Anstalt behalten, oder in Gesellschaft der Lehrer mit grösseren Excursionen beschäftigt werden sollen, wobei das Leztere die Regel, das Entlassen nach Hause aber um so mehr die Ausnahme zu bilden hat, als gerade diese Zeit trefflich verwendet werden kann, um den jungen Leuten im lebendigern Gespräche das beizubringen, oder nachholend zu erläutern und zu befestigen, was der Lehrvortrag an sich nicht tief genug einzuprägen vermochte, und um namentlich die edlere Gemüthsrichtung noch mehr hervorzurufen und zu fördern.

§ 45.—Die Lehrer haben schon im Laufe des Jahres und namentlich nach Beendigung einzelner Hauptabschnitte durch kleine Zwischenprüfungen sich zu überzeugen, ob und in wie weit die Zöglinge den Unterricht gefasst haben. Auch ist es Sache des Inspectors, monatlich eine der Arbeiten vorzugsweise auszuheben und als Probearbeit für die Location zu benützen, oder auch von Zeit zu Zeit allgemeinere Zwischenprüfungen zu veranlassen. Die Hauptprüfung aber findet am Schlusse des Lehrjahres unter Leitung des Kreis-Schul-Referenten, oder eines abgeordneten Kreis-Scholarchaten statt. Sie umfasst, theils schriftlich, theils mündlich sämmtliche Lehrgegenstände, und erstreckt sich auf beide Curse, mit vorzugsweiser Strenge aber auf den zweiten, als den Curs der Austretenden.

§ 46.—Nach Befund der Prüfung und nachdem das Ergebniss in Form der Beilage VI. angemessen aufgezeichnet worden ist, vernimmt der vorsitzende Commissär die Wünsche des Inspectors und sämmtlicher Lehrer über die etwa erforderlichen Massregeln und Einrichtungen und über die Abstellung etwa bemerkter Mängel und Missbräuche. Zugleich untersucht er den Gesammtzustand des Seminars und unterstellt sofort seinen Commissionsbericht der näheren Würdigung der vorgesetzten Kreisregierung, welche im Einklange mit ihrem Kreis-Scholarchate über die angeregten Punkte, so wie über die ihr sonst nöthig scheinenden Fragen die entsprechende Entscheidung erlässt, eine Abschrift der erlassenen Verfügung aber sammt den erwachsenen Acten in der Form Anlage VII. zur Kenntniss des k: Staats-Ministeriums des Innern bringt. VI. VII.

ABTHEILUNG 4.—*Von der Erziehungs-Weise, der Hausordnung, Disciplin und Qualification der Schul-Seminaristen.*

§ 47.—Die Lebensweise der Seminaristen soll ganz einfach, streng geordnet, und so beschaffen seyn, dass dadurch ihre Befähigung zum künftigen Berufe in jeder Beziehung herbeigeführt werde.

Zu dem Ende hat der Inspector nach den in die Beilage VIII. aufgenommenen Grundsätzen eine vollständige Disciplinar und Hausordnung zu entwerfen, dieselbe der Genehmigung der k. Kreisregierung zu untergeben und in Gemeinschaft mit sämmtlichem Personale dahin zu wirken, dass die Zöglinge diesen Anordnungen nicht sowohl aus Furcht, als vielmehr aus wahrer Liebe zum Guten, willigen und freudigen Gehorsam leisten. VIII.

Diese Disciplinar- und Hausordnung ist jährlich bei Wiederöffnung des Unterrichtes neu zu publiciren.

§ 48.—Zu Belebung und Erweckung eines wahrhaft religiösen Sinnes, dessen Begründung zu den wichtigsten Aufgaben des Seminars gehört, muss vorzugsweise das Beispiel des Inspectors und sämmtlicher Lehrer beitragen. Ausserdem sind dafür das tägliche, mit geistlichen Gesängen zu verbindede Morgen und Abendgebet, der fleissige Besuch des öffentlichen Gottesdienstes, (bei Catholiken insbesondere der täglichen heiligen Messe) die regelmässige Beicht und Communion, Ermahnungen und ähnliche Veranlassungen zu benützen.

§ 49.—Belobung, Tadel, Drohung und Strafe sind von Seite des Vorstandes und der Lehrer mit um so grösserer Vorsicht und Abwägung anzuwenden, als es sich in dem Seminare um das Heranbilden von Leuten handelt, denen nach kurzer Frist die Erziehung der Jugend und damit der entschiedenste Einfluss auf die Sittlichkeit ganzer Bezirke anvertraut werden soll, wesshalb auch nicht sowohl eine, die Fehler augenblicklich zurückscheuchende Strenge, als vielmehr ein genaues Erforschen der Charactere und Geistes-Richtungen ein alsbaldiges Ausscheiden der den Gehorsam versagenden und ein ernstliches, aber väterliches Leiten der übrigen Schulseminaristen Pflicht und Aufgabe wird.

§ 50.—Die im Seminar stufenweise anzuwendenden Strafen sind

1. Ermahnung und Warnung.
2. Verweis und Strafbedrohung.
3. Absonderung und schriftliche Vormerkung.
4. Kürzere oder längere Entziehung der Freyheit, oder einzelner Vortheile und Genüsse.
5. Entziehung etwaiger öffentlicher Unterstützung.
6. Zeitliche oder gänzliche Ausschliessung aus dem Seminar, und in deren Folge von dem Schulfache.

Uebrigens findet die obenerwähnte Steigerung nur bezüglich des Fleisses, der Reinlichkeit, einfacher Uebertretungen der Haus und Disciplinarordnung u. s. w. statt. Jede von einem wahrhaft bösartigen Gemüthe, von Mangel eines religiösen und sittlichen Gefühles, von vorherschendem Hange zum Trunke und zur Ausschweifung, von aufbrausendem leidenschaftlichem Wesen und von sonst mit dem Stande des Erziehers unverträglichen Fehlern zeugende Handlung, zieht die strengste Erwägung und nach Umständen den Antrag auf Zurückweisung an einen strengen Musterlehrer, Behufs der etwaigen Entwurzelung dieser Gebrechen, oder die Ausschliessung vom Lehrberufe nach sich.

Die Strafgrade 1–3 werden von den Lehrern, die von 1–4 von dem Inspector und die von 5–6 auf Antrag des Letztern von der Kreisregierung verfügt.

Jede eigentliche Strafe wird in das Strafbuch eingetragen, bei Abfassung der jährlichen Censur berücksichtiget, und so ferne ihre Veranlassung auf das Hinneigen zu einem dem Lehrberufe nachtheiligen Fehler schliessen lässt, selbst in dem Entlassungs-Zeugnisse ausgedrückt.

§ 51.—Zu genauer Beurtheilung der Seminaristen dienen:

a. die einzelnen Wahrnehmungen und Bemerkungen, welche der Inspector und die Lehrer während des Jahres aufzeichnen.
b. die monatliche Classification, welche sich auf das Ergebniss der Leistungen, vornehmlich aber der Probearbeiten und Zwischenprüfungen stützt.
c. Die Jahrescensur, welche der Inspector unter Beiziehung der Lehrer zu fertigen, und in welcher er eine genaue Schilderung sämmtlicher Zöglinge nach Anlage, Fleiss, Fortgang und sittlichem Betragen zu entwerfen hat.

Diese Censuren werden ihrem Hauptinhalte nach jährlich den Seminaristen eröffnet, und nicht bloss der k. Kreisregierung, sondern auch auf etwaiges Verlangen den einschlägigen Schulbehörden, Eltern und Vormünden, in Abschrift mitgetheilt.

§ 52.—Das Ergebniss dieser Wahrnehmungen, Bemerkungen, Classificationen und Jahres-Censuren wird durch bestimmte Noten ausgedrückt, welche sich in drey Classen theilen, und von welchen jede wieder zwei Stufen in nachstehender Reihenfolge umfasst:

I. Notenclasse (der ausgezeichneten Leistung).
1te Notenstufe (vorzüglich).
2te Notenstufe (sehr gut).
II.te Notenclasse (der hinreichenden Leistung).
3te Notenstufe (gut).
4te Notenstufe (hinlänglich).
III.te Notenclasse (der mangelhaften Leistung).
5te Notenstufe (gering).
6te Notenstufe (schlecht).

Die Note der ausgezeichneten Leistung erhält, wer in allen Hauptfächern die erste Notenclasse erreicht hat, und in keinem derselben bis zur IIIten Classe herabgesunken ist;

Die Note der hinreichenden Leistung erlangt, wer in keinem Fache sich als mangelhaft beweisst, in einigen aber als vorzüglich oder sehr gut erkannt wird.

Der Note der mangelhaften Leistung endlich fällt jeder anheim, der entweder in sittlicher Hinsicht tadelhaft ist, oder bezüglich der Kenntnisse eine Note der ersten und zweiten Classe nicht verdient.

§ 53.—Auf den Grund dieser einzelnen Noten werden am Schlusse jedes Jahres,
a. den Seminaristen des 1ten Curses, das Jahres-Zeugniss und
b. den Seminaristen des zweiten Curses das Austritts-Zeugniss nach beiliegenden Formular-Beilage IX. X. ausgestellt und eingehändiget.

IX u. X.

Abschnitt IV.—*Von der Fortbildung der mit dem Befähigungs-Zeugnisse ausgetretenen Schulseminaristen vor ihrer wirklichen Anstellung.*

§ 54.—Die mit dem Zeugnisse der Befähigung aus dem Seminar entlassenen Jünglinge treten sogleich in die Reihe der Schuldienstexpectanten ein, und haben sich in dieser Eigenschaft unter Vorzeigung ihrer Austrittsscheine der einschlägigen Districts-Schul und Districts-Polizeybehörden persönlich vorzustellen.

Sie begeben sich hierauf in die Schulpraxis, üben sich unter Aufsicht bewährter Lehrer und Inspectoren im Schulhalten, und habe ihre bereits gewonnenen Kenntnisse durch Privatfleiss und durch sorgfältige Benützung der für sie bestimmten Fortbildungs-Anstalten zu befestigen und zu vermehren. Im ersten und zweiten Jahre werden sie als Schulgehilfen verwendet, vom dritten anfangend kann nach gewonnener Ueberzeugung von ihrer hinlänglichen Befähigung ihre Verwendung als Schulverweser von der betreffenden Kreisregierung angeordenet werden.

§ 55.—Um sich von der Fortbildung der Schuldienst Expectanten zu überzeugen bestimmt jede Kreisregierung in jedem Districts-Inspections Bezirke einen oder einige der bewährtesten Local-Inspectoren oder Lehrer, bei welchem die Expectanten des Bezirkes monatlich mindestens einmal erscheinen, um mündliche Unterweisung zu erhalten, schriftliche Aufgaben zu fertigen, sich über ihre Privatbeschäftigung, über die Auswahl der von ihnen zu lesenden Bücher, und über ihr Benehmen in der Schule zu verständigen, auch musicalische oder andere Uebungen vorzunehmen.

Der betreffende Districts-Schul-Inspector ist gehalten, den Schuldienst-Expectanten seines Bezirkes die ernsteste Aufmerksamkeit zu widmen und namentlich ihren Berufs Ernst und ihr sittliches Benehmen entsprechend zu beaufsichtigen; zu dem Ende den oben erwähnten Versammlungen öfters persönlich beizuwohnen, die schriftlichen Arbeiten sämmtlicher Expectanten seines Bezirkes zur genauen Würdigung sich vorlegen zu lassen, dieselben theils nur im allgemeinen, theils genauer seiner Durchsicht zu unterwerfen. Die Qualification der Schuldienst-Expectanten, Schulgehilfen und Schulverweser seines Bezirkes mit Berücksichtigung der Angaben ihrer Conferenz-Vorstände und Schulinspectionen herzustellen und selbe der k. Kreisregierung vorzulegen.

§ 56.—In der Regel nach Verlauf von drey Jahren von dem Austritte aus dem Seminar angerechnet, bestehen die Schuldienst-Expectanten an dem Sitze der k. Kreis-Regierung und unter Leitung des Kreis-Schul-Referenten oder eines von dem k. General Commissär und Regierungs Präsidenten abgeordneten Kreis-Scholarchen und vor einer Commission, welche, so weit es nöthig ist, einen Districts oder Localinspector, einen Geistlichen der betreffenden Confession, einen Seminar-Vorstand, einen Musicverständigen, und einen Zeichnungslehrer als Mitglieder zählt, die eigentliche Anstellungs-Prüfung, deren Beginn 6 Wochen zuvor durch das Kreis und Intelligenzblatt öffentlich ausgeschrieben wird.

Diese Prüfung erstreckt sich theils mündlich, theils schriftlich, auf alle Lehrgegenstände des Schullehrer-Seminars, ausserdem aber noch, und ganz vorzugsweise auf Erforschung der Lehrgeschicklichkeit und des äussern Benehmens beim Schulhalten.

Das Nichterscheinen bei der Prüfung zieht die Hinweisung zu dem nächsten Concurse, jedoch, so ferne das Ausbleiben als schuldlos erkannt wird, mit Vorbehalt der frühern Concursreihe, nach sich.

§ 57.—Das von der Commission unter Bezug auf § 52, gefertigte und nach Beilage XI. sich richtende Prüfungs-Resultat wird sammt dem abgehaltenen Protocolle durch den Kreis-Schulreferenten oder Kreis-Scholarchen der k. Kreisregierungs-Kammer des Innern einbefördert, welche durch das Kreis-Scholarchat auf bureaucratischem Wege die Noten der Einzelnen festgesetzt, und selbe durch die Districts-Schul-Inspectionen in der Form Beilage XII. eröffnen lässt. XI. XII.

§ 58.—Erst die mit Erfolg erstandene Anstellungs-Prüfung macht anstellungsfähig.

Wer bei dieser Prüfung nicht mindestens die zweite Notenclasse erreicht hat, wird der nächstjährigen Prüfung zugewiesen. Dreimaliges Zurückweisen zieht die gänzliche Ausschliessung vom Schulfache nach sich.

Abschnitt V.—*Von der Fortbildung wirklich angestellter Lehrer.*

§ 59.—Auch die angestellten Lehrer sind verpflichtet, ihrer Fortbildung die angemessene Sorgfalt zuzuwenden und sich darüber vorschriftsmässig auszuweisen.

Den Minderbefähigten unter ihnen liegt ob, dem Districts-Inspector, oder einem von diesem in Vorschlag gebrachten und von der Kreisregierung bestätigten Inspector von Monat zu Monat Beweise ihres Fleisses und ihres Fortschreitens, und zwar so lange fort abzulegen, bis es ihnen gelungen ist, die Notenstuffe "gut" zu erhalten.

Die übrigen müssen sich wenigstens alle Viertel Jahre bei den auf Antrag des Districts-Inspectors durch die k. Kreisregierung für eine Zahl von Schulen als Conferenz-Vorstände bestellten Local-Inspectoren, und jährlich einmal bei dem Districts-Schul-Inspector selbst versammeln, um sich mit demselben über alle, das Schulwesen berührende Gegenstände zu besprechen, und über die von Zeit zu Zeit abzufordernden schriftlichen Arbeiten dessen Beurtheilung zu vernehmen.

Gerne wird gesehen werden, wenn sie sich ausserdem mit Wissen und Zustimmung der Districts-Polizeybehörde und der Districts-Schulinspection, wo möglich am Sitze der Letztern und unter Aufsicht des Districts-Inspectors oder eines Local-Schulinspectors zu musicalischen Uebungen versammeln.

Die Leistungen der Lehrer in Bezug auf die Fortbildung sind sorgfältig zu beobachten und bei Fertigung der Qualifications-Noten in besondere Erwägung zu ziehen.

Uebrigens ist denjenigen Lehrern, welche das 60te Lebensjahr überschritten haben, die

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

28.
BAVARIA.

Theilnahme an den Conferenzen in der sichern Ueberzeugung freigestellt, dass sie nicht ohne Noth einem so wichtigen Zwecke sich entziehen werden.

§ 60.—Jeder Inspections-District muss allmählich den ältern und neueren Verordnungen gemäss in den Besitz einer kleinen Schulbibliothek gelangen, deren Gründung und Ergänzung mittelst mässiger, wo möglich freywilliger Beyträge der Inspectoren und Schullehrer statt zu finden hat.

Sie wird in der Regel an dem Sitze der Districts-Schul-Inspection aufgestellt und der Leitung eines Schul-Inspectors untergeben, welcher insbesondere auch darüber zu wachen hat, dass kein ungeeignetes Buch angeschafft, und die ganze Bibliothek so gestaltet werde, dass die Lehrer dadurch reichliche Nahrung für die Bildung ihres Verstandes und Herzens erhalten, sie aber dabei ihrem Standpunkte und dem einfachen gründlichen Streben nach gewissenhaften Vollzuge der bestehenden Vorschriften nicht entrückt werden.

§ 61.—Wie über die wissenschaftliche, so haben die k. Kreisregierungen und sämmtliche Schulbehörden auch über die sittliche Veredlung und Vervollkommung der Schullehrer zu wachen, und bei eigener Verantwortlichkeit zu bewirken, dass nur solche Männer in dem Erziehungs und Unterrichtsfache verwendet und belassen werden, deren religiös sittlicher Wandel in allen Beziehungen tadellos ist.

Wahrgenommene Fehler sind durch ernste Belehrung und eindringliche Ermahnung im Keime zu beseitigen, bei wiederholtem Hervortreten aber mit rücksichtloser Strenge den klaren Bestimmungen der allerhöchsten Verordnung vom 11ten Juny 1809 über die Errichtung der Schullehrer-Seminare (Reggsblatt Jahrgang 1809 St. XLIII. S. 953 und folg:) insbesondere Regulativ Ziff: II. § 1–4 inclus: dann nach den allerhöchsten Verordnungen vom 25ten July 1810, und 6ten August 1815. (Reggsblatt Jahrgang 1815 St. XXXIII. S. 689 und folg: lit: E. Ziffr. 6. 7. u: 8:) und allerh: Verordnung, ohne weiters temporär oder bleibend von dem Lehr und Erziehungsfache zu entfernen, und es ist in Vollzug dieser lezten Bestimmung nie ausser Augen zu lassen, dass, wo es sich um Glück und Ruhe der Familien, um das Theuerste der Eltern, um die kommende Generation und sonach um die Zukunft des Vaterlandes handelt, Mitleid gegen Einzelne zur Härte gegen Alle wird, dass die Entfernung untüchtiger Lehrer nicht sowohl aus dem Standpunkte der Strafe, als vielmehr aus jenem der Fürsorge für die öffentliche und Privat-Wohlfahrt zu betrachten ist, und dass der Staat seine Pflicht nur dann vollständig erfüllt, wenn er eben so eifrig im Belohnen ausgezeichnet tüchtiger, als im Beseitigen untauglicher Lehrer ist, wobei übrigens den Behörden nicht nur unbenommen, sondern sogar zur Pflicht gemacht bleibt, in der Art der Entfernung, zwischen braven aber unfähig gewordenen und zwischen moralisch schlechten Lehrern zu unterscheiden, und bezüglich der ersteren durch Beigebung eines Adstanten, durch Ausmittelung untergeordneter Anstellungen und Verwendungen in Kanzleyen, im Communalwesen, durch Empfehlung zu Aufschlägerdiensten u. s. w. jede mit dem Hauptzwecke vereinbarliche Fürsorge eintreten zu lassen.

München den 31ten Jänner 1836. Auf Seiner Königl Majestät allerhöchsten Befehl.

Die Bildung der Schullehrer betreffend.

Sub-Enclosure (G. 2) in No. 28.

BEILAGE I.—Ergebniss der im Bezirke der Districts-Schulinspection Neustadt a/S. am 7 Aug. 1835 abgehaltenen Prüfung zur Aufnahme der Schuldienst-Präparanden.

NAME der angemeldeten Präparanden.	Zeit und Ort der Geburt. T.	M.	Jahr.	Stand und Aufenthalt der Eltern.	Früher besuchte Lehr-Anstalten.	Noten des Schulentlass-Scheins. Anlage.	Kenntnisse.	Fleiss.	Betragen.	Urtheil über die äussere Befähigung des Präparanden.
(Alphabetische Reihen-Folge hier, wie in allen Listen). 1. Mann, Joh. Georg.	14	Aug.	1822 Lohr im Landgerichte Neustadt an der Saale.	-- Schullehrer zu Hainsfahrt, Landgerichts Nördlingen.	-- 1. Ortsschule zu Lohr. 2. Gewerbschule zu Neustadt.	gut	- sehr gut.	gross	- sehr gut.	-- Körperlich gesund und kräftig.

BEY DER PRÜFUNG NACHGEWIESENE KENNTNISSE. Religions-Kenntniss.	Sprach-Kenntniss.	Sach-Kenntnisse.	Rechnen.	Schreiben und Zeichnen.	Gesang und Music.	Ausweis über den zu nehmenden Präparanden-Unterricht und die Vermögens-Verhältnisse.	Urtheil und andere Bemerkungen des Districts-Inspectors.
Weiss den Catechismus gut auswendig, gibt darüber Antworten, die Nachdenken beweisen. Ist in der biblischen Geschichte bewandert. Hat noch keine Lieder gelernt.	-- Fertiges, aber übel betontes Lesen; Rechtschreiben, ohne bedeutende Fehler. Aufsatz, noch ziemlich verworren.	--Einige Kenntniss von Bayern. Aus der Naturlehre, Naturgeschichte und Geschichte nichts.	-- Ein fertiger Kopfrechner. Auch die schriftliche Aufgabe aus der Dreysatzlehre wurde fertig und richtig gelöst.	-- 1. Eine deutliche und schon ziemlich feste Handschrift. 2. Im Zeichnen noch kein Anfang.	-- 1. Gutes Gehör, ziemlich reine Stimme. 2. Im Clavierspiel erst Anfänger. 3. Andere Instrumente nichts. 3.	-- 1. Wünscht, bey dem Präparandenlehrer Richter zu Neustadt a/S. eintreten zu dürfen. 2. Der Vater ist ziemlich vermögend.	Befähigt.

BEILAGE II.—Bezeichnung derjenigen Kenntnisse, über welche sich die Schuldienstpräparanden bei den jährlichen Prüfungen vor der Districts-Inspection auszuweisen haben.

No.	Lehrgegenstände.	Am Schlusse des 1ten Jahres.	Am Schlusse des 2ten Jahres.	Am Schlusse des 3ten Jahres.
1.	Religion -	- - Die Präparanden müssen die erste Hälfte des eingeführten Katechismus genau auswendig gelernt haben, und über das Verständniss seines Inhaltes Rechenschaft zu geben wissen. Ein Gleiches ist in Absicht auf die biblischen Geschichten des alten Testamentes zu fordern, und ebenso haben sie etwa den dritten Theil der vorgeschriebenen Spruch und Liedersammlung sich fest einzuprägen und mit Anstand und Ausdruck vorzutragen.	- - Des Katechismus zweite Hälfte, die biblischen Geschichten des neuen Testamentes und die Erlernung des zweiten Drittheils der Sprüche und Lieder.	- - Ausführlichere Wiederholung der gesammten Katechismuslehre und biblischen Geschichte, sowie die Wiederholung und Vollendung des Auswendiglernens der vorgeschriebenen Sprüche und religiösen Lieder.
2.	Sprache -	- - Sie sollen geübt seyn, richtig und mit gutem Ausdrucke zu lesen, vorgesprochene Sätze ohne gröbere Fehler gegen die Orthographie nachzuschreiben, einfache Sätze ohne Sprachunrichtigkeit selbst zu bilden und über Entstehung, Bedeutung, und Gebrauch der einzelnen Wörter genügende Auskunft zu geben.	- - Fortgesetzte Uebung im richtigen und ausdrucksvollen Lesen; fehlerloses Nachschreiben vorgesprochener Sätze; genauere Kenntniss der Satzlehre und Fertigung leichter Aufsätze nach Mustern oder nach Angabe der Hauptgedanken.	- - Forgesetztes richtiges und ausdrucksvolles Lesen, fehlerloses Nachschreiben vorgesprochener Sätze; sorgfältige Beachtung der Unterscheidungszeichen, und Fertigung leichter Aufsätze nach blosser Angabe des Hauptgedankens.
3.	Weltkunde -	- - Sie haben sich auszuweisen, dass sie von der Erde und deren wichtigsten Ländern, Erzeugnissen und Naturerscheinungen, wenigstens einen einfachen, klaren und richtigen Ueberblick, von Bayern und der vaterländischen Geschichte aber ein ziemlich genaue Kenntniss haben.	- - Kenntniss von Teutschland, von den wichtigsten Naturerscheinungen und Naturerzeugnissen, so wie von den merkwürdigsten Begebenheiten und Personen aus der Geschichte.	- - Kenntniss der übrigen, jedoch nur der wichtigsten Länder, Erzeugnisse, Personen und Begebenheiten. Hinsichtlich der Erzeugnisse ist aber hauptsächlich auf Verwendung derselben, auf Bebauung des Bodens, und auf die ersten landwirthschaftlichen Kenntnisse überhaupt sorgfältige Rücksicht zu nehmen.
4.	Rechnen -	- - Die Grundrechnungen in benannten und nicht benannten, in ganzen und gebrochenen Zahlen, sowie die gewöhnliche Dreysatzlehre muss mündlich und schriftlich wohl geübt seyn.	- - Die schwereren der gewöhnlichen Rechnungsweisen mit ganzen und gebrochenen Zahlen mündlich und schriftlich.	- - Die Zusammengesetztern Rechnungs-Arten in ganzen und gebrochenen Zahlen, mündlich und schriftlich.
5.	Schönschreiben.	- - Es ist ein leichte, einfache, deutliche und feste Handschrift der teutschen Currentzüge zu erlangen.	- - Fortgesetzte Ausbildung der teutschen Currentschrift, hinreichende Uebung im Nachbilden der lateinischen (englischen) Schrift.	- - Nicht bloss schön, sondern auch beim Schnellschreiben deutliche und gut ins Auge fallende teutsche und lateinische Currentschrift.
6.	Zeichnen und Formenlehre überhaupt.	Die Präparanden sollen sich darüber ausweisen, dass sie die verschiedenen einfachen Linien und Körper nachbilden, und über deren gegenseitige Verhältnisse Rechenschaft zu geben vermögen.	- - Fortgesetzte Linearzeichnung und Formenkenntniss.	- - Uebung im Ornamentenzeichnen und näherer Auskunft über die verschiedenartigen Formen der Körper.

(*continued*)

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

28.
BAVARIA.

No.	Lehrgegenstände.	Im ersten Jahre.	Im zweiten Jahre.	Im dritten Jahre.
7.	Musik -	- - Es ist Tactkenntniss, Notenlesen und treffen der Töne, sowie das Absingen leichterer Choräle oder anderer Kirchengesänge, Anfang im Clavierspiele und Kenntniss der einfachern Accorde zu fördern.	- - Uebung im mehrstimmigen Gesange, das Spielen leichter Choräle und anderer Tonstücke auf dem Clavier; Anfang im Violin-Spiel und in der Generalbasslehre.	- - Singen und Spielen der Choräle und der vorgeschriebenen Kirchen-Gesänge oder leichter Messen, &c. &c. Begleitung derselben mit der Violine, Uebersicht über die Hauptgrundsätze der Generalbasslehre.

ANMERKUNG 1. Bey den hier aufgestellten Forderungen ist der Massstab so genommen, dass diejenigen, welche sie erfüllen, als wohl vorbereitet ins Schullehrer-Seminar treten; diejenigen, welche nur den Forderungen des zweiten Lehrjahres genügen, wenigstens bei der Aufnahme nicht zurückzuweisen; diejenigen aber, welche nicht einmal diesen Leistungen entsprechen, bei der Aufnahmsprüfung nicht zuzulassen sind.

2. Dabei ist ferner angenommen, dass die Präparanden sich alle Tage wenigstens 8–10 Stunden mit ihrer Vorbereitung auf's Seminar beschäftigen. Davon möchte der dritte Theil der Zeit den eigentlichen Lehrstunden, zwei Drittheile der Selbstbeschäftigung theils unter, theils ohne specielle Aufsicht des Lehrers zu widmen seyn. Die weitere Eintheilung der Lehr- und Arbeits-Stunden muss den Präparanden-Lehrern überlassen bleiben; als ohngefähr anzunehmendes Verhältniss aber wird folgendes bezeichnet:

1. Religion.	Lehrst:	3.	Uebungsst:	3.	Zusammen,	6.
2. Sprache	–	4.	- –	- 2.	- –	- 6.
3. Weltkunde	–	3.	- –	- 3.	- –	- 6.
4. Rechnen	–	2.	- –	- 4.	- –	- 6.
5. Schönschreiben		2.	- –	- 4.	- –	- 6.
6. Zeichnen, &c.	–	2.	- –	- 4.	- –	- 6.
7. Musik - -	–	6.	- –	- 6.	- –	12.

3. Jedem Unterrichts-Gegenstande muss ein bestimmtes Lehrbuch zu Grunde liegen; Hefte schreiben zu lassen oder zu dictiren ist verboten. Damit soll aber keineswegs gesagt werden, dass nicht die Dictandoübungen zusammenhängenden Stoff haben dürfen.

BEILAGE III.—Ergebniss der im Prüfungs-District Neustadt a./S. mit den Schuldienst-Präparanden aus den Districts-Inspectionen Wipfeld, Ebersberg, Cham und Weilheim am 14ten September 1835, vorgenommenen Jahres-Prüfung.

Name, Eltern und Heimath.	Zeit und Ort der Geburt. Tag.	Monat.	Jahr.	Präparanden-Lehrer.	Lehr-Jahr.	Zeugniss aus dem Präparanden-Unterrichte. Anlage.	Kenntnisse.	Fleiss.	Betragen.	Religions-Kenntnisse.
1. Maier Ge. Ad. Taglöhnerssohn aus Erzberg.	11	October	1819 Erzberg Landgerichts Thalheim.	- - Holderer, Pfarrer zu Wannen, Landgerichts Thalheim.	Das 2te	- - hinlänglich.	- - hinlänglich.	- - hinlänglich.	gut -	- - 1. Die 3 ersten Gebote wohl eingeübt. 2. Geschichte Jo sephs ziemlich geläufig. 3. Mehrere Lieder Verse stockend. 3.

Sprach-Kenntnisse.	Welt-Kunde.	Rechnen.	Schönschreiben.	Zeichnen.	Music.	Aeussere Befähigung.	Urtheil und andere Bemerkungen.
1. Las fertig, aber eintönig. 2. Noch grobe Fehler beim Schreiben. 3. Der bearbeitete Brief, mangelhaft. 4.	- - 1. Die wichtigsten Berge in Teutschland, wohl bekannt. 2. Die wichtigsten Begebenheiten der letzten 20 Jahre-hinlänglich. 3. Die teutschen Futterkräuter gut bekannt. 3.	- - 1. Mündlich einige Additionsaufgaben mit getheilten Zahlen gut. 2. Schriftlich einige Aufgaben aus der Dreysatzlehre mit Brüchen richtig. 3.	- - Die Züge sind noch etwas zu steif, sonst fest und gut. 3.	- - Einfache Ornamente mit ziemlich fester Hand. 3.	- - 1. Die Stimme mutirt. 2. Ein Choral aus Ddur wurde mit grosser Mühe vom Blatte gespielt.	- - Gesunder, kräftiger, etwas plumper Körper.	Note II. 2. - - Wurde ernstlich bedeutet, fleissiger zu seyn, um im nächsten Jahre zur Aufnahms-Prüfung gelassen werden zu können.

Anmerk.—Auf dem Titelblatte ist zu erwähnen, wie viele Präparanden, und aus welchem Districte dieselben zu dem Prüfungs-Bezirke gehören, im wie vielsten Lehrjahre sie stehen, welche von ihnen und aus welchen Gründen sich dieselben nicht bei der Prüfung eingefunden haben, was desshalb verfügt worden ist, oder beantragt wird, &c. &c.

Beilage IV.—Ergebniss der Aufnahms-Prüfung für die Präparanden in dem Schullehrer-Seminar zu Freising vom 27 Aug.:—4 September 1835.

Beilage VII.—*Reihenfolge*

Derjenigen Punkte, über welche die k. Kreisregierungen jährlich dem k. Staatsministerium des Innern in Bezug auf den Zustand der Schullehrer-Seminarien zu berichten haben.

I. *Ueber den äusseren Zustand des Seminars.*

1. Umfang.
2. Localitäten.
3. Oeconomie.
4. Aeussere Einrichtungen.
5. Besondere Vorfälle und Bemerkungen.

II. *Ueber den innern Zustand.*

1. Personal.
2. Lehre.
3. Erziehungsweise.
4. Ergebniss der Prüfung.
5. Allgemeines Urtheil.

III. *Besondere Anträge und Bemerkungen.*

Beilage VIII.—*Hausordnung für die Schullehrer-Seminarien.*

1. Jeder neu aufgenommene Zögling hat sich an dem festgesetzten Tage im Seminar einzufinden, und bey dem Vorstande zu melden; in unabweisbaren Verhinderungsfällen aber rechtzeitig um Verlängerung der Frist nachzusuchen. Der dagegen Handelnde muss gewärtigen, dass statt seiner ein anderer Präparand einberufen werde.

2. Die Neueintretenden werden bey Eröffnung des Lehrcurses von dem Inspector feierlich verpflichtet und dem Gesammt-Lehrpersonale der Anstalt vorgestellt.

3. Der Zutritt in das Seminargebäude oder in die dazu gehörigen Räume, mit Inbegriff des Gartens ist, ausser den Angehörigen der Anstalt, nur denjenigen Orts-Bewohnern gestattet, welche durch ihren Beruf dahin geführt werden, oder von der Inspection speciell die Erlaubniss des Zutrittes erhalten haben.

4. Kein Zögling darf sich von dem Seminar ohne specielle Erlaubniss des Inspectors entfernen. Wird eine solche Erlaubniss ertheilt,—was niemals ohne erheblichen Grund geschehen soll—so hat sich der anbetreffende Seminarist zur bestimmten Zeit wieder einzufinden und bey dem Vorstande zu melden. Der Besuch von Wirthshäusern, das Tabackschnupfen und Tabackrauchen, sey es in oder ausser dem Seminar, Trinkgelage in Privathäusern, sind den Seminaristen unbedingt verboten, und es sollen daher auch Dosen Tabackspfeifen u. d. gl. Geräthe im Seminar gar nicht geduldet werden.

5. Für Beheitzung und Beleuchtung, dann für Reinigung der Wohn-Schlaf-Lehr- und Arbeits-Zimmer, sorgt die Anstalt.

Sämmtliche Localitäten müssen sich stets durch die höchste Reinlichkeit und durch die pünktlichste Ordnung der in denselben befindlichen Gegenstände um so mehr auszeichnen, als sie den Seminaristen für die Zukunft zum Vorbilde dienen sollen.

6. Die Kranken werden in abgesonderten Zimmern untergebracht, so ferne sie nicht die Pflege bey ihren Eltern oder bey Verwandten oder in einer öffentlichen Krankenanstalt vorziehen.

7. Das Haftzimmer muss abgesondert liegen, und so eingerichtet werden, dass auch von Aussen her keine Communication möglich ist.

8. Jeder Seminarist hat bey seinem Eintritte in das Seminar mitzubringen

a. eine einfache Hauskleidung für den täglichen Bedarf,
b. ein Feierkleid von schwarzer Farbe,
c. einen runden Hut, und eine einfache Mütze oder Kappe,
d. zwei Paar kurze Stiefel,
e. die nöthige Leibwäsche, nämlich Hemden, Unterbeinkleider, Strümpfe und Sacktücher, Halsbinden, dann Handtücher von jedem ein halbes Dutzend,
f. ein wollenes gestricktes Jäckchen, Tischbesteck, und das zur Reinigung erforderliche Geräthe. Auch soll er sich im Besitze einer Violine und überhaupt derjenigen Instrumente befinden, auf welchen er sich weiter ausbilden will. Endlich hat er auch für Trink- und Waschgeräth, für Bücher, Schreibmaterial und sonstiges Lehrgeräth aus eignen Mitteln zu sorgen. Für die nöthige Anzahl von Clavieren und Orgeln sorgt theils die Anstalt, theils werden diese Instrumente von den Seminaristen selbst herbeigeschaft, theils gegen eine monatliche kleine Einlage nach und nach angekauft. Der Abgang an diesen Bedürfnissen während des Aufenthaltes im Seminar ist stets sogleich zu ergänzen.

9. Für die Reinigung der Kleidungsstücke hat jeder Seminarist selbst zu sorgen. Es ist für diesen Zweck ein besonderer Platz im Gebäude zu bestimmen, und eine eigene Zeit festzusetzen. Aber auch bei diesem Geschäfte darf es nicht an der erforderlichen Aufsicht fehlen.

10. Die Ausbesserung der Kleidungsstücke oder Schuhe geschieht durch einen von dem Inspector bestimmten Schneider oder Schuhmacher. Die Seminaristen müssen alle für sie gelieferten Arbeiten sogleich bezahlen.

11. Die Leibwäsche ist wenigstens einmal in der Woche zu wechseln. Ein für die Anstalt eigens bestimmter Wäscher nimmt die gebrauchte Leibwäsche an jedem Montage in Empfang und liefert sie am Sonnabend gereinigt und nöthigenfalls ausgebessert wieder ab. Für Herbeischaffung und Reinigung der Bettwäsche sorgt die Anstalt; für die des Tisches der Speisemeister.

Jeder Zögling empfängt bei seinem Eintritte von der Anstalt

a. eine Bettstelle mit vollständig eingerichtetem Bette,
b. einen Schrank für Kleidung, Wäsche, &c.
c. ein verschliessbares Pult,
d. einen Stuhl,
e. ein Behältniss zur Aufbewahrung des Waschgeräthes oder sonstigen Eigenthums.

Wie für das den Seminaristen zur besonderen Benützung übergebene Geräthe sind dieselben in ihrer Gesammtheit auch für alle nicht durch den Gebrauch an sich herbeigeführte Beschädigung der Localitäten und Geräthe der Anstalt, vorbehaltlich ihres Anspruches an den Thäter vollständigen Ersatz zu leisten verpflichtet.

12. Das Frühstück besteht in Milch und Brod, oder in einer einfachen Suppe. Zum Mittagessen wird Suppe, $\frac{1}{2}$lb Fleisch nebst Gemüse und $\frac{1}{2}$lb Brod, an Fasttagen Mehlspeisen gereicht; des Abends giebt es Suppe und eingemachtes Fleisch, oder statt dessen Mehlspeise und Brod, zweimal in der Woche Braten und Salat, an den Fasttagen Käs und Suppe, oder Suppe und Mehlspeise. Das gewöhnliche Getränk ist Wasser, für dessen Herbeischaffung (auch zum Behufe des Waschens) jeder Einzelne selbst zu sorgen hat. Auf Verlangen kann Bier, jedoch des Tages niemals mehr als ein Mass für eine Person gegen Bezahlung verabreicht werden.

13. Frühstück, Mittag und Abendessen werden gemeinschaftlich eingenommen. Das Gebet vor und nach dem Essen verrichtet ein Zögling. Auch während des Essens darf die geeignete Aufsicht nicht unterbleiben. Ausser der Tischzeit wird ohne besondere Erlaubniss des Inspectors weder Speise noch Trank verabreicht. Nur an heissen Sommer-

tagen

tagen und bei sonstigen ausserordentlichen Gelegenheiten ist auf Spaziergängen der Genuss von Bier und Brod, nie aber über das oben bestimmte Mass, oder von Milch und Butter gestattet.

14. Das jeden Seminaristen treffende, nach einem bestimmten Preise festgesetzte Kostgeld, wird an den Inspector bezahlt, und von diesem unmittelbar dem Kostgeber eingehändigt.

Tages-Ordnung.

15. In den Wintermonaten stehen die Seminaristen Morgens um 5 Uhr, in den Sommermonaten um 4½ Uhr und zwar jedesmal nach dem ersten desfallsigen Rufe des Hausdiene auf. Eine halbe Stunde nach dem Aufstehen hat sich jeder an seinem Pulte in dem allgemeinen Studierzimmer, oder in der Kapelle, oder in dem Betsaale reinlich gewaschen, gekämmt und ordentlich angekleidet einzufinden. Nach einem kurzen Gesang und Morgengebet und nach Verrichtung des englischen Grusses von Seite der Catholiken ist Privatstudium bis 7 Uhr. Für die Protestanten findet zur selbigen Zeit gemeinschaftliche Morgenandacht mit Gesang, Gebet und religiöser Betrachtung, hierauf aber bis 8 Uhr Privatstudium und die Einnahme des Frühstückes statt.

16. Um 7 Uhr versammeln sich die katholischen Seminaristen auf das mit der Glocke gegebene Zeichen im Speisezimmer zum Frühstücke, nach dessen Beendigung sie sogleich in die Hauskapelle sich verfügen, wo sie zuerst der religiösen Betrachtung, und sodann dem heil. Messopfer mit jener Andacht beizuwohnen haben, welche diese heilige Handlung erfordert. Während der heiligen Messe werden passende Lieder, teutsche Messen, oder Choralmessen mit und ohne Begleitung der Orgel gesungen.

17. Um 8 Uhr beginnen die Lehrstunden und dauern abwechselnd mit den Uebungsstunden bis 12 Uhr. Während dieser Zeit muss Ruhe, Ernst und ungetheilte Aufmerksamkeit herrschen. Jede störende Handlungsweise, alles Schwätzen, Lachen, Umherlaufen, &c. &c. wird verwiesen und nach Umständen bestraft.

18. Um 12 Uhr wird nach Verrichtung des gemeinschaftlichen Tischgebetes, so wie von Seiten der Katholiken auch des englischen Grusses das Mittagessen eingenommen, welchem wieder Gebet und sodann die Erholungszeit bis 1 oder 1 ½ Uhr, sodann Vorbereitung bis 2 Uhr folgt. Von 2–7 Uhr sind Lehr- und Uebungsstunden.

19. Um 7 Uhr wird nach Verrichtung der Gebete das Abendessen eingenommen. Hierauf darf jeder Seminarist bis 9 Uhr in irgend einer geeigneten, mit keiner nachtheiligen Störung für Andere verbundenen Weise sich frey beschäftigen. Um 9 Uhr folgt das Abendgebet, und 4 stimmiger Gesang sodann das Schlafengehen in geziemender Ruhe und Ordnung.

20.—Während der Erholungszeit ist den Seminaristen jede überhaupt zulässige Freiheit zu gestatten, jeder Missbrauch dieser Freiheit aber und jeder Unfug strenge zu ahnden. Karten, Würfel und Geldspiele sind unbedingt verboten, wohl aber Schach-Kegel- und überhaupt solche Spiele, welche eine zweckmässige körperliche Bewegung und geistige Anregung, besonders im Gehen gewähren, gestattet.

21. Für den Besuch des Gartens sind gewisse Stunden des Tages zu bestimmen und theils zur Erholung, theils nützlichen Beschäftigungen zu verwenden.

22. Die Spaziergänge finden gemeinschaftlich und unter Gesicht statt, sie werden entweder sogleich nach dem Mittagessen, oder einige Stunden später, in den heissen Sommer-Tagen gewöhlich erst nach dem Abendessen vorgenommen.

23. An Sonn und Feiertagen wohnen die Katholiken der Predigt und dem Hochamte, die Protestanten ihrem Gottesdienst mit Ernst, Aufmerksamkeit und Andacht bey. Der Haupt-Inhalt der Predigt ist in ein besonderes Heft einzutragen, von welchem der Religions-Lehrer jedesmal Einsicht zu nehmen hat.

Uebrigens sind die Seminaristen, so weit es geschehen kann, zur Verrichtung des Messnerdienstes und zum Ministriren zu verwenden.

Von dem Betragen der Seminaristen.

24. Ungeheuchelte Frömmigkeit oder wahre Gottesfurcht ist die erste und vorzüglichste Tugend, welche jeder Seminarist zu erstreben hat, und durch jede seiner Handlungen, bei all seinem Thun und Lassen an den Tag legen soll.

25. Hiernächst muss sich nähren und befestigen: Ehrfurcht vor der Person des Königs, Achtung vor dem Gesetze, Liebe zum Vaterlande, Gehorsam gegen die Obrigkeit, und gegen sonstige vorgesetzte, Dienstfertigkeit und Bescheidenheit gegen Berufsgenossen, Höflichkeit und Freundlichkeit gegen alle Menschen.

26. Er hat sein Herz für Recht und Wahrheit offen zu erhalten, aufrichtig und ohne Falsch zu seyn, bey stiller Betrachtung redlich seine Schwächen zu erkennen und sich selbst beherrschen und überwinden zu lernen.

27. Er hat Heftigkeit und Streitsucht, Anmassung und Rohheit, Zorn und Rache, Schadenfreude und Verläumdung, Lug und Trug, Spott und Anklägerei, zweideutigen Scherz und boshaften Witz, Verachtung des Glaubens und Hohn der Frömmigkeit, Schimpfen, Fluchen, und Schwören, Schamlosigkeit und unzüchtiges Benehmen in Gebärden, Worten oder Werken auf das äusserste zu vermeiden.

28. Jeder soll durch anständiges, männliches Betragen, durch sorgfältiges Achten auf sich selbst und genaues Einhalten der bestehenden Sitte, durch Aufmerksamkeit und Fleiss, durch Wahrheitsliebe und Eintracht Andern zum Muster dienen und alle gesellige Tugenden schon jetzt im kleinem Kreise sich angewöhnen, die ihm künftig jede Dienstleistung erleichtern und jene Achtung und Zuneigung sichern werden, deren er in seinem Berufe unerlässlich bedarf.

29. Der Säumige und Schläfrige, der Zerstreute, der Leichtsinnige und Wankelmüthige, der Eigenmächtige und Trotzige lasse sich warnen und bessere sich. Den Widerspenstigen, den Verführer zur Unsittlichkeit oder zur Ungesetzlichkeit, den Wollüstling und Selbstschänder trifft unbedingte Entfernung aus der Anstalt und gänzlicher Ausschluss vom Lehrstande.

30. Dem Gebote der Vorgesetzten und Lehrer ist unbedingter Gehorsam zu leisten. Das Recht gegründeter und bescheidener Einrede oder Erörterung ist dadurch nicht ausgeschlossen. Widerrechtliche Selbsthilfe ist nie und unter keinen Umständen erlaubt. Wer sich verletzt oder beschwert glaubt, wende sich an den Inspector, und erwarte vertrauensvoll, was Rechtens ist.

Gemeinschaftliche Beschwerden und Anliegen sind ausschliessend durch die Monitoren an den Seminarvorstand zu bringen.

31. Jeder ist schuldig, grobe Pflichtverletzungen, von welchen er auf irgend eine Weise Kenntniss erlangt hat, zur Anzeige zu bringen, und als Zeuge der Wahrheit gemäss auszusagen, was er davon weiss. Hehler und Läugner unterliegen der gebührenden Strafe.

32. Gegenseitiges Borgen oder Geldaufnehmen ist den Seminaristen untersagt. Nur mit ausdrücklicher Bewilligung des Inspectors können Darlehen gemacht werden.

33. Jedes Bedürfniss ist sogleich baar oder längstens binnen Monatsfrist zu bezahlen. Rückstände werden nicht geduldet, und ein dreimaliges vergebliches Mahnen von 10 zu 10 Tagen führt Entlassung nach sich.

Für diejenigen Seminaristen, welche ihre Bedürfnisse nicht aus eigenen Mitteln zu bestreiten vermögen, kann Bürgschaft gefordert werden.

Von dem Wirkungskreis des Seminar-Vorstandes der Lehrer, Aufseher und Monitoren.

35. Der Inspector ist Vorstand der Anstalt; er leitet dieselbe und hat zu diesem Behufe die erforderlichen Anordnungen innerhalb der Grenzen seiner Competenz zu erlassen, das übrige Personale ist ihm untergeordnet.

Er versammelt monatlich einmal und so oft er es ausserdem für nothwendig erachtet, die Lehrer und Aufseher zur Berathung über die wichtigern Angelegenheiten der Anstalt und vertheilt hiebei die einzelnen Geschäfte.

Er besucht, wo möglich alle Tage, die Lehr- und Uebungsstunden, erscheint unter den Zöglingen bey dem Gebete und bey Tische so wie in der Kirche, nimmt an den Spaziergängen Antheil, besichtiget fleissig die Schlafzimmer, und hat vorzüglich auch das Rechnungswesen stets in gehöriger Ordnung zu halten.

Ueberhaupt aber liegt in seinem Wirkungskreise Alles, was das Wohl und das Gedeihen der Anstalt unmittelbar oder mittelbar berührt.

Ueber seine Geschäfte führt er ein Tagebuch.

36. Die Lehrer theilen sich mit dem Inspector in den Unterricht und in die Aufsicht, nehmen an den Berathungen Antheil, erscheinen abwechselnd bei dem Gebet, und beim Gottesdienst, bei Tische, bei Spaziergängen und in den Uebungs-Stunden. Sie sind verbunden, dem Inspector von ihrem Lehrgange und ihrer Behandlungsweise Kenntniss zu geben, und dessen Erinnerungen oder Anordnungen genau zu befolgen.

37. Die Aufseher erholen sich täglich zur bestimmten Zeit von dem Inspector die nöthigen Aufträge und sind verbunden, den Lern- und Uebungsstunden beizuwohnen, den schwächeren Seminaristen Nachhilfe zu leisten, die Zöglinge überhaupt zur Aufmerksamkeit und zum Fleisse zu ermuntern, die Trägen, Unaufmerksamen und Saumseligen zu ermahnen, die vorgeschriebene Ordnung aufrecht zu erhalten, täglich von ihren Wahrnehmungen Anzeige an den Inspector zu erstatten, und sich selbst so zu verhalten, dass die Seminaristen Achtung und Vertrauen zu ihnen gewinnen.

38. Die Monitoren sind vorzüglich zum innern Dienst und zur pünktlichen Durchführung der Anordnungen im Einzelnen zu verwenden. Sie werden von dem Inspector gewählt und von demselben wieder wählbar. Es wird von ihnen erwartet, dass sie die ihnen ertheilten Aufträge pünktlich befolgen und in ihrer Stellung sich durchaus nichts Ungeziemendes gegen ihre Mitseminaristen erlauben.

Beilage IX.—*Formular für die Jahres-Zeugnisse der Seminaristen.*

Xaver Mangold

geboren am 15 August 1812 zu Rehburg, Landgerichts Pfaffenhofen, Sohn des Schullehrers Mangold zu Pfaffenhofen, Seminarist des I^ten^ Curses zu Freysing, hat sich im Laufe des Jahres 1835. des nachstehenden Zeugnisses würdig gemacht:

I. Anlagen: (gut.) II. Fortgang: (gut) der 10^te^ unter 22 Seminaristen des 1^ten^ Curses.
III. Kenntnisse: (gut;) im Rechnen noch etwas zurück, in der Religion sehr gut;
IV. Kunstfertigkeiten: (sehr gut;) ein besonders geübter Zeichner.
V. Fleiss: gross. VI. Betragen: (sehr gut.)
VII. Besondere Bemerkungen.—Keine.

Freising am 3^ten^ Sept. 1835.

K. Beyer: Schullehrer-Seminar-Inspection.

(L. S.)

N. Inspector.

Beilage X.—*Formular für die Austritts-Zeugnisse der Seminaristen.*

Austritts-Zeugniss für den Schulseminaristen Xaver Mangold, Schullehrer Sohn aus Pfaffenhofen geb. am 15 August 1812 zu Rehburg Landg. Pfaffenhofen.

I. Anlagen: sehr gut.
II. Kenntnisse: in den meisten Lehrgegenständen sehr gut, in Religion und Geographie vorzüglich.
III. Kunstfertigkeiten: sehr viele; er singt nicht bloss sehr gut, sondern er spielt auch ausgezeichnet auf der Flöte und ist ein tüchtiger Organist. Im Zeichnen leistet er weniger, ist aber doch zum Unterrichte der Anfänger geschickt.
IV. Betragen: voll frommen Ernstes, durchaus musterhaft.
V. Befähigung zum Lehramte: sehr viele; er weiss sich klar, leicht und auf eine ansprechende Weise mitzutheilen, ist für städtische Schulen volkommen geeignet, und dürfte besonders in den höhern Knaben-Classen zu gebrauchen seyn.
VI. Hauptnote . . . I. 1. d. i. vorzüglich.
VII. Besondere Bemerkungen—Keine.

Freysing am 2ten Sept. 1835.

K. Bayer: Schullehrer-Seminar-Inspection.

(L. S.)

Beilage XII.

In Gemässheit einer unter dem 14ten September 1835 ergangenen Entschliessung der k. Regierung des Isar-Kreises, K. d. Innern, wird dem Schuldienst-Expectanten.

Johann Adam Meister,

gegenwärtigen Schulgehülfen zu Morsbach eröffnet, dass er sich bei der am 15ten August zu München stattgefundenen Anstellungs-Prüfung als befähigt erwiesen habe, und mit der Note: gut in die 1te Stufe der 2ten Classe eingetragen worden sey.

Als besondere Erinnerung wird ihm noch bemerklich gemacht, dass er sich einer deutlicheren Aussprache, eines ruhigeren Fortschreitens beym Unterricht-Ertheilen und einer etwas grösseren Handschrift zu befleissigen, auch im Orgelspiel noch mehr zu üben habe.

Münster am 17ten Septr. 1835.

Königl Districts-Schul-Inspection
Kanne.

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

28.

BAVARIA.

Sub-Enclosure (H. 1.) in No. 28.

Die für 1832–33 zum erstenmale an das Staatsministerium des Innern gelangten Jahresberichte sämmtlicher Districts- und Local-Schul-Inspectionen haben zu der Wahrnehmung geführt, dass in dem Schulfache unendlich viel geschrieben wird, und dass insbesondere die Schulbehörden sich jährlich nur über Dinge verbreiten müssen, deren Stätigkeit eine Wiederholung durchaus unnöthig macht.

In dieser Erwägung, und im Hinblicke auf die nunmehr allenthalben vollendete Schulstatistic wird hiemit verfügt wie folgt:

I. Die bisherigen Jahresberichte der Districts- und Local-Schulinspectoren haben fürohin zu unterbleiben.

[N. B.—*This is the same as Sub-Enclosure* (F. 1.) *but is retained, in conformity to the original Paper.*]

II. An deren Stelle treten einfache, in nachstehender Weise zu verfassende Visitations-Protocolle.

III. Die Districts-Schulbehörde setzt jährlich gemeinsam mit der Districts-Polizeybehörde die Tage der Schulvisitationen in der Art fest, dass die Visitation des Gesammtbezirkes jedenfalls mit Ablaufe des Wintersemesters vollständig geschlossen sey. Die Visitation selbst wird, in den mit Local-Schul-Commissionen versehenen Städten, durch diese, in den übrigen Bezirken durch die Districts-Schul-Inspectoren im Beiseyn des Vorstandes der Districts-Polizeybehörde (Landgerichts, Herrschaftsgerichts, unmittelbaren Magistrates) vollzogen. Im Verhinderungsfalle ersetzt den Districts-Schul-Inspector ein von der k. Kreisregierung im Voraus zu bestimmender Stellvertreter, den Districtspolizey-Beamten aber ein Polizey-Nebenbeamter.

IV. Die festgesezten Tage werden sämmtlichen Local-Schul-Inspectionen, dann in gutsherrlichen Gerichtsorten den gutsherrlichen Beamten, in den übrigen Gemeinden aber der Gemeinde-Verwaltung kund gegeben, und es erfolgen sofort diejenigen Bekanntmachungen, Einladungen, und Vorbereitungen, welche durch die Verfügung vom 1ten April 1832 für die Visitationen der Kreisscholarchen angeordnet wurden.

V. Der Local-Schul-Inspector übergiebt dem visitirenden Districts-Schulvorstande bei seiner Ankunft eine, nach Anlage I. verfasste kurze Uebersicht der Schulverhältnisse, in welcher auch bereits sowohl er (als Localinspector) als jeder einzelne Lehrer seine etwaigen Beschwerden, Wünsche, Anträge, bereits eigenhändig eingetragen hat.

VI. Die Visitation beginnt mit einer kurzen Anrede des Local-Inspectors mit der in Gegenwart aller anwesenden Eltern und Zuhörer stattfindenden Prüfung der schulpflichtigen Jugend; sodann folgt in einem Nebenzimmer die Durchsicht der Censurbücher und Absentenlisten, dann Bestätigung oder Modificirung der von den Local-Inspectoren beabsichteten Schulvorrückungen, Schulüberweisungen, und Schul-Entlassungen, die Besichtigung der Localitäten und der Schuleinrichtung, und die Anhörung und Bescheidung der etwaigen Anbringen.

Endlich wird zur nähern Würdigung und Bescheidung der von dem Local-Inspector überreichten Uebersicht und zur Ergänzung der Schulstatistic, d. h. zum Eintrag der Veränderungen geschritten, welche sich nicht auf die stets wandelbare Zahl der Einwohner des Schuldistrictes, und auch die eben so stets wandelbare Zahl der Schüler, sondern auf die bleibenden Verhältnisse der Schule und ihres Einkommens, auf den Umfang des Schulsprengels, auf die Zahl der Classen, der Lehrer und Gehilfen, auf den Bestand der Schul-Localitäten und auf den bleibenden Gehalt der Lehrer beziehen.

VII. Die Ergebnisse der Verhandlung gelangen in ein nach Anlage II. doppelt verfasstes Visitations-Protocoll, wovon ein Exemplar dem Local-Inspector zu seiner Nachachtung und zu Ergänzung der Inspections-Acten verbleibt, das andere aber in die Hände des Districts-Inspectors und des Districtspolizey-Vorstandes übergeht, um statt des Jahresberichtes an die Kreisregierung und an das Staatsministerium des Innern, und von dort seiner Zeit wieder zu den Districts-Inspections Acten zu gelangen.

VIII. Das Protocoll wird von dem Districts-Schul-Inspector nach vorgängigem vertraulichen Benehmen mit dem Districts-Polizei-Beamten dictirt. Abweichende Ansichten des leztern ziehen bei rein pädagogischen Fragen eine besondere schriftliche Bemerkung des Polizei-Beamten *in fine* des Protocolls unter der Rubrick: "Besondere Bemerkungen des Districts-Polizei-Beamten, und des Districts-Schul-Inspectors über den Inhalt vorstehenden Protocolls und über die Qualification der Lehrer und des Gehülfenpersonals-"
bey Gegenständen des gemeinschaftlichen Wirkungskreises aber Aufschub des Visitationsbescheides über den streitigen Punkt bis zu erfolgter Regierungs-Entscheidung nach sich. Jedenfalls haben aber solche Ansichtsverschiedenheiten Geheimniss beider Vorstände zu bleiben, und sind nicht zur Kenntniss der übrigen Anwesenden zu bringen.

Die Schreiberei liegt dem Schullehrer und seinem Adstanten oder Präparanden dort ob, wo ein zahlreicheres Lehrer-Adstanten und Präparanden-Personal sich befindet. Sollte die Zahl der Lehrer oder Adstanten nicht hinreichen das Protocoll in Duplo auszufertigen, oder sollte der vorhandene Lehrer zu alt seyn, oder zu langsam schreiben, und kein sonst befähigtes Individuum anwesend und geneigt seyn, so sind die im Dictandoschreiben und in der Moralität gleich ausgezeichnetsten Schüler zum Schreiben zu berufen. Diese Berufung darf auch als Auszeichnung bei genügender Befähigung der Lehrer, Adstanten und Gehülfen verfügt werden; übrigens versteht sich von selbst, dass diese Zuziehung der Schüler nicht zulässig ist, sobald das Protocoll etwas enthalten müsste was sich nicht zur Kenntniss der Schul-Jugend eignete. Dieses Protocoll wird im Beyseyn des Districts-Polizey- und Schulbeamten, des etwa anwesenden Gutsherrn, des Patrimonialrichters, des Local-Inspectors, des Lehrerpersonals, und der Gemeinde-Verwaltung verlesen, und von sämmtlich diesen Anwesenden unterzeichnet; das Urtheil des Districts-Polizeybeamten und des Districts-Schul-Inspectors über Fleiss und Fortgang wird auch insbesondere noch der versammelten Schuljugend,

jugend, und den dort anwesenden Eltern und Zuhörern durch den Districts-Inspector, oder durch den Local-Inspector bekannt gemacht.

IX. Um übrigens den Districts- und Local-Inspectoren die Erfüllung dieser Aufgabe im höchsten Grade zu erleichtern und zu bewirken, dass die Abfassung des Visitations-Protocolles in keinerlei Weise hemmend auf die eigentliche practische Prüfungs- und Visitations-Aufgabe einwirke, werden eigene Formulare, sowohl der Uebersichtsbogen als der Protocolle in der Art hergestellt, dass alles sich Gleichbleibende bereits lythographirt erscheine und die Arbeit sich lediglich auf Ausfüllung des Speziellen beschränke, und es folgen anliegend

a. für jeden Local-Inspector unentgeldlich 24 Exemplare bereits lythographirter Nachweisungen, und für jede Districts-Schul-Inspection 200 Exemplare bereits lythographirter Protocolle, mit dem Bemerken, dass auch in Zukunft dem Bedarf an solchen lythographirten Formbogen unentgeldlich von Seite des Aerars genügt werden wird.

X. Sämmtliche hier angeordnete Arbeiten sind in möglichter, beinahe lapidarer Kürze und mit Vermeidung jedes unnöthigen Wortgepränges zu verfassen, und es ist Sorge zu tragen, dass sowohl die in gedrängterer Form die Stelle der bisherigen Local-Inspections-Jahresberichte versehenden Uebersichten des Local-Inspectors, als die, die Stelle der bisherigen Districts-Inspections-Jahresberichte vertretenden Visitations-Protocolle, das treue Bild der Schulverhältnisse mit jenem Ernste, und in jener einfachen lebendigen Sprache darbieten, worauf vorzüglich der hochwichtige Zweig der Volksbildung einen so entschiedenen Anspruch behauptet.

XI. Uebrigens wird bei diesem Anlasse wiederholt darauf aufmerksam gemacht, dass die Schule nicht bloss zur Ausbildung des Verstandes, sondern auch, und zwar vorzugsweise zur Entwickelung und richtigen Leitung des Gemüthes errichtet ist, dass in der Aufgabe des Schulmannes das Erziehen auf gleicher Linie mit dem Lehrer steht, dass tiefe Religiosität, ächtes sittliches Gefühl, und festes Durchdrungenseyn von den Pflichten gegen Gott und die Obrigkeit, die ersten und heiligsten Zwecke jeder Volksbildung, und die unentbehrlichsten Vorbedingungen des Glückes der Einzelnen wie der Nationen ausmache; dass demnach die Schule die gute häusliche Erziehung unterstützen, die mangelhafte ergänzen, die schlechte verbessern muss.

Es wird ferner darauf aufmerksam gemacht, dass die Aufgabe des Erziehers nur von jenen erfüllt werden wird, welche in sich selbst die Prämissen einer solchen Erziehung tragen, und dass demnach auch der talentvollste Lehrer für wahre Volksbildung untauglich ist, sobald er selbst des Gehorsams gegen seine Obern, also zunächst gegen die mit einer höhern wissentschaftlichen Bildung, und mit der Weihe des priesterlichen Amtes versehenen Local-Schul-Inspectors, des reinen Gemüthes und wahrhaft religiöser Gesinnung entbehrt, und dass in Ländern, wo der Schulbesuch auf gesetzlichem Zwange beruht, unzeitige Nachsicht, Dulden eines oberflächlich verbildenden Unterrichts oder Belassen eines schlechten Lehrers auf seiner Stelle, einen offenbaren Verrath nicht nur gegen den Staat, dessen ganze Zukunft auf der heranwachsenden Generation beruht, sondern auch gegen die Eltern in sich schliesst, deren edelstes Gut in solchem Falle frevelhaften Händen überantwortet wird.

Es ist von höchster Wichtigkeit, dass die K. Districts-Schul-Inspectoren und die sie begleitenden Districts-Polizei-Beamten innig von dieser Wahrheit durchdrungen seyen. Es ist insbesondere unentbehrlich, sie zu überzeugen, wie die Zeit der unreifen Bildung, des Spielens mit sogenannten gemeinnützigen Gegenständen, und des Verachtens alles Positiven in Kirche und Staat, verschwinden muss; wie es sich darum handelt, nicht Rückschritte in der Volksbildung zu machen, wohl aber gründliche Kenntnisse an die Stelle des Auswendiglernens und der Paradeprüfungen treten zu lassen, und das Nützliche nur als Folgerung des Nothwendigen zu betrachten, und ein ernstes wahrhaft gebildetes Geschlecht dem Vaterlande zu erziehen, und wie die Aufgabe der Schulleitung sowohl als der Schulvisitationen nur dann im Sinne Seiner Majestät gelösst erscheint, wenn obiger Gesichtspunkt durch sie auch wirklich in die That und ins Leben übergeht.

XII. Gegenwärtige Verfügung tritt, wo die Schul-Visitationen für 1832–33 noch nicht vollzogen sind, mit dem Tage ihres Erscheinens in Wirksamkeit. Für jene Orte und Bezirke, wo die Schulvisitationen pro 1832–33 bereits statt gefunden haben, erfolgt noch die Vorlage der üblichen Jahresberichte, und der Terminus *a quo* für jene Orte und Bezirke ist das Schuljahr 1833–34.

Die K. Kreisregierungen werden hiernach gemeinsam mit dem Kreisscholarchate das Geeignete alsbald anordnen, die nöthigen Detail-Instructionen erlassen, und die erlassenen binnen 14 Tagen abschriftlich zur Anzeige bringen.

München am 24 Juli 1833.

Auf Seiner König[1] Majestät allerhöchsten Befehl
An sämmtliche K. Kreisregierungen

K. d. J. ergangen.

Die Schuljahresberichte, und die damit in Verbindung stehenden jährlichen Hauptvisitationen der Districts-Polizeibeamten und der Districts-Schul-Inspectoren, oder der bei den Behörden repräsentirenden Local-Schul-Commissionen, der den K. Kreisregierungen unmittelbar untergeordneten magistratischen Städte betr.

Wahrnehmungen.	Bescheide.

IV.—*Vorrücken der Werk- und Feyertags-Schüler aus einer Classe in die andere,—Uebertritt aus der Werk- in die Feyertags-Schule,—Entlassungen.*

Hinsichtlich der Vorrückung-Schulüberweisung und Schulentlassung setzte der Districts-Inspector fest was folgt:

Zum Uebertritte in eine höhere Classe fand er nach dem Prüfungs-Resultate nicht befähigt - - - - - - - - - - -

Zum Uebertritte in die Sonn- und Feyertags-Schule fand er ohngeachtet des erreichten Ueberweisungs-Alters nicht befähigt, und verwies somit noch für ein Jahr in die Werktagsschule - - - - - - - -

Zur Entlassung aus der Sonn- und Feyertag-Schule fand er trotz des zurückgelegten 18ten Lebensjahres nicht befähigt und verwies somit noch für ein Jahr in diese Schule - - - - - - - - - -

V.—*Einsichtsnahme von den Schul-Localitäten und von den Schulgeräthen.*

Wahrnehmungen.	Bescheide.

VI.—*Etwaige Anbringen des Lehrers und der Betheiligten.*

Name der Erschienenen.	Kurzer Inhalt des Uebrigen.	Bescheid.

VII.—*Durchsicht der von dem Local-Inspector vorgelegten Nachweise.*

Die von dem Local-Inspector übergebenen Nachweise gaben zu folgenden Verhandlungen Anlass.

RUBRA.

zu I. nämlich zu den Veränderungen der Schulstatistic.

BESCHEID.

Sowohl die in dem Nachweise enthaltenen, als die etwa noch ferner entdeckten Veränderungen der Schulstatistic wurden mit Ausnahme dessen, was die jährlich wandelbare Zahl der Schüler betrifft, in die Original-Statistic der Schule, gleichlautend eingetragen, wie folgt:

zu II. nämlich zu sonstigen Veränderungen der Schul-Verhältnisse -	wurde verfügt.
zu III. nämlich zu der Schulchronic - - - - - - -	wurde verfügt.
zu IV. nämlich zu dem gegenwärtigen Stand der Schule und des Schulunterrichts - - - - - - - - -	wurde verfügt.
zu V. nämlich zu dem Stande der Censur-Bücher und der Schul-Listen - - - - - - - - - -	wurde verfügt.
zu VI. nämlich zu den Anstalten für Fortbildung der Lehrer - -	wurde verfügt.

zu VII. nämlich zu dem Umfang des Unterrichts - - - -	wurde verfügt.
zu VIII. nämlich zur Zahl der Lehrstunden und der Lehrmethode -	wurde verfügt.
zu IX. nämlich zu den sonstigen Verhältnissen - - - -	wurde verfügt.
zu X. nämlich zu dem Abschlusse des Schulfondes und der Schulrechnungen - - - - - - - - - -	wurde verfügt.
zu XI. nämlich zu den Wünschen und Anträgen des Lehrerpersonals - - - - - - - - - - -	wurde verfügt.
zu XII. nämlich zu den Wünschen und Anträgen des Local-Inspectors - - - - - - - - - - -	wurde verfügt.

Nach dem Schlusse dieser Verhandlungen wurde das doppelt ausgefertigte Protocoll verlesen, richtig befunden und von allen Anwesenden unterschrieben.

Besondere Bemerkungen der Districts-Polizey und Districts-Schulbehörden über den Inhalt vorstehenden Protocolls und über die Qualification des Lehrer- und Gehülfen-Personals.

Die Districts-Polizei-Behörde und die Districts-Schul-Inspection haben nach beschlossener Visitation des Gesammt-Bezirkes gemeinsame Zusammentritte über die Qualification des Local-Inspectors und des Lehrers, sodann über die sonstigen Wahrnehmungen berathen und beschlossen, folgende

Anträge an die höchste und allerhöchste Stelle zu bringen:

I. Qualification des Local-Inspectors,
II. Qualification des Lehrer-Personals,
III. Sonstige Anordnungen und Anträge.

Sub-Enclosure (I.) in No. 28.

Abschrift.

Um das schon durch das organische Edict vom 15 September 1808 (Regierungsblatt Jahrgang 1808 Stück 2472, 2473, 2493 und 2494, angeordnete gemeinsame Wirken der Districts-Polizei-Behörden und der Districts-Schul-Inspectionen auch in gemischten oder reinen Ruraldistricten zu verwirklichen, den mündlichen Verkehr und die einfache Form der vertraulichen, denselben bisher vielfach fremd gebliebenen, Mittheilung an die Stelle des Vielschreibens treten zu lassen,—den Schulbehörden die kräftige Unterstützung der Staatsbehörden allenthalben und vollständig zu sichern und die Seelsorger jener peinlichen Lage zu enthalten, welche sie bisher häufig zwang, entweder ihre Stellung als Freunde und Berather ihrer Gemeinden durch einseitige Strenge in Schulsachen oder ihre Pflichten als Schulvorstände durch Rücksichten der seelsorgerlichen Stellung zu gefährden, wird hiemit verfügt was folgt:

I. Die rein technische Leitung des Unterrichts und der geistigen Erziehung gehört ausschliessend dem Wirkungskreise der Local-Schul-Inspectoren und der ihnen vorgesetzten Districts-Schulbehörde an. In Sachen des Religions-Unterrichts insbesondere sind selbe unmittelbar und exclusive der Oberleitung der kirchlichen Stellen ihrer Confessionen untergeben, an welche sie auf Verlangen diessfalls zu berichten, und deren Aufträge und Weisungen sie treulich zu vollziehen haben.

II. Als gemischte Schul-Angelegenheiten sind zu betrachten

a. alle organische Einrichtungen, als: Bildung und Veränderung der Schulsprengel, Errichtung öffentlicher und nicht öffentlicher Lehr-Institute,
b. die Errichtungen und Besetzungen von Lehrstellen,
c. die Qualificationslisten des Lehrer-Personals.
d. die Handhabung des Schulbesuches,
e. die Evidenthaltung der Schulstatistic,
f. Alles finanzielle des Unterrichtes, insbesondere die Herstellung und Unterhaltung der Schulgebäude und der Schulgeräthschaften und das Schulfondrechnungswesen; endlich
g. die jährliche Hauptsvisitation sämmtlicher Schulen jedes Bezirkes.

III. In den gemischten Angelegenheiten steht die Leitung dem Districts-Schul-Inspector gemeinsam mit der Districtspolizeibehörde zu.

IV. In den mit Local-Schul-Commissionen versehenen Städten behält es bei dem bereits geregelten Geschäftsgange sein Bewenden.

V. Was die zu keiner Local-Schul-Commission berechtigten rural- oder gemischten Districte betrifft, so wird in Zukunft möglichst dahin gestrebt werden, die Districts-Schul-Inspectoren an den Sitz der Districts-Polizei-Behörde zu verlegen, und verdiente bewährte Schulmänner bey Verleihung von Amtssitz-Pfarreien ganz vorzüglich zu berücksichtigen.

VI. Wo der Districts-Schul-Inspector an dem Sitze der Districts-Polizei-Behörde sich befindet, finden die gemeinsamen Berathungen nach Erforderniss der vorliegenden Geschäfte statt.

VII. Wo die Districts-Schul-Inspection sich nicht an dem Amtssitze befindet, ist über periodische Zusammentritte übereinzukommen und sind die Gegenstände des gemischten Wirkungskreises dieser Zusammentritte vorzubehalten.

VIII. Die Initiative gebührt in Sachen der Schulbauten der Districts-Polizei-Behörde, in den übrigen Fragen aber der Districts-Inspection, an welche nach wie vor alle Berichte der Local-Inspectionen ergehen.

IX. In den Zusammentritten werden vor Allem die amtlichen Anzeigen der Local-Schul-Inspectionen über die schuldbaren Schulversäumnisse geprüft, und der Districts-Polizei-Behörde zum Vollzuge der gemeinsam beschlossenen Strafen mitgetheilt. Sodann wird zu Berathung der übrigen Gegenstände geschritten.

X. Die Berichte an die königliche Kreisregierung ergehen unter gemeinsamen Formen wie folgt:

Betreff.

"Gemeinsamer Bericht des Landgerichts, Herrschaftsgerichts N. und der Districts-Schul-Inspection N. u. s. w. Unterschrift."

unterthänigst gehorsamste

Landgericht (Herrschaftsgericht) Districts-Schul-Inspection N.

Die Entschliessungen ergehen gleichfalls unter der gemeinsamen Adresse, die Acten werden, soferne sie Schulbau-Fragen, und Schulfond-Rechnungs-Gegenstände betreffen bei der Districts-Polizei-Behörde, für alle übrigen Gegenstände aber bey der Districts-Schul-Inspection aufbewahrt. Jeder Behörde steht es jedoch frey, Abschriften der bei ihr nicht aufbewahrten Entschliessungen zu ihren Acten zu nehmen. In Fragen der Schulorganisation ergehen die Entschliessungen an beide Behörden in doppelter gleichlautender Ausfertigung.

XI. Nichtvereintseyn beider Behörden über einen Gegenstand, zieht dessen Vorlage an die Kreisregierung nach sich. Zögerung der einen in Erledigung wichtigen Gegenstandes berechtigt und verpflichtet die andere nach fruchtloser Mahnung zu Erstattung eines dieses Verhältnisses erwähnenden Separatberichtes.

XII. Die Qualificationsbücher der Lehrer werden von jeder Stelle gesondert geführt, und der übereinstimmende oder abweichende Eintrag hängt von dem Einklange oder Nicht-Einklange der beiderseitigen Urtheile ab, deren gemeinsames Erörtertseyn jedenfalls aus den, den Visitations-Protocollen beigefügten Bemerkungen hervorgeht.

XIII. Protocolle über die Zusammentritte werden nicht geführt, die Berathung ist mündlich, und das Berathenseyn geht aus der gemeinsamen Fertigung der Concepte, so wie aus den diesen Concepten beyzufügenden Worten hervor.

"Beschlossen in dem gemeinsamen Zusammentritte N. N. den . . . . . .

XIV. Die Geschäfts-Stellung der Local-Inspectionen, so wie deren Verhältniss zu den Patrimonialgerichten und die edictmässige Competenz der letzteren bleibt unverändert.

Das gemeinsame Wirken der District-Schul-Inspectoren, und der Districts-Polizei-Beamten betreffend.

Sub-Enclosure (K. 1.) in No. 28.

Abschrift.—*Auf Befehl.*

Seine Majestät der König haben durch allerhöchste Verfügung vom 1ten April vor. Js. (Reggs. Bltt. Jahrgg 1832. Seite 279) zu verfügen geruht:

" es sollen jährlich entweder durch den Schulreferenten oder durch einen der Kreis-scholarchen die Volksschulen mindestens zweier Schul-Inspections-Districte visitirt werden. Die Visitation hat den intellectuellen sowohl als den moralischen Zustand der Schule zu umfassen und sich nach einer von dem Ministerium des Innern zu erlassenden genauen Instruction zu richten."

Im Vollzuge dieser allerhöchsten Anordnung wird hiemit nach vernommenem Gutachten des obersten Schulrathes verfügt was folgt:

1. Die vorgeschriebenen Kreis-Schul-Visitationen sollen, wenn nicht besondere Umstände Ausnahmen nothwendig machen, jederzeit in den Monaten Februar, März oder April vorgenommen werden und bis zum 1ten May als dem Anfange der Sommer-Schulen beendigt seyn.

2. Die Auswahl der zu visitirenden Schulbezirke steht dem Königl General Commissär und Regierungs-Präsidenten zu. Er gründet selbe auf das stets zu vernehmende Gutachten des Kreisscholarchates und auf die vorliegenden Warnehmungen über den Zustand der Schulen in der Art, dass die Controlle vor allem jene Districte treffe, deren Districts-Inspectoren in Eifer, Thätigkeit oder Befähigung zurückstehen, oder welche wegen mangelhafter Befähigung der Local-Inspectoren, wegen Nichtmitwirkung der Districts-Polizey-Behörden, oder endlich wegen sonstiger Umstände einer Controlle besonders zu bedürfen scheinen.

3. Der grosse Zweck Seiner Majestät ist: das Volksschulwesen von der in neuerer Zeit eingerissenen Tendenz bloser Verstandesbildung und oberflächlicher Vielwisserei auf den Standpunkt gleichmässiger Entwickelung des Geistes und des Herzens und reellen bleibenden Unterrichtes zurückgeführt zu wissen. Die Schule soll nicht blos lehren, sondern auch erziehen; sie soll den Einfluss weiser gebildeter Eltern unterstützen, den unvollständigen ergänzen, den mangelnden ersetzen, den schlechten unschädlich machen. Die Jugend soll von ächter Religiosität, d. h. von einem treuen Festhalten an den Lehrsätzen und dem Geiste ihres Glaubensbekenntnisses durchdrungen und sittlich eben so sehr, als intellectuell veredelt werden. Das Erlernte selbst soll nicht blos memorirt, sondern auch begriffen seyn. Der Lehr-Umfang soll so weit reichen, als es die Gründlichkeit gestattet; nie aber sollen sich seine Gränzen auf Kosten der Gründlichkeit erweitern. Mit einem Worte: von König Ludwig's Epoche soll ein ächt deutsches, biederes, religiös und politisch nachhaltiges gebildetes Geschlecht auf die Zukunft übergehen. Aufgabe des Visitators ist es vor allem, diesen Geist des Volksschulwesens zu erfassen, und nach ihm seine Einleitungen sowohl als seine Aeusserungen, seine Belehrungen und sein Urtheil zu bemessen. Die Visitation wird durch den Visitator als K. Regierungs-Commissär geleitet, und es haben derselben der erste Polizei-Beamte des Bezirkes, der Districts-Schul-Inspector, der Local-Schul-Inspector sammt den Mitgliedern der Local-Schul-Inspection, oder Local Schul-Commission beizuwohnen. Wo eine Schule mehrere Orte in sich fasst, sind ausser den Mitgliedern der Local-Inspection auch aus jedem der entfernteren Orte die Vorsteher und einzelne wackere, geachtete Männer beizuziehen. Endlich sollen alle zu der betreffenden Schule gehörigen Lehrer und Lehrgehülfen mit der gesammten Werk- und Feyertagsschulpflichtigen Jugend gegenwärtig sein.

Den Districts-Polizei-Beamten ist der Visitations-Termin mit der Weisung bekannt zu machen, im Verhinderungsfalle einen Stellvertreter abzuordnen;—Eltern und Schulfreunde sind zu der Verhandlung förmlich und rechtzeitig einzuladen.

4. Die Visitation umfasst den Gesammtzustand der Schule, und zerfällt in die beiden Hauptabtheilungen:

1. Untersuchung des Unterrichtes und der Erziehung, und
2. Untersuchung der äusseren Schulverhältnisse.

5. Sie beginnt jederzeit mit Prüfung der Kenntnisse; zuerst werden die Anfänger, hierauf die übrigen Werktagsschüler, und zuletzt die zur Feyertagsschule gehörige Jugend vorgerufen.

Um sich über den Stand der Kenntnisse vollkommene Gewissheit zu verschaffen, hat der Regierungs-Commissär nicht blos den Lehrplan und die Stundenordnung, die vorzulegenden Listen und Schriften genau einzusehen und das bei der Prüfung vorzunehmende Lehrpensum selbst zu bestimmen, sondern es wird ihm noch zur besonderen Pflicht gemacht, aus allen Fächern selbst zu prüfen und den Lehrer, den Districts- und Local-Schul-Inspector nur in soweit dazu aufzufordern, als es nothwendig ist, um deren Unterrichtsweise und den in der Schule eingeführten Lehrgang besser kennen zu lernen. Dabei hat er sein Augenmerk auf den in der Schule herrschenden Lehrton, auf die eingeführten Methoden und darauf zu richten, ob die Schüler das Gelernte bloss mechanisch ins Gedächtniss aufgenommen haben, oder ob sie davon mit Bewusstseyn Rechenschaft darüber zu geben und dasselbige in Anwendung auf die vorgelegten Fälle zu bringen vermögen. Er hat ferner darauf zu achten, ob der Lehrer vorzugsweise nur einzelne Schüler hervorhebt, oder ob er es versteht die Gesammtheit gleichmässig zu beschäftigen, aufmerksam zu erhalten und die überwiegende Mehrzahl auf gleicher Stufe fortzuführen. Endlich hat er genau darauf Rücksicht zu nehmen, wie wenige oder wie viele der Anfänger nach dem ersten Lehrjahre den Forderungen des Schulplans entsprechen, ob die zur Sontagsschule Uebertretenden die gehörige Reife erlangt haben; wie sich die oberste Abtheilung der Feyertagsschüler zur obersten Classe der Werktagsschüler verhält, und daraus das Gesammtergebniss des Unterrichtes herzustellen.

6. In der auf die Prüfung zu verwendenden Zeit hat zwar kein Uebermass zu herrschen, gleichwohl aber darf damit nicht früher abgebrochen werden, als bis der wahre Stand der Kenntnisse hinreichend erkundet ist, und auch über die stattfindende Erziehungsweise ein sicheres Urtheil gefällt werden kann.

7. Um letzteres zu erlangen, hat der Regierungs-Commissär zunächst auf die Persönlichkeit des Lehrpersonals zu achten, dabey die Qualifications-Bücher zu vergleichen und sich von der Sinnesweise, der Thätigkeit und der Lebensweise der Unterrichtenden die erforderliche Kenntniss zu verschaffen. Er muss dabey auf das Ansehen und die Wirksamkeit des

Lehrers

Lehrers unter den Schülern, auf die Ruhe und Aufmerksamkeit derselben auf ihre lebendige Theilnahme am Unterrichte, auf die bestehende äussere Ordnung, auf die Handhabung der Disciplin und auf den ganzen in der Schule herrschenden Geist überhaupt, vornehmlich aber darauf sehen, ob Frömmigkeit, Sittlichkeit, Rechtlichkeit, Fleiss und Anhänglichkeit an die bestehende Verfassung, an König und Vaterland, hier blos geboten oder ob sie der Jugend wirklich lieb und zur zweiten Natur gemacht werden.

8. Die Prüfung ist mit einer schlichten, prunklosen, die Bedeutsamkeit des Actes, die Standpunkte des von seiner Majestät vorgezeichneten Erziehungs-Systemes, die Pflichten des Lehrers, der Eltern und der Kinder, und die Erwartungen der Staatsregierung bezüglich auf den moralischen und intellectuellen Zustand der Schulen in kurzer allgemein verständlichen Worten schildernden Anrede des Regierungs-Commissärs zu eröffnen, und mit einer ähnlichen, das Urtheil über das Geschehene aussprechenden zu schliessen. Zeitraubende Feyerlichkeiten und Tändeleyen sind durchaus verboten.

9. Nachdem die Schuljugend entlassen ist, nimmt der Regierungs-Commissär in Begleitung der anwesenden Beamten und der gesammten Local-Schul-Commission, Einsicht von dem Zustand der Schullocalitäten, des Schulgartens, der Lehr- und Schulgeräthe, der Schulacten, insbesondere der Versäummisslisten, der Schulcasse und deren Rechnungen, so wie überhaupt von der gesammten äusseren Schuleinrichtung.

10. Hierauf lässt er unter 4 Augen und der Reihe nach erst die eines Gesuches oder einer Beschwerde wegen anwesenden Eltern, dann die Vorsteher, Lehrer und Inspectoren vor sich kommen, vernimmt ihre Anträge, verfügt darüber sogleich, in soweit es auf dem Wege blosser Ermahnung oder Hinweisung auf bestehende Gesetze und Verordnungen geschehen kann, und der Fall einer Disciplinar-Einschreitung nicht gegeben ist, und versammelt zuletzt das gesammte Personal, um sich mit demselben über die allgemeinen Schul-Angelegenheiten zu benehmen, und das Erforderliche zu besprechen und vorzubereiten.

11. Ueber diese Verhandlungen sowohl als über das Gesammt-Ergebniss der Visitation wird ein von allen Beamten und sonst betheiligten Personen zu unterzeichnendes Protocoll aufgenommen; wobey es jedem frei steht, seine besonderen Bemerkungen entweder beizufügen oder in einer eigenen Beilage an die Königl. Kreis-Regierung gelangen zu lassen. Dieses Protocoll sammt den, so ferne der Raum nicht hinreicht, am Rande beigefügten Bemerkungen, legt der Commissär 14 Tage nach geschlossener Visitation der Kgl. Regierung vor.

12. Die Fertigung des Protocolls und des Berichtes liegt dem Regierungs-Commissär ob. Demselben steht es aber frey, die Mitwirkung der Anwesenden dabey in Anspruch zu nehmen und hauptsächlich von Lehrern und Inspectoren die einzelnen Angaben vorbereiten und beibringen zu lassen. Die Fassung selbst hat nach Kürze, Bestimmtheit und leichter Uebersicht zu streben. Insbesondere sind darin keine Wiederholungen der in den Schulstatistiken enthaltenen Notizen aufzunehmen, sondern vielmehr alle Ansätze unter Bezugnahme auf die Statistic zu verfassen, und Abweichungen, als solche förmlich zu bezeichnen, und der das Protocoll Eintragende selbst hat zur Erleichterung der Revision der in mitfolgender Skizze angegebenen Reihenfolge der einzelnen Vortrags-Nummern zu folgen.

13. Die ganze Visitation soll die Frist eines Tages nicht überschreiten, aber es soll auch nicht gestattet werden, an einem und demselben Tage, ganz ungewöhnliche Fälle ausgenommen, mehr als zwey Schulen zur Untersuchung zu bringen.

14. Während oder nach geschlossener Visitation eines Districts-Schul-Inspections-Bezirkes hat der Regierungs-Commissär auch von der Geschäftsführung der Districts-Inspection oder Schulcommission und von den auf das Schulwesen bezüglichen Acten und Verhandlungen der Polizeibehörde Kenntniss zu nehmen, und insbesondere auf die den Districts-Inspectoren unmittelbar untergebenen Schulen ein vorzügliches Augenmerk zu richten.

15. Die Königl. Regierung prüft die eingegangenen Berichte und Protocolle durch das Kreis-Scholarchat, und den Kreis-Schulreferenten, ertheilt hierauf die erforderlichen Entschliessungen, verfügt insbesondere die etwa angemessen scheinenden Abänderungen in den Qulificationslisten der Local-Schul-Inspectoren, und sendet gelegentlich der Vorlage der Jahresberichte und der dissfallsigen Protocolle und Verfügungen auch die Visitations-Berichte und die darauf bezüglichen Verhandlungen an das Königl. Staats Ministerium des Innern ein.

16. Vorstehende Anordnung bezieht sich zunächst auf die in der Entschliessung, vom 1ten April 1832 vorgeschriebene regelmässige Visitation, ist aber auch auf die von dem k. General-Commissär und Regierungs-Präsidenten etwa verfügten aussergewöhnlichen und unvermutheten Untersuchungen einzelner Schulen anwendbar.

Die Visitation der Volksschulen durch Königl. Regierungen betreffend.

München den 12ten Februar 1833.

Abschrift.—*Schema zur Abfassung des Protocolls bey der Schulvisitation durch den Regierungs-Commissär.*

Ort und Zeit der Visitation der Schule.

I. Erwähnung oder Beifügung der Anrede des Visitators.

II. Untersuchung des innern Schulwesens.

a. Untersuchung des in den Schulen befolgten Ganges der Stunden-Ordnung, der Lehrbücher, der Lehrmethode, der Lehrabtheilungen, und der Vertheilung der Lehrfächer unter den Lehrern, und der Theilnahme der Ortsgeistlichen.
b. der Prüfung des vorgenommenen Lehrpensums, wie viel Zeit beiläufig darauf verwendet und durch wen examinirt wird.
c. Ergebniss der Prüfung, Urtheil der Beamten und Anwesenden, Urtheil des Regierungs-Commissärs über alle in der Instruction zur Beachtung vorgeschriebenen Puncte.
d. Vorlegung des Sittenbuches, der Versäumniss-Listen, Conferenz-Protocolle, &c. &c.
e. Angabe der Bemerkungen, welche Lehrer, Inspectoren und Vorsteher hinsichtlich der Schulerziehung, des Einflusses der häuslichen Zucht und der Ortsverhältnisse zu machen haben.
f. Urtheil des Commissärs mit Beachtung der in der Instruction aufgenommenen Punkte.

III. Untersuchung der äussern Schulverhältnisse.

1. Beschaffenheit der Schullocalitäten.
   a. Urtheil darüber, mit Bezugnahme auf die der Schulstatistic beigefügten Plane,
   b. Anträge und Anordnungen.
2. Schulbesuch.
   a. Durchsicht der Absenten-Listen, deren Genauigkeit, ob die schuldbaren Absenten in dem 1ten und 2ten Falle aus eigener Competenz der Local-Schul-Commission bestraft, ob sie in dem 3ten und den folgenden Fällen der Districts-Polizei-Behörde angezeigt wurden; ob letztere strafend eingeschritten ist.
   Ob keine Ueberweisung aus der Werk- in die Feyertagsschule und keine Entlassung von letzterer ohne vorgängige Prüfung und ohne Protocoll-Beschluss der Local-Schul-Inspection statt gefunden hat. Ob Altersdispense nur mit Genehmigung des District-Schul-Inspectors und auf den Grund einer von demselben abgehaltenen Special-Prüfung statt gefunden hat.
   b. Anträge und Anordnungen.
3. Schulaufnahme, Versetzung, Entlassung, &c.
   a. Einsichtnahme und Beurtheilung der Listen,
   b. Etwaige Verfügungen.
4. Verhältniss der Lehrer, Inspectoren, Vorsteher, &c. zu den Schülern und unter sich.
5. Schul-Zusammenkünfte.
   a. der Lehrer unter sich
   b. ob die monatlichen Schulconferenzen der Local-Schul-Inspectoren richtig gehalten und ob die Beschlüsse aufgezeichnet werden.
   c. Beurtheilung und Antrag.
6. Oeconomische Verhältnisse.
   a. Vergleichung des wirklichen Befundes mit der Schulstatistic.
   b. Zustand der Rechnungen,
   c. Anträge.
7. Schulacten Listen, &c.
   a. Beschaffenheit,
   b. Anträge.
8. Sonstige Beisätze und allgemeines Urtheil.

Unterschrift.

Sub-Enclosure (L.) in No. 28.

Die Nothwendigkeit der raschen Herstellung entsprechender Zeichnungs-Vorlagen ist durch die eingesendeten Arbeiten der Landwirthschafts- und Gewerbs-Schulen, dann der Schullehrer-Seminare, noch mehr aber durch die zur Ausstellung gebrachten Leistungen der Volks-Zeichnungsschulen zur vollsten Evidenz gelangt. Niemand kann mehr an der Wahrheit zweifeln, dass schriftliche Belehrungen allein nicht genügen, wo Vollzugs-Organe der manigfachsten Art und der verschiedensten Bildungsgrade, das Geschriebene ins Leben übertragen sollen, und das gebotene Vorlageblätter der materielle explicative Theil der Instructionen der einzige Weg zur Einheit der Bestrebungen und zur zweckmässigen Abstuffung des Unterrichts und das einzige Mittel sind, der Sache das Uebergewicht über die Speculationen der Kunsthändler zu sichern.

Es wird daher verfügt was folgt:

I. Es sollen schleunigst vollständige Vorlagen für die Zeichnungsschulen aller Categorien hergestellt werden,

II. Die Entwerfung derselben wird der k. Academie der bildenden Künste als dem gesetzlichen Mittelpunkte der künstlerischen Bildung im Staate im Vereine mit den Vorständen der drey k. polytechnischen Schulen Oberingenieur und Rector Pauli, Rector Scharrer und Rector Leo übertragen.

III. Druck

III. Druck und Verlag sind dem k. Central-Schulbücher-Verlage zur Pflicht gemacht, welcher seiner Bestimmung gemäss die dessfalls nöthigen Ausgaben, inclusive der Honorare, aus seiner Fonden vorschiessen, durchaus keinen Profit nehmen, wohl aber in dem gesicherten Absatze an alle Zeichnungs-Schulen, den vollen Ersatz seiner Auslagen finden wird.

IV. Da der Zweck des so umfassend gestalteten Zeichnungs-Unterrichtes dahin geht, das Zeichnen als technische Sprache, gleich der Schriftsprache, über alle Classen der Nation auszudehnen und durch diese technische Sprache die bessere Ausbildung der Handwerker, dann neben der Befähigung der Fabrik-Besitzer zum Verständnisse der Maschinen, die Gutsbesitzer zu Beurtheilung von Bauplänen und verbesserten Acker-Werkzeugen, auch erhöhten Kunstsinn und den ächten Uebergang der Kunst in die Gewerbe und in das Leben zu bewirken, so muss vor allem die Wahl der (ausschliessend dem Gebiete des Linear- und Ornamentenzeichnens zu entnehmenden) Gegenstände in der Art bemessen werden, dass neben den allgemeinen Erfordernissen auch jede specielle Richtung ihren speciellen Bedarf vollständig gedeckt finde, dass sonach landwirthschaftliche mit industriellen Maschinen und Gebäuden, Blumen-Ornamente (wichtig für die künftigen Cattundrucker, die Tapeten-Fabrikanten u. s. w.) mit rein architectonischen Ornamenten abwechseln, und dass diese Manigfaltigkeit der Objecte durch die zweckmässige Ordnung des Ganzen in die gehörige Harmonie gesetzt, und durchgehends von jenem Ernste durchdrungen werde, welcher den Character des Werkes bilden muss.

Auf die weiblichen Arbeiten ist in dem Werke keine specielle Rücksicht zu nehmen. Vielmehr sind für den Punkt, wo der allgemeine Zeichnungs-Unterricht bey Mädchen in jenen behufs der freyeren Handarbeiten sich scheidet, zu Gunsten der weiblichen Arbeits-Schulen, eigene Vorlagen durch einen Zusammentritt verständiger Personen ausarbeiten zu lassen, und diese als gesonderte Verlags-Artikel zu behandeln und zu debitiren.

V. Das Werk soll in zwey Hauptheile zerfallen:

a. in die Vorlagen für die Elementar-Volkszeichnungsschulen, und

b. in die Vorlagen für die Landwirthschafts- und Gewerbsschulen, dann für die Schullehrer-Seminare.

VI. Jeder dieser Haupttheile soll nach Cursen eingetheilt werden, und für jeden Curs in eine Reihe von Heften zerfallen, deren jedes ein gewisses Gebiet von Gegenständen zum Zwecke hat, z. B. Wohngebäude überhaupt, landwirthschaftliche Gebäude, landwirthschaftliche Geräthe, industrielle Gebäude u. s. w.

VII. Die einzelnen Blätter jedes Heftes sind durch eigene Bezeichnungen, in solche, welche jede Schule absolut haben muss, und in solche auszuscheiden, deren Anschaffung oder Nichtanschaffung nach Massgabe der Mittel jeder einzelnen Schule anheim gegeben bleibt. Ferner sind die Blätter jedes einzelnen Heftes in sich selbständig zu numeriren, damit in Zukunft von 2 zu 2 Jahren die entsprechend erachteten Nachträge gehörig angereiht, und durch diese die jeweiligen Fortschritte sowohl der Kunst, als der landwirthschaftlichen und industriellen Technic unbemerkt, aber um so sicherer und wirksamer in die Schulen und durch diese in die Masse der Nation übertragen werden können.

VIII. Da übrigens der Zeichnungs-Unterricht stets unvollständig bleiben würde, wenn mit der bildlichen Darstellung von Körpern nicht auch die Anschauung derselben verbunden würde, und da sowohl des Verständnisses der Vorlagen (von Seite oft ganz ungebildeter Knaben) als auch der practischen Richtung des gesammten technischen Unterrichts wegen, von absoluter Nothwendigkeit und eben desshalb unbedingt geboten ist, dass das Zeichnen nach Vorlagen von der einfachsten Dorfschule bis zu den vollständigen Landwirthschafts- und Gewerbs-Schulen mit gleichzeitigem Nachbilden körperlicher Vorlagen verbunden werde, so ist gleichzeitig mit dem Inslebentreten der Vorlagen-Sammlung auch das Inslebentreten einer Sammlung körperlicher Vorlagen zu bewirken, deren Verlag gleichfalls der Central-Schulbücher-Verlag zu übernehmen hat, und bezüglich deren Eintheilen nach Cursen u. s. w. dasjenige in analoge Anwendung zu kommen hat, was oben unter Ziffer V. VI. VII., in Absicht auf die Zeichnungs-Vorlagen festgesetzt wurde.

IX. Die körperlichen Vorlagen sind in der Art zu bemessen, dass bei mathematisch begränzten und folglich durch Grundriss, Aufriss und Durchschnitt darstellungsfähigen Gegenständen, durch den Nachweis der zu zeichnenden Flächen und bei Körpern von weniger gesetzmässiger Begränzung, zu deren möglichst klaren Darstellung Licht und Schatten zu Hülfe genommen werden müssen, durch den practischen Nachweis des Schattens, dem Vorstellungs-Vermögen der Jugend aufgeholfen und den Schülern der richtige Tact in dem Gebrauche der zur Darstellung nothwendigen Hülfs-Mittel gewährt werde.

Die Königliche Academie der bildenden Künste, im Vereine mit den Vorständen der drey polytechnischen Schulen des Reiches wird sich von selbst berufen fühlen, diesen grossen, nicht nur für Bayern, sondern auch für das gesammte teutsche Vaterland hochwichtigen Werke, die sorgfältigste Behandlung zu widmen, wo möglich das gleichzeitige Erscheinen einzelner Blätter aus allen Heften und somit die gleichzeitige Reglung des Zeichnungs-Unterrichtes in allen seinen Abstuffungen zu bewirken, und in der möglichst kürzesten Frist das Ziel zu verwirklichen, welches die erhabene Idee des Königlichen Beschützers der Künste und Wissenschaften in deren würdige Hände niedergelegt hat.

München den 13ten December 1835.

Auf

Seiner Königl. Majestät Allerhöchsten Befehl

An

die k. Academie der bildenden Künste.

Die Herausgabe eines Vorlagewerkes für den Zeichnungs-Unterriht betreffend.

Sub-Enclosure (M.) in No. 28.

Einige Schulvisitations-Protocolle vom Jahre 1833–34 geben Zweifel über den Sinn verschiedener Stellen der am 24ten Juli 1833 im unbemerkten Betreffe erlassenen allgemeinen Ausschreibung zu entnehmen, und deuten auf die Nothwendigkeit diessfallsiger Erläuterungen hin.

In Folge dieser Anregung wird hiemit bemerkt, was folgt:

I. *Zu Ziffer III. der Ausschreibung vom* 24ten *Juli* 1833.

Die Natur der Sache fordert, dass die Visitationen der teutschen Schulen in der Regel mit dem Schlusse der keineswegs an den zufälligen Termin Ostern gebundenen Winterschulen allenthalben vollzogen seyen.

In der That lässt sich ein gründliches Urtheil über die Landschulen nur in dem Zeitpunkte der wirklich gefüllten Schule, nicht aber in einer Jahres-Zeit fällen, in welcher die Feld-Arbeit und manigfache andere Rücksichten der Schulfrequenz auf dem Lande stets mehr oder minder nahe treten. Eben deshalb ist auch laut der nunmehr vorliegenden Aufschlüsse das Visitiren vor Ostern bereits bisher in den meisten Schul-Districten des Königreiches üblich gewesen.

Uebrigens versteht sich von selbst, dass eine Ausnahme von der Regel allerdings da Platz greifen kann und muss, wo der unverhältnissmässige Umfang eines Inspections-Districtes oder sonstige ausserordentliche-streng nachzuweisende Hindernisse das Vollenden der Visitation vor Ostern aus irgend einem Grunde unmöglich machen.

II. *Zu Ziffer III. der Ausschreibung vom* 24ten *Juli* 1833.

Die öftere Anwesenheit der Amts-Vorstände in den Gemeinden bilded die erste und unerlässlichste Grundlage jeder wohlgeordneten lebendigen Verwaltung. Namentlich ist den bayerischen Districts-Polizei-Beamten das jährlich mindestens zweimaliche Besuchen jeder Gemeinde durch ältere und neuere Ausschreibungen zur förmlichen Pflicht gemacht.

Das Nichttheilnehmen der Polizeibeamten an den Schulvisitationen würde daher keine andere Folge haben, als den Districts-Verwaltungs-Behörden die persönliche Controlle des ersten und wichtigsten aller Geschäfte (des Geschäfts der Volksbildung und der sittlichen und geistigen Veredlung der Nation) zu benehmen, um ihr Erscheinen an demselben Orte auf andere minder wichtige Tage zu verlegen.

Eine wesentliche Erleichterung haben jedoch die Amts-Vorstände bereits dadurch erlangt, dass ihnen die vertretungsweise Abordnung ihrer Nebenbeamten ohne die gewöhnlich strengen Beweise absoluter Verhinderung gestattet wurde.

Sollten in ausserordentlichen-jedesmal nachzuweisenden Fällen unverschiebliche Geschäfte dem Erscheinen des Beamten sowohl als seiner Stellvertreter bey allen Schulvisitationen hindernd entgegentreten, so müsste jedenfalls nach Einvernahme der Local-Inspection durch Abrede mit dem Districts-Schul-Inspector die Einleitung dahin getroffen werden, dass dieses Nichterscheinen nur die als anstandsfrey bekannten Schulen treffe und dass der Polizei-Beamte oder dessen Ersatzmann unfehlbar in keiner jener Schulgemeinden vermisst werde, für deren Prüfung der Districts- oder Local-Inspector dessen Anwesenheit als nothwendig bezeichnet.

III.—*Zu Ziff. VI. der Ausschreibung vom* 24ten *Juli* 1833.

Es lag bereits in der Absicht der Abschreibung vom 24ten Juli 1833, dass die kurze der Prüfung vorangehende Anrede von dem Districts-Inspector gehalten werde; das diesen Act der Local-Inspection zu wendende Lithographie-Versehen in der benannten Ausschreibung ist daher angemessen zu verbessern.

IV.—*Zu Ziff. VI. der Ausschreibung vom* 24ten *Juli* 1833.

Alle Schulverordnungen der vergangenen, wie der gegenwärtigen Regierung, wollten Vorrückungen aus einer Classe der Werktags- oder Sonn- und Feyertags-Schule in die andere als reines *Internum* der Schulen dem Ermessen des Localschul-Inspectors vorbehalten, die Ueberweisungen aus der Werktags- in die Sonn- und Feyertags-Schulen, also die Entlassung aus der Werktags-Schulpflicht, dann die Entlassungen aus der Sonn- und Feyertags-Schule, also aus der Gesammt-Schulpflicht, als ein das staatsbürgerliche Leben und selbst die einstige Zulassbarkeit zur Ansässigmachung und Verehelichung und zu den verschiedenen sonstigen Zweigen bürgerlicher Wirksamkeit ohne Rücksicht auf Alter und sonstige Verhältnisse, von dem genügenden Bestandenhaben der entsprechenden Prüfung abhängig und durch die Districts-Behörden genau controlirt wissen.

Die Erfahrung hat die Wichtigkeit und Richtigkeit dieser Bestimmungen noch näher dargelegt, und durch unbestreitbare Thatsachen bewiesen, dass der Local-Inspector das Gehässige der Gesetzes-Strenge unmöglich auf sich allein zu nehmen vermag, ohne seine seelsorgerliche Stellung und die unerlässlichen Bande der Liebe und des Vertrauens zu gefährden.

Die Acten beweisen, wie in den nichtcontrolirten Schulen gegen Wort und Geist der Vorschriften der Uebertritt sowohl als der Austritt mit der 1ten Communion oder Confirmation, ohne dass eine Prüfung veranlasst oder dem Erfolg dieser Prüfung irgend eine Wirkung beigelegt wird, verbunden sey,— und tausend biedere Bayern beklagen jetzt eine Nachsicht, welche sie bey sonst eminenter Tüchtigkeit von den Unterofficier-Stellen im

Heere,

Heere, von der Anstellung im Staats und öffentlichen Dienste, von den Ehren-Aemtern des Gemeinde und Stiftungs-Wesens, ja sogar laut der Gesetze vom 11ten Septr. 1825, und 1ten Juli 1834, von den edleren Rechten des Meisterwerdens, des Erlangens eines eigenen Herdes und des Begründens einer eigenen Familie ausschliesst. Was durch die Ausschreibung vom 24ten Juli 1833, in das Gedächtniss zurückgerufen und näher präcisirt wurde, lag daher längst in den allseitigen Wünschen. Ja sehr viele würdige Local-Schul-Inspectionen hatten diess in Berichten, Eingaben und Visitations-Protocollen als das einzige Mittel bezeichnet, dem Gesetze Vollzug zu sichern, ohne die Orts-Pfarrer in eine Collision von Pflichten und in Reibungen mit ihren Pfarr-Kindern zu bringen.

Wohl aber ist der Districts-Schul-Inspector, falls er die Visitationen nicht insgesammt vor Schluss des Wintersemesters abthun kann, gehalten, gemeinsam mit dem Vorstande der Districts-Polizeibehörde einen Tag zu bestimmen, an welchem die von den Local-Inspectionen in Folge der jährlichen Schluss-Prüfung zur Ueberweisung aus der Werktags in die Sonn- und Feyertags-Schule, oder zu Entlassung aus der letzteren reif befundenen Schulpflichtigen der vor Schlusse des Wintersemesters nicht zu Visitation gelangenden Orte an dem Sitze der Districts-Polizey-Behörde zu controlirenden Districts-Prüfung, und zwar die männlichen unter Aufsicht des Gemeinde Vorstehers, die weiblichen unter der Aufsicht einer würdigen, von der Localinspection zu bestimmenden Frau, insoferne erscheinen können, als in der betreffenden Gemeinde Entlassungen mit Schlusse der Winterschule überhaupt herkömmlich sind, und als der Orts Pfarrer in seiner Eigenschaft als Localinspector ihnen bezeugt, dass das Verbleiben in der Schule bis zur Visitation auf ihre Familien-oder sonstigen Verhältnisse nachtheilig einwirken würde.

Auch werden die Districts-Inspectoren im Benehmen mit den Districts-Polizeybeamten, sich von selbst berufen fühlen, dort, wo die zu grosse Entfernung der Ortschaften das Uebernachten der Schulpflichtigen ausser ihrem Wohnorte nach sich ziehen würde, statt Einer solchen Districts Prüfung, deren mehrere in dem Mittelpunkte der vor Ostern nicht visitirt werdenden Schul-Gemeinden angeordnet werden.

Sehr gern gesehen, und als Beweis edlen Eifers für die Sache des öffentlichen Unterrichtes wird es erkannt werden, wenn ausser dem zum Erscheinen verpflichteten Schullehrer auch der Local-Inspector der betreffenden Gemeinde sich persönlich an den Prüfungssitz begeben und an den Prüfungen den für die Visitations-Prüfungen durch Ausschreibung vom 24ten Juli 1833, vorgezeichneten Antheil zu nehmen, ohne dass jedoch ein solches Erscheinen bey diesen bloss im Privat-Interesse einzelner Schüler und Schülerinnen stattfindenden Prüfungen ihnen zur Obliegenheit gemacht werden will.

Auf diese Weise wird die, namentlich durch die neuesten Gesetze von 1825. und 1334. so nöthig gewordene Controle aufrecht erhalten, ohne irgend störend in die Verhältnisse der Einzelnen einzugreifen.

V.—*Zu Ziff. VII. und VIII. der Ausschreibung vom 24ten Juli* 1833.

Das Schreiben der Protocolle durch ausgezeichnete Schüler bleibt an die in der Ausschreibung vom 24ten Juli 1833 festgesetzten Voraussetzungen geknüpft. Die Herstellung eines Duplicates für die Kreis-Regierung erscheint um so weniger nöthig, als die Visitations-Protocolle der Kreis-Regierung nach gemachtem Gebrauche von dem obersten Kirchen und Schul-Rathe an die k. Kreis-Regierung zurückgelangen, und von dem k. Staats-Ministerium des Innern nicht zurückbehalten werden.

München den 18ten Januar 1836.

Auf
Seiner Königlichen Majestät Allerhöchsten Befehl.
An
sämmtliche k. Kreisregierungen Kammer des Innern also ergangen.

Die jährlichen Visitationen der teutschen Schulen nach Masgabe der Ministerial-Entschliessung vom 24ten Juli 1833 betreffend.

No. 29.—PRUSSIA.

Lord *William Russell* to Viscount *Palmerston.*

My Lord, Berlin, 6 May 1836.

In the month of November 1834, Mr. Abercrombie, by the directions contained in your Lordship's despatch of the 29th October of that year, applied to the Prussian Government for information in answer to certain questions (of which a copy is herewith enclosed) relative to the state of National Museums and Libraries in Prussia; it is, however, only lately that I have received from his Excellency Monsieur Ancillon a note upon the subject of those inquiries, of which, and of its Enclosure, I have now the honour to transmit a copy to your Lordship, together with the original documents furnished by his Excellency.

I have also the honour to forward to your Lordship a Memorandum, and its Enclosure, upon the subject of the Royal Museums at Berlin, drawn up from those documents; as also a Translation, with Enclosure, of the Regulations of the Royal Library at Berlin.

I have the honour to be, &c.

Wm. Russell.

The Right Hon.
The Viscount Palmerston, G.C.B.
&c. &c. &c.

Enclosure, No. 1. Questions relative to Museums and Libraries.
Enclosure, No. 2. M. Ancillon to Lord Wm. Russell, 22 April 1836.
Enclosure, No. 3. Memorandum relative to Museums.
Enclosure, No. 4. Regulations of Royal Library at Berlin.

Enclosure 1, in No. 29.

Memorandum of Information desired.

Museum.

1. Is there a National Museum, devoted to the arts, antiquities or natural history, in the capital of ——— ?
2. Under whose control and direction is it placed ?
3. How many directors are attached to it, and what are their salaries ?
4. Into what departments is it divided ?
5. What are the general annual expenses ?
6. Out of what fund are they defrayed ?
7. Who are the principal directors at present ?
8. What the bye-laws regulating the admission of the public to the Museum ?

Library.

1. How many Public Libraries are there in the capital of ——— ?
2. How many librarians attached to each of them, and what are their salaries ?
3. What is the annual expense of books ?
4. What the general annual expenses ?
5. Out of what fund are they paid ?
6. What bye-laws regulate the admission of the public ?
7. Who are the principal librarians at present ?
8. What is the number of volumes in each ?
9. What the number of manuscripts ?
10. What is the nature of the government of these institutions generally ?
11. Are there any annual printed accounts, or reports relating to them ?
12. What is the number of provincial libraries ?
13. Are they under the superintendence of any Government authority ?

Enclosure 2, in No. 29.

M. *Ancillon* to Lord *William Russell.*

Berlin, ce 22 Avril 1836.

Au reçu de la note de M. Abercrombie en date du 12 Novembre 1834, le soussigné s'est empressé de démander au Ministère du Culte et de l'Instruction Publique, les renseignemens que le Gouvernement Britannique a désiré d'obtenir relativement aux Musées et Bibliothèques de la Prusse.

Ce n'est qu'aujourd'hui que, par suite d'une communication de M. le Baron d'Altenstein, le soussigné se voit en état de répondre à ce désir, en transmettant ci-joint à Mylord Russell, &c. les réponses aux différentes questions qui lui ont été adressées sur cet objet et en y joignant les pièces imprimées qui leur servent d'appui.

En

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

En abandonnant à Mylord Russell de porter ces différentes pièces à la connaissance de sa Cour, le soussigné profite de cette occasion pour lui renouveler l'assurance de sa haute considération.

Ancillon.

À Mylord Russell,
&c. &c. &c.

29.
Prussia.

Enclosure 2 (A.) in No. 29.

A. Musées.

Il existe à Berlin

a. Un musée qui a pour but l'avancement des beaux arts et l'étude des objets d'art.
Il est divisé en neuf sections.
Les questions ad 2—8 trouvent leur solution dans le statut ci-joint du 15 Janvier 1835, et dans l'état également ci-annexé de l'année 1835.
Les frais d'entretien de ce musée, comme des musées et collections dénommés ci-aprés tombent à la charge des caisses de l'état.

b. Une collection de plâtres d'après des antiques et des sculptures modernes, qui va être ouverte à l'usage du public.

c. Un musée zoologique et entomologique.

d. Un musée anatomique et zootomique.

e. Un musée minéralogique.

f. Une collection de plantes.

No. 1.
No. 2.

Copies des états des musées ad c. d. e. f, pour l'an 1835, et des règlemens qui s'y rapportent se trouvent ci-annexés.

No. 3-13.

B. Bibliothèques.

Ad. 1. À Berlin il y a une bibliothèque qui est entretenue des fonds de l'état. Il y en a encore d'autres moins grandes à l'Université, à l'Institut Médical et Chirurgical, à tous les gymnases et aux différens ministères, dont l'usage est réservé aux précepteurs et aux étudians, ainsi qu'aux membres de ces ministères.

Ad. 2. jusqu'à 7. L'état ci-joint de 1835, tout comme les règlemens qui s'y rapportent, répondent à ces questions.

No. 19.
No. 20.

Ad. 8 & 9. L'on ne peut indiquer avec exactitude le nombre des volumes et des manuscrits, ni dans la Bibliothèque Royale, ni dans les autres bibliothèques de la capitale.

Ad. 10. Le règlement ci-annexé résout cette question.

Ad. 11. Les rapports annuels des bibliothécaires sur l'administration des bibliothèques ne sont pas imprimés; mais on publie chaque année une liste des ouvrages dont on a augmenté tant la Bibliothèque Royale à Berlin, que les bibliothèques des Universités de Bonn, Breslau, Halle, Königsberg, et Greifswald, dans le courant de l'année.

Ad. 12. L'on ne peut indiquer le nombre des bibliothèques dans les différentes provinces de la monarchie. Les Universités de Bonn, Breslau, Halle, Königsberg et Greifswald, l'Académie de Münster, le Lycée Hosianum à Braunsberg, les 112 gymnases de l'état Prussien, le séminaire des ecclésiastiques évangéliques à Wittenberg, les différens séminaires aux Universités et les séminaires pour les maîtres-d'école; tous ces instituts possèdent des bibliothèques qu'ils entretiennent de leurs fonds particuliers. Les consistoires royaux, les conseils d'école provinciaux, les régences et beaucoup d'églises ont des bibliothèques à l'augmentation desquelles leurs fonds sont spécialement appliqués. Il y a en outre de grandes bibliothèques publiques à Erfurt, Düsseldorf, Thorn, Stralsund, Danzig, Posen, Stettin, Magdebourg, Quedlinbourg, Trèves et Paderborn, qui sont entretenues en partie aux frais de l'état, et en partie des revenus des communes et des fondations.

Ad. 13. Les bibliothèques des Universités, des gymnases, des séminaires, et des écoles primaires, des églises, &c. &c. resortissent au ministère du Culte et de l'Instruction Publique; les bibliothèques des villes sont administrées par les magistrats respectifs, et ressortissent en dernier lieu au Ministère de l'Intérieur.

Enclosure 2 (B.) in No. 29.

(1.)—Statut für das Königliche Museum zu *Berlin.*

Berlin, 15ten Januar 1835.

Wir Friedrich Wilhelm, von Gottes Gnaden, König von Preussen, &c. &c.
haben in Gnaden beschlossen: für das zur Förderung der Kunst und der auf die Betrachtung und das Studium der Kunstwerke sich gründenden Bildung in Unserer Haupt- und Residenzstadt errichtete Museum nachstehendes, die Bestimmungen über die Beaufsichtigung, die Verwaltung und Benutzung desselben enthaltende Statut zur Nachachtung und Befolgung festzusetzen.

§ 1.—Zu dem Museum gehören folgende, theils im Museums-Gebäude, theils in andern Localien aufgestellte Sammlungen:

Bestandtheile des Museums.

1) die Gemälde-Gallerie,
2) die Gallerie antiker Sculpturen,
3) das Antiquarium, bestehend aus den Sammlungen

 a) antiker

a) antiker Vasen, Bronzen, &c.,
b) geschnittener Steine,
c) antiker Münzen,
d) der Münzen und Medaillen des Mittelalters und der neueren Zeit;

4) die Sammlung ägyptischer Alterthümer,
5) der Majoliken und Glas-Malereien,
6) der Kupferstiche und Handzeichnungen,
7) der slavo-germanischen Alterthümer,
8) die ethnographische Sammlung,
9) die Sammlung von Merkwürdigkeiten aller Art, die nicht zur Aufnahme in die vorgenannten Sammlungen geeignet sind, mehr oder weniger der Kunst angehören, an die sich jedoch theils ein künstlerisches, theils ein historisches Interesse knüpft. (Kunstkammer.)

Beaufsichtigung u. Verwaltung der Sammlungen.

§ 2.—Die obere Aufsicht und Verwaltung des Museums, als eines für wissenschaftliche und Kunstzwecke gegründeten Instituts, überweisen Wir dem Ressort Unseres Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten, dem es obliegt, dafür Sorge zu tragen, dass das Institut die ihm von Uns angewiesene Stellung jederzeit einnehme und seine Bestimmung erfülle. Namentlich ressortirt von dem Ministerium unmittelbar alles, was auf die Verbindung des Museums mit der Verwaltung im Allgemeinen und besonders mit sämmtlichen Veranstaltungen für Wissenschaft und Kunst und deren Benutzung für diesen Zweck nähere oder entferntere Beziehung hat. Das Ministerium verfügt hierüber selbstständig nach den von Uns im Allgemeinen in diesem Statut genehmigten Grundsätzen, oder hat an Uns unmittelbar zu berichten und Unsere Bestimmung zu gewärtigen.

Der General-Intendant.

§ 3.—Die specielle Oberaufsicht und Verwaltung des Museums ist dem General-Intendanten nach den in diesem Reglement enthaltenen allgemeinen und speciellen Bestimmungen und mit den ihm darin ertheilten Befugnissen übertragen. Es liegt ihm ob, darauf zu sehen, dass sämmtliche Localitäten der Sammlungen in gutem Stande erhalten bleiben, und dass die Behufs der speciellen Leitung, Anordnung und Verwahrung der einzelnen Sammlungen angestellten Beamten, so wie das übrige Dienstpersonale ihre Pflichten pünktlich erfüllen. Das gesammte Beamten-Personale des Museums ist ihm daher zunächst und unmittelbar untergeordnet und untergeben und hat seinen Weisungen, welche sich auf ihre in diesem Statute festgestellten oder durch besondere Instructionen noch festzustellenden Dienst-Obliegenheiten beziehen, Folge zu leisten, so wie es auch in allen ihre Dienstverhältnisse betreffenden Angelegenheiten sich immer zunächst an ihn zu wenden hat.

§ 4.—In allen Angelegenheiten, die das Museum betreffen, deren Leitung und Beurtheilung sich aus den reglementsmässigen Bestimmungen ergiebt, und nicht der artistischen Commission oder den Directorial-Beamten ausdrücklich vorbehalten ist, verfügt der General-Intendant selbstständig; wo es aber auf neue nicht schon feststehende Anordnungen ankommt, wozu weder ihm, noch der artistischen Commission, noch den Directorial-Beamten die bestimmte Befugniss ertheilt ist, hat er die nöthigen Anträge bei dem vorgesetzten Ministerium zu formiren.

§ 5.—Wir behalten Uns vor, dem General-Intendanten in Sachen des Museums Unsere Befehle unmittelbar zugehen zu lassen und gestatten ihm, nöthigen Falles auch an Uns unmittelbar zu berichten. In solchen Fällen hat er jedoch von Unseren Befehlen, wie von dem Inhalte seiner Berichte dem Ministerium der Geistlichen und Unterrichts-Angelegenheiten Kenntniss zu geben.

§ 6.—Wenn der General-Intendant auf mehrere Tage und Wochen verhindert wird, seine Geschäfte selbst wahrzunehmen, so hat er für die angemessene Vertretung zu sorgen und dazu die Genehmigung Unseres Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten einzuholen. Etwaigen Urlaub hat er bei Uns unmittelbar nachzusuchen, von dessen Bewilligung aber das Ministerium in Kenntniss zu setzen ist.

Die artistische Commission.

§ 7.—Für die Angelegenheiten des Museums, deren Berathung und Anordnung ein auf wissenschaftliche und künstlerische Bildung gegründetes Urtheil in Anspruch nehmen, haben Wir eine artistische Commission verordnet, deren Mitglieder Wir neben dem General-Intendanten aus den Directorial-Beamten und aus Künstlern und Kunstverständigen jedesmal für drei Jahre auf den Vorschlag des Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten zu ernennen Uns vorbehalten.

§ 8.—Die artistische Commission hat die Verpflichtung und die Befugniss zu berathen und zu beschliessen:

a) über die zu bewirkende Erwerbung neuer Gegenstände für die Sammlungen des Museums;
b) über die Entfernung oder Entäusserung eines zu den Sammlungen gehörenden Gegenstandes;
c) über die für die Beschauung vortheilhafteste Aufstellung der Kunst-Gegenstände;
d) über jede wesentliche Veränderung der bisherigen Aufstellung;
e) über die Restauration der in beschädigtem Zustande erworbenen oder schadhaft gewordenen Gegenstände;
f) über die Gesuche um Erlaubniss zum Copiren, in so fern solche zu ertheilen nicht schon der Academie der Künste reglementsmässig zusteht;
g) über die das Museum betreffenden Gegenstände, worüber das Ministerium ihre Meinung erfordert, hat sie ihr Gutachten abzugeben.

§ 9.—Wenn über den Ankauf eines Kunstwerks für die einzelnen Abtheilungen des Antiquariums, des ägyptischen Museums, der Kunstkammer und der Kupferstich-Sammlung

oder

oder sonst über Gegenstände dieser Abtheilungen in Beziehung auf die im vorigen § enthaltenen Bestimmungen zu berathen und zu beschliessen ist, so muss der mit der speciellen Beaufsichtigung und Ordnung der betreffenden Abtheilungen beauftragte Dirigent, respective Assistent, auch wenn er nicht zum Mitgliede der Commission ernannt ist, zu den Berathungen der Commission hinzugezogen und ihm eine Stimme zugestanden werden.

§ 10.—Bei den Ankäufen und Erwerbungen für die Sammlungen des Museums hat die artistische Commission nicht aus den Augen zu lassen, dass die Gemälde und Sculpturen den Kern der Sammlungen bilden, weshalb die zur Vermehrung ausgesetzten Fonds wesentlich zur Erweiterung und Verschönerung der Gemälde- und Sculpturen-Gallerie zu verwenden sind, so dass zwar die Erwerbung eines besonders interessanten Gegenstandes für eine der übrigen Sammlungen nicht ausgeschlossen bleibt, doch nur in dem Maasse zuzulassen ist, dass die Zwecke für jene Hauptgegenstände in keiner Art gefährdet werden. Bei Erwerbungen für die Gemälde-Gallerie ist besonders Bedacht zu nehmen, dass sie nicht blos dazu dienen, vorhandene Lücken durch Werke auszufüllen, an denen die Eigenthümlichkeit der verschiedenen Bildungsstufen ausgezeichneter Meister, bestimmter Kunstschulen und Kunstrichtungen zur Anschauung gebracht wird, sondern dass hauptsächlich auch der Mangel an künstlerisch bedeutsamen Gemälden der grössesten Meister in Laufe der Jahre sich nach und nach möglichst beseitige.

§ 11.—Die Commission hat sich bei ihren Ankäufen und Verwendungen nach der ihr im Anfange jedes Jahres zur Disposition zu stellenden Summe zu richten. Ueberschreitungen dieser Summe, sey es durch Anlehen oder Vorschuss, sind zu vermeiden, und wo solche unter ganz besondern Umständen Statt finden sollen, oder im Fall über die disponible Summe hinaus eine ausserordentliche Bewilligung erforderlich wäre, hat die Commission nicht zu beschliessen, sondern nur ein vollständiges Gutachten abzugeben und bei dem vorgesetzten Ministerium eine desfallsige Bericht-Erstattung an Uns zu beantragen.

§ 12.—Die Beschlüsse der Commission werden nach Stimmenmehrheit gefasst. Es müssen aber alle Mitglieder, auch diejenigen, welche bei dem Vortrage zufällig nicht zugegen, oder nicht vertreten waren, mit ihrem Gutachten gehört werden. Bei gleicher Stimmenzahl entscheidet die Stimme des General-Intendanten.

§ 13.—Der General-Intendant führt in der Commission den Vorsitz, ordnet die Art und Weise des Vortrags an und leitet die Geschäfte. Er bringt die Beschlüsse der Commission zur Ausführung und hat dafür zu sorgen, dass alle das wesentliche Interesse des Museums, namentlich die Ankäufe betreffenden Beschlüsse zur Kenntniss des vorgesetzten Ministeriums gelangen.

§ 14.—Bei längerer Abwesenheit des General-Intendanten führt ein Mitglied der Commission, das dazu auf den diesfälligen Bericht des General-Intendanten von dem Ministerium der Geistlichen Unterrichts- und Medicinal-Angelegenheiten ernannt wird, den Vorsitz und übernimmt die Leitung der Geschäfte.

§ 15.—Bei längerer Abwesenheit der zur Commission gehörenden Directoren können sich diese durch einen ihrer Assistenten vertreten lassen, in welchem Falle sie der Commission dieses schriftlich anzuzeigen haben.

Die Directoren und Assistenten.

§ 16.—Den einzelnen Abtheilungen des Museums sind die Directoren mit ihren Assistenten vorgesetzt, welche auf den Vorschlag des General-Intendanten und den Antrag Unseres Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten von Uns ernannt werden. Es sind dazu jederzeit Männer zu wählen, welche ausser der Qualification für die Verwaltung der ihnen anzuvertrauenden Abtheilung ganz vorzüglich geeignet sind, die allgemeinen Zwecke des Instituts in Beziehung auf Wissenschaft und Kunst zu fördern und Ausgezeichnetes zu leisten.

Die Directoren.

§ 17.—Die Directoren stehen ihrer amtlichen Stellung nach unter dem General-Intendanten und haben sich in allen dienstlichen Angelegenheiten in der Regel zunächst an ihn zu wenden.

§ 18.—Es liegt ihnen ob, für die gute Aufbewahrung und angemessene Aufstellung der Kunstgegenstände, für die Erhaltung der Locale und Geräthe, der Bibliothek und des wissenschaftlichen Apparats der ihrer Aufsicht untergebenen Abtheilung Sorge zu tragen, und sie sind dafür verantwortlich, dass alles in der nöthigen Ordnung bleibe und für Künstler und Kunstfreunde möglichst gemeinnützig werde.

§ 19.—Wenn Reparaturen oder Restaurationen in einer Abtheilung sich als nothwendig ergeben, oder die Benutzung der Gelegenheit zu neuen für die Abtheilung wichtigen Erwerbungen zu befürworten ist, so hat der Director dem General-Intendanten darüber die erforderlichen Vorschläge zu machen, welcher sofort das Geeignete verfügen, oder, falls der Gegenstand von Bedeutung ist, die Sache bei der artistischen Commission zur Sprache bringen und die Hinzuziehung des betreffenden Directors zu den Berathungen der artistischen Commission veranlassen wird.

§ 20.—Wesentliche Abänderungen und zweckmässig erscheinende neue Einrichtungen kann der Director der betreffenden Abtheilung nicht ohne Weiteres ausführen, sondern er hat jedesmal, wo die Entscheidung nicht der artistischen Commission zusteht, zuvor dem General-Intendanten darüber zu berichten, der in den § 4. bezeichneten Fällen den Bericht des Directors von seinem Gutachten begleitet dem vorgesetzten Ministerium vorlegen wird.

§ 21.—Die Directoren sind verpflichtet, ihre Zeit den auf die Gegenstände der ihnen anvertrauten Sammlung sich beziehenden Studien und Arbeiten gewissenhaft zu widmen und gehalten, mit Ausschluss der Sonn- und Feiertage, in ihren Dienststunden, täglich von 11—1 Uhr, in der ihrer Aufsicht untergebenen Abtheilung des Museums gegenwärtig zu seyn.

Für die Tage, an welchen zu den betreffenden Abtheilungen dem Publicum und den Künstlern und Kunstfreunden der Zutritt gestattet ist, und bei den Sammlungen, die täglich

geöffnet sind, ist ihnen freigestellt, mit ihren Gehülfen eine von dem General-Intendanten zu genehmigende Einigung zu treffen, nach welcher während der Besuchstunden immer einer von ihnen in dem Locale anwesend seyn muss, um jede gewünschte Auskunft über Kunstgegenstände bereitwillig und freundlich ertheilen und überhaupt die nöthige Aufsicht wirksam führen zu können. Wenn ein Director durch Krankheit oder sonst wie verhindert werden sollte, in den ihm zugefallenen Dienststunden zu erscheinen, so hat er dieses ungesäumt dem General-Intendanten anzuzeigen, damit dieser wegen der Stellvertretung das Erforderliche veranlasse.

§ 22.—Zu den Obliegenheiten der Directoren gehört es ferner, die Inventarien der Sammlung in Ordnung zu halten, die Cataloge anzufertigen, für den Druck derselben zur rechten Zeit Sorge zu tragen, auch einzelne Theile der Sammlungen durch Druckschriften bekannt zu machen und zu erklären, wozu jedoch, wenn dem Museum dadurch Kosten verursacht werden, zuvor die Genehmigung des vorgesetzten Ministeriums einzuholen ist.

§ 23.—Bei den Directorial-Geschäften und Arbeiten können sich die Directoren der Hülfe ihrer Assistenten unter Zustimmung des General-Intendanten und des Ministeriums bedienen, welches letztere auch befugt ist, einzelne Geschäfte und Arbeiten nach einem zwischen den betreffenden Directoren und Assistenten berathenen und von dem General-Intendanten begutachteten Plane den Gehülfen besonders zu übertragen. Im letztern Falle haben die Directoren nur darüber zu wachen, dass die Arbeit vorschriftsmässig ausgeführt werde.

§ 24.—Das Verhältniss der Directoren zu ihren Assistenten ergiebt sich aus den die letzteren betreffenden Bestimmungen.

§ 25.—Den Directoren sind die ihrer Abtheilung zugewiesenen Gallerie-Diener erster und zweiter Classe untergeben und haben diese die von ihnen erhaltenen Anweisungen und Anordnungen pünktlich zu befolgen und auszuführen. Sollte ein Gallerie-Diener sich Versäumnisse und Vergehen, die Ordnungsstrafen nach sich ziehen, zu Schulden kommen lassen, so hat der Director dem General-Intendanten zur weiteren Veranlassung davon Anzeige zu machen.

§ 26.—Der Bau- und Haus-Inspector und der Castellan sind den Directoren zwar nicht untergeben, sie haben jedoch den Wünschen und Anforderungen, welche die Directoren in Beziehung auf die ihrer Aufsicht anvertrauten Sammlungen an sie richten, willig Genüge zu leisten.

§ 27.—Die Directoren sind verpflichtet, am Ende jedes Jahrs einen Verwaltungs-Bericht zu erstatten, in welchem sie von ihren eigenen Leistungen und denen ihrer Assistenten, über die Beziehungen, in welche sie zu den Vorstehern ausländischer Sammlungen ähnlicher Art getreten, von den Verbindungen, die von ihnen Behufs der Vorschläge zu neuen wichtigen Erwerbungen angeknüpft, ferner über das, was von ihnen selbst in Betreff der ihnen anvertrauten Sammlungen herausgegeben und wie die darauf bezüglichen Arbeiten anderer Gelehrten unterstützt worden sind, Rechenschaft zu geben haben. Diesen Bericht wird der General-Intendant mit seinen Bemerkungen versehen dem vorgesetzten Ministerium einreichen.

§ 28.—Urlaubsgesuche der Directoren sind an den General-Intendanten zu richten, und können von diesem nach Befinden der Umstände für eine Zeit von drei Wochen bewilligt werden. Für einen längern Urlaub und für Reisen jeder Art, die von den Directoren in Angelegenheiten des Museums gemacht werden, ist die Genehmigung des Ministeriums erforderlich.

Die Assistenten.

§ 29.—Die Assistenten bei den verschiedenen Abtheilungen des Museums sind dem General-Intendanten, zunächst aber den Directoren untergeben und haben diese in ihren Dienstgeschäften zu unterstützen, respective die unter Zustimmung des General-Intendanten und mit Genehmigung oder im speciellen Auftrage des Ministeriums ihnen zugewiesenen Arbeiten zu übernehmen und unter der dem betreffenden Director zustehenden Controle auszuführen.

§ 30.—Bei neuen Anordnungen oder Abänderungen der Pläne, nach welchen der Assistent zu arbeiten angewiesen ist, steht es demselben zu, sein von der Ansicht des Directors oder des General-Intendanten etwa abweichendes Votum schriftlich an den letzteren abzugeben, der dasselbe dem an das Ministerium zu erstattenden Berichte beifügen oder bei der artistischen Commission, wenn die Sache dahin gehört, zur Sprache bringen wird.

§ 31.—Die Assistenten müssen mit Ausschluss der Sonn- und Feiertage täglich von 11 bis 1 Uhr in der Abtheilung des Museums, für welche sie angestellt sind, gegenwärtig sein, an den Tagen aber, wo die betreffende Abtheilung dem Publicum, den Künstlern und Kunstfreunden geöffnet, und bei den Abtheilungen, zu denen der Zutritt täglich gestattet ist, nur in den Stunden, die ihnen nach der im § 21. erwähnten Uebereinkunft zufallen. Sie haben dieselben Verpflichtungen zu erfüllen, die in dem gedachten § den Directoren auferlegt sind.—Wenn der Assistent durch Krankheit oder sonst wie verhindert werden sollte, in den ihm zugefallenen Dienststunden zu erscheinen, so hat er dieses ungesäumt dem betreffenden Director schriftlich anzuzeigen, damit dieser für die Vertretung sofort Sorge tragen, nöthigen Falles dem General-Intendanten die erforderliche Anzeige machen könne.

§ 32.—Der Assistent ist gehalten, den Anordnungen des Directors, in sofern sie nicht durch besondere Instruction und Aufträge geordnete Angelegenheiten betreffen, willig Folge zu leisten, und nicht befugt, in der Sammlung, bei der er angestellt ist, eigenmächtig etwas anzuordnen, oder ohne Vorwissen und Zustimmung des Directors und des General-Intendanten, respective ohne besondern Auftrag des Ministeriums sich andern Geschäften und Arbeiten für die Sammlung, als den ihm instructionsmässig zustehenden zu unterziehen.

§ 33.—Die

§ 33.—Die Assistenten haben sich von allem, was in der Abtheilung, für welche sie angestellt sind, vorhanden ist, genau zu unterrichten und mit den Directoren darüber zu wachen, dass nichts beschädigt, sondern alles möglichst gut erhalten werde.

§ 34.—In Abwesenheit des Dirigenten versieht der Assistent dessen Stelle und tritt dann in ein unmittelbares Dienstverhältniss zu dem General-Intendanten.

§ 35.—In allen Dienstsachen, welche ihn nicht persönlich betreffen, hat der Assistent zuerst mit dem betreffenden Director Rücksprache zu nehmen, ehe er sich an den General-Intendanten wendet. In den ihn persönlich betreffenden Angelegenheiten kann er unmittelbar an den General-Intendanten berichten.

§ 36.—Rücksichtlich der Urlaubs-Gesuche gelten die Bestimmungen des § 28. auch für die Assistenten.

§ 37.—Desgleichen kommen auch die im § 25. und 26. über das Verhältniss des Dienstpersonals zu den Dirigenten enthaltenen Bestimmungen bei den Assistenten zur Anwendung, nur sind sie nicht befugt, die Befehle und Anordnungen, die von den Directoren ausgegangen sind, einseitig aufzuheben oder abzuändern.

Der Archäolog des Museums.

§ 38.—Zu den Directorial-Beamten gehört auch der Archäolog des Museums, dessen Functionen mit denen eines Directors unmittelbar zu verbinden jedoch vorbehalten wird.

§ 39.—Die Verpflichtung des Archäologen besteht darin,

a) zur Vervollständigung des Antiken-Vorraths, in dem für die kunstgeschichtlichen Thatsachen des Alterthums die hinlänglichen Beläge dargeboten werden sollen, im Auftrage der artistischen Commission planmässige Ankäufe zu vermitteln,

b) zur wissenschaftlichen Benutzung der Sammlung die nöthigen archäologischen Hülfsmittel, wie z. B. Abformungen, Abbildungen und Zeichnungen in der Sammlung nicht vorhandener, respective unedirter Denkmäler herbeizuschaffen, und dadurch den Vergleich des Vorhandenen mit den Sammlungen des Auslandes zu erleichtern,

c) die vorhandene Sammlung durch öffentliche Mittheilungen, sowohl durch Druckschriften, als auch durch mündliche Vorträge dem wissenschaftlichen und gebildeten Publicum des Aus- und Inlandes nutzbar zu machen.

§ 40.—In seinem Verhältnisse zu dem General-Intendanten und dem Ministerium der Geistlichen Unterrichts- und Medizinal-Angelegenheiten ist er den Directoren gleich gestellt und gelten die im § 17. und 28. enthaltenen Bestimmungen auch für ihn.

Der Restaurator der Gemälde.

§ 41.—Der Restaurator der Gemälde ist mit dem ihm zugeordneten Gehülfen verpflichtet, die nach dem Beschluss der artistischen Commission bestimmten Restaurationen mit Fleiss und Pünktlichkeit auszuführen.

§ 42.—Er nimmt zu dem Behufe an der Aufsicht über die gute Erhaltung der Gemälde Theil und hat auf die etwa nothwendige Restauration vorhandener oder neu angekaufter Bilder den Director, den General-Intendanten und die artistische Commission aufmerksam zu machen und darüber sein Gutachten abzugeben.

§ 43.—In dringenden Fällen, wo der Director der Bilder-Gallerie oder dessen Assistent durch Krankheit oder Abwesenheit an der Erfüllung ihrer Pflichten gehindert werden, ist der Restaurator oder dessen Gehülfe gehalten, die Aufsicht über die Gallerie nach der besondern Weisung des General-Intendanten stellvertretend zu übernehmen.

§ 44.—Der Restaurator hat am Schlusse des Jahres einen ausführlichen Bericht über die von ihm und seinem Gehülfen während des verflossenen Jahres vorgenommenen und vollendeten Restaurationen zu erstatten und diesen dem General-Intendanten einzureichen, der ihn von seinem Gutachten begleitet dem Ministerium vorlegen wird.

§ 45.—Das Verhältniss des Restaurators zu den vorgesetzten Behörden, so wie das des Gehülfen zu dem Restaurator ist dem der Directoren, respective der Assistenten gleich und gelten daher für ihn und seinen Gehülfen die darauf bezüglichen Bestimmungen für die Directoren und deren Assistenten.

Die Unterbeamten.

§ 46.—Das Unterbeamten-Personale des Museums besteht aus den Beamten

a) des Verwaltungs-Büreaus des General-Intendanten,
b) des Hausdienstes,
c) und des Dienstes in den Gallerien und Sammlungen.

§ 47.—Die Unterbeamten, mit Ausnahme des General-Secretairs und des Bau- und Haus-Inspectors, werden von dem General-Intendanten ernannt, wobei derselbe jedoch die Versorgungs-Ansprüche der anzustellenden Individuen zu berücksichtigen hat. Die eintretenden Veränderungen sind dem Ministerium der Geistlichen Unterrichts- und Medicinal-Angelegenheiten anzuzeigen, damit das Erforderliche in Beziehung auf die Justification des Etats und der Rechnungen veranlasst werden könne.

In Ansehung des General-Secretairs und des Bau-Inspectors bleibt zwar die Ausfertigung der Bestallung dem General-Intendanten auch überlassen, es ist derselbe jedoch verpflichtet, sich der Zustimmung des Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten vor der Ernennung zu versichern.

Der General-Secretair u. die übrigen Beamten des Büreaus.

§ 48.—In dem Verwaltungs-Büreau, dem der General-Secretair vorsteht, sind alle Geschäfte zu besorgen, die die Correspondenz des General-Intendanten, der artistischen Commission und der Directoren in Angelegenheiten des Museums, die Ordnung des Archivs und der Bibliothek des Instituts veranlasst.

§ 49.—Der General-Secretair und der Rechnungs- und Registratur-Beamte des Büreaus haben ihren Dienst nach einer von dem General-Intendanten vollzogenen und von dem Ministerium gebilligten besondern Dienst-Instruction zu verrichten.

§ 50.—Die

No. 10.

Der Bau- und Haus-Inspector.

§ 50.—Die Aufsicht über den baulichen Zustand und die Besorgung der œconomischen Angelegenheiten und die polizeiliche Ordnung im Innern des Museums liegt dem Bau- und Haus-Inspector unter der Controle des Verwaltungs-Büreaus, respective des General-Secretairs ob.

§ 51.—Er hat die Contracte und Anschläge der Handwerker zu prüfen, und nach erfolgter Genehmigung die Ausführung zu veranlassen und die Arbeiten der Handwerker und Tagelöhner etc. zu controliren.

§ 52.—Er wacht über die Sicherheit, Reinhaltung und zweckmässige Heizung der Locale und führt zu diesem Behuf die strengste Aufsicht über den Castellan, den Portier, Hausknecht, Ofenheizer, Frotteur etc.

§ 53.—Von ihm werden auch die Ankäufe der nöthigen Utensilien, des Feuerungs-Materials, nach den von dem General-Intendanten genehmigten Lieferungs-Contracten, so wie die Frachten ankommender und zu versendender Kunstwerke etc. besorgt.

§ 54.—Ueber sämmtliche Obliegenheiten ist ihm im Einverständniss mit dem Ministerium von dem General-Intendanten eine specielle Instruction zu ertheilen.

Der Castellan.

§ 55.—Unter der Controle des General-Secretairs und des Haus-Inspectors ist der Castellan nach einer ihm zu ertheilenden speciellen Instruction verpflichtet, über die Sicherung des Hauses vor Feuersgefahr und Einbruch, über die Heizung, die Reinhaltung der Treppen, Gänge und innern Räume des Museums aufs pünktlichste zu wachen, das Aufschliessen und Verschliessen der Gallerie und die Beförderung der an den General-Intendanten, das Verwaltungs-Büreau und die übrigen Beamten eingehenden Briefe und Packete zu besorgen.

Der Portier und der Hausknecht

§ 56.—Zur Aufrechthaltung der Ordnung rücksichtlich des dem Publicum zu dem Museum zu gestattenden Zutritts ist der Portier und für die Besorgung des niedern Hausdienstes der Hausknecht angestellt, welche sich in ihren Obliegenheiten nach den allgemeinen reglementsmässigen Bestimmungen und den ihnen besonders zu ertheilenden Instructionen zu richten haben.

Die Gallerie-Diener.

§ 57.—Für den Dienst innerhalb der verschiedenen Sammlungen des Museums sind die Gallerie-Diener erster und zweiter Classe angestellt. Ihnen liegt ob, nach Bestimmung des Directors der betreffenden Abtheilung, respective des Assistenten den Transport der Kunstwerke innerhalb des Gebäudes und die Aufstellung derselben zu bewirken, auf den Zustand der Kunstwerke beständig zu achten und von jeder Veränderung und Beschädigung dem Director sogleich Anzeige zu machen, ferner für das Reinhalten, Abstäuben der Kunstwerke, respective der Schränke, in denen sie sich befinden, zu sorgen und in sofern sie eine Kunst oder ein Handwerk erlernt haben, dasselbe unentgeldlich zum Besten des Museums auszuüben.

§ 58.—Sie haben dem besuchenden Publicum über alles, was die betreffende Abtheilung anlangt, mit gebührender Bereitwilligkeit Auskunft zu ertheilen und strenge darauf zu wachen, dass die zur Besichtigung und Benutzung der Sammlungen Zugelassenen die zu dem Behuf angeschlagenen Reglements gehörig beobachten. Es stehen ihnen in dieser Beziehung höfliche Erinnerungen zu und haben sie, im Fall diese nicht fruchten sollten, sofort dem Director und dessen Assistenten, respective dem Haus-Inspector oder dem General-Secretair die nöthige Anzeige zu machen.

§ 59.—Die Gallerie-Diener sind zwar in der Regel in die verschiedenen Abtheilungen ein für allemal zu vertheilen, doch kann auch der General-Intendant eine von der Nothwendigkeit gebotene Veränderung und Vertauschung der Plätze ohne Weiteres verfügen.

§ 60.—Sie sind verpflichtet, im Dienste immer in der vorgeschriebenen Livrée zu erscheinen.

§ 61.—Da der Eintritt in das Museum sowohl dem grossen Publicum als auch den Kunstfreunden und Künstlern ganz unentgeldlich gestattet wird, so darf kein Gallerie-Diener von den das Museum Besuchenden unter irgend einem Vorwande etwas fordern, noch annehmen.

§ 62.—Wegen der Dienststunden und der den Gallerie-Dienern speciell zuzuweisenden Verrichtungen ist denselben eine besondere Vorschrift zur Nachachtung zu ertheilen.

Die Verwaltung der Fonds des Museums.

§ 63.—Der Etat des Museums wird auf den Grund des von dem General-Intendanten einzureichenden Entwurfs von dem Ministerium der Geistlichen Unterrichts- und Medicinal-Angelegenheiten und dem Ministerium der Finanzen aufgestellt und mit Erwähnung des Einverständnisses oder der abweichenden Meinung des General-Intendanten Uns zur Vollziehung vorgelegt.

§ 64.—Die Casse des Museums wird bei der General-Casse Unseres Ministeriums der Geistlichen Unterrichts- und Medicinal-Angelegenheiten besonders verwaltet und die Rechnung auf den Grund des Etats nach den für die gedachte General-Casse geltenden Vorschriften geführt.

§ 65.—Die Anweisung auf die Fonds des Museums erfolgt von dem General-Intendanten innerhalb der Grenzen des Etats, in soweit nicht die Disposition durch die im Etat selbst enthaltenen Bestimmungen beschränkt und dem Ministerium überlassen, oder Unsere unmittelbare Genehmigung nachzusuchen ist.

Die Benutzung des Museums.

§ 66.—Um den Zweck, den Wir bei der Stiftung des Museums ins Auge gefasst haben, zu erreichen, ist es Unser ausdrücklicher Wille, dass eine möglichst freie Benutzung der dazu gehörigen Sammlungen gestattet und bewirkt werde.

§ 67.—Zu dem Behuf sind an bestimmten Tagen der Woche die einzelnen Sammlungen dem grösseren Publicum unter den Bedingungen, welche ein die Ordnung sicherndes Reglement näher zu bestimmen hat, unentgeldlich zu öffnen und ist dafür Sorge zu tragen, dass theils durch die Cataloge der einzelnen Sammlungen, theils durch die von den Beamten bereitwillig zu gebende Auskunft die gewünschte Belehrung ertheilt und der bildende Einfluss der Kunst gefördert werde.

§ 68.—Auch an den nicht öffentlichen Tagen ist den Kunstfreunden und Künstlern nach

den

den darüber reglementsmässig festzustellenden Bestimmungen der Zutritt zu den Sammlungen zu gewähren.

§ 69.—Künstler, in sofern sie nicht noch zu den Zöglingen der Academie der Künste gehören und unter der Leitung ihrer Lehrer stehend die Erlaubniss zum Copiren von der Academie erhalten, haben die Erlaubniss zum Copiren von Gemälden und zum Zeichnen nach den Antiken bei der artistischen Commission nachzusuchen und ist ihnen nach gestatteter Zulassung zur Ausführung ihrer Arbeiten jeder mögliche Vorschub zu leisten.

§ 70.—Gelehrten, welche zu ihren wissenschaftlichen Untersuchungen ein fortgesetztes Studium einzelner Kunstwerke nöthig haben, ist der Aufenthalt in den Sammlungen während der Dienststunden der bei denselben fungirenden Beamten zu gestatten. Sie haben sich deshalb an den betreffenden Director zu wenden und von ihm jede zulässige Unterstützung bei ihren Arbeiten und auch die Erlaubniss, Abzeichnungen einzelner Gegenstände zur Erläuterung ihrer Untersuchungen fertigen zu dürfen, zu gewärtigen.

Indem Wir durch vorstehendes Statut die Bestimmungen über die Beaufsichtigung, die Verwaltung und Benutzung Unseres Museums festgestellt haben, befehlen Wir den dabei fungirenden Beamten sich überall darnach zu richten und Unserm General-Intendanten und dem Ministerium der Geistlichen Unterrichts- und Medicinal-Angelegenheiten auf die Befolgung derselben zu achten und die in Verfolg und zur Vollstreckung dieses Statuts erforderlichen Instructionen und speciellen Reglements nach den darin enthaltenen allgemeinen Bestimmungen zu erlassen.

Des zu Urkund haben Wir dieses Statut höchsteigenhändig vollzogen und mit Unserm Königlichen grossen Insiegel versehen lassen.

So geschehen und gegeben zu Berlin, den 15ten Januar 1835.

(L. S.) *Friedrich Wilhelm.*
von Altenstein.

Enclosure 2 (H.) in No. 29.

(7.)—Instruction

für den Director des zoologischen Museums bei der Königlichen Friedrich Wilhelms-Universität zu Berlin, in Betreff der Benutzung des Museums von Seiten der Studirenden.

Nach dem Beschluss des unterzeichneten Departements soll das zoologische Museum der Universität den hier Studirenden zur Benutzung geöffnet werden, und zwar unter folgenden Bestimmungen:

1. Den Studirenden der Königl. Friedrich Wilhelms-Universität wird das Museum wöchentlich zweimal, nämlich im Sommer Mittwochs und Sonnabends von 4 bis 6 Uhr, und im Winter an denselben Tagen von 2 bis 4 Uhr geöffnet.

2. Diejenigen unter ihnen, welche die Naturgeschichte zum Gegenstand eines besonderen Studiums machen, können, auf deshalb geschenene Nachsuchung von dem Director mit Einlasskarten versehen werden, die ein für allemal zu den genannten Stunden gültig sind.

3. Jedoch ist die Zahl solcher zu unausgesetzten Besuchen des Museums befugten Studirenden beschränkt, und es werden für jedes halbe Jahr nicht mehr, als 20, solcher Einlasskarten ausgegeben.

4. Eben so können von den übrigen Studirenden, jedesmal auch nur 20 zugelassen werden.

5. Diese holen ihre Einlasskarten gegen Einzeichnung ihres Namens in den Morgenstunden der genannten Tage von dem Gehülfen des zoologischen Museums ab.

6. Von den Besuchenden dürfen keine Schränke und Schubkasten geöffnet noch die Naturalien betastet oder in die Hände genommen werden.

7. Zu der Zeit, wo die Studirenden das Museum besuchen, ist es für alle andere Personen geschlossen.

Berlin, den 15ten Juni 1814.

Departement des Cultus und für den öffentlichen Unterricht.

(gez:) *Nicolovius.*

Enclosure 2 (I.) in No. 29.

(8.)—Instruction

für den Director des zoologischen Museums bei der Königlichen Friedrich-Wilhelms Universität zu Berlin, die Benutzung des Museums von Seiten der Gelehrten und Naturforscher.

1. Jeder einheimische oder fremde Gelehrte, der irgend ein Fach der Zoologie zum Gegenstand besonderer Untersuchungen und Nachforschungen macht, hat Anspruch auf den ungehinderten Zutritt in das Museum und die freie Benutzung der vorräthigen Sammlungen.

2. Jedoch können die darauf abzweckenden Arbeiten und Untersuchungen nur in dem Local des Museums vorgenommen und durchaus keine Stücke aus demselben verliehen werden.

3. Wer die obige Absicht hegt, hat sich deshalb an den Director des Musei zu wenden,

und von diesem die näheren Bedingungen, die für jedes Fach andere sein können, zu erfahren.

4. Alle im Königlichen Dienste stehende Gelehrte, besonders die Professoren der Königlichen Universitäten und Gymnasien, so wie die Mitglieder der Königl. Academie der Wissenschaften erhalten den freien Gebrauch der Sammlungen, entweder unbedingt, wenn sie die Stüke an Ort und Stelle betrachten, oder gegen einen schriftlichen Revers, worin sie sich für jeden Schaden verantwortlich machen, wenn sie gewisse Abtheilungen zum Behuf genauerer oder fortgesetzter Untersuchungen in einem der Arbeitszimmer vornehmen wollen. Auf diesen Fall ist dafür zu sorgen, dass sie, so lange ihre Arbeit währt, ein Behältniss benutzen können, zu welchem sie den Schlüssel bekommen, und in welchem in ihrer Abwesenheit die Sachen sicher bewahrt stehen.

5. Auswärtige Personen aber, und sonst dem Director nicht hinlänglich bekannte, haben in der Person eines hier ansässigen sichern Mannes vorher einen Bürgen zu stellen oder sich wegen Erlassung dieser Bedingung an das unterzeichnete Departement zu wenden, ehe ihm die Benutzung der Sammlungen unter denselben Bedingungen, wie oben, von dem Director gestattet werden darf.

6. Dieser ist übrigens angewiesen, allen solchen Arbeiten jeden möglichen Vorschub zu leisten, und auf jede Frage nach den vorhandenen Stücken die nöthige Auskunft und Zurechtweisung zu geben.

Berlin, den 15ten Juni 1814.

Departement für den Cultus und öffentlichen Unterricht:

(gez:) *Nicolovius.*

Enclosure 2 (J.) in No. 29.

(9.)—Instruction

für den Director des zoologischen Museums bei der Königlichen Friedrich-Wilhelms Universität zu Berlin, in Betreff der Benutzung des Museums von Seiten des grösseren Publicums.

Nach dem Beschluss des Königlichen Departements soll das zoologische Museum bei der Königl. Friedrich-Wilhelms Universität auch für das grössere Publicum geöffnet werden und zwar unter folgenden Bestimmungen:

1. Den Besuchen einheimischer und auswärtiger Personen beiderlei Geschlechts steht das Museum Dienstags und Freitags von 12 bis 2 Uhr offen.

2. Zu diesem Behuf werden jedesmal 40 Einlasskarten ausgegeben, die nur für den Tag gültig sind, für welchen sie gelöset wurden.

3. Die Einlasskarten werden aber nur an hier einsässige bekannte Personen auf deren schriftliches Begehren mit Bemerken der Personenzahl, die sie einzuführen denken, ausgegeben, und können Tages zuvor vom Museum abgeholt werden.

4. Fremde haben sich also durch ihre hiesigen Bekannte einführen zu lassen.

5. Die Benutzung des Museums geschieht durchaus unentgeldlich.

6. Der Aufgang ist durch die Haupttreppe im Universitäts-Gebäude.

Berlin, den 15ten Juni 1814.

Departement für den Cultus und öffentlichen Unterricht.

(gez:) *Nicolovius.*

Enclosure 2 (K.) in No. 29.

(10.)—Instruction

für den Gehülfen und Inspector des zoologischen Museums der Königlichen Friedrich-Wilhelms Universität zu Berlin.

Nachdem das Departement des Cultus und öffentlichen Unterrichts beschlossen hat, den A. Rammelsberg aus Braunschweig zum Gehülfen bei dem zoologischen Museum hiesiger Universität anzustellen, so ist für ihn diese Instruction ausgefertigt worden und verpflichtet sich derselbe bei Uebernahme der Stelle eines Gehülfen und Arbeiters am Zoologischen Museum hiesiger Universität den Inhalt dieser Instruction in allen Punkten und allen seinen Kräften zu erfüllen, und verbindet sich eidlich zur Befolgung der darin ertheilten Vorschriften.

1. Seine hauptsächlichen Arbeiten bestehen in Allen dem, was zur kunstmässigen Aufstellung aller in dem Zoologischen Museum enthaltenen Thier-Arten und ihrer Theile und zu der Zubereitung derselben für diejenige Art der Aufbewahrung gehört, welche der Aufseher des Zoologischen Museums bestimmt. Diese Arbeiten sind: Ausbalgen, Ausstopfen, Auftrocknen, Aufblasen, Einsetzen in Weingeist, Ausbreiten der Insecten u. s. w., ferner alle Vorbereitungen und Einrichtungen der Kasten, Gestelle, Gläser, Erhaltungsflüssigkeiten u. s. f. Zugleich das hierbei vorkommende Schreiben der Etiketten, Verzeichnisse und dergl.

2. Zur Erhaltung der aufbewahrten Gegenstände, die ihm zur besondern Pflicht gemacht wird, wendet er alles an, was sie gegen Motten, Raub-Insecten, Feuchtigkeit, Staub und Licht sichert, oder die schon angegriffenen wieder herstellt. Dazu gehört das sorgfältige Verschliessen der Schränke, Kasten und Fenster, das Herablassen der Vorhänge, das zu

 dienlichen

dienlichen Zeitpunkten vorzunehmende Auslüften, Auspochen, Backen, das stete Nachsehen in den Sammlungen zur Entdeckung der Beschädigungen, und die Ausbesserung der beschädigten Gegenstände.

3. Ueberhaupt führt er pünktlich und nach seinen Kräften alle die ihm von dem Aufseher aufgetragenen Arbeiten und Geschäfte aus, welche dieser für die Anstalt zweckmässig und nützlich hält, und sucht mit Bereitwilligkeit sich noch diejenigen Kenntnisse und Fertigkeiten zu erwerben, die ihm von dem Aufseher, als dem Museum ersprieslich, angezeigt und empfohlen werden.

Keine der ihm aufgetragenen, seine Kräfte nicht übersteigenden Arbeiten ist ihm zu mühsam oder zu gering.

4. Er führt eine sorgfältige Aufsicht auf alle Zimmer, Thüren und Fenster des Museums und hütet dasselbe vor Diebstahl, Feuer, Beschädigung durch das Wetter, auf die ihm mögliche Weise. Jeden Morgen und jeden Abend visitirt er zu diesem Entzwecke alle Zimmer des Museums.

5. Er ist bei den Besuchen des Museums und bei den gestatteten Benutzungen der einzelnen Sammlungen gegenwärtig, zeigt sich gegen die Besuchenden gefällig, ist ihnen zu näherer Betrachtung der Gegenstände gern behülflich, ertheilt ihnen willig die verlangte Auskunft, aber verhütet mit eben so viel Gewissenhaftigkeit als Bescheidenheit und Höflichkeit alles Angreifen und Handhaben der Sachen, und giebt nicht zu, dass irgend Einzelne von der Gesellschaft in ein anderes Zimmer des Museums gehn, sondern behält sie alle in seiner Gegenwart.

6. Ohne Erlaubniss des Aufsehers lässt er für sich nie Jemand in das Museum ein, und unter keinem Vorwande vertraut er fremden Personen Schlüssel desselben an.

7. Unter keinem Vorwande und Namen nimmt er irgend eine Erkenntlichkeit für das Einlassen und Umherführen und das Zugegensein bei Besuchen.

8. Er ist für alle in dem Zoologischen Museum aufbewahrten Gegenstände verantwortlich, und erlaubt sich nie, irgend ein Stück, wenn es ihm auch noch so unbedeutend und verdorben scheinen sollte, ohne die ausdrücklich darüber eingeholte Meinung des Aufsehers, daraus zu entfernen.

9. Er sucht auf jede erlaubte Art zu der Vermehrung und Vervollkommenung der im Museum enthaltenen Sammlungen beizutragen, und giebt dem Aufseher sogleich Nachricht, wenn er etwas dahin Einschlagendes in Erfahrung bringt, das dieser zum Besten der Anstalt benutzen könnte.

10. Er darf nie eine Naturalien- oder Präparaten-Sammlung für sich selbst oder für einen Andern machen, und eben so wenig mit solchen Gegenständen Handel oder Tausch treiben.

11. Gegen den Aufseher des Zoologischen-Museums beträgt er sich, wie gegen den Vorgesetzten, dem er zunächst verantwortlich und untergeordnet ist, und gegen die noch neben und mit ihm am Museum Angestellten, wie es der gemeinschaftliche Zweck und gute Verträglichkeit verlangt. Er giebt ihnen nach seinen besten Einsichten Bescheid, unterweist sie gern und ohne Rückhalt in den Fertigkeiten und Kenntnissen, die er besitzt, und hilft willig die Arbeiten ausführen, welche entweder überhaupt gemeinschaftlich wirkende Kräfte fordern, oder ohne seine Beihülfe gar nicht zu Stande gebracht werden könnten. Bei allen Arbeiten ist überhaupt das Beste des Museums allen übrigen Rücksichten voranzustellen, und wenn eine Arbeit durch Aufschub leiden würde, so muss sie einer schon angefangenen unbedenklich vorgezogen werden.

Berlin den 19ten April 1811.

Departement des Cultus und des öffentlichen Unterrichts.

(gez:) v. *Schuckmann.*

Enclosure 2 (L.) in No. 29.

(11.)—Instruction

für den Aufwärter des Zoologischen Museums der Königlichen Friedrich-Wilhelms Universität zu Berlin.

1. Der Aufwärter des Königlichen zoologischen Museums hat die Reinigung und Heitzung der Zimmer, so wie die Wege und Bestellungen für dasselbe zu besorgen und bei den Arbeiten des Gehülfen des Zoologischen Museums die nöthige Handreichung zu leisten.

2. Die Reinigung der Säle, Zimmer, Corridors und Treppen des Museums kann er theilweis durch seine Frau oder eine gemiethete Magd, für die er jedoch völlig verantwortlich ist, verrichten lassen, und ist von ihm nur dahin zu sehen, dass

a. in jedem Zimmer, in welchem gearbeitet wird, täglich einmal ausgekehrt und der Staub mit feuchten Tüchern von den Tischen, Schränken und Fenstern abgenommen werde,

b. dasselbe mit gleicher Sorgfalt in den übrigen Zimmern geschehen so oft es nach Massgabe der Jahreszeit oder anderer Umstände vom Director oder Gehülfen für nöthig gehalten wird,

c. dass das ganze Museum wenigstens halbjährig in den Ostern- und Michaelis-Ferien (sonst aber auch jedes Zimmer so oft es Z. B. in Sommer der Motten wegen nöthig gefunden wird) durchaus und gründlich mit Wasser gereinigt d. h. der Fussboden gescheuert, die Fenster gewaschen, die Vorhänge abgenommen und ausgeklopft und die Schränke auch oberhalb vom Staube völlig befreit werden,

d. dass endlich der Corridor im Hauptgebäude bis an die grosse Treppe und von dieser Treppe der Theil, der aus dem mittlern Stockwerk an der Seite des Museums auf das dritte Stockwerk führt, stets rein gehalten und deshalb auch zu bestimmten Zeiten gewaschen werde.

3. Die frei stehenden grossen Säugethiere hat er wöchentlich einmal nach Anleitung des Gehülfen sammt ihren Gestellen abzuputzen und sogleich zu melden, wenn er an ihnen oder sonst irgendwo Motten bemerkt.

4. Er ist aber nicht befugt, die in den Schränken aufbewahrten Thiere eigenmächtig zu reinigen, oder nur einen derselben anders als auf Befehl des Directors oder Gehülfen zu öffnen.

5. Ueberhaupt ist er verantwortlich für jeden Schaden, der durch seine oder seiner Frau oder seiner Stellvertreter erwiesene Unvorsichtigkeit angerichtet wird, und soll ihm der Ersatz desselben von seinem Lohn abgezogen werden. Er hat sich daher mit dem Reinigen der Gläser, worin Thiere in Weingeist aufbewahrt sind, oder Schrankfenster nicht anders als auf ausdrücklichen Befehl seiner Vorgesetzten zu befassen, noch weniger darf er irgend etwas von den Naturalien anders, als wenn es ihm aufgetragen worden, reinigen wollen.

6. In den Wintermonaten hat er das Arbeitszimmer des Gehülfen und dasjenige Zimmer des Museums zu heizen, in welchem der Director gerade beschäftigt ist. Diess geschieht so früh, dass die Zimmer spätestens um 7 Uhr warm sind. Das dazu nöthige Holz wird ihm vom Castellan angewiesen und von ihm selbst in Vorrath auf das Museum geschafft, Er darf sich auch nicht entziehen, wenn in einzelnen Fällen mehre Zimmer zu heizen sein sollten.

7. Das für das Museum und die Arbeiten des Ausstopfens nöthige Wasser hat er immer in der erforderlichen Menge und frisch herbei und dagegen das schmutzige Wasser nebst dem Abfall fortzuschaffen, ersteres ohne erst daran erinnert zu werden, letzteres nie ohne vorher angefragt zu haben, ob vielleicht noch etwas Brauchbares darin enthalten sei.

8. In allen Angelegenheiten des Museums hat er dem Director und Gehülfen unbedingten Gehorsam zu leisten und die von ihnen erhaltenen Aufträge unverzüglich und auf das Pünktlichste auszurichten, auch täglich zweimal zu einer bestimmten Zeit bei Beiden anzufragen, ob dergleichen für ihn zu thun sei.

9. Dagegen sind diese nicht berechtigt, irgend einen persönlichen Dienst, Z. B. die Reinigung ihrer Wohnungen oder Bestellungen in ihren Privatangelegenheiten, von ihm zu fordern.

10. In Hinsicht auf Bestellungen für das Museum, mit welchen kleine Auslagen verbunden sind, hat er sich wegen deren Vorschuss oder Wiedererstattung an den Gehülfen zu halten, und werden schriftliche Berechnungen gemachter Auslagen ihm nicht gestattet.

11. Es ist ihm ausdrücklich verboten, irgend Jemand ohne Vorwissen und Erlaubniss des Directors den Eintritt in das Museum zu gestatten, oder wohl gar Fremde zum Besehen desselben hineinzuführen.

12. Er macht sich ausdrücklich verbindlich, von Niemand, unter welchem Vorwand es auch sei, Trinkgelder oder irgend eine andere Erkenntlichkeit anzunehmen, es sei denn, dass der Director in einzelnen besondern Fällen seine Einwilligung dazu gebe.

13. Er hat jeden Abend vor Sonnenuntergang die Runde durch alle Zimmer des Museums zu machen, alle Fenster wohl zu verschliessen, die Vorhänge niederzulassen, nach den Oefen zu sehen, ob das Feuer ganz ausgebrannt sei und dem Director Bericht zu erstatten, dass sich alles in Ordnung befinde.

14. Es wird ihm ernstlich verboten, nach dieser Zeit oder wohl gar nicht mit Licht anders als zum Einheizen in das Museum zu kommen.

Berlin, den 12ten August 1813.

Departement des Cultus und des öffentlichen Unterrichts.

(gez:) v. *Schuckmann.*

Enclosure 2 (M.) in No. 29.

(12.)—Instruction

für den zweiten Professor der Anatomie und Prosector des anatomischen Theaters und Museums an der Königlichen Friedrich Wilhelms Universität zu *Berlin.*

1. Der zweite Professor der Anatomie ist zugleich Prosector des anatomischen Theaters und Museums.

2. Um die Liebe für diese Anstalten ungetheilt zu bewahren, darf derselbe, weder für die menschliche Anatomie im gesunden und kranken Zustande, noch für die vergleichende Anatomie eine eigne Sammlung anlegen, sondern alles, was er Merkwürdiges findet und etwa zum Geschenk erhält, fällt an das Anatomische-Museum.

3. Dagegen bleibt ihm unbenommen, die zu seinen Vorträgen nöthigen Präparate, als seinen vergänglichen Apparat, in einem eigenen Spinde auf dem anatomischen Museum und dem anatomischen Theater aufzustellen; so wie aber etwas darunter vorkommt, das dem anatomischen Museum wenigstens in der Art fehlt; so fällt es an dieses.

4. Sonst stehen ihm alle zu seinen Vorlesungen nöthigen Präparate des anatomischen Museums, so wie die für die Vorlesungen noch besonders auf dem anatomischen Theatre aufbewahrten Präparate zum freien Gebrauch, und hat er möglichst darauf zu sehen, dass

immer

immer weniger Präparate vom Museum zu den Vorlesungen nöthig werden und die allein hierzu bestimmten auf dem anatomischen Theater sich möglichst mehren.

5. Verpflichtet sich derselbe zu lesen:

a. in jedem Halbjahr Osteologie
b. im Winterhalbjahr die Syndesmologie und die Lehre von den Aponeurosen (*publice*)
c. im Winterhalbjahr die Splanchnologie
d. im Somerhalbjahr einen grösseren oder kleineren Theil der chirugischen Anatomie, oder die Lehre von den Regionen des menschlichen Körpers.

6. Die Vorlesungen, welche der erste Professor, und welche der zweite Professor halten, werden, um alle Collissionen zu vermeiden, von ihm nicht gelesen, so wie sie sich wiederum seiner Vorlesungen enthalten, es sei denn: dass wegen Krankheit oder anderer dringender Ursachen, oder wegen freier Verabredung darin Abänderungen getroffen werden, denn alle drei Lehrer sind gemeinschaftlich verbunden, nirgend in dem Vortrage der anatomischen Disciplinen eine Lücke zu lassen, und sich wechselseitig zu unterstützen.

7. Auf dem anatomischen Theater leitet er die Arbeiten der Präparanten und widmet diesen täglich ein paar Stunden, besonders den Anfängern, und ist wenigstens die Zeit des Präparirens hindurch auf dem anatomischen Theater zu finden, um überall wenn er sich auch mit andern anatomischen Arbeiten beschäftigt, Hülfe leisten zu können.

8. Er besorgt auch alle anatomischen Einspritzungen, sei es mit Wachs, Gyps oder Queeksilber.

9. Er nimmt keine andern Leichen zu den Einspritzungen, oder zu seinen Vorlesungen, als die ihm von dem ersten Professor angewiesen sind. Da dieser nämlich auch die Leichen für die anatomischen und chirurgischen Cursus bestimmen muss, so hat er auch die Leichen zum Präpariren zu den Vorlesungen u. s. w. auszuwählen und zu vertheilen, damit für Alles gesorgt und die nöthige Controlle beschafft wird, auch keine Missverständnisse durch verschiedenartige Anordnungen bei dem Castellan und dem Inspector entstehen, sondern eine Einheit im Ganzen, namentlich bei den Präparanten erhalten wird. Dagegen ist der erste Professor verpflichtet, die Leichen oder Theile derselben, welche der zweite Lehrer zu seinen Vorlesungen geeignet hält, diesem auf sein Verlangen anzuweisen, wenn er sie nicht selbst für die seinigen oder für die Cursus nöthig gebraucht.

10. Im Sommerhalbjahr präparirt er täglich auf dem anatomischen Museum, zur Bereicherung desselben mehr oder weniger, je nach dem Bedürfniss desselben, und hauptsächlich was der Director jedesmal am nöthigsten findet.

11. Ausserdem steht ihm aber frei, eigene Untersuchungen zu führen falls sie nicht mit denen vom Director gewünschten zusammen (§ 10.) fallen.

12. Was der Director Z. B. für seine Vorträge in der Academie der Wissenschaften, untersucht wissen will, ist, wenn es neue Entdeckungen mit sich führt, dessen literarisches Eigenthum. Dagegen ist dem Prosector Alles, worauf ihn seine selbsgewählten Untersuchungen führen, literarisch eigen.

13. Wenn Candidaten zu ihren Inaugural-Dissertationen Gegenstände, die auf dem anatomischen Museum aufbewahrt werden, zu beschreiben oder abzubilden wünschen, so verweist er sie deshalb an den Director.

14. Er selbst giebt ebenfalls weder Beschreibungen noch Abbildungen von den Gegenständen des Museums heraus, ohne vorher mit dem Director darüber gesprochen und dessen Einwilligung dazu erhalten zu haben.

15. Er hat wie der Director darauf zu sehen, dass die Präparate im möglichst guten Stande erhalten bleiben, und wenn etwas abgeht, dass der Abgang sobald es sein kann, auf das Beste ersetzt wird.

16. Der zweite Prosector, der Castellan und Inspector des anatomischen Theaters, so wie der Gehülfe und Inspector des anatomischen Museums, haben ihm, in Abwesenheit des Directors, in allen Amtsgeschäften Folge zu leisten.

17. Ausser seinem Gehalt und dem Honorar für die Vorlesungen, empfängt er die Hälfte der Gebühren für das Präpariren.

Berlin den 28ten April 1832.

Ministerium der Geistlichen, Unterrichts- und Medecinal-Angelegenheiten.

(gez:) von *Altenstein.*

Enclosure 2 (N.) in No. 29.

(13.)—Instruction

für den zweiten Prosector des anatomischen Theaters und Museums an der Königlichen Friedrich-Wilhelms-Universität zu *Berlin.*

1. Der zweite Prosector ist sowohl für das anatomische Theater, als für das anatomische Museum thätig.

2. Er besorgt die anatomischen Präparate, welche für die Vorlesungen des ersten Professors frisch gearbeitet werden müssen, wogegen ihm dieser dieselben Präparate.—so weit sie erhalten werden können—wiederum nachher zu seinen Repetitionen überlässt.

3. Sowohl Vormittags als Nachmittags während der Zeit des Präparirens ist er auf dem anatomischen Theater, um abwechselnd, wie es die Arbeiten erfordern, theils diese zu besorgen theils den Präparanten im Seciren Unterricht zu ertheilen.

4. Im Winterhalbjahr hält er ein Repetitorium der anatomischen Vorlesungen des ersten Professors, so dass er in vier Stunden zusammenfasst, was jener in deren sechs vorträgt, daher er auch nur solche Zuhörer zu seinen Repetitorien zulässt, die schon die ausführlicheren Vorlesungen eines Professors einer preussischen Universität besucht haben.

5. Es steht ihm auch frei im Sommerhalbjahr über einzelne Theile der Anatomie, welche die andern Lehrer nicht vortragen Vorlesungen zu halten, falls sie nicht etwa durch freie Verabredung einzeln mit einander darin tauschen.

6. Er darf sich keine Sammlung, weder für menschliche noch für vergleichende Anatomie, im gesunden oder kranken Zustande der Theile anlegen, sondern alles, was er auf dem anatomischen Theater oder sonst Merkwürdiges findet, fällt an das anatomische Museum.

7. Zu den Präparaten, welche im Winterhalbjahr beschafft werden nimmt er keine, als von dem ersten, oder in dessen Auftrage von dem zweiten Professor angewiesenen Leichen.

8. Bei dem Injiciren ist er dem ersten Prosector auf dessen Wunsch behülflich, um eine solche Fertigkeit zu erlangen, dass er ihn im Nothfall ersetzen kann.

9. Im Sommerhalbjahr präparirt er auf dem anatomischen Museum in der Regel in den Vormittags-Stunden von 8 bis 12 Uhr, und wenn es dringende Umstände nöthig machen, auch einige Nachmittags-Stunden, und nur was der Director nöthig findet.

10. Wenn bei dem was der Director für seine Zwecke zu präpariren aufgiebt, sich etwas neues findet, so ist es dessen litterarisches Eigenthum.

11. Was dagegen der zweite Prosector bei seinen eigenen Untersuchungen in andern Stunden bei andern Gegenständen findet bleibt sein unbestrittenes litterarisches Eigenthum.

12. Er beschreibt und zeichnet keine Gegenstände des Museums ohne Bewilligung des Directors, erlaubt dies auch anderen nicht, und lässt Keinem Gegenstände vom Museum verabfolgen, die nicht der Director ausdrücklich dazu bestimmt hat, und es wird wie bisher daraus nichts verliehen, sei es auch auf noch so kurze Zeit.

13. Mit der grössten Sorgfalt nimmt er sich der Präparate sowohl auf dem anatomischen Museum, als auch deren an, welche auf dem anatomischen Theater zu den Vorlesungen aufbewahrt werden, und so wie der Weingeist trübe wird oder verdunstet, in welchem sich Präparate befinden, oder so wie sich Motten und Larven in trockenen Präparaten zeigen, lässt er das Nöthige vom Gehülfen oder Inspector besorgen, oder thut es selbst.

Berlin, den 28ten April 1832.

Ministerium der Geistlichen, Unterrichts- und Medicinal-Angelegenheiten.

(gez:) von *Altenstein.*

Enclosure 2 (O.) in No. 29.

(14.) Instruction

für den Castellan der Anatomie bei der Königlichen Friedrich Wilhelms-Universität zu *Berlin.*

1. Der Castellan der Anatomie hat die Befehle sowohl des Ministerii der Geistlichen, Unterrichts- und Medicinal-Angelegenheiten als des Kriegs-Ministerii pünktlich zu erfüllen.

2. Ebenso hat er in Allem, was sein Amt betrifft, die Befehle der den gedachten Ministerien untergeordneten Behörden zu befolgen, also nicht nur die Befehle der Universität und der medecinisch-chirurgischen Militair-Academie hierselbst, überhaupt, sondern auch zunächst der Professoren der Anatomie und Chirurgie, so wie auch die des Prosectors, und aller übrigen Professoren, welche auf dem anatomischen Theater Vorlesungen halten, oder von den chirurgischen Instrumenten Gebrauch zu machen berechtigt sind.

3. So wie er gegen seine Vorgesetzten stets die ihnen schuldige Ehrfurcht zu beobachten hat, so muss er auch gegen die Studirenden höflich und bescheiden sein.

4. Der Castellan muss den Umlauf aller der ihm von dem Directorio oder dem Decan der Militair-Academie übergebenen Papiere ungesäumt besorgen.

5. Der Castellan muss bei allen öffentlichen Verhandlungen, welche auf der Anatomie Statt finden, folglich während aller daselbst zu haltenden Vorlesungen, so wie während der Abhaltung der anatomisch-chirurgischen Staats-Prüfungen u. s. w. daselbst gegenwärtig sein, und namentlich an den sechs Wochentagen in den sechs Wintermonaten jeden Morgen von 9 bis 12 Uhr in dem zu seinen Geschäften bestimmten öffentlichen Locale anzutreffen sein, oder Falls er durch Krankheit oder in Folge eines höheren Auftrags, daran verhindert sein sollte, den Professoren der Anatomie oder dem Prosector davon Nachricht geben.

6. Der Castellan hat darauf zu sehen, dass der Aufwärter der Anatomie seine Pflichten pünktlich erfülle; jedoch wird er sich bei seinen Aufträgen und Erinnerungen der Bescheidenheit befleissigen.

7. Der Castellan muss auf Alles, was zur Anatomie gehört, auf das Gebäude selbst, auf das Hausgeräthe, auf die anatomischen und chirurgischen Instrumente und Bandagen, auf die Bücher, auf Holz, Torf, Kohlen, Licht u. s. w. ein wachsames Auge haben, damit Diebstahl und Feuers-Gefahr verhütet werden. Derselbe muss ferner die Anatomie zu gehöriger Zeit öffnen und schliessen, auch alles gehörig verwahren, und an die dazu Berechtigten nichts ohne Schein verabfolgen, andern aber ohne Anweisung der Professoren und Geheimen

 Medicinal-

Medicinal-Räthe Rudolphi und Kluge, denen die Oberaufsicht über die vorhandenen anatomischen Präparate, die Bücher-Instrumenten- und Bandagen-Sammlungen anvertraut ist nichts mittheilen, da er für Alles zu haften hat.

8. Daher muss der Castellan auch besonders über das Einheizen im ganzen Gebaüde die Aufsicht führen, nicht zugeben, dass Kohlen-Pfannen und Licht in die Zimmer der Präparanten gebracht werden, noch das irgend Jemand Taback rauche, eben so muss er darüber wachen, dass die möglichst grösste Reinlichkeit beobachtet wird, dass die Ventile stets in Ordnung, und so viel es seyn kann Tag und Nacht offen sind, das Niemand ohne specielle Erlaubniss der Professoren der Anatomie ausser den gewöhnlichen Stunden daselbst präparire.

9. Im Winter muss der Castellan der Anatomie alle Cadaver in Empfang nehmen, und darauf sehen, dass sie von dem Aufwärter zu gehöriger Zeit gereinigt, gewaschen und rasirt werden, damit sie nie anders als von allen Unsauberkeiten frei auf die Präparanten-Tische kommen. Auch müssen die angekommenen Cadaver vor 9 Uhr des Morgens mit Nummern versehen sein, die mit den zu ihnen gehörigen Leichenzetteln übereinstimmen. Auch hat der Castellan darauf zu sehen, dass die, an die Cadaver gehefteten Nummern möglichst lange daran bleiben, und dass nichts von den Cadavern verschleppt oder gestohlen werde. Daher soll er auch bei dem Einpacken und Wegschaffen der verarbeiteten Cadaver gegenwärtig sein, und Niemanden die Todten-Kammer anvertrauen.

10. Lassen Prüfungs-Candidaten die zu ihren Lectionen erforderlichen Präparate heimlich oder öffentlich durch andere anfertigen, so ist der Castellan dafür verantwortlich; daher wird ihm zur Pflicht gemacht, dies durch strenge Wachsamkeit zu verhindern.

11. Sollten auf dem anatomischen Theatre Unordnungen vorfallen, die er nicht beilegen kann, sollten ihm die Studenten oder der Anatomie-Aufwärter daselbst etwas in den Weg legen, so hat er sich deshalb zuvörderst an die Professoren der Anatomie zu wenden, um die Sache in der Kürze beizulegen. Kann die Sache aber nicht beigelegt werden, oder hat er in andern Punkten zu klagen, so wendet er sich entweder an den Rector der Universität oder an den Director der medecinisch-chirurgischen-Militair-Academie, je nachdem die Sache geeignet ist.

12. Da die Geschäfte des Castellans für die sechs Sommer-Monate fast ganz ruhen, so ist derselbe während dieser Zeit verpflichtet dem Director des anatomischen Museums oder dem Prosector an den sechs Wochentagen täglich wenigstens drei Stunden im Verfertigen der Präparate behülflich zu sein.

Berlin, den 13ten April 1829.

Der Minister der Geistlichen, Unterrichts- und Medecinal-Angelegenheiten.

Der Minister des Kriegs.

(gez:) von *Hake.*

Enclosure 2 (P.) in No. 29.

(15.)—Instruction

und Bestallung für den Wärter des anatomischen Museums der Königlichen Friedrich-Wilhelms-Universität zu *Berlin.*

Nachdem des Königs Majestät durch die allerhöchste Cabinets Ordre vom 13ten v. M. zu genehmigen geruht haben, dass dem N. N. die bei dem hiesigen Königlichen anatomischen Museum erledigte Wärterstelle übertragen werde, so ernennt das Ministerium denselben hierdurch zum Wärter des gedachten Museums unter der Bedingung, dass er seine Pflichten in dieser Eigenschaft treu und redlich erfülle, sich die Conservation der Präparate des Museums zur angelegentlichsten Pflicht mache und überhaupt allen seinen Obliegenheiten, welche die folgende Instruction ihm vorschreibt, pünktlichst nachkomme. Das Ministerium erwartet, dass derselbe das in ihn gesetzte Vertrauen in jeder Beziehung rechtfertigen, und sein Benehmen und seine Führung stets so sein werde, wie es dem Wärter einer Königlichen Anstalt geziemt.

1. Der Wärter des Anatomischen Museums hat dem Director desselben in allen, dieses Institut betreffenden, Dingen strenge und pünktliche Folge zu leisten, auch ist derselbe dem zweiten Professor der Anatomie und dem Prosector in Allem was deren Geschäfte auf dem Museum betrifft, und in sofern seine Dienstleistungen nicht für den Director des Museums in Anspruch genommen sind, gehorsam schuldig.

Er hat nicht allein dem Director desselben, sondern auch dem zweiten Professor der Anatomie, dem Prosector und dem Gehülfen des Museums bei ihren Arbeiten und Präparationen auf dem Museum dienstfertig Hand zu leisten.

2. Zu jeder Zeit, in welcher Präparate für die Vorlesungen zurechtgestellt, und Vorlesungen mit Demonstrationen im Auditorio des Museums von den Mitgliedern dieses Instituts gehalten werden, muss der Wärter gegenwärtig sein. Er hat die von den Mitgliedern des Instituts zu ihren Vorlesungen benutzten Präparate von ihrem Orte, im Museum, in den Hörsaal und wohl gehalten wieder zurück zu bringen, und die systematische Ordnung, in welcher die Präparate aufgestellt sind, sich fest einzuprägen und dieselbe jedesmal genau zu beobachten.

3. Ausserdem muss der Wärter während des Sommers von 7 Uhr Morgens bis 1 Uhr Nachmittags

Nachmittags auf dem Museum gegenwärtig sein. Hier hat er die ihm von dem Director- und dem Prosector aufgegebenen Dienste zu leisten. Die übrige Zeit und die Nachmittags-Stunden ausser den öffentlichen Ausstellungen des Museums hat er zu Präparationen für das letztere zu benutzen.

4. Im Winter hat er für die Heizung der Zimmer in den kälteren Tagen zu sorgen, und sich dabei zur Verhütung von Feuers-Gefahr die strengste Vorsicht zum Gesetz zu machen. Alle freie Stunden der Wintertage in welchen er nicht zu den Ausstellungen des Museums oder zu Hülfsleistungen für die Vorlesungen in Anspruch genommen ist, hat er zu Präparationen für das Museum zu verwenden. Auch soll er nöthigenfalls bei gehäufter Arbeit auf dem anatomischen Theater und bei Krankheitsfällen des Dienstpersonals des letztern, so weit es seine laufenden Dienstgeschäfte zulassen, für diese Anstalt in Anspruch genommen werden.

5. Der Wärter hat nicht allein die künstliche Zusammensetzung der Skelette zu besorgen, sondern ist auch bei dem Aufstellen, Ordnen und Eintragen der Präparate, indem er dem Director und dem Prosector an die Hand geht, thätig, er hat die Auffüllung des Weingeistes und das Auftragen des Firnisses zu besorgen und in jeder Hinsicht über die Conservation der Präparate zu wachen.

6. Daher muss der Wärter die Gegenstände des Museums beständig im Auge behalten, und hat diejenigen, welche schadhaft geworden sind, oder durch Mangel an Weingeist, Firniss, oder durch den Wurm leiden, so viel es von ihm abhängt zu restituiren, sonst aber dem Director oder dem Prosector Anzeige zu machen.

7. Er hat die zu den anatomischen Arbeiten nöthigen Materialien im Auftrage des Directors zu beschaffen, und die an das Museum eingesandten Gegenstände auf dasselbe zu befördern.

8. Alle eingehende, zur Präparation bestimmte Gegenstände, hat der Wärter mit auf Pergament geschriebenen Nummern zu versehen, welche mit den Nummern des Catalogs der unpräparirten, nicht aufgestellten Gegenstände correspondiren und welche sie so lange behalten bis sie präparirt, aufgestellt und in dem grossen Catalog des Museums aufgeführt werden.

9. Bei den öffentlichen Ausstellungen des Museums, so wie dasselbe von hiesigen und fremden Gelehrten in den ihnen anberaumten Stunden besucht wird, muss der Wärter auf dem Museum gegenwärtig sein. Bei den öffentlichen Ausstellungen hat er darauf zu halten, dass Mäntel und Röcke von den Besuchenden vor ihrem Eintritt abgelegt werden. Er hat sich gegen jedermann bescheiden zu betragen, aber keinem der nicht mit einer Einlasscarte versehen ist, den Eintritt zu gestatten.

10. Während der öffentlichen Ausstellungen hat er darauf zu sehen, dass Niemand, etwas beschädige, aus den Kisten herausnehme, oder auch nur anfasse.

11. In den für den Zutritt der Gelehrten bestimmten Stunden darf der Wärter keine Zeichnungen nach den Präparaten des Museums erlauben, wenn die Befugniss dazu nicht ausdrücklich von dem Director ertheilt worden ist. Ebenso wenig darf er jemanden etwas aus den Schränken oder Gläsern zu näherer Untersuchung darreichen, oder die Schlüssel zu den Schränken hiesigen oder fremden Gelehrten einhändigen. In den Fällen, wo die genauere Untersuchung eines Präparats von hiesigen oder fremden Gelehrten zulässig ist, wird der Director den Prosector zur Unterstützung und Erleichterung der Gelehrten anweisen, und der Wärter ist dann verpflichtet, den Gelehrten bei näherer Untersuchung der Gegenstände, so viel es seine Dienstgeschäfte erlauben, an die Hand zu gehen.

12. Unter keinerlei Vorwand hat der Wärter von denen die das Museum besuchen, etwas zu fordern, oder Geschenke anzunehmen.

13. Der Wärter hat für die regelmässige Reinigung der Zimmer, Spinden, Tische, und Bretter Sorge zu tragen, und in dem Arbeitszimmer Ordnung und Reinlichkeit zu erhalten. Es versteht sich übrigens von selbst, dass in dem Arbeits-Zimmer des Museums weder von dem Wärter, noch von dem Gehülfen noch von dem zu Präparationen angewiesenen Studirenden Tabak geraucht werden darf.

Ueber die Befolgung dieses Verbots hat der Wärter streng zu wachen.

Für die im vorstehenden näher bezeichneten Dienstleistungen soll der Wärter einen monatlichen Gehalt von Sechs und Zwanzig Thaler 7 ½ Sgl. nebst freier Wohnung und Feuerung zu geniessen haben.

Urkundlich ist diese Bestallung und Instruction von dem Ministerio ausgefertigt und mit dessen Insiegel bedruckt worden.

Berlin, den 31ten Juli 1833.

Ministerium der Geistlichen, Unterrichts- und Medicinal-Angelegenheiten,

(gez:) von *Altenstein.*

Enclosure 2 (Q.) in No. 29.

(16.)—Instruction

für den Professor G. Rose in Beziehung auf seine Stellung bei dem Mineralien-Cabinet der Königlichen Friedrichs-Wilhelms-Universität zu *Berlin.*

1. Der Professor G. Rose legt seine bisherige Anstellung als Gehülfe bei dem Königlichen Mineralien-Cabinet der hiesigen Universität nieder und ist von den Obliegenheiten derselben, welche gleichzeitig auf den neu ernannten Gehülfen übergehen, entbunden. Da aber der Pro-

fessor

fessor G. Rose den bisherigen Gehalt aus dem Fonds des Mineralien-Cabinets zu beziehen fortfährt, so werden ihm dafür andere Functionen zugetheilt, und zwar solcher Art, welche bei den Geschäften im Innern des Cabinets höhere wissenschaftliche Kenntnisse voraussetzen und in der äussern Repräsentation desselben zur würdevollern Erscheinung desselben beitragen.

2. Er wird deshalb in den jedesmal halbjährig von dem Director unter Genehmigung des Ministeriums zweimal wöchentlich zu je zwei festzusetzenden Stunden für den öffentlichen Zutritt des grösseren Publicums anwesend sein, und wenn der Director nicht persönlich gegenwärtig ist, die Ober-Aufsicht dabei zu führen, und dabei zu seiner Erleichterung sich des kleinen Zimmers als seines regelmässigen Aufenthalts bedienen können, welches an den Haupteingang rechts anstösst. Von hier aus wird er nach Umständen in die Säle gehen, welche für die Special-Aufsicht, während dieser Stunden ihre besonderen Hüter erhalten, und den Besuchenden nützlich sein, ausgezeichnetere Personen selbst geleiten u. s. f., sich aber auch nach Befinden in das kleine Zimmer wiederzurückziehen können, von wo aus er einer jeden möglichen Störung der Ordnung während des öffentlichen Besuchs am nachdrücklichsten augenblicklich begegnen kann.

3. An den übrigen laufenden Geschäften des Cabinets wird er nur in so weit Theil nehmen, als der Director mit Bezug auf § 1. seine Hülfe dabei besonders in Anspruch nimmt. Dies wird aber stattfinden:

a. in allen Fällen wo der Gehülfe seinen Functionen nicht allein vollständig gewachsen ist, und wo er ihn dann anleiten und belehren wird. Ganz besonders beim Tausch Verkehr des Cabinets werden diese seine besonderen Dienste erforderlich sein;

b. in denen wo der Director selbst seine wissenschaftliche Hülfe in Anspruch nimmt, seine Gutachten verlangt, bei sich darbietenden Acquisitionen ihm einzelne bestimmte Stücke zu näherer wissenschaftlicher Untersuchung vorlegt u. s. w.

c. bei dem Besuche des Cabinets in anderen als den obigen Stunden, durch auswärtige Gelehrte und andere ausgezeichnetere Personen.

Zu allen diesen Geschäften wird der Professor G. Rose auf jedesmalige besondere Aufforderung des Directors im Cabinet zu erscheinen bereit sein, so weit ihnen nicht zu festgesetzten, bestimmten bleibenden Stunden Genüge geschehen kann. Schon das zweimal wöchentliche Erscheinen in den Stunden des öffentlichen Zutritts für das Publicum wird eine bequeme Gelegenheit zu dem für das jedesmal nächste zu Bestimmende darbieten.

4. Nicht zu den laufenden Geschäften, sondern zu den übrigen vom Professor G. Rose zu erwartenden wissenschaftlichen Leistungen für das Cabinet werden gerechnet die Dienste, welche derselbe nach eigner Wahl seinem wissenschaftlichen Berufe gemäss irgend an Stücken des Cabinets der immer zu erhöhenden wissenschaftlichen Ausbildung desselben leisten und durch Niederlegung seiner Resultate in Etiketten bei den betreffenden Stücken ihren Werth erhöhen wird. Es ist hier ein grosses Feld freier verdienstlicher Thätigkeit, und es wird von seiner Liebe zur Sache erwartet, dass er sich dasselbe mit Eifer angelegen sein lassen wird.

5. Zu seinen Vorlesungen wird er sich, wie bisher der Sammlung bedienen, sich das ihm dazu Erforderliche auswählen und an seinen Ort zurückstellen, wobei er sich der Dienstleistungen des Gehülfen bedienen kann, der in jedem Falle davon Kenntniss zu nehmen hat. Es versteht sich dass er die Collision mit dem was der Director gleichzeitig zu seinen eigenen Vorträgen bedarf, vermeidet.

Berlin, den 5ten May 1833.

Ministerium der Geistlichen-Unterrichts und Medicinal-Angelegenheiten.

(gez:) von *Altenstein.*

Enclosure 2 (R.) in No. 29.

(17.)—Instruction

für den Assistenten beim Mineralien Cabinet der Königlichen Friedrich-Wilhelms Universität zu *Berlin.*

1. Dem Assistenten wird die gewissenhafteste Treue und grösste Sorgsamkeit für alle Gegenstände des Königlichen mineralogischen Museums zur Pflicht gemacht.

2. Er hat sich der Aufträge und Arbeiten, welche der zeitige Director Professor Weiss ihm für das Königliche mineralogische Museum angeben wird, jederzeit mit Fleiss und Pünktlichkeit zu unterziehen.

3. Es wird vornehmlich von ihm verlangt: Fortsetzung der Cataloge des Museums nach Anweisung des Professors Weiss, Hülfsleistungen bei den zu treffenden Abänderungen oder Erweiterungen in der Anordnung und Aufstellung der Sammlung, bei Ausscheidung und Verwendung der ausgeschiedenen Stücke zu den für sie angeordneten Bestimmungen, bei der die Angelegenheiten des Königlichen mineralogischen Museums betreffenden Correspondenz, überall nach den Anordnungen des Professors Weiss, desgleichen Aufsicht über die Stücke in denjenigen Stunden, wo die Sammlung oder einzelne Theile derselben, sei es

für Studirende oder für einzelne Besuchende und Fremde, oder für ein grösseres Publicum zur Betrachtung geöffnet sein wird, mit strenger Beobachtung der Regeln, welche darüber insbesondere theils festgestellt sind, theils werden festgestellt werden, nicht minder das, was zur mechanischen Pflege der Sammlung erforderlich ist, als Reinigen und Waschen der Stücke, so oft sie dessen bedürfen, zu welchen mechanischen Verrichtungen, so weit sie dem Aufwärter übertragen werden können, dieser die Aufträge des Assistenten anzunehmen und zu vollziehen angewiesen ist.

4. Der Assistent ist für sich selbst zu keinem andern Gebrauche und Benutzung der Stücke der Sammlung befugt, als wozu die vom Herrn Professor Weiss ihm aufgetragene Arbeit ihn anweist. Jede andere Benutzung ist ihm lediglich unter besonderer Genehmigung des Herrn Professors Weiss gestattet.

5. Endlich wird dem Assistenten ausdrücklich untersagt, eine Sammlung von Mineralien für sich anzulegen, oder zu besitzen, oder auch mit Mineralien Handel zu treiben.

Berlin, den 24ten Juni 1833.

Ministerium der Geistlichen-Unterrichts und Medecinal-Angelegenheiten.

(gez:) von *Altenstein.*

Enclosure 2 (S.) in No. 29.

(18.)—Verfügung an sämmtliche Königliche Regierungen die Einsendung der Missgeburten und andere medicinische Merkwürdigkeiten.

Den Physikern ist bereits durch den § 6. ihrer Instruction vom 17ten October 1776. aufgegeben worden, Missgeburten und andere ihnen vorkommende medecinische Merkwürdigkeiten hierher einzusenden. Um nun der Verbreitung falscher Gerüchte und Urtheile bei vorkommenden Missgeburten und der Bestärkung unwissender Leute in die bei solchen Gelegenheiten gewöhnlich geäusserten schädlichen Vorurtheilen und Aberglauben vorzubeugen, wird hierdurch festgesetzt, dass jede menschliche Missgeburt von den Hebammen dem Physicus angezeigt, und wenn sie todt ist, ungesäumt übersendet werden muss. Hebammen, welche dieses zu thun unterlassen, werden in eine angemessene Geld- oder Gefängnissstrafegenommen.

Damit aber solche Monstra für die Wissenschaft von den zu solchen Untersuchungen geübten Forschern benutzt werden können, haben die Physiker diese für das hiesige anatomische Museum an den Mitaufseher desselben, den Professor Dr N. N. wohlverwahrt, nebst der Liquidation der etwa dabei gehabten Unkosten und Auslagen einzusenden. Unbedeutende und gewöhnliche Missbildungen wie Hasenscharten, Wolfsrachen, Fingerähnliche Auswüchse an Händen mit 5 Fingern bei todtgebornen Kindern, solche Acephali, wo nur ein Theil der Seitenbeine und Stirnbeine &c. &c. mangelt, können zurück gegeben oder begraben werden. Monstra und pathalogische Präparate von bedeutendem Umfange, welche ihrer Beschaffenheit oder der weiten Entfernung und der Jahreszeit wegen nicht sicher und schnell hierher gesandt werden können, sind in taugliche hölzerne Gefässe unter Brandtwein oder reines Wasser, worin etwas Alaun aufgelöst worden, zu setzen und so zu übersenden. Alle Aerzte und Chirurgen sind aufzufordern, nicht nur die bei Leichen-Oeffnungen, Operationen, &c. gefundenen besonders merkwürdigen pathalogischen Missbildungen auf eben gedachte Weise an das hiesige anatomische Museum einzusenden und die Vergütigung ihrer liquidirten Auslagen und Unkosten zu gewärtigen. Demnächst sind auch die Gutsbesitzer, Bauern, Jäger, Schäfer, Fischer über die Merkwürdigkeiten, der ihnen etwa vorkommenden thierischen Missbildungen und über den Nutzen ihrer Aufbewahrung zu unterrichten, und sie zu gleichmässiger Einsendung aufzumuntern. Es ist zu hoffen, dass Niemand wissentlich eine Gelegentheit versäumen werde, sich um ein eben so bedeutendes, als nützliches vaterländisches Institut, wie das hiesige anatomische Museum ist, verdient zu machen. Desto nöthiger ist es, das Publicum dafür zu interessiren und dasselbe über die rechte Art, dem Institute nützlich zu sein, zu belehren. Auch die Einsendung der in hiesigen Gegenden seltener vorkommenden Thiere zum Zergliedern wird erwünscht sein, und es soll in den über das Museum von Zeit zu Zeit herauszugebenden Schriften rühmliche Erwähnung aller derer geschehen, welche sich um die Bereicherung desselben, auf die eine oder die andere Art verdient gemacht haben.

Berlin, den 27ten Februar 1811.

Enclosure 3, in No. 29.

ANSWERS to Questions relative to Museums.

(A.)

The Royal Museum at Berlin has for its object to promote the fine arts and the study of works of art. It is divided into nine departments:

Royal Museum at Berlin.

Into what departments divided.

1.) A Picture Gallery.

2.) A Gallery of Ancient Sculptures.

3.) A Collection of Antiques, consisting

a.) Of Ancient Vases, Bronzes, &c.
b.) Of Cut Stones.
c.) Of Ancient Coins.
d.) Of Coins and Medals of the middle ages and of later times.

4.) A Collection of Egyptian Antiques and Mummies.

5.) Of Majolicas and Glass Paintings.

6.) Of Engravings and Drawings.

7.) Of Sclavonic German Antiques.

8.) The Ethnographic Collection.

9.) A Collection of Curiosities of all kinds, which from their nature are not adapted to the preceding collections, but which appertain more or less to the arts, possessing partly a scientific, partly an historical interest. It is called the Cabinet of Curiosities. (Kunst-Kammer.)

Under whose control and direction placed.

The Museum, as well as the different institutions for the arts connected with it, are placed under the superior control of the minister of public instruction and ecclesiastical and medical affairs. The special superintendence of the Museum is confined to an Intendant-General, upon whom it devolves to see that the buildings which contain the collections are in good repair, and that the officers of the different establishments punctually perform their duty. Upon all such matters relating to the Museum respecting which the existing regulations neither render him nor the Scientific Commission, by which he is assisted, competent to decide, he is charged to report to the superior ministerial department. The King reserves to himself the right of communicating his orders directly to the Intendant-General, who is permitted, when necessary, to report directly to his Majesty, in which cases, however, he has to acquaint the ministry of public instruction and ecclesiastical and medical affairs with the substance of his Majesty's orders, as well as with that of his own reports to his Majesty.

The members of the Scientific Commission, which, in addition to the Intendant-General and the directors of the respective departments, is composed of artists and competent judges of the arts, are named by the King for three years, upon the proposal of the ministry of public instruction.

The duties of the Scientific Commission, of which the General-Intendant is the president, are to consider and decide upon the purchase for, or removal from, the collections of works of art, the advantageous distribution and arrangement of the same, and the permissions to copy. Whenever a decision is to be taken relative to the purchase of a work of art for any of the several departments of the collection of Antiques, the director and assistant specially charged with the superintendence of the department in question are admitted to the deliberations of the Scientific Commission and allowed to vote. The Scientific Commission is directed, in its acquisitions for the collections of the museum, constantly to bear in mind that the funds placed at its disposal are chiefly to be employed in the augmentation and embellishment of the picture and sculpture galleries, and that, in its choice of pictures, it is principally to be guided by the purpose of gradually filling up the deficiency in the most renowned works of the great masters, rather than by a desire to complete the collections in particular schools. The sum allotted to this effect is not to be exceeded without the necessary authorization obtained through the superior ministerial department. The resolutions of the Commission, in which the president (viz. the Intendent-General) has the casting vote, are decided by a majority of votes. During the absence of the Intendant-General, a member of the Commission takes his place.

The directors and assistants of the several departments are named by the King, upon the proposal of the Intendant-General and the report of the ministry of public instruction. They are placed under the immediate control of the Intendant-General, to whom it is their business to report and propose the repairs and changes which may become necessary. They are likewise responsible for the careful preservation of the works of art committed to their charge,

of the premises and apparatus. The directors and their assistants are required to be present in their respective departments every day, with the exception of Sundays and holidays, from 11 till one o'clock. At the end of each year the directors draw up a return relative to their assistants, to the communications into which they may have entered with the superintendents of foreign collections of a similar nature, and to the general bearings of their administration. The Intendant-General transmits their report, with his own remarks, to the superior ministerial department.

The assistants are subordinate to the directors, and perform under their superintendence the functions imposed upon them. With respect, however, to new undertakings or proposed changes of plans they are authorized to explain in writing the views which they entertain different from those of the directors. They replace the directors when absent.

An archæologian and restorer of pictures are likewise attached to the museum, and are placed on an equal footing with the directors. The duties of the former are to make the necessary purchases, according to the plans of the Scientific Commission, for the completion of the collection of Antiques; as also to procure models and drawings of Antiques not to be found in the collections, and thereby to facilitate the comparison of those in its possession with the collections of foreign countries. The functions of the latter are to report to the directors, the Intendant-General and the Scientific Commission the restorations which he considers necessary, and to execute them in the manner prescribed by the Commission. At the close of the year the restorer of pictures addresses a detailed return to the Intendant-General of the result of his labours.

Number, salaries and names of the principal directors.

The number, salaries and names of the principal directors are to be found in the accompanying table of the revenue and expenses of the Museum, as well as those of the subordinate officers.

Statement of administration of Royal Museum.

Out of what fund defrayed.

The expenses of the Royal Museum are defrayed by the state. The statement of the expenditure of the Museum is framed by the ministry of public instruction from the estimate presented by the Intendant-General, and is submitted to the King. At the general pay-office of the ministry of public instruction there is a separate department for the accounts of the Museum, upon which the Intendant-General draws the amount fixed by the estimate.

What the bye-laws regulating the admission of the public.

The several collections are open gratis to the public in general on certain fixed days during the week. Artists and admirers of the arts are admitted also on the days which are not public. Those artists who do not belong to the academy, and have not already obtained from it leave to copy, receive from the Scientific Commission the necessary permission to copy pictures and make drawings of the Antiques, and every facility is afforded to them. Learned persons whose scientific researches necessitate the continued study of particular works of art are permitted, upon application to the directors, to remain in the several departments during the hours when the officers are on duty. The latter are at all times required cheerfully to give every information desired by visitors.

In addition to the Museum, the following institutions for the arts exist at Berlin, are maintained at the expense of the state, and are, under certain restrictions, open to the public and scientific persons gratis.

(B.)

A Collection of Casts, which will shortly be open to the public.

(C.)

The Zoological Museum at the Frederick William University at Berlin.

(D.)

The Anatomical Museum at the Frederick William University at Berlin.

(E.)

The Cabinet of Mineralogy at the Frederick William University at Berlin.

(F.)

The Botanical Garden at Schoeneberg.

Enclosure 3 (A.) in No. 29.

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

29.
PRUSSIA.

Enclosure 4 (A.) in No. 29.

(20.)—REGLEMENT für die Königliche Bibliothek.

ERSTER ABSCHNITT.

Ueber die öffentliche Benutzung der Königlichen Bibliothek.

§ 1.—Es giebt für das Publicum eine dreifache Benutzung der Königlichen Bibliothek, das Lesen auf dem Lesezimmer derselben, das Leihen der Bücher in die eigene Behausung und die Besichtigung der Bibliothek.

§ 2.—Zum Lesen auf dem Lesezimmer sind bestimmt die Nachmittagsstunden im Sommer von zwei bis Fünf, im Winter von zwei bis vier Uhr täglich, den Sonntag allein ausgenommen.

Zum Abholen und Wiederbringen der Bücher die Vormittagsstunden von Neun bis Zwölf Uhr am Dienstag und Freitag, und zur Besichtigung der Bibliothek die Vormittagsstunden von Neun bis Eilf Uhr am Mittwoch und Sonnabend.

Alles jedoch mit Ausnahme der sämmtlichen kirchlichen Festage und dreier Wochen, welche mit dem Montag vor dem ersten August anfangen.

§ 3.—Da das Lesen auf der Bibliothek nur literarische Benutzung der vorhandenen Werke zum Zweck haben darf: so werden Bücher, welche zur schönen Literatur gehören, wie Romane, Schauspiele, Gedichte in Deutscher und in den allgemeinen bekannten auswärtigen lebenden Sprachen, wofern nicht ein literarischer Zweck besonders dabei nachgewiesen wird, zum Lesen nicht ausgegeben.

§ 4.—Zöglinge hiesiger Lehranstalten, so wie überhaupt noch nicht erwachsene Personen sind vom Lesezimmer ausgeschlossen.

Nur Schüler der hiesigen Gymnasien können auf besondere schriftliche Empfehlung ihrer Directoren zugelassen werden.

§ 5.—Wer auf der Bibliothek lesen will macht zuförderst dem im Lesezimmer anwesenden Bibliothekar oder Bibliothekgehülfen Anzeige von seinem Namen und Stand; die verlangten Bücher verzeichnet er dann auf einem mit seiner Unterschrift und der Angabe seiner Wohnung versehenen Zettel, den er den Bibliothekdiener übergiebt, worauf ihm die Bücher, wenn sie vorhanden sind, in das Lesezimmer gebracht werden.

§ 6.—Jedermann ist verpflichtet ehe er sich wieder entfernt, dem Bibliothekofficianten die gebrauchten Bücher wieder abzuliefern, wogegen er den Zettel zurück erhält. Ein zurückgebliebener Zettel begründet die Vermuthung, dass die Bücher nicht ordnungsmässig abgeliefert worden, und in Folge dessen den Regress gegen den Aussteller.

§ 7.—Der im Lesezimmer anwesende Bibliothekar oder Bibliothekgehülfe wird bemüht seyn, literarische Notizen, deren diejenigen welche lesen wollen, bedürfen könnten, sofern es in der Kürze geschehen kann, mitzutheilen, wogegen Niemand ein Recht hat zu fordern, dass man ihn in die Bibliothek selbst einlasse um dort Bücher aufzusuchen und nachzuschlagen.

§ 8.—Das Recht, Bücher von der Königlichen Bibliothek zu leihen, steht nur zu

1. den Prinzen und Prinzessinnen des Königlichen Hauses,
2. den am Königlichen Hofe beglaubigten Gesandten und Geschäftsträgern,
3. den Königlichen Hof und Staats-Beamten im Militair bis zum Obristen herab inclusive, im Civilstande ebenso bis zum Staats-Rath und Präsidenten,
4. den Königlichen Ober Consistorial-Räthen,
5. den Mitgliedern der Academie der Wissenschaften,
6. den ordentlichen und ausserordentlichen Professoren bei hiesiger Universität,
7. den Directoren der Academie der Künste und der hiesigen Gymnasien,
8. den Mitgliedern der mit der hiesigen Universität verbundenen Seminarien wie auch des Seminars für gelehrte Schulen, insofern sie durch ein Zeugniss der Direction ihre wirkliche Mitgliedschaft halbjährig nachweisen.

§ 9.—Dieses Recht gilt jedoch nur für Berlin und dessen Polizeibezirk. Sollte jemand von diesen Classen sich ausserhalb aufhalten, und dorthin Bücher zu leihen wünschen, so haben die Bibliothekare dieserhalb erst bei dem Departement für den Cultus und öffentlichen Unterricht anzufragen, welches auch von dem Verleihen von Büchern und Handschriften an auswärtige Gelehrte gilt.

§ 10.—Wer von diesem Recht Gebrauch machen will, hat über jedes einzelne für sich bestehende Werk einen besonderen Zettel in der Grösse eines Quart oder Octavblattes auszustellen, welcher rein und deutlich geschrieben den hinlänglichen Titel des Buches, Namen, Stand und Wohnung des Epmfängers und Datum des Empfanges enthält.

§ 11.—Der gesetzliche Termin zur Rückgabe der geliehenen Bücher ist Vier Wochen nach dem Tage des Empfanges. Ueber eine längere Frist muss jeder sich mit dem Bibliothekar besonders einigen, und dann den Termin auf dem Zettel bemerken. Doch gilt hierbei allemal stillschweigend die Bedingung, dass wenn während dieser verlängerten Frist ein anderer Berechtigter ein so geliehenes Werk auf kürzere Zeit bedarf, es für diesen abgefordert und hernach dem ersten Leiher auf die übrige Zeit zurückgestellt wird.

§ 12.—Andere als die in § 8. verzeichnete Personen können Bücher von der Königlichen Bibliothek nur geliehen erhalten vermittelst einer Special-Caution eines selbst zum Leihen berechtigten, indem nämlich dieser dem vom Empfänger selbst ganz nach Vorschrift des

§ 10. ausgestellten Zettel das Wort *cavet* oder *verbürgt* mit seinem Namen, Stand, und Wohnung beifügt. Allgemeine Erlaubniss zum Bücherleihen kann andern Personen künftig nur ausnahmsweise auf ein durch die Bibliothekare an das vorgesetzte Departement zu bringende Gesuch ertheilt werden.

§ 13.—Die gegen Special-Caution geliehenen Bücher müssen jedoch Vierzehn Tage nach dem Empfange zurückgegeben werden, wenn nicht mit Vorwissen- und Bewilligung des Caventen ein längerer Termin verabredet wird; sonst müssen sie wenigstens am bestimmten Tage auf der Bibliothek vorgezeigt und ein neuer vorschriftsmässiger Schein nebst Caution ausgestellt werden, worauf, wenn sonst kein Berechtigter schon Anspruch auf das Werk gemacht hat, die Prolongation erfolgen kann.

§ 14. Für die auf Special-Caution geliehenen Bücher haftet zwar natürlich zunächst der Empfänger, *in Subsiduum* aber hat sich die Königliche Bibliothek an den Bürgen vollkommen so, als hätte er die Bücher selbst empfangen, zu halten; und gilt wegen des bei Eintreibung der Bücher unvermeidlichen Zeitverlustes gegen den Caventen der Schein noch Vierzehn Tage nach Ablauf des § 13. bestimmten Termins.

§ 15.—Wörterbücher, Glossarien, auf der Bibliothek selbst nöthige Nachschlagen und Handbücher werden gar nicht ausgeliehen. Kostbare Kupferwerke, einzelne Theile voluminöser Werke, so der Commentarien gelehrter Gesellschaften, wie auch Handschriften können nur nach genauer Erwägung der Umstände von den Bibliothekaren an selbstberechtigte Personen ausgeliehen werden, an solche aber die einer Caution bedürfen nur vermittelst eine bei dem vorgesetzten Departement besonders nachzusuchenden Erlaubniss.

§ 16.—In den Tagen zwischen dem 12ten und 20ten März und zwischen den 1ten und 8ten August müssen alle ausgeliehenen Bücher zum Behuf einer allgemeinen Revision wenigstens auf zwei Tage zur Bibliothek zurückgeliefert werden.

§ 17.—Wenn Bücher an diesen Terminen nicht eingeliefert oder sonst über die reglementsmässige oder verabredete Frist behalten werden: so erhält der saumselige Leiher einen Mahnbrief durch den Bibliothekdiener, welchem er 4 Gl. Cour. Gebühren dafür entrichtet, und hat am nächsten der zur Ablieferung bestimmten Tage die eingemahnten Bücher zur Bibliothek einzuschicken. Geschieht dieses nicht: so werden sie am folgenden Tage durch den Bibliothekdiener, dem seine Gebühren auf's neue zu zahlen sind, und durch einen auf Kosten des Leihers angenommenen Träger abgeholt, und wenn sie sich nicht vorfinden als verloren angesehen.

§ 18.—Wer ein Buch beschädigt oder verliert, und es binnen einer nach den Umständen zu bestimmenden Frist nicht wieder erstattet, der bezahlt das Zweifache des von einem geschworenen Bücher Taxator dafür zu bestimmenden Preises.

§ 19.—Wer verreiset ist ohne vorher die von der Königlichen Bibliothek ihm geliehenen Bücher zurückgegeben, hat es sich selbst zuzuschreiben, wenn nöthigenfalls eine obrigkeitliche Eröffnung seiner Wohnung um der Bücher habhaft zu werden bewirkt wird.

§ 20.—Wer seine Wohnung in der Stadt verändert ohne dies auf seinen auf der Bibliothek etwa befindlichen Bücherscheinen zu bemerken, wird wenn er in sich in den Fall der Massregel des § 17. setzt, die Botengebühren doppelt bezahlen.

§ 21.—Wer bei der Veränderung seines Wohnortes die Rückgabe der von der Königlichen Bibliothek geliehenen Bücher versäumt hat, der wird es sich selbst zuzuschreiben haben, wenn sogleich seine neue Obrigkeit zur Einsendung dieser Bücher auf seine Kosten requirirt wird.

§ 22.—Wer die Bibliothek zu besichtigen wünscht, meldet sich zu der dazu bestimmten Zeit bei dem anwesenden Bibliothekar oder Bibliothekgehülfen mit Angabe seines Namens und Standes. Es werden aber nie mehr als Zehn Personen höchstens zugleich zugelassen.

§ 23.—Die an der Besichtigung Theilnehmenden dürfen sich nicht in der Bibliothek zerstreuen, sondern müssen dem herumführenden Bibliothekar folgen, welcher seinerseits, indem er die Hauptwerke und Seltenheiten der verschiedenen Fächer namhaft macht und zur Anschauung bringt, die Besichtigung so nützlich als möglich wird zu machen suchen.

§ 24.—So oft die Umstände Veränderungen in den zu den verschiedenen Arten der Bibliothekbenutzung bestimmten Zeiten nöthig machen sollten, werden diese durch einen Anschlag auf der Bibliothek selbst und durch die hiesigen Zeitungen zur Kenntniss des interessirten Publicums gebracht werden.

Zweiter Abschnitt.

Ueber die verschiedenenen Zweige der Geschäftsführung und über deren Vertheilung.

§ 1.—Um die nöthige Einheit in die Geschäfte der Königlichen Bibliothek zu bringen ist dieselbe für jetzt unter die unmittelbare Oberaufsicht eines Mitgliedes des Departements für den öffentlichen Unterricht gestellt, und hat sich das sämmtliche Bibliothekpersonal nach dessen Commissorium zu achten.

§ 2.—Die Geschäfte sowohl, welche zur Erhaltung der Ordnung auf der Bibliothek, als die welche zur zweck und Etatsmässigen Vermehrung derselben gehören, werden theils collegialisch in Conferenzen der Bibliothekare verhandelt, theils sind sie einzelnen Mitgliedern des Bibliothekpersonals übertragen, theils werden sie abwechselnd von allen nach bestimmter Ordnung verrichtet.

§ 3. Ueber die Vertheilung der Geschäfte und die Ordnung des Wechsels einigen sich die Bibliothekare mit dem Ober-Aufseher, und darf in dem was dieser genehmigt hat, ohne dessen Vorwissen und Einwilligung keine Veränderung gemacht werden.

§ 4. Alle Berichte und Anträge an das vorgesetzte Departement können nur von der Conferenz ausgehn, in welcher daher alles was sich hierzu aus dem Geschäftskreise eines Einzelnen eignet vorgetragen werden muss.

§ 5.—Dahin gehören vornämlich alle nicht schon etatsmässig einzeln bestimmten Ausgaben

gaben, indem Anweisungen an die Casse nur auf früher ertheilte Bewilligungen gegeben worden.

§ 6.— Die Führung der Correspondenz mit dem Departement selbst nach Massgabe des in den Conferenzen beschlossenen wird von dem Oberaufseher einem der Bibliothekare übertragen.

§ 7.—Wann und wie oft die ordentlichen Conferenzen zu halten sind wird der Oberaufseher bestimmen. Es ist jedesmal ein Protocoll über die Verhandlung zu führen und dieses dem Oberaufseher, wenn er nicht selbst zugegen war, mitzutheilen.

§ 8.—Um die nöthige Ordnung auf der Bibliothek desto besser zu erhalten, wird dieselbe nach den verschiedenen wissenschaftlichen Fächern unter die einzelnen Bibliothekare und Bibliothekgehülfen vertheilt, und ist jeder für die übernommenen Fächer dem Departement und zunächst dem Oberaufseher speciell verantwortlich.

§. 9—Wem ein Fach auf diese Weise übergeben ist, dem liegt ob

1. die Erscheinung der Fortsetzungen von angefangenen Werken, und eben so
2. die etwa entstandenen Defecte bei der Conferenz anzuzeigen, damit auf die Anschaffung derselben angetragen werden kann.
3. Bücher, welche einer Reparatur bedürfen, demjenigen der die Geschäfte mit dem Buchbinder besorgt zu übergeben, damit alle Bücher immer in brauchbarem Stande erhalten werden ;
4. die neu eingegangenen oder zur Bibliothek zurückgekommenen Bücher seines Faches sobald ihm Anzeige davon gemacht worden, genau an ihren Ort zu stellen, und zwar so dass kein Buch länger als vom Dienstag bis zum Freitag oder vom Freitag zum Dienstag an dem interimistichen Verwahrungsort liegen bleibe ;
5. von den bei seinem Fach entstandenen Doubletten, nach gehörig mit einem andern gemeinschaftlich verrichteten Collation zu bestimmen, welches Exemplar zu behalten, und welches zum Verkauf auszuschliessen sei.

§ 10.—Die Vermehrung der Königlichen Bibliothek geschieht in der Regel theils durch die gesetzlichen Lieferungen der inländischen Verlagsbuchhändler, theils durch Ankauf.

§ 11.—Der Oberaufseher wird einem Bibliothekar oder Bibliothekgehülfen besonders das Geschäft übertragen, die Ablieferungen der Buchhändler durch fleissiges Vigiliren auf den Messcatalog und die Anzeigen in öffentlichen Blättern zu controlliren, die Säumigen zu mahnen und darauf zu halten, dass nur vollständige und wohlconditionirte Exemplare eingeliefert werden.

§ 12. Zum Behuf einer zweckmässigen Vermehrung durch Ankauf ist auf dem Arbeitszimmer der Bibliothekare ein Desideraten-Buch anzulegen, in welchem die ordentlichen und ausserordentlichen Professoren hiesiger Universität die Werke, welche sie angeschafft wünschen, verzeichnen.

§ 13.—Alle bedeutende Auctions-Cataloge circuliren unter den sämmtlichen Bibliothekaren und Bibliothekgehülfen, damit jedes zunächst die in jenem Buch notirten oder von den Secretairen der Academie statutenmässig geforderten Werke seines Fachs und demnächst was ihm sonst wünschenswerth scheint anstreiche.

§ 14.—Collegialisch wird hierauf in den Conferenzen mit Beseitigung aller Vorliebe und mit möglichster Berücksichtigung der Kostbarkeit der Bücher und des Bedürfnisses der verschiedenen Fächer beschlossen, was zur Anschaffung vorgeschlagen werden soll, und was für Preise den Beauftragten zu setzen sind.

§ 15.—Wenn Werke, die weder von den Secretairen der Academie gefordert, noch von den Professoren der Universität gewünscht worden, dennoch zum Ankauf in Vorschlag gebracht werden, so muss ein solcher Antrag besonders motivirt und zugleich im Allgemeinen bemerkt sein, ob noch viel oder wenig von den geforderten Werken in Rückstand sey.

§ 16.—Es versteht sich, dass neuere Werke, welche von der Academie oder Universität gefordert werden, nicht auf Auctionen zu warten brauchen, sondern durch die Buchhandlungen angeschafft werden, wenn nicht baldige sichere Aussicht ist, sie auf jenem Wege zu erlangen.

§ 17.—Halbjährig wird Ende Juni und Ende December dem academischen Senat ein Verzeichniss der von den Professoren in diesem Zeitraume geforderten und der aus den vorigen noch in Rest gewesenen Bücher eingereicht, mit dem Bemerken welche davon angeschafft worden und welche noch nicht.

§ 18.—Die Correspondenz mit den Auctions-Commissarien, Speditoren, Buchhändlern &c. &c. so wie auch die erste Abnahme der von ihnen eingehenden Bücher und die Kostenverrechnung wird von dem Oberaufseher einem Bibliothekar oder Bibliothekgehülfen als ein eigenes Geschäft übertragen.

§ 19.—Dasselbe gilt von dem Eintragen der neu eingetragenen Bücher in den Accessionscatalog, und der von Zeit zu Zeit aus diesem vorzunehmenden Vervollständigung des allgemeinen alphabetischen und künftig auch des Real-Catalogs.

§ 20.—Eben so wird der Verkehr mit dem Buchbinder und die nöthige Controlle desselben mittelst eines Buches, worin der Empfang von ihm und die Ablieferung von der Bibliothek jedesmal attestirt wird, einem Bibliothekar oder Bibliothekgehülfen als eigenes Geschäft übertragen.

§ 21.—Jeden Vormittag von Neun bis Zwölf, und jeden Nachmittag von Zwei bis Fünf, in den kurzen Wintertagen nur von Zwei bis Vier Uhr, ist abwechselnd, nach der mit dem Oberaufseher verabredeten Ordnung einer von den Bibliothekaren oder Bibliotheksgehülfen und sämmtliche Bibliotheksdiener auf der Königlichen Bibliothek zur Besorgung der currenten Geschäfte anwesend.

§ 22.—Diese

§ 22.—Diese currenten Geschäfte sind

1. die Eröffnung aller an die königliche Bibliothek eingehenden Briefe und Sachen, mit Ausnahme der Verfügungen des vorgesetzten Departements, als welche gleich an denjenigen, der die Correspondenz mit demselben führt, abgegeben werden und die Zuschreibung derselben an die in deren besondern Geschäftskreis sie gehören,
2. die Aufnahme und Löschung wiedereingehender Bücher, die auf längere Termine welche etwa nicht gerade auf die gewöhnlichen Ablieferungstage fallen verliehen gewesen oder durch executorische Abholung eingegangen sind,
3. die Ausfertigung der Speciallisten von den auf die eine oder andere Art eingegangenen Büchern für die Verwalter der einzelnen wissenschaftlichen Fächer,
4. die Notirung der zur gesetzten Zeit nicht eingegangenen ausgeliehenen Bücher, Die Ausfertigung und Registrirung der Mahnbriefe,
6. die Anordnung der executivischen Abholung derjenigen Bücher, welche zufolge erlassener Mahnbriefe hätten einkommen sollen,
7. die Aushändigung und Abnahme der Bücher in und aus dem Lesezimmer.

§ 23.—Am Dienstag und Freitag des Vormittags cessiren die currenten Geschäfte mit Ausnahme von No. 1, und sind dagegen sämmtliche Bibliothekare und Bibliothekgehülfen gegenwärtig, um die bei Abholung und Wiederbringung der Bücher sich häufenden Geschäfte mit Leichtigkeit und Ordnung versehen zu können.

§ 24.—Diese Geschäfte sind bei der Ausleihung

1. Annahme und Revision der eingehenden Zettel nebst Besprechung über die etwa gewünschten längeren Termine ;
2. Aussuchung der geforderten Bücher ;
3. Eintragung derselben in das Leihjournal mit Vermerk des Empfängers und des *Terminus ad quem* ;
4. Eintragung des Buchs und des Empfängers in das Termin oder Control-Buch unter dem *Terminus ad quem.* Erst wenn dies alles geschehen ist wird
5. der Zettel an seinem Ort in das alphabetische Repertorium gelegt und das Buch ausgehändigt.

Bei der Wiederannahme

1. die Aufsuchung des einzulösenden Zettels im Repertorium ;
2. Vergleichung der dargebotenen Bücher mit dem Zettel ;
3. Löschung der Bücher im Leihjournal und Controllebuch ;
4. Aushändigung des Zettels und Abgabe der Bücher an den interimistischen Verwahrungsort.

§ 25.—Diese Geschäfte wird der Oberaufseher auf zweckmässige Art vertheilen und bleibt jeder für seine Parthie speciell verantwortlich.

§ 26.—Wegen Herumführung derer, welche die Bibliothek zu besichtigen wünschen, wird der Oberaufseher einen *turnus* unter denjenigen Bibliothekaren und Bibliothekgehülfen einführen, welche ihm dazu die tauglichsten scheinen, und muss sich derjenige, den die Reihe trifft, pünktlich um die bestimmte Zeit auf der Bibliothek einfinden.

§ 27.—Im Lesezimmer wird ausser dem, der auf der Bibliothek den Tag hat, ein Bibliothekar oder Bibliothekgehülfe nach Bestimmung des Oberaufsehers jedesmal während der ganzen zum Lesen bestimmten Zeit anwesend sein. Auch soll der Real-Catalog sobald er zu Stande gekommen ist in dem Lesezimmer aufgestellt werden.

Berlin den 30ten April 1813.

Departement für den Cultus und öffentlichen Unterricht im Ministerium des Innern.

Enclosure 4 (A.) in No. 29.

(Translation.)

REGULATIONS of the ROYAL LIBRARY.

First Part:—On the public advantage of the Royal Library.

1. The Royal Library offers three advantages to the public; the reading in the reading-room, the loan of the books, and the inspection of the library.

2. The reading hours in the reading-room are, in summer from two to five, p. m., in winter from two to four every day, Sundays alone excepted. For the delivery and loan of books, the days appointed are Tuesdays and Fridays, from 10 to 11, with the exception however of the various religious holidays, and of the three weeks, counting from the Monday before the 1st August.

3. As reading in the library can only have for its object literary advantage, books which belong to polite literature, such as novels, plays, verses in German, and in universally known modern languages, are not given out to read, as there can be no especial literary object in view.

4. All children are excluded from the reading-rooms. Four scholars of the Gymnasium of Berlin are admitted on a written application from their masters.

5. Whoever wishes to read in the library must give in his name and condition to the secretary

No. 10.
Communications respecting Literary Institutions or Libraries in Foreign Countries.

29.
PRUSSIA.

secretary or his assistant; and on his giving his card to the servant in waiting, the books he wishes to read will be brought to him in the reading-room.

6. Every one is obliged, before he goes away, to return to the library-servant the books he has used, when he will receive back his card. If however this card be left behind, it is presumed that the books have not been properly returned, and consequently application is made to the person who took them from their place.

7. The secretary or his assistant is bound to supply literary notices respecting the books asked for, in order to prevent the accusation of difficulties in the way of finding books.

8. The following alone have the right to books from the Royal Library.

1. Princes and princesses of the royal family.
2. Ministers and chargés d'affaires accredited to this court.
3. All officers to colonels, inclusive, as well as civilians, to counsellers of state, and presidents.
4. First counsellors of the Consistory.
5. Members of the Academy of Sciences.
6. Ordinary and extraordinary professors of the University.
7. Directors of Academy of Arts and Gymnasia.
8. Members of the seminary of the University, as well as of other seminaries, on their receiving a *carte d'entrée* from any of the half-yearly commission.

9. This card is only good for Berlin and the Circle; should however any of this last class wish to borrow books, the librarian must address himself to the department of Public Instruction, and receive an official certificate, authorizing the loan of books and manuscripts to professors not of this University.

10. Whoever makes use of this privilege must insert in a book, kept for this purpose, the title of the books borrowed, his name, condition, and residence, and date of its reception.

11. The period prescribed for the return of the books is four weeks after their delivery. Should a longer time be required, permission must be granted by the secretary.

12. Should other persons than those mentioned in § 8 wish to borrow books, they must give a pledge to the secretary, and a card with their name, condition and residence.

13. Books given under such pledge must be returned in 14 days; and no longer time can be allowed, unless they appear on the day appointed, show their permission, and produce their pledge.

14. The person who receives such pledge becomes answerable for the books.

15. Dictionaries and explanatory books are not distributed, neither are expensive engravings, except in such cases and circumstances as the secretary deems expedient; and then by application in writing.

16. A general revision takes place on 12th and 20th March, and between 1st and 8th August all books must be returned.

17. If books are not delivered in at the stated period, the person in fault is warned by the library-servant, and has to pay a fee of four dollars; and must return the books on the first day appointed for their delivery. If he does not do so, he is again fined, and has to pay any expenses that may be incurred; and then, if not forthcoming, they are accounted lost.

18. Whoever injures a book is bound to pay twice the price of the damage sustained.

19. Whoever goes away without returning the books of the Royal Library, incurs the risk of having his house opened by the authorities, to discover the volumes that are wanting.

20. Whoever changes his residence without informing the secretary, in case of his having any books of the library, is fined double fees.

21. Whoever changes his residence without returning all books in his possession, incurs the risk of the expense of the employ of the authorities, if necessary, for the discovery of the books.

22. Whoever wishes to frequent the Royal Library must present himself at the time appointed to the secretary, and give his name and condition; but more that 10 persons are never admitted at the same time.

23. Those who visit the library must not lounge about, but follow the librarian; who on his part will point out every thing by name, and render the visit as advantageous as possible.

24. The time of visiting the library must be changed according to circumstances; but due notice will be given of the change, and the public duly informed by the papers.

Second Part.—On the different Branches of the Establishment, and their Administration.

1. In order to introduce the necessary uniformity in the Royal Library, it has been placed under the direction of a member of the department of Public Instruction, who has the care of the entire business of the library.

2. The affairs of the library, as regards both its order and its increase, are carried on, partly in conferences of its secretaries, partly by individual members.

3. The distribution and regulation of the library is confided to the secretary and the head of the establishment, without whose authorization no change can be effected.

4. The conference superintends the accounts of the library, which must be inspected by each one individually.

5. Receipts as well as expenditure.

6. The correspondence must be carried on in such manner as be agreed upon in conference, and entrusted by the head of the department to one of the secretaries.

7. At

7. At what period, and how often conferences are to be held, is decided by the head of the department, and their decision communicated to him.

8. For the better regulation of the library, the business is divided between the secretary and his assistants, who are specially answerable to the head of the department.

9. All defects must be laid before the conference, by which means attention is paid to repair of the books; and such as are brought back to the library must be immediately restored to their places, and such regulations adopted, that no books should be longer abroad than from Tuesday to Friday, or Friday to Tuesday. Whatever duplicates be obtained, they are collected apart, and offered for sale.

10. The augmentation of the library is effected, partly by contribution, partly by purchase.

11. The head of the department entrusts the secretary, or his assistants, with the business of dealing with the librarians and booksellers, and the superintendence of notices in the papers, so that only the best and perfect copies be acquired.

12. The apartment of the secretary is also used for the purchase of books, where the ordinary and extraordinary professors of the University may point out the books they wish to have.

13. All catalogues of books for sale are in the care of the secretary and assistants, by which means works to which reference may be made can easily be obtained, or those required by the secretaries of the academies.

14. The conference superintends the prices of books, as well as their sale and purchase.

15. When an application be made for books by the secretary of the Academy, or professors of the University, care must be taken to inquire whether or not they are in arrear with books.

16. If new works be required by the Academy or University, they may be purchased from booksellers, without waiting for public sale.

17. Every half-year, at the end of June and December, a sketch of the books borrowed by the professors, and of those returned, must be drawn out.

18. The correspondence with commissioners of auctions and booksellers. The price and payment of books is entrusted by the head of the department to a secretary, as a business apart.

19. As well the superintendence and perfection of catalogues,

20. As all transactions with the bookbinding.

21. Every morning from 10 to 12, and every evening from two to five, and in the winter from two to four o'clock, must one of the secretaries or assistants be present, as well as all the servants, for the current business.

22. Which consists, 1st, in opening all letters and effects sent to the Royal Library, except such as belong to the department of the official correspondence; 2dly, in the reception of the books returned, and in their delivery; 3dly, in the inspection of the lists relative to the distribution of books; 4thly, in the insertion in the catalogues of the books not duly returned; 5thly, in the registration of letters of reclamation; 6thly, in the taking steps for the recovery of such books as should be returned in consequence of such letters; 7thly, in the delivery and reception of library books.

23. On Tuesdays and Fridays all persons connected with the library must be present for the proper arrangement and registration of the books,

24. As well as the distribution to each of his own and individual business,

25. For the due performance of which he is answerable.

26. The head of the department appoints the several secretaries to be present by turns, for the sake of those who may wish to visit the library; and the person whose turn it is must not fail to be at his post most punctually.

27. In addition to the person in the library, another must always remain in the reading-room, where will be found the official catalogue of the books.

Berlin, 30 April 1813.

Department of Ecclesiastical Affairs, Public Instruction,

v. *Schuckmann.*

Appendix, No. 11.

Appendix, No. 11.

Contracts for New Works.

A STATEMENT of the CONTRACTS entered into under the directions of the Surveyor General of His Majesty's Office of Works; and of the Commissioners of His Majesty's Woods, Forests, Land Revenues, Works, and Buildings; for the Works in erecting the NEW BUILDINGS of the BRITISH MUSEUM.

1.—CARPENTER'S AND JOINER'S CONTRACT.

	s.	d.
Day Work:		
Carpenter - - - per day	4	11
Joiner - - - - —	5	2
Oak in Day Work:		
Common Scantling - per ft. cube	5	10½
Ditto - - die square and free from sap - - —	6	6¼
Oak Scantling - - ditto - - if more than 9 feet long and 9 inches square - —	7	1¾
Oak in measured Work, all die square and free from Sap:		
Rough, no labour - - per ft. cube	7	–
Bond - - - - - —	7	4¼
Framed - - - - - —	7	10
Wrought and framed - - —	8	3
Wrought, framed, rabbetted and beaded - - —	8	7¼
Ditto in Door and Window frames, not exceeding 6 inches square - - —	8	10¾
Add on all the above Articles, if not more than 9 ft. long and 9 inches square —	–	7½
Sawing in new Oak - per hundred ft. super[l]	6	8¾
Ditto in old ditto - - —	10	1
Oak Plank in Day Work:		
1-inch Plank - - - per ft. super[l]	–	7½
1½ ditto ditto - - - —	–	11
2 ditto ditto - - - - —	1	2¾
2½ ditto ditto - - - —	1	6½
3 ditto ditto - - - —	1	9¾
Oak Plank in measured Work:		
1-inch Plank, no labour per ft. super[l]	–	10
Ditto one side - - —	–	11¾
1½-inch ditto, no labour - —	1	2¼
Ditto one side - - —	1	4½
2-inch, no labour - - —	1	6½
Ditto one side - - —	1	8½
2½-inch ditto, no labour - —	1	10¾
Ditto one side - - —	2	–¾
3-inch ditto, no labour - —	2	2½
Ditto one side - - —	2	5
Fir:		
Used in Day-work - - per ft. cube	3	–¼
Fir in measured Work:		
Rough, no labour - - —	3	1¾
Bond, Lintel and Plate - —	3	4¼
Framed - - - - - —	3	9¼
Wrought and framed - - —	4	–¾
Wrought, framed, rabbetted and beaded - - p[r] ft. cube	4	3¼
Ditto in Door and Window frames, not exceeding 6 inches square - - —	4	5¾
Sawing in new Fir - per hundred ft. super[l]	4	7½
Ditto old ditto - - - —	6	11¼

	s.	d.
Deals in Day Work:		
Ten feet Slit Deals - - each	1	3
Ditto - ¾-inch ditto - - —	1	9
Ditto - 1-inch ditto - - —	2	3
Ditto - 1¼-inch ditto - - —	2	8¾
Ditto - 1½-inch ditto - - —	3	2¼

Ditto ovolo flat and bead butt	—	1	$-\frac{3}{4}$
Ditto ovolo, ogee or quarter round raised and bead butt	—	1	$2\frac{1}{2}$
Add extra, when hung in two heights	—	–	$1\frac{1}{4}$
Ditto - if three panels high	—	–	1
Ditto - if four ditto, or more	—	–	$1\frac{3}{4}$
Ditto - if of $1\frac{1}{2}$-inch Deal	—	–	$1\frac{3}{4}$
Floors:			
Inch Deal rough folding floor jointed		38	5
Ditto - wrought		41	2
Ditto - ditto - straight joint floor		48	5
$1\frac{1}{4}$-inch Deal rough folding floor, jointed	per square	49	4
Ditto - wrought		52	9
Ditto - straight joint and edges nailed with best deals ploughed and tongued headings		65	3
Ditto - with best battens		71	2
Ditto - with clean battens, dowelled, and ploughed and tongued headings		145	4
$1\frac{1}{4}$-inch wainscot dowelled floor, headings ploughed and tongued		101	7
Add on Deal floors, if ploughed and tongued		6	9
Boarding, &c.			
$\frac{3}{4}$-inch Deal sound boarding and fillets	per square.	30	5
$\frac{3}{4}$-inch Deal rough boarding edges shot	—	30	–
1-inch Deal - ditto	—	38	5
$1\frac{1}{4}$-inch Deal - ditto	—	49	4
Weather boarding rough	—	33	–
Ditto - wrought and weathered, or beaded	—	40	6
$\frac{3}{4}$-inch Deal battening, exclusive of holdfasts or nails	—	7	8
1-inch Deal - ditto	—	9	5
$1\frac{1}{4}$-inch Deal - ditto	—	11	1
$1\frac{1}{2}$-inch Deal - ditto	—	12	7
Common centering to arches	—	26	11
Groin centering	—	46	2
Centering to apertures	per ft. super[1]	–	$6\frac{3}{4}$
Ditto - to brick trimmers	—	–	6
Ditto - to drains	—	–	$4\frac{1}{4}$
Half-Inch Wainscot:			
Rough, no labour	per ft. super[1]	–	$6\frac{3}{4}$
Planed one side	—	–	$9\frac{3}{4}$
Planed both sides	—	–	11
Ditto - and beaded	—	–	$11\frac{3}{4}$
Ditto - and dovetailed	—	1	2
Add, if ploughed & tongued or rabbeted	—	–	$1\frac{1}{4}$
Three-quarter-Inch Wainscot:			
Rough, no labour	per ft. super[1]	–	$9\frac{3}{4}$
Planed one side	—	1	$1\frac{1}{4}$

¾-Inch Wainscot—continued.	s.	d.
Planed both sides - per ft. super[1]	1	2½
Ditto - and framed - - —	1	3¾
Ditto - and dovetailed - —	1	5¾
Add, if ploughed & tongued or rabbetted - -	—	1¼
— if beaded - - - —	—	1
1-Inch Wainscot:		
Rough no labour - per ft. super[1]	1	—
Planed one side - - - —	1	4¼
Planed both sides - - —	1	5¾
Ditto - and framed - - —	1	7½
Ditto - and dovetailed - —	1	9¼
Add, if ploughed & tongued or rabbetted - -	—	1¾
— if beaded - - - —	—	1
Framed backs to presses - —	1	6¼
1¼-Inch Wainscot:		
Rough no labour - per ft. super[1]	1	3
Planed one side - - - —	1	8¾
Planed both sides - - —	1	10½
Ditto - and framed - - —	2	—½
Ditto - and dovetailed - —	2	2¼
Add, if ploughed & tongued or rabbetted - -	—	1¾
— if beaded - - - —	—	1
Framed backs to presses - —	2	—
1½-Inch Wainscot.		
Rough no labour - per ft. super[1]	1	6
Planed one side - - —	2	—
Planed both sides - - —	2	1¾
Ditto - and framed - - —	2	3¾
Ditto - and dovetailed - —	2	5½
Add, if ploughed & tongued or rabbetted - -	—	1¾
— if beaded - - - —	—	1
2-Inch Wainscot:		
Rough no labour - per ft. super[1]	2	—¼
Planed one side - - - —	2	6
Planed both sides - - —	2	7¾
Ditto - and framed - - —	3	10¼
Ditto - and dovetailed - —	3	—
Add, if ploughed & tongued or rabbetted - -	—	2¼
— if beaded - - - —	—	1
2½-Inch Wainscot:		
Rough no labour - per ft. super[1]	2	6¼
Planed one side - - - —	3	—½
Planed both sides - - —	3	2¾
Ditto - and framed - - —	3	5¼
Ditto - and dovetailed - —	3	7¾
Add, if ploughed & tongued or rabbetted - -	—	2¼
— if beaded - - - —	—	1
Wainscot Doors:		
1¼-inch 1 panel doors to presses framed ovolo, ogee, or quarter round, flat and square - -	2	5

Wainscot Doors—continued.	s.	d.
1¼-inch 1 panel doors to presses, with raised panels and square - -	2	7½
Ditto 2 panel doors to presses framed ovolo, ogee, or quarter round, flat and square - - - -	2	6¾
Ditto - ditto - with raised panels and square - - - - -	2	10
Ditto 1 panel door to presses framed bead flush and square - -	2	6¾
1¼-inch Wainscot, 2 panel door to presses framed bead flush and square - - - - -	2	8¼
Add, if folding - - - -	—	1¾
1¼ Wainscot 4 panel doors framed ovolo, ogee, or quarter round, flat and square - - - -	2	8¼
Ditto - ditto - both sides - -	2	10¾
Ditto - ditto - with raised panels and square - - - - -	2	10¾
Ditto - ditto - raised both sides -	3	1½
Add, if folding - - - -	—	1¾
Mouldings:		
Deal Mouldings - - per ft. super[1]	1	4½
Large outside Mouldings - —	1	1¼
Wainscot Mouldings - - —	2	3
Mahogany ditto - - - —	3	9½
Running Articles:		
Rough Fillets - - - -	—	1
Fillets wrought and chamfered -	—	1¾
Deal beads - - - - -	—	1¼
Wainscot beads - - - -	—	3
Ogee - - - - -	—	2¼
Ditto and bead - - - -	—	3
Beaded capping - - - -	—	2½
Square angle staff - - - -	—	3¼
Angle staff bead - - - -	—	5
Straight moulded handrail in Deal - - -	—	10
Circular or ramped - ditto - -	1	8¼
Wreathed - - - ditto - -	3	4¼
Straight moulded handrail in Wainscot - - -	2	3
Circular or ramped handrail in Wainscot - - -	4	5¾
Wreathed - - ditto - - -	8	11½

Circular or ramped ditto - -	7	1¾
Wreathed - - - ditto - -	14	3½
Inch bar baluster - - - -	—	1¾
Ditto - dovetailed one end - -	—	2½
Labour only:		
Bead, groove, or rabbet in deal -	—	—½
Ditto - in wainscot or mahogany -	—	1
Angle beads on wainscoting, &c. -	—	1
Cross groove one inch and under, in deal - - - - - -	—	1½
Ditto, in wainscot or mahogany -	—	2¼

Observations.—These prices were subject to a trifling increase, which fluctuated from Midsummer 1825 to Lady-day 1832. This increase was allowed; the Contractor having memorialized and satisfied the Surveyor-general that an unexpected rise had taken place in the journeymen's wages generally.

In addition to the above prices the following articles were specially agreed for; viz. 1. Sound oak of British growth, in chain plates 12 inches square more or less, and 25 to 30 feet in length, scarfed and bolted with two ½-inch bolts at each scarf; and the same also in sleepers and other plates 9 inches by 5 inches more or less, in similar lengths, and scarfed where required, exclusive of bolts, per foot cube, 8 *s.* 11 *d.*

2. Best wainscot flooring 1 ½ inch thick, dowelled, with ploughed and tongued headings, per square, 10*l.* 15 *s.*

3. Ditto, parquetted as shown, per foot superficial, 2 *s.* 10 *d.*

Appendix, No. 11.

Contracts for New Works.

2.—BRICKLAYER'S CONTRACT.

		s.	d.
Bricks:			
Red Stocks	per M.	95	2
Grey Stocks	—	45	–
Common Malm Stocks	—	77	8
Best washed Malm Stocks	—	115	10
Best washed Malm Stock Cutters	—	126	3
Paving Bricks	—	66	9
Best Windsor Fire Bricks	—	139	9
Stourbridge Fire Bricks	—	300	–
Welch Lumps:			
36 inches	each	10	8¾
33 —	—	9	8
30 —	—	8	7
28 —	—	7	6
24 —	—	6	5½
22 —	—	5	4¼

18 —	—	3	9½
16 —	—	3	3¼
Tiles:			
Plain Tiles	per M.	48	7
Pan Tiles	—	119	–
Hip and Ridge Tiles	—	119	–
10-inch Paving Tiles	per C.	26	5
12-inch - ditto	—	33	4
Oven Tiles	each	1	1½
Tile Pins	per bushel	2	6½
Fir Laths	per bundle	2	5¾
Ditto and wrought Nails	—	3	5½
Double Fir Laths	—	4	9½
Ditto and wrought Nails	—	5	11
Oak Sap Laths	—		
Ditto and Nails	—		
Oak Heart Laths	—	4	7¾
Ditto and Nails	—	5	10¼
10-feet Pantile Laths	—	4	–½
Ditto and Nails	—	4	6
12-feet ditto	—	4	11½
Ditto and Nails	—	5	4¾
Mortar and Lime:			
Dorking Lime	per C.	22	6
Merstham Lime	—	18	7
Chalk Lime	—	14	6
Mortar (containing 27 cubical feet), 32 hods	per load	13	11
Ditto	per hod	–	5½
Lime and Hair	—	–	7¼
Pargetting	⊥	–	7¼
Pointing Mortar	—	–	10¾
Terras	—	6	3½
Cement	per bushel	3	2
Windsor Loom	—	2	–¼
Clean River Sand	per load	5	–
Hair	per bushel	1	4¼
Ashes	—	–	5½
First Size Chimney Pots	each	4	11½
Second size - ditto	—	3	10¾
Third size - ditto	—	3	–
Double bracketted Pots, first size	—	10	10
Day Work:			
A Bricklayer, from 5th of April to the 10th October	per day	5	2
A Labourer - ditto	—	3	–
A Bricklayer, from 10th October to the 5th April	—	5	–
A Labourer - ditto	—	2	9

MEASURED WORK.

		£.	s.	d.
Brick Work:				
Reduced Brick-work done with common Lime, and with all hard burnt Grey Stocks, measured, neat	per rod			
The work to be all flushed in with Mortar, both beds and joints, including Scaffolding.	—			
Reduced Brick-work done with Dorking Lime	—	14	1	–
Ditto, done with Parker's Cement	—	18	13	–
When faced on the above with Malm Stocks	—	–	–	3
When faced with best washed Malm Stocks	—	–	–	5
Add to all the before-mentioned, if circular	—			
Mortar labour, and scaffolding, to new work	—			
Add to all the before-mentioned, (except Chimney Shafts) for extra height, if more than 40 feet from the ground				
Deduct for old Brick-work taken down and used again				
Ornaments in Brick Work:				
Rubbed and gauged Arches straight on the plan, either circular or camber Soffites, with Red Stocks or Malms set in Putty or Mortar, with 4-inch Soffites	pr ft superl	–	2	11
Ditto with more than 4-inch Soffites	—	–	2	1¾
Cut Groins, red or Malm Stocks	pr ft. run.	–	1	6
Flat Pointing on old Work, including raking, dubbing, and scaffolding	per ft. superl	–	–	2¾
Tucked Pointing on old work, including stopping with blue mortar	—	–	–	5½
Rough cut Splays	per ft. run.	–	–	1¾
Rubbed ditto or Birdsmouth	—	–	–	4½
Paving with Bricks and Tiles:				
Grey Stock Pavement laid flat in Sand	per yard	–	2	8
Ditto - all but bricks	—	–	–	10
Ditto - laid on edge in sand	—	–	3	11¾
Ditto - all but bricks	—	–	–	11¾
Ditto - laid flat in mortar and grouted	—	–	3	3¼
Ditto - all but bricks	—	–	1	4¼
Ditto - laid on edge in mortar	—	–	4	5
Ditto - all but bricks	—	–	1	6
Paving Brick Pavement laid flat in sand	—	–	2	8
Ditto - all but bricks	—	–	–	9½
Ditto - laid on edge in sand	—	–	5	5¾
Ditto - all but bricks	—	–	1	–¾
Ditto - laid flat in mortar and grouted	—	–	3	3¼
Ditto - all but bricks	—	–	1	4¼
Ditto - laid on edge in mortar	—	–	5	10¾
Ditto - all but bricks	—	–	1	6½
10-inch Tile Pavement laid in sand	—	–	4	3½
Ditto - laid in mortar	—	–	4	9¼
Foot Tile Pavement laid in sand	—	–	3	7
Ditto - laid in mortar	—	–	4	3½

Tiling:		s.	d.
New English Pantiling laid dry, including hips and ridges, laid in mortar	per square	32	5
New English Pantiling, bedded and pointed inside with lime and hair	—	38	6
New English Pantiling, bedded and pointed outside with lime and hair	—	36	5
New English Pantiling, bedded and pointed inside and outside with lime and hair	—	41	8
Pantiling laid dry, including hips and ridges laid in mortar, all but tiles	—	13	3

Tiling—continued.		s.	d.
Pantiling bedded and pointed inside with lime and hair, all but tiles	per square	19	4
Pantiling bedded and pointed outside with lime and hair, all but tiles	—	17	4
Pantiling bedded and pointed inside and outside with lime and hair, all but tiles	—	22	6
Plain tiling done with oak or double fir laths to a 7-inch gauge	—	50	2
Ditto ripped and new tiled, all but tiles	—	21	5
Two course plain tile creasing	per foot running	–	4

These prices were subject from Christmas 1825 to Midsummer 1832 to a rise of 11 *s.* per rod for reduced brick-work, for similar reasons to those stated for the rise allowed to the Contractor for Carpenter's and Joiner's work.

3.—MASON'S CONTRACT. *N.B.*—The Contract Prices for Mason's work in the new buildings at the British Museum are accompanied by a special covenant in the agreement, that instead of the mode usually adopted, in measuring Mason's work, no workmanship is to be measured or charged, but that which appears on the face of the stone when set; so that a less quantity being allowed in the measurement, a higher price for the work is necessarily charged in these Contracts.

		s.	d.
Portland Stone - -	per ft. cube	4	5
Scantling Blocks above 6 feet long - - -	—	4	8 ¾
Slabs 1-inch thick, or in chimney pieces - -	per ft. super[1]	1	10 ½

Ditto 2½ in. thick - - —		
Block firestone 5 in. thick - —		
Double block firestone - —		
Yorkshire paving - - —	–	8¼
Ditto rubbed - - —	–	10½
Yorkshire step - - per ft. run.	2	4
Purbeck paving - - per ft. super[1]		
step - - per ft. run.		
Chimnies blacked - - each		

These prices were subject to a trifling increase which fluctuated from Midsummer 1825 to Ladyday 1832, which was allowed for similar reasons to those stated for the rise allowed to the Contractor for the Carpenter's and Joiner's work.

4.—PLUMBER'S WORK.

The Roof of the New Buildings of the British Museum being covered with copper, the Plumber's work was trifling, and whatever in the trade was required was done at the prices allowed by the Department for the ordinary works and repairs to the other public buildings.

5.—PAINTER'S CONTRACT.

		s.	d.
1. Twice in distemper stone or any other ordinary colour	per yard	–	3¾
2. Twice in oil and white lead	—	–	4½
3. Three times in oil ditto	—	–	6½
4. Four times in oil ditto	—	–	8¼
5. Five times in oil ditto	—	–	9½
6. Add extra upon either of the said 4 items for flatting the same, finishing it dead white, or any other plain or mixed colour	—	–	2½
7. Add extra upon either of the said 4 items if the same be flatted upon the surface of any ornamental frieze or panel	per ft. super¹	–	1
8. Add extra upon either of the above-mentioned 4 items if the surface of the ornamental frieze or panel be flatted, and the ground of the enrichment be picked out in a different tint	—	–	3
9. Plain or moulded surfaces 3 in. wide or less picked out in 2 or more tints extra, to the charge tendered for No. 6.	per ft. run.	–	–¾
10. Woodwork grained in the best manner in imitation of wainscot, exclusive of the ground colour, which is to be considered as one coat of oil common, and varnished twice over in the best brown copal varnish	per yard super¹	3	–
No extra prices for any mouldings enriched or plain, nor for any narrow surfaces.			
11. Varnishing on graining or other coloured work, for each coat	—	–	6
12. — 4 coats rubbed down to a perfectly smooth surface and very highly polished, if on a plain surface	—	4	–
if on a paneled ditto	—	8	–
13. Varnishing once over on new wainscot, the surface of the wood to be first covered by a solution of gum senegal with a little size	—	–	9

		s.	d.
14. Ditto for every additional coat	per yard super¹	–	6
15. For painting the sky-lights in the upper story, and all other sashes, the whole surface on each side and edge to be measured, and charged - if 4 coats	—	–	6
16. Ditto - if 5 ditto	—	–	7
17. Ditto - if of wainscot and varnished twice over	—	–	3
18. Sash frames - if 4 coats, per ft. run.		–	1
19. Ditto - if 5 ditto	—	–	1¼
20. Ditto if flatted	—	–	–½
21. Ditto if wainscot and varnished twice over	—	–	1
22. The cornice round the King's library, from the upper edge of the frieze to the ceiling, with all its enrichments, as executed 5 times in oil and flatted stone colour	per ft. run.	1	5
23. The enriched frieze in the centre part of the same room, the ground picked out with a darker tint	—	–	9
24. The enriched border or frame surrounding all the compartments of the ceiling, including the enriched member on the upper part of each side of it next the ceiling	—	–	7
25. Each compartment in the ceiling, including the beads, 4 double sunk panels and mouldings, as shown in the drawings No. 99; the beads and ground of the panels to be picked out with a different tint from the rest - each compartment at		10	–
26. Each compartment in the ceiling of the manuscript room, as shown in the drawing No. 98, with the 7 sunk panels, including the enriched ogee, and bead surrounding the whole - each compartment at		22	–
27. The cornice surrounding the ceiling in the centre part of the manuscript room	per ft. run.	1	–
All the preceding 6 items to be painted over 5 times in oil and flatted of some light mixed colour.			

	£.	s.	d.
Scaffold for the 2 reading rooms	20	–	–
Ditto for the manuscript room	15	–	–
Ditto for King's room	60	–	–

6.—SMITH'S CONTRACT.

Cast Iron:		s.	d.	*Wrought Iron:*		s.	d.
All castings, properly fitted and fixed in the building, the whole of them to be cast from the best pig iron melted in the air furnace	per cwt.	12	–	All wrought ironwork, including tie rods, straps, screw bolts, and every other description of wrought work required in the framing of the roofs, floors, partitions, &c.	per lb.	–	2¾

7.—PLASTERER'S CONTRACT.—(By Tender).

		s.	d.
1. Lathing only with single laths per yard	pr yard super¹	1	–
2. Ditto - double ditto	—	1	11
3. Floated lath and plaster set, on walls	—	2	–
4. Ditto - circular ditto	—	2	7
5. Ditto, straight on ceilings, with double laths, as described	—	3	–
6. Ditto - in panels, under 4-ft. square, or 16-ft. superficial	—	3	8
7. Ditto - on walls, ditto	—	3	7
8. Ditto, in stiles, and all widths, not exceeding 12 inches, the prices given for this item to included arrises	per foot super¹	–	6
Note.—No extra price above that given for the item No. 5, is to be allowed if the panels upon ceilings or other parts are 4-ft. square or upwards.			
9. Floated rough stucco on brick	pr yard super¹	1	8
10. Circular ditto ditto	—	2	2
11. Floated and trowelled stucco on double laths	—	3	9
12. Ditto ditto circular ditto	—	4	9
13. Quirk bead, the bead and quirk to be girth and charged at per inch girth	per ft. run	–	1¼
14. Circular ditto ditto -	—	–	1½
All the arrises to be included in the prices given for the preceding items.			
15. Floated rough stucco on brick, jointed with White's pozzolano and stone lime	pr yard super¹	3	2
16. Fine trowelled ditto ditto	—	3	9
17. Ditto on double laths -	—	5	8
18. Add extra if circular -	—	1	3
19. Ditto on No. 17, if finished with fine surface as specimen No. 1, and polished of plain colours	—	6	3
20. Ditto, if polished in imitation of light veined marble	—	7	–
(The specimens are to be seen at Mr. Smirke's office.)			
21. Quirk bead, measured as No. 13	per ft. run	–	2½
22. Plain mouldings, finished in the same manner as No. 17	—	2	–
23. Plain mouldings, finished and polished, as article No. 19	per ft. run	2	6
24. Add extra upon No. 15 if covered with the patent Vitruvian cement, highly polished, of white or plain colours	pr yard super¹	3	9
25. Plain mouldings in the same cement, laid upon a plain surface of stone or stucco, and highly polished	per foot super¹	–	10
26. Enriched mouldings polished at per inch girth	per ft. run	–	6
All arrises and mitres to be included in the preceding prices.			
27. Plain mouldings in putty and plaster, upon ceilings or walls, 4-inch girth or under	—	–	5
28. Elliptical or circular ditto	—	–	7
29. Plain mouldings, above 4-inch girth	per foot super¹	1	1
30. Circular or elliptical ditto	—	1	4
31. Mitres to all plain mouldings at per inch, but no mitres to be charged to any panels or other parts 4-ft. square or upwards	per inch girt.	–	2
32. Enriched members of cornices, properly trimmed, at per inch girth	per ft. run.	–	2½
No extra price if circular, nor any extra charge for mitres.			
33. Enrichments of foliage, well trimmed and undercut, not exceeding 3 inches in relief, for stiles, friezes, soffits, &c., at per foot run, per inch, in width measuring the actual width of the still, frieze, &c.	—	–	4
34. Rosettes in flat relief, not exceeding two inches in projection, at per inch diameter	—	–	9
35. Ditto, in bold relief, not exceeding six inches in projection, at per inch diameter	—	1	3
36. The cornice round the walls of the King's Library is to be valued in the tender, with all its enrichments as described in the drawing No. 100, including all arrises, mitres, &c.	per ft. run.	11	–

Plasterer's Contract—continued.		£.	s.	d.
37. The architrave below the frieze connected with the same cornice, with its enrichments, &c., as shown in drawing No. 103 - - - -	per ft. run	-	5	8
38. Each compartment in the ceiling of the same room, is to be valued at a specific price to be stated in the tender, including the beads, four double sunk panels and mouldings, as shown in the drawing No. 99; each compartment at - -	—	6	12	7
39. The border or frame surrounding these compartments in the manner shown upon the drawing No. 89, and more at large in No. 100, is to be valued in the tender, with its enrichments of foliage having a relief not exceeding two inches, and including the enriched member on the upper part of each side of it marked A, in the drawing No. 100 - -	per ft. run	7	19	-
40. Each compartment in the ceiling of the MSS. room, as shown at large in drawing No. 98, containing seven treble sunk panels, is to be valued with the moulding round these panels, but not including the enriched O. G. and bead, surrounding the whole compartment; each compartment at - - -	—	11	18	-

In the measurement of the preceding items, the net surface of all that is seen of each is to be taken, and no more, nor is any allowance of extra thicknesses or dubbing out, with nails, tartwine or otherwise, to be made, as the parties making their tender, can, by referring to the drawings and to the buildings, have full opportunity of ascertaining how far any may be required.

All works not specified in the Schedule are to be valued in proportion to the prices given, such proportion being regulated by that which the articles bear respectively in the Office of Works' contract.

The drawings referred to, numbered 59, 60, 61, 62. 73. 81. 84. 89. 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, are those prepared by Sir Robert Smirke for the foregoing works.

To allow 2 ½ per cent. for the scaffolding, not provided by the contractor.

8.—GLAZIER'S CONTRACT—(By Tender).

		s.	d.			s.	d.
Best crown glass, under 2 feet superficial - -	per foot super[t]	1	5 ½	Best crown glass, between 4-ft. and 5-ft., for the principal floor, flatting included - - -	per foot super[t]	3	6
Ditto - - 2 feet and under 3 feet - - - -	—	1	9 ½				
Ditto - - 3 feet and under 3 feet 6 inches - -	—	2	-	Plate glass of inferior quality for skylights - -	—	5	6
Ditto - - 3 feet 6 inches and under 4 feet - -	—	2	3	Ditto - - best, for principal floor - - - - -	—	9	6
If flatted add - - -	—	-	6	Grinding glass - - -	—	-	8

9.—COPPERSMITH'S CONTRACT.

Best malleable copper, smelted at Swansea or in its vicinity at Neath. The sheets to be 5 feet 6 inches long, and 2 feet 3 inches wide, weight 21 pounds 10 ounces each. The sheets to be joined together with double seams perfectly water-tight, and with not less than 3 inches of copper in every seam; to be fastened down with copper ties, worked into every long seam, not more than 8 inches apart. The ties to be made of sheet copper, 16 ounces per foot superficial, and every tie to be nailed to boarding with two patent jagged wrought copper nails at edge next glass, and the copper folded over nails at the outer edge, to be seamed to copper of roof.

The whole work to be done in the best workmanlike manner, including every expense, at 2 *s.* 8 ½ *d.* per foot superficial, measured on face when finished.

The foregoing is a Statement of the Contracts for erecting the East and West Wings of the British Museum.

For the New North Wing, fresh Contracts were entered into, as follow:—

BRICKLAYER'S, MASON'S, AND CARPENTER'S CONTRACTS.

The prices for the above works, in building the New North Wing of the British Museum, now in progress, are returned separately, as they are founded upon a particular mode of measurement prescribed by the Architect, to which the prices allowed by this Department for ordinary works do not apply. The lowest tender was accepted after a competition amongst several eminent builders.

Appendix, No. 11.

Contracts for New Works.

SCHEDULE OF PRICES FOR BRICKLAYER'S WORK.

		£.	s.	d.
1. Excavation of ground for the foundation, including the levelling, filling in, &c.		891	–	–
1*. Grouted stratum under the foundation	cub. yard	–	3	3
2. Brickwork in walls, spandrells of arches, drains, &c. built with stone-lime mortar	per rod	9	15	–
3. Ditto - in arches over the basement floor	—	10	5	–
4. Ditto - in walls to be built with cement	—	14	2	6
5. Cutting indents in the old walls, and rendering the same	per ft. super[l]	–	–	6
6. Barrel drains, 9 in. diameter, with half-brick rim, the lower half set and rendered over with cement	per yard run.	–	4	9

		s.	d.
7. Barrel drains, 12 in. diameter, with one-brick rim, the lower half of the inner rim set and rendered with cement	per yard run.	11	–
8. Bricklayer	per day	5	3
9. Labourer	--	3	3
10. Hods of lime-stone mortar, prepared	each	–	6
11. Cement	per bush.	2	3
12. River sand	per cub. yard	2	9
13. Clean river gravel, delivered, if required, for the grouted stratum	—	2	6
14. The new main drain into the public sewer in Montague-place	per ft. run.	8	6

SCHEDULE OF PRICES FOR MASON'S WORK.

		£.	s.	d.
1. Yorkshire stone bonders, with a cramp secured to each	each	–	4	1½
2. Yorkshire stone templates	—	–	13	8
3. Portland stone	per ft. cube	–	3	2
4. Plain work to ditto, in the ashlering, &c.	per ft. super[l]	–	1	3
5. The base moulding upon the plinth	per ft. run.	1	3	–
6. The capitals of pilasters	each	13	–	–
7. The columns in the centre of the south front, with their base and capital	each	230	–	–
8. The architraves of the windows in the centre part of south front, with their sill, cornice, &c.	—	42	–	–
9. The same of the windows on each side of the centre part	—	55	10	–
10. The entablature over the columns of pilasters of the south front	per ft. super[l]	–	7	9
11. The cornice of the pediment	—	–	11	10
12. The architraves of the windows on the north, east, and west sides of the building	each	28	7	–

14. The upper string course	—	–	11	–

		s.	d.
15. The cornice upon the north, east and west fronts	per ft. super[l]	5	–
16. The coping of the parapets	per ft. run.	10	–
17. Portland stone in day work, measured net	per ft. cube	2	10
18. Yorkshire stone, from Park Spring, Eland Edge, or other quarries of equally approved quality	—	2	9
19. Masons employed in day work	per day	5	6
20. Labourers attending them	—	3	4
21. Common York paving, bedded in mortar	per sqre. yard	5	9
22. Other works, at 7 per cent. below the office prices.			
23. Cragleith stone in steps, each step of the size and length, moulded, rubbed and set, as shown in the drawing No. 250.	per ft. cube	15	–
24. The same stone in blocks, not exceeding 5 feet in length, and not containing more than 40 cubic feet in each stone, measured net when worked.	—	4	9
25. Plain work to ditto, rubbed; measuring all that is seen when fixed, setting included	per ft. super[l]	1	11
26. Houseing the ends of the steps into the stone	each end	3	6

SCHEDULE OF PRICES FOR CARPENTER'S WORK.

		s.	d.
1. Fir timber	per ft. cube	2	9½
2. Oak timber	—	5	3
3. Teak timber	—	4	10
4. Labour to fir timber	—	–	2½
5. Ditto to oak or teak timber	—	–	3
6. Ditto to timber framed	—	–	8
7. Extra for timber prepared by Kyan's process	—	–	7
8. Labour, nails, &c., to framing and fixing floors	per sqre.	8	–
9. Ditto ditto to ceiling floors	—	7	9
10. Bracketting to ceilings; labour and nails	per ft. super[1]	–	4
11. Labour, nails, &c., to framing and fixing the roof timbers	per sqre.	10	6

		£.	s.	d.
12. Framed gutter bearers, labour and nails	per ft. super[1]	–	–	1½
13. 1¼-inch yellow deal boarding for lead, laid in narrow widths	per sqre.	2	2	–
14. 1½-inch ditto ditto	—	2	8	–
15. 1½-inch deal roll for lead	per ft. run.	–	–	1½
16. 1¾-inch ditto	—	–	–	2
17. Labour, nails, &c., to framing and fixing the basement floor of oak	per sqre.	–	5	3

All other works to be valued proportionately to the above prices.

JOINER'S CONTRACT.

The Joiner's work for finishing the North Wing of the British Museum, according to the specification, and under the direction of Sir Robert Smirke, was submitted to competition; and the lowest tender, amounting to 12,843 *l.*, was accepted.

A special covenant accompanied the agreement, that should any further work be required than that described in the specification, it should be charged for at 11 per cent. under the prices in the printed Schedule of the department.

PLASTERER'S CONTRACT.

The Plasterer's work for finishing the interior of the New North Wing, according to the specification, was submitted to competition, and the lowest tender was accepted, amounting to 1,112 *l.*

There was a special covenant in the agreement, that should any further work be required than that described in the specification, it was to be charged for at 12 per cent. under the prices of the printed Schedule of the department.

COPPERSMITH'S CONTRACT.

Copper covering, 28 ounces per foot superficial, in the best workmanlike manner, and in every respect similar to that done on the roofs of the east and west wings, at 2 *s.* 6 *d.* per foot superficial, including labour, copper, nails, ties and every expense; and labour to lay patent felt under copper, at half-penny per foot, nails included.

The following Works are at present executed upon the same Contracts as those for the east and west wings, viz.:—

Smith and Founder's Work.
Painter's Work.
Glazier's Work.
Plumber's Work.

The foregoing Statements include the Contracts for all the principal Works in the New Buildings of the British Museum; but it is proper to observe, that in the progress of them several articles were required not provided for in those Contracts; which have been either specially agreed for, or provided at prices which, after full consideration, have been determined to be reasonable.

Henry Hake Seward,
Surveyor of Works and Buildings.

Office of Woods, &c.,
18th August 1836.

Appendix No. 13.

Appendix, No. 13. Library of Dresden.

PAPERS referred to in the Evidence of *Edward Edwards*, Esq., on the British Museum, 2 June 1836.

NOTICE of the PUBLIC LIBRARY at *Dresden*, supplementary to the Return printed in the Appendix to Minutes of Evidence, 1835:—Translated from "*Merkwuerdigkeiten Dresdens.*" Von *J. G. Wiemann*; Dresden, 1835.

I.—*Catalogues, &c.*

Full and accurate information respecting the history, regulations and curiosities of the library of Dresden may be found in the excellent work of F. A. Ebert, intituled, "*Geschichte und Beschreibung der Koeniglichen Oeffentlichen Bibliothek zu Dresden,*" (Leipzig, 1822-8.) In the Appendix to that work catalogues are given of the MS. Greek and Latin classics, as well as of those of the Spanish, Italian, French, English, Polish, Bohemian and Russian MSS. which relate to ancient and æsthetic literature. A catalogue of others of the MSS. relating to the history of the middle ages, has been published by the same author in the first vol. of the "*Archiv der Gesellschaft fuer aeltere und Teutsche Geschichtkunde.*"

Of the Poetical part of the old German MSS., a catalogue is prefixed to Adelung's work, "*Altteutsche Gedichte in Rom.* &c. (Königsb. 1798-9.) A portion of the Oriental MSS. are known by the catalogue printed by Reiske, in the fourth part of the "*Memorabilien von Paulus,*" (Leipzig, 1793.) More recently, a complete catalogue of the collection of Oriental MSS., 450 in number, has been prepared by one of De Sacy's most accomplished pupils, Dr. Fleischer. The books of this library, referred to in Ebert's "*Allgemeines Bibliographisches Lexicon,*" (2 B. Leipzig, 1821-30), are distinguished by an *. The most complete view of all these treasures will be afforded by the great Classed Catalogue, (*Der Grosze Real-Catalog*), which, since the commencement of the present year [1835], has been progressing with the greatest possible rapidity. The several faculties of Jurisprudence —Medicine—Theology (as a faculty of science)—Literary History—the Natural Sciences, and German and Italian Classical Literature, are in course of active preparation. Of the following faculties: Ancient Classics—*Ars Musica*—Philology and Glossology—Botany —Spanish and Portuguese Belles Lettres—Science of Education [*Paedogogik*]—Mineralogy, &c.; classed catalogues are already completed.

With the beginning of the present year also, a new Acquisition-Catalogue [*Haupt Eingang-Journal*] was commenced, in which all books, from the largest encyclopædia to the smallest *brochure*, whether presented or purchased, are regularly entered, and which therefore combines the advantage of affording a perfect control over the ordinary business of the library, with that of giving immediate information of its most recent acquisitions.

II.—*Control, &c.*

The direction [*Aufsichtführung*] of this library is vested in a chief librarian, an assistant-librarian, and two secretaries, who are assisted by a clerk of the chancery. The library is open every day throughout the year (except for a week at Easter, Whitsuntide and Christmas respectively), from nine o'clock until one, for those who wish to consult books in the reading-room; and from eleven o'clock until one for the purpose of lending out books, which must be returned at the expiration of four weeks at the latest. Books of reference, and such as are in daily use, are not allowed to be taken out at all, and MSS. and rare or precious works, only under certain express stipulations.

By the regulations of the institution, strangers, in order to borrow books from the library, must be provided with the security of some person either holding a public office or being a settled inhabitant of the city. In the first week of September, in every year, there is a general revision or visitation, for which purpose all books, without exception, must be previously returned. It is worthy of observation, that for the public convenience, a suggestion-book (*Einskreibebuch*), is placed in the reading-room, wherein may be entered the title of any desiderated book not already in the library, which, if not too unimportant, or by its price beyond the limited means of the establishment, will be purchased in its turn.

In future, *spectators* of the library also will meet with more convenient regulations for their accommodation. For the gratification of the admirers of curious MSS. the most attractive of those in this library will be exhibited in glass cases, *Schaukaesten.)*

Appendix, No. 13.

Library of Dresden.

III.—*Arrangement, &c. of the Books.*

The most remarkable portions of this library consist of editions of the Greek and Roman Classics—French, German, and especially Saxon History—History of Literature—Important Collections of Writings concerning the Jesuits, and of the controversial tracts of the Reformation, and the Thirty Years War—Spanish Literature, as well Scientific as Polite, &c. A collection of Academical and other Writings, reaching down to the year 1755, is also especially worthy of notice: in the classes of Literary History and Jurisprudence, it is unique. Among the MSS. on vellum are some rare treasures, many of them richly illustrated, and formerly in the collections of the old Dukes of Burgundy, of the House of Medici, &c. The number of *Incunabula* exceeds 1,600.

The books are arranged in 25 rooms, thus:—

Room I. contains, Encyclopædias—Philology and Criticism—Archæology—Greek and Roman Classics.

II. MSS.—Aldine Editions—Books on Vellum.

III. Universal History—Historical Prolegomena and Paralipomena.

IV. Ancient History—History of particular periods, and Historico-Political writings.

V. History of Portugal, Spain, Italy and Switzerland.

VI. Philosophy—Politics—Sc. Education (*Paedogogik*)—Pure Mathematics, and the Natural Sciences.

VII. Geography—Voyages and Travels.

VIII. History of Germany—History of France.

IX. History of Saxony, as well under the Royal as the Ducal races.

X. History of Great Britain, Holland, Denmark, Sweden, Poland, Russia, Hungary, and European Turkey—Mixed Historical works.

XI. Literary History (except Transactions of Academies, &c.)—The richness of this class may be estimated by Francke's Catalogue.

XII. Oriental Philology—Bibles—Exegetical Writings—Fathers of the Church—Councils—Scholastic Theology.

XIII. Theology of the Catholic and Reformed Churches.

XIV. Lutheran Theology.

XV. Doctrines of other Sects—Universal Church History—Judaic and Christian Antiquities.

XVI. History of Saints—of Popes—of the Monastic Orders, and of the Reformation—Liturgical Works.

XVII. & XVIII. Editions and Expositions of the Roman Law Books—Entire collections of Juridical Works—Civil Law—Canon Law, and remaining portions of Jurisprudence.

XIX. Medicine.

XX. Polygraphical Works—Writings of Learned Societies—Epistolary and Miscellaneous Writings.

XXI. Journals and Modern Latin Literature.

XXII. Grammar and Lexicography of Modern Languages—Æsthetics—Portuguese, Spanish and Italian Literature—French Literature.

XXIII. French Literature continued—European Æsthetical Literature.

XXIV. Mixed Mathematics—Military Science—Art of Mine Working—Technology—Commerce.

XXV. Fine Arts, including Architecture and Music—Drama—Gymnastics, &c.*

Of this library, the writer of a communication to the Record Commission says, "The Royal Library at Dresden is a truly noble institution. It is formed by purchases; the King of

* In the work from which the above is extracted (*Merkwürdigkeiten Dresdens*), will be found much valuable information (the accuracy of which may be depended upon) respecting the other public institutions of Dresden, and especially of the Collections of antiquities, medals and coins, paintings and natural history; the Historical Museum, illustrative of the national history; the Museum of Arts and Manufactures, &c. The Parliamentary Return printed in Appendix to Report, &c. of last year, is very meagre.

Appendix, No. 13.

Library of Dresden.

of Saxony having constantly resisted the proposals to tax literature by exacting copies; which would be in truth to tax not his own subjects only, but all Germany, the greater number of German books being published at Leipzig. The ordinary yearly revenue applied to the purchase of books is only 500 *l.*, but it is found sufficient to add annually the best works. The number of volumes amounted in 1827 to 285,000, well-chosen useful works, and 16,000 volumes of MSS.; *all so well arranged according to their subjects, that any one may be found in a few minutes.* Civil history alone occupies 80,000 volumes; still many excellent works are wanting."—*Proceedings, &c.*, 1833, p. 416.

II.—LIBRARY OF GOETTINGEN.

Library of Goettingen.

NOTICE of the SYSTEM of CATALOGUES, by *A. H. L. Heeren*, Professor of History in the University of *Göttingen*, &c. Supplementary to the Official Return, *vide* page 592.

I. EVERY addition to the library is first entered in the "*Manual*" of the year; in this are concisely written the title and date of the book, and the day of its reception.

II. The book is then entered with its full title in the "*Accession-Catalogue*," which also is commenced with every year, forming at its close four volumes. Vol. 1 being devoted to Theology; vol. 2, to Jurisprudence; vol. 3, to History; and vol. 4, to Miscellanea. In this catalogue are also entered the form and number of each book, with references to the corresponding entries in the "*Manual*."

These two first catalogues are intended for the more particular use of the librarians; the two which follow are for the readers.

III. The third is a complete Alphabetical Catalogue, in which every book is entered under its author's name, if given; if not given, then under chief word of title. When the author's name, though not given, is known, the book is entered in both ways. The date and form are also entered on one side, with references to the "*Manual*" and "*Accession-Catalogue*;" on the other side is entered the head in the "*Classed Catalogue*" to which the book belongs. In order to preserve clear alphabetical order, a page is invariably given to every name or chief word; and, when full, such page is taken out, copied, and two inserted in its stead; when the volume becomes too thick it is divided into two.

IV. Lastly, the book is entered in the "Classed Catalogue" or "Scientific Catalogue," [*Real* or *Wissenschaftlichen Cata.*], according to its subject, and is then placed in that division of the Library to which it belongs. Its class and position are also entered in Nos. II. & III., as well as in the book itself.

The first two catalogues serve as registers of increase [*Einnahme Register*] for each year; the Alphabetical Catalogue answers the question whether a certain book is in the Library, and where it is to be found; and the Scientific or Classed Catalogue shows at once what books are contained in the Library on any given subject.

Of this system the writer of a communication to the Record Commission on Foreign Libraries (before alluded to) says, "The Catalogues of the Library at Göttingen are truly admirable; some of their rules I am endeavouring to get introduced into the British Museum."—*Proceedings, &c.*, 1833, *p.* 417.

Appendix, No. 14.

Appendix, No. 14.

Letter from T. Hawkins, Esq.

LETTER from *Thomas Hawkins*, Esq., to the MEMBERS of the SELECT COMMITTEE on BRITISH MUSEUM.

Sharpham Park, Glastonbury, 4 July 1836.

MY Lords and Gentlemen, Members of the Select Committee appointed to inquire into the Condition, Management, and Affairs of the British Museum.

I BEG most respectfully to lay before you the following facts relative to my transactions with the honourable the Trustees of the British Museum, and the accompanying protest against certain evidence of Mr. König, curator of mineralogy, adduced before your honourable Committee.

In 1833 I offered the British Museum the whole of my collection of fossil organic remains for 4,000 *l.*, which was declined.

In 1834, the collection being trebled in amount and value, I addressed Professor Buckland, the second letter, published page 53, in my Memoirs of Ichthyosauri and Plesiosauri, which I have the honour to submit for your inspection. And I beg your observation to the following

Appendix, No. 14.
Letter from T. Hawkins, Esq.

following words, in italics, found in that letter. "As I do not wish to make a bargain, only to recover the money that I have expended, let the Museum have them at a price that you yourself shall fix upon." And I have the honour to submit for your consideration, the 10th and 11th letters, in the former of which is found the following decisive paragraph: "I have sent the Trustees, with my work, a list of all the sauri, &c. &c., that I propose for the Museum, a copy of which I retain for you, with the several prices, as well as I remember, that the articles have cost me, so that there may be no manner of mistake anywhere, and as little trouble in the estimation as possible." The latter letter is an assertion as distinct and unequivocal as language may be, when addressed to so exalted a corpus as the honourable the Trustees of the British Museum, that the acquisition of that portion of my collection, now in the British Museum, should not be held in the light of a purchase, but rather as a donation, I receiving not the uttermost value of the transferred fossil remains, but merely "the money they had cost me."

II. The restorations were made in the most public manner in London. Cliff, Mantell, Conybeare, Buckland, and every other distinguished geologist in the country being cognizant thereof, or witness thereto. Mr. König, had his curiosity directed him, might have easily joined them, the distance from his residence to the place where the restorations were made, not exceeding 200 yards. And he was again and again invited to inspect the collection.

I have the honour to be, my Lords and Gentlemen, your most obedient humble servant,

Thomas Hawkins.

Appendix, No. 15.

Appendix, No. 15.
Letter from Sir Francis Chantrey.

LETTER from Sir *Francis Chantrey* to the CHAIRMAN of the SELECT COMMITTEE on the BRITISH MUSEUM.

Sir, Belgrave Place, 15 June 1836.

SINCE I gave my Evidence yesterday concerning engravings made from medals by a machine, I have conversed with Mr. Wynn, die engraver to the Royal Mint, who informed me that there are several machines in this country which produce copies of medals in true proportions in all their parts.

I beg leave to enclose an impression which he gave to me; it is from a plate engraved by Mr. Bates' machine. It appears to me, that in this impression, the "distortion" (as it has been called) is entirely obviated. I understand that a similar machine is in the possession of a person of the name of Lacy.

In the enclosed print the effect of relief appears inferior to most of the engravings by the French machine, but that I presume may depend in some degree on the direction of the lines; in this instance they run obliquely.

Had I been aware of this improvement in the machine, I should have stated it yesterday; perhaps you will think it important enough to add to my evidence.

I have the honour to be, Sir, your very obedient servant,

F. Chantrey.

To T. G. B. Estcourt, Esq.
&c. &c. &c.

ANALYSIS OF INDEX.

PRINCIPAL SUBJECTS on which EVIDENCE was taken, with the NAMES of the WITNESSES Examined on each Subject.

GENERAL MANAGEMENT OF THE MUSEUM:

Canterbury, His Grace the Archbishop of - page 19, 20

INDEX.

N. B.—In the following Index the *year* [1835 or 1836], following the heading, refers to the Evidence taken before the Committees appointed in those years respectively; *Rep. p.* refers to the page of the Report; the *Figures* following the Names to the Questions of the Evidence, and *App. p.* to the page of the Appendix of either year respectively.

A.

ABERCROMBIE, A., Esq. [1835.] Letter from him to Viscount Palmerston, dated Berlin, 12th Nov. 1834, relative to literary institutions in Prussia, *App. p.* 481.

Academie Impériale des Sciences. See *Russia*, 4.

Academy, Royal. [1836.] If a collection of casts of statues were formed, it should not be deposited there, as there would be restrictions upon the admission of the public to it, *Weigall* 236——There is a collection of casts there, but not so extensive an one as necessary, nor can it be open to the public, *Weigall* 243, 244.

Academy, Royal, President of. See *Trustees of the British Museum.*

Accessions. See *Collections. Natural History Collection*, 1.

Accounts of the British Museum. [1835.] Officers of the establishment who are conversant with accounts, *Ellis* 403, 404——By whom the accounts of the Museum are audited, *Forshall* 806–825——Mode of auditing the annual accounts by the sub-committee of finance, *Forshall* 920–927——There would be no objection to the accounts being authenticated by the auditors or the principal librarian, though the authentication by the accountant has always been considered sufficient, *Forshall* 961——Evidence as to supposed omissions of receipt and appropriation in accounts laid before Parliament, *Forshall* 962-970——Variance between accounts returned to parliament in 1833, and the annual accounts, and cause thereof, *Forshall* 982–1005——Under what head in the accounts payments to Mr. Millard will be found, *Forshall* 993–999——Mode of keeping the accounts could not be improved to any extent, *Forshall* 1269, 1270.
See also *Elgin Marbles. Extra Service. Literature, Arts and Science. Parliamentary Grants. Parliamentary Returns. Rich*, Collection.

Acts of Parliament:
[1835.] Opinion that the Act 26 Geo. 2, entirely superseded the Act of Anne, *Ellis* 1047–1050——List of statutes relating to the British Museum, *App. p.* 570.
[1836.] They are sent to the British Museum by the order of Parliament, *Baber* 4654.
See also *Cottonian Collection.*

Admiralty. [1835.] The admiralty has presented some objects to the Museum, but not many, relative to zoology, *König* 2847——*See* also *Donations* and *Bequests. Parry*, Capt.

Admission of the Public:
[1835.] Days of the week the public are admitted to the British Museum, necessity for Saturday being devoted to cleaning, *Ellis* 252-266——The public could not be advantageously admitted in the month of September, that month being devoted to reparations and re-arrangements, *Forshall* 1271–1283——Account of the number of applications made to the trustees of the British Museum (at meetings authorized according to the rules to grant admissions), for the purpose of being admitted to inspect that part of the collection of minerals not generally shown, or any particular part thereof; similar accounts for the collections of medals and coins, and prints and drawings, and to the reading-room, 1815 to 1820; and admissions in consequence of such applications, *App. p.* 397.
[1836.] The public should only be admitted on alternate days if the Museum open till eight o'clock, *Bell* 459–469——The public might be admitted during the study of the artists, without their studies being interrupted; the Museum might be open five days; there is a necessity for closing one day, *Rennie* 1214–1216. 1223–1227——Facilities to the public for visiting the institution would improve the national taste, and periods of closing for cleansing and arranging might be chosen that were not holidays, *Richardson* 2302–2312——Mode by which the Museum was formerly allowed to be seen by strangers; limitation of time for viewing the whole collection; at present any individual may remain as long as he pleases in one room, *Gray* 2704, 2705——Facility of access to the Museum greater than that of the Jardin des Plantes, *Children* 2791.
See also *Evening Admission. Foreigners. Holidays. Hours of Admission. Leyden Museum. Literary Characters. Natural History Collection. Repairs. Visitors. Zoological Society.*

Advocates' Library. [1836.] The advocates' library in Scotland has lent out books to readers since its foundation in 1682, *Hannay* 5153.

African Birds. See *Ornithological Collection*, 1.

Agassiz, Mr. [1836.] Is an authority for the use of the term swimming bladder, *Yarrell* 2010——His testimony to the value of the collection, and to the facilities afforded by officers of the British Museum, *Yarrell* 2015–2019, *Griffiths* 2164–2166, *Gray* 2698.
See also *Fossil Fish.*

Akerman on Roman Coins. [1836.] Publication of this work; its success as a matter of speculation, distinct from its reputation as a work of art; why it is not analogous to the proposed medallic history of coins, *Tilt* 5628–5630.

Alabaster Sarcophagus. See *Salt's Egyptian Antiquities.*

Alcuin's Bibles. [1836.] Two of Alcuin's bibles at Rome and Paris are of a later date than that offered to the Museum, *Evans* 3341-3372.——*See* also *Charlemagne Bible.*

Alexandrian Manuscripts:
[1835.] Parliamentary grant, in 1817, on account of the Alexandrian manuscript fund; sum paid thereout, *Cowtan* 939–945——Appropriation of part of the Parliamentary grant of 1817, for this purpose, to the general purposes of the Museum, *Ellis* 946–949——Sums voted for this purpose were not strictly so applied, *Forshall* 1193-1195——Sum asked from Parliament on this account, and sum expended thereon, *Cowtan* 1345–1349——Balance from the Alexandrian manuscripts was accounted for to Parliament, and went towards the supplies of the following year, *Ellis* 1358, 1359——Sums paid on account of the publication of the fac-simile of the Alexandrian manuscripts, 1821 to 1833, and manner in which the several sums were distributed, *App. p.* 364——Account showing the number of copies of the fac-simile of the Alexandrian manuscripts which were printed, and the manner in which they were disposed of, *App. p.* 365——Account of expenditure on the publication of the fac-simile of the Alexandrian manuscript, for editing, printing, engraving, paper, &c. 1814–1818, *App. p.* 402——Account of the Alexandrian manuscript fund: 1814, *App. p.* 300—1815, *App. p.* 302—1816, *App. p.* 305—1817, *App. p.* 307—1818, *App. p.* 309—1819, *App. p.* 312—1820, *App. p.* 314—1821, *App. p.* 317—1822, *App. p.* 320—1823, *App. p.* 323—1824, *App. p.* 326—1828, *App. p.* 336.
[1836.] From its great value it is not now allowed to go into the reading-room; it is the most valuable in the world; whether a common attendant cannot obtain access to it in the absence of the keepers, *Holmes* 4098–4117.

Alphabetical Catalogues. See *Catalogues of Books and Collections*, VII. *Catalogue of Manuscripts*, 3. *Foreign Libraries. Tours Library.*

Ambrozian Library. See *Milan.*

America. [1836.] In 1828 a series of portraits by machinery, from medals of illustrious men, was published in America, *Wyon* 5848.

Ammonites. [1836.] Manner in which witness found the collection of fossil ammonites inaccessible, *Grant* 1508——The enormous fossil collection could not be conveniently classified and placed with the recent forms of cephalopods, *Grant* 1510——Size of some of the specimens, *Bowerbank* 917, 918——Evidence relating to fossil ammonites, *Gray* 3078.

Anatomical Paintings, &c. [1836.] Report concerning the collection of those in the basement of the Museum, *App. p.* 575.

Anatomy. [1836.] Extent to which the Secretary of State exercises control over the schools of anatomy, *South* 1101–1103.
See also *Comparative Anatomy.*

Ancient Marbles. [1835.] Persons by whom the description of the collection of ancient marbles in the Museum is edited, *Hawkins* 3457–3460.

Andiffredi's Catalogue. See *Casanate Library at Rome.*

Angler Fish:
[1835.] Examination upon the description in the synopsis of the Common Angler, and how far correct, *Children* 3203–3207.
[1836.] Objection to the description in the Synopsis of the Common Angler, *South* 1151–1153——*See* also *Bronchial Sac.*

Anglo-Gallic Coins. [1835.] Number of copies of the catalogue of Anglo-Gallic coins, which were printed, distributed, retained, and sold, *Ellis* 1075——Description thereof commenced by Mr. Combe, and published by witness, *Hawkins* 3449——Sums paid on account of the publication of the Anglo-Gallic coins, 1821 to 1833, and manner in which the several sums were distributed, *App. p.* 366——Account showing the number of copies of the catalogue of Anglo-Gallic coins which were printed, and the manner in which they have been disposed of, *App. p.* 366.

Annales du Museum. See *Natural History Department.*

Annual Reports. See *Reports.*

Annual Visitation. See *Reports. Visitation.*

Anonymous Works. [1836.] Extracts showing the want of a consistent plan for entering these works in the alphabetical catalogue, *Edwards* 4744.

Antelope. [1836.] The naked and decayed hide of that placed on the staircase, gives early warning of the state of the collections within, *Grant* 1523——One in the British Museum 60 or 70 years exposed, and is now in as good a state as ever, *Gray* 2909.

Antiquarian Department. See *Synopsis.*

Antiquarian Society of Paris. [1835.] Loan to witness by Sir Henry Ellis, of the transactions of the Celtic or Antiquarian Society of Paris, *Millard* 2349.

Antiquaries, President of the Society of. See *Trustees.*

Antiquaries, Secretary to Society of. [1835.] Salary received by witness as joint secretary to the Society of Antiquaries; the duties do not interfere with those of librarian to the Museum, *Ellis* 281–284.

Antique Statues. See also *Ancient Marbles. Athenian Marbles. Corsi Collection of Antique Marbles. Marbles. Moulds of Statues.*

Antiques, Gallery of, at Dresden. See *Saxony.*

Antiquities, Collection of:

[1835.] Witness is generally consulted as to the value of collections of classical antiquities offered for sale, *Hawkins* 3461–3463——How far witness deciphers Greek inscriptions and hieroglyphics in specimens of Grecian and Egyptian antiquities, *Hawkins* 3464.

[1836.] The department of British antiquities might be increased; there might be a separate room appropriated for it, and a classed catalogue made, *Gage* 5079–5082——Valuable accessions made of late years to the collection of British antiquities; the purchase of the gold British corselet has done the trustees credit, *Gage* 5087, 5088——Sums expended thereon, 1831 to 1835, out of the Parliamentary grant, *Panizzi* 4790——Report of 14th February 1807, containing list of works fit to be executed in this department, *App. p.* 520.

See also *Belzoni,* Mr. *Egyptian Antiquities. France,* III, 2. *Marbles. Millengen,* Mr. *Salt's Egyptian Antiquities.*

Antiquities, Department of. [1836.] A subdivision of it would increase its usefulness; marbles, prints and coins should each have a separate and responsible keeper; distinct catalogues of each should be printed for sale, *Edwards* 4766*——Mr. Hawkins, the present keeper of this department has been repeatedly consulted relative to the accommodation required by his department; extent to which his suggestions have been carried into effect, *Smirke* 5370, 5371. 5376–5379——The area appropriated thereto in the Museum is considerably larger than the whole area provided for it in the great Museum at Berlin, *Smirke* 5453.

Antiquities, Gallery of:

[1835]. Cause of the delay in the publication of the volume of the Gallery of Antiquities, now in the press, *Forshall* 1122–1132——Names of draftsmen and engravers employed; necessity for unity of design, *Forshall* 1133–1137——Account of sums expended in the publication thereof, 1809 to 1834, put in, *Cowtan* 2211——Students to the Gallery of Antiquities generally come recommended by Royal Academicians, though it is not absolutely necessary, *Westmacott* 3983–3985——Sums paid on account of the publication of the Gallery of Antiquities, volumes V. to IX., 1821 to 1833, and manner in which the several sums were distributed, *App. p.* 362, 363——Number of copies of volumes V. to IX. that were printed, and manner they have been disposed of, *App. p.* 364——Sum expended on the publication of the Gallery of Antiquities, 1809 to 1834, *App. p.* 419.

[1836.] The Gallery of Antiquities is expensive, but as a work of luxury for the upper classes it is desirable to see it as it is, *Cochran* 3478–3480.

Austrian Institute. See *Spain*, 2.

Authors. [1836.] Difficult to select from persons, merely known by their reputation as authors, so good a board of management as the present, *Archbishop of Canterbury* 5522.

Aylmer de Valence, Earl of Pembroke. [1836.] Beauty of this monument, and advantage of having a cast from it, *Weigall* 245.

Ayscough's Catalogue of Charters. [1836.] Would be unfit for use if kept in the reading-room, it can always be obtained by asking the attendant, *Nicolas* 3733.

See also *Catalogue of Manuscripts*, 1. *Cottonian Manuscripts.*

B.

Babbage, Mr. [1836.] Particulars relative to the invention for engraving medals to which Mr. Babbage has drawn attention, *Brockedon* 5886.

Baber, The Rev. *Henry Herbert:*

[1836.] (Analysis of his Evidence.)—Witness's salary and duties as keeper of the printed books, 4492–4497——Increase is made to the library from three sources, donations, the Copyright Act, and purchase, 4498——Recommendations formerly made to the Library Committee for the purchase of books; cause of that committee discontinuing its meetings; purchases, unless of large amount, are now made by witness at his discretion, 4499–4511——Circumstances under which the librarians of the Royal Library became officers of the British Museum, 4512–4516——Circumstances under which His Majesty formed that library, and amount annually laid out upon it, 4517–4519——Opinion upon the manuscript classed catalogue of that library, compiled by Sir Frederick Barnard, 4520–4525.

A classed catalogue is frequently desired, and useful in a national library; one has proceeded to a considerable extent in the Museum; it was laid on one side from the necessity of first completing an alphabetical catalogue; possibility of their proceeding simultaneously, if extra expense gone to; comparative use of an alphabetical and classed catalogue, 4526–4545——If there is only one catalogue an alphabetical catalogue would be best; but there should be both an alphabetical and classed catalogue, 4548–4554——If the two catalogues were carried on simultaneously, it would require two different descriptions of persons; but it would be a saving of time, though the alphabetical catalogue would not be produced so soon, 4555–4570——Progress that is being made in transcribing catalogues for the use of the reading-room, and period in which they are likely to be completed, 4571–4579——How far the suggestions detailed in a report to the trustees in 1806, relative to the formation of a classed catalogue, have been complied with, 4580–4587.

Classed catalogue supposed to have been proceeded in, about half-way, 4592–4594——Number of printed works in the library; cause of the omission in the return to Parliament, in 1833, of a number of pamphlets; number of works acquired since 1833, 4592–4598——The annual printed list will show the additions made to the library in the course of the year; pamphlets are stated as so many volumes for want of time to catalogue them, 4599–4605——A classed catalogue might be made a work of public utility, without the assistance of a class of gentlemen, but it would be more creditable to a national library to do it with the best and ablest assistance, 4606–4608.

Baber, The Rev. *Henry Herbert*—continued.

Opinion upon the classed catalogues of certain private institutions, 4609–4612——Further evidence in favour of a classed catalogue, though an alphabetical one, with a full index of matters to it, is more desirable, 4616–4619. 4623——Mode adopted of obtaining publications under the Copyright Act; proportion the Museum are supposed to lose by evasion of the Act; greater proportion they would lose but for employing a collector, 4628–4644——Statement of the number of books and pamphlets, songs and pieces of music entered at Stationers' Hall and received for the library of the British Museum; also those procured by the collector for the Museum, 4645.

The newspapers are supplied to the Museum annually by the Stamp-office, but always with two years' in arrear; date of the earliest newspaper in the Museum; purposes for which they are used, and by what class of persons, 4646–4653——The parliamentary papers are received by order of Government, 4655–4658——Means taken by witness of procuring foreign literary works, 4659–4661——Extent of the works of German authors that are in the Museum, 4662–4667——Impossible to prevent the reading-room catalogues becoming over crowded, that having been the case has led to the transcript of the whole of the manuscript portion, 4668, 4669——Desirable that there should be a systematic selection from Foreign authors, 4673, 4674——Works on Danish literature do not exist to any extent in the Museum; there are few published, and it is principally want of funds that prevents their being obtained, 4675–4677.

Number of distinct catalogues that there are in the Museum; the Alphabetical Catalogue will contain every printed paper and book in the Museum, from which a classed catalogue can be made with greater facility, 4678–4688——Extent to which the London Gazettes are perfect with indexes, 4689–4693——Extent to which duplicates of purchased works are parted with; circumstances taken into consideration previous to their being marked as duplicates; duplicates of donations are not now parted with, though there are instances of its having been done formerly, 4694–4718——The only objection to opening the Museum during holidays is from the supposed influx of people who would not be so well conducted as at other times, 4719——Extending the hours of admission to the reading-room and library would be a question of expense, 4720–4728——Scientific men in the board of trustees would not be an advantage in the printed book department, 4729, 4730——Management of the Museum being vested in the heads of departments as a committee of general management, subordinate to the board of principal trustees, would be an advantage; 4731——Sum asked and paid for the Transactions of the old Cortes of Spain 4731*–4734.

Baber, The Rev. *H. H.*:

[1835.] Sums paid him for editing the fac-simile of the Alexandrian manuscript, *App. p.* 402——Expenses of his journey to Munich, *App. p.* 405.——Letter from him to Sir Henry Ellis, as to persons attending the reading-rooms, dated 26 June 1835, *App. p.* 428——Another letter, dated 30 June 1835, *App. p.* 429.

[1836.] Mr. Baber was consulted as to the new buildings after the plan was decided, *Panizzi*, 4956——Reports from the Rev. H. H. Baber, of the department of printed books, 26th April and 6th May 1834, *App. p.* 534.

Bacon's Works. See *Rome.*

Bandini's Catalogue. See *Tuscany.*

Banks, late Mr. *Henry*:

[1835.] His literary acquirements and qualifications as a trustee of the Museum, *Forshall* 656.

[1836.] Difficulty of getting his assent to the purchase of books when he was a member of the library committee, *Baber* 4504, 4509, *Panizzi* 4810.

Banks, Sir *Joseph*. [1836.] Opinion as to his interference when a trustee, *Panizzi* 4945–4949——His report of 27th February 1809, on the collections in the basement of the Museum, *App. p.* 574.

Banks, Sir *Joseph*, Collection of:

[1835.] Nature of the negotiation entered into with Mr. Brown, by which the Museum became possessed of Sir Joseph Banks's collection, and gave Mr. Brown an appointment, *Ellis* 424–433——How far certain articles given by Sir Joseph Banks were parted with by the trustees about the year 1809, *Ellis* 437——Answer to the charge in the Edinburgh Review of 1823, relative to the transfer to the College of Surgeons, by the Museum, of a portion of this collection; subsequent sale by auction, and re-purchase by the Museum, *Ellis* 1584–1619——There are none of the specimens of natural history in this collection remaining, *König* 2764——Salary and duties of the office of under-librarian and keeper of the Banksian botanical collection, *Brown* 3630–3637——Particulars as to the transfer of Sir Joseph Banks's collection to the Museum, and the terms on which witness accompanied it, *Brown* 3682–3689.

[1836.] Evils arising from individual loss of time, and also the prevention of improvement in the museum of the College of Surgeons, from the Banksian library of natural history not being maintained in the spirit of its formation, *Owen* 499, 1179–1194——The Banksian library is very defective in geological works, *Greenough* 3882–3883.

Barbonic Library. See *Sicily.*

Barnard, Sir *Frederick.* See *King's Library.*

Barrington, Shute, Bishop of Durham. [1835.] His literary reputation and qualifications as a trustee of the Museum, *Forshall* 654.

Bartsch, of Vienna. [1836.] Catalogue of the prints and drawings in the Museum in progress, formed on the principle of his work, *Josi* 5190.

Basement. [1836.] Uses to which some parts of the basement of the building are intended to be applied, *Smirke* 5357–5359——Report concerning the more valuable parts of the collections, deposited in the basement story of the British Museum, *App. p.* 574.

Basle, Public Library. [1836.] Questions and answers, showing the condition of this library, number of librarians, &c., *App. p.* 542–562.

Bas Reliefs. See *Moulds of Statues.*

Bates, John. [1836.] (Analysis of his Evidence.)—The difference between witness's and the French machine has been fully explained by Mr. Brockedon, 5952.

Bates's Engraving Machine. [1836.] Engravings produced by his machine are not altogether satisfactory, *Tilt* 5618——Origin of Mr. Bates's first machine for engraving; defect therein, but which has been overcome by his improved machine, *Wyon* 5848–5854. 5873–5875——Nature of the improvements in Mr. Bates's and Mr. Froude's machines, *Brockedon* 5888–5895——The principle of the construction of this machine affords the only way in which the medals of the Museum can be accurately engraved, *Brockedon* 5896——This machine having attained accuracy is incapable of important improvement, *Brockedon* 5897——Price at which medals could be executed by it, *Brockedon* 5900–5903——The engravings by Mr. Bates's machine are perfectly correct, though they have not that beautiful appearance that the French ones have, *Doubleday* 5912–5914——The difference between witness's and the French machine has been fully explained by Mr. Brockedon, *Bates* 5952——Comparison of engravings by the French and English machines, impossible to unite the perfections of both in one, *Pistrucci* 5987–5997——Letter from Sir F. Chantrey, relative to this subject, *App. p.* 595.
See also *Cheselden Medal. Collas's Engraving Machine. Engraving Machines. Engravings of Medals. Minerva Medal. Panathenaic Frieze. Parthenon. Phygalian Marbles. Thomas's, St., Hospital.*

Batrachia. [1836.] Those in the Museum are for the most part nameless, *Grant* 1504.

Bats. [1836.] The bat is without a scientific name in the Museum collection, *Sowerby* 5, *South* 724——Only two named, in case containing 31 specimens, *Grant* 1472——Explanation as to evidence of Dr. Grant relating to the number and labelling of the cases containing bats, *Gray* 2668–2670. 2969. 2971.
See also *Catalogues of Books and Collections,* V.

Battle Abbey Muniments. [1836.] Number and description of the charters, grants, and muniments, relating to Battle Abbey, the collection of Sir G. Webster; price at which witness has offered them to the British Museum, but the purchase was declined, *Thorpe* 3212–3222——Opinion that literary men would give preference to the purchase of the muniments of Battle Abbey for 1,200*l.* over the application of any 2,000 *l.* expended in sales by the Museum, *Thorpe* 3231——Great value of the Battle Abbey deeds and manuscripts in the hands of Mr. Thorpe, which it would be desirable that the Museum should possess, *Mathew* 3393–3400——Extract from witness's report to the trustees of 10th Nov. 1832, relative to the recommendation for the purchase of this collection, *Forshall* 4428–4431. 4475.
See also *Hastings Tithes. Sacrist's Ledger.*

Battles. [1836.] Sea and land battles cannot be faithfully represented in engraving from medals by machinery, *Wyon* 5855.

Bavaria. [1836.] Communication from His Majesty's minister, relative to literary institutions and libraries therein, *App. p.* 577–30.

Bavaria, King of. See *Dodwell's Greek Bronzes. Egina Marbles.*

Beasts. [1836.] A very large portion of the collection of beasts are unnamed, *South* 724.

Beaumont, Sir *George.* [1835.] His qualifications as a trustee of the Museum, *Forshall* 654.

Beaumont, Sir *George,* Pictures of. [1835.] Custody of the pictures presented by Sir George Beaumont to the British Museum has been transferred to the National Gallery, though the ownership still remains in the trustees of the Museum, *Ellis & Forshall* 538–556——Right of the trustees over these pictures, and understanding that they were to be placed in the National Gallery, *Forshall* 1218–1236——Minutes of the trustees, list of pictures, and correspondence relative to these pictures; transfer to the National Gallery, and present power of the trustees over them, *Forshall* 1360–1386——Extracts from minutes of trustees respecting Sir George Beaumont's pictures, dated 12 and 21 July 1823, 14 February 1824, and 13 May 1826, *App. p.* 430——Letter from Sir George Beaumont to the trustees, dated 17 July 1823, *App. p.* 430——Letter from Sir George Beaumont to Sir Charles Long on the same subject, *App. p.* 431.

Beche, H. T. de la, F. R. S. [1835.] Letter from him to the trustees of the British Museum on the subject of Hawkins's fossils, dated 17 July 1834, *App. p.* 440.

Beck, Dr. [1836.] Disappointed in his object in making a scientific tour to this country to examine the identical specimens which have been described as species in different publications, *Bell* 345——Objects of his visit to this country, *Turner* 1960–1969——He is one of the first conchologists of the day, *Turner* 1670——His opinion that the Museum collection was respectable, and that in a few years it would be the first in Europe, *Turner* 1977–1980——Witness in correspondence with Dr. Beck of Copenhagen, for the receipt of specimens, *Bowerbank* 867.

Bedford, Duke of. [1836.] Spaces on the north-east and north-west corners should be purchased of the Duke of Bedford, *Smirke* 5487, 5488.

Beechy, Captain. [1835.] There are several rock specimens and weapons in the Museum collected by him, *König* 2861——Specimens collected on his voyage to the North Pacific Ocean were presented to the Zoological Society, *Gray* 3358.

Belcher, Capt. See *Zoological Society*.

Belgium. [1835.] Letter from Sir George B. Hamilton to the Duke of Wellington, dated Brussels, 28 November 1834, relative to literary institutions in Belgium, *App. p.* 484——Number of national museums at Brussels; under what direction placed; departments into which divided; annual expenditure, out of what funds payable; admission of the public, &c., *App. p.* 484, 485——Arrêté de Leopold, Roi des Belges, le 24 Septembre 1832, *App. p.* 485——Number of libraries in Brussels, and in the provinces, names of librarians, regulations of libraries, admission of the public, &c., *App. p.* 486.

Bell, Thomas. [1836.] (Analysis of his Evidence,)—Surgeon and fellow of the Royal Society, and lecturer on comparative anatomy at Guy's Hospital, 326, 327——Facilities given by the scientific officers of the Museum for the examination of specimens in the natural history department, 330——Collection of reptilia not in the state it ought to be, though it is much improved of late years; the specimens in spirits are good, the dry specimens cannot be kept in so good order; the nomenclature is admirable, as far as it has gone; causes why the whole are not named, 331–341——It is desirable that wherever a description has been given of a species from any individual specimen, that the original name should be retained to that specimen, whatever alterations may afterwards take place, 342–345——The collection of crustacea exposed to view contains a great number of valuable specimens, either not named at all, or named by a nomenclature now obsolete; and where modern generic names are placed in cases, they are thrown in, in an irregular manner; the great improvements have not been kept pace with, 346–348.

The collections in drawers bear Dr. Leach's name, who was a great authority in that class: the British collection is one of the most perfect in any department of zoology, 349——It is highly desirable, in all cases where exposure would hurt the specimens, that duplicates only should be exposed, 350–352——Advisable in the exposed part of the collection that each class, order, family or tribe should have displayed in the cases the organs upon which the divisions are founded, 353, 354——Names are repeatedly written in pencil, and badly, but are not illegibly or improperly spelled; scientific men should not undergo the drudgery of writing names, 355–357——Names given by Dr. Leach to the crustacea are retained; those of the conchological collection have been entirely removed or altered, 358–362——Curators should have books for consultation in their respective departments, independent of the general library, 363——They should have separate apartments to pursue their speculations uninterruptedly, 364, 365.

The scientific and English trivial name should be attached to English species; scientific names are so well known, that foreign names need not be attached, 366——The spirit preparations of the reptilia are well named; the dry preparations are deficient in that respect, 369——Dr. Leach formed a scientific catalogue of the crustacea and insects, which is kept up by M. Samouelle; it has not been printed, 373–377——There should be a synoptical catalogue adapted for general visitors, and a strictly scientific one which should contain every species in the collection; it would meet with a ready sale, and is of first-rate importance, 379–382——The catalogue of the College of Surgeons is highly interesting; it took many years in the formation, 383–388——Portions of the natural history department being in a state of transition, it would be impossible at present to form a perfect catalogue, 389–436.

Impossible that the zoological officers could, under existing circumstances, form such a catalogue as the Museum ought to have, 395——If the trustees had viewed it as a matter of importance, they would have taken steps to have formed one, 396–399——The catalogue of crustacea would be accessible to a stranger on application to Mr. Samouelle, 400–404——Heads of departments should be more independent than they are now, but should not have so much power as the French curators, 407——Loan by a naturalist, having charge of a collection in the Paris Museum, of a case of the rarest specimens of tortoises from the public collection, without any period being specified for their return, 407–413——Impossible that any specimens could have been withheld from Cuvier on his visit to the Museum, 416–418——It would be an act of injustice to interdict officers in charge of collections from forming private collections, 419–421.

Desirable that the officers of the Museum should be consulted previous to the purchase of collections for their respective departments, 422–428——Reference made to witness respecting the purchase of a fossil turtle, 429, 430——Examination relative to the recommendation by an officer of the Museum in favour of the purchase of Hawkins's

Bell, Thomas. [1836.] (Analysis of his Evidence)—*continued.*

fossils, 431–444——There are arguments that may be used both in favour and against public lectures at the British Museum, 445——No objection to officers of the Museum being secretaries to other learned bodies, if the duties do not trench on the time that ought to be devoted to the Museum, 446——Desirable that Government should give facilities for improving the collection of natural history, through their ministers abroad and officers employed on voyages of discovery, 449, 450——Intermixture of men of science in the trusteeship would be beneficial, 455–458.

During the summer months, it would be advantageous the collections and library should be opened till eight o'clock of an evening, but the public should only be admitted on alternate days, 459–469——If the Museum could be open during holidays, without risk to the cases from the crowd, it would be desirable, as access to such institutions would be an incalculable benefit to the public character, 464. 470–475——No subject of more importance to the Museum than the formation of a most extensive and full catalogue, 476——Desirable that some of the officers should be able to speak all the principal continental languages, but there are doubts whether it is feasible to exact it as a condition of their appointment, 477——When specimens are perfected from the parts of other specimens, the additions should be marked; it is so with the skeleton of the elephant, 479–483——To render a zoological collection as perfect as possible, the parts upon which the characters of the different groups are founded should be exhibited with the animals; but a collection of comparative anatomy in the Museum rendered unnecessary by the splendid collection in the College of Surgeons, 484.

Beloe, Mr. [1836.] When he was librarian, certain duplicates of donations of books were parted with, *Baber* 4696, 4697.

Belzoni, Mr. [1835.] His name was mixed up with Mr. Salt's offer; his own collection was sold by auction, *Ellis* 1570——Minute of committee respecting Mr. Belzoni's offer to collect antiquities in Egypt, dated 13 February 1819, *App. p.* 424——Minute of general meeting declining Mr. Belzoni's offer, dated 13 February 1819, *App. p.* 424.

Bennett, Edward Turner. [1836.] (Analysis of his Evidence.)—Secretary to the Zoological Society; works published by witness on the subject of zoology, 1687–1691——Progressive improvement in the zoological collection of the British Museum within the last 20 years, but particularly within the last seven or eight years, since more space has been allowed, 1692–1701——The arrangement of the mammalia is as good as the space will allow; whether possible to afford them a larger space, 1702–1705——Condition of the old specimens are ragged; those recently introduced are good skins and well stuffed, 1706–1710——No instance of specimens in good condition and liable to injury from dust being exposed to them, 1711——In some departments, a better classification might be made if there were more officers, and by that means more working hours, 1714——Opinion that the classification of an eminent authority should not be implicitly followed in a large collection, but that variations should be made according to the improvements in science, 1715–1723——How far the imperfect state of the collections twenty years ago was from want of space, 1724——The first step in the recent advancement in zoology was contemporaneous with the opening the intercourse with the continent, 1726, 1727.

Rare specimens might be purchased with a view of future exhibition, but in the present state of the Museum buildings it would not have been prudent to have purchased largely, 1730–1732——The condition of the British birds is good, and as a separate collection, is complete, 1733, 1734——Reason why, as regards the Museum, the British birds should form a separate collection, though, generally speaking, collections should be blended into an entire system, 1735——The general collection has been considerably increased in the last few years, though it is still imperfect, 1736, 1737——The attractive nature of birds causes them to occupy a proportionably larger space than that of other collections; they are rather crowded than otherwise, 1738–1741——The classification of Temminck has been adopted, which is considered a good authority, though it is not that which witness would have adopted, 1742–1745——The Museum collection of shells is extensive, has much increased of late years, and is very extensively named; it is of considerable scientific value, 1746, 1747.

Particulars as to the negociation between the Zoological Society and Mr. Cumings for the possession of his collection of shells; reasons of his preferring that society to the British Museum, though in the event of the negociation going off the Museum is to possess the collection, 1748–1753——Not desirable at any time to publish a catalogue of the entire collections of the Museum, though one should be prepared, 1756, 1757——Purchasing duplicates for the purpose of exchanging is not a desirable mode of proceeding for the Museum, 1758–1760——Objection to scientific men practically acquainted with any particular department being trustees of the Museum; it would prevent the curators from working with that energy they would do if the credit of the arrangement redounded to themselves, 1761–1767——Heads of departments in the Museum are generally men of science in those particular departments to which they have been appointed, 1768–1770.

Collections at the Zoological Society are equal in condition to the recent ones at the Museum, both having passed through the same hands, 1773, 1774——Improvements in the Museum collections within ten or twelve years, 1775–1777——Extent to which the catalogue of British bats is perfect; it may be inspected by students, on application to the curator, 1778–1793——Catalogue of the collections at the College of Surgeons is exceedingly

Bennett, Edward Turner. [1836.] (Analysis of his Evidence)—*continued.*

exceedingly valuable; difference in the nature of the collections is a reason why a similar catalogue for the British Museum should not be published, 1794–1802——A complete catalogue of the department of the science of zoology should be published, the objects in it being marked that are or are not in the British Museum, 1803–1809——Scientific men being appointed as trustees might be advantageous as regards supplying the deficiencies of the collections, but would be disadvantageous if they interfered with the details of the departments, 1810–1832.

[Second Examination.]—Naming the specimens in the natural history department is not so complete as could be wished; parts that are most deficient and most complete, 1834–1837——Witness's inspection is not sufficient to admit or contradict Mr. South's statement that the mammalia are mostly not named or not rightly named, 1838–1842——Manner in which the management of the collection of the Jardin des Plantes has caused it to be more useful to science than that of the British Museum, 1843–1848——If there were a museum of natural history alone, a board, consisting of heads of departments, might be very advantageous for all natural arrangements, 1849, 1850. 1868——It should be superintended by a board composed of certain official persons, and certain family, and a few elected trustees; official persons that should and should not be appointed, and who would and would not be likely to attend, 1851–1867.

The objects of the Museum are too miscellaneous to admit of a board being formed from the officers, to manage its internal affairs, so advantageously as might be expected from a similar board for the natural history department, 1869–1872——Desirable to consult heads of departments previously to appointing officers under them, 1873, 1874——Where departments are not of greater extent than the officer would have full time to attend to, there is no necessity for a second person to write or affix labels; a clerk might be appointed to write labels, but the specimens are of greater scientific value if written by the hand of a competent authority, 1875–1882——Whether it is advisable to pay literary men by the day; that system has not prevented competent men being obtained when wanted, 1885–1887.

Witness's opinion that the collection of shells is extensively named, is different from that of the keeper of the department; it may arise from Mr. König having been examined last year, and witness speaking of the present time, 1888–1901——Extent to which the synopsis is useful to casual visitors and to scientific inquirers; it is not capable of much improvement, except as admitting of greater developement, 1902–1927——Period during which the Jardin des Plantes has existed, 1928, 1929——Number of persons of whom the board for natural history should consist, 1930–1933——Necessity for an accurate catalogue of the specimens in the natural history department being formed, 1934–1936——The reason no good catalogue has been formed for the Zoological Society is from want of assistance, which may equally apply to the British Museum, 1937, 1938.

Benvenuto Cellini. [1836.] There are no casts from his works; artists cannot study them without travelling, *Weigall* 230.

Bequests of Collections. [1835.] Bequest of collections to the Museum have not generally been by men who were great writers; they have been men of fortune, *Ellis* 201–209——They are kept separate and distinct when there are stipulations to that effect in wills, *Ellis* 434–436——The object of not parting with bequests in duplicate is to encourage gifts and bequests from other parties, *Ellis* 467–471——Advantages of keeping collections that are bequeathed to the Museum entire over classing them in a general library, *Ellis* 481–490——Cause of the trustees entertaining the intention of keeping great bequests entire, *Ellis* 1044–1046.——*See* also *Donations and Bequests.*

Berlin Gallery:

[1835.] The entomological collection in that gallery is much richer than that of the British Museum, *König* 2738.

[1836.] Hours of admission, *Rennie* 1217——Number of visitors annually, *Rennie* 1218——Is the third in European collections as regards birds, *Grant* 1523——The birds are packed in boxes, being in a transition state, *Gould* 2367——Witness not aware of any published catalogue to collections there, *Gray* 2624——Nature of the synopsis to zoological collection at Berlin, by professor Lichtenstein, *Gray* 2676——List of duplicates purchased there, *Gray* 2690——There are 1,200 species of birds therein, *Gray* 2947——There are 280 species of reptiles, *Gray* 2998——740 species of fish therein, *Gray* 3033——70,000 species of insects in this collection, *Gray* 3097——The gallery of arts at Berlin was not erected when the plan for the British Museum was designed, *Smirke* 5361–5362.

See also *Manuscript Collection*, 1. *Ornithological Collection*, 4. *Quadrupeds. Zoological Collection.*

Berlin Royal Library. [1836.] The library at Berlin contains 320,000 volumes, *Panizzi* 4774——Questions and answers, showing the condition of the library, number of librarians, &c., *App. p.* 542–562.

Bern. See *Switzerland.*

Bewick's Birds and Quadrupeds. [1836.] Contains amusement and information for unscientific persons, *South* 766.

Bezæ Codex. See *Codex Bezæ.*

Bibliothèque Imperiale Publique à St. Petersburgh:

[1835.] The catalogues stated to be in the Imperial Library at St. Petersburgh are supposed to be in manuscript, *Ellis* 2405——The fruits of conquest have added considerably to the Imperial Library there, *Ellis* 2413——By whom founded; how governed; annual funds; admission of the public; names of librarians; number of books and manuscripts therein; regulations for its management, *App. p.* 448——Actes relatifs à la nouvelle organisation de la Bibliothèque Impériale, *App. p.* 449——Rescript de Sa Majesté au directeur en chef de la Bibliothèque Impériale, feu M. le Comte Stroganof, conseiller privé actuel de la première classe, *App. p.* 449——Statut d'administration pour la Bibliothèque Impériale Publique, *App. p.* 449——Etat de la Bibliothèque Impériale Publique, *App. p.* 450.

Décret de Sa Majesté au Ministre de l'Instruction Publique, M. le Conseiller privé actuel Comte de Rasoumowski, *App. p.* 451——Décret de Sa Majesté au Ministre des Finances, M. le Conseiller privé actuel Gourief, *App. p.* 451——Décret de Sa Majesté Impériale, énoncé au Sénat Dirigeant, le 12 Fevrier 1812, par le Ministre de l'Instruction Publique, le Senateur Comte de Rasoumowski, *App. p.* 451——Règlement détaillé pour l'Administration de la Bibliothèque Impériale Publique, *App. p.* 452——Essai sur un Nouvel Ordre Bibliographique pour la Bibliothèque Impériale de St. Petersbourg, présenté par le C. d'E. A. Olenin, et approuvé par le Directeur en chef en 1808, *App. p.* 457——Four plans of the Imperial Russian Library, *App. p.* 481.

[1836.] Nature of the catalogues preparing there, *Evans* 3317, 3318——The report containing the account of the classification of this library would furnish some very valuable hints, *Gregory* 3495——The Russian library is a monument of the rapacity of the most odious government that can exist; it has formed part of the conquests from the Poles, *Panizzi*, 4783——The plan for a classed catalogue there looks one of the finest things that can be seen, *Panizzi* 4855——Particulars relative to the formation of the library at St. Petersburgh; its classification is according to the size of books, and not according to subjects; defects in its catalogue; difficulty of Englishmen obtaining admission, *Huish* 4985–5005——It is estimated to contain 400,000 volumes; if so, the British Museum contains 1,000,000, *Hannay* 5149.——*See* also *Zaluski.*

Bibliothèque Royale à Paris:

[1835.] Royal ordonnance of 1832 relative to the conduct of, *Ellis* 246——Date of the last catalogue in the Royal Library at Paris; great quantity of books therein that are uncatalogued, *Ellis* 2493–2495——Ordonnance du Roi concernant la Bibliothèque Royale, *App. p.* 405—Règlement concernant la Bibliothèque Royale, *App. p.* 470.

[1836.] The British Museum library is far inferior to the King's Library at Paris, even including the magnificent donation made by King George 4, *Panizzi* 4773——The King's Library at Paris is the finest in the world; it contains 700,000 volumes, *Panizzi* 4773——In 1791 it contained 153,000 volumes, *Panizzi* 4800——Grant by Napoleon Buonaparte for the benefit of, *Panizzi* 4795——The French have not returned all the books taken from the Vatican, which has of course extended their library, *Panizzi* 4784——One-third of it is formed of the libraries taken from convents and emigrants, *Panizzi* 4911——Supposed number of manuscripts therein, *Forshall* 4446–4448——It is admitted to contain the greatest number of manuscripts; it claims the first rank in the number of printed books, but the pretension is doubtful, *Hannay* 5149——There is neither a classical nor alphabetical catalogue; eight or nine folio volumes of a catalogue of printed books, published about the middle of last century, but the classed catalogue of manuscripts never proceeded with to any extent, *Evans* 3309. 3316——The system is bad upon which the catalogue in the Paris Library is formed, *Panizzi* 4836–4838——Facilities experienced by witness in the Paris Library, *Gregory* 3581. 3585——Hours it is open; no book is given out within the last half hour, *Hannay* 5094–5096——In the manuscript department in the Paris library the facilities are as great as can be found; evils of the want of accurate catalogues: great extent of the holidays, *Hannay* 5107–5113——Strangers are not allowed a sight of the catalogues of printed books; in this department the whole plan and practice is bad; defalcation in the number of books, and from what causes; comparison in favour of the British Museum, *Hannay* 5114–5128——There are no means adopted of warming this room, *Smirke* 5409. 5410——This library is possessed of materials illustrative of our history, copies of which should be obtained, *Hannay* 5153——Particulars relative thereto; number of volumes; state of the library; catalogues, number of librarians, &c., *App. p.* 543–562.

Biblical Manuscripts. [1836.] Preparation made by witness some years ago for an index to these manuscripts, *Forshall* 4378.

Bingham, Hon. *Richard.* [1836.] Letter from, to the Hon. W. T. Fox Strangways, enclosing communications relative to literary institutions and libraries in Bavaria, *App. p.* 577–30.

Biography. See *Continent.*

799

Bird-stuffing:

[1835.] This operation was tried to be carried on at the Museum, but it did not answer, *Children* 3146——The public have the security that the best bird-stuffer in the kingdom is employed, *Children* 3147–3149——It is better done by employing an eminent bird-stuffer than by performing the operation at the Museum, *Gray* 3274, 3275.

[1836.] It would be more economical that a salaried bird-stuffer should be employed at the Museum, than that the specimens should be sent out, *South* 1134–1146——The excellent stuffing is confined to two or three houses in London, *Turner* 1642——There is the highest reason to be satisfied with the mode in which the bird-stuffing committed to Mr. Gould is done, *Children* 2836–2838——The two attempts of stuffing at home have been attended with the most signal want of success, both as regards the specimens and the expense, *Children* 2837——Bad mode of stuffing birds at Paris for the Museum, *Gray* 2951——Impossible to depend on specimens so stuffed, *Gray* 2954.

Board of Works. See *Buildings.*

Board Meetings. [1835.] Nature of the attendance of trustees at the board meetings, *Ellis* 64–74.

Board Wages. [1835.] Amount of board wages to servants, *Forshall* 1259, 1260.

Bodleian Library:

[1835.] There is no classed catalogue of the Bodleian library, *Ellis* 2490.

[1836.] The catalogue, by Hyde, instanced as a good pattern of an alphabetical catalogue, *Panizzi* 4862——Dr. Bandinal has sent commissions to foreign countries for the purchase of books for this library, in consequence of the combinations at sales by auction here, *Harding* 4345–4347.——*See* also *Douce*, Mr. *Gough, Richard*, Esq.

Bonn Museum. [1836.] Miscellaneous arrangement of specimens therein, *Gray* 2640.

Book Fund. [1835.] Receipts and expenditure of the book fund: 1812, *App. p.* 296—1813, *App. p.* 298—1814, *App. p.* 300—1815, *App. p.* 302—1816, *App. p.* 304—1817, *App. p.* 307—1818, *App. p.* 309—1819, *App. p.* 312—1820, *App. p.* 314—1821, *App. p.* 317—1822, *App. p.* 320—1823, *App. p.* 323—1824, *App. p.* 325—1825, *App. p.* 328—1826, *App. p.* 330—1827, *App. p.* 333—1828, *App. p.* 335—1829, *App. p.* 339—1830, *App. p.* 342—1831, *App. p.* 345—1832, *App. p.* 348—1833, *App. p.* 351—1834, *App. p.* 354.

Books. [1835.] Instance of 55 books being required in one morning by one gentleman, *Ellis* 1315, 1316.

See also *Copyright Act. Duplicate Books, Coins and Collections. Fees. Freight. Library of the British Museum. Literary Works. Printed Books. Publications. Reading Room. Sales of Publications. Titles.*

Books and Manuscripts:

[1835.] Sums voted in 1833 for the purchase thereof, and the sum expended in 1834, nearly tally, *Forshall* 1213, 1214.

[1836.] Provision that will be made in the new buildings for additional books and manuscripts, *Smirke* 5422, 5423.

Books of Reference:

[1835.] There should be working books of reference in each officer's room, to prevent their labours being suspended by the works they are using being wanted in the reading-room, *Samouelle* 3878.

[1836.] Curators should have books for consultation in their respective departments, independent of the general library, *Bell* 363.

Bordeaux. [1836.] There is a classed catalogue in manuscript in the library at, *Matthew* 3384-3387——The library is considered a fine one, *Matthew* 3385. 3392.

Botanical Catalogues. [1836.] Those which have been published, prove that the Museum Catalogue would meet with a sale, *South* 761.

Botanical Collection:

[1835.] Merits of Mr. Brown as a botanist; has the charge of the Banksian collection; the other botanical collection of the Museum will be made over to him, *König* 2854–2860 ——The care of the whole botanical collection of the Museum is in progress of being placed under witness's charge, *Brown* 3638–3644——Witness is recently enabled to increase the collection nearly to the extent he suggested as sufficient, *Brown* 3697——Period of the first representation as to the transfer of the whole botanical collection to witness's charge, *Brown* 3702, 3703——If the botanical department eventually transferred to the natural history department, the efficiency of the former will be impaired, *Brown* 3731.

[1836.] Desirable that it should be exhibited to the public, *Sowerby* 44.

See also *Zoological, Botanical and Mineralogical Departments.*

Botany. See *Library of the British Museum. Organic Remains.*

Bowerbank, James Scott. [1836.] (Analysis of his Evidence.)—Fellow of the Geological and Zoological, and member of the Entomological Society, 840——Extent of witness's conchological collection, 843——Smallness of the extent, and bad arrangement of the shells in the British Museum; names of private collections which are superior, 844–848 ——Shells should be placed stratigraphically; recent shells should be considered subjects of zoology, and fossil shells subjects of geology, 849——Deficiency of the entomological collection; the arrangement, as far as it goes, is good; small proportion of those arranged to those unarranged, 850–853——Every possible facility is given by the officers of the Museum; great want of even the commonest assistance, but more particularly as regards the entomological department, 854–858. 861, 862——Private collections have been disposed of other ways than being sent to the British Museum, for fear they should be lost there, 859, 860——Manner in which the curator's time is taken up in other ways than in the arrangement of his own collection, 861——Importance of a good entomological collection, both to medicine and manufactures, 863, 864.

The Museum should improve its collections by corresponding with persons in different localities, having a travelling collector, and whose expenses might be paid by the sale of duplicates; one of the officers might be so employed, 865–872. 899, 900——Partially shown, in the expenditure of money, to the minerals over the fossils, crustacea and insects, 876–878——Comparison of the collection of British fossil shells and organic remains with those of private collections, shows it to be a miserable collection, 880–886 ——The geological collection should not be attached to the mineralogical collection, and placed under one curator, 898–900——The fossil shells for the study of the conchologist should be arranged zoologically; if for the geological world, the primary arrangement should be stratigraphical, and the second zoological, 901–906.

Great deficiency of names or labels, as a zoological arrangement, 907–909—— The great body of fossil organic remains have not been displayed for many years, 910——Space that would be required to exhibit a perfect collection of fossil shells, and whether there is sufficient room in the British Museum, 913–922——Necessity for a classed catalogue; difficulty of troubling the librarian every minute, 923–925 ——A classed catalogue of printed books, sold in parts, would meet with a ready sale; manner in which the catalogue might be formed in a short time; it would show the comparative poverty or richness of the Museum collection, 929–931——Necessity for a classed catalogue, and whether it is not necessary to finish the alphabetical catalogue first, though constant accessions will prevent either from being complete, 932–946.

The two catalogues might be formed simultaneously; the expense should not be an impediment; if the library is worth forming, the catalogues are; description of clerks that should be employed, and supposed number, 948-972——For the convenience of scientific men, engaged during the day in business, the library should be open of an evening, 973-977——Advantageous to the Museum that scientific men should have a greater share in the management and direction, 978-981——The departments of mineralogy and geology should be divided, 982——Heads of departments should be independent of each other, but responsible to superior authority, 983——Giving lectures would

801

Bowerbank, James Scott. [1836.] (Analysis of his Evidence)—*continued.*

would be highly advantageous, 984, 985——Government might aid the national collection by calling on their consuls and diplomatic agents to assist them, 986, 987——If leading men in the different branches of science were in the trusteeship, it would lead to the recommendations of curators as to the purchase of collections being attended to, 988–992.

Bowerbank's Conchological Collection. [1836.] Extent thereof, *Bowerbank* 843.

Branch Libraries. [1836.] Advantage of the establishment of them in the metropolis; such a disposition of the duplicates of the Museum would be better than selling them, *Edwards* 4766*——There ought to be at least two public libraries for education in London, and they ought to be formed on very different principles from those of the library of the British Museum, *Panizzi* 4794.——See *District Libraries.*

Brass. [1836.] Extent of the contraction or settling in casts taken from any mould in brass, *Faraday* 5962–5970.

Brazilian Birds. See *Ornithological Collection,* 1.

Brazilian Insects. See *Noel,* Mrs.

Brera Library. See *Milan.*

Bridgewater, Earl of, Bequest of. [1835.] Salary paid to the librarian of, *Forshall* 781–788——Extent of the bequest, and appropriation of the proceeds, *Forshall* 1629–1650——Documents put in, being extract of the will of the Earl of Bridgewater; minutes of the trustees as to the appropriation of part of the dividends; statement of the application of the proceeds, *Forshall* 1872——Minutes of trustees on Lord Bridgewater's bequest, dated 10 March 1832, *App. p.* 414——Statement of receipts and payments on account of the Bridgewater fund, *App. p.* 414——Extract from the will and codicils of the Earl of Bridgewater, so far as the same concern the trustees of the British Museum, *App. p.* 415–418.

Brimstone. [1836.] It will not resist heat and cold in taking casts with, *Faraday* 5971.

British Birds. See *Ornithological Collection,* 2.

British Collection of Entomology:

[1835.] Excess of this collection over that of Sir Hans Sloane at the period of the attack by the Edinburgh Review on the British Museum, *Samouelle* 3813.

[1836.] The British collection is but little improved since 1819, *Horsfield* 2571.

British Fresh-water Shells. [1835.] There is a very good collection of them in the Museum, *König* 2719.

British Laws and Institutions. See *Sweden.*

British Lias. [1836.] Unique specimens of, in the British Museum, *Viscount Cole* 2724.

British Medals. See *Coins and Medals.*

British Minerals. [1835.] There is a collection of British minerals, but some of the principal specimens are incorporated with the general collection, *König* 2569.

British Museum:

[1835.] Origin of the British Museum, *Ellis* 11——The trust of the British Museum is as faithfully and as perfectly administered as such an institution will allow, *Ellis* 245——The Museum is well constituted, as the great national storehouse of materials for literature, art and science, for assisting persons engaged in those pursuits, *Forshall* 612–618——Objects of the Museum, *Gray* 3322——No important ground of objection to the general management of the Museum, allowance being made for the great variety and little connexion of objects which the establishment embraces, *Brown* 3715.

[1836.] The present state of the Museum, and the increasing interest taken in it, justifies the recommendation of the committee, *Rep.* v——Expedient to revise the establishment, *Rep.* iii——As compared with the Jardin des Plantes, the whole management of the British Museum is an opprobrium to the British nation and these enlightened times, *Grant* 315——That statement differs much from witness's opinion, *Bell* 370–372——Zoology and the fine arts should be removed from the British Museum, and that institution devoted to literature only, *Vigors* 1366–1370——With respect to the objects a national collection should contain, no one department is inferior to another, *Vigors* 1402–1404——Sir Humphrey Davy's opinion upon the necessity for reform in that institution, from the thirst of the people for knowledge, *Grant* 313–315——Reform necessary in the constitution of it, *Grant* 1530–1534——Is susceptible of improvement, *Richardson* 2252——Management of the institution not worked so well as it ought, *Gray* 2713–2717——Suggestions for the better government of the Museum, *Vigors* 1445–1448, *Gregory* 3571–3580, *Greenough* 3918–3932, *Edwards* 4766*, *Hannay* 5151–5160——No reason why England should be behind France in any of the advantages such an institution as the Museum is capable of affording, *Greenough* 3886, 3887——The defects in the Museum are for want of a systematic plan; the objects of the Museum have never been sufficiently defined, *Greenough* 3907–3910. 3913——A government formed by a president and council composed of visitors and curators proposed, *Greenough* 3918–3932——Additional facilities must be granted to fit the Museum to the growing wants of the public, *Hannay* 5150——Evidence upon the origin and foundation of the British Museum, *Hannay* 5151–5160——It is an archive of state for the preservation of the records and

British Museum—continued.

evidences of history, constitution, laws and private rights, *Hannay* 5151. 5152——Report of a sub-commitee of the trustees, 14th February 1807, as to new arrangements then expedient, *App. p.* 512.

See also *Board of Management. Collections of the Museum. Desiderata. Evidence. Funds. Heads of Departments. Income and Expenditure. Jardin des Plantes,* 1. *Landed Property. Lectures. Library of the British Museum. Officers of the British Museum. Reading-room. Rewards. Synopsis. Trustees.*

British Specimens. [1835.] The time and place when and where any rare British specimen has been taken should be noticed in the Synopsis, *Children* 3184.

Brockedon, William. [1836.] (Analysis of his Evidence.)—Member of the Royal Society, painter of history, &c., 5882——Particulars relative to an engraving of the Napoleon and Marie Louise medal by the old machine, showing its imperfections, 5885–5888——Nature of the improvements in Mr. Bates's and Mr. Froude's machine, 5888–5895——The principle of the construction of Mr. Bate's and Mr. Froude's machine, affords the only way in which the medals of the Museum can be accurately engraved, 5896——This machine having attained accuracy is incapable of important improvement, 5897.

The works executed by the French machine have had the benefit of skilful artists which the English machine has not; the French machine is incorrect, it does not possess advantages in medals of low relief and small size, 5897–5899——A publication of the medals in the British Museum might be made to pay its expenses without Parliamentary aid; price at which medals could be engraved by Mr. Bate's machine, 5900–5903.

Bromley, Mr. [1836.] His duty as one of the attendants of the reading-room is to superintend the delivery and return of manuscripts, *Holmes* 4064, 4065.

Bronchial Sac:

[1835.] It is not Cuvier's meaning that the prey of the common angler are retained in the bronchial sac, *Children* 3206.

[1836.] Witness has no knowledge of the meaning of the bronchial sac in fishes, *South* 1154.

Bronzes:

[1835.] Injury to bronzes from frequent casts is more conspicuous than to marbles unless protected by a strong patina, *Hawkins* 3861——Delicate bronzes would suffer more from moulding than marbles; large bronzes not so much, *Westmacott* 3988——It is not desirable that moulds should be taken of the smaller bronzes in the Museum, *Westmacott* 4000–4003.

[1836.] The trustees recommended to consider the best mode of furnishing the public with, *Rep.* v——Bronzes might be cast without affecting the colour; it would be better they should be moulded in wax than plaster, *Weigall* 189–192. 226–229——The colour on ancient bronzes is much more durable than on modern bronzes, *Weigall* 226——Many of the small bronzes would suffer materially from moulding, many of them would not suffer at all, *Rennie* 1279, 1280.

See also *Dodwell's Greek Bronzes. Hercules. Siris,* Bronzes of.

Brown, Robert. [1835.] (Analysis of his Evidence.)—Salary and duties of the office of under-librarian and keeper of the Banksian botanical collections, 3630–3637——The care of the whole botanical collections of the Museum are in progress of being placed under witness's charge, 3638–3644——The herbaria of Sir Hans Sloane is contained in a number of volumes whose contents are miscellaneous, and can only be rendered accessible by an index, 3644——The Sloane collection in nearly the same state of preservation as it was fifty years ago, 3645–3650——Doubts as to there being any catalogue containing the number of specimens, 3651–3653——Charge by the Edinburgh Review of 1823 of injury to the Sloane collection by dust and worms, and contradiction of that charge to the extent that witness has examined the collection, 3654–3662——The volumes containing the collection will be more accessible than they have been; the previous want of access was partly caused by limited space, 3663–3666.

The library of the Museum does not contain all the latest works on botany which are desirable, 3667–3673——Lists of important works wanted have been given in to the principal of the department of printed books, 3675——Failure of an action brought by the Museum under the Copyright Act, to obtain possession of the Flora Græca, 3678–3681——Particulars as to the transfer of Sir Joseph Banks's collection to the Museum, and the terms on which witness accompanied it, 3682–3689——Unsuccessful attempt of witness to obtain a private room, which is an accoommdation the other under-librarians have, 3690–3696——Witness is recently enabled to increase the collection nearly to the extent he suggested as sufficient, 3697——Period of the first representation as to the transfer of the whole botanical collection to witness's charge, 3702, 3703——Witness has not been consulted about the requisite accommodation in any other part of the building than the east wing, 3705, 3706.

The trustees have not been elected from professionally scientific men; men distinguished in branches of science with which the Museum has little connexion would not be particularly well qualified for the management of such an institution as the Museum,

Brown, Robert. [1835.] (Analysis of his Evidence)—*continued.*

3707–3721——More appropriate modes of rewarding scientific men might be found than electing them trustees of the Museum, 3713 ——Institutions in Paris are managed by a board; their constitution is different from that of the Museum, 3714, 3715——Gentlemen holding official high situations, whose avocations would prevent them attending to the concerns of the Museum, would be equally as objectionable for its management as scientific men engaged in the professional pursuits, 3716–3720——Scientific knowledge, particularly as regards natural history, should not be overlooked as a qualification with regard to the election of trustees, 3721–3723——Mode of appointment of the governing body of the Jardin du Roi in Paris, 3724–3727.

Heads of departments in the Museum giving lectures would be objectionable, 3729 ——The public have a moral security, from the character of individuals appointed as heads of departments in the Museum, that they will keep up the reputation which acquired them their appointment, 3730——If the botanical department eventually transferred to the natural history department, the efficiency of the former will be impaired, 3731——Natural history department in the Jardin du Roi is more extensive than that of the Museum subdivisions of the department, 3732, 3733——Not advisable that the officers of the Museum should publish Annales du Museum, while natural history is so subdivided, 3734——Societies in this country for the cultivation of natural history which are supported by individual subscriptions, 3734, 3735——Advantage if Government were to give occasional assistance in the publication of memoirs on objects of science, 3736, 3737——There are scientific societies in Paris of recent origin corresponding with those in London, 3738–3740——Extent to which there is an analogy between the constitution of the Museum and that of the Jardin du Roi, 3741.

Brown, Capt. *T.* See *Conchological Collection,* 3.

Brown, Mr. [1835.] His merits as a botanist, *König* 2854——His collection is in a fine state of preservation, *Samouelle* 3820, 3821.

Bruce Manuscripts. [1835.] Contents of the Bruce manuscripts, and cause of the purchase being rejected by the Museum, *Ellis* 606–608——Mr. Bruce's manuscripts were not purchased on account of the extravagant price asked for them, *Ellis* 1450–1466.

Brussels. [1836.] Periods at which the Museum at Brussels is open, *Gray* 3140——Questions and answers, showing the condition of the library, number of librarians, &c., *App. p.* 542–562.

Brydges, Lords Chandos. See *Forgeries in Manuscripts.*

Buckland, the Rev. Dr. [1835.] Letter from Professor Buckland to Mr. Forshall relative to the restorations in Hawkins's fossils, *Forshall* 2962——Extract of a letter from him to the Right Hon. Lord Farnborough, dated 26 June 1834, relative to Hawkins's fossils, *App. p.* 437——Letter from him to the Trustees, dated 7 July 1834, on the same subject, *App. p.* 440——Another letter, dated 12 July 1834, *App. p.* 441——Another letter, dated 20 July 1834, *App. p.* 441——Letter from him to the Rev. J. Forshall, dated 12 March 1835, on the same subject, *App. p.* 443.

Buda. [1836.] Information relative to the condition of the libraries, number of volumes &c.; number of librarians, &c. in the Royal University Library, and Széchenyi library *App. p.* 542–562.

Budget. See *France,* II.

Buenos Ayres. [1835.] Letter from Hamilton Hamilton, Esq. to the Duke of Wellington, dated 16 February 1835, relative to literary institutions, *App. p.* 491.

Burmeister, Dr. See *Entomology.*

BUILDINGS:

1. *Generally. Treasury Arrangements and Funds.*
2. *Extent to which additional Accommodation can be obtained.*
3. *Accommodation afforded to the different Departments.*
4. *Extent to which the Officers have been consulted as to the Accommodations necessary for their Departments.*
5. *Papers laid before the Committee.*

1. *Generally. Treasury Arrangements and Funds:*

[1835.] Specimens are not liable now to be spoiled for want of room, though many were spoilt before the new buildings, *Children* 3381–3383——The room in which the Elgin marbles are placed is one of the finest in the world, and as finely lighted as any, *Westmacott* 3966–3973——Sums paid by the Board of Works, on account of the British Museum, specifying the purposes for which paid; together with buildings proposed to be erected by the Board of Works for the Museum, according to the plan of Sir Robert Smirke, *App. p.* 382——Similar account from February 1821 to March 1823, *App. p.* 383.

[1836.] Nature of the instructions received from the trustees for erecting buildings on the east wing, *Smirke* 5276–5282——Trustees authorized by the Treasury to communicate with the architect relative to details, giving no order to increase expense or alter the character of the design of the exterior; extent to which the interior accommodation

Buildings:—1. *Generally. Treasury Arrangements and Funds*—continued.

was considered in detail, *Smirke* 5296–5314——The trustees communicate with the architect as to what is wanted, but no alteration is made till an estimate has been sent to the Commissioners of Woods, and by them forwarded to the Treasury, *Smirke* 5464——Advantages of the granite columns in the library over iron ones for the situation in which they are placed, *Smirke* 5351–5356.

The insecure state of the old south front renders it indispensable that a new building should be substituted, *Smirke* 5424, 5425——Mode of warming and ventilating, *Forshall* 4248–4252——Nature of the precautions taken to render the building fire-proof, *Smirke* 5426–5431——Estimated cost of the north wing, *Smirke* 5338–5349——Taking a sum of money on account of buildings, and leaving the appropriation to the trustees and architect, would only be of advantage in removing the delay between the requisition to Government for money and the answer, *Smirke* 5465, 5466——The trustees have frequently pressed on Government the necessity of proceeding more rapidly with the buildings, but sometimes only half the money asked has been granted, *Smirke* 5467.

2. *Extent to which additional Accommodation can be obtained:*

[1836.] Inconvenience that will arise if the building cannot be raised or extended without destroying the architecture, *Greenough* 3898–3903——Advantages that would result from extending the building on the east side of the east wing, as regards accommodation for an increased number of printed books, *Smirke* 5432–5436. 5439–5441——Additional room that may be obtained by projections from the north and south wings towards the west, *Smirke* 5437, 5438. 5442–5444——Elongation of the north wing would not be too remote from the reading-room to put books in, *Smirke* 5452.

A range of gallery might be added on the west wing similar to that proposed on the east wing, *Smirke* 5445, 5446——Space between the Elgin room and the proposed elongation of the south wing might be filled up without inconvenience, *Smirke* 5447, 5448——If the marbles, miscellaneous and Egyptian antiquities, removed, the space could not with advantage be applied to receiving books, *Smirke* 5450, 5451——Period at which the north wing will be available for the public; sum remaining of the Parliamentary grant, and sum that will be required this year for its completion, *Smirke* 5470–5476——There was no want of foresight in the parties under whose direction the new buildings were undertaken, as it was impossible to tell to what extent the collections would be increased, *Smirke* 5477–5479.

3. *Accommodation afforded to the different Departments:*

[1836.] Due proportion should be kept between the size of subjects and the size of the room, *Weigall* 224, 225——Opinion upon the room in which the mineralogical collection is at present exhibited; it should be devoted entirely to that purpose; should have a gallery and more light for minute mineralogical specimens, *Grant* 263–267——The accommodation afforded to other departments must be considered before it can be determined whether sufficient has been given to the zoological department in the new buildings, for the money that has been laid out in them, *Grant* 274, 275——The accommodation in the new building will not be sufficient for the continual increase in the zoological collection, *Grant* 276, 277——The public have not had all the advantage that might have been expected from the sums laid out in the buildings, *Greenough* 3898–3903—— Great want of minor accommodations in the Museum for the officers and public, *Holmes* 4125–4133——Inconveniences that it is supposed will result from the new buildings as regards the printed book department; the officers were not sufficiently consulted, *Panizzi* 4955–4957.

4. *Extent to which the Officers have been consulted as to the Accommodations necessary for their Departments:*

[1835.] Witness could not have given a detail of the space required for his department, if he had been consulted, from the many specimens stowed away that were inaccessible, *Children* 3384–3388——Extent to which witness has been consulted by the architect, as to the arrangement of the new buildings, in reference to witness's department, *Hawkins* 3537–3540——Witness has not been consulted about the requisite accommodation in any other part of the building than the east wing, *Brown* 3705, 3706.

[1836.] The officers of the natural history department are not consulted by the architect, *Grant* 254——Information upon the accommodation necessary for the different collections in the new buildings can be quite as well given to the architect by the trustees as by the curators, *Yarrell* 2062–2068——Importance of the curators being consulted as regards the buildings, *Greenough* 3898–3903—— Witness has been consulted, and has gone over the plans both with the trustees and architect, and his suggestions have been readily considered and fairly discussed, *Forshall* 4240–4247——Extent to which the officers of the different departments have been consulted by the architect as to the accommodation necessary for their particular departments, and how far their wishes have been complied with, *Smirke* 5365–5385——Letter from the Rev. J. Forshall to C. König, esq., dated 6th June 1833, requesting suggestions on plans of the new north side of the Museum, *Forshall* 5492, 5493.

5. *Papers*

Buildings—continued.

5. *Papers laid before the Committee:*

[1836.] Correspondence of the trustees with the Lords of the Treasury in regard to new buildings, *App. p.* 531——Statement of contracts entered into under the directions of the surveyor-general of His Majesty's Office of Works, and of the Commissioners of His Majesty's woods, forests, land revenues, works and buildings, for the works erecting for the new buildings of the British Museum, *App. p.* 578.

See also *Entrances. Estimates. Forshall*, Rev. *J. Geological Department. King's Library. Library of the British Museum*, 3. 5. *Mammalia*, 4. *Manuscript Collection*, 5. *Mineralogical Gallery. Munich Natural History Collection*, 7. *Ornithological Collection*, 1. 3. *Plans for the New Buildings. Portico. Prints and Drawings. Quadrupeds. Reading Room. Reptilia. Townley Marble Room. Trustees*, 1. *Zoological Collection*, 5.

Bullock's Sale. [1836.] The College of Surgeons purchased nothing at this sale that had been in the British Museum; the specimens were marked as having been brought to England by Sir Joseph Banks, and not as part of his collection, *Clift* 619–625.

See also *Leverian Museum. Natural History*, Collection of.

Burchell, Mr.:

[1835.] Mr. Burchell's valuable specimens of natural history have not been exhibited from want of room, *König* 2805–2815.

[1836.] Number of Mr. Burchell's specimens which have been received and exhibited, *Gray* 2918——They were not exhibited earlier, in order that he might derive advantage from taking notice of them in his travels, *Gray* 2920——*See* also *Smith*, Major.

Burney Manuscripts:

[1835.] The second part of the new general catalogue, containing the Burney manuscripts, is nearly, if not quite, finished, *Ellis* 1797.

[1836.] This catalogue is about being delivered to the public, *Evans* 3288——When completed an index will be given, *Evans* 3305——The catalogue of, has been completed, and is printed within a sheet or two, *Forshall* 4222–4224. 4379. 4396.

C.

Cabinets:

[1835.] Cedar cabinets were replaced by mahogany, the gum from the cedar having a tendency to destroy the insects, *Samouelle* 3822.

[1836.] The cases are too small for the present collection of mammalia, *Grant* 252——The cases or cabinets should be so arranged as to fit one room as well as another, *Greenough* 3890–3892——There will be in the Museum twice the surface of wall cases for the zoological collection that there is in the Jardin des Plantes, *Smirke* 5418.

Calculi. [1836.] Sir Joseph Banks' Report, dated 27th February 1809, relative to the collection in the basement of the Museum, *App. p.* 575.

Cambridge. See *Queen's College, Cambridge.*

Cameleopards. See *Quadrupeds.*

Camels. [1836.] There are two fit for preserving; they would last many years on stands, but would be better under glass, *Gould*, 2446–2452——Are more liable to suffer from moths than other animals, *Gould* 2451.——*See* also *Mammalia.*

Canova:

[1835.] He would not allow the Apollo Belvedere to be moulded, *Westmacott* 3942.

[1836.] He did not rub any substance into the marble to complete the surface, which washing would remove, *Weigall* 196, 197.

Canterbury, His Grace the Archbishop of. [1836.] (Analysis of his Evidence.)—Deference paid with regard to the disposal of patronage by the Lord Chancellor and Speaker of the House of Commons, to the Archbishop of Canterbury, 5498——Mode adopted by witness for ascertaining the competency of parties to fill up vacancies as assistants or subordinate officers, and how far the other official trustees, and the respective heads of departments are consulted, 5499–5506——Particulars relative to the appointment of Mr. Holmes, 5507–5509——Mr. Panizzi was appointed upon the representation of several persons not connected with the Museum, and upon its being much pressed by several of the trustees, 5510, 5511——Witness's opinion over-ruled by consulting the other trustees upon the occasion of Mr. Ottley being appointed, 5512, 5513——Some of the trustees were consulted; testimonials required and inquiries made, and the Chancellor and Speaker's concurrence required, previous to the appointment of M. Josi to succeed Mr. Ottley, 5514, 5515.

Witness's knowledge of the qualifications of candidates for vacancies is not solely confined to information by the secretary and librarian, 5517, 5518——Deference is made by the official and family trustees to the recommendation of the three principal trustees, communicated by the Archbishop of Canterbury; with regard to the election of trustees, many of the elected trustees are themselves consulted, 5519–5521——Whether a better board of management could be formed than the present; the official trustees have from

Canterbury, His Grace the Archbishop of. (Analysis of his Evidence)—*continued.*

the first been appointed; the family trustees are appointed in consequence of the bequests of their families, 5522–5525——Reasons against dividing the offices of secretary and keeper of the manuscripts, 5528–5532——Progress made in the preparation of a catalogue of the manuscripts; officer's report to the trustees that it will be finished within ten years, 5534–5536.

Better that the trustees should have a general interest in the promotion of objects of science, which may lead them to take the best measures for the conservation and increase of the collection, than themselves to be pre-eminent in any one branch, 5537——Inconvenience has not arisen to the business of the Museum from the non-attendance of the trustees; a request being made to some who have not attended a certain number of times, might induce them to resign, 5538–5542——Advantages derived from members of the Government being official trustees, 5543–5545——Inconvenience may arise as much from too many as too few of the trustees attending, 5546.

There having been a greater disposition on the part of the members of the Government to attend to the expensive recommendations of the trustees has arisen from various causes, and which are rather approved of by the people than otherwise, 5547, 5548——The visitation of the trustees, though cursory, is of great use, 5549——Benefit would be derived by making the heads of departments independent; giving them the subordinate patronage of their departments, and forming them into a committee of management, 5550–5553——Mode of payment of the officers employed on literary works admits of improvement, 5554–5556——The zoological collection has increased, and the trustees desire it should increase commensurate with the space in which it is displayed, 5557, 5558.

It is absolutely necessary that the care of manuscripts should occasionally be entrusted to attendants, which trust has not hitherto been exercised improperly, 5559–5561——Objections that would arise from the general infusion of scientific men into the board of trustees, 5562–5564——The principle of admitting the representatives of learned societies among the trustees might be beneficially extended; the details must be left for future consideration, but it would not be desirable that eminent men should be selected from those societies, 5565–5571. 5574–5576——Not desirable to make the number of trustees much more numerous, 5572, 5573——Advantages of the present monthly and general meetings, 5577–5579.

3. Expense of forming Classed Catalogues.
4. Progress made in the Formation of.
5. Whether completing an Alphabetical Catalogue previously, necessary.
6. Whether the two can be carried on simultaneously.

IX. *Papers laid before the Committee.*

I. *Nature of the Catalogues of the Museum Collections which exist, and in what respect they are defective:*

[1835.] Number of printed and manuscript catalogues there are in the Museum, with and without indexes, *Forshall* 744–749——The names of gentlemen composing catalogues are affixed to them, *Forshall* 862, 863——Description of catalogues that are placed in the reading-room, *Ellis* 1684, 1685——The additions to the library have doubled the bulk of the catalogue published in 1819, the additions are continued in manuscript, *Ellis* 1791–1795——Inconvenience to literary men from certain catalogues in the Museum being without indexes, *Millard* 2304–2307——In whose hands the copyright of the various catalogues published at the expense of the trustees, and also of those not so published, is vested, *Ellis* 2529.

[1836.] The present catalogue might be made more useful, *Bowerbank* 925——The present one should be corrected by the Museum officers, by having the titles of unimportant works curtailed, and those of important ones extended, *Evans* 3310, 3311——There are two or three catalogues of printed books in the library, but none consolidated, *South* 1160, 1161——Number of distinct catalogues that there are in the Museum, *Baber* 4678–4688——Examination concerning Mr. South's and Mr. Owen's evidence, as to their want of knowledge of the existence of catalogues, *Gray* 2974. 2977——No perfect systematic catalogue of any one large class in any museum, *Gray* 2618——Many catalogues in the reading-room without indexes, *Mathew* 3380.

Reason no good catalogue has been formed for the Zoological Society is from want of assistance, which may equally apply to the British Museum, *Bennett* 1937, 1938——Upon witness's consulting the specimens and making inquiries, a catalogue was referred to by the officers, *Richardson* 2313–2321——Pander and D'Alton's work on skeletons eventually found in the catalogue under the second author's name only, while works of De Blainville and De Lamarck were found under B. and L., *Owen* 1556——Want of system generally in the alphabetical catalogue, and more particularly as regards the names of French authors, *Edwards* 4744——The printed catalogue made many years ago is imperfect; the interleaved part appears to be a good general catalogue, *Nicolas* 3614——Those in existence are inconvenient, as the index must be referred to to know what exists, *Evans* 3292——Manuscript catalogue is not discreditable, but might be put on a more creditable footing; names of catalogues that have and have not indexes, *Evans* 3304, 3305.

II. *Transcript of the Manuscript Catalogue for the Use of the Reading Room:*

[1836.] Progress that is being made in transcribing catalogues for the use of the reading-room, and period in which they are likely to be completed, *Baber* 4571–4579——Recommendation of witness relative to transcribing the manuscript catalogue for the use of the reading-room not immediately attended to by the trustees, *Baber* 4578. 4588——Impossible to prevent the reading-room catalogues becoming over crowded, that having been the case has led to the transcript of the whole manuscript portion, *Baoer* 4468, 4469——Officers at present employed in transcribing the manuscript catalogue,

Catalogues of Books and Collections—continued.

logue, with a smaller one for the use of the reading-room, *Panizzi* 4862, 4863——Improvements that have taken place in the transcript of the catalogue for the use of the reading-room, by which books will be found more quickly, *Panizzi* 4875.

III. *Necessity for the Formation of Catalogues of the Museum Collections:*

[1836.] Exertion recommended to be made to complete full and accurate catalogues of the collections with a view to printing and publishing such portions as would hold out expectations of a partial sale, *Rep. p.* iv——Importance of the formation of a most extensive and full catalogue of all the collections, *Bell* 476, *Nicolas* 3612, *Forshall* 4378, 4379——Not desirable at any time to publish a catalogue of the entire collections of the museums, though one should be prepared, *Bennett* 1756, 1757——A complete catalogue of the department of the science of zoology should be published, the objects being marked that are not in the British Museum, *Bennett* 1803–1809——If the officers competent to make it, a catalogue of the zoological collection would be valuable, *Richardson* 2323, 2324——Necessity for an accurate catalogue of the specimens in the natural history department being formed, *Bennett* 1934–1936.

Opinion in favour of the catalogues being kept up, even with the contents of the Museum, *Nicolas* 3650–3656——Extent to which catalogues may or may not be perfect in other institutions is no excuse for defects existing in those of the Museum, *Nicolas* 3666, 3667——The intention with regard to catalogues is to make the Museum as perfect as it can be made, and not by way of comparison with any other institution, *Forshall* 4401–4405——Opinion upon the necessity for duplicates of the catalogue of printed books, *Stonestreet* 5179–5183——Catalogue of any one class of animals might be comprised in one quarto volume, *Owen* 1188.

IV. *Opinions against the Formation of complete Catalogues:*

[1835.] Advantageous that catalogues should be rather in arrear to keep in employment expert officers, over having the works complete, and reducing the establishment, *Forshall* 1138–1143.

[1836.] Opinion against Mr. Forshall's evidence in favour of an arrear for the sake of employment, *Nicolas* 3650–3656——Not desirable in the present transition state of the Museum collections to form a complete catalogue, *Gray* 2617.

V. *Progress made in the Formation of Catalogues:*

[1836.] Catalogues are in progress, of serpents, crustacea and insects, mammalia and fishes, *Grant* 1526——Progress made in the publication of catalogues, *Forshall* 4378, 4379——Extent to which the catalogue of British bats is perfect; it may be inspected by students on application to the curator, *Bennett* 1778–1793, *Gray* 2969–2973——A manuscript catalogue of the zoological collection in progress; a printed catalogue would be desirable, *Griffiths* 2159——Catalogue of the zoological collection commenced about two years ago is progressing as rapidly as the strength of the department will allow, *Children* 2865–2871.

VI. *Opinions in favour of printing Catalogues:*

[1836.] Advantages of a printed over a manuscript catalogue, although it might meet with but a slight sale, *Owen* 519–524——A catalogue should be printed, even though at a loss; it might be printed in a cheap form; smaller size than royal octavo recommended for printed books, *Evans* 3298, 3299——Should be printed in octavo instead of folio, *Evans* 3293–3301——If it were printed in octavo, it would meet with an extensive sale, *Mathew* 3378——Supposed expense of printing an alphabetical catalogue of the printed books of the Museum, *Cochran* 3439–3443——Witness would undertake the risk of printing a classed catalogue of the printed books of the Museum, if printed in parts according to his own plan, *Murray* 3741–3761——When the Museum catalogue was sold, it was too expensive for the public too buy, *Evans* 3333, 3334.

VII. *Alphabetical Catalogues:*

[1835.] The completion of an alphabetical catalogue is more essential than a classed catalogue, the latter being only occasionally useful, *Ellis* 1690–1694——Names of gentlemen employed thereon; if they required additional attendance it would be immediately granted them, *Ellis* 1724–1751——A complete alphabetical catalogue is a pressing want, *Ellis* 2437–2439.

[1836.] An alphabetical catalogue, with a good index of subjects, is much more useful than a classed catalogue, *Greenough* 3960–3964, *Forshall* 4378, 4379. 4467, *Baber* 4616–4619. 4623, *Panizzi* 4858. 4958–4967——Mode in which alphabetical catalogues ought to be formed, *Panizzi* 4833–4834——Nature of the difficulties that arise in the formation of an alphabetical catalogue in a large library; plan of one proposed for the British Museum, *Panizzi* 4846–4851——Adoption by the trustees of another plan than that suggested by the officers of the printed book department, *Panizzi* 4860, 4861——Number of titles that can be got through in a day; practical mode proposed to be adopted for the formation of an alphabetical catalogue for the Museum, *Panizzi* 4864–4869—— Opinion in favour of a good alphabetical catalogue printed in one series, with a well digested and full classed index of subjects, and with classed catalogues of books

in

809

Catalogues of Books and Collections—continued.

in some five or six branches of knowledge, *Forshall* 4467——Loss of time that would be occasioned by having to go through the alphabetical catalogue of printed books, *Mathew* 3381.

VIII. *Classed Catalogues:*

1. Generally; Modes of Classification; Private and Foreign Catalogues:

[1835.] Differences of opinion with regard to the modes of classification in catalogues, *Ellis* 1754–1763. 2504–2512——Mr. Horne's outline of classification was extremely good as well as elaborate, but he has changed his mind as to various portions of it, *Ellis* 1765–1773——Most catalogues in private institutions are heedlessly made, and are of comparatively little use, *Ellis* 2471–2484. 2511–2513.

[1836.] Private catalogues have generally alphabetical indexes, *Baber* 4546, 4547——Opinion upon the classed catalogues of certain private institutions, *Baber* 4609–4612——That of the College of Surgeons recommended as a pattern; difficulties in the way of its formation, which should be overcome, *Owen* 490–499——Such an one would not be popular or saleable, *Gray* 2608–2610. 2615——Difficulty of determining what are desiderata in a classed catalogue, *Gray* 2619——Reasons in detail, showing the impossibility of making a good classed catalogue, *Panizzi* 4855–4858——How far the suggestions detailed in a report to the trustees in 1806 relative to the formation of a classed catalogue have been complied with, *Baber* 4580–4587——Useful nature of witness's classed catalogue of his own collection; mode pursued of keeping it up, *Cochran* 3444–3449. 3457–3460——Classed catalogues in manuscript are in use in the provincial libraries in France, *Mathew* 3382–3388.

2. Advantages of a Classed Catalogue, and whether an absolute Necessity for one for the British Museum:

[1835.] The trustees may contemplate forming a classed catalogue, but it is doubtful whether they intend printing it, *Ellis* 1722——The index to titles and authors annexed to a classed catalogue is not like an alphabetical catalogue superadded to a classed catalogue, *Ellis* 2443–2450——A classed catalogue is desirable, *Ellis* 1754–1763. 2504–2512——Doubts whether foreigners would consult a classed catalogue to ascertain the richness or poverty of the Museum library as compared with their own, *Ellis* 2461–2463——A librarian who does his duty supplies the place of a classed catalogue, which, from its nature, cannot be perfect, *Ellis* 1775–1778. 2500–2503.

[1836.] Manner in which a librarian will supply the place of a classed catalogue, *Baber* 4541. 4542——Printed catalogues are better than reference to a librarian, however well acquainted he may be with the library, *Evans* 3320, 3321——Difficulty of troubling the librarian every minute, *Bowerbank* 923–925——Comparative use of an alphabetical and classed catalogue, *Baber* 4526–4545——Necessity for a classed catalogue, *Bowerbank* 923–925. 932–946, *South* 1162–1164, *Mathew* 3377, *Nicholas* 3613–3616, *Baber* 4526–4545. 4616–4619. 4623——It would cause literary men to point out the deficiencies, *Evans* 3323, 3324.

A public library is susceptible of much greater utility when possessing a classed catalogue, *Evans* 3306, 3307——Difficulties which arise from the want of a classed catalogue, *Edwards* 4743——It would be a great convenience if the classed catalogue were immediately furnished to the reading-room to such an extent as progress has already been made in it; together with an alphabetical index of authors' names, *Edwards* 4572——There should be both an alphabetical and classed catalogue printed in every great public institution, *Evans* 3312, 3313. 3315. 3319——A classed catalogue preferred to the present one for printed books, *Evans* 3310, 3311——If there is only one catalogue, an alphabetical catalogue would be best, but there should be both an alphabetical and classed catalogue, *Baber* 4548–4554.

A classed catalogue most desirable, *Mathew* 3382, *Gregory* 3488–3494——Classed catalogue would be more useful than an alphabetical one; when completed the yearly addenda lists should be published, *Edwards* 4752, 4753——A catalogue completed to one year would be useful for many years; an addenda might be published annually, and eventually incorporated, *Evans* 3339, 3340——A classed catalogue of printed books sold in parts would meet a ready sale; manner in which the catalogue might be formed in a short time; it would show the comparative poverty or richness of the Museum collection, *Bowerbank* 929–931——Advisable that a classed catalogue of manuscripts and books should be published in parts; if a loss incurred in the publication, the trustees' funds should be augmented to carry it into effect, *Nicolas* 3681–3696——A classed catalogue would show the poverty of the Museum in zoology, *Owen* 1552——Modes by which books may be found with ease, although there is no classed catalogue, *Panizzi* 4870–4874——Disapproval of a classed catalogue, unless from so much expense having been gone to already, it might be thought advisable to complete it, *Panizzi* 4958–4967.

3. Expense of forming Classed Catalogues:

[1835.] Very great expense of a classed catalogue, *Ellis* 1774. 1779–1790——The classed catalogue discontinued partly on the ground of expense, *Ellis* 1695 1700. 2451–2456. 2490, 2491——Sums granted by Parliament for several years towards the formation

Catalogues of Books and Collections—continued.

of one, *Ellis* 1790. 2440-2442——Estimated expenditure for forming classed catalogue: For 1827, *App. p.* 331—1828, *App. p.* 333—1829, *App. p.* 336—1830, *App. p.* 339—1831, *App. p.* 342—1832, *App. p.* 345—1833, *App. p.* 348—1834, *App. p.* 351.

[1836.] The expense should not be an impediment; if the library is worth forming, the catalogues are, *Bowerbank* 948–972——The expense of such a catalogue of printed books would be more than repaid, *Evans* 3328, 3329.

4. Progress made in the Formation of Classed Catalogues:

[1835.] The titles made in forming the classed catalogue are now being used in forming the alphabetical one, but are so marked as to be easily transferred when the previous work is renewed, *Ellis* 1701–1720. 2424–2431——Progress might have been made in the classed catalogue, if the powerful assistance possessed by the Museum had been brought to bear upon it, *Ellis* 2432–2437.

[1836.] The titles belonging to the classed catalogue now being used for the alphabetical one are all marked, and can be easily replaced, *Baber* 4536, 4537. 4587——One has been proceeded in to a considerable extent, supposed about half way, *Baber* 4526–4545. 4592–4594.

5. Whether completing an Alphabetical Catalogue previously necessary:

[1835.] The classed catalogue has been discontinued, partly from the necessity of completing the alphabetical one, *Ellis* 1695–1700. 2451–2456. 2490, 2491——Classed catalogue was laid on one side from the necessity of first completing an alphabetical one, *Baber* 4526–4545——Whether it is necessary to finish the alphabetical catalogue first, though constant accessions will prevent either from being complete, *Bowerbank* 932–946——Opinion upon the necessity of an alphabetical catalogue being first completed, *Baber* 4530, *Panizzi* 4852–4857——The alphabetical catalogue will contain every printed paper and book in the Museum, from which a classed catalogue can be made with greater facility, *Baber* 4678–4688.

6. Whether the two may be carried on simultaneously:

[1835.] The two works could not be performed simultaneously with the same quickness, *Ellis* 1721. 2451–2456——If the two catalogues are done conjointly the establishment must be increased, for the persons engaged on it must be entirely devoted to it, *Ellis* 2451–2456. 2514–2517.

[1836.] The two catalogues might be formed simultaneously, *Bowerbank* 948–972——Description of clerks that should be employed, and supposed number, *Bowerbank* 948–972, *Baber* 4555–4570——A classed catalogue might be made a work of public utility without the assistance of a class of gentlemen, but it would be more creditable to a national library to do it with the best and ablest assistance, *Baber* 4606–4608——They might be performed simultaneously if extra expense gone to, *Baber* 4526–4545. 4565——If the two catalogues were carried on simultaneously it would be a saving of time, though the alphabetical catalogue would not be produced so soon, *Baber* 4555–4570——Manner in which they might be formed simultaneously; supposed expense, *Cochran* 3451–3456——There are difficulties in the way of two being formed together, though it might be done, *Panizzi* 4852–4857——No difficulty in forming a classed catalogue at the same time as an alphabetical one, *Thorpe* 3252–3282.

IX. *Papers laid before the Committee:*

[1835.] Estimated and actual expenditure for the catalogue of printed books, and out of what particular sums in the estimate the payments are made, *Forshall* 1237–1254, *App.* 354.

[1836.] Report of special committee of 12th July 1806, as to catalogues of printed books, *App. p.* 525——Extract from minutes of the trustees, April and May 1834, as to new catalogue of printed books, *App. p.* 534——Observations by Dr. Gregory relative to this subject, in continuation of his evidence, *App. p.* 571.

Catalogue of Coins. See *Coins and Medals.*

Catalogues of Manuscripts:

1. *Nature of those at present existing, and how far defective.*
2. *Necessity for Catalogues of Manuscripts, and Progress made in their Formation.*

Catalogues of Manuscripts—continued.

3. *Whether a Classed Catalogue, or a Numerical one, with Index of Subjects, most desirable.*

4. *Size most advantageous for printing, with a view to Sale.*

5. *Expense of printing Catalogues of Manuscripts.*

1. *Nature of those at present existing, and how far defective:*

[1835.] Observations by Sir Harry Nicolas that the catalogues of the Harleian, Lansdowne and Cottonian manuscripts are often erroneous, and generally unsatisfactory, *Forshall* 734–738.

[1836.] How far the manuscripts are all catalogued; nature of the list of additions, and in what manner distributed, *Holmes* 4308–4321——State of the catalogue of the old Royal Library manuscripts, *Forshall* 4151–4162——Catalogue of the Sloane manuscripts, formed by Mr. Ayscough, *Forshall* 4194–4196. 4207——Reasons why literary authors are deterred from examining the catalogues of manuscripts as they now stand, *Evans* 3335, 3336.

The bad arrangement of the catalogues of manuscripts at the Museum caused witness to desist from consulting them relative to information respecting Staffordshire, *Mathew* 3374–3376——Nature of the imperfections in the catalogues of manuscripts in the Museum, and inconveniences they cause to literary men, *Nicolas* 3623–3633——Extent to which classed catalogues of the manuscripts exist, and extent to which witness has endeavoured to supply the deficiencies, *Nicolas* 3657–3663——Greater difficulties occur in consulting the catalogue of manuscripts than in that of the printed books, *Edwards* 4757——They are generally very correct, and sufficiently ample, *Stonestreet* 5179——An interleaved copy of catalogues in the reading-room, for insertion of errors of description, or articles missing, is desirable, *Stonestreet* 5179.

2. *Necessity for Catalogues of Manuscripts, and Progress made in their Formation:*

[1836.] Desirable that there should be complete and accurate catalogues and indexes of manuscripts, *Forshall* 4225–4228——How far the catalogues have been progressing during the last year, *Forshall* 4222–4224——Further evidence upon the progress made towards cataloguing the manuscripts; nature of the catalogues, and manner in which the manuscripts are arranged therein; proposal relative to indexes thereto, *Forshall* 4389–4400——Progress made in the preparation of a catalogue of the manuscripts; officers report to the trustees that it will be finished within ten years, *Canterbury*, Abp. of, 5534–5536.

3. *Whether a Classed Catalogue, or Numerical Catalogue, with an Index of Subjects, most desirable:*

[1836.] Advantage of a classed catalogue of manuscripts to the British Museum, *Evans* 3287——A catalogue might be made without any unreasonable loss of time, the collection from which the manuscripts come should be marked, *Evans* 3290——The catalogue of manuscripts should be a classed catalogue, with a copious alphabetical index annexed, *Evans* 3302, 3303——Although the printing a classed catalogue of manuscripts might be attended with loss, it should nevertheless be undertaken, *Evans* 3328. 3330——In addition to a general classed catalogue of them, there should be published separately a more fully descriptive catalogue of that portion which relates to English history, *Edwards* 4766*.

Previous to any index being made, the whole of the catalogues, with certain exceptions, require to be re-written, *Holmes* 4273–4302——An alphabetical catalogue would be a third catalogue, which might be made after the numerical catalogue and classed catalogue, or catalogue under subjects, are complete; an alphabetical index would do instead of an alphabetical catalogue, *Holmes* 4297, 4298——Plan and particulars of a classed catalogue of manuscripts undertaken by witness in his own time, and examination thereon, *Holmes* 4273–4302——Opinion upon Mr. Holmes's method of forming a classed catalogue of manuscripts, *Forshall* 4465–4470——In a catalogue of manuscripts a full and well-constructed index of authors and subjects, with copious cross references, is of more use than a classed catalogue; such an index is in the course of formation, and may be expected within ten years, *Forshall* 4200–4206. 4238, 4239——A classed catalogue of manuscripts is not desirable, *Forshall* 4378, 4379.

4. *Size most advantageous for Printing with regard to Sale:*

[1836.] If a classed catalogue of the manuscripts in the British Museum were published in octavo, it would be the best speculation ever undertaken by a bookseller, *Thorpe* 3252–3282——It would pay the expense of publication, *Murray* 3734–3740——Extent to which it would sell if published in octavo, in parts, *Evans* 3293–3301, *Mathew* 3378, *Cochran* 3436–3438. 3481——A smaller size than royal octavo not recommended for a catalogue of manuscripts, *Evans* 3299——Demy octavo is a sufficient size for a catalogue of manuscripts, but where fac-similes are given royal octavo is desirable, *Cochran* 3483–3485.

Catalogues of Manuscripts—continued.

5. *Expense of Printing Catalogue of Manuscripts:*

[1835.] Sums voted in 1833, and expended for printing this catalogue, nearly tally, *Forshall* 1215–1217——Estimated and actual expenditure for, and out of what particular sums in the estimate the payments are made, *Forshall* 1237–1254——Names of catalogues of manuscripts, with indexes, *Ellis* 1797–1799.

See also *Burney Manuscripts. Cottonian Manuscripts. Hargrave Manuscripts. Harleian Manuscripts. Index to Manuscripts. King's Library. Lansdowne Manuscripts. Manuscript Collection*, 1. *Manuscripts*, Keeper of. *Milan. Oriental Manuscripts. Sloane*, Sir *Hans*, Collection of. *Syriac Manuscripts.*

Catalogues of Maps, &c. [1835.] Number of copies of the catalogue of maps, topographical prints and drawings in the library of Geo. 4, which were printed, sold and distributed, 1821 to 1833, *Ellis* 1064.

Catalogues of Private Institutions. See *Catalogues of the Museum*, 1. *Edinburgh Advocates' Library.*

Cates, Mr.:

[1835.] Letter from Mr. Cates to Sir H. Ellis, as to persons attending the reading-room, *App. p.* 429.

[1836.] His duty as chief attendant of the reading-room set forth in the statutes of the Museum, *Holmes* 4056——His satisfactory manner of discharging them, *Nicolas* 3702, *Holmes* 4044, *Hannay* 5155, 5156——His salary should be increased, *Hannay* 5155, 5156.

Cecil Papers. [1836.] A catalogue of the Cecil papers preserved at Hatfield House would be of value to the British Museum, *Edwards* 4766*.

Cephalopods. [1836.] Useless state of the collection of cephalopods, which are stowed away in boxes, while the most common species of shells, oysters, &c. are exhibited in fine glazed cases; recent ones are crowded, not a single specimen of an extinct cephalopod exhibited, *Grant* 1508——Several fossil cephalopods exhibited, *Gray* 3083. 3089. 3092——The series of fossil cephalopods are not exhibited for want of room and want of assistance, *König* 3169–3171.

Chancellor of the Exchequer. [1836.] Should be one of the board of trustees, *Bennett* 1866, *Yarrell* 2038.

Chandos Peerage. See *Forgeries in Manuscripts.*

Chanticleer, His Majesty's Ship. [1835.] On its return from a scientific expedition in 1831, its collections were divided between the Zoological Society and the Museum, with choice to the Society, *Gray* 3358.

Chantrey, Sir *Francis.* [1836.] (Analysis of his Evidence.)—Examination upon the specimens of medal engravings produced by Mr. Collas and Mr. Nolte's machine; opinion in favour of its general utility, although there may be some slight inaccuracies, but which are fewer than in a drawing made by the eye, 5642–5663.

[Second Examination.]—The deviations occasioned by the machine are more limited than those occasioned by the hand of an engraver; for accuracy the proposed is a better method than any other, but it is not suitable to very high relief, 5792–5803.

Chantrey, Sir *Francis.* [1836.] Letter from, to the Chairman of the Committee, dated 15 June 1836, relative to his evidence on engraving machines, *App. p.* 595.

See also *Megatherium.*

Characters of Orders and Tribes. [1836.] The parts of the animal forming the anatomical characters of the different orders and tribes should be placed in front of every case in which any order or tribe is placed, *South* 721.

Charlemagne Bible. [1836.] Examination upon a manuscript bible, supposed to be the one presented by Alcuin to the Emperor Charlemagne, in the year 801; price at which originally offered to the trustees; price at which it was bought in at a public auction, and price at which eventually bought by the trustees, *Thorpe* 3234–3251, *Evans* 3341–3372, *Forshall* 4437–4445. 5580–5586.

See also *Codex Bezæ. Forshall*, Rev. *J. Grenville*, Hon. *Thos. Jerome, St.*

Chateaubriand's Works. [1836.] Are not complete in the Museum, though portions stated in Edwards's pamphlet not to be in the Museum, are therein, *Baber* 4670.

Charters and Rolls. [1836.] Are about 20,000 in number, but have been erroneously stated in one of the prefaces to the catalogues or synopsis at 40,000, *Holmes* 4076——There are 19,000 and upwards; 16,000 in the Harleian collection, *Forshall* 4236, 4237——The catalogue describing the charters in the old Royal collection may be had by any reader who asks for it, *Forshall* 4161, 4162——That describing the charters in the Cottonian collection is in the reading-room, *Forshall* 4165, 4166——Extent to which there are catalogues to the charters in the Museum, and means the public have of becoming acquainted therewith, *Holmes* 4303–4307——The catalogue of charters is accessible to the

Charters and Rolls—continued.

the public on inquiries being made for it, though it is not always in the reading-room, *Forshall* 4406–4415——Catalogue of the additions made since witness has been keeper of the manuscripts is ready for printing; several additions and corrections have been made to the old catalogue, *Forshall* 4389——Importance of this catalogue, which should be completed without delay, *Forshall* 4397——Report, being Appendix to Report of 13 July 1805, on the charters and rolls in the Museum, *App. p.* 523.

See also *Harleian Manuscripts. Hogarth*, Mr.

Charts. See *Maps and Charts.*

Chemistry. [1836.] If a distinguished chemist were on the trust, his judgment would not be biassed in favour of that department to the prejudice of the others, *Grant* 1026——Improvements therein render it impossible to make classed catalogues of works relating thereto, *Panizzi* 4855.——*See* also *Organic Remains.*

Cheselden Medal. [1836.] Die for this medal executed by witness, *Wyon* 5845——Distortion in the engraving of this medal executed by Bates's machine, *Wyon* 5848——Improvements in his second machine have caused instructions to be given for another impression of this medal, *Wyon* 5853. 5873-5875——Cost of the casts of the Cheselden medal in enamel, *Wilson* 6005, 6006.

Chiefs of Departments. See *Heads of Departments.*

Children, John George. (Analysis of his Evidence.)

[1835.] Amount of witness's salary as assistant officer in the natural history department; duties of the office, 3029–3037——Extent to which witness is responsible for the arrangement of the zoological collection, 3038–3043——Also for the entomological department, 3044–3046——Witness has not sufficient assistance in the zoological department, 3047–3053——There is no perfect catalogue of specimens in the natural history department; such an one is desirable, but would be expensive, from the increased number of hands requisite for its formation, 3054–3064——Advantages and disadvantages that would arise from the formation of a board composed of the most eminent naturalists to have the control of the natural history department, 3065–3068——How far the trustees have the power of seeking to obtain the most distinguished men in each branch of science, with a view to placing them at the head of departments, 3069–3071——The addition of the most eminent literary and scientific men, to the board of trustees, would be beneficial, 3072–3076.

The mammalia are in good condition; they are arranged according to Cuvier, whose nomenclature is adopted with such variations as recent discoveries have rendered necessary, 3077, 3078——Further evidence upon the supposed effect of associating scientific men with the trustees, 3079–3086——The honour of a trusteeship would be a benefit to science, and induce men to turn their attention to scientific objects, 3087–3089——Whether certain men of science named would benefit the Museum by being attached to it as trustees, 3090–3094. 3101——Very eminent scientific knowledge ought not to be a sufficient inducement for election, were the individual not possessed of amiable qualities, 3095–3100. 3102–3104——The important duties of great public funtionaries leave them but little time to attend to the business of the Museum, 3108——The constitution of the Museum might be improved, though not the slightest reflection can be cast on the present trustees, 3109, 3110.

Distinguished scientific men, who have been trustees, have also been men of high rank, 3111–3115——System of nomenclature attached to the different specimens; more names would be attached to the labels if there were more hands for the performance of the duties, 3123–3131——There has not been sufficient time to put the names on the various specimens with the present number of hands, 3132–3134——Cause of some specimens not being exhibited; they are in general put into the cases as soon as possible, 3142——A chemical laboratory, in the British Museum, would be desirable, 3152–3160——Extent to which witness's duties, as secretary to the Royal Society, interfere with his duties at the Museum, 3161-3163——Extent to which the names of donors are mentioned in the synopsis; instances where they are not attached to the specimens are accidental omissions, 3166–3170.

Justification of the act of adding tusks to the skeleton of an elephant presented to the Museum, 3171–3176——It is more advisable to place long descriptions of birds in the Synopsis than on the labels, 3177–3180——The age and sex of birds are indicated where known, 3182——Specimens belonging to remarkable collections should be indicated on the label, 3183——Zoological lectures would be beneficial, but would be attended with very great expense, 3187——Advantages that would be derived from a scientific naturalist being sent out with expeditions and voyages of discovery, 3190——Exchanges between the Museum and foreign governments would be advantageous, 3191, 3192——Examination upon different passages in the Synopsis, and how far the whole requires revision, 3193–3207.

[Second Examination.]—How far the zoological collection is arranged so as to be attractive to the public and useful to the student, and whether improvement might be made, 3361–3369——Witness had no communication with the architect, or knowledge of the space to be allotted to zoology in the new buildings, 3370–3375——Extent to which a general system of classification and nomenclature is adopted, 3376-3378——

Children, John George. (Analysis of his Evidence)—*continued.*

Extent to which the zoological subjects are actually named, 3379——Specimens in spirits are spoken of as one of the finest collections, 3380——Specimens are not now liable to be spoiled for want of room, though many were spoiled before the new buildings were erected, 3381–3383——Witness could not have given a detail of the space required for his department if he had been consulted, from the many specimens stowed away which were inaccessible, 3384–3388——Specimens of natural history in spirits are accessible to the public on public days, and to the principal librarian at all times, 3389–3394——Name of the author whose nomenclature is adopted is attached to the specimens, 3395–3397——The scientific name in Latin, and the trivial names in English, French and German should be attached, 3398——The nomenclature adopted by Dr. Leach has been altered by Mr. König, and is in a more perfect state than in the time of Dr. Leach, 3399, 3400.

Unstuffed specimens for examination would be useful; but as they would be attended with expense, such a suggestion has not been offered to the trustees, 3401, 3402. 3408–3412——How far the trustees are responsible for the wants of the Museum when those wants are not fairly brought before them, 3403–3407——A catalogue of the collections of zoology, like that of the College of Surgeons, would be useful, but also expensive, and it would be better to wait till the new building allows of more complete arrangement, 3413–3426——An entry book, containing a list of new purchases and presents, with numbers attached, and mentioning the locality from which derived, would be advisable, 3427–3432——There is not sufficient assistance in the zoological department, 3433——Description in the Synopsis of the ourang outang and chimpanzé, and how far those descriptions adhered to by witness, 3438–3440.

[1836.] To what extent portions of the mammalia are exposed to dust, and why they are not likely to be injured by that exposure, 2781, 2782——Specimens not being placed in strict zoological order is entirely attributable to want of space, 2783–2788——Cause of there being only one case of insects exhibited, 2789, 2790——Facility of access to the Museum greater than that of the Jardin des Plantes, 2791——Collections of the Museum are as useful as their present state and arrangement can make them, 2792——The specific names of Linnæus should never be abandoned; in what cases the generic names should also be used, 2793——Causes why the selection of birds are not, in the Synopsis, called by their scientific names, 2794.

Labels that are worn out have been taken out to be re-written; they should be replaced as soon as possible; almost every specimen is named in the catalogue, except those of very recent introduction, 2795–2809——The catalogue of mammalia is very nearly, if not quite complete, 2810–2812——Clerical mistake on the label of an Indian boa; similar errors in Dr. Grant's work on comparative anatomy, 2813–2817——Reason why the British birds being classed according to Mr. Jenyn's work, and the general collection according to Temminck's, does not tend to confuse the student, 2818——Instructions given to Mr. White on alteration of the classification of British birds according to Mr. Jenyn's work, 2819. 2886, 2887——Circumstances under which Mr. White came into the establishment, and why the head of the department was not consulted, 2819–2823.

The lama is a very bad specimen; it is just in the same state as when it came from the College of Surgeons, 2824–2829——Want of room prevents the large specimens in store being exhibited, 2830, 2831——Specimen of the kangaroo first brought to England is in one of the glass cases in the saloon; it is remarkably good, and larger than any other kangaroo, 2832–2835——Satisfactory manner in which the bird-stuffing committed to Mr. Gould is done, 2836–2838——Defence of the term swimming-bladder, as used in the Synopsis, 2840, 2841——Defence upon a charge of Dr. Grant relative to confused nomenclature of the emu and cassowary, 2842–2852——Dissection of insects is now going on, and will be exhibited to the public when completed, 2856-2859——Increase in the establishment of the zoological branch of the natural history department since witness's appointment, which has taken place at his suggestion, 2860–2863.

Catalogue of the zoological collection, commenced about two years ago, is progressing as rapidly as the strength of the department will allow, 2865–2871——The collection of mammalia is as well arranged as the limited space will allow, 2872–2874——The French collection may be better arranged from there being greater space, but the facilities of access are greater in the British Museum, 2875–2881——Officers of the natural history department have not had any communication with the architect upon the details of the accommodation to be afforded to that department in the new buildings, 2882–2885——The entomological collection presented by General Hardwicke did not for a considerable time remain inaccessible to the public, 2888–2891——Punctuality and fidelity with which Mr. John Edward Gray executes his duties at the Museum; his work on Indian zoology was not attended to by him during the hours he ought to have been attending to the affairs of the Museum, 2892–2897

Children, Mr. [1835.] His merits as a naturalist, *König* 2855.

Chimpanze. See *Synopsis.*

Christie's Sale of Pictures. [1836.] Instance of combination between picture dealers at this sale, who immediately quarrelled; the excise and the proprietor of the property are supposed to have suffered, *Harding* 4341–4344.

Christmas

8/5

Christmas Holidays. See *Holidays. Reading Room.*

Chrysales. [1836.] In many parts of the Paris collection they are put with the full grown species, *Grant* 1523.

Cinerary Urns. [1835.] Witness has edited a description thereof, which was commenced by Mr. Combe, *Hawkins* 3451.

Clapperton, Captain. See *Rock Specimens.*

Classed Catalogues. See *Catalogues of Books and Collections,* VIII. *Catalogue of Manuscripts,* 3. *Chemistry. Foreign Libraries. Gottingen Library. Gregory,* Dr. O. *Horne,* Rev. *T. H. Inner Temple. Leyden Museum. London Institution. Munich,* Library at. *Prints and Drawings. Provincial Libraries. Queen's College, Cambridge. Royal Society,* 1. *Sciences. Sion College. Southey's Monastic Orders. Surgeons,* College of. *Theological Works. Tours Library.*

Classen's Library. See *Denmark,* III, 1.

Classical MSS. [1836.] Indexes to them might be printed separately, *Forshall* 4378.

Classics. [1835.] The library of the Museum is rich in classics, *Ellis* 2458.

Classification of Collections. [1836.] It is more attended to in the museums of Edinburgh and Manchester than in the British Museum, *Grant* 268–270——In some departments a better classification might be made, if there were more officers, *Bennett* 1714——Opinion that the classification of an eminent authority should not be implicitly followed in a large collection, but that variations should be made according to improvements in science, *Bennett* 1715–1723.

See also *Conchological Collection,* 2. *Natural History Collection,* 3. *Ornithological Collection,* 3. *Zoological Collection,* 2.

Classification of the Library. [1835.] Number of copies of the outline of the classification of the library by the Rev. T. H. Horne that were printed, and in what manner they were distributed, *Forshall* 1056–1063——It was printed by order of the trustees; Mr. Horne has since changed his mind on various portions of it, *Ellis* 1765–1773——Sums paid on account of the publication of a classification of a library, 1821 to 1833, and manner in which the several sums were distributed, *App. p.* 365——Account showing the number of copies of the outlines of classification of a library, which were printed, and the manner in which they have been disposed of, *App. p.* 365.——*See* also *Lee,* Mr.

Clift, William:

[1835.] Letter from him to the Rev. J. Forshall, on the subject of Hawkins's fossils, dated 7 July 1834, *App. p.* 439.

[1836.] (Analysis of his Evidence.)—Conservator of the Museum of the College of Surgeons, 596——Particulars as to the purchase by the college from the trustees of the British Museum of certain specimens of natural history; description of the specimens, some of which had never been examined, 599–630——Classed catalogue of the College of Surgeons is much used and highly valued; number of volumes and price at which sold, 631–638——The value of the glass bottles in which the specimens were contained was more than half the sum paid for the specimens, 639–642——Zoological collection in the College of Surgeons was better and in better preservation than that at the Museum in 1809, 643–659. 674, 675——Particulars relative to the presentation of a mammoth's head and other articles by the Emperor of Russia to Sir Joseph Banks, its being placed in the British Museum, subsequently accompanying the purchase of the College of Surgeons, and eventual return to the British Museum previous to the Emperor of Russia visiting this country, 659-688.

Particulars relative to Mr. Corse's present to the British Museum of two elephants' skulls, their transfer to the College of Surgeons, and eventual return to the British Museum, 669, 670. 689–695. 700–702——Considerable number of the skins of birds received from the Museum are now in the collection of the College of Surgeons; some of the dried ones were presented to Mr. Bullock, 696–699——Donations to the College of Surgeons are taken care of, to induce others to present; but persons having the care of a collection must not be compelled to accept and preserve everything offered to them, partly from want of room, and partly from the expense of preservation, 705-707——The purchase and subsequent reclamation was the first and last money transaction between the College and the Museum, 708–711.

Clowes, George. [1835.] Estimate showing the price per copy at which the Synopsis of the British Museum could be printed, according to the description of paper and number of copies, 2769–2794, *App. p.* 444.

Clytie. [1835.] Witness recommended that this cast should not be moulded from, on account of the risk that might be run, *Westmacott* 3942.

Cobbett's Register. [1836.] There are 12 volumes of this work wanting in the Museum library; small price at which they might have been obtained had there been funds for that purpose, *Huish* 5014–5020.

Cochran, John. [1836.] (Analysis of his Evidence.)—Bookseller and manuscript dealer in the Strand, 3429-3431——Purchases made by Museum officers are not so extensive as they ought to be, and they would do better in bidding by deputy, 3432-3435——Classed catalogue of manuscripts would be useful to literary men; extent to which it would sell if published in octavo size in parts, 3436-3438. 3481——Supposed expense of printing an alphabetical catalogue of the printed books of the Museum, 3439-3443——Useful nature of witness's classed catalogue of his own collection, 3444-3449——Mode pursued of keeping it up, 3457-3460——Manner in which an alphabetical and classed catalogue at the Museum might be formed simultaneously; supposed expense, 3451-3456.

Duplicates parted with from the Museum with greater carelessness formerly that an present, 3461-3463—A celebrated work written by Henry the 8th against Luther, presented to Cranmer, with his notes in it, was once in the Museum, but was sold by auction three times, 3464-3466——Price at which Luther's copy of his German translation of the Bible, of the date of 1541, sold for, in consequence of the autographs contained in it, 3467-3471——Price at which another copy of the same work was sold to the Bodleian library, 3474, 3475.

If a synopsis of the contents of the Museum existed, printed neatly at a moderate expense, containing a description of the Elgin marbles, the Townley collection, the minerals, &c., it would be beneficial, 3477——The gallery of antiquities is expensive; but as a work of luxury for the upper classes it is desirable to see it as it is, 3478-3480——Readiness of the librarians to listen to any suggestions of desiderata in the library, and as to their being supplied if the funds permitted it, 3482——Demy octavo is a sufficient size for a catalogue of manuscripts; but where fac-similes are given, royal octavo desirable, 3483-3485.

Cockereli, Mr. [1836.] His objection to the present mode of lighting the Elgin marbles; his knowledge of the details of the Parthenon, *Rennie* 1213. 1246.——No arrangement of the Elgin marbles should be entered into without his advice, *Rennie* 1246.

Codex Bezæ. [1836.] Is probably the next in value for age to the Charlemagne bible, *Thorpe* 3238-3240.

Coins and Medals:

[1835.] The coins are mixed in the cases, with labels showing the collection to which they originally belonged, *Ellis* 575, 576——Duties of the office of keeper, and salary, *Hawkins* 3444-3446——There is a catalogue of the greater part of the coins, that of the remainder is in progress, *Hawkins* 3471-3474——The coins of the late king were catalogued before they came to the Museum, and the catalogue has since been verified with the coins, *Hawkins* 3497——There is not space in the Museum for allowing the medals and coins to be exhibited both sides at once, *Hawkins* 3530-3536——Account of the number of applications made to the trustees of the British Museum (at meetings authorized according to the rules to grant admissions) for the purpose of being admitted to inspect the collections of medals and coins, or any part thereof, 1815 to 1820; number of admissions in consequence of such applications, *App. p.* 397.

[1836.] Mode in which they should be arranged and catalogued, *Greenough* 3814——Difficulties from want of a sufficient catalogue of, *Edwards* 4761——Desirable that selections from the coins and medals should be formed to illustrate history, and the progress of the medallic art, and be exhibited without restriction, *Edwards* 4766*——Facilities experienced in consulting them in the Museum; doubts whether foreigners receive so great facilities in their own museums, *Gage* 5073-5078——Number of British medals that there are; the whole of which are not in the British Museum, *Hawkins* 5734, 5735. 5763, 5764——Proportion of large to small medals in the Museum, *Hawkins* 5750, 5751.

See also *Ackerman on Roman Coins. Anglo-Gallic Coins. Combe,* Mr. *Taylor. Denmark,* IV. *Duplicate Books, Coins and Collections. Greek Coins. Hunter,* Dr., Coins of. *Medals. Pembroke,* Lord.

Coins and Medals, Royal Cabinet of. See *Denmark* II. 2.

Colchester, Lord. [1835.] His literary and other qualifications as a trustee of the Museum, *Forshall* 656. *See* also *Index to Manuscripts.*

Cole Collection. [1835.] To the Cole collection there is more than one full index made by Mr. Cole himself, *Ellis* 1799.

Cole, Lord Viscount. [1836.] (Analysis of his Evidence.)—Opinion in favour of the collection of fossils in the British Museum, 2723-2727——No collection of fossil Saurians in any foreign museum that comes near the collection in the British Museum, 2730——The collection of fossil mammalia very good; beauty of certain casts, which will eventually be more valuable than the originals, 2731-2748——Hawkins's collection of Saurians are the largest, the most unique, and by far the most valuable, 2749-2751——Extent to which the principal Ichthyosaurus in that collection is made up, and how far the additions are taken notice of in Mr. Hawkins's book, 2752-2763——There is no objection to making up small portions of a specimen if there is sufficient warrant for it, but not to go to the extent Mr. Hawkins has, 2764-2771——The long specimen on the floor has certain

Cole, Lord Viscount. [1836.] (Analysis of his Evidence)—*continued.*

tain portions that are not artificial, but no value was put on this specimen when the collection was bought, 2772–2777——The Museum possesses a fair proportion of the discoveries made in England of fossil remains of late years, 2778–2780.

Collas's Engraving Machine. [1836.] The evidence on Mr. Tilt's petition laid before the House, and the petition placed in the Appendix to the Report, *Rep.* v.——Extract from the Journals of the House of Commons relative to the presentation of Mr. Tilt's petition on this subject, *p.* 463——Petition from Charles Tilt relative to its application to medals in the British Museum; examination upon the petition, and upon the necessity of Government assistance, *Tilt* 5592–5641——Advantages of Collas's machine for engraving medals, and opinions that the distortions occasioned by it do not affect the fidelity of the engraving, *Tilt* 5592–5641, *Chantrey* 5642–5663——Satisfactory state of Collas's method of engraving in reference to medals generally, *Hawkins* 5666–5671——It is much cheaper and better than the ordinary mode of engraving, *Hawkins* 5673–5677. 5705–5713. 5773——Principle on which the machine is constructed, *Hawkins* 5720–5722——Origin of the invention, improvements that have been made, and extent to which it approaches perfection, *Hawkins* 5725–5733, *Nolte* 5808——Value of the discovery in representing large and small specimens, *Hawkins* 5741–5749.

Parts of medals to which the machine is least suited should be retouched by the hand, *Hawkins* 5755, 5756. 5781–5785, *Nolte* 5832. 5960, *Brockedon* 5896——Written opinions of Monsieur Lenormant and Monsieur Mionnet, two of the conservators of medals and antiquities in the Royal Library at Paris, in favour of this invention, *Hawkins* 5692–5696——Names of high scientific men in France whose opinions are in favour of it, *Nolte* 5308——The spirit and character of the medal is better given by this process than any other, *Hawkins* 5697, 5698——The machine can be worked by a common mechanic, with care and attention, *Hawkins* 5699–5702.

Whether the machine would be equally applicable to medals previous to as since the fifteenth century; the questions addressed to the French conservators were relative to those since, *Hawkins* 5757–5762——The deviations occasioned by the machine are more limited than those occasioned by the hand of an engraver; for accuracy the proposed is a better method than any other, but is not suitable to very high relief, *Chantrey* 5792–5803——The machine cannot alter the forms of the letters, it sometimes renders them indistinct, which may be remedied by engraving, *Hawkins* 5781–5785——An engraving executed by a fine artist would be more pleasing to the eye, but not so faithful a representation of the medal as one executed by the machine, *Hawkins* 5786–5791——General character of the evidence is in favour of the machine being a proper one, to produce a faithful image of the medals, *Nolte* 5805——Indemnity against any violation of contract must be reciprocal between Mr. Tilt and the Company in Paris, *Nolte* 5807.

Manner in which the Company in Paris formed, and extent of patronage afforded to it by the king and government, *Nolte* 5808——Casts must be taken of the medals and the engravings executed in Paris: imperfect engravings would be rejected, *Nolte* 5813–5817——Period taken to execute engravings from the casts, *Nolte* 5828, 5829——The French government have no security except the withdrawal of their subscription, if the work does not keep up its excellence; no objection to the work being submitted to a competent person to be agreed upon, *Nolte* 5820–5823——The machine may be applied to taking patterns for the use of manufacturers, *Nolte* 5830——Other purposes to which it may be applied, *Nolte* 5831——Proportion of support given by the French government, *Nolte* 5824. 5838–5840——Supposed number of copies printed; number of subscribers, which is on the increase, *Nolte* 5825.

Period when the work will be completed, *Nolte* 5838–5840——The specimen, No. 2 produced, is one of the finest specimens possible, for the taste and judgment with which it has been etched up to a beautiful tint of colour, *Brockedon* 5898——The works executed by the French machine have had the benefit of skilful artists, which the English machine has not; the French machine is incorrect; it does not possess advantages in medals of low relief and small size, *Brockedon* 5897–5899——Impressions of engravings by Collas's machine are out of proportion; there has latterly been an improvement in the appearance of the plates, but not in their correctness, *Doubleday* 5904–5911.

In the absence of Mr. Bates's, the French is the best, *Doubleday* 5935——The evidence given does not convey a just idea of the capacity of the French machine; the distorting properties of Mr. Bates's old machine have been blended with the qualities of the French one, *Nolte* 5953——Imperfections may arise from the medals themselves being imperfect from which the casts have been taken, *Nolte* 5832——Answer in detail to the supposed imperfections of the French machine, as compared with Mr. Bates's, *Nolte* 5956——The French engravings are taken in perspective, as being best suited to the public eye; the machine is capable of producing perfect engravings when required, *Nolte* 5957, 5958——Comparison of engravings with the French and English machine, both being preferable to common engraving, *Pistrucci* 5987, 5988. 5998, 5999——In the French machine, that which is called distortion, is not so, but a foreshortening or perspective view, *Pistrucci* 5989–5994——Letter from Sir F. Chantrey, on the subject of his evidence relative thereto, *App. p.* 595.

See also *Casts of Medals. Engraving Machines. Medallic History of England. Parthenon. Phygaleian Marbles. Tresor de Numismatique.*

Collating Manuscripts. [1836.] Want of a room for this purpose, *Holmes* 4121–4124——There will be a room for this purpose when the present reading rooms are altered, *Forshall* 4247.

Collections in the Museum:

[1835.] Offers of, are usually brought under the notice of the trustees by the officers of the institution, *Ellis* 129, 130. 135–137——The plan of keeping collections entire, or disposing of duplicates under the powers of 47 Geo. 3, may be left to the sound discretion of the trustees, *Forshall* 490–495.

[1836.] The accessions made of late, and the interest taken by the public in them, render it expedient to revise the establishment of the Museum, *Rep.* iii——And to further subdivide the departments, *Rep.* iv——Imperfection is mainly attributable to want of space and limited pecuniary means, *Rep.* v——Accessions to be registered by heads of departments in a book kept for the purpose, annual report being made to the trustees, *Rep.* v——Great care is bestowed in the preservation of the specimens, *Richardson* 2176——Exhibition of the Museum collections is of the highest importance to the public taste and morals, *Mathew* 3406——The Museum collections are composed of specimens from every quarter of the world, *Turner* 1975——Never heard complaints of persons consulting or visiting the Museum collections, *Turner* 1976——There is no Museum so complete as the British Museum; there ought to be a larger collection if Great Britain chose to go to the expense, *Richardson* 2253–2256——From the energy of the officers, and under the present constitution, the Museum collections have made greater progress than any other Museum in Europe, *Gould* 2443. 2445——Improvement in the collections of late years, *Bennett* 1775–1777——Collections of the Museum are as useful as their present state and arrangement can make them, *Children* 2792.

The deplorable state of the collections in the Museum is, in a great measure, dependent upon the bad constitution of the whole establishment, *Grant* 1529——Collections are not in the state they ought to be, considering the wealth of the country and the influence of the trustees, *Gould* 2435–2442——The collections might be better named and exhibited than they are, *Richardson* 2250, 2251——Mode by which the collections might be improved, *Bowerbank* 865–872. 899, 900——How far defect pointed out therein, has been from want of space; extent to which it has been remedied since the new buildings have been opened, *Bennett* 1724, *Yarrell* 2086–2092, *Richardson* 2179-2182, *Horsfield* 2541–2543, *Children* 2830, 2831——Since the new building has been opened the Museum does not more resemble a store-house than a school of zoology, *Gould* 2415–2417.

See also *Classification of Collections. Desiderata. Duplicate Books, Coins and Collections. Index to Collections. Jardin des Plantes*, I. *Leyden Museum. Nomenclature. Trustees*, 1; also *the different Collections under their respective names.*

Collector of Specimens. [1836.] Collections might be increased by the appointment of a travelling collector occasionally; sale of duplicates would pay his expenses; one of the officers might be so employed without its being derogatory to his own dignity, or that of the Museum, *Bowerbank* 865–875. 899, 900.

Colonial Secretary. [1836.] Manner in which he might be instrumental in increasing the collections, *Bennett* 1853.

Coluber. See *Reptilia.*

Combe, Mr. *Taylor*, his Coins. [1835.] Account of sums expended on Mr. Taylor Combe's catalogue of coins, 1809 to 1834, put in, *Cowtan* 2211, *App. p.* 419.

See also *Greek Coins.*

Committees of the Trustees:

[1835.] Titles of commitees of the Board of Trustees of the British Museum, and names of the trustees belonging severally to such committees, *App. p.* 389.

[1836.] Reports of special committees of the trustees in 1805, 1806 and 1807, on improvements proposed in the Museum, *App. p.* 512–525.

See also *Accounts. Library of the British Museum*, 4. *Visitation.*

Committee on Affairs of the British Museum. See *Evidence.*

Commons Parliamentary Papers. [1836.] They are not received at the Museum for a considerable time after the Session is closed, from their being arranged, paged and bound, without any expense to the Museum, and which cannot be done till the whole series is complete, *Baber* 4656, 4657.

Comparative Anatomy:

[1835.] The superiority of the collection at Paris is owing to the superintendence of Baron Cuvier, *Forshall* 705–708.

[1836.] The most extensive catalogue of any continental collection is that of the cabinet of comparative anatomy at Paris, *Bennett* 1755——Object of Cuvier in forming his collection of comparative anatomy, *Gray* 2719.

It would be objectionable that the internal parts of animals should be placed in cases with the mounted skins; it would be better that they should form a separate cabinet, *Grant* 257——Objections to a mixed cabinet of zoology and comparative anatomy, *Grant* 257——There are a few specimens of, in the Museum, *Bell* 478——A collection of comparative anatomy would be out of place in the Museum, *Bell* 484——Extent to which

Comparative Anatomy. [1835.]—*continued.*

which it might be advantageously introduced into the zoological collection, but it should not form a separate collection, *Owen* 529——There should be so much as would elucidate the grounds upon which any arrangement of animals is founded, *South* 796.

See also *Characters of Orders and Tribes. Organic Remains. Surgeons, College of,* 1.

CONCHOLOGICAL COLLECTION:

1. *Condition of the Collection.*
2. *Arrangement and Classification of the Collection.*
3. *Nomenclature of the Collection.*

1. *Condition of the Collection:*

[1835.] The collection of shells in the British Museum is far superior to any other public collection; enumeration of different foreign collections, *Gray* 3334–3336——There are more shells in the Museum than in other collections; but there are not half the number of species that are in existence, *Gray* 3357.

[1836.] The Museum collection contains 4,025 species, and 15,000 individuals, *Gray* 3056——It contains nearly half the known species of shells, *Turner* 1685, 1686——Within the last six or seven years the collection of shells in the British Museum has become one of first-rate importance, from being ten or twelve years ago a disgrace to the country, *Turner* 1564–1567——The collection in the British Museum is satisfactory in point of arrangement to the scientific man, and the whole collection is open to the public, *Owen* 530–534, *Turner* 1582–1584. 1587–1590. 1607–1610——The Museum collection of shells is extensive, and of considerable scientific value, *Bennett* 1746, 1747——There are none of the collections in Europe that are superior to that at the British Museum, *Turner* 1621——Comparison between the collections of shells in the French and British Museums, showing the British to be more unique, but the Parisian to have the greater number of pescimens, *Turner* 1568–1579. 1614. 1664–1666.

The shells are valuable, but are comparatively speaking, deficient, *Vigors* 1287——There are many deficiencies, *Sowerby* 17——Lord Mountnorris's and the Rev. Dr. Goodall's collections contain a larger number of species, *Sowerby* 22, 23——Smallness of the extent, and bad arrangement of the shells in the British Museum; names of private collections that are superior, *Bowerbank* 844–848, 880–886——Extent to which it is an opprobrium to the British nation, *Grant* 1061, 1062. 1078. 1082. 1086——Shells of the most common fish are spread in profusion in the Museum, while space cannot be found for the more rare specimens, *Grant* 1508——Explanations relative to Dr. Grant's evidence on the state of shells, *Gray* 3076——Mercantile value may be added to much, by a number of duplicates; not so the scientific value, *Turner* 1585.

Scientific and commercial value of a large collection is nearly the same, unless the collection is overloaded with duplicates, *Turner* 1570. 1585, 1586. 1596–1598——Specimens offered to the British Museum by witness have generally been purchased; manner in which the transaction takes place, *Turner* 1591–1595, 1611–1613——Space that would be required to exhibit a perfect collection of fossil shells, and whether there is sufficient room in the British Museum, *Bowerbank* 913–922——Former and present space allotted to this collection, *Gray* 2457——The room in which it is exhibited is not at all convenient for it, *Greenough* 3861, 3862.

2. *Arrangement and Classification of the Collection:*

[1835.] System adopted with regard to the arrangement of shells, *König* 2707–2729, *Gray* 3222–3230——Impossibility of adhering to any system of arrangement of classification, from the discoveries of new genera and species in conchology, which are not to be found in any previous work, *Gray* 3337–3353.

[1836.] Shells should be placed stratigraphically; recent shells should be considered objects of zoology, and fossil shells of geology, *Bowerbank* 849——Shells and specimens of strata should be arranged separately, but should be in the neighbourhood of each other, and readily accessible, *Bowerbank* 897——If the fossil shells are intended for the study of the conchologist, they should be arranged zoologically; if meant for the service of the geological world, the primary arrangement should be stratigraphical, and the second zoological, *Bowerbank* 901–906——The rapid increase of specimens in the British Museum renders it difficult to keep the arrangement so complete as is desirable, *Turner* 1599——The shells are arranged in the very extensive series of tables appropriated to them, *Bennett* 1702——A different arrangement might give accommodation for a few more, but not for a large number, *Bennett* 1738.

3.—*Nomenclature of the Collection:*

[1835.] Cause of difficulty in nomenclature, *König* 2707–2729——The collection of shells is not entirely named; the discovery of later objects prevents the nomenclature of any one work being strictly followed, *Gray* 3222–3230.

[1836.] The nomenclature of the shells is, as far as it has gone, satisfactory, *Sowerby* 18–21, *Owen* 530–534——There is a great deficiency of names, *Bowerbank* 907–909——It is very extensively named, *Bennett* 1746, 1747——Cause of a difference of opinion with Mr. König on this subject, *Bennett* 1888–1901——Great progress made in naming

Conchological Collection—3. *Nomenclature of the Collection*—continued.

the British collection during the last year, *Turner* 1953, 1954——More shells named in the British than the Paris collection, *Turner* 1953, 1954——The names given by Dr. Leach to this collection have been removed or altered, *Bell* 358–362.

There are some very odd names on the shells, *South* 735–743——Explanation in answer to Mr. South's objections, *Gray* 3050——The nomenclature of British shells is altogether antiquated; the same species are in different rooms by different names, *Grant* 1501——Explanation of Dr. Grant's evidence, *Gray* 3095——The Lamarckian arrangement and nomenclature of Linnæus is that adopted at the British Museum for shells, *Gray* 2474. 3063—— Linnæan nomenclature should be adhered to, *Gray* 3069— Private collections of, in England, are named after those in the British Museum, *Turner* 1958, 1959——There is no additional money value given for shells, because they are named; persons purchasing would rather have shells not named, *Turner* 1957–1970—— Montagu's is the best work on British shells, *Gray* 3065——Nomenclature adopted by Dr. Heming and Captain T. Brown, *Gray* 3067.

See also *British Freshwater Shells. Fossil Shells. Grant*, Dr. *Jardin des Plantes*, III., 1, 2. *Leach*, Dr. *Leyden Museum. Natural History Collection*, 3. *Nomenclature. Ornithological Collection*, 3.

Conchology. [1836.] Lamarck describes 4200 species, *Gray* 3062——Circumstances which have caused witness to send finer specimens to the French than the British Museum, *Turner* 1615–1617.

See also *Cuming's Conchological Collection. Organic Remains. Tankerville*, Earl of. *Valencienne*, Mr. *Wetherell*, Mr. *Wood*, Mr.

Conditions of Bequests. [1835.] Reasons the conditions annexed to the bequests of Mr. Payne Knight, and the Hon. Mrs. Damer, were not mentioned in the return made to Parliament, *Ellis & Forshall*, 585–589.——*See* also *Donations and Bequests.*

Constitution of the Museum. See *Collections. Trustees.*

Consuls. [1835.] It would be desirable that they should write to the trustees respecting any valuable specimens that may come under their notice, *Children* 3189——They have, at great expense and pains, procured living animals for the Zoological Society, *Gray* 3358.

Continent:

[1835.] Manner in which the great museums or libraries on the Continent are conducted, *Ellis* 214–227——Circular from the Foreign Office, and answers, showing the state of libraries, &c. on the Continent, *App. p.* 446.

[1836.] Works published on the Continent in the departments of history (including biography and travels) and fine arts, between January and April 1832, distinguishing those which are not to be found in the British Museum, *Edwards* 4738——Trustees have not the means of making purchases on the Continent, but the catalogues of all large collections come over here, *Josi* 5260, 5261.

See also *Library of the British Museum*, 3. *Mammalia*, 5. *Ornithological Collection*, 4. *Zoology*, 1.

Contracts. [1836.] Specifications and contracts for buildings made under the superintendence of the office of works; names of contractors, *Smirke* 5283–5295——Mode by which contracts entered into, *Smirke* 5350——Statement of the contracts entered into under the directions of the Surveyor-general of His Majesty's office of works; and of the commissioners of His Majesty's woods, forests, land revenues, works and buildings; for the works in erecting the new buildings of the British Museum, *App. p.* 578–589.

Contributions. See *Donations and Bequests.*

Convents. See *Spanish and Portuguese Convents.*

Conybeare, Rev. *W.*, F.R.S. [1835.] Letter from him to the Rev. J. Forshall, on the subject of Hawkins's fossils, dated 7 July 1834, *App. p.* 439.

Copenhagen. See *Denmark. Manuscript Collection*, 1.

Copyright Act. [1836.] The proper number of books not being supplied the Museum under that Act, is from its defective nature, *Nicolas* 3618-3620——Mode adopted of obtaining publications under the Copyright Act; proportion the Museum are supposed to lose by evasion of the Act; greater proportion they would lose but for employing a collector, *Baber* 4628–4644——Examples (A. to C.) of works published in London between December 8, 1834, and June 8, 1835, due under the Copyright Act, and not in the library of the British Museum in October 1835, *Edwards* 4758, 4759——An alteration in the law is imperatively called for to enforce the provisions of the Copyright Act, *Edwards* 4760——A Copyright Act, in reference to engravers' works, would be beneficial to the print-room, and particularly as a school of art, *Josi* 5206——Doubts whether such a regulation made lately in Paris; one does not exist in Holland, *Josi* 5256.

See also *Cowtan*, Mr. *Flora Græca. Library of the British Museum*, 2.

Corals and Corallines:

[1835.] There are more in the Museum than in other collections, *Gray* 3357.

[1836.] The

Corals and Corallines. [1836.]—continued.

[1836.] The collection is instructive, but inferior to what zoologists would wish it to be, *Vigors* 1416——They are very fairly arranged, *Bennett* 1702——Collections of corals very good; better than the collection at either Paris or Leyden; has been formed within the last six or seven years, *Turner* 1680–1684——Fossil corals not at present exhibited, *Gray* 3091——Former and present space allotted to this collection, *Gray* 2457.

See also *Jardin des Plantes*, III. 1. *Natural History Collection*, 3.

Correspondence:

[1835.] Letter from the Rev. J. Forshall to Mr. Millard, dated 17 February 1831, *App. p.* 426——Another letter, dated 16 June 1831, *App. p.* 427——Another letter, dated 16 Jan. 1833, *App. p.* 428——Letter from Benjamin Hawes, esq. to the trustees, dated 10 May 1831, *App. p.* 426——Letter from Mr. Millard to Henry Ellis, esq., dated 7 July 1831, *App. p.* 427——Note from Mr. Millard to the trustees, dated 7 July 1831, *App. p.* 427.

Letter from the Rev. H. H. Baber to Sir Henry Ellis, as to persons attending the reading-rooms, dated 26 June 1835, *App. p.* 428 ——Another letter, dated 30 June 1835, *App. p.* 429——Letter from H. T. de la Beche, esq., F.R.S. to the trustees, on the same subject, dated 17 July 1834, *App. p.* 440——Letters from the Rev. Dr. Buckland to the trustees, on the same subject, dated 7, 12 and 20 July 1834, *App. p.* 441—— Letter from the Rev. Dr. Buckland to the Rev. J. Forshall, dated 12 March 1835, on the subject, *App. p.* 443.

Copies of communications made to and received from His Majesty's Ministers abroad, respecting literary institutions or libraries in foreign countries, 1834, 1835, *App. p.* 446–568.

Extract of a letter from the Rev. Dr. Buckland to the Right Hon. Lord Farnborough, dated 26 June 1834, relative to Mr. Hawkins's fossils, *App. p.* 437——Letter from the Rev. J. Forshall to Charles König, esq., dated 10 July 1834, on the same subject, *App. p.* 438—Letter from Gideon Mantell, esq., F.R.S., to the trustees, on the same subject, dated 11 July 1834, *App. p.* 439——Letter from the Rev. W. Conybeare, F.R.S., to the Rev. J. Forshall, dated 7 July 1834, on the same subject, *App. p.* 439—Letter from W. Clift, esq., F.R.S., to the Rev. J. Forshall, dated 7 July 1834, on the same subject, *App. p.* 439——Letter from Mr. Cates to Sir Henry Ellis, on the same subject, dated 24 June 1836, *App. p.* 429.

Letter from Sir George Beaumont, bart., to the trustees, on the subject of his pictures, dated 17 July 1833, *App. p.* 430——Letter from Sir George Beaumont to Sir Charles Long, bart. on the same subject, *App. p.* 431.

Letter from Prince Polignac to M. Paul de Fontenay, referred to in Sir H. Ellis's evidence, dated 24 August 1829, relative to manuscripts at Pomard, *App. p.* 432—— Note from the Baron de Joursanvault to Sir Henry Ellis, dated 3 September 1829, *App. p.* 433.

[1836.] Letter from the Rev. J. Forshall to C. König, esq. requesting suggestions on plans of the new north side of the Museum, *Forshall* 5492, 5493——Letter from Joseph Planta, esq. to the Speaker, dated 22 January 1807, on the subject of improving the mode of watching the Museum, *App. p.* 520——Of the Trustees with the Lords of the Treasury in regard to the new buildings, *App. p.* 531——Letter from Thomas Hawkins, esq. to the Members of the Committee on British Museum, dated 4 July 1836, *App. p.* 594——Letter from Sir Francis Chantrey to the Chairman of the Committee, dated 15 June 1836. *App. p.* 595.

Corsi Collection of Antique Marbles. [1836.] The purchase of this collection recommended to the trustees and declined; afterwards bought by an individual, and presented to the University of Oxford, *Greenough* 3953.

Corsini, Prince. [1836.] His library at Rome is valuable and expensive, and librarians are kept for the public service, *Hannay* 5103.

Cortes of Spain. [1836.] Sum asked and paid for the transactions of the old Cortes of Spain, *Baber* 4731*–4734.

Corunna. Library of the Junta of Commerce at. See *Spain*, 6.

Costumes. See *South Sea Islands.*

Cottonian Collections. See *Charters and Rolls.*

Cottonian Manuscripts.

[1835.] There is a catalogue of the Cottonian manuscripts, *Ellis* 1797——How far it is incomplete, *Forshall* 740–743——The oath mentioned in the Act 5 Anne, c. 30, to be taken by the librarian to the Cottonian trustees, is not repeated in Act 26 Geo. 2; the librarian is librarian to the trustees generally, *Ellis* 1031–1037——State of manuscripts in the Cottonian collection that were injured by the fire that originally took place at Cotton House, *Forshall* 1105–1121.

[1836.] Desirable that the remains of the Cottonian manuscripts which have not been examined, should be, and those that are of value copied, *Nicholas* 3674–3680—— Several of the works and papers contained in the burnt manuscripts had appeared in print before the fire; such are noticed in the catalogue, *Forshall* 4179–4181.

Cottonian Manuscripts. [1835.]—continued.

A great deal has been done by printing the catalogues of this collection, *Evans* 3288——It is printed upon too indifferent paper, *Evans* 3288——It has an index, *Evans* 3305 It is mere waste paper; a copy of it can be bought for less than the binding costs, *Evans* 3337——It might be improved, *Forshall* 4163–4166——Particulars as to the catalogues of that collection called Hooper's or Astle's by Mr. Planta, and that by Mr. Ayscough, *Forshall* 4167–4181——Considerable materials have been collected for a supplement to the Cottonian catalogue, *Forshall* 4389——Supplement should be printed, *Forshall* 4397.

Coudou Antelope. See *Antelope.*

Cowtan Mawer. (Analysis of his Evidence.)

[1835.] Parliamentary grant in 1817, on acccount of the Alexandrian Manuscript fund; sum paid thereout, 939–945——Account relative to Major Edwards's fund, 1082–1088——Sums voted in 1834 for drawings in illustration of the Athenian marbles; sum expended and appropriation of surplus, 1175–1179——Sum asked from Parliament on account of the Alexandrian manuscript, and sum expended for that purpose, 1345–1349——Papers put in: Account of the objects of natural history, bought at Mr. Bullock's sale by Dr. Leach; accounts of the sums expended in the publication of the Gallery of Antiquities, and on Mr. Taylor Combe's catalogue of coins, 1809 to 1834; statement of Major Edwards's fund, 2211.

owtan, Mr. [1836.] Keeps the accounts of the Museum as well as collects books under the Copyright Act; it was deemed expedient to pay him by salary instead of per centage, *Baber* 4636–4640——Amount of his salary, *Baber* 4645.

Cracherode, Mr. [1836.] Was a trustee, distinguished by a magnificent donation to the Museum, *Panizzi* 4903, 4904——Supposed to have been made a trustee on account of his collection, *Panizzi* 4942——Extent of the collection of drawings by ancient masters in the collection of Mr. Cracherode, *Josi* 5264–5266.

See also *Duplicate Books, Coins and Collections.*

Cranmer. See *Henry the Eighth.*

Cranmer's Bible. [1836.] A bible with Cranmer's autograph in it seen at the house of Messrs. Payne and Foss, *Cochran* 3472, 3473.

Creation. [1836.] Names of sculptors who have formed works on the creation which are worth moulding from, *Weigall* 245.

Cremations. [1835.] Threat of an action by persons in the neighbourhood of the Museum, from the supposition that moths were introduced into their houses by the cremations, *König* 2755.

See also *Zoological Collection.*

Crinoidea. [1836.] There is a case of crinoideal remains in the Museum, *Viscount Cole,* 2748——Most of the crinoidea are put out, and are a tolerably good collection, *König* 3193, 3194.

Crocodilus Priscus. [1836.] The crocodilus priscus of Sömmering in the Museum is unique, *Viscount Cole* 2725.

Crustacea:

[1835.] Witness's duty as extra-assistant in the natural history department, having the care of the crustacea, *Samouelle* 3774–3750——Extent to which the catalogue is named, numbered and catalogued, *Samouelle* 3769–3776——The collection is in very fair condition, *Samouelle* 3794——State of the collection in 1821 and at present, *Samouelle* 3862, 3863.

[1836.] Dr. Leach formed a scientific catalogue of the crustacea and insects, which is kept up by Mr. Samouelle; it has not been printed, *Bell* 373–377. 476——The catalogue of crustacea would be accessible to a stranger on application to Mr. Samouelle, *Bell* 400–404——Imperfect nomenclature; great improvements have not been kept pace with, *Bell* 346-348——The collection in drawers bears Dr. Leach's name, who was a great authority, *Bell* 349——Which names are retained, *Bell* 358–362——Explanation relative to the nomenclature of crustacea; Mr. Bell's opinion thereon; reason for the system adopted, *Gray* 3045.

The British collection is one of the most perfect, *Bell* 349——The collection of fossil British crustacea in the Museum is exceedingly poor, *Bowerbank* 887——Witness has many more species, *Bowerbank* 893——Small sum expended thereon in five years, *Bowerbank* 876——Extent to which these collections are an opprobrium to the British nation, *Grant* 1081. 1085——The collection of, is far from being completed in the nomenclature or arrangement, *Grant* 1512——Portion of the collection under the care of Mr. Samouelle, *Gray* 3053.

See also *Catalogue of Books and Coins,* V. *Edwards,* Dr. *Milne. Entomological Collection. Leach,* Dr. *Mineralogical Collection. Myriapod.*

523

Cumings' Conchological Collection. Terms on which offered to the Zoological Society, which, if not accepted, the collection will be offered to the Museum, *Vigors* 1287–1291. 1350–1365, 1392——Particulars as to the negociation with the Zoological Society, *Bennett* 1748–1753——Mr. Cumings is, to all intents and purposes, a dealer in shells, and spoken of as such, *Turner* 1627–1631——Witness never heard that Mr. Cumings offered shells to the Museum for sale, *Gray* 3063.——*See* also *South Sea Islands.*

Cursorius Isabellinus. [1836.] Evidence as to the purchase of the Cursorius Isabellinus at Mr. Donovan's sale, *Gray* 2978, 2979.

Cuvier, Baron:

[1835.] Baron Cuvier had free and unrestrained opportunity of inspection of all the Museum collection, and was also shown a collection not belonging to the Museum, *Gray* 3235-3239——His nomenclature is adopted, except in deviations required by new species and genera, *Children* 3125——His work does not form the text-book of arrangement in the French museum, *Gray* 3233.

[1836.] Impossible that any specimens could have been withheld from Cuvier on his visit to the Museum, *Bell* 416–418——The catalogue of the Cuverian collection is a mere numerical list or index, published since Cuvier's death, *Owen* 510, 511——In all great points his arrangements should be adhered to closely, *South* 718——Improvements have been made in his nomenclature as well as in others, *Vigors* 1419—— Defence of Cuvier's arrangement, who has adopted Linnæus's nomenclature, *Richardson* 2265–2277 ——Cuvier, in conjunction with M. Valenciennes, was writing a history of fishes; little progress made since his death, *Gray* 2627——His testimony to the anxiety displayed by officers of British Museum to afford every facility of search, &c., *Gray* 2698—— Object of his visit to the Museum, *Gray* 3036-3040.

D.

Damer, The Hon. Mrs. [1835.] Her bequest is in the custody of the trustees, *Forshall* 1651.

See also *Conditions of Bequests.*

Danish Literature. [1836.] Works on Danish literature do not exist to any extent in the Museum, from want of funds; there few published, *Baber* 4675–4677.

Darmstadt. [1836.] Certain specimens of fossils that are only found in the great duchy of Hesse; they all go the Museum at Darmstadt, *Viscount Cole* 2742.

See also *Fossils.*

Davy, Sir *Humphrey.* [1836.] His knowledge of natural history generally; of zoology and mineralogy, *Children* 3071——Extract from a work of Dr. Davy, giving the opinion of Sir Humphrey Davy against the constitution of the Museum, and suggesting improvements, *Grant* 313 315——Not his meaning that the heads of departments should be admitted to the trusteeship, *Grant* 1006, 1007——Was not one of the best trustees that the Museum could have had, *Panizzi* 4945–4949.

Decapods. [1836.] Small number which are named; they are spread over a considerable space, *Grant* 1512.

Deleuze. [1836.] His work made use of in the Paris Museum by visitors, *Turner* 1949, 1950——Character and value of the work of Deleuze, *Gray* 2681.

[1835.] Despatch from Sir Henry W. W. Wynn to the Duke of Wellington, dated Copenhagen, 24th March 1835, relative to litterary institutions in Denmark, *App. p.* 481.

Denmark—continued.

II. *Museums at Copenhagen:*

1. Royal Museum of Arts and Antiquities:

[1835.] Name of governor; under what direction; departments into which divided; annual expenses, and out of what fund defrayed; regulations for admission of the public, *App. p.* 482.

2. Royal Cabinet of Coins and Medals:

[1835.] Government of; departments into which divided; annual expenses; how defrayed; admission of the public, *App. p.* 482.

3. Royal Cabinet of Engravings:

[1835.] Government of; departments into which divided; annual expenses; how defrayed; institution not yet opened, *App. p.* 482.

4. Royal Museum of Natural History:

[1835.] Government of; departments into which divided; annual expenses; funds of which defrayed; admission of the public, *App. p.* 482.
[1836.] Period it is open, *Gray* 3140.

5. Museum of Northern Antiquities:

[1835.] Government of; departments into which divided; annual expenses, and out of what fund defrayed; admission of the public. *App. p.* 482.

6. Royal Picture Gallery:

[1835.] Government of; departments into which divided; annual expenses; out of what fund defrayed; admission of the public, *App. p.* 482.

III. *Libraries at Copenhagen:*

1. Classen's:

[1835.] Number of librarians; annual expense of books; general annual expenses; how defrayed; admission of the public; names of librarians; number of volumes of books and manuscripts, &c., *App. p.* 483.

2. King's:

[1835.] Number of librarians; annual expense of books; general annual expenses; fund out of which paid; admission of the public; names of librarians; volumes of books and manuscripts, &c., *App. p.* 483.

[1836.] The library at, contains 400,000 volumes, *Panizzi* 4774——The contents of this library may be ranked after those of Dresden and Munich, *Hannay* 5149——There are valuable materials in this library of which it is desirable the Museum should obtain copies, *Hannay* 5153——Information relative to the number of volumes, condition of the library, number of librarians, &c, *App. p.* 542–562.

3. University:

[1836.] Number of librarians; annual expense of books; general annual expenses; out of what fund paid; rules for admission of the public; names of libraries; number of volumes of books and manuscripts, &c., *App. p.* 483.

IV. *Coins and Medals of.*

[1836.] The Danish government have published a very extensive work of all the coins and medals of Denmark at the public expense, *Hawkins* 5716.

Departments. See *Desiderata.*

Depot for Casts. See *Formatore.*

Derby, Earl of. [1836.] Is the trustee of the Museum, more distinguished for his knowledge of natural history than any other; he should not be removed from the board, *Bennett* 1819–1824.

Desiderata. [1836.] Heads of departments to report annually to the trustees the desiderata, and state and condition of their departments, vouched by the signature of the principal librarian, *Rep. p.* v——A list of desiderata of a collection is of utility, *Owen* 520——Readiness of the librarians to listen to any suggestions of desiderata in the library, and as to their being supplied if the funds permitted, *Cochran* 3482——Report of special committee, dated 13 July 1805, as to desiderata in the several departments, *App. p.* 520——Desiderata in the zoological department of the national library (Mr. Owen), *App. p.* 563.
See also *Catalogues of Books and Coins,* VIII. 1. *Fischer,* Dr. *Manuscripts,* 3.

Dictionaries. See *Reading-room.*

Digitigrade Animals. [1836.] A large portion of the smaller ones are not named, *South* 724.

Director-general of Museums. See *France,* III, 1.

Disbrowe, Sir *Edward C.* [1835.] Despatch from, to Viscount Palmerston, dated Stockholm, 29 July 1835, relatice to literary institutions in Sweden, *App. p.* 497.

823

District Institutions. See *Duplicate Books, Coins and Collections.*

District Libraries. [1836.] Importance of the formation of district libraries, *Mathew* 3411.
See also *Branch Libraries.*

Dodwell's Greek Bronzes. [1835.] Cause of the rejection of Mr. Dodwell's offer of Greek bronzes of the Archaic style, found near Perugia, a specimen of gold ornamental painting belonging to the ex-queen of Naples; subsequent purchase of the collection by the King of Bavaria, *Ellis* 1521–1527.

Dolphin. See *Mammalia.*

Donatello. [1836.] Difficulty of artists, without travelling, studying from the works of Donatello, *Weigall* 230.

Donations and Bequests:

[1835.] The trustees have the power of refusing a donation, *Ellis* 519, 520——Value of contributions to the Museum within the last 12 years, *Forshall* 611——A list of them is annually made out, and will be found among the depositaries in the library of the House of Commons, *Forshall* 1657, *Children* 3164——Articles of value that have been presented to the Museum in the last twenty years, *König* 2795, 2796——An entry-book, containing a list of new purchases and presents, with numbers attached, and mentioning the locality from which derived, would be advisable, *Children* 3427–3432.

General account of all bequests, donations and contributions above the value of 100 *l.* made to the British Museum, 1821 to 1833, distinguishing such bequests as have special conditions annexed to them, and stating how far such conditions have been complied with, *App. p.* 360——Sums paid on account of the publication of the catalogue of donations for 1828, between 1821 and 1833, and manner in which the several sums were distributed, *App. p.* 367—For 1829 and 1830, *App. p.* 368——Account showing the number of copies of the catalogue of donations for 1828 which were printed, and the manner in which they have been disposed of, *App. p.* 367—For 1829 and 1830, *App. p.* 368.

[1836.] Those to the College of Surgeons are taken care of, to induce others to present; but the accepting and preserving specimens should not be compulsory, *Clift* 705–707——All should be exhibited, to induce donations, *Bowerbank* 931——They should be preserved, though the consent of the donor should be obtained for parting with useless duplicates, *Vigors* 1312–1376.

See also *Bequests of Collections. Bridgewater,* Earl of. *Conditions of Bequests. Damer,* Hon. Mrs. *Duplicate Books, Coins and Collections. East India Company. Edwards,* Major. *Entomological Collection. Hardwicke,* General. *Hunter,* Mr. *Library British Museum,* 2. *Natural History Collection,* 1. *Reeves,* Messrs. *Surgeons,* College of. *Trustees,* 1. *Zoological Society.*

Donors, Names of:

[1835.] But few names of donors are mentioned in the Synopsis, being those only who have presented to a considerable extent, *Children* 3165–3168——Extent to which the names of donors are mentioned in the Synopsis; instances in which they are not attached to the specimens are accidental omissions, *Children* 3166–3170——The name of the donor is attached to most insects, *Samouelle* 3879——Names of donors to the British Museum, particulars of their donations, and nature of the conditions attached to them, *App. p.* 360.

[1836.] If the donors' names were attached, duplicates would be presented with readiness, *Bowerbank* 931.

Donovan, Mr. [1836.] His collection of fish are in the Museum, *Yarrell* 2005.
See also *Cursorius Isabellinus.*

Doubleday, John. [1836.] (Analysis of his Evidence.)—Impressions of engravings by Collas's machine are out of proportion; there has latterly been an improvement in the appearance of the plates, but not in their correctness, 5904–5911——The engravings by Mr. Bates's machine are perfectly correct, though they have not that beautiful appearance that the French ones have, 5912–5914——A medallic history of England is much wanted in this country, but it could not be undertaken by any booksellers without some assistance, 5916–5922——Number of medals that it would be necessary to engrave, 5923–5924——No injury would be sustained by the medals from taking two or three casts, but it should not be repeated too often, 5925–5929——Difference in the expense of hand engraving and the machine, for reprinting editions of former works on medals, 5930–5934——If Mr. Bates's machine were not used, the French is the second best, 5935.

Douce, Mr. [1835.] Difficult to account for Mr. Douce's resigning the office of keeper of the manuscripts; supposed cause of his leaving his own collection to the Bodleian library, *Ellis* 1475–1496.

Dover, Lord. [1836.] His suggestion for moving certain public records, which are only now valuable as historical records, to the British Museum, *Edwards* 4766.

Drawings and Engravings. [1835.] Sums voted for these purposes are not always specifically applied, *Forshall* 1211, 1212——Accounts of receipts and payments for: 1825, *App. p.* 328——1826, *App. p.* 330——1827, *App. p.* 333——1828, *App. p.* 335——1829, *App. p.* 338——1830, *App. p.* 341——1831, *App. p.* 344——1832, *App. p.* 347——1833, *App. p.* 351——1834, *App. p.* 354.

See also *Cracherode,* Mr. *Elgin Marbles. Maps. Prints and Drawings.*

Dresden. See *Marbles. Saxony.*

Dresses. [1835.] The dresses of different nations are for want of space kept in that part of the building appropriated to natural history, *Hawkins* 3443.

See also *South Sea Islands.*

Dromedarys. See *Mammalia.*

Dryander's Catalogue. [1836.] Works on zootomy and physiology that would have been inserted in this catalogue, had they existed in the time of Sir Joseph Banks, *Owen* 499——Great value thereof; works since its publication should be seen, *Bowerbank* 927——A copy of it lately bought for five guineas by Mr. South, *Bowerbank* 946——Extent to which it is a classed catalogue, *South* 1164——Is a model of a catalogue, *Evans* 3322——Is only useful for scientific men; it cannot be made use of by students, *Panizzi* 4855.——*See* also *Zoology*, 2.

Du Fresne. [1836.] Chapter in his work on difficulties in stuffing an elephant at the Paris Museum, *Gray* 2942.

Duméril, M. [1835.] The reptiles and fishes in the French Museum are arranged by him on his own principles, *Gray* 3233.

Duplicate Books, Coins and Collections:

[1835.] Any work, although in duplicate, that has been given or bequeathed to the Museum, is not parted with without express authority from the trustees, *Ellis & Forshall* 455–460. 471, 472, *Forshall* 1098–1102——The constant wear and tear of books renders it necessary that duplicates should be preserved, *Ellis* 473–480. 507–515——There have been but two sales of duplicate books and two sales of coins since the 47 Geo. 3, the produce of which is brought to account, and the amount paid into the Bank, *Ellis* 521–523.

There would be no objection in principle to bestowing duplicate books or duplicate objects of curiosity upon district institutions or libraries to be approved by the trustees, *Ellis & Forshall* 565–568——Advantages of selling duplicates over giving them to other institutions; no objection to presenting them with casts of the coins, *Ellis & Forshall* 578–584——Plan that would be adopted by the trustees of disposing of duplicates or superfluous collections in the event of their inconveniently increasing, which is not the case at present, *Forshall* 609, 610——Nature of duplicate coins that were sold, *Ellis* 569, 570——No sale has taken place of any duplicate coins found in the collection of Geo. 4, or Mr. Payne Knight, *Ellis* 571–574—Or of Mr. Townley, *Ellis* 577—Or Mr. Cracherode, *Ellis* 570. 577.

[1836.] Not desirable that they should be kept for the inspection of scientific men, *Sowerby* 143, 144——Where exposure would hurt the specimens, duplicates only should be exposed, *Bell* 350–352——The trustees should have the power of disposing of duplicates when they obtain a better specimen of the same species, *South* 1156——Extent to which particular specimens should be preserved, although in duplicate, *Vigors* 1313–1316——The Museum should have the power of exchanging with eminent collectors and country museums, *Vigors* 1307–1310——Purchasing duplicates for the purpose of exchanging is not a desirable mode of proceeding for the Museum, *Bennett* 1758–1760.

Usual manner of disposing of duplicates when offered to the Museum, *Gray* 2684——The best mode of disposing of duplicates is by auction, *Gray* 2693——They were parted with from the Museum with greater carelessness formerly than at present, *Cochran* 3461–3463——Extent to which duplicates of purchased works are parted with; duplicates of donations are not now parted with, *Baber* 4694–4718——The sale of duplicate books has been a great misfortune to the Museum, *Panizzi* 4793.

Edwards, Edward. [1836.] (Analysis of his Evidence.)—Author of a pamphlet on the Minutes of Evidence taken before the Committee on the British Museum, in which are given examples of the deficiencies in the library, 4735-4737——Examples of deficiencies of books in the library of the British Museum, from an examination of the catalogues in October 1835, 4738——Examples of German works wanting, 4738——Examples of French works wanting in history, philosophy and legislation, 4738——Works published on the continent in the departments of history (including biography and travels) and fine arts, between January and April 1832; distinguishing those which are not to be found in the British Museum, 4738——Examples of works on architecture wanting, 4738——Manner in which those lists were made up, 4739–4741——Difficulties which arise from the want of a classed catalogue, 4743——Extracts, showing the want of a consistent plan for entering anonymous works in the alphabetical catalogue, 4744——Want of system generally in the alphabetical catalogue, and more particularly as regards the names of French authors, 4744.

As far as the present regulations are concerned, and as far as regards the officers and attendants, every facility is afforded in the reading-room, 4751——In what manner the regulations might be extended, so as to afford greater facilities to readers, 4752——Classed catalogue would be more useful than an alphabetical one; when completed the yearly addenda lists should be published, 4752, 4753——Opinion in favour of one of the librarians being constantly attendant in the reading-room as formerly, 4754–4756 — Greater difficulties occur in consulting the catalogue of manuscripts than in that of the printed books, 4757——Examples (A to C) of works published in London between December 8, 1824, and June 8, 1835, due under the Copyright Act, and not in the library of the British Museum in October 1835, 4758, 4759.

An alteration of the law is imperatively called for to enforce the provisions of the Copyright Act, 4760——Difficulties from want of a sufficient catalogue in the coin and medal department, 4761——Difficulties in the print department occasioned by the illness of Mr. Ottley, which, if there had been sufficient assistance, would not have been occasioned, 4761, 4762——Necessity for some better arrangement with regard to the Parliamentary Papers, 4762, 4763——List of the works of German historians, &c. referred to as authorities by Mr. Connop Thirlwall, in the first volume of his history of Greece, distinguishing those which are not to be found in the library of the British Museum; in further exemplification of its deficiencies in German literature, 4765——Suggestions for moving certain manuscripts from the State Paper office to the Museum, 4766——Further suggestions for improvements in the Museum, 4766.*

Edwards, Edward. [1836.] Answer to the charge in his pamphlet of certain works not being in the Museum, *Baber* 4666–4670——Want of arrangement in the catalogues may be the cause of witness not being able to find certain works, *Edwards* 4742. 4745, 4746——Papers referred to in his evidence on the British Museum, 2 June 1836, *App. p.* 592.

Edwards, Dr. *Milne.* [1836.] Has published the best book on Crustacea; he much approved of Dr. Leach's names being still retained, *Bell* 345——Spoke of the facilities afforded him at the Museum, and the pleasure with which he saw Dr. Leach's names and observations in the catalogue, *Bell* 402.

Edwards's, Major, Bequest. [1835.] Appropriation by the trustees of Major Edwards's bequest, *Ellis* 1006–1024——His books have become merged in the general library, *Ellis* 1025–1030——His books and pictures are still in possession of the trustees, unless any duplicates have been sold, *Ellis* 1038–1043——Purchase of Baron Moll's library and minerals with Major Edwards's bequest, *Ellis* 1089–1097——Account relative to Major Edwards's fund, *Cowtan* 1082–1088. 2211——1815, *App. p.* 299——1816, *App. p.* 302——Statement of the expenditure of Major Edwards's fund, 1785–1815, *App. p.* 419–424.

Egina Marbles. [1835.] Means taken by Government to procure the Egina marbles; failure of the negotiation, and subsequent sale to the King of Bavaria, *Ellis* 1528–1541——Statement in the Edinburgh Review respecting the price for which they were sold to the King of Bavaria, *Ellis* 1529——Extract from the Report on the Elgin marbles relative to the same subject, *Ellis* 1539.

Egyptian Antiquities. [1836.] By whom the situation in which Egyptian antiquities, Etruscan vases, &c., should be placed should be determined, *Greenough* 3833–3836.

Elephant:
[1835.] Justification of the act of adding tusks to the skeleton of an elephant presented to the Museum, *Children* 3171–3176.

[1836.] The additions made to the skeleton of the elephant are marked, *Bell* 479–483——Teeth have been added to the skeleton of the elephant, *Grant* 1523——Beautiful cast of the fossil elephant in the Museum, *Viscount Cole* 2732——Reason why no stuffed elephant is to be found in the British Museum, *Gray* 2940——Space better devoted to rarer animals, *Gray* 2941——Difficulty of stuffing elephants, *Gray* 2941.

Elephants' Skulls. See *Surgeons,* College of.

Elgin Marbles:
[1835.] Account of the Elgin marbles published by Sir Henry Ellis, and also by the Society for the Diffusion of Useful Knowledge, *Ellis* 289, *Hawkins* 3452–3456——The sum expended for them is not accounted for in the annual accounts, but is merely mentioned as a note by the trustees, *Forshall* 964, 965——Account of expenditure for drawings and engravings of the Elgin marbles, 1834, *App. p.* 404——Mr. Westmacott's proposal for making moulds from marbles in the Elgin collection, *App. p.* 444——Conditions on which the trustees accepted Mr. Westmacott's proposal, *App. p.* 445——Account of receipts and payments for the Elgin marbles, 1816, *App. p.* 305.

[1836.] Objections to the lighting the large room in which the Elgin marbles are placed have been inconsiderately made, *Weigall* 222, 223——It is impossible to light three rows of sculpture in one room, *Rennie* 1208–1213——In what manner they might be better arranged in the present room, *Rennie* 1245–1248——Casts of them are unattainable: the trustees contemplate having a new set of moulds made, *Rennie* 1257, 1258——Witness's opinion relative to the Elgin room corroborated by other artists, *Rennie* 1278——Objection to the colour of the room, *Rennie* 1228——Not advisable now to alter the height at which the Elgin marbles are exhibited; it would have been an advantage to place them at their original height if a Parthenon had been built opposite Northumberland-house, *Greenough* 3837–3840——The room is heated by means of hot water, *Smirke* 5411——Answer to a charge relative to the bad ventilation thereof, *Smirke* 5415.

Ellis, Sir *Henry:*
[1835.] (Analysis of his Evidence.)—Principal Librarian to the British Museum, and also holding the office of expenditor. Salary and duties, and extent of patronage, 1–10——Origin of the British Museum, 11——Number of trustees, and of what description, 12——Names of the official trustees, 16——Names of the family trustees, 17——Names of the elected trustees, 18——Family trustees are appointed by Act of Parliament, 19, 20——How far the body of trustees would interfere in the event of an hereditary trustee being a minor or an idiot, 21–29——The trustees have no veto on the appointment of family trustees, 30–32——No limited amount of donation or bequest that will give the donor a claim to appoint a family trustee, 34——Family trustees appointed on the principle that the successors of families should have an opportunity of seeing that the donation or bequest was disposed of in the way the donor intended, 35——The trustees now make it a rule not to sell or part with any books, coins or other things, that may have been given to them, 36–43.
Mode of electing the elected trustees, and at what place the election held, 46–63——Nature of the attendance of trustees at the Board meetings, 64–74——Nature of the annual visitation by the trustees, 75–83——Visitations and minute examinations occasionally take place by sub-committees, 84–86——By Act 5 Geo. 4, the trustees have the power of holding estates in land, 87, 88——Within what period after the death or resignation of a trustee vacancies are filled up, 89——High literary attainments of the trustees shows them to be amply qualified for the office, 92–117——The patronage of the Museum is confined to the three principal trustees, 118–121——Mode adopted by the trustees when scientific collections are offered for sale, 128–130——Mr. König was consulted upon the purchase of Mr. Hawkins's fossils, 131–134——Collections are usually brought under the notice of the trustees by the officers of the institution, 129, 130. 135–137.
The office of elected trustee is considered the blue ribbon of literature; it would not be a greater advantage to the institution that men of science should be elected instead of the present trustees, 138–154——Qualifications of trustees elected in 1753, 155–159

Names

Ellis, Sir *Henry*. [1835.] (Analysis of his Evidence)—*continued*.

——Names of trustees who have been appointed, but not for their works on literature or science, 160–169——The trustees do not make purchases of collections above the value of 1,200 *l.* or 1,500 *l.*; mode adopted of applying to Parliament, and evidence taken before the Committees of the House of Commons, 171–191——Opinion in favour of taking the evidence of scientific men, when occasion requires, rather than having scientific men at the Board, whose opinions might have undue weight, 122–127. 192–200——Bequests of collections to the Museum have not generally been by men who were great writers; they have been men of fortune, 201–209——Donation of works of value to the Museum does not constitute any ground for the selection of trustees, 210——The advice of scientific men, who are consulted previous to purchasing collections, is usually taken, 211–213.

[Second Examination.]—Manner in which the great museums or libraries on the Continent are conducted, 214–217——Literary qualifications of the director-general of museums in France, 218–222——Circumstances under which the original nomination of trustees for the British Museum took place, 223–225——Cause of the Presidents of the Royal Academy, and of the Society of Antiquaries, being appointed official trustees, 226, 227——Names of the curators of the several literary and scientific institutions in Paris, and whether selected for their knowledge of science and literature, 228–236——Difficulty of forming an opinion as to the result of placing the British Museum under a board composed of heads of departments, under the control of the Secretary of State for the Home Department, 237, 238——Difference between the British Museum and the Jardin des Plantes in Paris, 239–241——Imperfect collection of subjects for natural history in the British Museum, 242–244——The trust of the British Museum is as faithfully and as perfectly administered as such an institution will allow, 245.

Royal ordonnance of 1832, relative to the conduct of the Paris library, 246, 247——Comparison of the mode of conducting the Paris library and that of the British Museum, showing the greater facilities of the latter, 246–251——Days of the week the public are admitted to the British Museum; necessity for Saturday being devoted to cleaning, 252–266——Appointment and duties of the principal librarian, his hours of attendance are not limited, 267–270——When books or manuscripts are taken out of the Museum to be given in evidence, the officer of the department receives a similar fee to that received by a solicitor, 273——Fees for transcripts are not taken unless the officer makes the transcript, 275–280——Salary received by witness as joint secretary to the Society of Antiquaries; the duties do not interfere with those of librarian to the Museum, 281–284——The remuneration to witness for editing the extent of Welsh Manors, or the Welsh Domesday, for the Record Commission, will be according to the value the commission set on the work, 285–288.

Account of the Elgin marbles, written by witness for the Society of Useful Knowledge, 289——Being a member of the committee of that society does not interfere with witness's duties at the Museum, 289–292——Emoluments of the secretary; that office has not for any length of time been held conjointly with that of principal librarian, 294–304——Whether the duties of secretary and keeper of the manuscripts are efficiently discharged, the offices being held conjointly, 305–327——Witness and other chiefs of departments have not seats at the Board by virtue of their offices, 328–331——The secretary always attends the Board, 329, 330——No officers of the Museum hold appointments which take them away from it during the hours that ought to be devoted to its service, 332–336——No officers of the Museum have been appointed since March 1833; clerks have been employed for temporary purposes, 337–345.

The officers of each department give security for the integrity of the different collections; the inferior officers do not give security though appointed by the principal trustees, 346–351——Every officer makes a report at the time of the annual visitation, 352——Nature of the annual visitation, besides which the trustees make inspections when they think proper, 353–359——The responsibility of seeing that the officers effectually discharge their duty devolves upon witness, 361–363——Vacancies are filled up by the three principal trustees; manner in which publicity is given to the fact of a vacancy, 364–369——The principle of promotion is acted on in the establishment, 370, 371——Scale of salaries, and system of daily pay to literary gentlemen, and advantages of the system, 372–376——Class of persons the attendants are selected from, their salaries, qualifications and duties, 378 401——Foreigners are shown the Museum by a sufficiently qualified attendant, 402——Officers of the establishment who are conversant with accounts, 403, 404.

[Third Examination]. No inconvenience attends the practice of chiefs of departments, when summoned before the trustees, being kept standing, 406–422——Nature of the negociation entered into with Mr. Brown, by which the Museum became possessed of Sir Joseph Banks's collection, and gave Mr. Brown an appointment, 425–433——Collections are kept separate and distinct when there are stipulations to that effect in wills, 434–436——Bequest of Mr. White is in reversion, dependant on two lives; reason the mention of it was omitted in a return presented to the House of Commons, 438–441——Nature of the exchange, and consideration given by the Museum to the Royal Society, for the Arundel manuscripts, 443–454——Any work, although in duplicate, that has been given or bequeathed to the Museum, is not parted with, 455–460. 471, 472——King George the

Ellis, Sir *Henry*. [1835.] (Analysis of his Evidence)—*continued.*

Third's library, given by King George the Fourth to the Museum, is kept whole and entire, 461–466.

The object of not parting with bequests in duplicate is to encourage gifts and bequests from other parties, 467–471——The constant wear and tear of books renders it necessary that duplicates should be preserved, 473–480. 507–515——Advantages of keeping collections that are bequeathed to the Museum entire, over classing them in a general library, 481–490——The plan of keeping collections entire, or disposing of duplicates under the powers of 47 Geo. 3, may be left to the sound discretion of the trustees, 490–495——Advantages which the British Museum derives from King George the Third's library; money value of the books; when at the palace, access to it could only be obtained by leave of His Majesty, or through the influence of the librarian, 496–506——Trustees have the power of refusing a donation, 519, 520——There have been but two sales of duplicate books and two sales of coins since the 47 Geo. 3, the produce of which is brought to account, and the amount paid into the Bank, 521–523.

Value paid for the Arundel manuscripts, and why the amount was not mentioned in the annual returns to Parliament, 524–528——Bequests of pictures have not been sold; they are placed in the Mineral Gallery, 529–537. 557–564——Custody of the pictures presented by Sir George Beaumont to the British Museum has been transferred to the National Gallery, though the ownership still remains in the trustees of the Museum, 538–556——There would be no objection in principle to bestowing duplicate books or duplicate objects of curiosity upon district institutions or libraries, to be approved by the trustees, 565–568——Nature of duplicate coins that were sold, 569–570——No sale has taken place of any duplicate coins found in the collection of Geo. 4, or of Mr. Payne Knight, 571–574——Or of Mr. Towneley, 577——Or of Mr. Cracherode, 570. 577——The coins are mixed in the cases, with labels showing the collection to which they originally belonged, 575, 576——Advantages to be gained by the Museum selling duplicate coins over giving them to other institutions; there is no objection to presenting those institutions with casts of the coins, 578–584.

Reasons the conditions annexed to the bequests of Mr. Payne Knight and the Hon. Mrs. Damer were not mentioned in the return made to Parliament, 585–589——The collection of pictures bestowed on the Museum by the Rev. Holwell Carr, are with Sir George Beaumont's in the National Gallery, 590–593——The offer of any collection for sale is laid before the trustees, 594, 595——Officers sometimes make purchases of small value, which, if not confirmed by the trustees, are returned upon their hands, 596–598——Purchase of the Ely manuscript recognised with thanks by the trustees; amount paid for it, and commercial value, 599–602——Estimate of the expenditure for the ensuing year laid before the trustees previous to applying to Parliament for the annual grant, 603–605——Contents of the Bruce manuscripts, and cause of the purchase being rejected by the museum, 606–608.

[Fourth Examination.]—Appropriation of part of the Parliamentary grant of 1817 for the Alexandrian fund, to the general purposes of the Museum, 946–949.

[Fifth Examination.]—Appropriation by the trustees of Major Edwards's bequest, 1006–1024——His books have become merged in the general library, 1025–1030——The oath mentioned in the Act 5 Anne, c. 30, to be taken by the librarian to the Cottonian trustees, is not repeated in Act 26 Geo. 2; the librarian is a librarian to the trustees generally, 1031–1037——Major Edwards's books and pictures are still in possession of the trustees, unless any duplicates have been sold, 1038–1043——Cause of the trustees entertaining the intention of keeping great bequests entire, 1044–1046——Opinion that the Act 26 Geo. 2 entirely superseded the Act of Anne, 1047–1050——About the year 1812, whoever presented the accounts to Parliament signed them, 1050, 1051.

[Sixth Examination.]—Purchase of Baron Moll's library and minerals, with Major Edwards's bequest, 1089–1097.

[Seventh Examination.]—Number of copies of the Synopsis printed, profit to the trustees, and whether advisable to reduce the price, 1148–1157——Expense of spirits of wine, &c. for preserving subjects of natural history, 1159–1161——Expense of freight, &c. on import of books, 1162–1165——The Museum was open of an evening from four till eight on Mondays and Fridays during the summer months, from 1771—1801; cause of that practise being discontinued, and objections to its renewal, 1307–1314——Objections to opening the Museum from nine till eight, 1315–1318——Objection to opening the Museum during the Easter holidays, 1319–1330——The Louvre is open on Sunday, which is the great festival, but the secret police are always in attendance, 1331–1338 The assistance of the police would be called in at the Museum if occasion required it, after a report of the necessity to the principal librarian, 1339–1344.

[Eighth Examination.]—Cause of sums being asked for one purpose and expended on another, 1350, 1351——Sums asked for the Athenian marbles for some years past, and there being no expenditure for that purpose has been accidental, 1353–1357——Balance from the Alexandrian manuscripts was accounted for to Parliament, and went towards the supplies of the following year, 1358, 1359.

[Ninth Examination.]—Particulars as to journey to Pomard, near Beaune, in France, to inspect the collection of the Baron de Joursanvault, in answer to the charges of Sir Harris Nicolas against witness; cause of the collection not being purchased, and showing

831

Ellis, Sir *Henry*. [1835.] (Analysis of his Evidence)—*continued.*

ing that the Museum have since obtained all that was valuable from that collection, 1387–1449——Mr. Bruce's manuscripts were not purchased on account of the extravagant price asked for them, 1450–1466——Cause of Mr. Gough leaving his books and manuscripts to the Bodleian Library, 1467–1474——Difficult to account for Mr. Douce's resigning the office of keeper of the manuscripts; supposed cause of his leaving his manuscripts to the Bodleian Library, 1475–1496.

Purchase of Mr. Salt's Egyptian antiquities by the British Museum, price paid for them, and purchase of the alabaster sarcophagus by Sir John Soane, 1497–1517——Disposal by Mr. Salt of a second collection of Egyptian antiquities to the French government, 1518–1520——Cause of the rejection of Mr. Dodwell's offer of Greek bronzes of the Archaic style found near Perugia, and a specimen of gold ornamental painting belonging to the ex-queen of Naples; subsequent purchase of the collection by the King of Bavaria, 1521–1527——Means taken by Government to procure the Egina marbles; failure of the negociation, and subsequent sale to the King of Bavaria, 1528–1541——Dr. Hunter's coins were bequeathed to go to Glasgow, where they form part of the Hunterian Museum, 1542, 1543.

Rejection of Mr. Simcoe's collection of prints, and subsequent sale by auction, at which they fetched a higher price than offered by the Museum, 1560–1569——How far the trustees arm themselves with evidence as to value, previous to any application to Parliament for a grant above 2000 *l.* for the purchase of any curiosity, 1578–1581.

[Tenth Examination.]—Expenses of journey to Pomard, 1582, 1583——Answer to the charge in the Edinburgh Review of 1823, relative to the transfer to the College of Surgeons by the Museum of a portion of Sir Joseph Banks's collection, the subsequent sale by auction, and repurchase by the Museum, 1584–1619——Sir Hans Sloane's herbarium is in as perfect a state as Sir Joseph Banks's, if not more so, 1620, 1621——Application by Mr. Gough to allow some copper-plates to be deposited at the Museum for safety; consent of the trustees, and no further notice taken by Mr. Gough, 1622, 1623——Further evidence as to Mr. Simcoe's bequest, and its realizing more by auction than it was offered to the British Museum for, 1624–1628.

[Eleventh Examination.]—The reading-room is not sufficiently capacious, or so well ventilated as it ought to be, 1658–1661——Name of the superintendent of the reading-room, 1662–1665——The old rule of the Museum, requiring the attendance of one of the librarians in the reading-room, has been superseded, his attendance being considered a misapplication of time, 1666–1675——No difficulty has ever occurred to foreigners in the library, from the want of persons with whom they could communicate, 1676–1683——Description of catalogues that are placed in the reading-room, 1684, 1685——By whom the classed catalogue of the King's library was made; extent to which it is a classed catalogue, 1686–1689——The completion of an alphabetical catalogue is more essential than a classed catalogue, the latter being only occasionally useful, 1690–1694——The classed catalogue has been discontinued, partly on the ground of expense, and partly from the necessity of completing the alphabetical catalogue, 1695–1700.

The titles made in forming the classed catalogue are now being used in forming the alphabetical one, but are so marked as to be easily transferred when the work of the classed catalogue is renewed, 1701–1720——The two works could not be performed simultaneously with the same quickness, 1721——The trustees may contemplate forming a classed catalogue, but it is doubtful whether they intend printing it, 1722——There have been no formal complaints of the state of the library, 1723——Names of gentlemen employed on the alphabetical catalogue; if those gentlemen required additional attendance it would be immediately granted them, 1724–1751——Difference of opinion with regard to the modes of classification in catalogues, but still a classed catalogue is desirable, 1754–1763——Mr. Horne's outline of classification was extremely good, as well as elaborate, but he has changed his mind as to various portions of it, 1765–1773——Very great expense of a classed catalogue for the Museum, 1774——A librarian who does his duty supplies the place of a classed catalogue, which from its nature cannot be perfect, 1775–1778.

The expense is one of the chief considerations in forming a classed catalogue, from the necessity of employing persons properly qualified, and from the expedition required to ensure uniformity of design, 1779–1790——The additions to the library have doubled the bulk of the catalogue published in 1819, the additions are continued in manuscript, 1791–1795——Names of catalogues of manuscripts with indexes, 1797–1799——Number of volumes of lexicons, dictionaries and encyclopedias in the reading-room, one half of which have been added of late years, 1800, 1801——Appropriation of the great room in the Royal library as a reading-room would cause the books to be turned out of the library to make room for those of the reading-room; two new reading-rooms are preparing, 1802, 1803——Means of procuring admission to the reading-rooms; recommendations usually required, particularly with regard to foreigners, 1804–1806——Index to the manuscripts commenced at the recommendation of Lord Colchester; employment of Mr. John Millard thereon for three years, to the satisfaction of witness, 1807–1822.

[Twelfth Examination.]—Lord Colchester's wish that an index to the manuscripts should be made, as a classed catalogue was out of the question, 1873–1877——Recommendation of Mr. Millard by Lord Colchester through Mr. Horne, 1878–1881——Portion of the work Mr. Millard was employed on was of an inferior character; period of

Ellis, Sir *Henry*. [1835.] (Analysis of his Evidence)—*continued.*
time in which he might have qualified himself for the more difficult portion, 1882–1896——Requisite qualifications for a person to make a classed index to manuscripts, 1897–1906——Witness had no occasion to find fault with Mr. Millard while under his superintendence, 1907–1915——Charge against him of irregular attendance after witness left the Manuscript department; his discharge by the trustees, and assistance given him by witness in the shape of a memorial, to procure his remaining in their service for two years after he was discharged, 1916–1933.

Mr. Millard came recommended by Lord Colchester and Mr. Horne, from having been employed upon a General Index to the Reports of the House of Commons, from 1715 to 1801, 1934–1943——He did not latterly do justice to his recommendations, 1944–1949——Witness had not means of knowing Mr. Millard's knowledge of languages, 1950–1964——Appointment of Mr. Forshall by the trustees as assistant in the Manuscript department, without any communication with witness as head of the department, 1969–1979——No disadvantage has hitherto arisen from assistants being appointed without consulting the heads of departments, 1980, 1981——Complaints by Mr. Millard of not liking to serve under his new principal, 1982–1989——Ill-health and irregularity of attendance of Mr. Millard after Mr. Forshall's appointment; his irregularity became generally the talk of the Museum, 1990–2010——The memorial was suggested by witness with a view to give Mr. Millard the chance of remaining in some situation in the Museum, 2011–2029——Kindness to Mr. Millard caused witness not to represent his conduct to the trustees, and induced him to suggest the drawing up of the memorial, 2030–2065——Witness is generally consulted upon dismissals taking place, but this was a discontinuance of a labour, and not a dismissal, 2066–2069.

[Thirteenth Examination.]—Officers living within the walls of the Museum would be allowed to take home manuscripts, 2342, 2343——The index to the manuscripts will not be continued till the catalogues are revised, 2346–2348.

[Fourteenth Examination.]—Witness did lend Mr. Millard Spelman's Archaismus Graphicus, that he might become acquainted with the contractions in manuscript writing, 2351.

[Fifteenth Examination.]—To what extent there are classed catalogues in the foreign libraries, 2399–2418——Number of volumes in the library of the British Museum, 2419–2423——The titles copied for the classed catalogue, which are now being used for the alphabetical catalogue, will be again used for the classed catalogue when the labour is resumed, 2424–2431——Progress might have been made in the classed catalogue if the powerful assistance possessed by the Museum had been brought to bear upon it, 2432–2437——A complete alphabetical catalogue was a pressing want, 2437–2439——Parliamentary grant for the classed catalogue, 2440–2442——The index to titles and authors annexed to a classed catalogue, is not like an alphabetical catalogue superadded to a classed catalogue, 2443–2450.

It might have been a matter of importance to the public that the two catalogues should have been proceeded with conjointly, but the catalogue establishment must have been doubled, and the alphabetical catalogue is of decidedly the greatest importance, 2451–2456——Branches of literature in which the Museum library is richest, 2457–2470——Names of private and local institutions having classed catalogues, but which are small compared with that of the Museum, and some of them are very badly done, 2471–2484——Names of classed catalogues of foreign libraries of former years, 2485–2489——A classed catalogue is a work of second-rate importance; an alphabetical one is the first consideration, 2490–2491——Date of the last catalogue in the Royal Library at Paris; great quantity of books therein that are uncatalogued, 2493–2495——A librarian supplying the place of a classed catalogue is not so advantageous as a written catalogue would be, 2500–2503——A classed catalogue is very desirable, but is not a matter of the greatest moment with literary men, 2504–2512.

If the two catalogues are done conjointly, the establishment must be increased, for the persons engaged on it must be entirely devoted to it, 2514–2517——To what extent witness is responsible for the publication of the Synopsis: those who are answerable for errors are those who write the particular article, 2518–2528——In whose hands the copyright of the various catalogues published at the expense of the trustees, and also of those not so published, is vested, 2529——Persons who are responsible for different portions of the Synopsis, 2536–2541.

Ellis, Sir *Henry*. [1836.] Has adopted suggestions by witness when convinced of their advantage, *Hannay* 5157.

Ely Manuscript. [1835.] Purchase of the Ely manuscript recognised with thanks by the trustees; amount paid for it, and commercial value, *Forshall* 599–602.

Emu. [1836.] Confusion in the nomenclature of this bird, *Grant* 1521——Answer to Dr. Grant's charge, *Children* 2842–2852.
See also *Grant*, Dr. *Ornithological Collection*, 3.

Enamel. [1836.] Its composition and manner in which used for casts, *Faraday* 5971——Casts of medals in enamels in glass give a very accurate representation of the original, *Wilson* 6004.——*See* also *Napoleon and Marie Louise Medal*.

833

Encyclopedia. See *Reading-room.*

English Authors. [1836.] Better provision should be made for collecting the works of English authors, *Edwards* 4752.

English Coins. [1835.] There was a considerable sale of duplicate English coins, *Ellis* 570.

English Drama. [1835.] The library of the Museum is rich in English drama, *Ellis* 2458.

Engraving Machines. [1836.] Previous to Collas's invention, outlines would have been recommended as the cheapest; the extraordinary expense of full engravings by the best artists would render that course impracticable, *Hawkins* 5752–5754——Difference in the expense of engraving medals for the Museum by hand and by machinery in favour of the latter, *Wyon* 5857, *Doubleday* 5930–5934——Subjects which cannot be faithfully represented by machinery, *Wyon* 5855, *Brockedon* 5896——Necessity for an engraver to aid the machine as regards details, *Nolte* 5832, *Brockedon* 5896——The hand of a skilful engraver found more useful than a diagonal tracer in a machine, *Nolte* 5960——Comparison of engravings by the French and English machine of the Henry the Fourth medal, *Wilson* 6008——Letter from Sir F. Chantrey, in addition to his evidence, *App. p.* 595.
See also *Collas's Engraving Machine.* *Manuel Du Tourneur.* *Tresor de Numismatique.*

Engraving of Medals. [1836.] A work on engravings of the medals of the Museum done in a superior way would be useful, *Gage* 5083–5086——Examination upon engravings from casts of medals before the committee, and how far the difference in the diameter is from the shrinking of the casts, *Faraday* 5971–5981——Comparison of engravings with the French and English machines, both being preferable to common engraving, *Pistrucci* 5987, 5988. 5998, 5999——An engraver would be instructed to give a correct copy of a medal, and not a perspective view, *Pistrucci* 6000.
See also *Collas's Engraving Machine.*

Engraving Plates. [1836.] Many thousand engravings have been taken from one plate; Collas's invention will not cause much difference, *Hawkins* 5765–5767——The plates will bear 9,000 or 10,000 impressions without showing it, *Nolte* 5832.

Engravings, Collection of. See *Saxony.*

Entomological Collection:

[1835.] Arrangement of the insects, mode of admission to view them, *König* 2730–2735——Small amount of the sum annually expended thereon prevents its being as perfect as some foreign collections, *König* 2738–2742, *Samouelle* 3791–3798. 3905——Extent to which witness is answerable for the entomological collection, *Children* 3044–3046——Witness has no assistance in his department; nature of the assistance that would be useful to him, *Samouelle* 3758–3768——Extent to which the crustacea, &c. under witness's charge, are named, numbered and catalogued, *Samouelle* 3769–3776——The collection is in very fair condition, *Samouelle* 3794——State of the collection of crustacea and insects in 1821 and at present, *Samouelle* 3862, 3863——Number of species which the catalogue at present contains, *Samouelle* 3774.

The system of the authors best known is adopted by witness with regard to arrangement and nomenclature, *Samouelle* 3788–3790——The name of witness's office should be defined, he having been told he is not an officer of the Museum, *Samouelle* 3780–3787——There have been but few collections of insects purchased within the last 14 years, *Samouelle* 3799–3804——Excess of the British collection over that of Sir Hans Sloane at the period of the attack by the Edinburgh Review on the British Museum, *Samouelle* 3813——The collection has been increased since witness was appointed; it was in fine condition then, *Samouelle* 3823——Particulars as to the purchase and donations of insects since 1821, *Samouelle* 3864——How far witness's labours in the entomological collection have been directed by the heads of the natural history department, and how far witness considers himself responsible, *Samouelle* 3865, 3866——There is sufficient ground for forming the entomological collection into a distinct department, *Samouelle* 3871–3873——The collection is continually referred to, *Samouelle* 3898.

[1836.] More specimens exhibited in Paris than in the British Museum; whether more duplicates might not be exhibited without injury from the light, *Grant* 279–294——Cause of there being only one case of insects exhibited, *Children* 2789, 2790——Dissection of insects is now going on and will be exhibited to the public when completed, *Children* 2856–2859——That presented by General Hardwicke did not for a considerable time remain inaccessible to the public, *Children* 2888–2891——That in the British Museum is in a very imperfect state both with regard to number and arrangement, *Grant* 280——There are a few specimens in the Museum which are of great scientific value from having the valuable names of Latreille and Dr. Leach in their own hand writing still attached, *Grant* 1503——Explanation in answer to Dr. Grant's evidence concerning Myriapod and Arachnidæ specimens, *Gray* 3098.

Deficiency thereof; the arrangement is good as far as it goes; small proportion of those arranged to those unarranged, *Bowerbank* 850–853——It is held in very consi-

Entomological Collection—continued.

derable contempt by the London entomologists, *Bowerbank* 858——The British collection is but little improved since 1819; the foreign has been more so but is now inconsiderable, *Horsfield* 2571——The collection is good, but not such as ought to belong to a national Museum, *Vigors* 1287——The insects are well arranged in an extensive series of cabinets, *Bennett* 1702——Great want of common assistance in arranging, *Bowerbank* 854–858. 861, 862.

Manner in which the curator's time is taken up in other ways than in the arrangement of his own collection, *Bowerbank* 861——The curator has been arranging for 14 years; the number of specimens yet remaining to be worked out render it doubtful whether he will be able to complete his own arrangement, *Grant* 1511——Mr. Samouelle has catalogued a very considerable part of the insects, *South* 756——Private collections have been disposed of other ways than being sent to the Museum, for fear they should be lost there, *Bowerbank* 859, 860——Collections of insects have been offered to the Museum, which have not been purchased, *Bowerbank* 990–992.

See also *Catalogue of Books and Coins*, V. *Crustacea. Hunter*, Mr. *Jardin des Plantes*, III. 3. *Leyden Museum. Light. Melley*, Mr. *Mineralogical Collection. Myriapod. Sloane*, Sir *H.*

Entomology:

[1835.] Works on entomology published by witness, *Samouelle* 3756, 3757——More valuable results will be derived from insects when there is a better acquaintance with their habits and manners, *Samouelle* 3897——Foreign countries in which entomology has been extensively pursued as a branch of natural history, *Samouelle* 3899, 3900——Encouragement of the study, so as to make it bear on arts or medicine, is better left to the views of private individuals, *Samouelle* 3901, 3902——Experiments must be tried in the living state, which could not be done at the Museum, *Samouelle* 3903——Difficulty of obtaining insects in the same locality in different years, *Samouelle* 3904.

[1836.] Importance of a good entomological collection both to medicine and manufactures, *Bowerbank* 863, 864——Arrangement of a collection at the East India House, a catalogue of which is still in progress, *Horsfield* 2583–2586——Opinion of Dr. Burmeister that there are 80,000 species known, *Gray* 3097.

See also *Kirby*, Mr. *Library. Private Collections.*

Entrances to the British Museum. [1836.] Number of entrances the public will have to view the collections, and whether any alteration has been made in the original design, *Smirke* 5315–5335.

Entry Book. See *Donations and Bequests.*

Epplesheim. See *Pachydermata.*

Estimates:

[1835.] Estimates of expenditure of the Museum, 1812 to 1835, *App. p.* 295–355.

[1836.] Cubing the contents of a building, and giving the cost per solid cube, is a very fallacious mode of making a comparison of expense, *Smirke* 5363, 5364.

See also *Expenditure. Parliamentary Grants.*

Etchings. See *Dutch Masters.*

Eugene, Prince. See *Prints and Drawings.*

Etruscan Vases. See *Egyptian Antiquities.*

European History. [1835.] The Library of the Museum is extremely rich in the history of Europe, *Ellis* 2458.

Euryale. [1836.] The genus euryale is named in pencil, and the Latin specific names are put in the neuter gender; the Synopsis is correct, *Sowerby* 9, 10——Lamarck is not an authority to be referred to in defence of this grammatical error, *Sowerby* 166, 167.

Evans, Robert Harding. [1836.] (Analysis of his Evidence.)—Advantages of a classed catalogue of manuscripts to the British Museum, 3287——A catalogue might be made without any unreasonable loss of time; the collection from which the manuscripts come should be marked, 3290——The catalogues existing are inconvenient, as the index must be referred to to know what exists, 3292——They should be printed in octavo instead of folio, 3293–3301——The catalogue of manuscripts should be a classed catalogue, with a copious alphabetical index annexed, 3302, 3303——Manuscript catalogue is not discreditable, but might be put on a more creditable footing; names of catalogues that have and have not indexes, 3304, 3305.

A classed catalogue preferred to the present one for printed books; the present one should be corrected by the Museum officers, by having the titles of unimportant works curtailed, and those of important ones extended, 3310, 3311——Of printed books there should be both an alphabetical and classed catalogue printed in every great public institution, 3312, 3313. 3315. 3319——Printed catalogues are better than reference to a librarian, however well acquainted he may be with the library, 3320, 3321——A classed catalogue would cause literary men to suggest deficiencies, 3323, 3324——Although the printing a classed catalogue of manuscripts might be attended with loss, it should nevertheless be undertaken, 3328. 3330——The expense of such a catalogue of printed books would be more than repaid, 3328, 3329——When the Museum catalogue was sold, it was too expensive for the public to buy, 3333, 3334.

Evans, Robert Harding. [1836.] (Analysis of his Evidence)—*continued.*

Reasons why literary authors are deterred from examining the catalogues of manuscripts as they now stand, 3335, 3336——A catalogue completed for one year would be useful for many years; an addenda might be published annually, and eventually incorporated, 3339, 3340——Price at which the Bible written by Alcuin for Charlemagne on his coronation was bought in at; Mr. Forshall's opinion that it was a work of national importance; Sir Francis Palgrave's and the Hon. Thomas Grenville's opinion on the same subject, and upon the price; Sir Robert Peel's opinion on its importance; two other of Alcuin's Bibles at Rome and Paris are of a later date; evidence showing the authenticity of the one in question, 3341–3372.

Evening Admission:

[1835.] Objections to the library or reading-room being opened of an evening, *Forshall* 1287–1306, *Ellis* 1307–1314.

[1836.] Advantages of the reading-room being open of an evening, *Greenough* 3904–3906——To scientific men, *Bowerbank* 973–977——To members of the legal profession, *Mathew* 3401–3405——Should be open from six in the morning, and by artificial light of an evening, *Gregory* 3532–3560——Opinion in favour of the reading-room being open from nine till sunset, *Nicolas* 3720–3725——Concurrence in Sir Harris Nicolas's recommendation, *Edwards* 4752——The reading-room would seldom be used for more than novel-reading of an evening, *South* 1170–1174——Impracticable to extend the hours at which it is open, *Hannay* 5091–5094——Opening the collections of the Museum of an evening could not be thought of, *South* 1178.

See also *London Institution.*

Evidence. [1835.] That taken before the Committee, submitted to the House, with a recommendation on the expediency of appointing a committee next session, for the purpose of pursuing and completing the inquiry, *Rep. p.* 3——Numerous points in the Evidence require explanation, but which, as it would cause delay, will be declined, on the understanding that the inquiry will be recommended to be renewed next session, *Forshall* 4007–4009.——*See* also *Fees.*

Exchanges:

[1835.] Exchanges between the Museum and foreign governments would be advantageous, *Children* 3191, 3192.

[1836.] The Museum has not much material for exchange, *Vigors* 1373–1375——M. Temminck, though in the habit of making extensive exchanges, complains of the difficulty he is under in such matters, *Gray* 2687——Exchanges are the cause of frequent complaints and jealousies between naturalists, *Gray* 2689.

See also *Duplicate Books, Coins and Collections. Leyden Museum. Private Libraries. Zoological Society.*

Excise. [1836.] Communication made to, relative to frauds by means of combinations at picture and book sales by auction, *Harding* 4329, 4330.

Exotic Birds. See *Ornithological Collection. Perishable Articles.*

Expeditions. See *Naturalists. Richardson,* Dr. *Zoological Society.*

Expenditor. [1836.] This office recommended not to be combined with that of principal librarian, *Rep. p.* iv.——*See* also *Librarian,* Principal.

Expenditure. [1835.] Estimate of the expenditure for the ensuing year, laid before the trustees previous to applying to Parliament for the annual grant, *Ellis & Forshall* 603–605——Accounts of, on the publication of the fac-simile of the Alexandrian manuscripts, from 1814 to 1818, *App. p.* 402——For engravings of the Elgin and Townley marbles, 1834, *App. p.* 404.

See also *Income and Expenditure. Natural History Department.*

Experiments. [1835.] No chemical laboratory in the Museum, nor even a proper place for measuring the angles of a crystal with the reflective goniometer, *König* 2816–2823——A chemical laboratory would be desirable, *Children* 3152–3160——Why there would be no real benefit in giving each department apparatus for making experiments, *Gray* 3271–3274.——*See* also *Entomology.*

Extra Service. [1835.] Why extra service money is not distinguished from salary in the accounts laid before Parliament; nature and origin of extra service, *Forshall* 971–981.

F.

Family Trustees. See *Trustees,* 5.

Faraday, Robert. [1836.] (Analysis of his Evidence.)—Extent of the contraction or settling in casts taken from any mould in brass, 5962–5970——Examination upon engravings from casts of medals before the Committee, and how far the difference in the diameter is from the shrinking of casts, 5971–5981.

Farnborough, Lord. See *Long,* Sir *Charles.*

Fees. [1835.] When books or manuscripts are taken out of the Museum, to be given in evidence, the officer of the department receives a similar fee to that received by a solicitor, *Ellis* 273.

Fete Days. See *Vatican.*

Fighting Gladiator:

[1835.] Injury that has been done to this statue in the Louvre, from frequent and unskilful moulding, *Westmacott* 3942.

[1836.] This statue in the Louvre was oiled, to prevent adhesion to the mould, the stains from which have interfered with the shadows, *Weigall* 178.

Finance, Sub-Committee of. See *Accounts.*

Finden, Messrs. [1836.] Number of artists out of their establishment that could at an hour's notice be put on medal engraving by machinery to produce as perfect examples as any shown the Committee, *Brockedon* 5897.

Fischer, Dr. [1836.] His Synopsis Mammalium, published at Stutgard 1829, already a great number of additions might be made, *Gray* 2619——Owing to subsequent discoveries, *Gray* 2631——There are now descriptions in this country of at least 100 species which are not contained in his catalogue, *Gray* 2621.——*See* also *Mammalia,* 1.

Fishes. See *Duméril,* Mr. *Ichthyology.*

Fitzinger's Catalogue of Reptiles. [1838.] Extent of the catalogue by Fitzinger of Vienna, *Gray* 2530.

Fitzwilliam, Lord. [1835.] Donation of his museum to the University of Cambridge in 1816, *Ellis* 37–41.

Flaxman, Mr. [1836.] Extract from his lectures in praise of the architecture of the middle ages, *Weigall* 245.

Fleetwood's Life of Christ. [1836.] This work was not in the library of the Museum, but was purchased upon a representation being made, *Huish* 5021.

Flemish Historical Medals [1836.] Superiority in the minuteness and beauty of the execution of these works, which were done by hand, *Wyon* 5855.

See also *Loon,* Monsieur *Von.*

Flora Græca:

[1835.] Failure of an action brought by the Museum, under the Copyright Act, to obtain possession of this work, *Brown* 3678–3681.

[1836.] Opinion of the Attorney and Solicitor-general that this work was claimable under the Copyright Act, though upon going to law the trustees lost their cause, *Baber* 4633–4635.

Florence. See *Holidays. Magliabeccian Library. Seymour, G. H. Tuscany.*

Forbes, Hon. *F. R.* [1835.] Despatch from, to Viscount Palmerston, dated Dresden, 12 May 1835, relative to literary institutions in Saxony, *App. p.* 494.

Foreign Countries. See *Entomology.*

Foreign Governments. See *Exchanges.*

Foreign Libraries:

[1835.] No foreign library of great extent has printed a catalogue of late years, *Ellis* 1752——Classed catalogues do not exist in foreign libraries, *Ellis* 1764——To what extent there are classed catalogues in the foreign libraries, *Ellis* 2399–2418——Names of classed catalogues of foreign libraries of former years, *Ellis* 2485–2489——Communications made to and received from His Majesty's ministers abroad, respecting literary institutions or libraries in foreign countries, 1834, 1835, *App. p.* 446.

[1836.] There is generally a classed catalogue in foreign libraries, *Evans* 3306, 3307, *Mathew* 3382——There are very few foreign libraries where they have even alphabetical catalogues, *Panizzi* 4832. 4840——There should be obtained from foreign libraries and archives whatever may illustrate the laws, institutions and history of our country, *Hannay* 5153——None are open by artificial light, *Hannay* 5160——Information on foreign libraries of printed books by A. Panizzi, Esq., *App. p.* 542——Foreign communications from libraries; viz. Austria, Hanover, Netherlands, Sardinia, Mexico, Portugal, the Hague and Leyden, Sardinia, Bavaria and Prussia, *App. p.* 577–1.

See also *Italy. Lectures. Library of the British Museum Reading Room.*

Foreign Literary Institutions. See *Belgium. Bibliothèque Imperiale Publique à St. Petersbourg. Bibliothèque Royal à Paris. Continent. Denmark. Foreign Literature. France. Frankfort. Jardin des Plantes. Louvre. Luxembourg. Russia. Sardinia. Saxony. Sicily. Spain. Sweden. Switzerland. Tuscany. Wirtemberg.*

Foreign Literature. [1836.] Means taken by witness of procuring foreign literary works, *Baber* 4659–4661——Desirable that there should be a systematic selection from foreign authors, *Baber* 4673, 4674——Better provision should be made for furnishing the Museum with foreign literature regularly, *Edwards* 4752——Correspondence being kept up with foreign libraries might facilitate the interchange of literary productions with the Continent, *Edwards* 4766*.

Foreign Medals and Coins. [1836.] Names of foreign collections of medals and coins that have been engraved at the national expense, *Hawkins* 5716–5719.

Foreign Museums. See *Mammalia*, 5. *Ornithological Collection*, 4. *Visitors, Zoological Collection*, 3.

Foreign Secretary. [1836.] Manner in which he might be instrumental in increasing the collection, *Bennett* 1853.

Foreigners:

[1835.] Are shown the Museum by a sufficiently qualified attendant, *Ellis* 402——Are admitted to the Museum at all times, whether in September or otherwise, *Forshall* 1272, 1274——No difficulty has ever occurred to foreigners in the library, from the want of persons with whom they could communicate, *Ellis* 1676–1683.

[1836.] Two foreigners only are employed at the Museum, Dr. Solander and Mr. König, both librarians to Sir Joseph Banks, *Gray* 2708.

See also *Coins and Medals. Reading-room.*

Forgeries in Manuscripts. [1836.] Particulars relative to the discovery of forgeries in the manuscripts of the Museum, as instanced in the manuscripts relating to the claim of Brydges, Lords Chandos, to that peerage, *Nicolas* 3639–3649.

See also *Reading Room.*

Formatore or Moulder:

[1835.] How far it would be advisable to establish an office of moulder in the Museum, *Hawkins* 3523–3526——There is one in the Louvre appointed by the government, *Sarti* 3596——Regulations with regard to the office, *Sarti* 3613——In the event of the appointment of one at the Museum, casts could be obtained as cheap in London from antique statues as they can be obtained in Rome, *Sarti* 3629——A moulder being attached to the Museum would not cause the public to be supplied with better and cheaper casts than they now obtain, *Hawkins* 3841——The appointment of a moulder under competent superintendence, with a proper place for working, would be a great advantage in improving public taste by the circulation of good casts at a cheap rate, *Westmacott* 3943–3952——Appointing a moulder to the Museum would be a dangerous thing, as many statues would suffer very much from being moulded, *Westmacott* 3942.

[1836.] Statues of the Louvre are moulded through a formatore, *Weigall* 181, 182——The appointment of one at the Museum would be a security against accidents to statues, *Weigall* 183–188. 206, 207——Desirable that a formatore and depôt for casts should be established in the Museum, *Rennie* 1200, 1201——Extent of establishment that would be required from the institution of such an office, *Weigall* 209, 210. 217–221, *Rennie* 1205, 1249–1256.

Forshall, The Rev. *J.* [1835] (Second Examination.)—[For First Examination, see *Ellis*, Sir *H.*, Third Examination.]—Plan that would be adopted by the trustees of disposing of duplicates or superfluous collections in the event of their inconveniently increasing, which is not the case at present, 609, 610——Value of contributions to the Museum within the last twelve years, 611——The Museum is well constituted as the great national storehouse of materials for literature, art and science, for assisting persons engaged in those pursuits, 612–618——Constitution of the literary and scientific institutions of Paris, 621——Comparison between the political constitution and government of France, showing why the system of management of literary institutions in France would not suit the Museum, and doubts whether the Museum does not surpass the institutions in France, 622, 623——Whether the zoological collection in the Museum is not equally conducive to the interests of science as that in the Jardin des Plantes, although the collections in the latter are more extensive, 624–632——There has been of late years a greater attention on the part of the public to literary and scientific pursuits; symptoms of an increased desire on the part of the Government to comply with the wishes of the public in that respect, 632–636.

Sums annually expended by the government of France for literary and scientific purposes, 637–642——Trustees, who are men of science and literature, with wealth and rank attached, are better calculated for the office than those who make literature or science a profession, 643–693——Comparison as to whether the Government of England or the Government of France has done most for the encouragement of knowledge within the last 25 years, 694–698——Neither the situation of trustees or officers of the Museum should be given as rewards; there are duties to be performed in both cases, 699–702——Literature is protected by the introduction into the trust of the heads of all the learned professions, the church, the law and physic, 703, 704——Superiority of the collection of comparative anatomy at Paris is owing to the superintendence of Baron Cuvier, 705–708——Trustees of the British Museum who have an earnest desire to promote literature, art and science, conjointly, are better than those of very eminent scientific acquirements only, 709–713.

Evils that would arise from the presence of men particularly eminent in any branch of science among the trustees, 714, 718——Amount of salary as keeper of the manuscripts, duties of the office, and extent of assistance employed, 719–727——The office of secretary and keeper of the manuscripts being held by the same person, does not impair the efficiency of the duties of either, 728–733——Observations by Sir Harry Nicolas, that the catalogues of the Harleian, Lansdowne and Cottonian manuscripts are often erroneous, and generally unsatisfactory, 734–738——The catalogue of the Harleian manuscripts is more brief than desirable, but is a very fair catalogue, and as good a one as there is of most foreign collections, 738, 739——How far the catalogue of the Cottonian manu-

Forshall, The Rev. *J.* [1835.] (Second Examination)—*continued.*

scripts, and the index to it, are incomplete, 740–743——Number of printed and manuscript catalogues there are in the Museum, with and without indexes, 744–749.

General index to the manuscripts is desirable, but not essentially necessary; cause of the one that was begun being abandoned, 750–761——Ill-health caused the gentlemen employed on that index to be inefficient, 756–780——Salary paid witness as librarian of the Bridgewater manuscripts, 781–788——Printed catalogue of the Arundel manuscripts published last year; reason an index was not published with it, 789–794——To whom copies of the Arundel catalogue have been given; some have been sold, 795–797.

[Third Examination.]—Examination in answer to the remarks in Sir Harris Nicolas's pamphlet, on the catalogue of the Harleian collection, 798–805——By whom the accounts of the Museum are audited, and the returns laid before Parliament made, 806–825—— Sources of income of the Museum for general purposes, 826——Names of publications sold by the Museum, 827, 828——Portion of time occupied by witness in his duties of keeper of the manuscripts and secretary to the Museum, 830, 831——Witness's duties as chaplain of the Foundling Hospital, 832, 833——Peculiar duties of the keeper of manuscripts; that office may be held compatibly with that of secretary, 834–861——The names of gentlemen composing catalogues are affixed to them, 862, 863——By whom assistants in the manuscript department are recommended and appointed, 864–867.

Nature of the qualifications required for a keeper of manuscripts, 868–872——Means taken for obtaining the best qualified candidates in the manuscript department, 873——Salaries of the officers of the Museum are not sufficiently liberal, 884–888——There has been a greater increase of assistance in the manuscript department than in others, 889——Mr. König, the head of the department for natural history, is not obliged to write the labels to be placed on the minerals with his own hand, 890–893. 899. 900——In the event of assistance being required in any department, whether the influence of the secretary or the head of the department would have the greater weight in the recommendation of a competent individual, 894–897——Mr. König's opinion upon the purchase of Mr. Hawkins's fossils, 901–906——Nature and use of the annual visitation of the trustees, 910–919.

[Fourth Examination.]—Mode of auditing the annual accounts of the Museum by the sub-committee of finance, 920–927——Special grants made by Parliament are not entered in the accounts, as not going through the trustees' hands, 929–934——Reason the sums received by the trustees in 1833 on account of exchanges with the Royal Society for the Arundel manuscripts were not mentioned in the returns to Parliament, 950–959——Further evidence as to supposed omissions of receipt and appropriation in accounts laid before Parliament, 962–970——Why extra service money is not distinguished from salary in the accounts laid before Parliament; nature and origin of extra service, 971–981——Variance between the accounts returned to Parliament in 1833 and the annual accounts, and cause thereof, 982–1005.

Number of copies of the Synopsis and Museum publications printed, and number of copies sold, 1052–1055——Number of copies of the outlines of the classification of the library by the Rev. T. H. Thorne, that were printed, and in what manner they were distributed, 1056–1063——Means taken by the trustees to get their printing done at the lowest rate; names of printers employed by the Museum, 1065–1074.

[Fifth Examination.]—Mr. Woodfall's estimate for printing the Arundel collection, and amount of his bill, 1078–1081.

[Sixth Examination.]—Orders given that no duplicate coins which have been bequeathed or presented should be parted with without express authority from the trustees, 1098–1102——State of manuscripts in the Cottonian collection that were injured by the fire that originally took place at Cotton-house, 1105–1121——Cause of the delay in the publication of the volume of the Gallery of Antiquities now in the press, 1122–1132——Names of draftsmen and engravers employed; necessity for unity of design, 1133–1137——Advantageous that catalogues should be rather in arrear to keep in employment expert officers, over having the works complete, and reducing the establishment, 1138–1143——Expense of printing the Arundel catalogue, 1144–1147.

[Seventh Examination.]—Sum wanted for the drawings and engravings of the Athenian marbles; period in which that work is likely to be finished, appropriation of grants already made, 1166–1170——Sums voted by Parliament for specific purposes are not always strictly applied to those purposes, but the balance is returned in the annual accounts to Parliament, 1171–1174.

[Eighth Examination.]—Manner of appropriating balance of specific grants, and how far accounted for to Parliament in the following year, 1180–1185——Period of the last payment for printing the Athenian marbles, 1186–1188——Money appropriated to other purposes than the specific ones for which granted is sanctioned by Parliament, by being mentioned in the estimates of the following year, 1189–1192——Sums voted for the Alexandrian manuscripts were not strictly applied to the purposes for which voted, 1193–1195——Further evidence as to the estimate for printing the description of Athenian marbles, and the reasons the work has not been enabled to be printed, 1196–1210.

Sums voted for drawings and engravings not always specifically applied, 1211, 1212——Sums voted in 1833 for the purchase of books and manuscripts, and the sum expended

839

Forshall, The Rev. *J.* [1835.] (Eighth Examination)—*continued.*

expended in 1834, nearly tally, 1213, 1214——As also the sum voted and expended for printing the catalogue of manuscripts, 1215–1217——Right of the trustees over Sir George Beaumont's pictures, and understanding that they were to be placed in the National Gallery 1218–1236——Estimated and actual expenditure for the catalogue of printed books and the catalogue of manuscripts, and out of what particular sums in the estimate the payments are made, 1237–1254——The money voted is received from the Treasury *en masse*, and appropriated as nearly as possible to the specific objects for which the estimates are framed, 1255–1258——Amount of board wages to servants, 1259–1260——Class of persons signified under the term "assistants" and "attendants," 1263–1267.

Mode of keeping the accounts could not be improved to any extent, 1269, 1270——In the month of September the public could not be advantageously admitted, that month being devoted to reparations and re-arrangements, 1271–1283——The Museum could not be kept open more than six hours per day without considerable increase in the establishment, 1284——Objections to the library or reading-room being opened of an evening, 1287–1306.

[Ninth Examination.]—Minutes of the trustees; list of pictures, and correspondence relative to Sir George Beaumont's pictures; and examination relative to their transfer to the National Gallery, and the present power of the trustees of the Museum over them, 1360–1386——Trustees did all they could to get Lord Pembroke's coins in 1826, but the Treasury would not advance the money, 1544–1550——Amount paid for Mr. Sams' collection in 1834, 1551–1559——Rejection of Mr. Upcote's offer of manuscripts, 1573–1577.

[Tenth Examination.]—Extent of Lord Bridgewater's bequest, and appropriation of the proceeds, 1629–1650——State of the White bequest, and powers and expectations of the trustees with regard to it, 1655, 1656——A list of the donations and bequests to the Museum, and the additions to it, is annually made out, and will be found in the Library of the House of Commons, 1657.

[Eleventh Examination.]—Evidence as to the cause of dismissal of Mr. Millard, 1823–1871.

[Twelfth Examination.]—Documents put in, being extract of the will of the Earl of Bridgewater; minutes of the trustees directing appropriation of part of the dividends; statement of the application of the proceeds; minutes of trustees relating to the purchase of Mr. Salt's collection of Egyptian antiquities, 1872.

[Thirteenth Examination.]—Minutes of the trustees, and letters from witness relative to the discontinuance of the general classed Index to the manuscripts, and memorials from Mr. Millard, 2212——Extent to which witness confirms the evidence of Sir Henry Ellis and Sir Frederick Madden relative to Mr. Millard, 2213–2216——Examination upon witness's letter to the Wyndham Club on Mr. Millard's applying for the situation of secretary, 2217, 2254.

[Fourteenth Examination.]—Opinion, without communication with the trustees, that they would not wish to urge the inquiry further as to the index to the manuscripts, 2352.

[Fifteenth Examination.]—Report of Sir H. Ellis, Mr. König, and Mr. Children, on the 2d February 1829, regarding the department of natural history, 2962——Minutes, reports and correspondence relative to the purchase of Mr. Hawkins's fossils, 2962.

[Sixteenth Examination.]—Numerous points in the evidence require explanation, but which, as it would cause delay, will be declined, on the understanding that the inquiry will be recommended to be renewed next session, 4007–4009.

Forshall, The Rev. *J.* [1836.] (Analysis of his Evidence.)—Intention, when space allows, to exhibit curious manuscripts in table cases under glass, to prevent injury from handling, 4150——State of the catalogue of the old Royal Library Manuscripts, 4151–4162——That of the Cottonian collection might be improved, 4163–4166——Particulars as to the catalogues of that collection, called Hooper's or Astle's by Mr. Planta, and that by Mr. Ayscough, 4167–4181——Several of the works and papers contained in the burnt manuscripts had appeared in print before the fire: such are noticed in the catalogue, 4179–4181——Readers have the power of representing any defects, but there are no instances in which such representations have been made, 4182–4188——Amplification and correction required for the Harleian catalogue, 4189–4193.

A new catalogue of the Sloane collection is in the course of formation, 4197–4199——In a catalogue of manuscripts a full and well constructed index of authors and subjects with copious cross references is of more use than a classed catalogue; such an index is in the course of formation and may be expected within 10 years, 4200–4216. 4238, 4239——Catalogue of the Lansdowne collection formed by officers of the Museum and published by the Record Commission, 4208–4220——How far the catalogues of manuscripts have been progressing during the last year, 4222–4224——Desirable that there should be complete and accurate catalogues and indexes of manuscripts; it is also desirable that larger sums should be expended in increasing the collection, 4225–4228.

Number of volumes and manuscripts in the Museum, and number of which there are not catalogues, 4229–4235——Witness has been consulted and has gone over the plans both with the trustees and architect, and his suggestions have been readily considered

Forshall, The Rev. *J.* [1836.] (Analysis of his Evidence)—*continued.*

sidered and fairly discussed, 4240-4247——Mode of warming and ventilating, 4248-4252——The negociation for Mr. Heber's manuscripts went off in consequence of his representatives conceiving themselves only at liberty to sell by public auction, 4253-4255——Witness's answer to Captain Sherwell's evidence, relative to the offers for the purchase of Mr. Upcott's manuscripts, 4256-4259.

[Second Examination.]—Produces copy of a letter, dated 6 June 1833, from himself as secretary to Mr. König, requesting his suggestions on the plans of the new north side of the Museum, to which there was no answer, 5491-5496.

[Third Examination.]—Price at which the Bible transcribed by Alcuin, and presented to the Emperor Charlemagne, was purchased by the British Museum; price at which it was bought in, and that at which it was first offered to the trustees, 5580-5586——Extract from Mr. König's report of 10th May 1832, informing the trustees of the offer of Mrs. Noel's collection of insects for sale, with request that Mr. Samouelle might be allowed to make a selection, and leave given by the trustees that such selection, should be made, 5587-5589——With respect to Mr. Stone's collection, Mr. König laid Mr. Samoulle's letter before the trustees without remark, 5590——Extract from Mr. König's report relative to Mrs. Haworth's collection, 5591.

[Fourth Examination.]—Produces the Tresor de Numismatique in pursuance of the directions of the Committee, 5841.

[Fifth Examination.)—Period of witness's first appointment to the Museum and to his present situation; his recommendation was from his character as tutor and librarian at Oxford University, 4354-4358.——Additions that have taken place in the manuscript department since 1827, without any extra aid from Parliament, 4359, 4360——Purchases of importance are not made without consultation with the heads of departments; they are sometimes declined without such consultation, 4361-4368——Extent of the establishment in the manuscript department in 1824, and additions that have been made since; the assistants are considered in the light of supernumeraries, but are expected to be placed on a different footing, 4369-4372.

Nature of the accommodation as regards room in the manuscript department in 1827; additions that have been made since, and how far sufficient, 4373-4377——A full and accurate catalogue of all the collections is desirable, containing a copious index of authors nd subjects, but a classed catalogue of manuscripts is not desirable; progress made in the publication of catalogues, 4378, 4379——Nature and extent of the printed annual lists of additions, and how far accessible to the public, 4379-4388—Further evidence upon the progress made towards cataloguing the manuscripts; nature of the catalogues, and manner in which the manuscripts are arranged therein; proposal relative to the indexes thereto, 4389-4400.

The intention with regard to catalogues is to make the Museum as perfect as it can be made, and not by way of comparison with any other institution, 4401-4405——The catalogue of the charters is accessible to the public on inquiries being made for it, though it is not always in the reading-room, 4406-4415——Increase in the number of manuscripts purchased of late years over former years, 4416——Great caution exercised, although the manuscripts are of necessity occasionally in the care of attendants, 4417-4422——The Museum manuscripts supposed to be the most numerous in the world, with the exception of the Paris and Vatican collections, 4423——Great difficulty of ascertaining the number of manuscripts or books in different collections; errors that have taken place in authorized publications, 4424-4427.

Extract from witness's report to the trustees of November 10, 1832, relative to the recommendation for the purchase of Mr. Thorpe's Battle Abbey Muniments, 4428-4431, 4475——Extent of the purchases of manuscripts by the Museum of Mr. Thorpe in the last four years, 4431——Preference by witness of purchasing manuscripts at public sales himself, instead of employing an agent, in consequence of the unfairness of dealing and combinations among booksellers, 4432——Mode adopted with regard to the purchases of Mr. Heber's manuscript at his sale, 4433-4436——Price asked for the Charlemagne Bible is higher than the trustees would feel justified in giving, 4437-4445——Supposed number of manuscripts in the Bibliotheque du Roi, 4446-4448——Duties of of Mr. Panizzi and Mr. Cary in the printed book department, and security given by them, 4449-4457.

No objection in some cases in making purchases through an agent, 4458-4461——The printed annual lists are but inconsiderable helps towards catalogues, 4462-4464——Opinion upon Mr. Holmes's method of forming a classed catalogue of manuscripts, 4465-4470——When there are sufficient duties to occupy the time of the secretary, the duties of that office and that of keeper of the manuscripts must be separated, 4473, 4474, 4482——Period that usually elapses between the making minutes by the trustees, and their being communicated to the principal librarian, 4476-4481——A board of heads of departments, under the board of trustees, might be useful on certain occasions and under certain restrictions, 4483——Duties of the principal librarian, and whether any beneficial alteration could take place in the office, particularly as regards separating it from that of expenditor, 4484-4491.

Forshall, The Rev. *J.*:

[1835.] Letters from, to Mr. Millard, dated 17th Feb. 1831, *App. p.* 426—Dated 16th June 1831, *App. p.* 427—Dated 16th January 1833, *App. p.* 428——Letter from, to Charles König, esq., dated 10th July 1834, relative to Hawkins's fossils, *App. p.* 438.

[1836.] His opinion that Alcuin's Bible was a work of national importance, *Evans* 3341–3372——Letter from, to Mr. König, dated 6 June 1833, requesting suggestions on the plans for building, *Forshall* 5491–5496——Letters from, to the Treasury, dated 15 December 1831 and 24 January 1832, on the subject of the new buildings, *App. p.* 531.——*See* also *Manuscript Department.*

Fossils:

[1835.] Some parts of the collection of, in the British Museum, is more perfect than in the Paris Museum, *Forshall* 707.

[1836.] Small sum expended thereon in five years, *Bowerbank* 876——The collection poor, *Bowerbank* 887–893——Are not named, *Bowerbank* 910——Fossil organic remains are purely geological, *Bowerbank* 895——Plaster exhibition of stucco work in some cases instead of fossil remains, *Grant* 1523——Evidence as to plaster work in fossil remains, *Viscount Cole* 2732–2738. *Gray* 3124——The collection of fossil mammalia very good, beauty of certain casts which will eventually be more valuable than the originals, *Viscount Cole* 2731–2748——Answer to evidence by Mr. Bowerbank and Dr. Grant, on the subject of the secondary fossils, and against a stratagraphical arrangement of them, *König* 3155–3157——Superiority of the Paris collection to that in the Museum, *Grant* 1523——Collection of fossil saurian remains in the British Museum is superior to that in any continental museum, *Turner* 1948——Fine collection of fossil remains at Darmstadt and Stutgard, *Gray* 3119.

Opinion in favor of the collection of fossils in the British Museum, *Viscount Cole*, 2723–2727, 2732–2738——The Museum possesses a fair proportion of the discoveries made in England of fossil remains of late years, *Viscount Cole* 2778–2780——There should be a distinct department for them as in Paris; they should not be annexed to the mineralogical department, *Grant* 1509–1510——Hurried manner in which removals of them took place, and caused the work of years to be undone, *König* 3158–3164——The fossil radiated classes are not exhibited, *König* 3172.

See also *Ammonites. Casts of Fossils. Darmstadt. Gault Fossils. Geological Society. Hawkins's Fossils. Jardin des Plantes*, III. 4. *Maestricht Museum. Mineralogical Collection. Minerals and Fossils. Monheim. Organic Remains. Saurians. Smith's Fossils. Zoological Collection.*

Fossil Crustacea. See *Crustacea.*

Fossil Echinites. [1836.] This collection in the Museum is poor, *Bowerbank* 887——They are not named, *Bowerbank* 910——Witness has many more species, *Bowerbank* 893.

Fossil Fish. [1836.] This collection is well exhibited; the nomenclature of M. Agassiz is adopted, *Griffiths* 2160–2163——The collection of fossil fish are exhibited and named after the nomenclature of Dr. Agassiz; correspondence with that gentleman with a view to increasing the collection, *König* 3176–3179.

Fossil Fruits. [1836.] Witness has in his collection ten times the amount there is in the Museum, *Bowerbank* 893.

Fossil Mollusca. [1836.] Extent to which it is an opprobrium to the British nation, *Grant* 1067. 1086.

Fossil Shells:

[1835.] There is a very good collection of them in the Museum; they are arranged and named by witness, *König* 2721.

[1836.] Opinion that the major part of the fossil shells are exhibited, *Bowerbank* 848.

See *Conchological Collection*, 1, 2,

Foster, Sir *Augustus:*

[1835.] Despatch from, to Viscount Palmerston, dated Turin, 25th March 1835, relative to literary institutions in Sardinia, *App. p.* 522.

[1836.] Letters from, to Viscount Palmerston, dated Turin, 30th January and 10th March 1836, relative to literary institutions and libraries in Sardinia, *App. p.* 577; 14. 24. *See* also *Sardinia.*

Foundling Hospital. [1835.] Duties of witness as chaplain of the Founding Hospital, *Forshall* 832, 833,

Fox, The Hon. *Henry Edward.* [1836.] Letter from, to the Hon. W. Fox Strangways, dated Vienna, 14th January 1836, relative to literary institutions or libraries in Austria, *App. p.* 577–3.

FRANCE:

I. *Comparison between England and France as to Literary Institutions.*

II. *Public Instruction in France.*

III. *Royal Museums:*

1. Generally.
2. Royal Museum of Egyptian and Greek Antiquities.
3. Naval Museum.
4. Museum of the Artillery.

IV. *Libraries in France.*

I. *Comparison between England and France as to Literary Institutions:*

[1835.] Comparison between the political constitution and government of France, showing why the system of management of literary institutions in France would not suit the Museum, and doubts whether the Museum does not surpass the institutions in France, *Forshall* 622, 623——Sums annually expended by the French government for literary and scientific purposes, *Forshall* 637–642——Comparison as to whether the governments of England or France have done most for the encouragement of knowledge within the last 25 years, *Forshall* 694–698——Institutions in Paris are managed by a board; their constitution is different from that of the Museum, *Brown* 3714, 3715——Despatch from Earl Granville to Viscount Palmerston, dated Paris, 3d Nov. 1834, relative to literary institutions in France, *App. p.* 487——Another despatch on the same subject, dated 31st August 1835, *App. p.* 523.

II. *Public Instruction:*

[1835.] Ministère de l'Instruction Publique; budget des dépenses de l'exercice 1835, *App. p.* 527——Rapport au Roi sur le Régime Financier de l'Université, *App. p.* 527 Rapport au Roi sur le budget du Ministère de l'Instruction Publique, par l'exercice 1835, *App. p.* 531——Budget des dépenses de l'exercice 1835, *App. p.* 544——Notes sur le Budget du Ministère de l'Instruction Publique, *App. p.* 560.

III. *Royal Museum:*

1. Generally:

[1835.] Literary qualifications of the director-general of museums in France, *Ellis* 218–222——Names of the curators of the several literary and scientific institutions in Paris, and whether selected for their knowledge of science and literature, *Ellis* 228–236——Constitution of the literary and scientific institutions of Paris, *Forshall* 621——Arrangements in the French Museum are according to the views of those having charge of the several departments, *Gray* 3233, 3234——Witness did not receive similar facilities on visiting the French Museum that M. Cuvier received on visiting the British Museum; witness did not consider it necessary to take official letters, *Gray* 3239-3245——Réponses aux questions adressées au gouvernement Français sur les Musées, *App. p.* 524.

2. Royal Museum of Egyptian and Greek Antiquities:

[1835.] Contains a great variety of objects of the fine arts, *App. p.* 524.

3. Naval Museum:

[1835.] Is intended for preserving models of various constructions for the navy, *App. p.* 524.

4. Museum of the Artillery:

[1835.] Contains a complete collection of ancient, and many specimens of modern armour, *App. p.* 524——Is under the control of the Minister of War, *App. p.* 524.

IV. *Libraries in France:*

[1835.] Réponses aux questions adressées aux gouvernement Français sur les Bibliothèques, *App. p.* 525——Names of libraries in Paris; direction of them; number of librarians; annual expenditure on books; general annual expenses; funds out of which defrayed; admission of the public, government, &c., *App. p.* 525–527——Number of provincial libraries, and under what government, *App. p.* 527.

[1836.] Particulars relative to libraries in Paris; viz. Library of the Arsenal; Library of Ste. Geneviève; Mazarine Library; Library of the Institut, containing number of volumes, number of librarians, condition of the library, &c., *App. p.* 543–562.

See also *Bibliothèque Royale at Paris. Cuvier*, M. *Duméril*, M. *Fossils. French Government. Ichthyological Collection. Italy. Jardin des Plantes. Libraries. Library of the British Museum. Louvre. Luxembourg. Menageries*, Paris. *Mercure de France. Moulds. Organic Remains. Provincial Libraries. Roman Statues. Salt's Egyptian Antiquities. Saurians. Scientific Societies. Sculpture.*

Francis the First, Henry the Second, and Francis the Second:

[1836.] Imperfection in the engraving of this medal, from its being taken from an imperfect cast, *Nolte* 3832.

FRANKFORT:

843

FRANKFORT:

1. *Literary Institutions generally.*
2. *Staedel Institution.*
3. *Senkenberg Museum.*
4. *Libraries.*

1. *Literary Institutions generally:*

[1835.] Despatch from Thomas Cartwright, Esq. to Viscount Palmerston, dated Frankfort, 18 July 1835, relative to literary institutions therein, *App. p.* 492.

2. *Staedel Institution:*

[1835.] By whom founded; directions under which it is placed; departments into which divided; annual expenses; funds out of which paid; admission of the public, *App. p.* 492.

3. *Senkenberg Museum:*

[1835.] Direction under which placed; departments into which it is divided; annual expenses, and out of what funds defrayed; admission of the public, *App. p.* 492——Supplementary and circumstantial minutes respecting the Senkenberg Society for Natural History, *App. p.* 493.

[1836.] It ranks the fifth as regards birds in the European collections, *Grant* 1523——Species of birds 2500, *Gould* 2341——Colours of many of the birds are extracted, from exposure to the light, *Gould* 2342——The specimens are all exhibited, but not named, *Gould* 2369, 2370——Large space allotted to the exhibition of birds, *Gray* 2957——Period at which the Museum is open, *Gray* 3140.

4. *Libraries:*

[1835.] Particulars as to the Stadt Bibliothek; number of librarians; annual expense of books; general annual expenses; funds out of which defrayed; admission of the public; number of volumes of books and manuscripts; government of the institution, *App. p.* 493.

[1836.] Information relative to the city library; number of volumes; condition of the library; number of librarians, catalogues, &c., *App. p.* 542–562.

See also *Galleries. Mammalia*, 5. *Ornithological Collection*, 4. *Quadrupeds.*

Franklin, Captain. [1835.] Distribution of the collection of birds made on his voyage among the Zoological Society, the Museum of the Edinburgh University, the Plymouth Museum, and to the naturalist who edited the works, *Gray* 3358.

See also *Richardson*, Dr. *Rock Specimens. Zoological Society.*

Freebairn, Mr. See *Soane Medal.*

Freight. [1835.] Expense thereof on import of books, *Ellis* 1162–1165.

French Authors. See *Catalogues of Books and Collections*, I.

French Government. [1836.] Application by the French government for copies of the finer statues in the Museum might be complied with, if the moulds taken under competent superintendence, *Weigall* 211–213

See also *Collas's Engraving Machine.*

French Journeymen. [1836.] Are remarkable for their knowledge of drawing and design, *Rennie* 1241.

French Language. [1835.] It is not necessary that the attendants should speak French; there are several who do, *Ellis* 400, 401.

French Literature. [1836.] Examples of French works wanting in the Museum, in history, philosophy and legislstion, *Edwards* 4738.

French Novels and Romances. [1836.] These works are not much sought after for the Museum, from their immoral tendency, *Baber* 4672——Certain romances purchased by witness for Mr. Heber for 20 *l.* each, were run up at his sale by the Museum officers to 130 *l.* and 140 *l.*, *Thorpe* 3232.

Froude, William. [1836.] Particulars as to his invention of a machine for engraving medals, *Brockedon* 5888——A machine similar to Mr. Froude's was invented by Mr. Collas 18 mouths ago, but it was found that the hand of a skilful engraver was more useful, *Nolte* 5960.

Fruits. See *Fossil Fruits.*

Fuller's Endowment at the Royal Institution. [1836.] One of the few endowments for the benefit of science in London, *South* 787.

Funds. [1835.] Account of funds of the British Museum, 1812 to 1835. *App. p.* 294–355.

G.

Gage, John. [1836.] (Analysis of his Evidence.)—Director of the Society of Antiquaries, and author of the History of Hengrave and of a history of Suffolk, 5023——The utmost facilities experienced by witness when he first frequented the reading-room 20 years

Gage, John. [1836.] (Analysis of his Evidence)—*continued.*

ago, though his situation may cause him to receive greater privileges now, 5024–5032——Particulars as to the facilities experienced by witness at the Rouen library, and as to its collections and catalogues, 5033–5041——Letter from Dr. Gradwell to witness, relative to the period the Vatican library is open, 5042——Supposed difficulty in finding manuscripts therein, 5043——There is no delay in obtaining the sight of a manuscript in the Museum; if the particular description of one is not known, the officers will render their assistance in finding it, 5044–5047.

There would be difficulty in the Vatican, if even casual visitors were admitted, of ascertaining the extent of the collection, or the presence of any particular work, 5048–5050——There is no library, foreign or domestic, public or private, where there is such a mass of information, or such facility of reference, as there is in the British Museum, 5051–5059——Inferiority in the manuscript or book department of the Museum as compared with the Vatican or Paris library, may partly be attributed to the short duration of the former over both the latter, 5060–5061——Manuscripts and books can be consulted together or separately in the Museum, though not in the Paris library, 5063–5066——No objection to the hours at which the Museum is open; it might remain open till five during the summer months, 5067–5070.

It would be an advantage to the public that it should be open during the holidays, but the officers require some relaxation, 5071, 5072——Facilities experienced in consulting medals in the department of antiquities; doubts whether foreigners receive as great in their own museums, 5073–5078——The department of British antiquities might be increased; there might be a separate room appropriated for it, and a classed catalogue made, 5079–5082——A work on engravings of the medals of the Museum done in a superior way would be useful, 5083–5086——Valuable accessions made of late years to the collection of British antiquities; the purchase of the gold British corselet has done the trustees credit, 5087, 5088.

Galleries. [1836.] The form of a cross or transept, as adopted at Leyden and Frankfort, is better than the form adopted at the Museum, *Greenough* 3889.

Gallileo. See *Rome.*

Gallinaceous Birds. See *Ornithological Collection,* 1.

Gas. [1836.] Its admission into the reading-room, if the pipes were not hidden, would be quite as safe as the present mode of heating the establishment, *Bowerbank* 975.

Gazette, The London. [1836.] Imperfect collection of; one series without indexes, *Nicolas* 3621, 3622——Extent to which the collection is perfect with the indexes, *Baber* 4689–4693——They are furnished annually through the Stamp-office, two years being always in arrear, *Baber* 4646.

Gasteropods. [1836.] Plan adopted by Mr. König, in his arrangement of a small collection of, *Grant* 1511.

Gault Fossils. [1836.] Value of witness's collection of, *Bowerbank* 866.

Gems. [1835.] There is a manuscript catalogue of the gems, *Hawkins* 3470.

Genealogical Manuscripts. [1836.] An index to them might be printed separately from a general index to the manuscripts, *Forshall* 4378.

Geneva Public Library. [1836.] Information relative to the public library, number of volumes, condition of the library, number of librarians, catalogues, &c., *App. p.* 542–562.

Geoffrey, Professor. [1836.] Complaints by this gentleman of not having access to specimens, *Gray* 2711.

Geological Collection. [1836.] Nature of the deficiencies therein, *Greenough* 3877, 3878.
See also *Rock Specimens.*

Geological Department. [1836.] It might go along with the mineralogical department, *Sowerby* 16——It would have been expedient that the officers of this department should have been consulted by the architect, *Gregory* 3526–3531.

Geological Society. [1836.] They have three persons to attend to the interests of their library and collection, *Bowerbank* 900——Their fossils are collected into groups according to their strata, and not according to their zoological characters, *Bowerbank* 907——Period of electing the president of, *South* 1118.

Geology. [1835.] It is indispensably necessary that a collection should be formed, showing the geological formation of each English district, *König* 2694–2696.
See also *Conchological Collection,* 2.

Geosaurus. [1836.] Unique specimen of, in the Museum, *Viscount Cole* 2725.

German Catalogues. [1836.] There are many of them published which are used for scientific purposes, *South* 767, 768.

German Libraries. See *Italy.*

German Literature. [1836.] Extent of the works of German authors that are in the Museum, *Baber* 4662–4667——Examples of deficiencies, *Edwards* 4738——List of German works referred to in Mr. Connop Thirlwall's History of Greece, which are not in the Museum, *Edwards* 4765.

German Novels. [1836.] These works are not much sought after by the Museum, *Baber* 4672.

Gin Palaces. See *Sundays.*

Giraffes. [1836.] Whether necessary to retain an inferior specimen because it was the first that came over, *Vigors* 1316——State of destruction in which these specimens are, *Sowerby* 79, *Grant* 1523, *Children* 2781——The one presented to the Museum by the College of Surgeons never was good, *Bennett* 1708–1710——Those at the zoological museum are in good condition; one was his late Majesty's, and the other was attempted to be imported living, *Bennett* 1774——The setting up one specimen cost the society 150 *l.*, *Vigors* 1341, 1342.

Goodwell, Dr. See *Gradwell,* Dr.

Gottingen Library. [1836.] This library, on official authority, is stated to contain 300,000 volumes, though it in fact contains only 200,000, but the number of articles is about 300,000, *Panizzi* 4773–4842——The contents of this library may be ranked after Denmark, *Hannay* 5149——It is an university library, and not a library of research, and ought not be conducted on the same principles as that of the British Museum, *Panizzi* 4794——They have a better classed catalogue here than in any other foreign library, *Panizzi* 4832–4835——Period taken in its formation: it is going on as the library increases, *Panizzi* 4841–4845——It is kept in possession of the librarian, and it is a favour to see it, *Panizzi* 4863——The library there is managed by the governing body consulting with officers, *Panizzi* 4940——Information relative to the university library, number of volumes, condition of the library, number of librarians, catalogues, &c., *App. p.* 542–562——Notice of the system of catalogues by A. H. L. Heeren, professor of history in the university of Gottingen, &c., *App. p.* 594.
See also *Manuscript Collection,* 1.

Gough, Richard, Esq. [1835.] Cause of his leaving his books and manuscripts to the Bodleian Library, *Ellis* 1467–1474——Application by Mr. Gough to allow some copper-plates to be deposited at the Museum for safety; consent of the trustees, and no further notice taken by Mr. Gough, *Ellis* 1622, 1623——Minute of the trustees, dated 18 February 1804, relative to a letter from Richard Gough, esq., *App. p.* 413.

Gould, John. [1836.] (Analysis of his Evidence.)—Superintendent of the Zoological Society in the ornithological department, and animal preserver to the British Museum, author of several works on zoology, 2333–2335——Rank which is due to the collection of ornithology in the British Museum, as compared with collections in the continental museums, 2336–2350——Increase in the ornithological collection at the Museum since the new rooms were opened, 2351–2354——Number of specimens of birds stuffed for the British Museum, 1831 to 1836, 2355, 2356——In 1832 to 1836, 2357–2359——In the collection of mammalia in the British Museum there are more species than in other museums; it is deficient with regard to the large tribes, the possession of which at Paris, Leyden and Frankfort makes those collections appear so much larger, 2360–2365——Extent of exhibition and nomenclature in continental collections, 2366–2371——There is no collection in which all the specimens are named, 2372.

More specimens unnamed in the British Museum than in any other collection of equal size, 2373——Progress has been made lately in attaching names, 2374, 2375——The collection of mammalia in the Museum does not consist of the most common and cheaply acquired species; there are a great many rare species, 2376——Number of cats, rats, mice and squirrels of the same species, 2377–2380——No collection of natural history in the world even approaching to perfection, 2381——Dr. Grant's account that the zoological collection is miserable, devoid of classification or nomenclature, the specimens exposed to dust, and the chief constituents are of the most common description, is not correct, 2382——If the officers proceed with the same energy they have done in the last three or four years, the collection will rank among the first, 2382–2388.

The great increase of specimens stuffed by witness of late years may have been in store, and not the result of donations; state of the store-room on witness examining it, and number and description of specimens he selected for preserving, 2389–2411——Witness cannot suggest a better arrangement of the quadrupeds and birds, 2412——Since the new building has been opened, the Museum does not more resemble a store-house than a school of zoology, 2415–2417——Some years back the space was not adequately filled with the exhibition of objects of zoology; desire on the part of the officers in the last three or four years to fill every case, 2418——There is a fair proportion of the more interesting species of birds of the tropical climates, though perhaps not in proportion to the means possessed by the country of obtaining them, 2419, 2420

Gould, John. [1836.] (Analysis of his Evidence) *–continued.*

The specimens are well classed, the families are put together, 2423——A better arrangement with regard to nomenclature might be made; difference of opinion as to the best system to be adopted; the labels are clearly written of that portion of the birds that are labelled, 2421–2432——The nomenclature is not more perfect than that of other collections; it is nearly as good, 2433, 2434——Collections are not in the state they ought to be, considering the wealth of the country and the influence of the trustees, 2435–2442——From the energy of the officers, and under the present constitution, the Museum collections have made greater progress than any other museum in Europe, 2443–2445——There are two camels fit for preserving; they would last many years on stands, but would be better under glass, 2446–2452.

Gould, Mr.:

[1835.] Is considered to be the best bird-stuffer, *Children* 3150.

[1836.] Is very clever in the art of bird-stuffing, *South* 1143–1145——Has described and figured birds from specimens in collection at British Museum, *Gray* 2963.

Government:

[1835.] Government might, through the various means in their power, both diplomatic and military, obtain valuable specimens for the Museum from all parts of the world, *König* 2841——Individual members have occasionally made presents to the Museum, *Gray* 3360——The Government departments have not afforded the Museum that assistance which as a national museum it had a right to expect, *Gray* 3358–3360——Advantage if Government were to give occasional assistance in the publication of memoirs on objects of science, *Brown* 3736, 3737——Regret that the collections made by King's officers accompanying expeditions do not come to the Museum, *Samouelle* 3834——Government should give directions to naval and military officers, and foreign residents to make collections, *Samouelle* 3912——Desirable that Government should occasionally purchase works of classical sculpture, *Westmacott* 3974, 3975——Government patronage would do much to elevate public taste, and advance the arts, *Westmacott* 4006.

[1836.] Advantage of retaining in the hands of Government a certain influence over the affairs of the Museum, *Rep. p.* iii——Desirable that Government should give facilities for improving the collection of natural history through their ministers abroad, and officers employed on voyages of discovery, *Bell* 449, 450, *Bowerbank* 986, 987.

Government Grant. See *Parliamentary Grant.*

Gradwell, Dr. [1836.] Letter from Bishop Gradwell, relative to the period the Vatican library is open, *Gage* 5042.

Grant, Robert Edmond, M. D. [1836.] (Analysis of his Evidence.)—Professor of comparative anatomy and zoology in the University of London, 248–250——Objection to the mode of exhibition, classification and nomenclature of the zoological specimens in the British Museum, 252——Want of accommodation in the building causes confusion in classification, 252, 253. 258, 259——Similar confusion will occur in the new buildings if the officers are not consulted, 254——The zoological collection might be better arranged, 255, 256——The internal parts of animals should form a separate cabinet, 257——One general system of classification not recommended, 260——Cabinets of unstuffed specimens not recommended, 261——Few of the collections can be compared with those preserved in Paris, 262——Improvements suggested in the room in which the mineralogical collection is exhibited, 263–267——Classification in the museums of Edinburgh and Manchester more attended to than in the British Museum, 268–270——Double the space required to exhibit the zoological specimens properly, 271–273——Whether sufficient accommodation afforded to the zoological departments in the new buildings, 274–277——Comparison between the collections of birds in the Paris and British Museums, 278——More entomological specimens exhibited in Paris than in the British Museum, 279–294——There should be similar division of labour in the zoological staff at the Museum as is established in Paris, 295——Number of professors and mode of appointment in the Jardin des Plantes, 296–306——If the trusteeship could be made an honour to scientific men, they would eagerly look forward to the appointment, 307–312——Extract from a work of Dr. Davy, giving the opinion of Sir Humphrey Davy against the constitution of the Museum, and suggesting improvements, 313–315——Evils that would result if two out of three of the official acting trustees were to decline to act, 316–319——Opinion in favour of a board of officers in all respects equal and similar, selecting a president according to the French law, and confining the trustees to their duties as such, 320, 321——The degraded rank of the several offices have rendered the appointment of the most eminent scientific men impossible, 322——Names of the present trustees who are not eminent for the scientific acquirements, 323——Men eminent in science have not been elected trustees, 312–324——Names of scientific men who would have done honour to the trusteeship, 325.

[Second Examination.]—Constitution of the London University, 996——Professors take no part in the management beyond what immediately concerns education, 997——They recommend gentlemen for the office of Professor, 999——They expend the sums appropriated to them by the council for collections or books, 1000–1001——Objections to their sitting at the council board, 1002–1004——The same objections apply to admitting

847

Grant, Robert Edmond, M. D. [1836.] (Analysis of his Evidence)—*continued.*

ting heads of departments in the Museum to the trusteeship, 1005——Not the meaning of Sir Humphrey Davy that such should be the case, 1006, 1007——Scientific men acting as a sub-committee of trustees over the several departments would be of immense benefit, 1007–1009——More advantageous to have gentlemen in the council of the University intimately acquainted with and taking interest in the respective departments, than having the professors of those departments at the board, 1010–1026——There should be among the trustees a due proportion of gentlemen intimately acquainted with the departments of science relating to the British Museum, and of other noblemen and gentlemen, who from taste take interest in the affairs of science, 1027–1030——Extent to which the sub-divided departments of the Museum should be represented at the board, 1031–1044.

Period the professors of the University formed themselves into a sub-committee; cause of the services of the warden being discontinued, his situation represented by the present secretary, 1045–1049——Anything would be better than the present system at the Museum, 1051——Differences of opinion detrimental to the Museum; would not have been likely to arise between Professors Jameson and Playfair, supposing one had been the professor of geology and the other the trustee representing that department, 1052–1057——Proposed duties of scientific trustees; they should be joined with men of influence in the State, 1058–1060——Deficiencies in the zoological collection which substantiate the charge of the collection being opprobrium to the British nation, 1061–1088——Superiority of the Paris collection of mammalia over that of the British Museum, 1089–1091——More than four times as many fishes in the Paris collection as in the British Museum, 1092——The scientific value of the collection of birds at Paris is infinitely greater than that in the British Museum, 1093.

[Third Examination.]—Objects of a national zoological museum, which are not fulfilled in any of the conditions at the British Museum, 1466, 1467——No strict method of classification followed with regard to the mammalia, 1468——The greater number of mammalia have neither scientific nor vulgar names attached to them, 1469–1472——Causes of the collection being useless to the public and the student, 1473–1474——Objection to the antiquated names of Linnæus used in the Synopsis, 1475–1478—Want of scientific designation of birds in the Synopsis; not a quarter of them named in the general collection, 1479, 1480——Waste of space in exhibiting the collections of birds, 1481——The birds are in the new building, and the other parts of the zoological collection are chiefly in the old building, 1482——The exhibition of the birds and shells has improved since opening the new buildings, but there ought to be more assistance for naming the birds, 1483–1485. 1487.

Eminent men not appointed to the zoological departments; subordinate clerks have been placed at the heads of departments, 1488——Grounds of witness's comments, 1489, 1490——Old names should be left on the specimens till the new ones ready, 1491–1495——Many of the antiquated names have been recently placed, 1496——Cuvierian names of those specimens which now have antiquated names attached to them, 1497–1500——Antiquated nomenclature of British shells; the same species are in different rooms by different names, 1501——The reptiles are neither exhibited, classified or named, so as to be useful to the student, 1502——There are several good specimens of dried fishes exhibited, but are useless to the student for want of names, 1503——Detail of the great advantages of a proper nomenclature, 1503——Want of classification and names of the serpents and lizards in spirit, 1504——The crowded state of the specimens prevents specific names being reached by the eye, 1505.

Neglect of the specimens shown by the label "vertebra of an Indian Boa," 1506——Evils of the general collection of birds being arranged according to Temminck, and the British birds according to Jennings, 1507——Useless state of the collection cephalopods; profusion of duplicates of the most common species of shells, of oysters, &c., 1508——There should be a distinct department for fossils, as in Paris, 1509, 1510——The curator has been employed 14 years in arranging the insects, but the number of specimens remaining render it doubtful whether he will be able to complete them, 1511——The collection of crustacea is far from being completed in the nomenclature or arrangement, 1512——There are plaster casts of extinct quadrupeds, which supply the place of the real remains, 1513——There is not a single species or specimen of any extinct zoophytes yet exhibited, 1514.

Progress is making with naming the small collection of dried specimens of recent zoophytes, 1515——By whom the collection of British birds have been identified and named, which is discreditable to the officers of the Museum, 1516–1520——By whom the specimens in the general collection are named, 1521——Confusion in the nomenclature of the bird "Emu," 1521——So many persons having assisted in naming the birds, it is difficult to ascertain the person responsible, 1522——Further evidence of the superiority of the Jardin des Plantes over the British Museum, 1523——Inferiority of the zoological collection to that at Paris, 1524——Beauty of Mr. Hawkins's collection of fossils, 1525——Catalogues of the zoological departments are in progress, 1526, 1527——Lectures by the officers of the Museum would be advantageous if conducted upon the plan adopted at Paris, 1528——Cause of the deplorable state of the collections in the Museum, 1529——Reform necessary in the constitution of the Museum, 1530–1534——Witness has the management of the collection illustrative of his own lectures at the London University, which is extended, 1535–1538.

Grant, Dr. [1836.] Want of time prevents medical students from attending Dr. Grant's lectures on comparative anatomy and physiology at the London University, *South* 799–803——His opinion upon the bad arrangement of the shells in the Museum is not consistent with witness's observations, *Turner* 1608——He is not distinguished as a conchologist, *Turner* 1618–1620. 1655–1663. 1671——His authority upon the arrangement of a collection of natural history is not slight; he is a comparative anatomist of eminence *Richardson* 2289–2293——Further evidence upon Dr. Grant's work, and against his nomenclature superseding that of Linnæus or Cuvier in the British Museum, *Richardson*, 2278–2293. 2325–2330——His account of the zoological collection is not correct, *Gould* 2382——Answer to the charge of Dr. Grant relative to confused nomenclature of the "emu" and "cassaurius," *Children*, 2842–2855.

Granville, Earl. [1835.] Despatch from him to Viscount Palmerston, in 1834, relative to literary institutions in France, *App. p.* 487——Another despatch on the same subject, in 1835, *App. p.* 523.

Gray, John Edward. (Analysis of his Evidence):

[1835.] Salary as extra assistant in the natural history department, 3208–3210——Duties of the office, 3211, 3212——Extent to which the arranging and naming has gone; constant new accessions render it impossible for such a collection to be ever said to be finished, 3213, 3214——The time occupied in giving information to visitors requiring it, prevents the work of arrangement going on speedily, and the person making the arrangement is the most fit person to give information, 3215–3218——Previous arrangements are necessarily altered upon considerable acquisitions taking place, 3219, 3220——Difficulties might be better overcome with more assistance, 3221——The collection of shells is arranged, though not entirely named; the discovery of later objects prevents the nomenclature of any one work being strictly followed, 3222–3230——Collections being arranged and named according to the views of the officer arranging them, is necessary to show the advances made by science, 3231–3233——Arrangements in the French Museum are according to the views of those having charge of the several departments, 3233–3234.

Baron Cuvier had free and unrestrained opportunity of inspection of all the Museum collection, and was also shown a collection not belonging to the Museum, 3235–3239——Witness did not receive similar facilities on his visit to the French Museum; he did not consider it requisite to take official letters, 3239–3245——If assistance were granted to witness of a superior description it would be advantageous, but not that of an attendant who had previously been employed in a menial capacity, 3246–3257——Extent to which the annual visitation is useful; collections are previously placed in the most complete order; interest taken by individual trustees in the collections, 3258–3270——Why there would be no real benefit in giving each department apparatus for making experiments, 3271–3274——Bird-stuffing is better done by employing an eminent bird-stuffer than by performing the operation in the Museum, 3274, 3275——There is no private collection; everything is exhibited, 3276, 3277.

[Second Examination.]—Advantage that would be derived by subdividing the natural history department into separate departments of zoology and mineralogy, 3280–3287——Number of divisions and heads of departments in natural history in the Jardin des Plantes at Paris, 3288–3290——Further evidence in favour of the subdivision, 3291–3307——Manner in which annual grants would be recommended, and if obtained, appropriated, in the event of the departments being distinct, 3308–3313——It would be advantageous if young men were taken into the Museum at moderate salaries as assistants, on the understanding of rising by merit, 3315–3317——Heads of departments in the Museum delivering lectures would not be advisable, 3318–3321.

Objects of the British Museum, 3322——Observations upon the descriptions in the Synopsis, and in what manner the work might be improved, 3323–3333——The collection of shells in the British Museum is far superior to any other public collection; enumeration of different foreign collections, 3334–3336——Impossibility of adhering to any system for arrangement of classification, from the discoveries of new genera and species in conchology, which are not to be found in any previous work, 3337–3353——Comparison of the zoological collection of the Museum with that of Paris and Berlin, 3354, 3355——Collection of radiata the richest of any collection known to witness, though not so rich as it might be if more money granted for it, 3356, 3357——Government departments have not afforded the Museum that assistance which, as a national museum, it had a right to expect, 3358–3360.

[1836.] Long acquainted with the British Museum, 2453——Changes which the collections of natural history have undergone since the institution of the Museum, 2455——Authority on which witness's statement is made, 2456——Method adopted in the Museum upon the increase of any division of the department of natural history, 2458——Reasons why many specimens are not named, and others named in pencil, 2460——Mode pursued in fixing the nomenclature, 2461——Increased taste for zoology after the peace, 1814; consequent increase of the collection, 2463——Donations of Messrs. Reeves and General Hardwicke, 2464——System of nomenclature adopted in the different departments of natural history, 2466——System the same as adopted in the Jardin des Plantes at Paris, 2468.

No new complete work of nomenclature for birds or reptiles, 2471——No work on the entire subject of nomenclature of shells, except that of Lamarck, 2473——The Lamarckian

Gray, John Edward. [1836.] (Analysis of his Evidence)—*continued.*

arrangement and nomenclature of Linnæus is that adopted at the British Museum for shells, 2474——Evidence in explanation of nomenclature of simia satyrus and simia troglodytes, 2475–2494——Extent to which Dr. Leach had formed catalogues, 2496——Specimen of catalogue to the collection of natural history, 2496——Which is open to any person who wishes to consult it, 2497, 2501–2506——Witness always ready to give any information to any person desirous of inquiring, 2497——Further evidence concerning publicity and access of manuscript catalogues to natural history, 2507–2516.

No general collection of zoology on the Continent in which there is a perfect catalogue, 2517——List of reptiles of the museum of Vienna published by the offices of the department, 2517——Extent to which a catalogue of natural history at British Museum would run if formed on the plan of that of the College of Surgeons, 2523——Intercourse between witness and Mr. Owen when that gentleman was forming his catalogue to the collection of the College of Surgeons, 2525——Opportunities of Mr. South as to examining catalogues of natural history if he desired so to do, 2524——Facilities afforded to Dr. Grant in consulting specimens of natural history in the Museum, 2526–2528——Extent of the catalogue of Fitzinger of Vienna, 2530.

[Second Examination.]—Explanations as to the removal or alterations of Dr. Leach's names to specimens, 2599–2606——Not necessary to add the trivial name of any object in a foreign language, 2601——Evidence concerning catalogue of collection of the College of Surgeons; a corresponding catalogue in reference to specimens in British Museum would not be popular or saleable, 2608–2610. 2615——Time taken by Mr. Owen to form catalogue to specimens at College of Surgeons, 2612, 2613——Not desirable in the present transition state of the collections at British Museum to form a regular catalogue, 2617——No perfect systematic catalogue of any one large class in any museum, 2618——Difficulty of determining what are desiderata in a class catalogue, 2619——Dr. Fischer's catalogue of mammalia published at Stutgard, 1829; its defects owing to subsequent additions, 2619——Witness not aware of any published catalogue to collections either at Berlin or St. Petersburgh, 2623, 2624——Work of Latham on birds published 1790, synopsis still in manuscript, 2625——Work of Merrem, published in 1820, on reptiles, a mere compilation, and arranged according to an exploded system, 2626.

No systematic catalogue of fish since Block's Systema, 1791, 2627——Cuvier in conjunction with M. Valenciennes was writing a history of fishes; little progress made since his death, 2627——Cause of the absence of general systematic catalogues of natural history, owing to the enormous amount of labour which would be required, 2628——How far any intermixture of objects of natural history in the same room at British Museum, 2635——Similar order at Paris, 2636—and Leyden, 3637——Miscellaneous arrangements at Edinburgh, 2640—at Bonn, 2640——In the British Museum the various classes are always arranged in distinct cases, 2645——Radiated animals, corals, shells, &c. are in distinct series, as they would follow in Cuvier's animal kingdom, 2646——No intermixture of subjects in the separate cases contained in the same room, 2648——British birds and shells are kept separate for the use of collectors, 2651——The collection considered as of authority among all the collectors of England, 2655——Space which would be required if the collection of natural history was to be arranged in the manner that Mr. Samouelle has arranged the collection of entymology, 2656——Evidence as to altering the nomenclature of natural history department, 2658–2663.

Collection at British Museum as fully named as that of Jardin des Plantes, 2664, 2665——Manner in which specimens are ordinarily offered for sale at British Museum, 2666——Number of species of birds known, about 4,200, 2667——Explanation as to labelling cases of bats and other cases since March 1836, in answer to Dr. Grant's evidence, 2668–2670——Nature of synopsis to zoological collection at Berlin, by Professor Lichtenstein, 2676——Synopsis of College of Surgeons' museum valuable as showing the arrangement of John Hunter, 1786, which is nearly the same as that employed by Cuvier in the cabinet of comparative anatomy at Paris, 2679——Character and value of the work of Deleuze, 2681——Habit of the director of the museum at Leyden to visit different countries for the purpose of exchanging duplicates, 2683——Usual manner of disposing of duplicates when offered to the Museum, 2684——M. Temminck, though in the habit of making extensive exchanges, complains of the difficulty he is under in such matters, 2687——Mode of exchange of specimens practised at Leyden, 2688——Cause of frequent complaints and jealousies between naturalists, 2689.

List of duplicates published at Berlin, 2690——Best mode of disposing of duplicates is by auction, 2693——Hardly a practised zoologist in London, who is not in the habit of coming continually to make use of the British Museum, 2694–2696——Names of scientific persons who have been in the habit of frequenting the British Museum, 2696——Their testimony to the facility with which access was allowed and information given, 2697, 2698——Mode in which the British Museum was formerly allowed to be seen by strangers; limitation of time; at present any individual may remain as long as he pleases in one room, 2704, 2705——Information always afforded by attendants of, by application to officers, 2707.

Two foreigners only are employed at the British Museum, Dr. Solander and Mr. König, librarians to Sir J. Banks, 2708——How far the professors in the Jardin des

Gray, John Edward. [1836.] (Analysis of his Evidence)—*continued.*

Plantes regulate the general arrangements, 2710——Facilities in the British Museum far greater than at the Jardin des Plântes, 2711——Complaint of Mr. Geoffrey, a professor, of not having access to specimens, 2711——Management of the institution not worked so well as it ought, 2713-2717——Facilities of the menagerie at Paris for the purchase of living animals which may be brought to France, 2714——Mode in which specimens are placed in the French collections; additions only placed on re-arrangement of the class, 2718——Object of Cuvier in forming his collection of comparative anatomy, 2719.

[Third Examination.]—Circumstances under which witness engaged in the publication of Indian zoology, 2898——There are 405 species and 750 individuals of mammalia in the British Museum, 2899——Number in the Paris museum, 500 species, 1,500 individuals, 2900—In Leyden 661 species, 2,016 individuals, 2901——Number of mammalia described in Fischer's Synopsis, 2902——Many rare specimens which foreigners have visited this country to examine, 2903——Four-fifths of the specimens are catalogued, 2904——The sorts most easily obtained are those most wanting, 2906——No species are exposed to the air and dust which would be liable to injury, 2909——Exposure of animals at Leyden, 2910——Very few mammalia in store, not more than 30 or 40 imperfect skins, 2915——No specimens have been stoved for seven or eight years, 2917——Number of Mr. Burchell's specimens which have been received and exhibited, 2918——Mr. Burchell's specimens not exhibited earlier in order that he might derive advantage from taking notice of them in his travels, 2920.

Animals transferred from the College of Surgeons in as good a state as ever, 2925——Evidence explaining in reference to Dr. Grant's examination as to the exhibition of the common species of animals, 2929——Comparative number of rarer specimens at British Museum and Paris, 2933——Foreigners publishing on mammalia have thought it necessary to consult the collection, 2934——Evidence as to collection of skeletons of vertebrated animals, 2935——Reason for placing specimens of hares in a different part of the room explanatory of evidence of Dr. Grant on that subject, 2936——On any person desiring to consult the collection, skins, &c. in store are shown, as well as those stuffed and exhibited, 2937——Reasons why no stuffed elephant is to be found in the British Museum, 2940——Space better devoted to rarer animals, 2941——Difficulty of stuffing elephants, 2942——There are 2,400 species and 4,659 individual birds in the British Museum, the principal part added during the last four years, 2946——Number in Paris according to Deleuze, 2,300 species, 6,000 individuals, 2947——In Berlin museum 1,200 species, 2947——The largest enumeration amounts to 4,000 species, 2948——Museum rich in gallinaceous birds, 2949——In African and Brazilian birds, and those of northern regions, 2949——Most deficient in humming birds and European birds, 2949.

Bad mode of stuffing birds at Paris for the museum, 2951——Impossible to depend on specimens so stuffed, 2954——Collection of birds generally popular, 2956——Large space allotted to exhibition of birds in Paris and Frankfort, 2957——Four times as many birds known as quadrupeds or reptiles, 2958——Want of space partly, but not want of interest on the part of trustees, &c., will account for the manner in which birds are exhibited, 2961——List of naturalists who have described birds from specimens in British Museum, in answer to evidence of Dr. Grant alleging that the general collection of birds is useless to students, 2962-2965——Answer to Dr. Grant's evidence as to naming birds, 2966——As to bats, 2969-2972——Examination concerning Mr. South's and Mr. Owen's evidence, as to their want of knowledge of the existence of catalogues, 2974, 2977——Evidence as to purchase of the cursorious isabellinus at Mr. Donovan's sale, 2878——Examination as to Mr. Vigor's evidence on extent of collection of birds, 2981, 2983., 2985——Collection of humming birds not equal to that of Paris and some private collections, as those of Mr. Loddige and Mr. Leadbeater, 2988.

Explanations, concerning the collection of hornbills, strutheous birds, toucans and birds of paradise, in answer to Dr. Grant's evidence, 2991——Concerning the cassowary, 2992, 2994——Of reptiles, the Museum possessed 600 species, and 1,300 individuals, 2995——In Leyden, between 600 and 700 species, 2996—In Vienna there are 345 species, 2997—In Berlin 280 species, 2998—In Paris 500 species and 1,800 individuals, 2999——Collection at British Museum rich in rare specimens, 3000——Value, extent and arrangement of the collection of reptiles, 3001——Cuvier's statement as to the difficulty of identifying the species of Coluber, 3006——Answers to Dr. Grant's statement as to reptiles, 3001-3009——As to the Saurian and Chelonian reptiles, 3009——Mr. Bell's opinion of their arrangement compared with Dr. Grant and Mr. South, 3010——Mr. Bell's opinion of the arrangement and nomenclature of reptiles, 3012, 3015, 3023——Adoption of some of witness's genera (reptile) by Cuvier and others, 3024, 3025——Dried saurians all named; tortoises named, and many labelled, 3026——Number of fish in the British Museum, nearly 1,000 species, 3030—In Paris, 4,700 species, 3031—In Berlin, 740 species, 3033——Visit of Baron Cuvier for specimens of fish for his work on ichthyology, 3038——Explanation relative to nomenclature of the crustacea; Mr. Bell's opinion thereon; reason for system adopted, 3045——Explanation relative to the names of shells in answer to objections of Mr. South, 3050—— Derivation of the word porcelain, 3052——Portion of the crustacea under the care of Mr. Samouelle, 3053.

Gray, John Edward. [1836.] (Analysis of his Evidence)—*continued.*

[Fourth Examination.]—The collection of shells in the British Museum contains 4,025 species, 15,000 individuals, 3056—In Paris, 4,000 species, 3056—In Leyden, 3,700 species, 3058——Lamarck describes 4,200 species, 3060——Evidence relative to naming and arranging the fossil shells at Paris, 3061——Nomenclature of Lamarck (as to genera), that adopted at British Museum for shells, 3062——Witness never heard that Mr. Cummins offered shells to Museum for sale, 3063——Present from Mr. Cummins of dresses, &c. of South Sea Islands, 3063——The best work on British shells is Montagu's, 3065——Nomenclature adopted by Dr. Heming and Capt. T. Brown, 3067——Linnæan nomenclature should be adhered to, 3069——Explanations relative to Dr. Grant's evidence on the state of the shells, 3076——Evidence relating to fossil ammonites, 3078——There are several fossil cephalopods exhibited, 3083, 3089, 3092——No fossil bivalves at present exhibited, 3090——Fossil corals not at present exhibited, 3091——Evidence concerning alleged wrong naming of shells, 3095.

Number of insects in the Leyden collection, 25,400 species, 3096—In Paris, 25,000, 3096——Opinion of Dr. Burmeister that there are 80,000 species, 3097——In Berlin collection 70,000 species, 3097——Explanation in answer to Dr. Grant's evidence concerning myriapod and arachnida specimens, 3098——Zoophytes in the British Museum, 747 species, 2,200 individuals, 3114—In Leyden, 700 species, 3114——Answer to Dr. Grant's evidence as to extinct zoophytes, 3115——Arrangement of fossil remains at Paris, 3117——A magnificent collection, 3119——Fine collection of fossil remains at Darmstadt and Stutgard, 3119——Evidence as to plaster work in fossil remains, 3124——Time when zoological lectures are given in the Jardin des Plantes, 3134.

Not advisable to have lectures on zoology, 3137——Names of persons who now lecture on zoology at different institutions, 3138——Periods at which visitors are admitted to the museum at Paris, 3139——Have not the same facilities there as at the British Museum, 3140——Periods at which museum at Brussels is open, 3140—At Leyden, 3140—At Dresden, 3140—Frankfort, 3140—Stutgard, 3140—Copenhagen, 3140—Vienna, 3140—Turin, 3140—St. Petersburg, 3140——In foreign museums generally not the same facilities offered to the public as at British Museum, 3142——Witness sees no objection to Museum being open on holidays, 3143——Examination as to supply of books in the natural history department, 3144.

Gray, Mr. [1836.] The names given to reptiles in his papers are considered an authority on the Continent as well as in this country, *Bell* 343——Punctuality and fidelity with which he executes his duties at the Museum; his work on Indian zoology was not attended to by him during business hours, *Children* 2892-2897.

Greece, History of. See *German Literature.*

Greek Antiquities. See *France,* III, 2. *Millengen,* Mr.

Greek Coins:

[1835.] There was a sale of duplicate Greek coins, *Ellis* 570——Number of copies of the catalogue of Mr. Payne Knight's collection of Greek coins printed, distributed and sold, *Ellis* 1076——Mr. Combe's catalogue of the collection as it existed in his time, and Mr. Knight's own catalogue of those he bequeathed to the Museum, have been printed, *Hawkins* 3472——Account of sums expended on Mr. Taylor Combe's catalogue of Greek coins, 1809 to 1834, *App. p.* 419——Sums paid on account of the publication of Mr. R. P. Knight's catalogue of his collection of Greek coins, 1821 to 1833, and manner in which the several sums were distributed, *App. p.* 367——Account showing the number of copies of the catalogue of Mr. R. P. Knight's collection of Greek coins which were printed, and the manner in which they have been disposed of, *App. p.* 367.

[1836.] An extensive work on Greek coins published by M. Mionnet, *Hawkins* 5693——It contains plates added to each volume, which are a little shaded, *Hawkins* 5714.

Greek Grammar. See *Lascaris's Greek Grammar.*

Greek Testament. [1836.] Witness would not knowingly have disposed of this work as a duplicate, *Baber* 4699-4701.

Greenough, George Bellas. [1836.] (Analysis of his Evidence.)—Fellow of the Royal Society; twice president of the Geographical, and three times of the Geological Society, 3800, 3801——Whether the marbles are subject to the best arrangement and light in the Museum, 3804-3807——Mode in which prints should be arranged and catalogued, 3808-3813——For the consideration of the Committee whether the statues and sculpture should be at the British Museum, 3816-3824——Whether the collection of prints has not been formed more with a view to art than illustration, 3825-3832.

By whom the situation in which Egyptian antiquities, Etruscan vases, &c. should be placed should be determined, 3833-3836——Not advisable now to alter the height at which the Engin marbles are exhibited; it would have been an advantage to place them at their original height, if a Parthenon had been built opposite Northumberland-house, 3837-3840——Visiting the statues at Rome by torch-light is a favour; torch-light not recommended if other means can be obtained, 3841-3845.

A committee of arrangement of the natural history department would be advantageous; it should be difficult to alter arrangements once made, 3846-3851——Evils of the alteration of the arrangement of the Greville collection of minerals against the

Greenough, George Bellas. [1836.] (Analysis of his Evidence)—*continued.*

recommendation of the ablest mineralogists of the day, 3852–3856——The buildings are not suitable to the collection of natural history, 3858, 3859——General rules upon which catalogues in the natural history department should be constructed and printed, 3863–3867——Divisions into which the natural history department should be divided, and plan upon which lectures should be given, 3868.

Extract from Swainson's work, showing the number of species of animals there are in the Museum, and number of species known, 3869–3871——The Linnæan Society might be incorporated with the natural history department with advantage to both; number of visitors that should be chosen by Government, 3872–3876——There should be a distinct library of natural history, a separate collection of books for each subdivision of the department, 3881–3885——Improvements suggested in the mineral-room, 3892–3897.

Importance of the curators being consulted as regards the buildings; inconvenience that will arise if the building cannot be raised or extended without destroying the architecture; the public have not had all the advantage that might be expected from the sums laid out in the buildings, 3898–3903——The defects in the Museum are for want of a systematic plan; the objects of the Museum have never been sufficiently defined, 3907–3910, 3913——Further evidence in favour of lectures, and the mode in which they should be given, 3910–3917——Detail of a plan for the better government of the Museum by means of president and council, composed of visitors and curators, 3918–3932.

Examination upon the duties of the keeper of the natural history department; extract from the statutes of the Museum relative thereto, 3939–3945——Permanence in arrangement and nomenclature is more important than continual slight improvements in endeavouring to keep pace with science, 3949, 3950——Further evidence upon the written communications of the curators to the trustees, and upon their not being consulted relative to the purchase of collections, 3951–3958——Opinion in favour of an alphabetical catalogue, with a copious index of persons, plans and subjects, instead of a classed catalogue, which plan might be adopted in all the collections, 3960–3964.

Gregory, Olinthus, L.L.D., F.R.A.S. [1836.] (Analysis of his Evidence.)—Professor of mathematics in the Royal Military Academy at Woolwich, and one of the board of visitors of the Royal Observatory, 3486, 3487——Number of books in the Museum library not sufficient to satisfy the expectations of scientific men; necessity for a classed catalogue, 3488–3494——Outline of the divisions into which the library might be arranged; manner it which it might be made to contain many more books than it does at present, 3496–3521——Necessity for the architect consulting the librarians, 3522–3525——It would have been expedient that the officers of zoological and geological departments should have been consulted by the architect, 3526–3531.

Opinion in favour of the reading-room being further subdivided, and opened at six in the morning, and by artificial light of an evening; arrangements that should be made for attendants and cleaning, 3532–3560——Desirable that scientific men, as well as some of the curators, should have a share in the government, 3561–3564——Objections to learned societies appointing the trustees, the trustees appointing the principal officers to form a board for managing the executive, 3565–3569.

Objection to the appointment of the trustees being in the ministers of the day, 3570——Suggestions for the better government of the Museum, by having librarians to each division of the library, and curators to each department, to elect a director in chief; subordinate departments being filled up by well-instructed young men; associate trustees to be elected from the principal officers, with appeal to the entire body of trustees, and eventually to the Home Secretary, 3571–3580——Facilities experienced by witness in the Paris library, 3581–3585.

Gregory, Dr. *Olinthus.* [1836.] In his plan for a classed catalogue he has forgotten the vegetable kingdom, *Panizzi* 4855——Observations connected with Dr. Gregory's evidence of May 12th, and separate from which that evidence is defective, and in part unintelligible, *App. p.* 571.

Grenville, Hon. *Thomas.* [1836.] His opinion of Alcuin's Bible, and upon the price asked for it, *Evans* 3341–3372.

Grenville, Lord. [1835.] His literary and other qualifications as a trustee of the Museum, *Forshall* 656.

Gresham Lectures. [1836.] One of the few private endowments in London for the benefit of science, *South* 787——Instanced for showing whether salaries or pupils are the best mode of paying professors, *South* 825.

Greville Minerals. [1836.] Evils of the alteration of the arrangement of the Greville collection of minerals against the recommendation of the ablest mineralogists of the day, *Greenough* 3852–3856.

Griffiths, Edward. [1836.] (Analysis of his Evidence.)—Witness has published an English edition of Cuvier's Règne Animal, 2098——Fellow of the Royal and Linnæan Societies, and corresponding member of the Natural History Society in Philadelphia and other societies, 2099——Witness was first acquainted with the Museum in the time of Dr. Shaw, about 20 years, and also in the time of Dr. Leach, 2100–2102——The zoological collection was at that period in a wretched state as compared with the present state

853

Griffiths, Edward. [1836.] (Analysis of his Evidence)—*continued.*

state of zoology, but with regard to its then state the collection bore a nearer proportion; it has advanced progressively with the state of the science since the time of Dr. Leach, 2103–2108——The collection of mammalia is better than it was formerly, though there is not at present one third of the species described by authors, 2110——Bad state of the collection 20 years ago more to be attributed to the state of zoology at that time than to the want of space, 2113–2115.

Dr. Leach's nomenclature rather too refined; he was approaching that eminence in science which would give authority to the nomenclature he might adopt, 2120, 2121——The collection of mammalia the most deficient; it might be supplied at inconsiderable expense; it requires a greater space than other collections, but that is not entirely a reason for the deficiency, 2122–2127——With regard to the organic remains, it is not advisable to refine too much in systematic arrangement; if the large genera of some eminent naturalist, such as Cuvier be adopted, the subdivisions will be better left to the observation of students, being pointed out by the synonyma on the labels; there are a vast many species not named, 2128–2139——The collection of the British Museum is one possessing an European reputation, 2140.

Examination upon Griffiths' Introduction to Cuviers' Animal Kingdom, and whether any reference is made therein to the collections in the Museum, 2141–2147——If some portion of the trustees were scientific men, it would be desirable; with regard to the competence of the present trustees to judge of what is wanted, they should seek the information of men of science; desirable that a portion of the trustees would be influential men, 2149–2157——If with convenience and propriety the hours for exhibiting the collection could be extended, it would be desirable, 2158——A manuscript catalogue of the zoological collection in progress: a printed catalogue would be desirable, 2159——The collection of fossil fish is well exhibited; the nomenclature of M. Agassiz is adopted, 2160–2163——Facilities afforded for consulting the officers and books, and for artists taking drawings, which facilities would have been afforded to every one, 2164–2166.

Griffiths' Introduction to Cuvier's Animal Kingdom. [1836.] Whether any reference is made therein to the collections in the British Museum, *Griffiths* 2141–2147.

See also *Règne Animal.*

Griffith, Mr. [1836.] Has described birds from specimens in British Museum, *Gray* 2963.

Guise, Duke of. [1836.] There are many varieties of this medal, *Hawkins* 5686.

H.

Hague, The. [1836.] Information relative to the Royal Library, number of volumes, condition of the library, number of librarians, catalogues, &c., *App. p.* 542–562——Letter from G. Jerningham, esq. to John Backhouse, esq. dated the Hague, 17 June 1834, relative to literary institutions and libraries at the Hague, *App. p.* 577–20.

Hallam, Mr. [1836.] Has frequented the reading-room for 20 years, and is referred to, to state whether there is any just cause of complaint, *Panizzi* 4873——A stranger would most probably be served in the reading-room before a man of eminence like Mr. Hallam, because the latter would be less likely to make complaint of any delay, *Panizzi* 4950, 4951.

Hamilton, Sir *George B.* [1835.] Despatch from him to the Duke of Wellington, dated Brussels, 28 November 1834, relative to literary institutions in Belgium, *App. p.* 484.

Hamilton, Sir *William.* [1835.] His qualifications as a trustee of the Museum, *Forshall* 666.

Hamilton, Hamilton, Esq. [1835.] Letter from, to the Duke of Wellington, dated Buenos Ayres, 16 February 1835, relative to literary institutions in Buenos Ayres, *App. p.* 491.

Hannay, Robert. [1836.] (Analysis of his Evidence.)—Impracticable to extend the hours at which the reading-room is open, 5091–5094——Want of facilities for study in the Vatican library, 5097–5102——Facilities in the Minerva library at Rome, are much less than in the British Museum, 5103–5106——In the manuscript department in the Paris library the facilities are as great as can be found; evils of the want of accurate catalogues; great extent of the holidays, 5107–5113——Strangers are not allowed a sight of the catalogues of printed books; in this department the whole plan and practice is bad; defalcation in the number of books, and from what causes; comparison in favour of the British Museum, 5114–5128——Advantage of the regulation for admission to the reading-room of the Museum which should not be relaxed, 5129–5136.

The library at Dresden contains one of the greatest and most valuable collections of books; facilities with which strangers can obtain books and manuscripts at their own homes, and advantages of this plan, 5137–5145——Particulars of the facilities experienced in the library at Munich, 5146, 5147——In no library are so many facilities enjoyed as at the British Museum, 5148——Supposed rank the Museum library holds compared with foreign libraries, 5149——Additional facilities must be granted to fit the Museum to the growing wants of the public, 5150——Evidence upon the origin and foundation of the British Museum, and improvements suggested for its better government and management of the different departments, 5151–5160.

Hanover. [1836.] Letter from Baron Ompteda to Viscount Palmerston, dated London, 8 December 1835, relative to library institutions and libraries in Hanover, *App. p.* 577–6.

Hansard, Luke Graves. [1835.] (Analysis of his Evidence.)—Nature of the employment of Mr. Millard with regard to the Index to the Fifteen volumes of Reports of Committees of the House of Commons from 1715, which he executed to witness's satisfaction, 2357–2362——Nature of his employment in combining the Sessional Indexes into one General Index, 1801 to 1826, which was also done to witness's satisfaction, 2363–2385——Mr. Millard also made indexes to several of the Woods and Forests Reports, under witness's direction, 2386, 2387——He was also employed to read the proof sheets of the Report of the Lords on the Dignity of the Peerage, 2388——Different persons formed the Annual Indexes to the Sessional Papers, some were done by Mr. Millard; but the combination into one index, and making cross-references, was his principal business, 2389–2398.

Harding, Joseph. [1836.] (Analysis of his Evidence.)—Practice of some booksellers at sales by auction not to bid beyond a certain point against one another, but to compete privately among themselves for the lots purchased; dishonesty of the practice; it extends to most sales by auction, 4327–4334——Opinion against Mr. Thorpe's evidence, who advises the trustees to buy manuscripts, &c. by commission; they would be bought much dearer, 4335, 4340–4344——A principal purchasing at an auction through an agent is a judicious practice, 4336–4339——Further evidence in favour of the Museum purchasing by their own officers, 4345–4352——They have employed agents, 4353.

Hardwicke, General:
[1835.] His bequest to the Museum, chiefly of birds, *König* 2795.
[1836.] His extensive donations of specimens of natural history to the British Museum, *Gray* 2464.
See also *Entomological Collection.*

Hardwicke, Lord. [1835.] His qualifications as a trustee of the Museum, *Forshall* 656.

Hares and Rabits. [1836.] Out of 21, only four specimens are named, *Grant* 1472——Many specimens of, placed in different parts of the room, *Grant* 1523——Reason for placing specimens of hares in different parts of the room, explanatory of the evidence of Dr. Grant on that subject, *Gray* 2936.——*See* also *Mammalia.*

Hargrave Manuscripts. [1835.] There is a catalogue of the Hargrave manuscripts, *Ellis* 1797.

Harleian Manuscripts:
[1835.] There is a catalogue of the Harleian manuscripts, *Ellis* 1797——The catalogue of these manuscripts is more brief than desirable, but is a very fair catalogue, and as good a one as there is in most foreign collections, *Forshall* 738, 739——Examination in answer to the remarks in Sir Harris Nicolas's pamphlet on the catalogue of this collection, *Forshall* 798–805.
[1836.] The catalogue is printed on too indifferent paper, *Evans* 3294——Preferable that this work should be printed in octavo, *Evans* 3301——Amplification and correction required, *Forshall* 4189–4193, 4197——The latter part of the catalogue is very bad, *Holmes* 4301——The catalogue, though subject to some errors, is generally correct, *Hannay* 5112——Mr. Horne's classed index to the fourth volume renders the other three much more servicable than they otherwise would be, *Nicolas* 3668, 3669——Error in the number of charters and rolls in this collection stated in the authorized publications of the Museum, *Forshall* 4424.

Harper, Mr. [1836.] Certain duplicates of books sold when Mr. Harper had the care of the collection, *Baber* 4703.

Haslar Hospital. [1835.] There is a museum of some extent there, *König* 2842——Supposed that the trustees would not object to an examination of the collection at Haslar Hospital taking place, with the view to the appropriation of valuable specimens to the British Museum, *König* 2848.

Hastings Tithes. [1836.] Both offers and threats have been made use of to compel witness to produce such of the Battle Abbey muniments as relate to this subject, *Thorpe* 3220–3222.

Hawes, Benjamin, Esq. [1835.] Letter from, to the trustees of the British Museum, dated 10 May 1831, *App. p.* 426.

Hawkins, Edward:
[1835.] (Analysis of his Evidence.)—Keeper of coins, medals, antiquities and works of art, 3441–3443—— Duties of the office, and salary, 3444–3446——Description of Anglo-Gallic coins, commenced by Mr. Combe and published by witness, 3449——Account of the Elgin marbles published by Sir Henry Ellis, and also by the Society for the Diffusion of Useful Knowledge, 3452–3456——Persons by whom the description of the collection of ancient marbles in the British Museum is edited, 3457–3460——Witness is generally consulted as to the value of collections of classical antiquities offered for

Hawkins, Edward. [1835.] (Analysis of his Evidence)—*continued.*

for sale, 3461–3463——How far witness decyphers Greek inscriptions and hieroglyphics in specimens of Grecian and Egyptian antiquities, 3464——Nature of the arrangement of the Elgin, Phigalian and Townley Marbles, 3465–3468.

Printed catalogues of the marbles and antiquities are published in quarto volumes and in the Synopsis, 3469——There is a manuscript catalogue of the gems, 3470——There is a catalogue of the greater part of the coins, that of the remainder is in progress, 3471–3474——How far the print-room is under the head of the department of antiquities, and whether it would be advisable to make them distinct departments, 3475–3487——Allowing the heads of departments the patronage of subordinate officers is open to objections, 3488–3496——The coins of the late King were catalogued before they came to the Museum, and the catalogue has since been verified with the coins, 3497——Mode of admission to artists for the study of statuary, 3498——Special permission must be obtained for the purpose of taking casts, 3498–3502.

Most of the moulds that have been taken of the finer statues are in the hands of Mr. Westmacott, subject to the condition of supplying casts at particular prices at the order of the trustees, 3503–3509——The repetition of making moulds from the originals is attended with danger; but there is no objection to the multiplication of casts from those moulds, and distributing them to the utmost extent among the people, 3510, 3511——Whether Mr. Westmacott has the monopoly of the moulds; certain Italian artists have been allowed by the trustees to take casts, 3512–3520——Italian artists get casts of fine objects to mould from, and casts circulated about the country are casts of casts, 3521, 3522——How far it would be advisable to establish an office of moulder in the Museum, 3523–3526——It is not worth the while of Italian artists to take casts of the original size, 3527–3529——There is not space in the Museum for allowing the medals and coins to be exhibited both sides at once, 3530–3536——Extent to which witness has been consulted by the architect as to the arrangement of the new buildings, in reference to witness's department, 3537–3540.

[Second Examination.]—Papers given in; memorandum of price at which Mr. Westmacott agreed to supply the Museum with casts of some portions of the Elgin marbles; and list from Mr. Sarti of moulds in his possession taken from original statues in the Museum, 3836——Injury that may be done to antique statues from taking frequent casts, besides producing discolouration, 3838——Proper care, skill and prudence being provided for, there would be less injury from moulding, 3840——A moulder being attached to the Museum would not cause the public to be supplied with cheaper and better casts than they now obtain, 3841——How far Mr. Westmacott's property in certain moulds of the Elgin marbles would prevent the trustees granting Mr. Sarti permission to cast from the originals, 3842–3853——The only objection that could arise is the unnecessary multiplication of mouldings, which may cause injury to the original, 3854.

Difficulty has arisen to an English artist in obtaining leave to cast from the statue of Apollo, on account of risk to the statue, 3855——The Elgin marbles have not been moulded at all since witness has been at the Museum, and no statue has been moulded twice during that period, 3857, 3858——The number of casts that can be taken from one mould vary according to the skill with which the original mould is taken, 3860——Injury to bronzes from frequent casts is more conspicuous than to marbles, unless protected by a strong patina, 3861.

[1836.] Keeper of the antiquities in the British Museum, 5664——Extent to which witness is interested in the examination, by the probability of being employed in conducting a medallic history of England, 5665–5672—— Satisfactory state of Collas's method of engraving in reference to medals generally, 5666–5671——It is much cheaper that the ordinary mode of engraving, 5673–5677——Cost of engraving the Soane medal by a first rate artist; satisfactory representation of that medal by the machinery, 5678–5683——Distortions or inaccuracies in medals in high relief are not fatal to the truth or beauty of the medal; the distortions were in the early specimens, 5684——Medals are liable to variations from being cast and afterwards chased, 5685–5687.

Engraving being made from an inferior medal, and afterwards compared with the superior, may be the cause of inaccuracies apparently attributable to the process of engraving, 5688–5689——Written opinions of Monsieur Lenormant and Monsieur Mionnet, two of the conservators of medals and antiquities in the Royal Library at Paris, in favour of Collas's machine, 5692–5696——The spirit and character of the medal is better given by this process than any other, 5697–5698——The machine can be worked by a common mechanic with care and attention, 5699–5702——The engraving the collection of medals in the Museum must be done either wholly or in part at the expense of the public, 5703, 5704——Utility of a medallic history of England; it would be incomplete if confined to the medals contained in the Museum; it must be extended to those in private collections; the invention would be cheaper and better than the present mode of engraving, 5705–5713.

Names of foreign national collections of medals and coins that have been engraved at the national expense, 5716–5719——Principle upon which the machine is constructed, 5720–5722——Deviation which is not visible to the eye should not be considesed a distortion, 5723–5724——Origin of the invention; improvements that have been made,

Hawkins, Edward. [1836.] (Analysis of his Evidence)—*continued.*

and extent to which it approaches perfection, 5725-5733——How far the plates exhibited before the Committee give a fair average of the style in which the work has hitherto been executed, 5736–5740——Value of the discovery in representing larger specimens, 5741–5748——In representing small specimens, 5749——Proportion of large to small in the Museum, 5750–5751.

Previous to the discovery outlines would have been recommended as the cheapest; the extraordinary expense of full engravings by the best artists, would render that course impracticable, 5752–5754——Parts of the medals to which the machine is least suited should be retouched by the hand, 5755, 5756—— Whether the machine would be equally applicable to medals previous to as since the 15th century; the questions addressed to the French conservators were relative to those since, 5757–5762——The whole of the coins relative to British history are not to be found in the British Museum, 5763, 5764 ——Many thousand engravings have been taken from one plate; the invention will not cause much difference, 5765–5767.

Whether the medallic history of Louis XIV. was published at the expense of government, or by the jesuits assisted by the government, 5768–5772——If the work is to be executed, the machine is the most practicable mode as regards the expense, 5773—— Casts have been taken from some of the medals in the Museum, with a view to engravings being taken from them by the machine, which engravings are faithful representations of the medal, 3774–5780——The machine cannot alter the form of the letters; it sometimes renders them indistinct, which may be remedied by engraving, 5781–5785 ——An engraving executed by a fine artist would be more pleasing to the eye, but not so faithful a representation of the medal as one executed by the machine, 5786–5791.

Hawkins's Fossils:

1. *Evidence relative to the purchase of.*
2. *Minutes of the Trustees, and correspondence relative thereto.*

1. *Evidence relative to the purchase of.*

[1835.] Mr. König was consulted on the purchase thereof, *Ellis* 131–134——His opinion, *Forshall* 901–906——Purchase by the Museum of Mr. Hawkins's fossils, and extent to which restorations have been made in them, *König* 2638–2693——Reports and correspondence relative to the purchase of Mr. Hawkins's fossils, *Forshall* 2962—— Examination upon the price paid for Mr. Hawkins's fossils, and upon the restorations in the large specimen; difficulty of stating to what extent the collection is deteriorated by the restorations, *König* 2963–3028.

[1836.] Sum that would have been sufficient for the purchase of; extent to which they have been made up, and how far the plates describe the artificial parts, *Sowerby* 128–136, 147–153——Examination relative to the recommendation by an officer of the Museum in favour of the purchase of Hawkins's fossils, *Bell* 431–444——Viewed as a whole, have not their equal in Europe, *Grant* 1523–1525——Hawkins's collection of Saurians are the largest, the most unique, and by far the most valuable, *Viscount Cole* 2749–2751——The large specimen is to a certain degree made up; the parts made up are not engraved in Hawkins's book; that specimen never was valued at 500 *l.*, *Viscount Cole* 2752.

2. *Minutes of the Trustees, and correspondence relative thereto:*

[1835.] Minute declining Mr. Hawkins's offer, dated 11 May 1833, *App. p.* 437—— Minute declining Mr. Hawkins's second offer, dated 8 June 1833, *App. p.* 437——Extract of a letter from the Rev. Dr. Buckland to the Right Hon. Lord Farnborough, dated 26 June 1834, *App. p.* 437——Letter from the Rev. J. Forshall to Charles König, esq., dated 10 July 1834, *App. p.* 438——Minute of general meeting, dated 12 July 1834, *App. p.* 438——Letter from Gideon Mantell, esq., F.R.S. to the trustees, dated 11 July 1834, *App. p.* 439——Letter from the Rev. W. Conybeare, F.R.S. to the Rev. J. Forshall, dated 7 July 1834, *App. p.* 439——Letter from W. Clift, esq., F.R.S. to the Rev. J. Forshall, dated 7 July 1834, *App. p.* 439——Letter from H. T. de la Beche, esq., F.R.S., to the trustees, dated 17 July 1834, *App. p.* 440—— Letters from the Rev. Dr. Buckland to the trustees, dated 7, 12 and 20 July 1834, *App. p.* 440, 441——Minute of committee, dated 1 August 1834, *App. p.* 440——Extract from Mr. König's reports, dated 12 February 1835, *App. p.* 441——Minute of committee, dated 14 February 1835, *App. p.* 442—— Extract from Mr. König's report, dated 12 March 1835, *App. p.* 442——Minutes of committee, dated 14 March 1835, *App. p.* 442, 443——Minute of sub-committee, dated 26 March 1835, *App. p.* 443——Letter from the Rev. Dr. Buckland to the Rev. J. Forshall, dated 12 March 1835, *App. p.* 443.

Haworth, Mr.:

[1835.] Mr. Haworth's collection was an important and valuable one, but its purchase was declined by the trustees, *Samouelle* 3829–3833.

Haworth,

857

Haworth, Mr. [1836.]—*continued.*

[1836.] Extract from Mr. König's report, relative to Mr. Haworth's collection, *Forshall* 5591.

Heads of Departments:

1. *Their Qualifications and Duties, and Alterations proposed in the latter.*
2. *Communications with the Trustees, and Admission to the Trusteeship.*
3. *How far they should be independent of each other, and have the Patronage and Control of their Departments.*

1. *Their Qualifications and Duties, and Alterations proposed in the latter:*

[1835.] How far the trustees have the power to obtain the most distinguished men in each branch of science, with a view to placing them at the head of departments, *Children* 3069-3071——The public have a moral security from the character of individuals appointed as heads of departments in the Museum, that they will keep up the reputation which acquired them the appointment, *Brown* 3730.

[1836.] Jointly to revise the Synopsis, and to be responsible and each sign his own part, *Rep. p.* iv——To make entry of accessions to collections, and to report such annually to trustees, together with desiderata and the state and condition of their departments, vouched by the signature of the principal librarian, *Rep. p.* v——Are willing at all times to compensate for the want of catalogues by their personal attention and superintendence, *Owen* 498——Heads of departments are generally men of science in those particular departments to which they have been appointed, *Bennett* 1768-1770——The character of the individuals appointed as heads of departments is a security to the public that they will keep up their reputation, *South* 797.

They should attend to the more popular branches, which have hitherto been superseded by the higher branches, *Sowerby* 48-62——Evils of their having to attend parties round the Museum instead of attending to scientific objects, *Bell* 338-340. 347——No objection to their being secretaries to other learned bodies, if the duties do not trench on the time that ought to be devoted to the Museum, *Bell* 446.

2. *Communications with the Trustees, and Admission to the Trusteeship:*

[1835.] Witness and other chiefs of departments have not seats at the board by virtue of their offices, *Ellis* 328, 331—— No inconvenience attends the practice of chiefs of departments, when summoned before the trustees, being kept standing, *Ellis & Forshall* 406-422——It is not the etiquette for the heads of departments to sit before the trustees when called in to be examined on any specific subject, *König* 2690, 2691.

[1836.] Objections to admitting heads of departments in the Museum to the trusteeship, *Grant* 1005——Advantage if the curators always had the means of expressing the wants of their departments to the trustees, *Owen* 582——Evidence upon the written communications of the curators to the trustees, *Greenough* 3951-3958—— There is not that general consultation and cordial intercourse between the trustees and witness, as principal of the printed book department, which would be satisfactory, *Baber* 4590, 4591.

3. *How far they should be independent of each other, and have the Patronage and Control of their Departments:*

[1835.] No disadvantage has hitherto arisen from assistants being appointed without consulting heads of departments, *Ellis* 1980, 1981——Allowing them the patronage of subordinate officers is open to objections, *Hawkins* 3488-3496.

[1836.] Recommendation that a keeper should be placed at the head of each department, to be responsible for the arrangement, condition and safe custody of the collections under him; heads of departments to meet once in three months, to consult on internal arrangements, and submit the result jointly to the trustees in writing, *Rep. p.* iv—— Should be independent of one another to pursue their own studies, and have sufficient attendants under them for manual details, *Sowerby* 61, 62——They are not further limited in the choice of their pursuits than by want of funds, *Sowerby* 78——Sir Humphrey Davy's opinion in favour of sub-division of labour; each department being under a separate head, *Grant* 313-315——They should be more independent than they are, but should not have so much power as the French curators, *Bell* 407——Should be independent of each other, but responsible to superior authority, *South* 780-784. 1095-1097, *Bowerbank* 983——Benefit would not be derived by making them independent, *Archbishop of Canterbury* 5550-5553.

Should have the appointment of their own subordinates, *South* 780-784——Such a plan would not be beneficial, *Archbishop of Canterbury* 5550-5553——They should have the management of those under them, *Sowerby* 63-65——Desirable to consult them previously to appointing officers under them, *Bennett* 1873, 1874, *Panizzi* 4926-4928—— Are consulted through the secretary previously to filling up vacancies, but which communication from the secretary puts it in the power of the officer to communicate personally with the acting official trustee, *Archbishop of Canterbury* 5503-5506.

Hedlinger. [1836.] Superiority, as regards minuteness and beauty of execution, of the medals executed by him, *Wyon* 5855.

Heming, Dr. See *Conchological Collection,* 3.

Henning, John. [1836.] (Analysis of his Evidence.)—Production of specimens of engravings from works by witness on the Parthenon and Phygaleian marbles, done by the French machine and Mr. Bate's, with examination thereon, 5936–5951——Difficult to say whether a medallic history of England could be carried on as a commercial speculation; great expense must be incurred independently of the engraving, 5946.
Impossible to engrave correctly by a machine without the most perfect casts, 5946——Witness's work pirated in France; engravings taken from it, and his name expunged, 5946–5951——Letter from witness to the Chairman of the Committee, stating that he is in possession of a volume of the works of engravings published in Paris, in which his name is acknowledged, 5951——Advantage of making casts in enamelled glass; expense at which such a cast may be made, 5945, 5947–5950.

Henry the Second, Medal of. [1836.] Variations in different casts of this medal, *Hawkins* 5687——Copy of this medal from an imperfect cast, and manner in which the machine has faithfully represented the imperfections of the original, *Hawkins* 5688, 5689.

Henry the Fourth, Medal of. [1836.] Engravings of this medal made by the English and French machines, and examination thereon by way of comparison between the two, *Hawkins* 5688, 5689, *Brockedon* 5893–5895. 5899, *Nolte* 5956——Opinion of the engravings of the medals of Henry the Fourth by the French and English machine, *Wilson* 6008.——*See* also *Engraving Machines.*

Henry the Eighth. [1836.] A celebrated work written by Henry the Eighth against Luther presented to Cranmer, with his notes in it, was once in the Museum, but was sold by auction three times, *Cochran* 3464–3466.

Heraldic Manuscripts. [1836.] An index to the heraldic manuscripts might be printed separately, *Forshall* 4378.

Holmes, John. [1836.] (Analysis of his Evidence.)—Assistant in the manuscript department; duties and hours of attendance; appointed by Mr. Forshall, under a presumed minute of the trustees; such mode of appointment not satisfactory to the assistants, 3965–3983——Amount of witness's daily pay; deductions for absence either through illness or regulations of the Museum; payment takes place monthly by the hands of a messenger; wish of the officers for an alteration of that system, 3984–3999——How far the manuscript department is in a transition state, 4002–4006——Compilation of the Arundel catalogue by the assistants in the department, and revision of it by Mr. Forshall, 4007–4020——How far manuscripts in use in the reading room are in the actual custody of assistants, keepers or attendants, and whether sufficient vigilance is exercised to prevent manuscripts being injured, 4021. 4117.

Readers discovering defects in manuscripts would point them out to the chief attendant of the reading room, or to one of the officers in the manuscript room, 4118–4120——Want of a room for collating manuscripts, 4121–4124——Great want of minor accommodations in the Museum for the officers and the public, 4125–4133——Suggestion for one of the assistants being responsible, and superintending the delivery and return of manuscripts daily, 4134–4139——Opinion in favour of a selected exhibition, under cases, of valuable manuscripts, 4140–4143——A journal showing the dates and particulars of acquisitions in the manuscript department desirable, 4144, 4145——At a future time if any division takes place in the department, the oriental might be divided from the general, 4146–4148.

[Second Examination.]—Nature of the examination of the manuscripts which has taken place twice in six or seven years, 4260–4269——The Rev. T. H. Horne, one of the assistants in the printed book department, has always been paid by quarterly checques from the trustees, 4270–4272——Previous to any index being made, the whole of the catalogues, with certain exceptions, require to be rewritten; plan and particulars of a classed catalogue of manuscripts undertaken by witness in his own time, and examination thereon, 4273–4302——Extent to which there are catalogues to the charters in the Museum, and means the public have of becoming acquainted therewith, 4303–4307——How far the manuscripts are all catalogued; nature of the list of additions, and in what manner distributed, 4308–4321——Whether possible to add to each manuscript a description of its contents, similar to that given in the catalogue, 4322, 4323——Whether possible to have a numerical list of the manuscripts for the use of the reading-room completed every three months, 4324.

Holmes, Mr. [1836.] Particulars relative to the appointment of Mr. Holmes, *Archbishop of Canterbury* 5507–5509.——*See* also *Index to Manuscripts.*

Holy Land. See *Prudhoe*, Lord.

Home Secretary. [1836.] In the event of the trustees being responsible to him, his jurisdiction should be similar to that of a visitor of a college, *South* 1100–1107.

Homer, Head of. See *Moulds.*

Hooper's Catalogue. See *Cottonian Manuscripts.*

Hornbills. [1836.] Collection of is poor as compared with those of Paris, *Grant* 1523, Answered by, *Gray* 2991.——*See* also *Ornithological Collection*, 1.

Horne, Rev. *T. H.*:

[1835.] Amount of his salary, and out of what fund paid, *Ellis* 1246–1250——His outline of classification printed by order of the trustees; he has since changed his mind on various portions of it, *Ellis* 1765–1773——Number of copies printed, and how distributed, *Forshall* 1056–1063——His employment on the classed and alphabetical catalogues, and whether he has sufficient assistance, *Ellis* 1728–1751.

[1836.] His plan for a classed catalogue is one of the best, *Panizzi* 4855.

See also *Harleian Manuscripts. Salaries.*

Horns. [1836.] Valuable collection of, formerly occupying the walls of the lower rooms, which are in the Museum still, *Clift* 656——Sir Joseph Banks' report of 27 February 1809 relative to the collection of horns in the basement of the Museum, *App. p.* 575.

Horsfield, Thomas, M. D. [1836.] (Analysis of his Evidence.)—Fellow of the Royal and Member of the Linnean Society, at present employed in the Museum of the East India Company; works of which witness is the author, 2531–2533——Collection of natural history formed by witness in Java during a residence of seventeen years there, 2534——Defects in the department of natural history in 1819, and improvements within the last seven or eight years, 2536, 2537——Collection of mammalia in the museum at Leyden was in 1831 much more extensive than that of the British Museum, 2538–2540, 2544, 2545——

Horsfield, Thomas. [1836.] (Analysis of his Evidence)—*continued.*

2545——Increase in the collection of the British Museum since 1831 has been in proportion to the space allotted to the exhibition, 2541–2543——Great interest taken by the King of Holland and the Government to complete the museum at Leyden; travelling naturalists are employed, who visit all the Europen nations with duplicates for exchange, 2546–2552.

There is no material defect in the preservation of the specimens in the British Museum, 2553——The classification is according to the system of Cuvier; it is sufficiently perfect to afford effectual assistance in study, 2554——Any deficiency of arrangement is attributable to want of space; the precise space would require calculation, but it should be a very large room and well lighted, 2555–2557——Every facility afforded to scientific inquirers by the officers of the Museum; the facilities would be greater if the collection was larger, 2558–2564——Ornithological collection is the most perfect collection in the Museum, and has been formed in the last six or eight years, 2565——The Leyden collection of mammalia is greatly superior to that in the British Museum, 2566, 2567——Ornithological collection at Leyden is not exposed to the public view, 2568–2570.

The entomological collection, as regards the British, was nearly as extensive in 1819 as at present; the foreign has been improved within the last six or eight years, but is now inconsiderable, 2571——The zoological collection is not miserable in science or materials, 2573——The nomenclature adopted is that of Cuvier, and a better system could not be adopted in regard to the mammalia, 2574–2582——Arrangement of the entomological collection at the India House, a catalogue of which is still in progress, 2583–2586——Comparison between witness's opinion and that of Mr. Vigors, with regard to the deficiencies in the mammalia and ornithological collection, 2587–2593——Number of species of birds in existence, and number in the British Museum, 2589, 2590, 2593–2596——A public collection of natural history can never he complete, it should always be in a state of progression, 2595–2598.

Horton, Sir *W.* See *Stanley,* Lord.

Hortus Kewensis. [1836.] The sale of this work proves that the Museum catalogue, if published, would meet with a sale, *South* 761.

Hot Air. [1836.] Portion of the Museum that is heated by means of hot air, *Smirke* 5413.

Hotel de Richlieu. See *Richlieu,* Hotel de.

Hours of Admission:

[1835.] The Museum could not be kept open more than six hours per day without considerable increase in the establishment, *Forshall* 1284——The Museum open of an evening from four till eight on Mondays and Fridays, during the summer months, from 1771 to 1801; cause of that practice being discontinued, and objections to its renewal, *Ellis* 1307–1314——When the hours of attendance at the reading-room was altered from ten till four to eleven till five, the readers memorialized the trustees to go back to their old hours, *Ellis* 1313——Objections to opening the Museum from nine till eight, *Ellis* 1315–1318.

[1836.] Nature of the extension thereof recommended, *Rep. p.* iv——The hours of admission should not be extended, *Sowerby* 140, *South* 1170–1174——During the summer months the collections and library should be open till eight o'clock, *Bell* 459–469——Till five o'clock, *Gage* 5067–5070——From nine till an hour before sunset, *Nicolas* 3720–3725——Should be extended, if it could be done with propriety, *Vigors* 1431, 1432, *Yarrell* 2069–2085, *Griffiths* 2159, *Mathew* 3415–3424, *Edwards* 4752——It would be a convenience to artists, *Lear* 3207, 3208——It would be a question of expense, *Baber* 4720–4728——It should be open as early and as late as possible, even with artificial light, *Vigors* 1440–1442——It would be beneficial to extend the hours as long as there was light, *Richardson* 2301——Objections to opening the Museum by candlelight, *Petrie* 4979, *Hannay* 5159.——*See* also *Reading Room. Sicily. Zoological Society.*

House of Commons Library. See *Donations and Bequests.*

Housemaids. [1835.] Are appointed by the principal librarian, *Ellis* 6–10.

Huish, Robert. [1836.] (Analysis of his Evidence.)—No comparison can be drawn between the facilities afforded in the reading-room of the British Museum and that of foreign libraries, 4984, 5007——Particulars relative to the formation of the library at St. Petersburgh; its classification is according to the size of books, and not according to subjects; defects in its catalogue; difficulty of Englishmen obtaining admission, 4985–5005——The facilities in the reading-room of the Museum cannot be improved; persons going there on the usual recommendation are sure to meet with them, 5008–5010——Deficiencies in the library of the Museum, as regards common-place books, owing to the niggardly disposition of the Government; how far those deficiencies have been represented to the heads of the department, 5012–5022.

Huish's Life of George the Third. [1836.] This work was not in the library of the Museum until purchased, upon a representation being made, *Huish* 5022.

Humming Birds. [1836.] Collection of humming birds not equal to that of Paris, and some private collections, as those of Mr. Loddige and Mr. Leadbeater, *Grant* 278, 1523, *Gray* 2988——The collection is most deficient in humming birds, *Gray* 2949.
See also *Ornithological Collection.*

Hunter, Dr., Coins of. [1835.] They were bequeathed to go to Glasgow, where they form part of the Hunterian museum, *Ellis* 1542, 1543.

Hunter, Mr. [1835.] A selection from his collection of insects made on his voyage with Captain King, was presented to the Museum, *Samouelle* 1834.

Hunterian Collection. [1836.] Particulars relative to the publication of the catalogue of this collection, *Owen* 501–508, 517——Conditions of depositing it with the College of Surgeons, *App. p.* 541.

I.

Ichthyological Collection:

1. *Arrangement of the Collection.*
2. *State of the Nomenclature.*

1. *Arrangement of the Collection:*

[1835.] The collection of fishes in the French museum is very good, *Forshall* 707——This collection is small; inspection of it by Baron Cuvier, *König* 2697–2706.

[1836.] The collection of fishes is an opprobrium to the British nation as compared with the collection in France, *Grant* 1068, 1069, 1077——Great improvements have been made in the collection of fishes, but it falls short of perfection, *Vigors* 1413, 1414——Additions to this collection; former and present space occupied by the cases, *Gray* 2457——The crowded state of the spirit preparations renders it difficult for the eye to reach the specific names when they are attached to the specimens, *South* 717, *Grant* 1505——The collection of, in spirits, are as good as fish can be preserved in spirits; value of the collection, *Yarrell* 2000–2005.

The fishes are arranged in genera, but in some instances they are placed in masses as the collections have reached the Museum, *Bennett* 1702——The collection of fish in the Museum ranks fourth among the vertebrated animals, *Richardson* 2243——No reason to find fault with the classification, *Yarrell* 2006–2009——The collection of fish does not contain above a fourth part of the species known, but it is by far the best that the country contains, *Richardson* 2187, 2188, 2209——Nearly 1,000 species of fish in the Museum, *Gray* 3030——Visit of Baron Cuvier to the Museum for specimens of fish for his work on Ichthyology, *Gray* 3308.

2. *State of the Nomenclature:*

[1836.] The naturalist's name whose system is adopted is not attached to the specimens, *South* 1131——Not one in fifty named, *Grant* 1503, 1504——There are several good specimens of dried fishes exhibited, but for want of names are useless to the student and the public, *Grant* 1503——The naming is not so complete as in other departments, *Bennett* 1835——No reason to find fault with the nomenclature, *Yarrell* 2006–2009——They are not generally accurately named; the generic names are correctly given, but not the specific names, *Richardson* 2215–2221——There are many species of fish which have only China or Brazil upon the ticket, but the family name is appended to the whole of the shelf, *Richardson* 2226–2228.

See also *Catalogues of Books and Collections,* V. *Jardin des Plantes,* III. 1. 5. *Montagu,* Colonel.

Ichthyology. See *Cuvier,* Baron. *Donovan,* Mr. *Fossil Fish. Valencienne,* M. *Yarrell's Fishes.*

Ichthyosaurus:

[1835.] Want of room prevents the vertebræ of the large head of the ichthyosaurus being now exhibited, *König* 2941–2947.

[1836.] Comparison of the pleiosaurus dolichodeirus with Mr. Hawkins' splendid specimens of ichthyosaurus, *Grant* 1525——Extent to which the principal ichthyosaurus in that collection is made up, and how far the additions are taken notice of in Mr. Hawkins' book, *Viscount Cole* 2752–2763.

Ilissus, Statue of. [1836.] Estimated cost of moulding the statue of Ilissus, *Weigall* 203–204——The Ilissus is an instance of light and shade being destroyed, *Rennie* 1208–1213.

Illuminated Manuscripts. See *Light.*

Imperial Library. See *Russia.*

Income and Expenditure of the British Museum. [1835.] Sources of income of the Museum for general purposes, *Forshall* 826——Annual printed accounts of receipts and payments, 1812 to 1835, *App. p.* 293–356——General account of all sums of money received and expended on account of the British Museum, 1821 to 1833, under certain heads, *App. p.* 358.

Index to Collections. [1836.] A general index to all the collections should be formed and printed, *Forshall* 4397.

Index to Manuscripts. [1835.] A general index to the manuscripts is desirable, but not essentially necessary; cause of the one that was begun being abandoned, *Forshall* 750–761——Number of titles that could be got through in a day, in making a correct and useful index to the printed catalogue of manuscripts, *Madden* 2202–2211——Number of titles written while in the service of the Museum, *Millard* 2349——This work will not be continued till catalogues are revised, *Ellis* 2346–2348——Opinion, without communication with the trustees, that they would not wish to urge the inquiry further as to this work, *Forshall* 2352.

Ill health caused the gentleman employed on that index to be inefficient, *Forshall* 756–780——One was commenced at the recommendation of Lord Colchester; employment of Mr. John Millard thereon for three years, to the satisfaction of witness, *Ellis* 1807–1822. 1873–1877, 1907–1915——Recommendation of Mr. Millard by Lord Colchester, through Mr. Horne, *Ellis* 1878–1881, 1934–1943——Portion of the work Mr. Millard was employed on, *Ellis* 1882–1896——Qualifications requisite for a person to make a classed index to manuscripts, *Ellis* 1897–1906——Mr. Millard's attendance; how far efficient; his discharge, and period he remained in the service of the Museum afterwards, *Ellis* 1916–1953. 1982–2069, *Madden* 2145–2202——Further evidence as to the discharge of Mr. Millard, *Forshall* 1823–1871——Economy assigned as the cause of witness's dismissal from the Museum, *Millard* 2303.

Instances of mistakes occurring in the index on which Mr. Millard was employed, *Madden* 2072–2114——Witness not fully prepared at last examination with full evidence as to mistakes, *Madden* 2353–2356——Impression that there is no important error in the index to manuscripts referred to by Sir F. Madden, *Millard* 2290——Why mischief could not arise from the errors that have been pointed out, *Millard* 2349——Minutes of the trustees, and letters from witness relative to the discontinuance of the general classed index to manuscripts, and memorials from Mr. Millard put in, *Forshall* 2212——Examination thereon, *Millard* 2263–2269. 2276——Extent to which witness confirms the evidence of Sir Henry Ellis, and Sir Frederick Madden, relative to Mr. Millard, *Forshall* 2213–2216.

Date of minute appointing witness to undertake index to manuscripts, *Millard* 2255–2257——Witness's statement as to his duties and attendance, his absence and causes thereof, *Millard* 2258–2260, 2277, 2278, 2288, 2312–2338——Monthly reports made by witness to Sir H. Ellis and Mr. Forshall of the progress of the index, *Millard* 2349——State of the index on witness's quitting the Museum, *Millard* 2270——Superintendence of the index first by Sir Henry Ellis, and subsequently by Mr. Forshall, *Millard* 2279–2285.

Minute of general meeting respecting leave of absence to Mr. Millard, dated 13 March 1830, *App. p.* 425——Minute of committee respecting the continued assistance of Mr. Holmes, and notice to Mr. Millard, as to the term of his engagement, dated 12 February 1831, *App. p.* 426——Letter from the Rev. J. Forshall to Mr. Millard, dated 17 February 1831, *App. p.* 426——Letter from Benjamin Hawes, esq., to the trustees of the British Museum, dated 10 May 1831, *App. p.* 426——Memorial of Mr. Millard to the trustees, dated 11 May 1831, *App. p.* 426——Minute of committee respecting memorial, dated 14 May 1831, *App. p.* 427——Minute of committee on the same subject, dated 11 June 1831, *App. p.* 427——Letter from Rev. J. Forshall to Mr. Millard, dated 16 June 1831, *App. p.* 427——Letter from Mr. Millard to Henry Ellis, esq., dated 7 July 1831, *App. p.* 427——Note from Mr. Millard to the trustees, dated 7 July 1831, *App. p.* 427——Minute of committee on Mr. Millard's letter, dated 9 July 1831, *App. p.* 427——Memorial of Mr. Millard to the trustees, dated 4 January 1833, *App. p.* 428——Minute of committee on above memorial, dated 12 January 1833, *App. p.* 428——Letter from the Rev. J. Forshall to Mr. Millard, dated 16 January 1833, *App. p.* 428.

Jardin des Plantes:

I. *Its mode of Government; its Objects; Comparison with the British Museum.*

II. *Heads of Departments, and Lectures given by them.*

III. *Its Collections.*

1. Natural History generally.
2. Conchological Collection.
3. Entomological Collection.
4. Fossils.
5. Ichthyological Collection.
6. Mammalia.
7. Ornithological Collection.
8. Quadrupeds.
9. Reptilia.
10. Zoological Collection.

I. *Its mode of Government; its Objects; Comparison with the British Museum.*

[1835.] Difference between the British Museum and the Jardin des Plantes in Paris, as regards the management and value of collections, *Ellis* 239–242——Mode of appointment of the governing body of the Jardin du Roi in Paris, *Brown* 3724–3727——Extent to which there is an analogy between the constitution of the Museum and that of the Jardin due Roi, *Brown* 3741——Is under the control of the Minister of Public Instruction, as regards its administration, and under that of the Minister of the Interior as regards buildings and repairs, *App. p.* 524——Annual expenses, and out of what funds payable; admission of the public, *App. p.* 524, 525——Departments into which it is divided, and contents thereof, *App. p.* 524.

[1836.] Government grant for its support, and comparison with that of the British Museum, *Sowerby* 86–93——Period during which the Jardin des Plantes has existed, *Bennett* 1928, 1929——Objects of, supposed to be nearly the same as that of the British Museum, *Sowerby* 77——It is an institution of the highest scientific reputation in Europe, *Sowerby* 83——Extent to which popular as well as scientific objects are attended to in that institution, *Sowerby* 70–76——Constitution of the governing body of the Jardin des Plantes, which works well as regards increase of collections, but not as regards the publication of catalogues, *Owen* 551–564.

Its superiority over the British Museum with regard to the condition and management of its collections and its support from Government, *Grant* 1523——The establishments in France are regulated by a committee of officers, subject to the minister of the interior or of public instruction; difference between such a constitution and that of the influential men in the British Museum, *Panizzi* 4908–4918——The reputation of the Jardin des Plantes is an European reputation, as is that of the British Museum, *Owen* 590, 591——There is no synopsis in the Paris Museum, *Turner* 1949–1951——Periods at which visitors are admitted to the museum at Paris, *Gray* 3139——They have not the same facilities there as at the British Museum, *Gray* 3140.

II. *Heads of Departments, and Lectures given by them:*

[1836.] Names of the principal officers, *Sowerby* 70–76——Heads of departments are independent of each other, forming a board of direction, and responsible to the minister of the interior, *Sowerby* 80–82——Number of professors and mode of appointment, and advantages to science in consequence, *Grant* 296–306——The officers held other situations; offices held by Cuvier, *Owen* 585, 586——How far professors in the Jardin des Plantes regulate the general arrangements, *Gray* 2710——Constitution of the Jardin des Plantes has caused the officers to get their relatives placed on the establishment, *Owen* 583, 584, 594——But they have been men of high scientific attainments, *Owen* 595——The lectures of that institution have caused the improvement of the different collections, *Owen* 587–589——Manner in which the lectures and public exhibition are compatible at the same time, in the Jardin des Plantes, *South* 804–826.

Jardin des Plantes—continued.

III. *Its Collections:*

1. Natural History, generally:

[1835.] Number of divisions and heads of departments in natural history in the Jardin des Plantes at Paris, *Gray* 3288–3290——The natural history department in the Jardin du Roi is more extensive than that of the museum; sub-divisions of the department *Brown* 3732, 3733.

[1836.] The gallery that contains birds, has cases of shells, corals, radiated animals, &c. *Gray* 2636——Some of the cases of the collection of fish and reptiles there are placed too high, but in all collections some portions cannot be avoided being placed above the reach of the eye, *Turner* 1981–1984——Mode in which specimens of fish and reptiles are placed in the French collections, additions only placed on re-arrangement of the respective class, *Gray* 2718.

2. Conchological Collection.

[1836.] The rapid increase of shells prevents complete arrangement in the Paris collection, *Turner* 1599–1604——There are 4,000 species of shells therein, *Turner* 1571, *Gray* 3056——Evidence relating to the arranging and naming them, *Gray* 3061.

3. Entomological Collection.

[1836.] There are 25,000 species of entomology in the Paris collection, *Gray* 3096.

4. Fossils.

[1836.] Arrangement of fossil remains at Paris, *Gray* 3117——It is a magnificent collection, *Gray* 3119.

5. Ichthyological Collection.

[1836.] In Paris there are 4,700 species of fish, *Gray* 3031——More than four times as many fishes in the Paris collection as in the British Museum, *Grant* 1092.

6. Mammalia.

[1836.] The collection of mammalia in the Jardin des Plantes is superior to that of the British Museum in number, arrangement, condition and value, *Grant* 1089–1091——Manner in which the management of the collection of mammalia of the Jardin des Plantes has caused it to be more useful to science than that of the British Museum, *Bennett* 1843–1848——There are 500 species and 1,500 individuals, *Gray* 2900.

7. Ornithological Collection.

[1836.] The Paris is the second European collection as regards birds, *Grant* 1523, *Gould* 2343——It is usual in the bird-stuffing department in the Paris Museum to transfer the wings and tails of different birds to others, *Turner* 1955, 1956——The scientific value of the collection of birds at Paris is infinitely greater than that of the Museum, *Grant* 1093——Collection of birds in the Paris Museum is good, but witness does not approve of the mode of stuffing, *Turner* 1646–1648——The number of birds according to Deleuze is 2,300 species, and 6,000 individuals, *Gray* 2947——Large space allotted to the exhibition of birds, *Gray* 2957.

8. Quadrupeds.

[1836.] Imposing effect of the lower room there, on account of the number of large animals, *Gould* 2364.

9. Reptilia.

[1836.] There are 500 species and 1,800 individuals of reptilia, *Gray* 2999.

10. Zoological Collection.

[1836.] There is much more space for zoological collections there than in the British Museum, *Vigors* 1345, 1346——Time when zoological returns are given in the Jardin des Plantes, *Gray* 3134.

See also *Admission of the Public. Conchological Collection*, 1. *Corals. Entomological Collection. Fossils. Hilaire, St., M. Geoffrey. Leyden Museum. Light. Mammalia*, 5. *Mollusca. Jardine, Sir W. [1836.] Has figured and described birds from specimens in the British Museum, *Gray* 2963.

Java. See *Natural History.*

Javanese Islands. See *Leyden Museum.*

Jean, Baron de, Collection of. [1835.] Catalogue of the Baron de Jean, *Samouelle* 3914.

865

Jean Rovère, Medal of:
[1836.] Engraving of this medal taken from an imperfect cast, *Holte* 5832.

Jeannin, Peter, Medal of;
[1836.] Distortion in the engraving of this medal from the Tresor de Numismatique, which engraving was done with the French machine, *Doubleday* 5906–5909——Answer to the imperfections stated therein, *Nolte* 5956–5959.

Jenyns, Mr. [1836.] His work is of sufficient authority for the naming the collection of British birds, *Yarrell* 1993–1995.——*See* also *Ornithological Collection*, 3.

Jerningham, G. S., Esq. [1836.] Letter from, to Viscount Palmerston, dated the Hague, 25 September 1835, relative to literary institutions and libraries in the Netherlands, *App. p.* 577–10——Letter from, to John Backhouse, esq., dated the Hague, 17 June 1834, relative to literary institution and libraries at the Hague and Leyden, *App. p.* 577–20.

Jerome, St. [1836.] The Charlemagne Bible is the only entire version of the Holy Scriptures by St. Jerome, *Evans* 3352–3354.

Jesuits. See *Louis XIV.*, Medals of.

Jewel Office. See *Saxony.*

John of Bologna. [1836.] Without travelling, artists cannot have the means of studying from his works, *Weigall* 230.

Johnson, Dr. *Samuel.* [1835.] Letter from, to F. A. Barnard, Esq., dated 28 May 1768, pointing out the best means of completing the Royal Library, *App. p.* 386.

Josi, Henry:
[1836.] (Analysis of his Evidence.) Witness's duties and salary as assistant keeper in the department of antiquities and arts, having the care of the print-room, 5185–5188——Nature of the catalogue or index to the prints and drawings at present in use, and description of one that is forming, 5189–5193——The print-room is well lighted, ventilated and warmed, 5194–5198——Nature of the restrictions under which visitors are admitted, 5200——Estimated value of the prints, and number that there are in the collection, 5201–5203——Value of the collection of the etchings of the Dutch masters recently acquired by the Museum, collected by Mr. Sheepshanks; particulars relative to the contents of that collection, 5207–5216.

Period in which the classed catalogue of prints will be completed; its publication would be useful, 5217–5221——Care taken to prevent the prints being injured by turning over the leaves; artists and visitors are more careless on that subject in this country than in France, 5224–5228——Number of visitors who frequent the print-room per day; there were complaints made during Mr. Ottley's illness, which have been removed since witness was appointed, 5229–5234——Vienna collection of prints is more perfect and extensive than that of the British Museum, 5235–5239.

Paris collection is more numerous and rich than that of the Museum; mode of admission for critical examination at Paris, 5240–5241——Extent of superintendence exercised by Mr. Hawkins, the chief of the department of antiquities and arts, over the print-room, 5243–5251——Not desirable to show greater facility for examining the prints critically than is afforded at present; it is equal to that afforded by most foreign collections, 5252–5255——Annual allowance for the improvement of the collection, which when not sufficient for the purchase of any particular collection, a special application is made to the trustees, 5257–5259——Extent of the collections of drawings by ancient masters in the collections of Mr. Payne Knight and Mr. Cracherode, 5264–5266——The money not having been paid for the collection lately purchased, it is placed under seal, 5267–5269.

Josi, Mr. [1836.] Some of the trustees were consulted, testimonials required and inquiries made, and the Chancellor and Speaker's concurrence required previous to the appointment of Mr. Josi to succeed Mr. Ottley, *Archbishop of Canterbury*, 5514, 5515.

Journal des Savans. [1836.] There is but one entry and one work, but it comprises many hundred volumes, *Panizzi* 4773.

Journeymen. [1836.] Circulation of casts at a low rate would tend to place our journeymen on a level with those of France, *Rennie* 1242.

Joursanvault, Baron de, his Collection:
[1835.] Particulars as to journey to Pomard, near Beaume, in France, to inspect this collection; cause of the purchase not being made; the trustees have since obtained all that was valuable from it, *Ellis* 1387–1449——Expenses of journey, *Ellis* 1582, 1583.

Extract from Nicolas's observations on the state of historical literature, concerning Sir Henry Ellis's journey to Pomard, *App. p.* 432——Letter from Prince Polignac to M. Paul de Fontenay, referred to in Sir Henry Ellis's Evidence, *App. p.* 432——Extract from the Morning Journal of Saturday, 12th September 1829, *App. p.* 433——Note from the Baron de Joursanvault to Sir Henry Ellis, dated 3d September 1829, *App. p.* 433——Report made to his grace the Archbishop of Canterbury, by Sir Henry Ellis, upon the manuscripts at Pomard, dated 7th September 1829, *App. p.* 433.

Joursanvault, Baron de, his Collection—*continued.*

[1836.] Observations relative to Sir Henry Ellis's explanation on the subject of the Joursanvault manuscripts, and upon the necessity of obtaining them, if it could be done without acceding to the absurd terms of the owner, *Nicolas* 3726–3728.

K.

Kangaroo. [1836.] Specimen of the kangaroo first brought to England is in one of the glass cases in the saloon; it is remarkably good, and larger than any other kangaroo, *Children* 2832–2835.

Kemble, Mr. [1836.] A gentleman distinguished for his knowledge of Saxon and northern literature, declined a situation in the Museum from the degraded situation of the assistants, *Holmes* 4138.

King, Captain *P. P.* [1835.] Specimens collected in his survey of the South American Continent were presented to the Zoological Society, *Gray* 3358——None of his collection came to the Museum after his survey of New Holland, *Samouelle* 3834.

See also *Hunter*, Mr. *Zoological Society.*

King's Library:

[1835.] The library of His Majesty King George 3, given by His Majesty King George 4 to the British Museum, is kept whole and entire, *Ellis* 461–466——Advantages which the British Museum derives from King George the Third's library; money value of the books; when at the Palace access to it could only be obtained by leave of His Majesty, or through the influence of the librarian, *Ellis* 496–506——The trustees have the power of removing it to Oxford, if thought most conducive to the public good, *Forshall* 1377——There is a catalogue of the old royal library manuscripts, by Casley, *Ellis* 1797——Extent to which the catalogue of this library, made by Sir Frederick Barnard, is a classed catalogue, *Ellis* 1686–1689——Report from the Select Committee on papers relating to the royal library presented by His Majesty to the British nation, *App. p.* 383.

[1836.] Error in the number of books in the King's library stated in King George the Fourth's letter on its presentation, *Forshall* 4424——There were not above ten or twelve books kept back by the King, *Forshall* 4427——Circumstances under which the librarians of the Royal library became officers of the British Museum, *Baber* 4512–4516——Circumstances under which His Majesty formed that library, and amount annually laid out upon it, *Baber* 4517–4519——Great value of King George the Third's library, as regards choice of works, beauty of copies, value of editions, number of large paper and vellum books, and of other typographical rarities, *Panizzi* 4780——Influence used to obtain this library shows the advantage of high public functionaries being trustees, *Panizzi* 4902–4907——Duplicates which formed part of the Royal books in the reign of George 2, have been sold, but that practice has been abandoned since 1805, *Baber* 4702–4705——Catalogue of, should be re-made, *Forshall* 4397.

Catalogue of manuscripts in this library, made by Sir F. Madden within a few years, *Forshall* 4389——It will soon be printed, *Forshall* 4396——Opinion upon the manuscript classed catalogue of that library, compiled by Sir Frederick Barnard, *Baber* 4520–4525——It would be very difficult to set this building on fire, *Greenough* 3904——Temperature at which it is kept, *Smirke* 5407——Alteration made in the plans for the east wing, for the purpose of providing for the reception of the Royal library, *Smirke* 5276–5282.

See also *Catalogue of Manuscripts*, 1. *Charters and Rolls. Library of British Museum*, 1. *Maps. Prints and Drawings. Reading-room.*

King's Library at Copenhagen. See *Denmark*, III., 2.

Kirby, Mr. [1836.] Has presented his collection to the Entomological Society, *Bowerbank*, 859.

Knight, Mr. *Payne.* [1836.] Was a trustee, distinguished by a magnificent donation to the Museum, *Panizzi* 4903, 4942——Extent of the collections of drawings by ancient masters in this collection, *Josi* 5264–5266.

See *Conditions of Bequests. Duplicate Books and Coins. Greek Coins.*

König, Charles. (Analysis of his Evidence.)—

[1835.] Assistant librarian; his department that of natural history, 2542——Salary and emoluments, and extent of apartments, 2544–2547——Duties of his department, 2548–2552——Asssistants are appointed by the trustees without consultation with witness as head of the department, 2552–2557——The zoological collection is inferior in completeness to that of minerals and fossils, 2558–2564——Arrangement of the minerals and fossils; great labour therein, and how far further assistance requisite, 2565–2603——The state of the collection of minerals and fossils is reported monthly, and recapitulated in the annual reports, 2604–2611——Attendance upon the details of the mineralogical department does not prevent the general superintendence of the whole department of natural history, 2612–2615——To whom the monthly reports are made, and how far their correctness ascertained, 2616–2620——Names of assistants under witness, but who do not assist him, 2621–2627.

König, Charles. [1835.] (Analysis of his Evidence)—*continued.*

Arrangement by witness in the zoological collection, which was subsequently broken up, 2628——Complaints of nomenclature and the mode of classing objects in zoology, but which have been equally defended as complained of; any decided incorrectness would be interfered with by witness, 2629–2637——Purchase by the Museum of Mr. Hawkins's fossils, and extent to which restorations have been made in them, 2638–2639——It is indispensably necessary that a collection should be formed, showing the geological formation of each English district, 2694–2696——The ichthyological collection is very small; inspection thereof by Baron Cuvier, 2697–2706——System adopted with regard to the arrangement of the shells; cause of difficulty in the nomenclature, 2707–2729——Arrangement of the insects; mode of admission to view them, 2730–2735.

There is no general catalogue in the natural history department, 2736, 2737——Small amount of the sum annually expended upon the entomological department prevents its being as perfect as some foreign collections, 2738–2742——A portion of Sir Hans Sloane's entomological collection has been destroyed annually, until there is none of it remaining; the specimens decayed partly from his mode of keeping them, 2743–2759——There is but little opportunity of stoving the skins of quadrupeds, there being but one part of the building that can be appropriated to the purpose, 2760–2763——There were some skins of birds in bottles transferred to the College of Surgeons; difficulty in ascertaining what portion were sold by auction, 2765–2768.

[Second Examination.]—Articles of value that have been presented to the Museum in the last 20 years, 2795, 2796——The zoological specimens sent by Lieutenant Redman from Nova Scotia, have not been exhibited, from a doubt in the minds of the trustees as to whether they were Museum property, 2798–2804——Mr. Burchell's valuable specimens of natural history have not been exhibited from want of room, 2805–2815——There is no place in the Museum for a laboratory or place to measure crystals, &c. 2816–2823——Annual expenditure for purchasing objects in the natural history department, and for preserving them, and how far there is a limit to the sum expended, 2824–2839——Some of Captain Parry's collection of animals were presented by the Admiralty to the Zoological Society, 2850–2852.

Professed naturalists have been very rarely sent out for the purpose of collecting interesting objects relative to their science, 2853——Merits of Mr. Brown as a botanist; his charge of the Banksian collection; the other botanical collection of the Museum will be made over to him, 2854–2860——Want of room has precluded the trustees from obtaining objects of natural history, which they otherwise would have done, 2864–2870——Period occupied in the arrangement of the minerals and fossils in the long gallery, 2871–2873——System adopted with regard to the classification and nomenclature of the ornithological collection, 2875–2879——Objections to the principals of departments putting their names to that portion of the Synopsis which describes the collection under their control, 2880–2885——The price paid for Mr. Smith's collection of fossils was a fair remuneration, 2886, 2887.

Improvements that might be made in the Synopsis, 2888–2900——Extent to which the classification and nomenclature of Lamarck and Cuvier is attended to in the arrangement of the objects of natural history, and reason of its being necessary occasionally to deviate from those systems, 2901–2913——Further evidence upon the necessity of a revision of the Synopsis, 2914–2940——Want of room prevents the vertebræ of the large head of the ichthyosaurus being now exhibited, 2941–2947——Cause of the trustees not purchasing a piece of native gold from Peru which was offered them, 2948–2959——It is not the etiquette for the heads of departments to sit before the trustees when called in to be examined on any specific subject, 2960, 2961.

[Third Examination.]—Examination upon the price paid for Mr. Hawkins's fossils, and upon the restorations in the large specimen; difficulty in stating to what extent the collection is deteriorated by the restorations, 2963–3028.

[1836.] Answer to evidence by Mr. Bowerbank and Dr. Grant on the subject of the secondary fossils, and against a stratagraphical arrangement of them, 3155–3157——Hurried manner in which removals of them took place, and caused the work of years to be undone, 3158–3164——Casts of certain specimens that are as good as the originals, which could not be obtained; there is no case but what contains real osseous remains as well as casts, 3165–3167——Zoophites not yet exhibited for want of room, 3168——The series of fossil cephalopods are not exhibited for want of room and want of assistance, 3169–3171.

Fossil radiated classes are not exhibited, 3172——The echinodermata are all named, but not exhibited; there is no regular catalogue of them, though there are papers from which one may be formed, 3173–3175——The collection of fossil fish are exhibited and named after the nomenclature of Dr. Agassiz; correspondence with that gentleman with a view to increasing the collection, 3176–3179——Specimen of Saurian remains on the floor of the long room in the mineral gallery, which is of no value, but upon the fate of which the trustees have not yet decided, 3180–3192——Most of the crinoida are put out, and are a toletably good collection, 3193, 3194.

König, Mr. [1835.] Extract from his report, dated 12 February 1835, relative to Hawkins's fossils, *App. p.* 441——Extract from his report on the same subject, dated 12 March 1835, *App. p.* 442.——*See* also *Foreigners. Munich. Natural History Reports.*

Koudou Antelope. See *Antelope.*

Kyd, Lieut.-General. [1835.] Presentation to the Museum of the sculptured tortoise in nephritic stone, brought from Hindostan by Lieut.-General Kyd; its great value, *König* 2795.

L.

Labels:

[1835.] There ought to be one person to write labels only, *Children* 3135–3138——Specimens belonging to remarkable collections should be indicated on the labels, *Children* 3183.

[1836.] Labels might be attached to the specimens directly they come into the hands of the curator, *Sowerby* 37–42——No necessity for a writer of labels, unless the department is too large for the curator to attend to, *Bennett* 1875–1882——Particulars that the labels attached to specimens should contain, *Sowerby* 37–42, *Richardson* 2198, 2199——That are worn out have been taken out to be re-written; they should be replaced as soon as possible; almost every specimen is named in the catalogue, except those of very recent introduction, *Children* 2795–2809——Neglect of specimens shown by the label, "vertebra of an Indian Boa," *Grant* 1506——It is a clerical mistake; there are similar errors in Dr. Grant's work on comparative anatomy, *Children* 2813–2817.

See also *Zoological Society.*

Laboratory. See *Experiments.*

Lacy's Engraving Machine. [1836.] Improvement on Bate's machine in an engraving of a medal struck for Mr. Heath's Keepsake for 1833, *Wyon* 5849.

Lama. [1836.] Bad state of this specimen, *Sowerby* 79, *Grant* 1523——Was presented by trustees of the Hunterian collection, *Bennett* 1707——Is in the same state as when it came from the College of Surgeons, *Children* 2824–2829.

Lamarck. [1836.] Any other grammarian had better be referred to than Lamarck; he is not an authority, *Sowerby* 166, 167.

See also *Conchological Collection,* 3. *Conchology. Natural History,* Collection of. *Nomenclature. Valencienne,* Mr.

La Martine. [1836.] Some of his works are in the Museum, *Baber* 4672.

Landed Property. [1835.] By Act of 5 Geo. 4, the trustees have the power of holding estates in land, *Ellis* 87, 88.

Languages:

[1835.] The Museum library is rich in the native languages of each country, *Ellis* 2458.

[1836.] Some of the officers should speak the principal continental languages, *Bell* 477.——*See* also *French Language.*

Lansdowne Manuscripts. [1836.] A great deal has been done by the Museum in printing the catalogues to this collection, *Evans* 3288——It was formed by the officers of the Museum, and published by the Record Commission, *Forshall* 4208–4220.

Lascaris's Greek Grammar. [1835.] There are three copies of the first edition of 1472 of this work; names of collections with which each copy came, *Ellis* 457.

Latham, Dr.:

[1835.] English names to birds are generally taken from his work, *Children* 3128, 3129.

[1836.] His general synopsis of birds published 50 years ago; it should now be consulted for species, though the arrangement is obsolete, *Bennett* 1729——It was published in 1790; the synopsis of his general history is still in manuscript, *Gray* 2625.

Latreille. See *Entomological Collection.*

Law. [1835.] The Museum library is rich in what may be called international law, *Ellis* 2458——But it is poor in modern English law of the more ordinary kind, *Ellis* 2459.

Laws. See *Sweden.*

Leach, Dr.:

[1835.] Great complaints were made of his introducing his own instead of the old nomenclature, *König* 2552——His nomenclature of the shells has been materially altered, *Children* 3127——His nomenclature of the birds altered by Mr König, *Children* 3399——His collection is in a fine state of preservation, *Samouelle* 3820, 3821.

[1836.] Approval of the names of specimens of crustacea described by Dr. Leach being still retained, *Bell* 345——His nomenclature rather too refined, *Griffiths* 2120, 2121——Pupil of Cuvier, *Gray* 2463——The first to make the English acquainted, by his works and by his improved manner of arrangement, the progress that had been made in natural science on the Continent, *Gray* 2463——Nature of his catalogues, *Gray* 2496——He first gave the impulse of improvement to the zoological department of the Museum, *Griffiths* 2108. 2119.

Leadbeater, Mr. See *Humming Birds.*

Leake, Colonel. See *Bronzes.*

Lear, Edward. [1836.] (Analysis of his Evidence.)—Facilities experienced by artists frequenting the British Museum from the officers, as regards the examination of specimens they wish to consult, 3196–3206——Extending the hours of admission would be a great convenience to artists, 3207, 3208.

Lear, Mr. [1836.] Has figured and described birds from specimens in the British Museum, *Gray* 2963.

Learned Professions. See *Literature.*

Lectures:

[1835.] Heads of departments in the Museum delivering lectures would not be advisable, *Gray* 3318–3321, *Brown* 3729.

[1836.] There are arguments that may be used both for and against public lectures at the British Museum, *Bell* 445——The experiment of lectures ought to be tried, *Greenough* 3815, 3877——Advantages of the heads of departments giving lectures, *South* 785–795. 804–826, *Bowerbank* 984, 985, *Greenough* 3910–3917——The plan has answered in Paris, and would in the Museum, if the departments similarly constituted, *Grant* 1528——Better done in that way than by instituting a distinct establishment, *South* 804–826——More chance of lecturers doing their duty if paid by pupils than by salary, *South* 804–826——Professors giving public lectures for emolument would be devoting their time to the Museum, *South* 837, 838——Plan upon which lectures in the natural history department should be given, *Greenough* 3868. 3910–3917.

See also *Jardin des Plantes*, II. *London University. Mineralogical Lectures. Officers. Surgeons*, College of. *Zoological Lectures.*

Lee, Mr. [1835.] Mr. Lee, the librarian of the Royal Society, was employed by the Museum to class the mathematical and some other books, *Ellis* 2424.

Leibnitz. See *Rome.*

Leipzig. See *Saxony.*

Lending Books. [1836.] Opinion in favour of lending out books from the Museum according to the plan adopted in foreign libraries, *Hannay* 5153, 5154.

Lenormant, M. [1836.] Has distinguished himself by his writings on archæology and works of art, *Hawkins* 5693.——*See* also *Collas's Engraving Machine.*

Les Martyres. [1836.] This work appears in the reading-room catalogue, *Baber* 4670——Supposed cause of witness not being able to find it, *Edwards* 4746.

Leverian Museum. [1836.] Purchases by Mr. Bullock on the sale of this collection, *Clift* 622.

Lexicons. See *Reading Room.*

Leyden, Museum at. [1836.] Great interest taken by the King of Holland and the government to complete the museum at Leyden, *Horsfield* 2546. 2552——The collection at Leyden is a more choice collection than that of either Paris or London, and reason, *Turner* 1580, 1581. 1605, 1606——It is the finest collection in the world as regards mammalia, birds and skeletons; it is particularly rich in the products of the Javanese, Japanese and Eastern Islands, *Turner* 1974, *Gould* 2337–2340——Habit of the directors of the museum at Leyden to visit different countries for the purpose of exchanging duplicates, *Gray* 2683——Mode of exchange of specimens practised there, *Gray* 2688.

There are 3,700 species of shells therein, *Gray* 3058——Exposure of animals in this museum, *Gray* 2910——The centre of the gallery for mammalia is occupied with shells, *Gray* 2637——Engravings there representing process of stuffing an elephant; difficulty of the process, *Gray* 2942——Is the first European collection of ornithology, *Grant* 1523——The greater part of the collection of birds are shut up in boxes, *Gould* 2366, *Horsfield* 2568–2570——Number of insects in this collection is 25,400 species, *Gray* 3096——There are between 600 and 700 species of reptilia, *Gray* 2996——There are 661 species, and 2016 individuals of mammalia in the Leyden museum, *Gray* 2901——There are 700 species of zoophytes in this collection, *Gray* 3114——Periods at which the museum is open, *Gray* 3140——There is a classed catalogue of the library, *Baber* 4622——Particulars relative to the number of volumes, state of the library, catalogues, manuscripts, number of librarians, &c., *App. p.* 542–562——Letter from G. Jerningham, esq. to John Backhouse, esq., dated the Hague, 17 June 1834, relative to literary institutions and libraries at Leyden, *App. p.* 577–20.

See also *Corals. Galleries. Mammalia*, 5. *Quadrupeds. Zoological Society.*

Librarian, Principal, of the British Museum:

[1835.] Salaries and duties, and extent of patronage, *Ellis* 1–10——How appointed; his hours of attendance are not limited, *Ellis* 267–270.

[1836.] In the event of a vacancy his duties to be reconsidered, *Rep. p.* iv.——To vouch the signature of heads of departments to their annual reports to the trustees, *Rep. p.* v.——

Librarian, Principal, of the British Museum—*continued.*

Duties of the principal librarian, and whether any beneficial alteration could take place in the office, particularly as regards separating it from that of expenditor, *Forshall* 4484–4491, *Archbishop of Canterbury* 5526, 5527. 5531. 5533.

See also *Catalogue of Books and Collections*, VIII. 2. *Cottonian Manuscript. Minutes of the Trustees. Reading Room.*

Libraries:

[1836.] Most provincial towns in France have libraries, and duplicates are regularly exchanged; there is a government commission of inquiry for the purpose, *Mathew* 3389–3391——The intrinsic value of a library cannot be ascertained by the number of its volumes, and numbers do not form a test of utility, *Hannay* 5149.

See also *Branch Libraries.*

Library of the British Museum:

1. *Contents of, and Extent of Deficiencies.*
2. *Modes of Increasing.*
3. *Comparison with Foreign Libraries.*
4. *Library Committee.*
5. *Building Accommodation.*

1. *Contents of, and Extent of Deficiencies:*

[1835.] There have been no formal complaints of the state of the library, *Ellis* 1723——Number of volumes in the library of the British Museum, *Ellis* 2419–2423——Branches of literature in which the Museum library is richest, *Ellis* 2457–2470——The library of the Museum does not contain all the latest works on botany which are desirable, *Brown* 3667–3673——The Museum library is not decidedly poor in any class, *Ellis* 2459——List of important works on botany wanted, have been given in to the principal of the department of printed books, *Brown*, 3675——State of the library with regard to entomology is very good, *Samoulle* 3876, 3877——Number of volumes of printed books contained in the library in 1821 and 1832, and of additions since 1821; volumes sold and disposed of, *App. p.* 369.

[1836.] It consists of 240,000 volumes of books and 23,500 volumes of manuscripts, *Panizzi* 4776, 4777——If the donations and bequests and the king's library were taken out of the calculation, it will be found that not one-third of the books have been bought, by the nation, *Panizzi* 4785——Outline of the divisions into which the library collection might be arranged, *Gregory* 3496–3525—— Number of books in the Museum library not sufficient to satisfy the expectations of scientific men, *Gregory* 3488–3594——The library of the Museum is not a library worthy of the country, *Nicolas* 3617——Examples of deficiencies of books in the library of the British Museum, from an examination of the catalogues in October 1835, *Edwards* 4738——Manner in which those lists were made up, *Edwards* 4739–4741——Deficiencies therein as regards common-place books, owing to the niggardly disposition of the Government; how far those deficiencies have been represented to the heads of the department, *Huish* 5012–5022.

The zoological department of the library is inferior to that of the College of Surgeons, *South* 1158——Deficiencies in the zoological department of the library, *Owen* 1179–1194——There is a good supply of books in the natural history department, *Gray* 3144 Witness has always been able to obtain the books he wanted in the library; particular works on particular subjects may be known by reference to Watts's Bibliotheca, *Yarrell* 2093–2097.

2. *Modes of increasing:*

[1836.] Increase is made to the library from three sources; donations, the copyright act and purchase, *Baber* 4498——Additions to the library should be made by whole collections, and not single books, sums proposed to be voted annually for the purchase of such collections, *Panizzi* 4823–4829——Influence exercised by the trustees in increasing the library, particularly as regards that used to obtain the library of George the Third, *Panizzi* 4896–4901.

3. *Comparison with Foreign Libraries:*

[1835.] Comparison of the mode of conducting the Paris library and that of the British Museum, showing the greater facilities of the latter, *Ellis* 246–251.

[1836.] Comparison between the library of the British Museum and several of those on the Continent, *Panizzi* 4771–4782——Inferiority in the manuscript or book department of the Museum, as compared with the Vatican or Paris library, may partly be attributed to the short duration of the former over both the latter, *Gage* 5060, 5061——Manuscripts and books can be consulted together or separately in the Museum, though not in the Paris library, *Gage*, 5063–5066——In no library are so many facilities enjoyed as at the British Museum, *Hannay* 5148——Next to the Paris library it contains the greatest number of books and manuscripts in the world, *Hannay* 5149——Its utility exceeds that of the French library, though its numbers may be less, *Hannay* 5149——Supposed rank the Museum library holds compared with foreign libraries, *Hannay* 5149.

Library of the British Museum: [1836.]—continued.

4. *Library Committee:*

[1836.] Recommendations formerly made to the library committee for the purchase of books; cause of that committee discontinuing its meetings; purchases, unless of large amount, are now made by witness at his discretion, *Baber* 4499-4511——Was formerly composed of the late Archbishop of Canterbury, the late Lord Colchester when Speaker, and the late Mr. Henry Bankes, *Baber* 4503.

5. *Building Accommodation:*

[1836.] Manner in which it might be made to contain many more books than it does at present; necessity for the architect consulting the librarians, *Gregory* 3496–3525——Difficulty of putting up books in the space at present allotted to the library; the space to be appropriated to that purpose in the new buildings will not be sufficient, *Panizzi* 4803–4808——Without the new building the space would not have been sufficient to have augmented the library more than has been done. *Panizzi* 4830, 4831.

See also *Bankes*, late Mr. *Henry*. *Books of Reference*. *Classification of the Library*. *Edwards*, Major, Bequest of. *English Drama*. *European History*. *Evening Admission*. *Foreigners*. *Languages*. *Law*. *Manuscripts*. *Maps, Prints and Drawings*. *Parliamentary Grant*. *Zoology*.

Light. [1836.] Number of insects in the French Museum destroyed by exposure to, *Sowerby* 124——Illuminated manuscripts might suffer from the light if publicly exhibited under cases, *Holmes* 4141.

See also *Duplicates*. *Elgin Marbles*. *Entomological Collection*. *Evening Admission*. *Gas*. *Hours of Admission*. *Mineralogical Gallery*. *Natural History Collection*, 1. *Torchlight*. *Zoological Society*.

Linnean Society. [1836.] It might be incorporated with the natural history department with advantage to both: number of visitors that should be chosen by Government, *Greenough* 3872–3876.

Linnæus:

[1835.] His specific names are preferred as being the oldest, *Children* 3126——The specific Latin names of Linnæus are added to the ornithological collection, *Children* 3128.

[1836.] Names attached to many specimens mentioned in the Synopsis are the antiquated names of Linnæus, and not those of modern authors, *Grant* 1475–1478——His names are not antiquated, *Richardson* 2206–2208——His specific names ought always to be preserved, *Richardson* 2194, 2195. 2206–2208, *Children* 2793——By adopting Cuvier's system, both the generic names and synonymes of Linnæus are used, *Richardson*, 2194, 2195——His generic names are sometimes altered to suit new systems, *Richardson* 2206–2208——In what cases his generic names should also be used, *Children* 2793——Defence of his generic and specific names, *Richardson* 2206–2208, *Children* 2793——His nomenclature was valuable in its own time, but is ill-adapted to the present state of science, *Vigors* 1419.

See also *Conchological Collections*. *Cuvier*, Baron. *Natural History Collection*, 3.

Lion. See *Mammalia*.

Literary Characters. [1835.] Are admitted to the Museum at all times to view the Museum, even during September, *Forshall* 1272–1274.

Lists of Additions. See *Manuscript Collection*, 1. *Printed Books*.

Literary Institutions, Foreign. [1835.] Communications made to and received from His Majesty's ministers abroad respecting literary institutions or libraries in foreign countries, 1834, 1835, *App. p.* 446.

Literary and Scientific Pursuits. [1835.] There has been of late years a greater attention on the part of the public to literary and scientific pursuits, and symptoms of an increased desire on the part of the Government to comply with the wishes of the public in that respect, *Forshall* 632-636.

Literary Works. See *Continent*. *Danish Literature*. *English Authors*. *Foreign Literature*. *French Literature*. *German Literature*.

Literature. [1835.] Literature is protected in the Museum by the introduction into the trust of the heads of all the learned professions, the church, the law and physic, *Forshall* 703, 704——Literature has increased so much that a catalogue would find no purchaser if it were published, *Ellis* 1764.——*See* also *Library of the British Museum*. *Trustees*.

Literature, Art and Science. [1835.] Cause of the variance between the annual accounts of 1825 and the return of 1833, of sums expended for those purposes, *Forshall* 987–989.

Lizards. [1836.] Number of species in the collection at British Museum, *Gray* 3000.

See also *Reptilia*.

Lobster. [1836.] The common lobster is without a scientific name in the Museum collection, *Sowerby* 5.

Localities. [1836.] The locality of specimens should be shown, which is more attended to in private museums, *Sowerby* 32–35, *South* 730——The Museum should improve its collections by corresponding with persons in different localities, *Bowerbank* 865–872. 899, 900.

Madden, Sir *Frederick*. [1835.] (Analysis of his Evidence.)—Assistant keeper of the manuscript department, 2070——Instances of mistakes occurring in Mr. Millard's index to the printed catalogue of manuscripts, 2072–2144——Witness's knowledge of Mr. Millard's continual absences on the ground of ill health, with his opinion that they were not always occasioned by that cause, 2145–2202——Number of titles that could be got through in a day, in making a correct and useful index to the printed catalogue ofmanuscripts 2202, 2211.

[Second Examination.]—Witness was not prepared at his last examination with full evidence as to mistakes in manuscript index, from his having been called upon suddenly to give evidence, 2353–2356.——*See* also *King's Library*.

Madrid. See *Spain*.

Maestricht Museum. [1836.] Unique specimens of fossils from, in the Museum, *Viscount Cole* 2724.

Magliabeccian Library. [1836.] The Magliabeccian library at Florence is one of the most numerous and useful collections in Italy, *Hannay* 5149.

MAMMALIA:

1. *Extent of the Collection, and Deficiencies therein.*
2. *State of Preservation.*
3. *Arrangement and Nomenclature.*
4. *Building accommodation.*
5. *Comparison with Private and foreign Museums.*

1. *Extent of the Collection, and Deficiencies therein.*

[1836.] The collection of the British Museum is one possessing an European reputation, *Griffiths* 2140——The collection of mammalia in the Museum is upon the whole respectable, *Horsfield* 2573——The collection of, is better than it was formerly, though there is not at present one third of the species described by authors, *Griffiths* 2110——The class has been very much increased in the last two months, *Children* 2811——Proportion of the known and described species of mammalia that are to be found in the Museum, *Richardson* 2244——The expense of completing the collection is difficult to estimate, *Vigors* 1334–1344——There are 405 species, and 750 individuals, in the British Museum, *Gray* 2899——Number described in Fischer's Synopsis, *Gray* 2902——Many rare specimens which foreigners have visited the country to examine, *Gray* 2903. 2934——Very few mammalia in store; not more than 30 or 40 imperfect skins, *Gray* 2915——No specimens have been stored for seven or eight years, *Gray* 2915——The catalogue of mammalia is very nearly, if not quite complete, *Children* 2810–2812——Four-fifths of the specimens are catalogued, *Gray* 2904.

The collection is not sufficiently extensive for a national museum, *Owen* 536——It is an opprobrium to the British nation, *Grant* 1066. 1075. 1083——Deficiency in this collection, *Vigors* 1287. 1305——Comparison between witness's opinion and that of Mr. Vigors with regard to the deficiencies in the mammalia collection, *Horsfield* 2587–2593——The collection of mammalia the most deficient, and evidence thereon, *Griffiths* 2122–2139——The chief constituents of the collection of this class are mice, rats, shrews, moles, squirrels, rabbits, hares and cats, *Grant* 1523——And not a specimen of elephant, rhinoceros, camel, dromedary, lion, tiger, walrus, nor dolphin, *Grant* 1523——Answer to Dr. Grant's statement, *Gray* 2929——The collection of mammalia in the Museum does not consist of the most common and cheaply acquired species; there are a great many rare species, *Gould* 2376——Those most easily obtained are those most wanting, *Gray* 2906.

2. *State of Preservation*:

[1836.] Collection exposed to destruction from dust and insects, *Grant* 253——With proper care there is no specimen, great or small, that may not be preserved from destruction, *Vigors* 1347——No instance of specimens in good condition, and liable to injury

Mammalia. [1836.]—1. *Extent of the Collection, and Deficiencies thereof*—continued.

from dust, being exposed to it, *Bennett* 1711, *Gray* 2909——To what extent portions of the mammalia are exposed to dust, and why they are not likely to be injured by that exposure, *Children* 2781, 2782——There is no material defect in the preservation of specimens in the British Museum, *Horsfield* 2553——Were formerly placed on brackets in a small room, *Yarrell* 1988——Condition of the old and new specimens, *Bennett* 1706–1710.

3. *Arrangement and Nomenclature:*

[1835.] The mammalia are in good condition; they are arranged according to Cuvier, whose nomenclature is adopted with such variations as recent discoveries have rendered necessary, *Children* 3077, 3078.

[1836.] Want of arrangement of the collection, *Grant* 253——They are arranged with great taste and judgment, and are gems to be proud of, *Bowerbank* 912——Nearly the whole of the mammalia are named, *Bennett* 1837——Extent to which Cuvier's system of nomenclature and classification is adopted, *South* 717. 1126–1133, *Richardson* 2201–2203, *Horsfield* 2554. 2574–2582——The naturalist's name whose system is adopted is not generally in this collection attached to the specimens, *South* 1131——Errors in the nomenclature, *Grant* 1468–1478——Want of scientific names to the collection, *Grant* 253, *South* 1128–1133——There are not a great proportion of the species without scientific names; there are some, *Richardson* 2204, 2205——Witness's inspection is not sufficient to admit or contradict Mr. South's statement, that the mammalia are mostly not named or not rightly named, *Bennett* 1838–1842.

4. *Building Accommodation:*

[1836.] More space would be required than the Museum could afford if the collection completed, *Vigors* 1334–1344——They are much scattered for want of space, *Bennett* 1702——They are rather crowded from being in the old building, *Richardson* 2201–2203——The arrangement is as good as the space will allow, *Bennett* 1702–1705, *Horsfield* 2555–2557, *Children* 2872–2874——Former and present space allotted to this collection, *Gray* 2457——The precise space necessary for the collection would require calculation, but it should be a very large room and well lighted, *Horsfield* 2555–2557.

5. *Comparison with Private and Foreign Museums:*

[1836.] In the collection of mammalia in the British Museum there are more species than in other museums; it is deficient with regard to the large tribes, *Gould* 2360, 2361. 2365——Extent of exhibition and nomenclature in continental collections, *Gould* 2366–2371——There is no collection in which all the specimens are named, *Gould* 2372——More specimens named in the British Museum than in any other collection of equal size, *Gould* 2373——That at Frankfort is superior to the Museum collection, but not in the number of species, *Gould* 2349——Collection of mammalia in the museum at Leyden was in 1831 much more extensive than that of the British Museum, *Horsfield* 2538–2540. 2544, 2545. 2566, 2567——The French collection may be better arranged from there being greater space, but the facilities of access are greater in the British Museum, *Children* 2875–2881——Comparative number of rare specimens in the French and British collections, *Gray* 2933.

MANUSCRIPTS, COLLECTION OF:

1. *Extent of the Collection, and Additions thereto; Condition thereof, and Facilities for Consultation.*
2. *Custody of the Collection, and whether sufficient means taken to prevent Defacement.*
3. *Desiderata for the Collection.*
4. *Proposed Modes of Purchase, and Funds.*
5. *Building Accomodation.*

1. *Extent of the Collection, and Additions thereto; Condition thereof, and Facilities for Consultation:*

[1835.] Number of volumes of manuscripts contained in the library, 1821 and 1833; additions since 1821, *App. p.* 369.

[1836.] Number of volumes and manuscripts in the Museum, and number of which there are not catalogues, *Forshall* 4229–4235——Great difficulty of ascertaining the number of manuscripts or printed books in different collections; errors that have taken place in authorized collections, *Forshall* 4424–4427, *Hannay* 5100——The Museum manuscripts supposed to be the most numerous in the world, with the exception of the Paris and Vatican collections, *Forshall* 4423——The British Museum library is superior to those of Copenhagen, Berlin and Gottingen, in the number of its manuscripts, *Panizzi* 4778——About 8,000 volumes have been paged, *Forshall* 4389——Increase in the number of manuscripts purchased of late years over former years, *Forshall* 4416.

Additions that have taken place in the manuscript department since 1827, without any extra aid from Parliament, *Forshall* 4359, 4360——The printed annual lists are but inconsiderable helps towards catalogues, *Forshall* 4462–4464——Nature and extent of the printed annual lists of additions, and how far accessible to the public, *Forshall* 4379–4388——Some thousands of volumes of manuscripts without indexes, *Mathew* 3379——How far the department is in a transition state, *Holmes* 4002–4006——The staff of the Museum is not sufficient to bring up all the arrears of this department at once; objection to haste at the expense of doing it well, *Archbishop of Canterbury* 5530, 5531——Facility with which manuscripts can be consulted, *Nicolas* 3697–3719——There would be no delay in obtaining the sight of a manuscript in the Museum; if the particular description of one is not known, the officers will render their assistance in finding it, *Gage* 5044–5047.

2. *Custody of the Collection, and whether sufficient means taken to prevent Defacement:*

[1835.] Officers living within the walls of the Museum would be allowed to take home manuscripts, *Ellis* 2342, 2343.

[1836.] They are kept in safe custody, *Nicolas* 3697, 3698——How far manuscripts in use in the reading room are in the actual custody of assistant keepers or attendants, *Holmes*, 4021–4117——It is absolutely necessary that the care of manuscripts should occasionally be entrusted to attendants, which trust has not hitherto been exercised improperly, *Archbishop of Canterbury* 5559–5561——Great caution exercised, although the manuscripts are of necessity occasionally in the care of attendants, *Forshall* 4417–4422.

Suggestions for one of the assistants being responsible, and superintending the delivery and return of manuscripts daily, *Holmes* 4134–4139——Whether there is sufficient superintendence to prevent defacement, *Nicolas* 3701–3719, *Holmes* 4021–4117——Readers have the power of representing any defects, but there are no instances in which such representations have been made, *Forshall* 4182–4188——Readers discovering defects in manuscripts would point them out to the chief attendant of the reading room, or to one of the officers of the manuscript room, *Holmes* 4118–4120——Nature of the examination of manuscripts which has taken place twice in six or seven years, *Holmes* 4260–4269.

3. *Desiderata for the Collection:*

[1836.] Desirable that in each volume of manuscripts should be pasted a description of each manuscript of which printed catalogues exist, and also a page of blank paper for the remarks of readers, *Nicolas* 3670–3671——Writers printing manuscripts should give notice of their intention, *Nicolas* 3673——Whether possible to add to each manuscript a description of its contents similar to that given in the catalogue, *Holmes* 4322–4323——Whether possible to have a numerical list of the manuscripts for the use of the reading room completed every three months, *Holmes*, 4324——Opinion in favour of a selected exhibition, under cases, of valuable manuscripts, *Holmes* 4140–4143——Such the intention, when space allows, *Forshall* 4150——A journal showing the dates and particulars of the acquisitions in the manuscript department desirable, *Holmes* 4144, 4145——At a future time, if any division takes place in the department, the oriental might be separated from the general, *Holmes* 4146–4148——Proposed modes by which additions might be made, *Hannay* 5153.

Manuscripts, Collection of—continued.

4. *Proposed Modes of Purchase, and Funds:*

[1836.] Witness has offered to buy them for the Museum at 10 per cent. commissio by which they would save money, *Thorpe* 3225, 3226——Presence of the Museum officers at a sale has raised the price of manuscripts 25 per cent., *Thorpe* 3227–3230——Preference given by Museum officers to certain manuscripts over others which witness considered more valuable, *Thorpe* 3233, 3234——Sums expended thereon 1831–1835, and extra grant promised, *Panizzi* 4790——Desirable that larger sums should be expended in increasing the collection, *Forshall* 4225–4228.

5. *Building Accommodation:*

[1836.] Opinion given by Sir Henry Ellis relative to the accommodation that would be required in the new building for the manuscript department; impossibility of foreseeing the increase in that department, *Smirke* 5336, 5337——Nature of the accommodation as regards room in the manuscript department in 1827; additions that have been made since, and how far sufficient, *Forshall* 4373–4377.

See also *Arundel Manuscripts. Bruce Manuscripts. Catalogue of Manuscripts. Collating Manuscripts. Cottonian Manuscripts. Forgeries in Manuscripts. Hargrave Manuscripts. Harleian Manuscripts. Index to Manuscripts. Library of the British Museum*, 1. *Light. Milan. Nicolas's Observations. Nicolas's "Privy Council." Oriental Manuscripts. Russia. Select Manuscripts. Sloane's*, Sir *H.*, Collection. *Spelman's Archaismus Graphicus. Upcott's Manuscripts. Vatican. Webster*, Sir *Godfrey.*

Manuscript Department:

[1835.] By whom assistants in the manuscript department are recommended and appointed, *Forshall* 864–867——Means taken for obtaining the best qualified candidates in the manuscript department, *Forshall* 873——There has been a greater increase of assistance in the manuscript department than in others, *Forshall* 889——Appointment of Mr. Forshall as assistant in the manuscript department without any communication with witness as head of the department, *Ellis* 1969–1979.

[1836.] Duties and hours of attendance of witness in the manuscript department; appointed by Mr. Forshall under a presumed minute of the trustees; such mode of appointment not satisfactory to the assistants, *Holmes* 3965–3983——Extent of the establishment of this department in 1824, and additions that have been made since; the assistants are considered in the light of supernumeraries, but are expected to be placed on a different footing, *Forshall* 4369–4372——Suggestions relative to this department in Report of 13 July 1805, *App. p.* 521–523——Report of 14 February 1807 containing list of works fit to be executed in that department, *App. p.* 519.

Manuscripts, Keeper of:

[1835.] Amount of salary; duties of office; assistance employed, *Forshall* 423, 424. 719–727——His office being combined with that of secretary, does not impair the efficiency of the duties of either, *Ellis* 305–327, *Forshall* 728–733. 834–861——Nature of the qualifications required for the office, *Forshall* 868–872——Portion of time occupied in the duties of keeper of manuscripts and secretary, *Forshall* 830, 831.

[1836.] Period of witness's first appointment to the Museum, and to his present situation; his recommendation was from his character as tutor and librarian at Oxford University, *Forshall* 4354–4358——How far the imperfections in the catalogue of manuscripts not being remedied arises from the office of keeper of the manuscripts being conjoined with that of secretary, *Nicolas* 3634–3638——Reasons against dividing the offices of secretary and keeper of the manuscripts, *Archbishop of Canterbury* 5528–5532——When there are sufficient duties to occupy the time of the secretary, the duties of that office and that of keeper of manuscripts must be separated, *Forshall* 4473, 4474. 4482.——*See* also *Douce*, Mr. *Secretary.*

Maps and Charts. [1836.] The place at present used by map and chart makers in the Museum is inconvenient; there should be a place set apart for work so difficult and delicate, *Hannay* 5154.

Maps, Prints and Drawings. [1835.] Sums paid on account of the publication of the catalogue of maps and topographical prints and drawings in the library of His Majesty King George IV., 1821 to 1833; and manner in which the several sums were distributed, *App. p.* 366.——*See* also *Catalogue of Maps, &c.*

Marbles:

[1835.] Nature of the arrangement of the Elgin, Phygaleian and Townley marbles, *Hawkins* 3465–3468——Printed catalogues of the marbles and antiquities are published in quarto volumes and in the Synopsis, *Hawkins* 3469——List of marbles in the British Museum moulded by Mr. P. A. Sarti, *App. p.* 445.

[1836.] Whether the marbles are subject to the best arrangement and light in the Museum, *Greenough* 3804–3807——Proposed catalogue of marbles should be equally descriptive

Marbles—continued.

descriptive with the catalogues of the sculpture galleries of Munich and Dresden, *Edwards* 4766*.

See also *Ancient Marbles. Apollo*, Statue of. *Athenian Marbles. Belzoni*, Mr. *Clytie. Corsi Collection of Antique Medals. Egina Marbles. Elgin Marbles. Fighting Gladiator. Moulds of Statues. Phygaleian Marbles. Roman Statues. Sarti*, Mr. *Sculpture. Townley Marbles.*

Marciana Library. See *Venice.*

Marco, Sts., Library. See *Venice.*

Marengo, Battle of, Napoleon Medal of. [1836.] Engraving thereof produced to the Committee, *Nolte* 5832.

Marisupial Animals. [1836.] Collection of, in the British Museum, is superior to that in any continental museum, *Turner* 1943–1947.

Marshall, Mr. [1836.] Superintends the delivery and return of manuscripts as one of the attendants of the reading room, *Holmes* 4064, 4065.

Mary, St., de Valliscelland, Church of, at Rome. [1836.] Opinion of the copy of Alcuin's Bible that is therein, *Evans* 3359, 3360.

Mastodon Bones. [1836.] More than half the fragments of the mastodons are of painted plaster, *Grant* 1513——Beautiful casts of, in the Museum, *Viscount Cole* 2732.

Mathematics. See *Organic Remains.*

Mathematical Instruments, Collection of, at Dresden. See *Saxony.*

Mathematicians. [1836.] Disadvantage of great mathematicians being trustees of the Museum, *Panizzi* 4919, 4920.

Mathew, John Mee. [1836.] (Analysis of his Evidence.)—Barrister and fellow of the Antiquarian Society, 3373——The bad arrangement of the catalogues of manuscripts at the Museum caused witness to desist from consulting them relative to information respecting Staffordshire, 3574–3576——Great use and value a classed catalogue would be to the library, and to the public, 3377——If it were printed in octavo it would meet with an extensive sale, 3378——Some thousands of volumes of manuscripts without indexes, 3379——Many catalogues in the reading room without indexes, 3380——Loss of time that would be occasioned by having to go through the alphabetical catalogue of printed books, 3381.

A classed catalogue most desirable, 3382——Classed catalogues in manuscript are in use in the provincial libraries in France, 3382–3388——Most of provincial towns in France have libraries, and duplicates are regularly exchanged; there is a government commission of inquiry for the purpose, 3389–3391——Great value of the Battle Abbey deeds and manuscripts in the hands of Mr. Thorpe, which it would be desirable that the Museum should possess, 3393–3400——Advantage to members of the legal profession if the reading room were open of an evening, 3401–3405——Exhibition of the Museum collections is of the highest importance to the public taste and morals, 3406.

Advantage of the Museum being open on Sunday; it would counteract the effect of gin palaces, 3407–3410——Importance of the formation of district libraries, 3411——Utility of the classed catalogue of the London Institution, 3411–3414——Hours the British Museum reading room and collections are open are too exclusive, 3415–3424——The Louvre is an instance that the public do not inconvenience artists who are following their avocations during the period the public are admitted, 3425–3427.

Maurice, Rev. Mr. [1835.] He was the last officer who attended the reading-room, *Ellis* 1666.

Medals. See *Casts of Medals. Bates's Engraving Machine. Collas's Engraving Machine. Engraving of Medals. Flemish Historical Medals. Foreign Medals and Coins. Fronde*, Mr. *Hedlinger*, Mr.. *Louis the Fourteenth*, Medals of. *Medallic History of England. Ruding's Work on Medals. Snelling's Work on Medals. Tresor de Numismatique.——Also the Names of the different Medals under their respective Heads.*

Medallic History of England:

[1835.] Witness has collected and arranged materials for an account of the medals illustrative of the history of Great Britain and its dependencies, *Hawkins* 3450.

[1836.] Necessity for publication of; advantage of Collas's engraving machine as applicable thereto, and necessity for Government assistance, *Tilt* 5592–5641——The engraving the collection of medals in the Museum must be done either wholly or in part at the expense of the public, *Hawkins* 5703, 5704——Extent to which witness is interested in the examination in favour of Collas's machine, by the probability of being employed in conducting a medallic history of England, *Hawkins* 5665–5672——Utility of a medallic history of England; it would be incomplete if confined to the medals contained in the Museum, it must be extended to those in private collections, *Hawkins* 5705–5713——Number of copies that would form a sale sufficient to repay the cost of a medallic history of England; necessity for the aid of Government, *Nolte* 5808–5813.

Medallic History of England. [1836.]—continued.

Advantages that would be derived by art as well as history from engraving the medals in the British Museum, *Wyon* 5876–5881——A publication of the medals in the British Museum might be made to pay its expenses without Parliamentary aid if a sufficient number of subscribers were found; though alarming expenses would be incurred before a return could be obtained, *Brockedon* 5900–5903——Such a work is much wanted; but it could not be undertaken by any bookseller, without assistance, *Nolte* 5808–5813, *Doubleday* 5916–5922——Number of medals that it would be necessary to engrave, *Doubleday* 5923, 5924——Difficult to say whether such a work could be carried on as a commercial speculation; great expense must be incurred independently of the engraving, *Henning* 5946——Distortions or inaccuracies in medals in high relief are not fatal to the truth or beauty of the medal; the distortions were in the early specimens, *Hawkins* 5684——They are liable to variations from being cast, and afterwards chased, *Hawkins* 5685–5687——Deviation which is not visible to the eye should not be considered a distortion, *Hawkins* 5723–5724——Engraving being made from an inferior medal, and afterwards compared with the superior, may be the cause of inaccuracies apparently attributable to the process of engraving, *Hawkins* 5688, 5689——Casts have been taken from some of the medals in the British Museum with a view to engravings being taken from them by Collas's machine, which engravings are faithful representations of the medal, *Hawkins* 5774–5780.——*See* also *Coins and Medals.*

Medals, Cabinet of. See *Wirtemberg.*

Medals, Collection of. See *Saxony.*

Medicine. See *Entomology.*

Meetings of the Trustees:

[1835.] Return of the days on which the trustees of the British Museum have met during 1832 to 1834; the hours of meeting; and the trustees who attended each of the aforesaid meetings, *App. p.* 390.

[1836.] Advantages of the present monthly and general meetings, *Archbishop of Canterbury* 5577–5579——Inconvenience has not arisen to the business of the Museum from the non-attendance of trustees; a request being made to some who have not attended a certain number of times might induce them to resign, *Archbishop of Canterbury* 5538–5542——Inconvenience may arise as much from too many as too few of the trustees attending, *Archbishop of Canterbury* 5546.

See also *Board Meetings.*

Megatherium. [1836.] Beautiful casts of in the Museum, executed by Chantrey, the originals of which are in the College of Surgeons, *Viscount Cole* 2733–2735.

Melley, Mr. [1835.] Extent of the entomological collection of Mr. Melley of Liverpool, *Samoulle* 3906–3909.

Membranes. [1836.] The membranes have been counted, and a list of them printed, *Forshall* 4389.

Menageries, Paris. [1836.] Facilities of the menageries at Paris for the purchase of living animals which may be brought to France, *Gray* 2714.

Mercure de France. [1836.] Difference between titles and volumes shown by this work, extending to 500 volumes, and yielding only one title or entry, *Baber* 4593.

Mercury. [1836.] The little bronze Mercury of Mr. Payne Knight has not been moulded from, *Weigall* 242.

Merrems Reptiles. [1836.] This work published in 1820; it is a mere compilation, and arranged according to an exploded system, *Gray* 2626.

Mexico:

[1835.] Despatch from Richard Pakenham, esq. to the Duke of Wellington, dated Mexico, 26 March 1835, relative to literary institutions in Mexico, *App. p.* 491.

[1836.] Letter from Richard Pakenham, esq. to Viscount Palmerston, dated Mexico, 19th November 1835, relative to literary institutions and libraries in Mexico, *App. p.* 577–15.

Mice. See *Mammalia.*

Michael Angelo. [1836.] Artists who do not travel have difficulty in studying from the works of Michael Angelo, *Weigall* 230——Names of the only three casts from his works to which the public have access, *Weigall* 231.

Middle Ages. See *Monumental Remains.*

Milan:

[1835.] Nature of the institution and government of the Ambrosian Library, *Ellis* 214.

[1836.] The Brera Library was founded in 1763, and opened to the public in 1770, and contains 200,000 volumes, *Panizzi* 4785——The Ambrosian library at Milan is of great

Milan. [1836.]—continued.

great riches in manuscripts; but no catalogue is allowed to be made by the founder's will, *Hannay* 5149——Particulars relative to the libraries of Brera and Ambrosiana, number of volumes, state of the libraries, catalogues, number of libraries, &c. *App. p.* 542–562.

Millard, John. [1835.] (Analysis of his Evidence.)—Date of minute appointing witness to undertake a new general index to all the manuscripts in the Museum, 2255–2257——Complaints of witness's absence were not frequent, and his explanations were constantly approved, 2258, 2259——Number of days of witness's absence on the ground of illness in each year, 1828 to 1832, 2260——Minute to the trustees as to the discontinuance of the index; witness's memorial to the trustees, and applications to individual trustees, 2263–2269——Application to Mr. Forshall for certificate of conduct and character on witness's being a candidate for the office of secretary to the Wyndham club, 2270——State of the index on witness's quitting the Museum, 2270——Application to the Archbishop of Canterbury and the chief officers of the Museum, after notice of the abandonment of the index, 2276——Wilful neglect of duty or incompetence was not charged against witness on his dismissal, 2277, 2278.

Superintendence of the index first by Sir Henry Ellis, and afterwards by Mr. Forshall, and no complaints made of the mode of conducting the work, or any errors pointed out, 2279-2283——Difference between the instructions of Sir Henry Ellis and Mr. Forshall for the formation of the index, particularly as regards the latter desiring every manuscript to be refered to, 2283–2285——When witness had difficulty in reading particular manuscripts, he applied to certain gentlemen connected with the Museum, 2288——Witness's impression that there is no important error in the index to manuscripts referred to by Sir F. Madden, 2290——Extent of witness's knowledge of languages, 2291——Works of which he is the author, 2292——Employment in indexing 15 volumes of Reports of the House of Commons, and an index to the Sessional Papers, 1801 to 1826, 2293——The Sessional Papers index examined by the clerks of the House of Commons, and but one mistake discovered; it was approved by the late Speaker, and was a work of great labour, 2294–2297——Those works were conducted under the direction of Mr. Luke Hansard, 2299–2302.

Economy was assigned as the reason for witness's dismissal from the Museum, 2303——Inconvenience to literary men from certain catalogues in the Museum being without indexes, 2304–2307——Further evidence as to the days of witness's absence, 2312–2317——How far witness has cause of complaint of want of courtesy in the mode of his dismissal, 2318–2326——Opinion that witness's notes accounting for his absence by illness were satisfactory, 2327–2333——Witness was not competent to read the early manuscripts at the period of his employment; how far he was competent at the termination of his labours, 2335–2338——No recollection of having received from Sir Henry Ellis, by way of loan, Spelman's Archaismus Graphicus, 2339–2341.

[Second Examination.]—Loan to witness by Sir H. Ellis, of the Transactions of the Celtic or Antiquarian Society of Paris, but no recollection of receiving Spelman's Archaismus Graphicus in the same manner, 2349——Monthly reports made by witness to Sir H. Ellis and Mr. Forshall of the progress of the index, and no objection taken to the quantity or quality of the work; number of titles written while in the service of the Museum; why mischief could not arise from the errors that have been pointed out, 2349.

Millard, Mr. [1835.] Under what head in the accounts of the Museum payments to Mr. Millard will be found, *Forshall* 993–999——His employment on index to manuscripts, *Ellis* 1807–1822. 1873–1943. 1982–2069, *Madden* 2072–2144. 2145–2202. 2353–2356, *Forshall* 1823–1871. 2213–2216, *Millard* 2255–2260. 2263–2290. 2303. 2312. 2338, 2349——His application for the secretaryship of the Wyndham Club, *Millard* 2270, *Forshall* 2217–2254——Minutes of the trustees and correspondence relative to Mr. Millard, *App. pp.* 425–428——Mr. Millard was employed to read the proof sheets of the Lords' Report on the dignity of the Peerage, *Hansard* 2388——His employment on a general index to the Reports of the House of Commons, 1715–1801, *Ellis* 1936–1943, *Millard* 2293, *Hansard* 2357–2362——His employment on a general index to the Sessional Papers of the House of Commons, 1801–1826, *Millard* 2293–2302, *Hansard* 2363–2385. 2389–2398——Evidence upon the loan by Sir Henry Ellis to Mr. Millard of Spelman's Archaismus Graphicus, *Ellis* 1882–2351, *Millard* 2288. 2339–2341. 2349——Indexes made by Mr. Millard to several of the Woods and Forests Reports, *Hansard* 2386–2387.

Millingen, Mr. [1835.] How far capable of valuing Egyptian antiquities; he has been long consulted by the purchasers of Greek and Roman antiquities, *Ellis* 1499——Extract from a letter of Mr. Millingen in 1831 relative to the negociation for Dodwell's Greek bronzes, and the antiquities of the ex-Queen of Naples, *Ellis* 1522–1527——Extract from Mr. Millingen's pamphlet relative to the Egina Marbles, *Ellis* 1537–1540.

Mineralogical Collections:

[1835.] The collection of minerals in the British Museum is in its extent and arrangement probably more perfect than that of Paris, *Forshall* 707——Arrangement of the minerals and fossils; great labour therein, and how far further assistance requisite, *König*

Mineralogical Collections. [1835.]—continued.

2565–2603——The state of the collection is reported monthly and recapitulated in the annual reports, *König* 2604–2611——Witness's attendance on this branch of his department does not prevent the general superintendence of the whole department of natural history, *König* 2612–2615——Names of assistants under witness, but who do not assist him in mineralogy, *König* 2621–2627——Period occupied in the arrangement of the minerals and fossils in the long gallery, *König* 2871-2873——Account of the number of applications made to the trustees of the British Museum (at meetings authorised according to the rules to grant admissions) for the purpose of being admitted to inspect that part of the collection of minerals not generally shown, or any particular part thereof, 1815 to 1820; number of admissions in consequence of applications, *App. p.* 397.

[1836.] Great extent of the collection, *Sowerby* 17–24, *Greenough* 3879——It has become a perfect jargon, in consequence of the introduction of new names, *Greenough* 3857——Partiality shown, in the expenditure of money, to the minerals over the fossils, crustacea and insects, *Bowerbank* 876–878.

See also *British Minerals. Natural History Department. Zoological Collection.*

Mineralogical Department. [1836.] It should be divided so far as relates to the classes embraced in that department, *Sowerby* 16——Subdivisions recommended for mineralogy and zoology, the heads of those departments acting as a committee for the general management of those branches, *Sowerby* 66–69——The geological collection should not be attached to the mineralogical collection and placed under one curator, *Bowerbank* 898. 900. 982.

See also *Fossils. Geological Department. Greville Minerals. Natural History Department*, 2. *Zoological Department.*

Mineralogical Gallery. [1836.] Improvements suggested in the mineral room, *Greenough* 3892–3897——The light therein appears generally good, *Yarrell* 2064–2066——Arrangement may be made by which a larger space may be obtained for the mineralogical collection, and side lights given for the whole of it, *Smirke* 5419–5421——The mode of lighting the present mineralogical gallery might be altered at a moderate expense, and without altering the roof, *Smirke* 5458-5461.

Mineralogical Lectures. [1836.] The experiment ought to be tried of lectures on mineralogy, *Greenough* 3877.

Mineralogy. See *Organic Remains.*

Minerva Library at Rome. [1836.] Facilities in the Minerva library at Rome are much less than in the British Museum, *Hannay* 5103–5106.

Minerva, Medal of the Head of. [1836.] Price paid Mr. Lane for engraving this head for the seal of the Athenæum club, and price at which it might be executed by Mr. Bate's machine, *Brockedon* 5900.

Ministers, His Majesty's. See *Trustees*, 1. 3.

Minutes of the Trustees and of Committees:

[1835.] Relative to a letter from Richard Gough, esq., dated 18 February 1804, *App. p.* 413——On Lord Bridgewater's bequest, dated 10 March 1832, *App. p.* 414——Of committee respecting Mr. Belzoni's offer to collect antiquities in Egypt, dated 13 February 1819, *App. p.* 424——Of general meeting, declining Mr. Belzoni's offer, dated 13 February 1819, *App. p.* 424——Respecting Mr. Salt's offer of Egyptian antiquities, dated 19 February 1820, *App. p.* 425——Further minute, dated 11 May 1822, *App. p.* 425——Of sub-committee respecting the offer of Mr. Salt's Egyptian antiquities, dated 13 February 1823, *App. p.* 425——Of general meeting, respecting leave of absence to Mr. Millard, dated 13 March 1830, *App. p.* 425——Of committee, respecting the continued assistance of Mr. Holmes, and notice to Mr. Millard as to the term of his engagement, dated 12 February 1831, *App. p.* 426——Of committee, respecting Mr. Millard's memorial, dated 14 May 1831, *App. p.* 427——Another minute, dated 11 June 1831, *App. p.* 427——Of committee, on Mr. Millard's letter, dated 9 July 1831, *App. p.* 427——Of committee, on Mr. Millard's memorial, dated 12 January 1833, *App. p.* 428——Extract from minutes of the trustees, respecting Sir George Beaumont's pictures, dated 12 and 21 July 1823, 14 February 1824, and 13 May 1826, *App. p.* 430——Respecting Mr. Holwell Carr's pictures, dated 12 March 1831, *App. p.* 431——Respecting Mr. Hawkins's fossil remains, declining Mr. Hawkins's offer, dated 11 May 1833, *App. p.* 437——Declining his second offer, dated 1 June 1833, *App. p.* 437——Of general meeting, dated 12 July 1834, *App. p.* 438——Of committee, dated 1 August 1834, *App. p.* 440——Of committee, dated 14 February 1835, *App. p.* 442——Of committee, dated 14 March 1835, *App. p.* 443——Of sub-committee, dated 26 March 1835, *App. p.* 443.

[1836.] Period that usually elapses between the making minutes by the trustees and their being communicated to the principal librarian, *Forshall* 4476–4481——Extracts from minutes of the trustees, April and May 1834, as to the new catalogue of printed books, *App. p.* 534.

See also *Hawkins's Fossils*, 2. *Salt's Egyptian Antiquities.*

Mionnet, M. See *Collas's Engraving Machine. Greek Coins.*

Modern Statues. [1836.] They are not frequently polished, *Weigall* 196.

Moles. See *Mampalia.*

Moll, Baron de. [1835.] Account of the sum paid for Baron de Moll's books and other articles, *App. p.* 405.——*See* also *Edwards*, Major.

Mollusca. [1836.] Satisfactory manner of their exhibition in the Paris collection; the increase in one year mistaken in last year's report for the total amount, *Grant* 1523—— The crowded and confused state of the spirit preparations thereof, render it difficult for the eye to reach the specific names, *Grant* 1505.——*See* also *Fossil Mollusca.*

Monastic Orders. See *Southey's Monastic Orders.*

Monheim. [1836.] Unique specimens of fossils from, in the Museum, *Viscount Cole* 2724.

Monkeys. [1836.] A large portion of the monkeys are unnamed, *South* 724.

Monsters. [1836.] Sir Joseph Banks's report of 27 February 1809, relative to this collection in the basement of the Museum, *App. p.* 575.

Montagu, Colonel. [1836.] The British birds being his actual specimens, acquire an additional value; his Ornithological Dictionary is a standard work in British ornithology, *Bennett* 1735——Specimens that were bad at the time of its purchase have been replaced; the collection has been well kept, *Bennett* 1771——His collection of fishes collected on the Devonshire coast are in the Museum, *Yarrell* 2005.
See also *Conchological Collection*, 3. *Ornithological Collection*, 2.

Monthly Reports. See *Mineralogical Collection. Reports.*

Monumental Remains. [1836.] Advantages that would be derived from casts of the monumental remains of the middle ages, *Weigall* 230–247.

Monuments. [1835.] Government have occasionally encouraged sculpture by monuments to eminent men, *Westmacott* 3976, 3977.

Morals. See *Collections.*

Morier, D. R., Esq. [1835.] Dispatch from, to Viscount Palmerston, dated Bern, 26 June 1835, relative to literary institutions in Switzerland, *App. p.* 495.

Morning Journal. [1835.] Extract from the Morning Journal of Saturday, 12 September 1829, relative to Sir Henry Ellis's journey to Pomard, *App. p.* 433.

Moths. See *Camels. Cremations.*

Moulder. See *Formatore.*

Moulds of Statues:
[1835.] Special permission must be obtained for the purpose of taking moulds, *Hawkins* 3498–3502——Most of the moulds that have been taken of the finer statues are in the hands of Mr. Westmacott, subject to the condition of supplying casts at particular prices at the order of the trustees, *Hawkins* 3503–3509——The repetition of making moulds from the originals is attended with danger, but there is no objection to the multiplication of casts from those moulds, and distributing them to the utmost extent among the people, *Hawkins* 3510, 3511——Certain Italian artists have been allowed by the trustees to take moulds, *Hawkins* 3512–3520——Whether Mr. Westmacott has the monopoly of the moulds, *Hawkins* 3512–3520——Italian artists get casts of fine objects to mould from, and casts circulated about the country are casts of casts, *Hawkins* 3521, 3522——It is not worth the while of Italian artists to take copies of the original size, *Hawkins* 3527–3529.
Permission obtained to mould from statues in the Museum by application to a person of rank, *Sarti* 3541–3546. 3585–3589——Application must also be made to Mr. Westmacott, who has given a denial in some instances, *Sarti* 3547–3549. 3555, 3556—— Refusal to witness to be allowed to take a mould of the head of Homer; his subsequently obtaining permission; number of casts sold, *Sarti* 3558–3560——Those of the Elgin collection are not now in good condition; sum at which Mr. Westmacott offered them to witness, *Sarti* 3550–3554——If the means could be obtained of moulding figures and bas reliefs under proper superintendence, there would be a greater sale of casts, *Sarti* 3557–3561. 3568–3572. 3590, 3591——Accidents would not be likely to happen to the originals if the moulder is skilful; witness could find security, *Sarti* 3573–3584 ——The colour of antique statues will be changed by moulding, but the ancient colour will be regained in two months, and the original will not be otherwise injured if the moulder knows his business, *Sarti* 3592–3609.
Mode of obtaining casts at the French Museum; comparison between the description of casts sold in France and England, and their prices, *Sarti* 3611–3629——In France they charge more for casts taken from their own museum than they do for other casts, *Sarti* 3624——Memorandum delivered in of the price at which Mr. Westmacott agreed to supply the Museum with casts of some portions of the Elgin marbles, *Hawkins* 3836 ——List delivered in from Mr. Sarti of moulds in his possession, taken from original

Moulds of Statues. [1835.]—continued.

statues in the Museum, *Hawkins* 3836——Injury that may be done to antique statues from taking frequent casts, besides producing discolouration, *Hawkins* 3838—— Proper care, skill and prudence being provided for, there would be less injury from moulding, *Hawkins* 3840——How far Mr. Westmacott's property in certain moulds of the Elgin marbles would prevent the trustees granting Mr. Sarti permission to mould from the originals, *Hawkins*, 3842–3853——The only objection that would arise is the unnecessary multiplication of mouldings, which may cause injury to the originals, *Hawkins* 3854.

The Elgin marbles have not been moulded at all since witness has been at the Museum, and no statue has been moulded twice during that period, *Hawkins* 3857, 3858——The number of casts that can be taken from one mould vary according to the skill with which the original mould is taken, *Hawkins* 3860——The terms on which witness permitted to make moulds of the Elgin marbles were that the public should have every facility, and that the prices should be brought as reasonable as possible, *Westmacott* 3928–3931——Offer of the moulds for sale to Sarti, which, had it been accepted, would have been mentioned to the trustees, *Westmacott* 3932–3941——Moulding in wax would do less injury to the statue than plaster; but on account of its pliability could not be used for large statues, *Westmacott* 3989–3999.

Mr. Westmacott's proposal for making moulds from marbles in the Elgin collection, dated 16 February 1817, *App. p.* 444——Conditions on which the trustees accepted Mr. Westmacott's proposal, *App. p.* 445——List of marbles in the British Museum, moulded by Mr. P. A. Sarti, *App. p.* 445.

[1836.] The trustees recommended to consider the best mode of giving to the public a facility of obtaining them, *Rep. p.* v.——Moulds could be made and a supply of casts given to the public without injury to the statues, and at a low price, *Weigall* 171. 198–205——Detail of the mode of moulding and precautions that should, be taken to prevent injury to the statues both ancient and modern, *Weigall* 172–178. 193–195. 214–216——Number of casts that may be taken from one mould, *Weigall* 205——If antique statues moulded once in many years it would be sufficient, *Weigall* 193–195——If casts were obtained at a cheap rate they would meet with a ready sale, *Weigall* 229, *Rennie* 1204——Price at which the cast of a large statue could be furnished, *Weigall* 198–205.

Nine statues out of ten in the Museum might be safely moulded, but there are instances where there may be danger, *Rennie* 1198——No way in which a knowledge and taste of the arts can be better diffused than by exhibiting casts from the finest statues of antiquity in the kingdom, *Weigall* 199, *Rennie* 1199——No artist should have exclusive privilege, *Rennie* 1202——Great want of a good collection of casts of the most celebrated statues in the Museum, *Rennie* 1244——Witness has obtained casts of statues already moulded through Mr. Sarti, *Rennie* 1259——If intended that the Museum should be a school of sculpture, it should be supplied with casts of the first statues in Europe, *Weigall* 230–247——*Greenough* 3805.

2. *Comparison with the Collections at the Jardin des Plantes and College of Surgeons.*
3. *Classification and Nomenclature.*
4. *Unstuffed Specimens.*
5. *Suggestions relative to Catalogues of the Collection.*
6. *Annual Expenditure for.*
7. *Building Accommodation.*

1. *Extent and Condition of the Collections, and Facilities of Access by the Public:*

[1835.] Account of the objects of natural history bought at Mr. Bullock's sale by Dr. Leach, put in, *Cowtan* 2211, *App. p.* 418—— Report of Sir H. Ellis, Mr. König and Mr. Children, on the 2d February 1829, regarding the department of natural history, *Forshall* 2962——Description of specimens thereof that were obliged to be stowed away in boxes till the new buildings afforded room for their being exhibited, *Children* 3134——Cause of some specimens not being exhibited; they are in general put into cases as soon as possible, *Children* 3142.

[1836.] The condition of the objects is better than it was two or three years ago, *Sowerby* 11——Defects in the department of natural history in 1819, and improvements within the last seven or eight years, *Horsfield* 2536, 2537——Evils of the keeper of the department not being consulted by the trustees upon the advancement of the collection under his charge, *Greenough* 3937——Extracts from the statutes of the Museum, as to his duties; how far his duty to make suggestions, *Greenough* 3939–3945——Imperfection in the condition of the collections as regards bad stuffing, loss of names, &c., *Sowerby* 17, 48–62——The collection is not exposed to destruction from dust and insects, *South* 744–746——A public collection of natural history can never be complete; it should always be in a state of progression, *Horsfield* 2595–2598——Changes which the collections of natural history have undergone since the institution of the Museum, *Gray* 2455.
Method adopted in the Museum upon the increase of any division of the department of natural history, *Gray* 2458——Proposed method of disposing of and arranging presents and purchases on their reception at the Museum, *Greenough* 3848–3851—— Students in natural history should be admitted on private days in the same way that artists are to the gallery of antiquities, *South* 798, 799——Facilities afforded to Dr. Grant in consulting specimens of natural history in the Museum, *Gray* 2526–2528—— Extent to which the public will have access to the whole of the collections when the arrangements are complete; those that are not now exposed, on account of injury from the light, can be seen by application to the curators, *Sowerby* 116–124.

2. *Comparison with the Collections at the Jardin des Plantes and College of Surgeons:*

[1835.] The collection is imperfect, compared with that of the Jardin des Plantes, *Ellis* 242–244.

Natural History Collections:—2. *Comparison with Jardin des Plantes, &c.* [1835]—continued.

[1836.] Few of the collections can be compared with those preserved in Paris, and none are in such a state as they ought to be in a national museum, *Grant* 262——The collection at the Museum is as fully named as that of the Jardin des Plantes, *Gray* 2664–2665——The collection at the College of Surgeons was in better condition than that of the Museum at the time of the purchase of certain specimens from the Museum by the college, *Clift* 658.

3. *Classification and Nomenclature:*

[1835.] Mr. König is not obliged to write the labels *Forshall* 890–893. 899–900——Extent to which the classification and nomenclature of Lamarck and Cuvier is attended to in the arrangement of objects of natural history, and reason of its being necessary occasionally to deviate from those systems, *Konig* 2901–2913——System of nomenclature attached to the different specimens; more names would be attached to the labels if there were more hands for the performance of the duties, *Children* 3123–3134——Extent to which the arranging and naming has gone; constant new accessions render it impossible for such a collection to be ever said to be finished, *Gray* 3213, 3214——The time occupied in giving information to visitors requiring it prevents the work of arrangement going on speedily; and the person making the arrangement is the most fit person to give information, *Gray* 3215–3218.

Previous arrangements are necessarily altered upon considerable acquisitions taking place, and also upon removals, *Gray* 3219, 3220——Difficulties might be overcome with more assistance, *Gray* 3221——Name of the author whose nomenclature is adopted is attached to the specimens, *Children* 3395–3397——The scientific name in Latin, and the trivial names in English, French and German, should be attached, *Children* 3398——The nomenclature adopted by Dr. Leach has been altered by Mr. König, and is in a more perfect state than in the time of Dr. Leach, *Children* 3399, 3400.

[1836.] Specimens that are not named at all, also of some the spelling of which is incorrect, *Sowerby* 3–10. 166, 167——Names are repeatedly written in pencil and badly, but are not illegibly or improperly spelled, *Bell* 355–357——As far as it goes, witness is satisfied with the classification and nomenclature; the system published should be exposed to public view, *Sowerby* 12, 13——Naming the specimens there is not so complete as could be wished, *Bennett* 1834–1837——The original name should be retained to specimens, whatever alterations may afterwards take place, *Bell* 342–345——Ray's system superseded by that of Linnæus, which was again superseded by that of Cuvier, which should remain till improved by some equally great mind, *Owen* 534——The nomenclature should be regulated by the judgment of the head of the department of natural history, synonymes being added in the event of alterations, *Owen* 535.

Permanence in arrangement and nomenclature is more important than continual slight improvement in endeavouring to keep pace with science, *Greenough* 3949, 3950——Evils of too frequently multiplying genera; an accredited system of arrangement and nomenclature should be adopted, the curators' improvements only appearing in print at long intervals, *Greenough* 3961–3963——Scientific names are so well known that foreign names need not be attached, *Bell* 366——Common or trivial as well as scientific names should be attached, *Bell* 366, *South* 727–743. 747–753——If the common name has to be coined for the purpose, the scientific name alone would be better, *South* 727–743. 747–753——System of nomenclature adopted in the different departments of natural history, *Gray* 2466–2468——Evidence as to altering the nomenclature of the natural history department, *Gray* 2658–2663.

All works on natural history are defective, and arrangements made after them must be, *Richardson* 2255, 2256——No collection of natural history in the world even approaching to perfection, *Gould* 2381——Arrangement of the natural history collection is not such as to be instructive to the general observer and useful to the man of science, *Sowerby* 30, 31——How far any intermixture of objects of natural history in the same room at the Museum, *Gray* 2635——In the British Museum the various classes are always arranged in distinct cases, *Gray* 2645.

Radiated animals, corals, shells, &c. are in distinct series, as they would follow in Cuvier's animal kingdom, *Gray* 2646——No intermixture of subjects in the separate cases contained in the same room, *Gray* 2648——British birds and shells are kept separate for the use of collectors, *Gray* 2651——The collection considered as of authority among all the collectors of England, *Gray* 2655——Space which would be required if the collection of natural history was to be arranged in the manner Mr. Samouelle has arranged the collection of entomology, *Gray* 2656.

4. *Unstuffed Specimens:*

[1835.] Unstuffed specimens for examination would be useful, but they would be attended with expense; such a suggestion has not been offered to the trustees, *Children* 3401, 3402. 3408–3412.

[1836.] Cabinets of unstuffed specimens not recommended in the present state of the collection, *Grant* 261——Unstuffed specimens might be advantageous; they might be so kept in well-arranged stores as to be capable of being referred to with facility, *Bennett* 1731.

5. *Suggestions*

885

Natural History Collections—continued.

5. *Suggestions relative to Catalogues of the Collection:*

[1835.] There is no perfect catalogue of specimens therein: one is desirable, but the increased number of hands requisite for its formation would render it expensive, *König* 2736, 2737, *Children* 3054–3064.

[1836.] It is not known to scientific men that there are catalogues in manuscript in this department, *South* 754–758——Opportunities Mr. South had for examining the catalogues of natural history, if he had so desired, *Gray* 2524——Specimen of catalogue to the collection of natural history, which is open to any person wishing to consult it, *Gray* 2496, 2497. 2501–2516——Necessity for a catalogue, *Sowerby* 110–115, *Bell* 379–382, *South* 759–770——Expense should not be an obstacle in the way of its formation, *South* 759–770——The absence of general systematic catalogues of natural history is owing to the enormous amount of labour which would be required, *Gray* 2628——Portions of the natural history collection being in a state of transition, it would be impossible at present to form a perfect catalogue, *Bell* 389–394——The catalogue should not wait for supposed completeness of the collection; improvements might be incorporated in addenda, *Sowerby* 110–115, *Owen* 514–516. 525.

If the trustees had viewed it as a matter of importance, they would have taken steps to have formed one, *Bell* 396–399——If there had been no insuperable obstacles, the trustees should have had the officer's report of 1807 relative to catalogues carried into effect, *Owen* 526, 527——There should be a synoptical catalogue adapted for general visitors, and a strictly scientific one; it would meet with a ready sale, *Bell* 379–382, *South* 759–770——Catalogues of, should bear the names of the responsible authors on the title-page, *Owen* 509——General rules upon which catalogues in the natural history department should be constructed and printed, *Greenough* 3863–3867——That of the College of Surgeons proposed as a model, to be printed in quarto, in separate volumes of classes, *Owen* 509–513——Extent to which a catalogue of natural history at the British Museum would run if formed on the plan of that of the College of Surgeons, *Gray* 2523.

6. *Annual Expenditure for:*

[1835.] Annual expenditure for purchasing and preserving objects in the natural history department, and how far there is a limit to the sum expended, *König* 2824–2839——Bill for articles purchased by Dr. Leach for the British Museum at the sale of Mr. Bullock's collections, *App. p.* 418, 419——Account of the sums expended by the trustees upon objects of natural history, under various heads, between 25 December 1829 and 1830, *App. p.* 435——Report upon the department of natural history made by Sir Henry Ellis, Mr. König and Mr. Children, dated 2 February 1829, *App. p.* 436——Account of purchases in natural history, coins and antiquities, with cabinets: 1815, *App. p.* 302——1816, *App. p.* 305——1817, *App. p.* 307——1818, *App. p.* 310——1819, *App. p.* 312——1820, *App. p.* 314——1821, *App. p.* 317——1822, *App. p.* 320——1823, *App. p.* 323——1824, *App. p.* 326——1825, *App. p.* 328——1826, *App. p.* 331——1827, *App. p.* 333——1828, *App. p.* 336——1829, *App. p.* 339——1830, *App. p.* 342——1831, *App. p.* 345——1832, *App. p.* 348——1833, *App. p.* 351——1834, *App. p.* 354.

[1836.] Amount laid out last year on this collection, and whether expended judiciously, *Sowerby* 125–127——Sum expended thereon 1831–1835 out of the parliamentary grant, *Panizzi* 4790.

7. *Building Accommodation:*

[1835.] Want of room has precluded the trustees from obtaining objects of natural history, which they otherwise would have done, *König* 2864–2870.

[1836.] The buildings are not suited to natural history, *Greenough* 3858, 3859——Officers of, have not had any communication with the architect upon the details of the accommodation to be afforded to that department in the new buildings, *Children* 2882–2885——Extent to which Mr. Children has been consulted relative to the buildings intended to be appropriated to this department, *Smirke* 5372–5375. 5380–5385——Quantity of light for the natural history department is not complained of, but the direction of the light is, *Smirke* 5386–5388.

See also *Collection of Books and Coins*, III. *Entomology. Entomological Collection. Experiments. Grant*, Dr. *Hardwicke*, General. *Jardin des Plantes*, III, 1. *Mineralogical Department. Parliamentary Grant. Reeves*, Messrs. *Spirits of Wine. Trustees.*

Natural History Department:

1. *Removal from the British Museum.*
2. *Division proposed therein.*
3. *Officers thereof.*
4. *Proposed Board of Management.*
5. *Papers laid before the Committee.*

1. *Removal from the British Museum:*

[1836.] It ought to be removed from the British Museum, *Vigors* 1286, *Panizzi* 4800, 4801.

Natural History Department—continued.

2. *Division proposed therein:*

[1835.] Advantage that would be derived by subdividing the natural history department into separate departments of zoology and mineralogy, *Gray* 3280–3287. 3291–3307——Manner in which annual grants would be recommended, and if obtained, appropriated, in the event of the departments being distinct, *Gray* 3308–3313.

[1836.] The divisions therein are too limited; the responsibility is too much for one person, *Sowerby* 14–16——Division thereof into zoology and mineralogy; further division proposed, *Sowerby* 44, 45, *Greenough* 3868——There should be a distinct library of natural history, a separate collection of books for each sub-division of the department, *Greenough* 3881–3885——Detail of a proposition for dividing the natural history department into seven classes, with a professor to each, who should have an assistant or apprentice, and also a labouring person; salaries proposed, *South* 827–836. 1095–1097.

3. *Officers thereof:*

[1835.] Salary and emoluments, extent of apartments, and duties of witness as assistant librarian, taking the natural history department, *Konig* 2544–2552——Assistants are appointed by the trustees without consultation with witness as head of the department, *König* 2552–2557——Amount of witness's salary as assistant officer in the natural history department; duties of the office, *Children* 3029–3037——Salary of witness as extra assistant therein, *Gray* 3208–3210——Duties of the office, *Gray* 3211, 3212——If assistance were granted to witness of a superior description it would be advantageous, but not that of an attendant who had previously been employed in a menial capacity, *Gray* 3246–3257——Not advisable that the officers of the Museum should publish Annales du Museum, while natural history is so subdivided, *Brown* 3734——Salary and duty of witness as extra assistant in the natural history department, having the care of the crustacea and insects, *Samouelle* 3744–3750——Particulars as to witness's appointment, *Samouelle* 3752–3755.

[1836.] Increase in the establishment of the zoological branch of the natural history Department since witness's appointment, which have taken place at his suggestion after consideration by the trustees, *Children* 2860–2863——It ought to have better assistance, *Panizzi* 4800, 4801.

4. *Proposed Board of Management:*

[1835.] Advantages and disadvantages that would arise from the formation of a board composed of the most eminent naturalists to have the control of this department, *Children* 3065–3068.

[1836.] A committee of arrangement of the natural history department would be advantageous; it should be difficult to alter arrangements once made, *Greenough* 3846–3851——If there were a museum of natural history alone, a board consisting of heads of departments might be very advantageous for all natural arrangements, *Bennett* 1849, 1850. 1868——Number of persons of whom the board for natural history should consist, *Bennett* 1930–1933.

5. *Papers laid before the Committee:*

Report of 14 February 1807, containing list of works fit to be executed in that department, *App. p.* 519——Suggestions &c. in report of 13 July 1805, relative to, *App. p.* 522, 523, 524.

Natural History, Royal Museum of, at Copenhagen. See *Denmark*, II. 4.

Natural History, Museum of. See *Switzerland*, 2. *Tuscany.*

Natural History Societies. [1835.] Societies in this country for the cultivation of natural history, which are supported by individual subscriptions, *Brown* 3734, 3735.

Natural Theology. [1836.] One comprehensive museum of zoology is necessary for the study of natural theology, *Vigors* 1298.

Naturalists. [1835.] They have been very rarely sent out with expeditions for the purpose of collecting interesting objects relative to their science, *König* 2853——Advantages that would be derived by their being so sent out, *Children* 3190.

See also *Zoological Society.*

Naval and Military Museum. [1836.] There is a noble collection belonging to it, with means of being added to very extensively, *Vigors* 1296——Opinion that if the subject fairly laid before them, they would be induced to give up the élite of their collection to attain the object of centralization, *Vigors* 1311.

Naval Museum. See *France*, III. 3.

Naval Officers. [1835.] The regulation requiring naval officers to surrender collections made abroad should be so far altered as to allow the Museum to make selections, *König* 2843, 2844.——*See* also *Government. Zoological Society.*

887

Naylor, Sir *George*, Collection of. [1835.] This collection was not offered to the trustees in a mass; they made considerable purchases at Sir George Naylor's sale, *Ellis* 1571.

Nepotism. See *Jardin des Plantes*, II.

Netherlands. [1836.] Letter from G. S. Jerningham, esq. to Viscount Palmerston, dated the Hague, 25 September 1835, relative to literary institutions and libraries in the Netherlands, *App. p.* 577—10.

New Holland. See *King*, Captain.

New South Wales. [1836.] Specimens of insects received from, some of which were new to the cabinets of Europe, *Bowerbank* 987.

Newspapers. [1836.] They are supplied by the stamp office; date of the earliest newspaper in the Museum, *Baber* 4646–4653.——*See* also *Irish Newspapers.*

Newton, Works of. See *Rome.*

Nicolas, Sir *Harris*, K.C.M.G. [1836.] (Analysis of his Evidence.)—The public has nothing to complain of the manner in which the officers of the Museum perform their duties, 3586, 3587——Objections to great public functionaries, and men of high rank, having the whole management of the Museum entrusted to them, 3588–3591——The trusteeship ought to be the reward of literature and science; such persons have not been appointed solely for their eminence or fitness since 1791; the elected trustees ought to consist almost entirely of that class, 3592–3599——Duties of the trustees; objection to the elected trustees not having votes in the election of other trustees, 3600–3606——Whether men of rank have the best opportunities of selecting the most competent officers, 3607–3610.

Full and accurate catalogues of every department of the Museum are indispensable, 3612——Necessity for a classed catalogue of printed books, 3613–3616——The proper number of books not being supplied the Museum under the Copyright Act, is from the defective nature of that Act, 3618–3620——Nature of the imperfections in the catalogues of manuscripts in the Museum, and inconveniences they cause to literary men, 3623–3633——How far those imperfections not being remedied, arises from the office of keeper of the manuscripts being conjoined with that of secretary, 3634–3638——Particulars relative to the discovery of forgeries in the manuscripts of the Museum, as instanced in the manuscripts relating to the claim of Brydges, Lords Chandos, to that peerage; and which might have been prevented by there being two or more officers constantly in the reading-room, 3639–3649.

Opinion in favour of the catalogues being kept up even with the contents of the Museum, and against Mr. Forshall's opinion that an arrear is advisable for the constant employment of the establishment, 3650–3656——Extent to which classed catalogues of the manuscripts exist, and extent to which witness has endeavoured to supply the deficiencies, 3657–3663——Mistake in witness's observations on historical literature, as to the number of pages stated to be occupied in the description of certain manuscripts in the Museum, 3664, 3665——Extent to which catalogues may or may not be perfect in other institutions is no excuse for defects existing in those of the Museum, 3666, 3667——Desirable that the remains of the Cottonian manuscripts which have not been examined, should be, and those that are of value copied, 3674–3680.

Advisable that a classed catalogue of the manuscripts and books should be published in parts; it would not meet with a sale sufficient to pay its expenses; it cannot be compared to a bookseller's catalogue of his stock; Watt's Bibliotheca would be best work to compare it to; even if a loss were incurred in the publication, the trustees' funds should be augmented to carry it into effect, 3681–3696——Manuscripts are kept in safe custody, and are easily consulted, forming a striking contrast with the printed book department, 3697, 3698——Extract from an article of witness's in the Westminster Review, and another from his preface to his work on the Privy Council, bearing testimony to the facility with which literary men can consult the manuscripts in the Museum, 3699, 3700.

Further evidence with reference to the regulations under which the manuscripts are shown, and whether there is sufficient superintendence used to prevent defacement, 3701–3719——Opinion in favour of the British Museum and library being open from nine in the morning till an hour before sunset, 3720–3725——Observations relative to Sir Henry Ellis's explanation on the subject of the Joursanvault manuscripts, and upon the necessity of obtaining them, if it could be done without acceding to the absurd terms of the owner, 3726–3728——There should be a printed statement containing directions for using the library; the general directions accompanying the card of admission to the reading-room are not sufficiently minute, 3728——Evils of literary men being paid according to their daily service, 3729–3731——And of their having been for forty years excluded from the government of the Museum, 3732.

Nicolas, Sir *Harris.* [1836.] Published half a sheet containing an index to the technical marks by which the manuscripts in the old Royal collection may be found, *Forshall* 4159, 4160.——*See* also *Harleian Manuscripts. Joursanvault*, Baron de.

Nicolas's Observations, on the State of Historical Literature:

[1835.] Extract therefrom concerning Sir Henry Ellis's journey to Pomard, *App. p.* 432.

[1836.] Mistake in witness's observations on historical literature as to the number of pages stated to be occupied in the description of certain manuscripts in the Museum, *Nicolas* 3664, 3665.

Nicolas's "Privy Council." [1836.] Extract from the preface to, showing the facilities for consulting the manuscripts in the Museum, *Nicolas* 3699–3700.

Noel, Mrs., Collection of:

[1835.] Mrs. Noel's collection of Brazilian insects was a valuable collection, and offered at a reasonable price, but only one box was purchased, *Samouelle* 3805–3811.

[1836.] Examination upon Mr. Samouelle's evidence of last year relative to this collection not being purchased, *Greenough* 3954——Extract from Mr. König's report of 10th May 1832 relative thereto, with request that Mr. Samouelle might be allowed to make a selection, and leave given, *Forshall* 5587–5589.

Nolte, Vincent. [1836.] (Analysis of his Evidence.)—General character of the evidence is in favour of the machine being a proper one to produce a faithful image of the medals, 5805——Indemnity against any violation of contract must be reciprocal between Mr. Tilt and the company in Paris, 5807——Origin of the machine, 5808——Names of high scientific men in France whose opinions are in favour of it, 5808——Manner in which the company in Paris formed, and extent of the patronage afforded to it by the king and the government, 5808——Number of copies that would form a sale sufficient to repay the cost of a medallic history of England; necessity for the aid of Government; private publishers have refused to have anything to do with it without such assistance, 5808–5813.

Casts must be taken of the medals, and the engravings executed in Paris; imperfect engravings would be rejected, 5813–5817——The specimens selected were indiscriminately taken, to give a fair idea of the plates that have appeared, 5818——Difference between the amount paid for engraving the Soane medal by an engraver and by the machine, 5819——No objection to the work being submitted either to an officer of the Museum, or to some competent person to be agreed on between the trustees and witness; the French government have no security except the withdrawal of their subscription, if the work does not keep up its excellence, 5820–5823.

Proportion of support given by the French government, 5824——Supposed number of copies printed; number of subscribers, which is on the increase, 5825——Twelve hundred impressions of the Parthenon taken from one plate, and the plate in a very fair state, 5826, 5827——Period taken to execute engravings from the casts, 5828, 5829——The machine may be applied to taking patterns for the use of manufacturers, 5830——Other purposes to which it is applicable, 5831.

[Second Examination.]—Three thousand copies of the Parthenon have been taken; the plates will bear 9,000 or 10,000 without showing it, 5832—— Imperfections in the engravings may arise from the medals themselves being imperfect from which the casts have been taken, 5832——Necessity for the usé of an engraver to illustrate the legends of the medals, 5832——Impressions exhibited to the Committee that have been taken from the Tresor de Numasmatique, 5833–5837——Further evidence upon the extent of the support afforded by the French Government, and period when the work will be completed, 5838–5840.

[Third Examination.]—The evidence given does not convey a just idea of the capacity of the French machine; the distorting properties of Mr. Bate's old machine have been blended with the qualities of the French one, 5953——The second engraving of the Soane medal by the French machine answers all the exigencies of mathematical accuracy which can be required, 5954——The French casts being taken in brass are apt to shrink, which makes the engravings appear smaller than the medals, 5955–5958——Answer in detail to the supposed imperfections of the French machine as compared with Mr. Bate's, 5956——The French engravings are taken in perspective, as being the best suited to the public eye; the machine is capable of producing perfect engravings when required, 5957, 5958.

Nolte, Mr. [1836.] Manner in which the name of Mr. Nolte as well as Mr. Collas is connected with Collas's invention, *Tilt* 5619, 5620.

Nomenclature:

[1835.] Collections being arranged and named according to the views of the officer arranging them, is necessary to show the advances made by science, *Gray* 3231–3233——Nomenclature that was adopted by Dr. Leach; those on birds have been removed, but those on the shells have not been re-written, *Samouelle* 3894–3896.

[1836.] Unsatisfactory state of the nomenclature to the general visitor, *Grant* 1487——Detail of the great advantages of a proper nomenclature, *Grant* 1503——The arrangement and nomenclature of some accredited author should be used, though inferior in point of science to a curator's arrangement, *Richardson* 2191–2193—— A better arrangement with regard to nomenclature might be made; difference of opinion as to the

889

Nomenclature. [1836.]—*continued.*

the best system to be adopted, *Gould* 2421–2432——Mode pursued in fixing nomenclature, *Gray* 2461——No new complete work of nomenclature for birds or reptiles *Gray* 2471, 2472——None on the entire subject of shells but Lamarck's, *Gray* 2473——Explanation as to the removal or alteration of Dr. Leach's names to specimens, *Gray* 2599-2606——Reason why certain specimens are not named, and others named in pencil, *Gray* 2460——Not necessary to add the trivial name of any object in a foreign language, *Gray* 2601.

O.

Officers of the British Museum:

[1835.] No officers of the Museum hold appointments which take them away from it during the hours that ought to be devoted to its service, *Ellis* 332–336——No officers of the Museum have been appointed since March 1833; clerks have been employed for temporary purposes, *Ellis* 337–345——The responsibility of seeing that the officers effectually discharge their duty devolves upon witness, *Ellis* 361–363——They sometimes make purchases of small value, which if not confirmed by the trustees are returned upon their hands, *Ellis & Forshall* 596–598——Annual account, 1821 to 1833, of the number of librarians, officers, and other persons employed in the British Museum; salaries, extra service money, gratuities and perquisites, and other emoluments; nature and extent of service and attendance; accommodation by way of lodging, &c., *App. p.* 370——List of officers, assistants, attendants, &c, of the British Museum, 21 May 1835, *App. p.* 388——Amount of the annual salaries, and of the monies paid to each of the present under and assistant librarians, officers and attendants employed in the care and management of the manuscripts, printed books, minerals, medals, coins, prints and drawings, for extra service money, or any other sums or gratuities paid to them beyond their stated salaries; nature and extent of service; accommodation in the way of lodging, perquisites, &c., 1810 to 1820, *App. p.* 370.

[1836.] When their salaries revised, they are not to hold any other situation conferring emolument or entailing duties, than the one they hold in the Museum, *Rep. p.* iv——No charge to be brought against them; their talents, good conduct and general and scientific acquirements admitted, *Rep. p.* v.

Ability and uniform attention to the interests and service of the public by every officer in the Museum, *Bell* 330. 347, *Bowerbank* 854. 858. 861, 862, *Nicolas* 3586, 3587, *Hannay* 5157——All the officers ought to be consulted by the trustees more than they are now, *Sowerby* 137, 138. 154–165, *Panizzi* 4802. 4886–4893. 4939–4941——Difficulty of officers not being enabled personally to suggest improvements to the trustees, *Panizzi* 4968–4970——Their suggestions being made through the heads of their departments, prevents the merit attaching where it ought, *Panizzi* 4886–4893——Their representations might be considered as interference with their superiors, *Holmes* 4037, 4038. 4050–4055——The officers should have similar powers to those of the professors at Paris, the situations would then be held as marks of favourable consideration, *Sowerby* 84, 85——Evils of the degraded nominal rank of the useful scientific officers, and their relations of subordination to each other, *Grant* 319——It has rendered the appointment of eminent scientific men impossible, *Grant* 322——Scientific men should not undergo the drudgery of writing names, *Bell* 355–357——The mode of their appointment is one cause of the bad state of the collections, *Grant* 1529.

Mode adopted by witness for ascertaining the competency of parties to fill up vacancies as assistants or subordinate officers, and how far the other official trustees and the respective heads of departments are consulted, *Archbishop of Canterbury* 5499–5506——Witness's knowledge of the qualifications of candidates for vacancies is not solely confined to information by the secretary and librarian, *Archbishop of Canterbury* 5517, 5518——Necessity for the appointment of more officers, *Sowerby* 84, 85, *Bowerbank* 854. 858. 861, 862——For attending to the more popular branches, *Sowerby* 48–52——For making greater progress with catalogues, *Panizzi* 4953, 4954——In the event of lectures being given, *South* 785–795——Students might be admitted who would give their services for the information they obtain, *Vigors* 1348, 1349——Sir Humphrey Davy's

Officers of the British Museum: [1836.]—*continued.*

Davy's opinion in favour of scientific men being appointed as officers of the Museum, *Grant* 313–315——Report of a sub-committee of the trustees, 14 February 1807, as to the then present and proposed arrangement of officers, *App. p.* 512.

Ompteda, Baron. [1836.] Letter from, to Viscount Palmerston, dated London, 8 December 1835, relative to literary institutions and libraries at Hanover, *App. p.* 577–6.

Orders. See *Character of Orders and Tribes.*

Organic Remains:

[1835.] The collections of, in the French Museum are very good, *Forshall* 707.

[1836.] This department should be placed under a separate manager; it requires a knowledge of comparative anatomy, conchology and botany, and is incompatible with a minute knowledge of mineralogy, which requires chemistry and mathematics, *Sowerby* 16——The great body of fossil organic remains have not been displayed for many years, *Bowerbank* 910——Necessity for their being included in a national collecti on, *Vigors* 1402–1404.

Oriental Manuscripts:

[1835.] Progress is making in a catalogue of the Oriental manuscripts, *Ellis* 1797.

[1836.] One half the labour has been gone through which is necessary to make a complete catalogue of the oriental manuscripts, *Forshall* 4379——A catalogue of them must be printed, *Forshall* 4396.——*See* also *Manuscript Collection,* 3. *Parma,* State of.

Orleans. [1836.] Particulars relative to the city library, number of volumes, state of the library, catalogues, number of librarians, &c., *App. p.* 542–562.

Ornithological Collection:

1. *Extent and Condition of the Collection, Deficiencies therein, Space in which exhibited.*
2. *Collection of British Birds.*
3. *Classification and Nomenclature.*
4. *Comparison with Continental Museums.*
5. *Papers laid before the Committee.*

1. *Extent and Condition of the Collection; Deficiencies therein, Space in which exhibited:*

[1836.] There are great numbers of birds in the Museum, *Sowerby* 17——Number of specimens of birds stuffed for the British Museum, 1831 to 1836, *Gould* 2355–2356——In 1832 to 1836, *Gould* 2357–2359——Is the most perfect collection in the Museum, and has been formed in the last six or eight years, *Horsfield* 2565——This collection in the Museum is very instructive and very well arranged, *Horsfield* 2573——The general collection is popular, *Gray* 2956——The Museum stands the sixth in European collections as regards birds, *Grant* 1523——This collection ranks second in the zoological collection, *Richardson* 2243——Improvement in the collection of birds in the last seven or eight years, *Turner* 1672–1678, *Bennett* 1736, 1737——The collection has highly improved within the last 20 years, both in number and condition, *Griffiths* 2111–2112——Increase in the ornithological collection at the Museum since the new rooms were opened, *Gould* 2351–2354.

There are 5,000 or 6,000 known species of birds, and there are upwards of 2,000 in the Museum, *Richardson* 2186——About 2,300 species in the Museum, *Gould* 2342——About 4,000 known, and 2,000 in the British Museum, *Horsfield* 2589, 2590. 2593–2596——Number of species of birds known is about 4,200, *Gray* 2667–2948——There are 2,400 species and 4,659 individual birds in the British Museum, the principal part added during the last four years, *Gray* 2946——Four times as many birds known as quadrupeds or reptiles, *Gray* 2958——There is a fair proportion of the more interesting species of birds of the tropical climates, though not in proportion to the means possessed by the country of obtaining them, *Gould* 2419-2420——The Museum is rich in gallinaceous birds, *Gray* 2949——Also in African and Brazilian birds, and those of the northern regi ons, *Gray* 2949——It is most deficient in humming birds and European birds, *Gray* 2949——Explanation concerning the collection of horn-bills, strutheous birds, toucans and birds of paradise, in answer to Dr. Grant's evidence, *Gray* 2991——Concerning the cassowary, *Gray* 2992. 2994.

Ornithological Collection—continued.

1. *Extent and Condition of the Collection, &c.*—continued.

Deficiency therein, *Vigors* 1287, *Bennett* 1736, 1737——Deficiencies in the collection of birds might be filled up in six months; estimated expense of trebling the present collection, *Vigors* 1306. 1321–1333——Examination as to Mr. Vigors' evidence on the extent of the collection of birds, *Gray* 2981–2983. 2985——Comparison between witness's opinion and that of Mr. Vigors with regard to the deficiencies in this collection, *Horsfield* 2587–2593——The collection of birds could not be increased two thirds in six months, *Richardson* 2331, 2332——Extent to which it is an opprobrium to the British nation, *Grant* 1076——The collection of foreign birds is bad, and the old specimens in a bad state, *Turner* 1639–1645.

The birds are crowded for want of space, *Sowerby* 26, 27, *Turner* 1672–1678, *Griffith* 2127——If the collection trebled it might be exhibited in about double the space now in use, *Vigors* 1321–1323——Both the general and the British collection of birds are spread over a most disproportionate space, *Grant* 1481–1486——As there is sufficient space for it, the arrangement is satisfactory, the British birds have rather more space than absolutely required, *Bennett* 1702——The attractive nature of birds causes them to occupy a proportionably larger space than that of other collections, *Bennett* 1738–1741——Former and present space allotted to the collection, *Gray* 2457——Want of space partly, but not want of interest on the part of the trustees, will account for the manner in which birds are exhibited, *Gray* 2961.

2. *Collection of British Birds:*

[1836.] The condition of the British birds is good, and as a separate collection is complete, *Turner* 1632–1638, *Bennett* 1702. 1733, 1734, *Richardson* 2186–2200——How far that collection has been perfected at the expense of others, *Vigors* 1405–1409——The British birds being Colonel Montague's, is a reason why they should be kept separate from the general collection, though it is generally preferable to blend collections into an entire system, *Bennett* 1735——British birds formerly confined to one small room, *Yarrell* 1988——The collection of British birds have been identified and named by a boy employed in the capacity of a copier of labels, which is highly creditable to him, though not to the superior officers of the Museum, *Grant* 1516–1520——Instructions given to Mr. White on alteration of the classification of British birds according to Mr. Jenyn's work, *Children* 2819. 2886, 2887.

3. *Classification and Nomenclature:*

[1835.] System adopted with regard to the classification and nomenclature of the ornithological collection, *König* 2875–2879——It is more desirable to place long descriptions of birds in the Synopsis than on the labels, *Children* 3177–3180——The age and sex of birds are indicated where known, *Children* 3182——Certain exotic North American and Arctic birds, where named and labelled; doubts whether that system is continued, *Samouelle* 3777–3779.

[1836.] The birds are arranged in two sections, the one confined to British birds, whilst the other includes the whole class; the sections are generally but not completely arranged on Temminck's plan, *South* 717——The birds are partially but not completely arranged on Temminck's plan, *South* 1126——The naturalist's name whose system is adopted is attached to the specimens, *South* 1131——A very large proportion of the birds are named, *Bennett* 1837——In no collection are the specimens all named, *Gould* 2372——Difficulty there would be in so doing, *Gould* 2375.

Greater part of the birds in the British Museum are named, and mostly according to Temminck's nomenclature, *Turner* 1649–1654——The classification of Temminck has been adopted, which is considered a good authority, though it is not that which witness would have adopted, *Bennett* 1742–1745——The collection is arranged in classes, but not satisfactorily in orders or families, *South* 1147——The collection of birds is in most genera and families by far the most numerous in England, *Richardson* 2184–2186——The specimens are well classed, the families are put together, *Gould* 2423——Witness cannot suggest a better arrangement of the birds, *Bennett* 1702, *Gould* 2412.

As regards the mere exhibition of the birds and shells an improvement has taken place since the new buildings, but the trustees ought long since to have given sufficient aid to have had them named, *Grant* 1483–1485——Not a single species of the general collection of birds is named by its scientific designation in the Synopsis, and not a quarter of them named in the general collection, *Grant* 1479, 1480——Causes why the selection of birds are not in the Synopsis called by their scientific names, *Children* 2794——The specimens in the general collection are named by an inferior officer, *Grant* 1521——Confusion occasioned from the general collection of birds being arranged according to Temminck, and that of British birds according to Jenyns, *Grant* 1507——Contrary opinion, *Children* 2818——Confusion in the nomenclature of the bird "Emu," *Grant* 1521——Objections to the removal of Dr. Leach's names, and to the want of knowledge of who is responsible for the naming the collection, *Grant* 1522——List of naturalists who have described birds from specimens in the Museum, in answer to evidence of Dr. Grant alledging that the general collection of birds is useless to students, *Gray* 2962–2966.

Ornithological Collection—continued.

4. *Comparison with Continental Museums:*

[1836.] Rank which is due to the collection of ornithology in the British Museum, as compared with collections in the continental museums, *Gould* 2336–2350——The collection at Paris is more general and complete than that of the Museum, though the collection of British birds in the latter may make up the numbers, *Grant* 278——There are more rare and interesting specimens in the Paris collection than in the Museum, *Grant* 1523——Collection in the British Museum has increased more in proportion to the speed of zoological science than in the Paris Museum, *Turner* 1648——Comparison with Berlin, Frankfort and Vienna, *Gould* 2346.

5. *Papers laid before the Committee:*

Sir Joseph Banks's report of 27 February 1809, relative to the collection in the basement of the Museum, *App. p.* 575.

See also *Audubon's American Birds. Jardin des Plantes*, III. 1, 7. *Latham*, Dr. *Leyden Museum. Linnæus. Montague*, Colonel. *Natural History Collection*, 3. *Nomenclature. Zoological Society.*

Ornithology. See *Frankfort. Temminck.*

Osteological Collection. [1836.] It is an opprobrium to the British nation, *Grant* 1071——Sir Joseph Banks's report of 27 February 1809, concerning the collection deposited in basement of the Museum, *App. p.* 574.

Otter. [1836.] The otter is without a scientific name in the Museum collections, *Sowerby* 5.

Ottley, Mr. [1836.] Witness's opinion overruled by consulting the other trustees upon the occasion of Mr. Ottley being appointed, *Archbishop of Canterbury* 5512, 5513.

See also *Prints and Drawings.*

Ourang Outang:

[1835.] Description in the Synopsis of the ourang outang and chimpanzee (simia satyrus and simia troglodytes) and how far those descriptions adhered to by witness, *Children* 3438–3440.

[1836.] Evidence in explanation of the nomenclature of the simia satyrus and simia troglodytes, *Gray* 2475–2494.

Owen, Richard. [1836.] (Analysis of his Evidence.)

Member of the College of Surgeons, fellow of the Royal Society, and assistant conservator of the museum of the College of Surgeons, 486——Number of specimens described in the printed catalogues of the Museum, 488——Nature of the catalogue and plan which has been adopted in the natural history department, 489——Such a catalogue essentially necessary for the collections in the Museum, nature of the difficulties in the way of its formation, but which difficulties should be overcome as soon as practicable, 490–499——Evils arising from individual loss of time, and also the prevention of improvement in the museum of the College of Surgeons from the Banksian library of natural history not being maintained in the spirit of its formation, 499——Number and description of the volumes and parts of the catalogue of the Hunterian collection published, proportion the portion therein described bears to the whole collection; number of years it has been in progress and in which it will be completed, and number of persons engaged on it, 501–508. 517.

The catalogue of the invertebrated animals in the collection of the College of Surgeons is the nearest pattern for a catalogue of the natural history collection in the British Museum; it should be printed in separate volumes of classes in quarto, 509–513——If the catalogue waits for a supposed degree of completeness, the delay will be more detrimental than the incomplete state of the catalogue first printed, it will require considerable appendices and additions, 514–516. 525——That part of the zoological collection which is submitted to the public is in a state worthy of a printed catalogue, 518——Advantages of a printed over a manuscript catalogue, although it might meet with but a slight sale, 519–524——Report to the trustees in 1807 by the officers of the Museum, relative to the formation of certain catalogues in the natural history department, which if there had been no insuperable obstacles, the trustees should have had carried into effect, 526, 527——Extent to which comparative anatomy might be advantageously introduced into the zoological collection, but it should not form a separate collection while there is one at the College of Surgeons, 529——The collection of shells is in the most complete state and the most easy of access; the nomenclature is satisfactory, 530–534——Classification should be according to the text-book of the day, or system most generally adopted by zoologists, and should not be altered till a master mind revises the entire system; partial changes should not be allowed under the idea of improvement, 534——The nomenclature should be regulated by the judgment of the head of the department of natural history, synonymes being added in the event of alterations, 535——Collection of mammalia not sufficiently extensive for a national museum, 536.

Heads of departments should have the means of direct communication with the governing body respecting the purchase of collections, as is done in the College of Surgeons, and in forming the Parliamentary estimate each officer should himself state the amount he requires for the service of the year, 537–540——Constitution and functions of

Owen, Richard. [1836.] (Analysis of his Evidence)—*continued.*

of the board of curators of College of Surgeons, and whether such a plan would work well for the British Museum, 541–547. 549——A board of one or two members conversant with each department, meeting for the general superintendence of the whole, would not be so useful as a board of five or seven members to rule each department, 548——It is desirable that there should be scientific men in the governing body of the Museum, 550——Constitution of the governing body of the Jardin des Plantes, which works well as regards increase of collections, but not as regards the publication of catalogues, 551–564——A man deeply conversant with a particular branch of science may be likely to give undue importance to that branch, but a man of high scientific attainments as a doctor of the Museum, would give each department its fair share of his influence; four or five of the latter representing all the departments would not be unfit as a governing body, and such a plan would not cause petty feuds and jealousies, 566–573.

Further evidence in favour of the heads of departments and sub-departments having direct access to the trustees with regard to purchases, 574–578——Effect of the trustees being particularly conversant with any one department or sub-division on the curators of the department, 579–581——In a board composed of men of general education and scientific acquirements, the facility of increasing the Museum would be greater if the curators had the opportunity in all cases of expressing their wants, 582——Constitution of the Jardin des Plantes has caused the officers to get their relations placed on the establishment, 583, 584. 594——But they have been men of high scientific attainments, 595——The officers hold other situations; offices held by Cuvier, 585, 586——The lectures at that institution have caused the improvement of the different collections, 587–589—— The reputation of the Jardin des Plantes is an European reputation, as is that of the British Museum, 590, 591——If some among the trustees were men conversant with each branch of science, they would be better able to judge of the reports made to them by the curator, 592, 593.

[Second Examination.]—Names of zoological works which witness was unable to find in the Museum, from the Banksian library of natural history not being kept up in the spirit of its formation, 1179–1187——Catalogue of any one class of animals might be comprised in one quarto volume, 1188——Further evidence upon the deficiencies in the zoological department of the Museum library, and expense the College of Surgeons was put to in consequence, 1189–1194.

[Third Examination.]—List put in of works upon zoology which are not to be found in the library of the British Museum, 1539–1543——Some works have been introduced within the last two or three years, but the supply of the current works on zoology have not been to that extent to raise the department to the degree of excellence in which it was left by Sir Joseph Banks, 1544–1547——The deficient works are essential to a library professing to be national; corresponding works are contained in Dryander's Catalogue; the greater part are monographs; they are foreign, but could be obtained if a system established of having foreign works on zoology transmitted to the national library as soon as published, 1548–1551——A classed catalogue would show the poverty of the Museum in that branch, 1552——Cause of erasures in the list; number of them compared with the number in the list, 1553–1555——Pander and D'Alton's work on skeletons eventually found in the catalogue under the second author's name only, under D; while whole works of De Blainville and De Lamarck were found under B & L, 1556.

P.

Pachydermata. [1836.] Casts of, in the Museum, from Eppelsheim and Paris; beauty thereof, *Viscount Cole* 2733.

Pakenham, Richard, Esq.:

[1836.] Letter from, to Viscount Palmerston, dated Mexico, 19 November 1835, relative to literary institutions and libraries in Mexico, *App. p.* 577–15.

Palgrave, Sir *Francis.* [1836.] His opinion of Alcuin's Bible, *Evans* 3341–3372.

Pamphlets. [1836.] A single volume of pamphlets may contain 200 entries, *Panizzi* 4773. *See* also *Printed Books.*

Panathenaic Frieze. [1836.] Engraving from this by Mr. Bate's machine, executed in four or five hours, *Henning* 5941–5945.

Panizzi, Antonio. [1836.] (Analysis of his Evidence.)—Additional assistant librarian of the British Museum, 4767–4770——Comparison between the library of the British Museum and several of those on the Continent, 4771–4782——The Russian library has been partly formed of the conquests from the Poles, 4783——The French have not returned all the books taken from the Vatican, 4784——Parliamentary grants have not been sufficiently extensively applied to the service of the library; comparison with the other departments of the Museum, 4784–4792——Extension of the Parliamentary grant necessary for the purchase of costly and modern books, 4794–4801. 4823–4829——The affairs of the Museum being managed by the heads of departments forming a committee

Panizzi, Antonio. [1836.] (Analysis of his Evidence)—*continued.*

would not be a good plan, 4802——The space at present allotted to the library, also that in the new buildings, is not sufficient, 4803–4808. 4830, 4831.

Instances in which the trustees have declined to make purchases of books that have been suggested to them, 4809–4812. 4819–4822——Suggestion by witness relative to procuring the libraries of dissolved convents in Spain and Portugal, but which suggestions were not acted upon by the trustees, 4811–4818——Additions to the library should be made by whole collections, and not single books, 4823–4829——There are very few foreign libraries where they have even alphabetical catalogues, 4832–4840——Mode in which alphabetical catalogues ought to be formed, 4833, 4834——The system is bad upon which the catalogue in the Paris library is formed, 4836–4838——Period taken in the formation of the catalogue at Gottingen, which is going on as the library increases, 4841–4845.

Nature of the difficulties that arise in the formation of an alphabetical catalogue in a large library; plan of one proposed for the British Museum, 4846–4851——An alphabetical catalogue should precede a classed one; there are difficulties in the way of the two being formed together, though it might be done, 4852–4857——Reasons in detail showing the impossibility of making a good classed catalogue, 4855–4858——Adoption by the trustees of another plan for an alphabetical catalogue than that suggested by the officers of the printed book department, 4860, 4861——Officers at present employed in transcribing the manuscript catalogue, with a smaller one for the use of the reading-room, 4862, 4863——Number of titles that can be got through in a day; practical mode proposed to be adopted for the formation of an alphabetical catalogue for the Museum, 4864–4869.

Facilities given to readers in the reading-room are greater than in any similar institution; modes by which books may be found with ease, although there is no classed catalogue, 4870–4874——Improvements that have taken place in the transcript of the catalogue for the use of the reading-room, 4875——Average number of books asked for in the course of a day, 4876——Assistant librarians and subordinate officers are not consulted so much as they should be, 4881–4893. 4926–4928. 4939–4941——Influence exercised by the trustees in increasing the library, particularly as regards that used to obtain the library of George the Third, 4896–4901.

Advantage to the Museum from having high public functionaries and men of high rank among the trustees, which is instanced in the case of George the Third's library, 4902–4907——Comparative modes of government of establishments in France, and that of the British Museum, 4908–4918——Objection to a board composed of men of science and literature instead of the men of rank in the present trusteeship, 4919–4924——Evils of a board of management composed of heads of departments for managing the executive, under a board of trustees composed mainly of scientific men combined with men of rank, 4929–4935. 4939–4941——The officers have been more active promoters of purchases than the trustees, 4936–4938——The trustees should be composed of the same description of men as at present, 4939–4941.

Mr. Payne Knight and Mr. Cracherode were supposed to have been made trustees on account of their collections, 4942——Cause of the president of the Society of Antiquaries being appointed a trustee, 4943, 4944——Sir Joseph Banks and Sir Humphrey Davy, as presidents of the Royal Society, were not the best trustees that could be had; the former did mischief by his interference, 4945–4949——Obscure persons and strangers have more attention paid them in the reading-room and throughout the house, than eminent persons or persons known would have, 4950–4952——The staff of the Museum is not sufficient, 4953–4954——Inconveniences that are supposed will result from the new buildings, 4955–4957——Disapproval of a classed catalogue; an alphabetical catalogue, with an index of matters, would be more useful, 4958–4967——Difficulty of officers not being enabled personally to suggest improvements to the trustees, 4968–4970.

Panizzi, Mr. [1836.] He was appointed upon the representation of several persons not connected with the Museum, and upon its being much pressed by several of the trustees, *Archbishop of Canterbury* 5510, 5511.

Papal Government. [1836.] There is in the State Paper Office, ready for press, a collection of transactions between England, Scotland, Ireland and the Roman See, from the reign of Will. 2, to the present time, copies of which should be in the Museum, *Hannay* 5153.——*See* also *Vatican.*

Papyri. [1836]. The papyri have been transferred from the department of Antiquities to that of the Manuscripts, and numbers have been unrolled, pasted down and framed, or secured, *Forshall* 4389.——*See* also *Hogarth,* Mr.

Paris. See *Copyright Act. Temperature.*

Parliamentary Grants:

[1835]. The country ought, and would very wisely bestow, much larger grants on the Museum than at present, and if so every person in the establishment would be more liberally paid, *Forshall* 887——Special grants made by Parliament are not entered in the accounts of the Museum, as not going through the trustees' hands, *Forshall* 929–934——Sums voted by Parliament for specific purposes are not always strictly applied to those purposes, but the balance is returned in the annual accounts to Parliament,

Parliamentary Grants. [1835.]—*continued.*

Parliament, *Forshall* 1171–1174——Appropriation thereof to other purposes than the specific ones for which granted, is sanctioned by Parliament, by being mentioned in the estimates of the following year, *Forshall* 1180–1192.

The money voted is received from the Treasury *en masse*, and appropriated as nearly as possible to the specific objects for which the estimates are framed, *Forshall* 1255–1258——Cause of sums being asked for one purpose and expended on another, *Ellis* 1350, 1351——Sum that would be sufficient to be annually granted to complete the national collection, *Samouelle* 3910, 3911——Statement of the money votes by the House of Commons, specifying the statute by which each was applied, *App. p.* 568——Special grants voted by Parliament, 1811 to 1835, for the purchase of collections to be deposited in the British Museum, *App. p.* 357.

[1836]. Increase of, recommended to the consideration of Parliament, *Rep. p.* v.——Sums spent in the purchase of objects of natural history appear very large, *Sowerby* 89——Each officer should state the amount he requires, *Owen*, 537–540——That for the zoological department ought to be equal to what is given for the whole, *Vigors* 1299——Qualification of that answer, *Vigors* 1322——Sum that ought to be given, *Vigors* 1448——Defects in the institution mainly attributable to the want of funds, *Nicolas* 3725——Larger grants necessary, *Edwards* 4766*——They have not been sufficiently extensive for the library compared with other departments, *Panizzi* 4784–4792——Extent of the grant necessary for the purchase of costly and modern books, *Panizzi* 4794–4801.

See also *Alexandrian Manuscript. Expenditure. Jardin des Plantes*, 1. *Library. British Museum*, 1. *Medallic History of England. Natural History Collection. Printed Books. Prints and Drawings. Rich's Collection. Trustees*, 2. *Value of Collections.*

Parliamentary Papers. [1836]. They are received at the Museum by order of Government, *Baber* 4655-4658——Necessity for some better arrangement with regard to the Parliamentary papers, *Edwards* 4762, 4763.

Parliamentary Returns. [1835]. By what officer the returns laid before Parliament are made up, *Forshall* 806–825——Why the return presented to Parliament in 1833 was not according to the order of the House of Commons, *Forshall* 960——About the year 1812, whoever presented the accounts to Parliament signed them, *Ellis* 1050, 1051.

See also *Accounts.*

Parma, State of. [1836]. Purchase by the small state of Parma in Italy, of De Rossi's collection of Oriental manuscripts and books, for 4,000 *l.*, *Panizzi* 4785——Information relative to the Ducal library, containing number of volumes, state of the library, number of librarians, and other particulars, *App. p.* 543–562.

Parry, Captain. Some of his collection of animals were presented by the Admiralty to the Zoological Society, *König* 2850–2852.——*See* also *Rock Specimens.*

Parthenon. [1836.] Twelve hundred impressions of the Parthenon taken from one plate, and the plate in a very fair state, *Nolte* 5826, 5827——Three thousand copies have been taken, *Nolte* 5832——Production of specimens of engravings from works on the Parthenon, done by the French machine and Mr. Bates's, and examination thereon, *Henning*, 5936–5951——Witness's work pirated in France, engravings taken from it, and his name expunged, *Henning* 5945–5951——Letter from witness, stating that his name is acknowledged in the French work, *Henning* 5951.——*See* also *Cockerell*, Mr. *Elgin Marbles.*

Parties, Attendance on. See *Heads of Departments*, 1.

Patronage:

[1835.] The patronage of the Museum is confined to the three principal trustees, *Ellis* 118–121.

[1836.] Deference paid with regard to the disposal of patronage by the Lord Chancellor and Speaker of the House of Commons, to the Archbishop of Canterbury, *Archbishop of Canterbury* 5498.——*See* also *Heads of Departments*, 3.

Patterns. See *Collas's Engraving Machines.*

Payments. See *Income and Expenditure.*

Peel, Sir Robert. [1836.] His opinion as to the importance of obtaining Alcuin's bible, *Evans*, 3341–3372.

Peerage, Lords' Report on the Dignity of. [1835.] Mr. Millard was employed to read the proof sheets of the Lords' Report on the Dignity of the Peerage, *Hansard* 2388.

Pembroke, Lord, Coins of. [1835.] The trustees did all they could to get these coins in 1828, but the Treasury would not advance the money, *Forshall* 1544–1550.

Pennant's British Zoology. [1836.] Is a work well known to contain amusement and information to the unscientific, *South* 766.

Perishable Articles. [1836.] Duplicates of certain objects of zoology that were perishable, have recently been exchanged, *Forshall* 471.

Perriwinkle. [1836.] The genus with which it is connected is incorrectly spelt on the label, though it is right in the Synopsis, *Sowerby* 7.

Peruvian Gold. [1835.] Cause of the trustees not purchasing a piece of native gold from Peru, which was offered them, *König* 2948–2959.

Petrie, Henry. [1836.] (Analysis of his Evidence.) Keeper of the records in the Tower 4971* ——Facilities in the reading-room at the Museum are infinitely greater than at the Royal Library at Paris, 4972–4978——Objections to opening the Museum by candlelight, 4979.

Phygaleian Marbles. [1836.] Production of specimens of engravings from works on the Phygaleian marbles done by the French machine and by Mr. Bates's, with examination thereon, *Henning* 5936–5951——Witness's work pirated in France, engravings taken from it, and his name expunged, *Henning* 5946–5951——Letter from witness to the Chairman of the Committee, stating that he is in possession of a volume of the French work, in which his name is acknowledged, *Henning* 5951.——*See* also *Marbles.*

Physical and Mathematical Instruments, Collection of, at Dresden. See *Saxony.*

Physicians, College of. [1836.] President of, should not be excluded from the official trusteeship, *South* 1124.

Physiology. See *Dryander's Catalogue.*

Picture Gallery, Royal, at Copenhagen. See *Denmark,* II, 6.

Picture Gallery at Dresden. See *Saxony.*

Picture Sales. [1836.] The dishonest practice of agents at sales by auction of pictures might be stopped if properly looked after by the excise, and a short bill passed applicable to the case, *Harding* 4349.——*See* also *Christie's Sale of Pictures. Excise.*

Pictures. [1835.] Bequests of pictures have not been sold; they are placed in the National Gallery, *Ellis* 529–537. 557–564.——*See* also *Beaumont,* Sir *George,* pictures of.

Pierre Jeannin, Medal of. [1836.] Examination upon the engraving, and whether the difference of diameter would be to such an extent occasioned by the contraction of the cast, *Faraday* 5977.

Pipe Rolls. [1836.] Those transferred to the Museum by order of the Record Commissioners have all been examined, *Forshall* 4389.

Pistrucci, Benedetto. [1836.] (Analysis of his Evidence.) Chief medallist at the Mint, formerly chief engraver, 5982——Comparison of engravings with the French and English machines, both being preferable to common engraving, 5987, 5988. 5998. 5999——In engravings by the French machine, that which is called distortion is not so, but a foreshortened or perspective view, 5989–5994——Impossible to unite the perfections of both machines 5995–5997——An engraver would be instructed to give a correct copy of a medal, and not a perspective view, 6000.

Plans for the New Buildings. [1836.] Witness's instructions for furnishing plans for the new buildings at the Museum, were by letter from the surveyor-general of the Office of Works, referring to the trustees for further instructions, *Smirke* 5273–5275——Period when the detailed plans for the west and north wings were given in, *Smirke* 5338–5349——How far witness considered the plans of foreign libraries or museums previously to laying down the plan for the British Museum, *Smirke* 5360–5362——The trustees have never suggested considerable alterations in the plans, or complained of any part of them, *Smirke* 5468. 5469.

Planta, Joseph, esq. [1836.] Nature of the catalogue suggested by him in 1801, for the public records in the Museum, *Edwards* 4766*——Letter from, to the Speaker, dated 22d January 1807, on the subject of improving the mode of watching the Museum, *App. p.* 520.

Plaster of Paris. See *Fossils. Mastodon Bones. Quadrupeds.*

President of the Society of Antiquaries. } See *Trustees*, 6.

Presidents of the Royal Society. See *Royal Society*, 2.

Printed Books:

[1835.] Number of volumes of printed books contained in the library in 1821 and 1832, and of additions since 1821; volumes sold and disposed of, *App. p.* 369.

[1836.] Number there are in the Museum, *Forshall* 4424, *Baber* 4592–4598——Number of works acquired since 1833, *Baber* 4592–4598——Annual increase in the last few years, *Panizzi* 4803——The annual printed list will show the additions in the course of the year, *Baber* 4599–4605——The annual lists should be alphabetical, *Forshall* 4467——Statement of the number of printed books and pamphlets, songs and pieces of music, entered at Stationers' Hall, and received for the library of the British Museum; also those procured by the collector for the Museum, *Baber* 4645——Error in the number of them stated in the Report of the Committee of last year, *Forshall* 4424——Cause of certain pamphlets being left out of the return to Parliament in 1833, *Baber* 4592–4598.

There are branches of literature in which printed books are wanted, but which arises from the want of adequate funds to purchase them, *Gage* 5059–5062——Amount of the Parliamentary grant expended thereon, 1831 to 1835, *Panizzi* 4790——Every printed book in the library should be numbered, *Nicolas* 3672——Difficulties in the way of ascertaining in any collection the exact number of printed books, *Hannay* 5099——Pamphlets are stated in annual lists as so many volumes, *Baber* 4599–4605——Witness's salary and duties as keeper of, *Baber* 4492–4497——Duties of Mr. Panizzi and Mr. Cary, as assistants, and security given by them, *Forshall* 4449–4457——Report of 14 February 1807, containing list of works fit to be executed in that department, *App. p.* 519——Suggestions in report of 13 July 1805, as to this department, *App. p.* 520–523——Mr. Baber's reports of 26 April and 6 May 1834, *App. p.* 534.

See also *Catalogue of Printed Books. Continent. Copyright Act. English Authors. Heads of Departments*, 2. *King's Library. Lectures. Library of the British Museum*, 1. *Literary Works. Reading Room. Vatican.*

Printing. [1835.] Means taken by the trustees to get their printing done at the lowest rates; names of printers employed by the Museum, *Forshall* 1065–1074——Account of all sums paid on account of printing the Museum catalogues and publications, 1821 to 1833; cost of each publication; sums paid editor, engraver, printer and bookbinder; copies printed and how disposed of, *App. p.* 362–368.

See also *Catalogue of Books and Collections*, VI. *Catalogue of Manuscripts*, 3. 5.

Prints and Drawings:

[1835.] How far the print-room is under the head of the department of antiquities, and whether it would be advisable to make them distinct departments, *Hawkins* 3475–3487——Account of the number of applications made to the trustees of the British Museum (at meetings authorized according to the rules to grant admissions) for the purpose of being admitted to inspect the collection of prints and drawings, or any parts thereof, 1815 to 1820; number of admissions in consequence of such applications, *App. p.* 397——Copy of Mr. Smith's, keeper of prints and drawings, report to the trustees, dated 18 March 1824, *App. p* 413.

[1836.] Mode in which the prints should be arranged and catalogued, *Greenough* 3808–3813——Whether the collection has not been formed more with a view to art than illustration, *Greenough* 3825–3832——Difficulties in the print department occasioned by the illness of Mr. Ottley, which if there had been sufficient assistance would not have been occasioned, *Edwards* 4761, 4762——Nature of the catalogue or index to the prints and drawings at present in use, and description of one that is forming, *Josi* 5189–5193——Period in which the classed catalogue of prints will be completed; its publication would be useful, *Josi* 5217–5221——New inventory forming; the present one defective, *Josi* 5218–5223——Estimated value of the prints, and number that are in the collection, *Josi* 5201–5203——Care taken to prevent injury by turning over the leaves of prints, *Josi* 5224–5228.

Prints and Drawings. [1836.]—continued.

The collection at Vienna is more perfect and extensive than that at the Museum, *Josi* 5235–5239——It was part of the collection of Prince Eugene, *Josi* 5242——The Paris collection is more numerous and rich than that of the Museum, *Josi* 5240–5241——Some of the common prints might be shown with greater facility, but there are not many common prints in the Museum, *Josi* 5255——Annual allowance for the improvement of the collection, which when not sufficient for the purchase of any particular collection, a special application is made to the trustees, *Josi* 5257–5259——There is another situation intended for the print-room in one of the new buildings, *Josi* 5194——There is no necessity for a separate room, *Josi* 5198——It is well lighted, ventilated and warmed, *Josi* 5194–5198——Extent of superintendence exercised by Mr. Hawkins, the chief of the department of antiquities and arts, over the print-room, *Josi* 5243–5251.

See also *Maps, Prints and Drawings. Visitors.*

Private Collections:

[1835.] There is no prohibition against officers of departments making private collections, *Forshall* 906, 907——There is no private collection in the Museum; every thing is exhibited, *Gray* 3276, 3277.

[1836.] It would be an act of injustice to interdict officers in charge of collections from forming private collections, *Bell* 419–421——Number of insects that may be got together in a short time, shown by the extent of the collection of a small entomological club, *Bowerbank* 904, 905.——*See* also *Zoological Collection*, 3.

Private Libraries. [1836.] The collection of manuscripts in the Museum may be increased by obtaining copies of the most important records and historical documents in private libraries, in exchange for articles of equal value, *Hannay* 5153.

Private Museums. See *Mammalia*, 5.

Private and Local Literary Institutions. See *Catalogues of the Museum*, 3.

Private Rooms:

[1835.] Unsuccessful attempt of witness to obtain a private room, which is an accommodation the other under-librarians have, *Brown* 3690–3696.

[1836.] Curators should have separate apartments, to pursue their speculations uninterruptedly, *Bell* 364, 365, *Greenough* 3888——Provision that will be made for that purpose, *Smirke* 5389–5401——The accommodation provided for the officers in the Museum is greater than that provided for the officers in the Paris Museum, *Smirke* 5454.

Promotion:

[1835.] The principle of promotion is acted on in the establishment, *Ellis* 370, 371.

[1836.] The principle of promotion is not acknowledged in the appointments at the Museum, *Holmes* 4003–4005.

Provincial Libraries. [1836.] There is generally a classed catalogue in the provincial libraries in France, *Mathew* 3383.——*See* also *Libraries.*

Provincial Museums. [1836.] Under a formatore and competent superintendent, provincial museums would be able to supply themselves with fine casts at one-third the present price, *Weigall* 202.——*See* also *Louvre.*

Prudhoe, Lord. [1835.] About 60 specimens of rocks from the Holy Land, given by him, *König* 2796.

Prussia:

[1835.] Despatch from R. Abercrombie, esq., to Viscount Palmerston, dated Berlin, 12 November 1834, relative to literary institutions in Prussia, *App. p.* 481.

[1836.] Letter from Lord William Russell to Viscount Palmerston, dated Berlin, 6 May 1836, relative to literary institutions and libraries in Prussia, *App. p.* 577–136——Particulars relative to the Royal Museum at Berlin, its collections, income and expenditure, *App. p.* 577–159——Regulations of the Royal Library, *App. p.* 577–171.

Public Functionaries. See *Trustees*, 3.

Public Instruction. See *France*, II.

Public Taste. See *Taste.*

Publications. [1835.] Number of publications of the Museum printed and sold, *Forshall* 1052–1055——Account of receipts and expenditure for works published, 1812 to 1814, *App. p.* 298——1812 to 1815, *App. p.* 299——For 1815, *App. p.* 302——1816, *App. p.* 304——1817, *App. p.* 307——1818, *App. p.* 309——1819, *App. p.* 312——1820, *App. p.* 314——1821, *App. p.* 316——1822, *App. p.* 319——1823, *App. p.* 322——1824, *App. p.* 325——1825, *App. p.* 328——1826, *App. p.* 330——1827, *App. p.* 333——1828, *App. p.* 335——1829, *App. p.* 338——1830, *App. p.* 341——1831, *App. p.* 344——1832, *App. p.* 347——1833, *App. p.* 350——1834, *App. p.* 354.——*See* also *Sales of Publications.*

Pupils. See *Lectures.*

Purchase of Books. See *Library, British Museum*, 2.

869

Purchase of Collections:

[1835.] The trustees do not make purchase of collections above the value of 1,200 *l.* or 1,500 *l.*; mode adopted of applying to Parliament, and evidence taken before Committees of the House of Commons, *Ellis* 171–191——Account of the purchases of the Museum, 1812 to 1835, *App. p.* 357.

[1836.] Desirable that the officers of the Museum should be consulted previous to the purchase of collections for their respective departments, *Bell* 422–428——Heads of departments should have the means of direct communication with the trustees relative to purchases, *Owen* 537–540. 574–578——Purchases of importance are not made, though they are sometimes declined without consulting the heads of departments, *Forshall* 4361–4368——Evidence in favour of curators being consulted on purchases, *Greenough* 3951–3958——Reference made to witness respecting the purchase of a fossil turtle, *Bell* 429, 430——Assistant librarians are not consulted relative to the purchase of books; the keeper of the printed book department sometimes is consulted, *Panizzi* 4881–4885——Instances in which the trustees have declined to make purchases of books that have been suggested to them, *Panizzi* 4809–4812. 4819–4822——The officers have been more active promoters of purchases than the trustees, *Panizzi* 4936–4938——Purchases in the natural history department should be made on a well digested and connected system; principles of purchase proposed, *Vigors* 1390, 1391. 1396–1401.

Manner in which specimens are ordinarily offered for sale at the Museum, *Gray* 2666——Those made by Museum officers are not so extensive as they ought to be, and they would do better in bidding by deputy, *Cochran* 3432–3435——Opinion against Mr. Thorpe's evidence, who advises the trustees to buy manuscripts by commission; they would be bought much dearer, *Harding* 4335–4340. 4352——The Museum has employed agents, *Harding* 4353——No objection in some cases in making purchases through an agent, *Forshall* 4458–4461——Preference by witness of purchasing manuscripts at public sales himself, instead of employing an agent, in consequence of the unfairness of dealing and combinations among booksellers, *Forshall* 4432——Extent of the purchases of manuscripts by the Museum of Mr. Thorpe in the last four years, *Forshall* 4431.

Q.

Qualifications. See *Trustees.*

Quadrupeds:

[1835.] There is but little opportunity of stoving the skins of quadrupeds, there being but one part of the building that can be appropriated to the purpose, *König* 2760–2763.

[1836.] The lofty saloon containing them is without a gallery, the cases too low; the upper part of the saloon is quite dark from the sombre character of the old paintings with which it is covered, *Grant* 252——Small number that are named out of the number exhibited, *Grant* 1472——There are plaster casts of extinct quadrupeds, which supply the place of the real remains, *Grant* 1513——This collection ranks third in the zoological collections of the Museum, *Richardson* 2243——Their not being placed in strict zoological order is entirely attributable to want of space, *Children* 2783–2788——Want of space prevents the large specimens in store being exhibited, *Children* 2830, 2831——Witness cannot suggest a better arrangement thereof, *Gould* 2412.

Zebras, cameleopards and other short haired animals, do not injure at all with ordinary care and in a dry room, *Gould* 2451——Extent and description of the larger class of quadrupeds in the Jardin des Plantes, *Grant* 1523——The Museum collection is better than that of Berlin, but not so good as that at Frankfort, *Gould* 2349——The possession of the large animals at Paris, Leyden and Frankfort, makes those collections appear so much larger, *Gould* 2364——The collection at the Zoological Society is scarcely before that of the Museum, *Gould* 2360.

See also *Jardin des Plantes*, III. 8. *Ornithological Collection*, 1.

Queen's College, Cambridge. [1836.] The classed catalogue of that institution is found generally useful, *Baber* 4609, 4610.

Quérard. [1836.] This work is not in the catalogue, but there are two copies in the Museum in constant use of the officers, *Baber* 4671.

R.

Rabbits. See *Hares and Rabbits. Mammalia.*

Radiata:

[1835.] Collection of radiata the richest of any collection known to witness, though not so rich as it might be if more money granted for it, *Gray* 3356, 3357——Extent of in the Paris collection, *Gray* 3336.

[1836.] Extent to which the collection is an opprobrium to the British nation, *Grant* 1080——The radiated animals are generally named and arranged, *South* 1155——Crowded and confused state of the spirit preparations of, in the Museum, *Grant* 1505——Small number of specimens which are named, *Grant* 1515——They are very fairly arranged,

Radiata. [1836.]—continued.

arranged, *Bennett* 1702——Those in the Paris collection were named by the first zoophytologist in Europe, Lamarck, *Grant* 1523——The increase in one year in the Paris collection mistaken in last year's report for the total collection, *Grant* 1523.

See also *Fossils. Jardin des Plantes*, III. 1. *Natural History Collection*, 3.

Rats. See *Mammalia.*

Raumer, Monsieur Von. [1836.] The bad ventilation and warming of the reading-room at the Museum has occasioned a remark from this historian, *Edwards* 4745—— Answer to his complaint relative to warming the reading-room, *Smirke* 5408——There are only two of his works in the British Museum, *Edwards* 4765.

Ray's Nomenclature. See *Natural History Collection*, 3.

Reading Room:

[1835.] Is only closed during the Christmas, Easter and Whitsun weeks, *Forshall* 1281——In one instance the same gentleman required 55 books in one morning, which were supplied him, *Ellis* 1315, 1316—— It is not sufficiently capacious or so well ventilated as it ought to be, *Ellis* 1658–1661——Name of the superintendent of, *Ellis* 1662–1665——The attendance of one of the librarians therein has been dispensed with, it being considered a misapplication of time, *Ellis* 1666–1675——The Rev. Mr. Maurice was the last officer who attended the reading-room, *Ellis* 1666——Number of volumes of lexicons, dictionaries and encyclopedias therein, one-half of which have been added of late years, *Ellis* 1800, 1801——Appropriation of the great room of the Royal Library as a reading-room, would cause the books to be turned out of the library to make room for those of the reading-room; two new reading-rooms are preparing, *Ellis* 1802, 1803.

Means of procuring admission to the reading-room; recommendations usually required, particularly with regard to foreigners, *Ellis* 1804–1806——Account of the number of applications made to the trustees of the British Museum (at meetings authorized according to the rules to grant admissions) for the purpose of being admitted to the reading-room, 1815 to 1820; number of admissions in consequence of such applications, *App. p.* 397——Statutes and rules of the trustees now in force with respect to admission to the reading-room, 1821, *App. p.* 401——Letters from the Rev. H. H. Baber to Sir Henry Ellis, as to persons attending the reading-rooms, dated 26th and 30th June 1835, *App. p.* 428, 429——Letter from Mr. Cates to Sir H. Ellis, on the same subject, dated 24th June 1835, *App. p.* 429.

[1836.] Extension of the hours of admission thereto recommended, *Rep.* iv——The present one is not intended to be a permanent one; it is not sufficiently spacious, and is ill warmed and ventilated, *Edwards* 4754——Mode by which it is warmed, *Smirke* 5408——In the new buildings there should be a separate room in which to deposit books in use, instead of allowing them to remain in the reading-room as at present, *Edwards* 4766*——They are so fully attended that there is difficulty in getting a seat applicable to any research in which many volumes are wanted, *Stonestreet* 5184——Great increase in the number of persons attending the reading-room since the new buildings were first under consideration, *Smirke* 5313——There are no restrictions on the description of visitors frequenting the reading-room if they produce the common testimonials, *Mathew* 3419, 3420——The general directions accompanying the card of admission to the reading-room are not sufficiently minute, *Nicolas* 3728——Advantages of the regulations for admission to the reading-room which should not be relaxed, *Hannay* 5129–5136.

Difficulty witness formerly experienced of obtaining access to the Museum, when the privilege was solely granted by the trustees, *Stonestreet* 5162, 5163——Facilities which are at present experienced, and whether witness's claim to be admitted as a matter of right has not tended to those facilities, *Stonestreet* 5164–5170——As far as regards the present regulations and the officers and attendants every facility is afforded in the reading-room, *Edwards* 4751——In what manner the regulations might be extended so as to afford greater facilities to readers, *Edwards* 4752——Facilities given to readers in the reading-room are greater than in any similar institution, *South* 1169, *Panizzi* 4870–4874——Facilities there are infinitely greater than at the Royal Library at Paris, *Petrie* 4972–4978——No comparison can be drawn between the facilities afforded in the reading-room of the British Museum and that of foreign libraries, *Huish* 4984, 5007——The facilities there cannot be improved, persons going there on the usual recommendation are sure to meet with them, *Huish* 5008–5010, *Gage* 5024–5032——There is no library foreign or domestic, public or private, where there is such a mass of information or such facility of reference as there is in the British Museum, *Gage* 5051–5059.

The period that usually elapses between asking for a book or manuscript and obtaining it, is no longer than is necessary, considering the number of visitors, *Stonestreet* 5171–5172——Whether it would be possible that the reading-rooms should be classed between study and amusement, *Stonestreet* 5173–5176——Light literature, such as novels, plays, &c., should not be allowed to be read there, *Hannay* 5154, 5155——It might be advantageously open to persons under the age of 18 years, *Stonestreet* 5172—— If there had been two or more officers constantly in the reading-room, the forgeries in the Chandos manuscripts might have been prevented, *Nicolas* 3639–3649——There should be officers of a higher grade therein, *Nicolas* 3702——Opinion in favour of one of the

901

Reading Room. [1836.]—continued.

the librarians being constantly attendant in the reading-room as formerly, *Edwards* 4754–4756——Average number of books asked for in a day, *Panizzi* 4876——Courtesy and attention of the officer attending it, but he is not expected to be a man of literary attainments, *Edwards* 4754.

See also *Catalogues* I. II. VIII. 2. *Evening Admission. Gas. Hallam,* Mr. *Hours of Admission. Raumer,* Monsieur Von. *Salaries. Select Manuscripts.*

Receipts and Payments. [1835.] Receipts and payments of the British Museum annually, 1812 to 1834, *App. p.* 295–353——Account of money received and expended for the British Museum, 1820 to 1833, under particular heads, *App. p.* 358.

See also *Accounts. Income and Expenditure.*

Record Commission. [1835.] Sum received by witness from the Record Commission, for a work on which he had been engaged, and why the amount was not mentioned in the return to Parliament in 1833, *Ellis* 271.

See also *Lansdowne Manuscripts. Pipe Rolls. Welsh Domesday.*

Records, Public. See *Dover,* Lord. *Planta,* Mr. *Joseph. Private Libraries.*

Redman, Lieutenant. [1835.] The zoological specimens sent by Lieutenant Redman from Nova Scotia have not been exhibited, from a doubt in the minds of the trustees as to whether they were Museum property, *König* 2798–2804.

Reeves, Messrs. [1836.] Their extensive donation of specimens of natural history to the British Museum, *Gray* 2464.

Refusal to accept Donations. See *Donations and Bequests.*

Refusal to purchase Collections. See *Haworth,* Mr.

Règne Animal. [1835.] An English synonyme is added to the specimens, most frequently that in Griffith's Translation of the Règne Animal, *Children* 3126.

Rembrandts. [1836.] Reason the trustees did not purchase Mr. Sheepshanks' collection of Rembrandts; difficulty of forming a perfect collection of them, *Josi* 5210, 5211——Paris collection of, formed in the time of Louis XIV, *Josi* 5241.

Rennie, George. [1836.] (Analysis of his Evidence.)—The Apollo Belvidere at Rome moulded at witness's request, 1197——Nine statues out of ten in the Museum may be safely moulded, but there are instances where there may be danger, 1198——No way in which a knowledge and taste for the arts can be better diffused than by exhibiting casts from the finest statues of antiquity in the kingdom, 1199——Desirable that a formatore and depôt for casts should be established in the Museum, 1200, 1201——No artist should have exclusive privilege, 1202——Cost of moulding the Apollo Belvidere, 1203——Extensive sale would take place if such casts furnished to the public, 1204——Nature of the establishment for the formatore recommended, 1205——With regard to the Elgin marbles it is impossible to light three rows of sculpture in one room; the Ilissus is an instance of light and shade being destroyed, 1208–1213.

The public might be admitted during the study of the artists without their studies being interrupted; the Museum might be open five days; there is a necessity for closing one day, 1214–1216. 1223–1227——Number of visitors annually attending the British Museum, if it were open six days instead of three it would not be so crowded, 1219–1222——Galleries at Florence and Rome are open on fête days and holidays; there would be no objection to the British Museum being also open, 1229–1232——The Louvre is open on Sundays; there would be no objection to the British Museum being so after Divine service; it would be a rational and instructive amusement to the people, 1233–1237.

Provincial institutions of France furnished with casts from the Louvre, 1240——Circulation of casts and ornaments of the best antique remains throughout the country would be the best means of applying arts to manufactures, 1243——Great want of a good collection of casts of the most celebrated statues in the Museum, 1244——In what manner the Elgin marbles might be better arranged in the present room, 1245-1248——Space that would be required for the establishment of a formatore's department in the Museum, 1249–1256——Casts from the Elgin marbles are unattainable; the trustees contemplate having a new set of moulds made, 1257, 1258.

Witness has obtained casts of statues already moulded through M. Sarti, 1259——Desirable to have a selection of casts from the bests statues in the Louvre, which might be accommodated without considerable inconvenience to the Museum, 1261–1269——Supposed number of casts that it would be desirable to have from the Vatican, the Louvre, and from Florence, showing that they might be accommodated in the British Museum, 1274–1277——Witness's opinion relative to the Elgin room corroborated by other artists, 1278——Many of the small bronzes would suffer materially from moulding; many of them would not suffer at all, 1279, 1280.

Repairs. [1835.] When the collections are in their proper localities, part of the Museum might be closed at a time for repairs, and prevent the closing the whole in September, *Forshall* 1280——The public would be discontented at finding any part closed, *Forshall* 1282.

Reports of Committees of the House of Commons. [1835.] Mr. Millard's employment upon a general index to the Reports of the House of Commons, from 1715 to 1801, *Ellis* 1934–1943, *Millard* 2293——Nature of Mr. Millard's employment thereon, which he executed to witness's satisfaction, *Hansard* 2357–2362.

Reports of Officers of the Museum:

[1835.] Every officer makes a report at the time of the annual visitation, *Ellis* 352——To whom monthly reports are made, and how far their correctness ascertained, *König* 2616–2620——Witness's communications with the trustees are made by means of his reports through Mr. König, the principal of the department, *Samouelle* 3814, 3815.

[1836.] Reports of special committees of the trustees in 1805, 1806 and 1807, on improvements proposed in the Museum, *App. p.* 512–525——Reports from the Rev. H. H. Baber, of the department of printed books, 26th April and 6th May 1834, *App. p.* 534.

Reptiles, Collection of, in the French Museum. See *Duméril*, M.

Reptilia. [1836.] Collection of reptilia not in the state it ought to be, though it is much improved of late years; the specimens in spirits are good; the dry specimens cannot be kept in so good order; the nomenclature is admirable as far as it has gone; causes why the whole are not named, *Bell* 331–341, 369——There is a catalogue, but its use is superseded by Mr. Gray showing the specimens, *Bell* 400–405——They can hardly be called arranged; they are so closely packed it is impossible to examine them, *South* 717——. The collection is an opprobrium to the British nation, *Grant* 1072–1079——They are neither exhibited, classified or named, so as to be useful to the student, *Grant* 1502——Want of classification and names of the serpents and lizards in spirit, *Grant* 1504——Answer to Dr. Grant's statements, *Gray* 3001–3009——Mr. Bell's opinion of their arrangement compared with Dr. Grant and Mr. South, *Gray* 3010——Mr. Bell's opinion of their arrangement and nomenclature, *Gray* 3012. 3015. 3023.

Adoption of some of witness's genera by Cuvier and others, *Gray* 3024, 3025——Dried saurians all named; tortoises named and many labelled, *Gray* 3026——The label "Vertebra of an Indian Boa" would not deceive any one acquainted with reptiles, *Richardson* 2260–2264——The naturalist's name, whose system is adopted, is attached to the specimens, *South* 1131——They are put into genera; they are not so completely arranged as will be eventually desirable, *Bennett* 1702——State of, very much improved within the last 20 years, *Griffith* 2111, 2112——Former and present space occupied by this collection, *Gray* 2457.

The collection of, superior to any other in England, and in good condition, *Richardson* 2189——The reptilia are in a perfect state and well arranged; some of the tribes have not the specific names, *Richardson* 2222–2224——Is the best collection, *Richardson* 2243——The Museum possesses 600 species, and 1,300 individuals, *Gray* 2995——The Museum collection is rich in rare specimens, *Gray* 3000——Value, arrangement and extent of the collection of reptiles, *Gray* 3001——Cuvier's statement as to the difficulty of identifying the species of coluber, *Gray* 3006.

See also *Fitzinger's Catalogue. Gray*, Mr. *Jardin des Plantes*, III. 1. 9. *Leyden Museum. Merrem's Reptiles. Nomenclature. Ornithological Collection*, 1.

Rewards. [1835.] Neither the situation of trustees or officers of the Museum should be given as rewards, there are duties to be performed in both cases, *Forshall* 699–702—— More appropriate modes of rewarding scientific men might be found than electing them trustees of the Museum, *Brown* 3713.

Reynolds, Sir *Joshua.* [1836.] His works in the Museum collection are nearly complete. *Josi* 5205.

Rhinoceros. See *Mammalia.*

Rich's Collection. [1835.] Parliamentary grant for the purchase of this collection was not accounted for in the annual accounts, but was in the account of 1833, it being money expended for, and not by, the Museum, *Forshall* 962, 963.

Richardson, John, M.D., F.R.S., F.L.S. (Analysis of his Evidence.)—Author of the Fauna Boreali Americana, 2167——Naturalist to both Sir John Franklin's expeditions to the North Pole, 2168——The Museum contains the largest collection of vertebrated animals of any in Great Britain; collections with which compared, 2170–2176——The condition is as good as can be expected, 2176——Facilities of consultation experienced by witness, 2177, 2178——Great increase of specimens and species since 1819, 2179–2182——Persons reading upon any department of vertebrated animals should consult the Museum collection, 2183.

The collection of birds is, in most genera and families, by far the most numerous in England, 2184–2186——The Museum contains the most scientific collection of fishes of any in England, 2187, 2188——the collection of reptiles is superior to any other collection in England, and is in good condition, 2189——The arrangement and nomenclature of some accredited author should be used; curator's arrangement might be added in the catalogue, 2191–2193——Linnæus's specific names ought always to be preserved by adopting Cuviers system; both are used, 2194, 2195——Introduction of the trivial as well as scientific name is very necessary, particularly as regards British animals, 2196, 2197——Particulars that the labels attached to specimens should contain, 2198.

The

903

Richardson, John, M. D., F. R. S., F. L. S. (Analysis of his Evidence)—*continued.*

The specimens of mammalia are rather crowded; Cuvier's arrangement is adopted, as it ought to be, 2201–2203——There are not a great proportion of the species without scientific names, 2204, 2205——Linnæan names are not antiquated, as they must always be referred to, 2206–2208——The collection of fish does not contain above a fourth part of the species known, but it is far the best that the country contains, 2209——The collections of the first arctic expedition were presented by Government to the Museum, the second only partially; those of witness's own collecting appear in good condition, 2210, 2211——Attaching scientific names is one of the most important; difficult and expensive arrangements in a collection, 2212–2214.

The fish are not generally accurately named, as regards the specific names, 2215–2221——The reptiles are in a perfect state and well arranged; how far named, 2222–2224——Some of the casts are too high to read the names on the species, particularly the upper shelves, 2225——Many of the species of fish have only the locality marked on the ticket; reason why it does not cause difficulty in finding the specimens, 2226–2229——Witness has not discovered any gross errors in names in the zoological collection, 2230——Writing the names in pencil is only a temporary arrangement, 2231–2242.

Proportion of the known and described species of mammalia that are to be found in the Museum, 2244——Of birds, 2245——Every facility of examination afforded, 2247——No negligence has come under witness's notice, 2248, 2249——The collection might be better named and exhibited than it is, 2250, 2251——The collection is not such as it ought to be for the national collection of Great Britain, 2253, 2254——All works on natural history are defective, and arrangements made after them must be, 2255, 2256——The British Museum is susceptible of improvement, 2252——There are no collections so complete as that, 2255——It is the largest in the country, and the best arranged, 2259——The label "vertebra of an Indian Boa," would not deceive any one acquainted with reptiles, 2260–2264——Defence of Cuvier's arrangement, who has adopted Linnæus's nomenclature, 2265–2277——New arrangement by Dr. Grant, which has not been followed by any writer, or in any museum but his own, 2278–2293.

Advantages of scientific men being placed in the trusteeship, 2294–2300——It would be a benefit to extend the hours as long as there was light, 2301——Opinion in favour of collections being opened during holidays, 2302–2312——Upon witness's consulting the specimens and making inquiries, a catalogue was referred to by the officers, 2313–2321——Opinions of scientific men could be as well obtained if they were heads of departments as if they were trustees, 2322——If the officers competent to make it, a catalogue of the zoological collection would be valuable, 2323, 2324——Further evidence upon Dr. Grant's work and against his nomenclature superseding that of Linnæus in the British Museum, 2325–2330——The collection of birds could not be increased two thirds in six months, 2331, 2332.

Richardson, Dr.:

[1835.] Several specimens collected by him when he accompanied Captain Franklin's expedition are in the Museum, *König* 2862.

[1836.] His testimony to the facilities afforded to him at the British Museum in prosecution of his labours, by Messrs. König, Children and Gray, *Richardson* 2177, 2178, *Gray* 2697.

Richlieu, Hotel de, à Paris. [1835.] Manner in which it is regulated, *Ellis* 214.

Rock Specimens:

[1835.] Several very interesting rock specimens have been presented to the Museum, collected during the expeditions of Captains Ross, Parry, Franklin, Tuckey, Clapperton and others, *König* 2847.

[1836.] Nature of the collections of rocks that are wanting in the geological collection, *Greenough* 3877, 3878.

Rodent Animals. [1836.] A large portion of them are unnamed, *South* 724.

Rolls. See *Charter and Rolls.*

Roman Antiquities. See *Millingen,* Mr.

Roman Statues. [1835.] Casts were taken in France from every statue of celebrity that was taken there, previous to its being returned to Rome, *Westmacott* 3955–3957.

See also *Formatore.*

Romances. See *French Novels and Romances.*

Rome. [1836.] The subjects of the Papal government are forbidden to possess or read the works of Bacon, Newton, Locke, Leibnitz, Machiavelli and Galileo, *Hannay* 5101.

See also *Casanate Library. Corsini,* Prince. *Holidays. Mary's, St.,* Church of. *Minerva Library.*

Rosen, Dr. [1835.] His temporary employment on the catalogue of Oriental manuscripts, *Ellis* 341——His salary, *Ellis* 372.

Ross, Captain. See *Rock Specimens.*

Rossi's, De, Manuscripts. See *Parma,* State of.

Rouen Library. [1836.] Particulars as to the facilities experienced by witness at the Rouen library, and as to its collections and catalogues, *Gage* 5033–5041.

Roumaîntzoff, Le Musée. See *Russia*, 3.

Royal Academy, President of. See *Trustees*, 6.

Royal Library. See *King's Library.*

Royal Society:

1. *Catalogue of.*
2. *Presidents of.*
3. *Secretary of.*

1. *Catalogue of:*

[1836.] This classed catalogue will not be done so satisfactorily through the interference of scientific gentlemen as if it had been left to Mr. Panizzi, *Baber* 4613–4615——Absurdity of their plan for a classed catalogue, *Panizzi* 4855, 4858, 4859.

2. *Presidents of:*

[1836.] The president of, should not be excluded from the official trusteeship, *South* 1124——They have not always made the best trustees, *Panizzi* 4945–4949.

3. *Secretary of:*

[1835.] Extent to which witness's duties as secretary to the Royal Society, interfere with his duties at the Museum, *Children* 3161–3163.——*See* also *Lee*, Mr.

Ruding's Work on Medals. [1836.] This work was engraved by hand, *Doubleday* 5932.

Russell, Lord *William:*

[1835.] Despatch from him to the Duke of Wellington, dated Stuttgard, 10 December 1834, relative to literary institutions in Wirtemberg, *App. p.* 486.

[1836.] Letter from, to Viscount Palmerston, dated Berlin, 6 May 1836, relative to literary institutions and libraries in Prussia, *App. p.* 577–136.

Russia:

1. *Generally.*
2. *Literary Institutions in.*
3. *Le Musée Roumaîntzoff.*
4. *L'Academie Impériale des Sciences de St. Petersbourgh.*

1. *Generally:*

[1835.] Our literary intercourse with St. Petersburgh is less than with most countries of Europe, *Ellis* 2403. 2499.

[1836.] Works published in, are few in number compared with other parts of Europe, *Baber* 4677.

2. *Literary Institutions in:*

[1835.] Despatch from the Hon. J. D. Bligh to the Duke of Wellington, dated 28 December 1834, relative to literary institutions in Russia, *App. p.* 447.

3. *Le Musée Roumaîntzof:*

[1835.] By whom founded; of what it consists; number of volumes of books in the library; extent of collection of minerals, coins and medals; funds out of which supported; name of the principal and under librarians, and periods of admission of the public, *App. p.* 447.

4. *L'Academie Impériale des Sciences de St. Petersbourgh:*

[1835.] Number of sections into which it is divided; by whom superintended; funds by which supported; names of librarians; manner in which the public are admitted, *App. p.* 447.

[1836.] Witness not aware of any published catalogue to collections at St. Petersburgh, *Gray* 2623——Period the museum at St. Petersburgh is open, *Gray* 3140.

S.

Sacrist's Ledger. [1836.] This is the next in value to the Cartulary among the Battle Abbey muniments, *Thorpe* 3214.

Salaries:

[1835.] Scale of salaries and system of daily pay to literary gentlemen, and advantage of the system, *Ellis* 372–376——Those of the officers of the Museum are not sufficiently liberal, *Forshall* 884–888——Amount of the annual salaries and of the monies paid to each of the present under and assistant librarians, officers and attendants employed in the care and management of the manuscripts, printed books, minerals, medals, coins, prints and drawings, for extra service-money, or any other sums or gratuities paid to them beyond their stated salaries; nature and extent of service; accommodation in the way of lodging, perquisites, &c., *App. p.* 398.

905

Salaries –continued.

[1836.] To be revised for ascertaining increase necessary to carry into effect resolutions of Committee, and to secure the whole time and services of the ablest men, *Rep. p.* iv——Whether it is advisable to pay literary men by the day; that system has not prevented competent men being obtained when wanted, *Bennett* 1885–1887——Evils of literary men being paid according to their daily service, *Nicolas* 3729–3731——Amount of witness's daily pay as assistant in the manuscript department; deductions for absence, through illness or regulations of the Museum; payments take place monthly by the hands of a messenger; wish of the officers for an alteration of that system, *Holmes* 3984–3999——Mode of payment of the officers employed on literary works admits of improvement, *Archbishop of Canterbury* 5554–5556——The Rev. T. H. Horne, one of the assistants in the printed book department, has always been paid by quarterly cheques from the trustees, *Holmes* 4270–4272——Those of the assistants in the reading-room should be increased, *Hannay* 5155, 5156.

Sale of Catalogues. See *Catalogue of Manuscripts*, 4.

Sale of Pictures. See *Christie's Sale of Pictures. Excise.*

Sale of Publications:

[1835.] The trustees now make it a rule not to sell or part with any books, coins or other things that may have been given to them, *Ellis* 36–43——Names of publications sold by the Museum, *Forshall* 827, 828——Account of the sale of the several Museum publications, 1833 and 1834, *App. p.* 291–353.——*See* also *Publications.*

Sales by Auction. [1836.] Collusion among some booksellers and picture-dealers at sales by auction, not to bid beyond a certain point, but to compete privately; the practice extends to most auctions, *Harding* 4327–4334——It is judicious for a principal to purchase through an agent, *Harding* 4336–4339.

Salt's Egyptian Antiquities. [1835.] Purchase thereof by the Museum, price paid for them, and purchase of alabaster sarcophagus by Sir John Soane, *Ellis* 1497–1517——Disposal by Mr. Salt of a second collection to the French Government, *Ellis* 1518–1520——Minutes of the trustees relating to the purchase of Mr. Salt's collection of Egyptian antiquities put in, *Forshall* 1872——Minute respecting Mr. Salt's offer of Egyptian antiquities, dated 19 February 1820, *App. p.* 425——Further minute, dated 11 May 1822, *App. p.* 425——Minute of sub-committee respecting the offer of Mr. Salt's Egyptian antiquities, dated 23 February 1823, *App. p.* 425——Memorandum of sum paid for them, *App. p.* 425.——*See* also *Belzoni*, Mr.

Samouelle, George. [1835.] (Analysis of his Evidence.)—Salary and duties of witness as extra assistant in the natural history department, having the care of the collection of the crustacea and insects, 3744–3750——Particulars as to witness's appointment, 3752–3755——Works on entomology published by witness, 3756, 3757——Witness has no assistance in his department; nature of the assistance that would be useful to him, 3758–3768——Extent to which the collection of crustacea, &c. under witness's charge, are named, numbered and catalogued, 3769–3776——Certain exotic North American and Arctic birds were named and labelled; doubts whether that system is continued, 3777–3779——The name of witness's office should be defined, he having been told he is not an officer of the Museum, 3780–3787——The system of the authors best known is adopted by witness with regard to arrangement and nomenclature, 3788–3790.

The collection of insects is deficient as compared with other catalogues, 3791–3798——There have been but few collections of insects purchased within the last fourteen years, 3799–3804——Mrs. Noel's collection of Brazilian insects was a valuable collection, and offered at a reasonable price, but only one box was purchased, 3805–3811——Witness was examined by the trustees upon an attack being made on the Museum by the Edinburgh Review, 3812, 3813. 2816–3818——Witness's communications with the trustees are made by means of his reports through Mr. König, the principal of the department, 3814, 3815——At the period of the attack by the Edinburgh Review it was necessary to remove Sir Hans Sloane's collection from the public eye, as they were useless, 3819——Mr. Brown's and Dr. Leach's collection are in a fine state of preservation, 3820, 3821——Cedar cabinets were replaced by mahogany, the gum from the cedar having a tendency to destroy the insects, 3822.

The entomological collection has been increased since witness was appointed, it was in fine condition then, 3823——Regret that Mr. Stone's collection of British insects was not purchased, as it would have completed the Museum collection, 3824–3828——Mr. Haworth's collection was an important and valuable collection, but its purchase was declined by the trustees, 3829–3833——Regret that the collections made by King's officers accompanying expeditions do not come to the Museum, 3834.

[Second Examination.]—State of the collection of crustacea and insects in 1821 and at present, 3862, 3863——Particulars as to the purchase and donations of insects since 1821, 3864——How far witness's labours in the collection of entomology have been directed by the heads of the natural history department, and how far witness considers himself responsible, 3865, 3866——The arachnoidæ have been long arranged under their generic titles, but their species is now being determined by Mr. Children, 3867–3870——There is sufficient ground for forming entomology into a distinct department,

Samouelle, George. [1835.] (Analysis of his Evidence)—*continued.*

3871–3873——Witness is responsible for the synopsis as far as the insects are exhibited, 3874, 3175——State of the library with regard to entomology is very good, 3876, 3877——There should be working books of reference in each officer's room, to prevent their labours being suspended by the works they are using being wanted in the reading-room, 3878——The name of the donor is attached to most insects, 3879——Sir Hans Sloane's catalogue will determine the number of specimens; the exposure to the light having destroyed them in consequence of the bad mode in which they were preserved, is a circumstance that could not have been prevented, 3880–3893.

Nomenclature that was adopted by Dr. Leach; those on the birds have been removed, but those on the shells have not been re-written, 3894–3896——More valuable results will be derived from insects when there is a better acquaintance with their habits and manners, 3897——The collection is continually being referred to, 3898——Foreign countries in which entomology has been extensively pursued as a branch of natural history, 3899, 3900——Encouragement of the study, so as to make it bear on arts or medicine, is better left to the views of private individuals, 3901, 3902——Experiments must be tried in the living state, which could not be done at the Museum, 3903——Difficulty of obtaining insects in the same locality in different years, 3904——Entomological collections are more extensive abroad, 3905——Extent of the entomological collection of Mr. Melley of Liverpool, 3906–3909.

Sum that would be sufficient to be annually granted to complete the national collection, 3910, 3911——Government should give directions to naval and military officers and foreign residents to make collections, 3912——Rooms should be lighted with side windows, 3913——Catalogue of Baron de Jean, 3914.

Good conduct of the public generally while visiting the Museum, 3915, 3916——Objection to opening the Museum during holiday weeks, 3917——Increase in the number of visitors at the present day over formerly, 3918——Visiting the Museum would improve the taste of the public, 3919——If drunken people excluded, and strict watch kept up, the objection to opening during holiday weeks would be done away with, 3920–3925.

Samouelle, Mr. See *Crustacea. Entomological Collection.*

Sams's Collection. [1835.] Amount paid for this collection in 1834, *Forshall* 1551–1559.

Sarcophagus. See *Salt's Egyptian Antiquities.*

Sardinia:

[1835] Despatch from Sir Augustus Foster to Viscount Palmerston, dated Turin, 25 March 1835, relative to literary institutions in Sardinia, *App. p.* 522——Memoire sur les Musées et Bibliothèques Publiques dans les Etats Sarde, *App. p.* 522——Number of royal museums at Turin; how directed; annual expenses; funds out of which defrayed; admission of the public, *App. p.* 523——Number of librarians for the University library at Turin; annual expense of books; general annual expenses; funds out of which defrayed; number of volumes of books and manuscripts; admission of the public, &c., *App. p.* 523.

[1836]. Period at which the museum at Turin is open, *Gray* 3140——Particulars relative to the library of the royal university at Turin, number of volumes, state of the library, number of librarians, &c. *App. p.* 543–562——Letters from Sir Augustus Foster to Viscount Palmerston, dated Turin 30th January and 10th March 1836, relative to literary institutions and libraries in Sardinia, *App. p.* 577–14, 24.

Sarti, Petro Angel. [1835] (Analysis of his Evidence.)—Permission obtained to mould from statues in the British Museum by application to a person of rank, 3541–3546. 3585–3589——Application must also be made to Mr. Westmacott, who has given a denial in some instances, 3547–3549——Moulds of the Elgin collection are not now in good condition; sum at which Mr. Westmacott offered them to witness, 3550–3554——Instances in which permission to mould has been refused, 3555–3556——If the means could be obtained of moulding figures and bas-reliefs under proper superintendence there would be a greater sale of casts, 3557, 3561, 3568–3572, 3590, 3591.

Refusal to witness to be allowed to take a cast of the head of Homer; his subsequently obtaining permission; number of the casts sold, 3558–3560——There is an increasing demand for statues and busts when they are good, 3562–3567——Accidents would not be likely to happen to the originals if the moulder is skilful; witness could find security, 3573–3584——The colour of antique statues will be changed by moulding, but the ancient colour will be regained in two months, and the original will not be otherwise injured if the moulder knows his business, 3592–3609——Mode of obtaining casts at the French Museum; comparison between the description of casts sold in France and England, and their prices, 3611–3629.

Sarti, Mr. *P. A.* [1835]. List of marbles in the British Museum moulded by Mr. P. A. Sarti, *App. p.* 445——*See* also *Moulds of Statues.*

Saurians:

[1835.] The class of, in the British Museum, is more perfect than that in the French Museum, *Forshall* 707.

[1836.] They are arranged with great taste and judgment, *Bowerbank* 912——The fossil Saurian reptiles should be excluded, and the recent Sauria included in the charge of the

Saurians. [1836.]—continued.

the collection being an opprobrium to the British nation, *Grant* 1083——Unique specimens of Saurian bones in the Museum, *Viscount Cole* 2724——No collection of fossil Saurians in any foreign museum that comes near the collection in the British Museum, *Viscount Cole* 2730——Most of them are genuine, and placed together in their natural order, *König* 3187——The long specimen on the floor has certain portions that are not artificial, but no value was put on the specimen when the collection was bought, *Viscount Cole* 2772–2777——Specimen of Saurian remains on the floor of the long room in the mineral gallery, which is of no value, but upon the fate of which the trustees have not yet decided, *König* 3180–3192.——*See* also *Hawkins's Fossils. Reptilia.*

Saxony:

[1835.] Despatch from the Hon. F. R. Forbes to Viscount Palmerston, dated Dresden, 12th May 1835, relative to the literary institutions in Saxony, *App. p.* 494——Direction and salaries of officers of literary collections at Dresden, consisting of the picture gallery, the gallery of antiques, the collection of medals, the cabinet of natural history, the collection of physical and mathematical instruments, the historical museum, the collection of copies of antiques in plaster of Paris, the collection of engravings, the jewel office and armoury, *App. p.* 494——Number of librarians, salaries, volumes of books and manuscripts in the library at Dresden, *App. p.* 495——Library at Leipzig is under the control of the minister of worship; salary of the librarian, *App. p.* 495——Admission of the public to the libraries, *App. p.* 495.

[1836.] Period at which the museum at Dresden is open, *Gray* 3140——The Dresden library contains about 250,000 volumes, *Panizzi* 4774——The bibliographical lexicon of the late librarian shows that this library is extensive as regards rarities, *Panizzi* 4781——It contains one of the greatest and most valuable collection of books; facilities with which strangers can get books and manuscripts at their own homes, and advantages of the plan, *Hannay* 5137–5145——It follows close upon the British Museum with regard to the number of books and manuscripts therein, *Hannay* 5149——Information relative to the royal library at Dresden, number of volumes, condition of the library, number of librarians, catalogues, &c., *App. p.* 542–562——Supplementary information of the royal library at Dresden by *A. Panizzi*, esq., *App. p.* 562——Notice of the public library at Dresden, supplementary to the return printed in the appendix to the minutes of evidence, 1835;—translated from "Merkwuerdigkeiten Dresdens." Von J. G. Wiemann, Dresden, 1835. *App. p.* 592.——*See* also *Denmark.*

Scarborough Museum. See *Whitby, Scarborough and Manchester Museum.*

Schier, Dr. [1835.] His employment on the catalogues of books in the Sclavonian language and other dialects of the north of Europe, *Ellis* 341.

Schlegel, Frederick. [1836.] There are only four of his works in the British Museum, *Edwards* 4765.

Schools of Science. [1836.] There are but three endowments in London for the benefit of science, founded by private individuals, *South* 787.

Sciences. [1836.] Improvements therein of late years prevent the possibility of making classed catalogues to works relative to them, *Panizzi* 4855.

Scientific Collections. [1835.] Mode adopted by the trustees when scientific collections are offered for sale, *Ellis* 128–130.

Scientific Men. [1836.] Every facility is given to them in the Museum, both with regard to admission and the obtaining drawings, *Sowerby* 140.

See also *Heads of Departments. Officers. Rewards. Trustees,* 2.

Scientific Societies. [1835.] There are scientific societies in Paris of recent origin, corresponding with those in London, *Brown* 3738–3740.

Scotch Newspapers. [1836.] The Museum is unable to get files of these papers, *Baber* 4649.

Scott, Mr. [1836.] Has the means of access as an attendant to the charters and rolls; is faithful in discharge of his duty, *Holmes* 4078, 4079. 4089.

Scott, Sir *Walter,* Medal of. [1836.] Examination upon an engraving of this medal made by Collas's machine, and upon any deviation or distortion found therein, *Chantrey* 5651–5663.

Sculptors. [1836.] Collection of casts from the works of the celebrated sculptors who lived about the 15th century, would be an advantage, *Weigall* 230–247.

Sculpture. [1835.] Mode of admission of artists for the study of statuary, *Hawkins* 3498——The more beautiful sculptures are multiplied, the greater advantage it is, *Westmacott* 3947——There is a greater disposition to taste in sculpture in France than in England, each province having its academy which is supplied with casts from Paris, *Westmacott* 3953, 3954——Works of modern art that are in the Museum, *Westmacott* 3977–3982.

See also *Marbles. Monuments. Moulds of Statues. Torch Light.*

Sculptured Tortoise. See *Kyd*, Lieutenant-general.

Secretary to the British Museum:

[1835.] Emoluments of the secretary; that office has not for any length of time been held conjointly with that of principal librarian, *Ellis* 294–304——The secretary always attends the board, *Ellis* 329, 330.

[1836.] In the event of a vacancy, the office not to be combined with the keepership of any department, *Rep. p.* iv.——The head of a department being secretary, has an advantage in augmenting his own department which the others have not, *Panizzi* 4938, ——Is consulted upon the filling up vacancies, *Archbishop of Canterbury* 5501——Nature and importance of his duties, *Archbishop of Canterbury*, 5531.

See also *Manuscripts*, Keeper of.

Security. [1835.] The officers of each department give security for the preservation of the different collections; the inferior officers do not give security, though appointed by the principal trustees, *Ellis* 346–351.

Select Manuscripts. [1836.] There are some that are not considered select are of higher value than some that are so considered, *Holmes* 4097——Those of very high value are not allowed in the reading-room, *Holmes* 4098——How far the attendants have access to them in the absence of the keepers, *Holmes* 4078–4117.

Senkenberg Museum. See *Frankfort*, 3.

Serpents. [1836.] Those in the Museum are for the most part nameless, *Grant* 1504—— The crowded and confused state of the spirit preparations prevents the eye from reaching the specific names when they are attached to the specimens, *Grant* 1505.

See also *Catalogue of Books and Collections*, V. *Reptilia.*

Sessional Papers of the House of Commons:

[1835.] Employment of witness on a general index to the Sessional Papers, 1801 to 1826, *Millard* 2293–2302——Nature of Mr. Millard's employment in combining the Sessional Indexes to Papers into one General Index, 1801 to 1826, which was done to witness's satisfaction, *Hansard* 2363–2385——Different persons formed the annual indexes to the Sessional Papers; some were done by Mr. Millard; but the combination into one index, and making cross-references, was his principal business, *Hansard* 2389–2398.

[1836.] The Sessional sets of Parliamentary papers are sent to the Museum by order of Government, *Baber* 4655–4658——Those of 1834 were not received in the Museum till December 1835, and then four volumes were wanting, *Edwards* 4762–4763.

Seymour, George H., Esq. [1835.] Despatch from him to the Duke of Wellington, dated Florence, 29 December 1834, relative to literary institutions in Tuscany, *App. p.* 488.

Shaw, Dr. [1836.] His works are not equal to the wants of the present time, but when published they were respectable with reference to the then existing state of the zoological science in England, *Bennett* 1725, 1729.——*See* also *Zoological Collection.*

Sheepshanks, Mr. See *Dutch Masters. Rembrandts.*

Shells. See *Conchological Collection. Fossil Shells.*

Sherwell, Markham. [1836.] (Analysis of his Evidence.)—Examination upon the character of the Upcott manuscripts; their offer to the British Museum, and upon the decline of the purchase by that institution, 3762–3786. 3793–3799——Decline by the Museum to purchase Voltaire's works with marginal notes and corrections by M. La Harpe, 3787–3792——Names of assignments of the works of celebrated authors: price at which they were offered to the Museum and refused, 3773, 3774. 3798, 3799.

Shrews. See *Mammalia.*

icily:

[1835.] Despatch from the Honourable William Temple to the Duke of Wellington, dated Naples, 21 January 1835, relative to literary institutions in Sicily, *App. p.* 489 ——Contents of the Royal Museum at Naples; its control and direction; departments into which divided; annual expenses, and out of what fund defrayed; admission of the public, *App. p.* 489——Number of public libraries at Naples; number of librarians; annual expense of books; general annual expenses; out of what funds paid; names of librarians; admission of the public; number of books and manuscripts, &c., *App. p.* 490——Diocesan libraries in the provinces under the superintendence of the Minister of the Interior, *App. p.* 491.

[1836.] The public library at Naples is an exception to the rule of all foriegn libraries being limited within six hours for being open, *Hannay* 5092–5094——The Royal Library at Naples is one of the most numerous and useful collections in Italy, *Hannay* 5149——Particulars relative to the Royal Borbonic Library, number of volumes, state of the library, catalogues, number of librarians, &c. *App. p.* 542–562.

Simcoe's Prints. [1835.] Rejection of Mr. Simcoe's collection of prints, and subsequent sale by auction, at which they fetched a higher price than offered by the Museum, *Ellis* 1560–1569. 1624–1628——Mr. Smith's report thereon, dated 18 March 1824, *App. p.* 413.

909

Simia. See *Ourang Outang.*

Sion College. [1836.] The classed catalogue of that college was printed a considerable time ago, *Baber* 4611——They have no strength for keeping it up to the last accessions, and there are doubts whether a large portion of the books are catalogued at all, *Baber* 4625.

Siris, Bronzes of. [1836.] The bronzes of Siris could not be moulded without destroying them, *Rennie* 1280.

Skeletons. See *Leyden Museum. Vertebrated Animals.*

Skins. [1835.] There may be some duplicate old skins stowed away, and not exhibited, but which cannot be parted with, *Children* 3143-3145.——*See* also *Quadrupeds.*

Skulls. [1836.] How far the skulls of mammalia are exhibited, *Gray* 2905.

Sloane, Sir *Hans,* Bart.

[1835.] Origin of the Museum to be dated from the transfer of his collections to the public, *Ellis* 11——His appointment of several trustees, *Ellis* 224.

[1836.] Office copy of his will, *App. p.* 503.

Sloane, Sir *Hans,* his Collection:

[1835.] There is a catalogue of the Sloane manuscripts, *Ellis* 1797——Doubts of there being any catalogue containing the number of specimens, *Brown* 3651-3653——His catalogue will determine the number of specimens; the exposure to the light having destroyed them, in consequence of the bad mode in which they were preserved, is a circumstance that could not be prevented, *Samouelle* 3880-3893——A portion of Sir Hans Sloane's entomological collection has been destroyed annually, until there is none of it remaining; the specimens decayed partly from his mode of keeping them, *König* 2743-2759.

His collection of insects was not very valuable at first from the method Sir Hans Sloane had of preserving them, *König* 2757——The Sloane collection is nearly in the same state of preservation as it was fifty years ago, *Brown* 3645-3650——Charge by the Edinburgh Review of 1823, of injury to the Sloane collection by dust and worms, and contradiction of that charge to the extent that witness has examined the collection, *Brown* 3654-3662——At the period of the attack by the Edinburgh Review it was necessary to remove Sir Hans Sloane's collection from the public eye, as they were useless, *Samouelle* 3819——The volumes containing the collection will be more accessible than they have been; the previous want of access was partly caused by limited space, *Brown* 3663-3666.

[1836.] A new catalogue of the Sloane MSS. is in the course of formation, *Forshall* 4197-4199——About one third completed, *Forshall* 4379——It must be printed, *Forshall* 4396——A revision of the catalogue has been attempted since witness has been keeper of the MSS., *Forshall* 4472——Copies of his works have been disposed of when others in the Museum have been in better condition, *Baber* 4711-4718.

See also *Catalogue of Manuscripts,* 1.

Sloane, Sir *Hans,* Herbarium of. [1835.] The herbarium of Sir Hans Sloane is in as perfect a state as that of Sir Joseph Banks, if not more so, *Ellis* 1620, 1621——The herbaria of Sir Hans Sloane is contained in a number of volumes, whose contents are miscellaneous, and can only be rendered accessible by an index, *Brown* 3644.

Smirke, Sir *Robert.* [1836.] (Analysis of his Evidence.)—Appointed architect to the Museum in 1815, 5271, 5272——Nature of witness's instructions from the Office of Works, and trustees for furnishing plans for the erection of the new buildings, 5273-5282——Specifications and contracts made under the superintendence of the Office of Works; names of contractors, 5283-5295——Difference in the arrangements for management of the works under the Commissioners of Woods, and that of the late office of works, 5295——Extent of authority given by the Treasury to the trustees to communicate with witness relative to the details of the building; extent to which the interior accommodation was fully considered in detail, 5296-5314. 5464——Number of entrances the public will have, 5315-5335——Opinion given by Sir Henry Ellis relative to the accommodation required for the manuscript department, 5336, 5337——Period when the detailed plans for the west and north wings were given in; estimated cost of the north wing, 5338-5349——Mode in which the contracts were entered into, 5350.

Advantages of the granite columns in the library over iron ones, 5351-5356——Uses to which some parts of the basement of the building are intended to be applied, 5357-5359——How far witness considered the plans of foreign libraries or museums previously to laying down the plan for the British Museum, 5360-5362——Cubing the contents of a building, and giving the cost per solid cube, is a very fallacious mode of making a comparison of expense, 5363. 5364——Extent to which the officers of the different departments have been consulted by witness as to the accommodation necessary for their particular departments, 5365-6385——Quantity of light for the natural history department is not complained of, but the direction of the light is, 5386-5388——Extent of the provision that will be made with regard to private rooms for the chiefs of the different departments, 5389-5401——Mode by which the building is warmed in different parts,

Smirke, Sir *Robert*. [1836.] (Analysis of his Evidence)—*continued*.

5403–5415——Details of the area, now available for the zoological collection, and that which is proposed to be made available, 5416–5418.

Arrangements may be made by which a larger space may be obtained for the mineralogical collection and side lights given for the whole of it, 5419–5421——Provision that will be made for additional books and manuscripts, 5422, 5423——The insecure state of the old south front renders it indispensable that a new building should be substituted, 5424, 5425——Nature of the precautions taken to render the building fire-proof, 5426–5431——Advantages that would result from extending the building on the east side of the east wing, as regards accommodation for an increased number of printed books, 5432–5436. 5439–5441——Additional room that may be obtained by projectors from the north and south wings towards the west, 5437. 5438. 5442–5444——A range of gallery might be added on the west wing similar to that proposed for the east wing, 5445, 5446——Space between the Elgin room and the proposed elongation of the south wing might be filled up without inconvenience, 5447, 5448——If the marbles, miscellaneous and Egyptian antiquities removed, the space could not with advantage be applied to receiving books, 5450, 5451——Elongation of the north wing would not be too remote from the reading-room to put books in, 5452——If the collections of art were removed to the National Gallery, the buildings could not be so well applied as at present, 5455–5457.

The mode of lighting the present mineralogical gallery might be altered at a moderate expense, and without altering the roof, 5458–5461——Ventilation is satisfactory in the new rooms, and can be improved in the east wing, 5462——Taking a sum of money on account of buildings and leaving the appropriation to the trustees and witness, would only be of advantage in removing the delay between the requisition and answer, 5465, 5466——Trustees have frequently pressed on Government the necessity of proceeding more rapidly with the buildings, but sometimes only half the money asked has been granted, 5467——Period at which the north wing will be available to the public; sum remaining of the Parliamentary grant, and sum that will be required this year for its completion, 5470–5476——There was no want of foresight in the parties under whose direction the new buildings were undertaken, as it was impossible to tell to what extent the collections would be increased, 5477–5479——The non-adoption of the portico was partly on the ground of economy, and partly to give more room for the library, 5480–5486——Spaces on the north-east and north-west corners should be purchased of the Duke of Bedford, 5487, 5488.

Smith, Major. [1836.] His application for leave to draw from specimens presented by Mr. Burchall permitted on leave being given by that gentleman, *Gray* 2920–2921.

Smith, Mr. [1835.] Copy of Mr. Smith's report, as keeper of prints and drawings, to the trustees of the British Museum, dated 18 March 1824, *App. p.* 413.

Smith's Fossils. [1835.] The price paid for Mr. Smith's collection of fossils was a fair remuneration, *König* 2886, 2887.

Snakes. [1836.] Number of species in the collection at the British Museum, *Gray* 3000.

Snelling's Work on Medals. [1836.] This work was engraved by hand, *Doubleday* 5932.

Soane Medal. [1836.] Cost of engraving the Soane medal by a first-rate artist; satisfactory representation of that medal by Collas's machinery, *Hawkins* 5678–5683——Die for this medal executed by witness, *Wyon* 5845——Superior accuracy in the minuteness of the detail in the capitals of the columns of this medal, which was executed by hand, *Wyon* 5855, 5856——The engraving by Mr. Freebairn of this medal is a good example that line engraving does not represent a metallic surface, *Brockedon* 5896——Difference between the amount paid for engraving the Soane medal by an engraver and by the machine, *Nolte* 5819——Distortions in the engraving of this medal executed by the French machine; causes thereof, and manner they might be lessened, *Wyon* 5858–5864——In an engraving of the same medal by Mr. Bates's machine the same disproportions do not exist, *Wyon* 5865, 5866——The second engraving of this medal by the French machine answers all the exigencies of mathematical accuracy which can be required, *Nolte* 5954——Difference in the engraving of, by the French machine, arises from the shrinking of the cast, *Nolte* 5960——Examination upon the engraving, and how far the difference in diameter arises from the contraction of the cast, *Faraday* 5976.

Soane, Sir *John*. See *Salt's Egyptian Antiquities*.

Societies. See *Natural History Societies*. *Scientific Societies*.

Society for the Diffusion of Useful Knowledge. [1835.] Being a member of the committee of that society does not interfere with witness's duties at the Museum, *Ellis* 289–292.

911

South, John Flint. [1836.] (Analysis of his Evidence.)—Formerly lecturer on comparative anatomy, now assistant surgeon at St. Thomas's Hospital 712, 713——Deficiency in the classification and nomenclature of the zoological specimens, and improvements suggested, 714–726——The common as well as scientific names should be attached to the specimens, 727–743, 747–753——The collection is not exposed to destruction from dust and insects, 744–746——It is not known to scientific men that there are accurate catalogues in manuscript in the natural history department, 754–758——Advantages to the student and unscientific person from the formation of such a catalogue, 759–770——Supposition that the Synopsis was not intended to bear a high scientific character, 771–776——Present number of officers in the zoological department, nothing like sufficient for so large a collection, 779——Each officer of a department ought to be distinct, and amenable to no other officer in the establishment; each should have the appointment of his own subordinates, 780–784——Advantages of the heads of departments giving lectures, 785–795. 804–805——Students in natural history should be admitted on private days in the same way that artists are to the gallery of antiquities, 798, 799.

Want of time, from attendance on other lectures, prevents medical students from attending Dr. Grant's lectures on comparative anatomy and physiology at the London University, 799–803——Lectures and public exhibition are compatible at the same time in the Jardin des Plantes; more chance of lecturers doing their duty if paid by pupils than by salary, 804–826——Detail of a proposition for dividing the department into seven classes, 827–836——Professors giving public lectures for emolument would be devoting their time to the Museum, 837, 838——If keepers of departments eminent in their several branches, the management of the Museum might be safely entrusted to such a board, 839.

[Second Examination.]—Officers should be independent of one another if the natural history department further sub-divided, 1095–1097——The board of trustees should consist of the family trustees, and others appointed by the chancellors of the two universities and the presidents of certain learned societies in London, the board being responsible to the Home Secretary, 1098–1124——Arrangement of the mammalia might be better; extent to which Cuvier's nomenclature and classification is adopted as far as names are given, 1128–1133——It would be more economical to employ a salaried bird-stuffer, 1134–1146——The collection is arranged in classes, but not satisfactorily in orders or families, 1147——Objection to the word swimming bladder used in the Synopsis, 1148–1150——Objection to the description in the Synopsis of the common angler, 1151–1153——No knowledge of the meaning of the bronchial sac in fishes, 1154.

The radiated animals are generally named and arranged, 1155——Trustees should have the power of disposing of duplicate presents when they obtain a better specimen of the same species, 1156——The zoological department of the library is inferior to that of the College of Surgeons, 1158——No distinct catalogue of the zoological collection, 1159——There are two or three catalogues of printed books in the library, but none consolidated, 1160, 1161——Necessity for a classed catalogue, 1162–1164——The use of Watts's Bibliotheca would be superseded by a classed catalogue; the dirty state of that book shows it is much used, 1165–1168——Facilities given to persons attending the reading-room, 1169——Extension of the hours not recommended, 1170–1174——Opening the other part of the Museum of an evening could not be thought of, 1178——The first specimens discovered should always be kept as matters of historical interest, 1175–1177.

South Sea Islands. [1836]. Present from Mr. Cumings to the Museum of dresses, &c. of the South Sea Islands, *Gray* 3063.

Southey's Monastic Orders in Portugal. [1836.] Great use a classed catalogue would be to Mr. Southey while writing this work, *Evans* 3287. 3335.

Sowerby, James De Carle. [1836.] (Analysis of his Evidence.)—Publication by witness's father and himself on British mineralogy, and on fossil shells, 1, 2——Specimens of natural history in the Museum that are not named at all, also of some the spelling of which is incorrect, though the Synopsis in those cases is correct, 3–10. 166, 167——Condition of the objects is pretty good, and better than it was two or three years ago, 11——As far as it goes witness is satisfied with the classification and nomenclature; the system published should be that exposed to public view, 12, 13——The divisions in the natural history department are too limited, 14–16——The collections in the sub-division which exists in the natural history department are very far from perfect, 17——The nomenclature of the shells is, as far as it has gone, satisfactory; it is modern, and is in a state of progress that is favourable 18–21——The birds are crowded from want of space, 26–27.

Arrangement of the natural history collection is not such as to be instructive to the general observer and useful to the man of science, 30, 31——The locality of specimens should be shown, which is more attended to in private museums, 32–35——Labels might be attached to specimens directly they come into the hands of the curator, which label should contain the name, locality and reference to the author describing it, 37–42——Division of the natural history department at the Museum into zoology and mineralogy; zoology should be more divided, 44, 45——Imperfection in the condition of collections as regards bad stuffing, loss of names, &c., and manner it might be remedied, 48 62——Heads of departments should have the management of those under them, 63 65.

Sowerby, James De Carle. (Analysis of his Evidence)—*continued.*

Subdivisions recommended for mineralogy and zoology, the heads of those departments acting as a committee for the general management of those branches, 66–69——Names of the principal officers in the Jardin des Plantes; extent to which popular as well as scientific objects are attended to in that institution, 70–76——Heads of departments in the French Museum are independent of each other, forming a board of direction, and responsible to the minister of the interior, 80–82——It would be advantageous if the trustees appointed more officers, and gave them similar powers to those of the professors at Paris, the situations would then be held as marks of honourable consideration, 84, 85——Government grant for the support of the Jardin des Plantes, and comparison with that to the British Museum, 86–93——The Synopsis is not particularly scientific, it is quite sufficient as a general guide; has improved of late years; is most deficient in the antiquarian department, 94–109.

A general catalogue of subjects in the natural history department would be useful; variation in collections might be placed in an addenda, and incorporated in the following edition, 110–115——Extent to which the public will have access to the whole of the collections when the arrangements are complete; those that are not now exposed on account of injury from the light, can be seen by application to the curators, 116–124——Amount laid out last year in the natural history department, and whether expended judiciously, 125–127——Sum that would have been sufficient for the purchase of Hawkins's fossils; extent to which they have been made up, and how far the plates describe the artificial parts, 128–136. 147–153——The trustees should consult their own officers previous to making purchases, 137, 138. 154–165—— The hours of public admission should not be extended; every facility is given to scientific men, both with regard to admission and the obtaining drawings, 140——The Museum should be opened on general public holidays, 141–146.

Sowerby, Mr. [1836.] His collection of birds well known to witness, *Gray* 2950.

Stockholm. See *Sweden.*

Stoddart's Canterbury Pilgrimage. [1836.] Wish for an engraving of this by Mr. Bate's machine, *Nolte* 5960, 5961.

Stone, Mr.:

[1835.] Regret that Mr. Stone's collection of British insects was not purchased, as it would have completed the Museum collection, *Samouelle* 3824–3828.

[1836.] With respect to Mr. Stone's collection, Mr. König laid Mr. Samouelle's letter before the trustees without remark, *Forshall* 5590.

Stonestreet, Rev. *George Griffin,* L. L. B. [1836.] (Analysis of his Evidence.)—Difficulty witness formerly experienced of obtaining access to the Museum when the privilege was solely granted by the trustees, 5162, 5163——Facilities which are at present experienced, and whether witness's claim to be admitted as a matter of right, has not tended to those facilities, 5164–5170——The period that usually elapses between asking for a book or MSS. and obtaining it is not longer than is necessary, considering the number of visitors, 5171, 5172——Whether it would be possible that the reading-rooms should be classed between study and amusement, 5173–5176——The catalogues of MSS. are correct and ample, 5179——Opinion upon the necessity of duplicates of the catalogue of printed books, 5179–5188.

Strangways, The Hon. *W. Fox.* [1836.] Letter from, to Viscount Palmerston, dated Vienna, 5 May 1835, respecting literary institutions or libraries in Austria, *App. p.* 577—1.

Stratigraphical Arrangement. See *Conchological Collection,* 2. *Fossils. Geological Society.*

Streinius's Stemmata. [1836.] This work was part of the Royal collection, and sold in 1787; it would not have been parted with unless there had been another copy in the Museum, *Baber* 4706–4708.

Strutheous Birds. [1836.] The Museum collection of, is poor compared with that of Paris, *Grant* 278. 1523, answered by *Gray* 2991.

See also *Ornithological Collection,* 1.

Stucco. See *Fossils.*

Students. [1835.] The number of students falls off during the later hours the Museum is open, *Ellis* 1285.

See also *Natural History Collection,* 1. *Officers.*

Stuffing. [1836.] Defect therein in several instances has arisen from the want of taste in persons employed to stuff the animals, *Sowerby* 79——Evidence as to the value of stuffing common animals, *Gray* 2940.

Stutgard. See *Fossils.*

Sundays. [1836.] The Louvre is open on Sundays; if the Museum were so after Divine service, it would be a rational and instructive amusement for the people, *Rennie* 1233–1237——It would counteract the effect of the gin palaces, *Mathew* 3407–3410——It is partly a question of expense, and partly of public feeling, *Greenough* 3959.

See also *Louvre. Vatican.*

Surgeons, College of:

1. *Generally.*
2. *Catalogue of the College.*
3. *Transfer of Specimens from the Museum to the College, and Return to the Museum.*

1. *Generally:*

[1836.] The splendid collection of comparative anatomy therein, renders one in the Museum unnecessary, *Bell* 484, *Owen* 529——Constitution and functions of the board of the College of Surgeons, and whether such a plan would work well for the British Museum, *Owen* 541–547. 549——The lectures on comparative anatomy delivered there are the only means of obtaining oral instruction in either department of zoology, *South* 785——There is an endowment, *South* 787——Synopsis of College of Surgeons' museum is valuable, as showing the arrangement of John Hunter in 1786, which is nearly the same as that employed by Cuvier in the Cabinet of Comparative Anatomy, in Paris, *Gray* 2679.

2. *Catalogue of the College:*

[1836.] Number of specimens described in the printed catalogue of the Museum, *Owen* 488——Nature of the catalogue, and plan which has been adopted in the natural history department, *Owen* 489——Classed catalogue of the college is much used, and highly valued; number of volumes and price at which sold, *Bell* 383–388, *Clift* 631–638, *Bennett* 1794–1802——Intercourse between wituess and Mr. Owen, when that gentleman was forming his catalogue to the college collection, *Gray* 2525——Evidence concerning this catalogue, *Gray* 2608. 2612, 2613——Prices of the catalogues of the college museum, and manner of their distribution, *App. p.* 533.

3. *Transfer*

915

Surgeons, College of—continued.

3. *Transfer of Specimens from the Museum to the College, and return to the Museum:*

[1835.] There were some skins of birds in bottles transferred to the College of Surgeons: difficulty in ascertaining what portion was sold by auction, *König* 2765–2768.

[1836.] Particulars as to the purchase by the College of Surgeons from British Museum, of specimens of natural history; description of specimens; some of which had never been examined at the Museum, *Clift* 599–630——The value of the glass bottles in which the specimens were contained was more than half the sum paid for the specimens, *Clift* 639–642——They had never been dusted from the time of their being placed in the Museum, *Clift* 657——Particulars relative to the transfer to the college, and return to the Museum of a mammoth's head, and other articles presented by the Emperor of Russia to Sir Joseph Banks, *Clift* 659–688——The transfer to the college was injudicious, *Vigors* 1377–1384.

Particulars as to a similar transfer, and return of Mr. Corse's present of elephants' skulls, *Clift* 669, 670. 689–695. 700–702——Considerable number of the skins of birds received from the Museum are now in the collection of the College of Surgeons; some of the dried ones were presented to Mr. Bullock, *Clift* 696–699——The purchase and subsequent reclamation was the first and last money transaction between the college and the Museum, *Clift* 708–711——Animals transferred from the College of Surgeons were in as good a state as ever, *Gray* 2925——Returns from, giving extracts from the minutes of the trustees as to the transfer of certain objects from the Museum to the Hunterian collection, *App. p.* 533.

See also *Banks*, Sir *Joseph*, Collection of. *Donations and Bequests. Giraffe. Lama. Library of the British Museum*, 1. *Mammoth's Head. Megatherium. Natural History Collection*, 1. 5. *Zoological Collection*, 3.

Sutherland, Duke of. [1835.] Circumstances which qualified him as a trustee, *Forshall* 656.

Swainson, Mr. [1836.] His testimony to the value of the collection of natural history at the British Museum; its immediate accessibility; courteous manner in which opened to the public; zeal of officers, *Gray* 2697——Has described and figured birds, from specimens in collection at British Museum, *Gray* 2963——Extract from Swainson's work, showing the number of species of animals there are in the Museum, and the number of species known, *Greenough* 3869–3871.

Sweden:

[1835.] Despatch from Sir Edward C. Disbrowe to Viscount Palmerston, dated Stockholm, 29 July 1835, relative to literary institutions in Sweden, *App. p.* 497——Report on the state of the national libraries in Sweden, *App. p.* 497——Number of libraries at Stockholm; number of librarians; annual expence of books; annual expenses, and out of what fund paid; admission of the public; number of volumes of books and manuscripts; government of the institution, *App. p.* 499, 500——Superintendence of the provincial libraries; admission of the public, &c., *App. p.* 500.

[1836.] The works published therein are few in number compared with other parts of Europe, *Baber* 4677——This country can furnish the richest sources for investigating with success our ancient laws and institutions and it would cheerfully second the design of mutual exchange, *Hannay* 5153.

Swimming Bladder. [1836.] Objection to the word swimming bladder as used in the Synopsis, *South* 1148–1150——Defence of the term swimming bladder as applied to the air bladder of fish, works of authority in which the term is used, *Yarrell* 2010–2011——Quotations from Cuvier, showing his use of it, *Children* 2840, 2841.

SWITZERLAND:

1. *Literary Institutions.*
2. *Museum of Natural History at Berne.*
3. *Library.*

1. *Literary Institutions:*

[1835.] Despatch from D. R. Morier, esq. to Viscount Palmerston, dated Berne, 26 June 1835, relative to literary institutions in this country, *App. p.* 495.

2. *Museum of Natural History at Berne:*

[1835.] Direction of the museum of natural history at Berne; departments into which divided; general annual expences; funds out of which defrayed; admission of the public, *App. p.* 495.

3. *Library:*

[1835.] Salary of librarians; annual expense of books; annual expenses; funds out of which paid; admission of the public; number of volumes of books and manuscripts; government of the institution, *App. p.* 495.

[1836.] Questions and answers showing the condition of the library, number of librarians, &c., at the Berne city library, *App. p.* 542–562.

Synopsis:

[1835.] Number of copies of the Synopsis printed, and number of copies sold, *Forshall* 1052–1055——Number of copies printed, profit to the trustees, and whether advisable

Synopsis—continued.

to reduce the price, *Ellis* 1148–1157——To what extent witness is responsible for the publication of the Synopsis; those who are answerable for errors are those who write the particular article, *Ellis* 2518–2528——Persons who are responsible for different portions of the Synopsis, *Ellis* 2536–2541——Witness is responsible for the Synopsis as far as the insects are exhibited, *Samouelle* 3874, 3875——Objections to the principals of departments putting their names to that portion of the synopsis which describes the collection under their control, *König* 2880–2885.

Examination upon the different passages in the Synopsis, and how far the whole requires revision, *König* 2888–2990. 2914–2940, *Children* 3193–3197, 3438–3440, *Gray* 3323–3333——Estimate showing the price per copy at which the Synopsis of the British Museum could be printed, according to the description of paper and number of copies, *Clowes* 2769–2794——Estimate by Mr. Clowes for printing the Synopsis of the contents of the British Museum, with specimens, *App. p.* 444——Account showing the number of copies of the Synopsis of the British Museum which have been printed, and the manner in which they have been disposed of, 1821 to 1833, *App. p.* 368.

[1836.] Heads of departments to consult as to the best method of preparing an improved edition of the Synopsis; each officer to be responsible for and sign his own part; the work to be sold separately, at the lowest price that will cover the expense of publication, *Rep. p.* iv——It is sufficient for visitors, but not for scientific objects, *Sowerby* 94–109, *Bell* 378, 379, *South* 771–776, *Yarrell* 2050–2052——Extent to which the Synopsis is useful to casual visitors and to scientific inquirers, *Bennett* 1902–1907——In cases where the spelling of the names attached to the specimens is incorrect, the Synopsis is correct, *Sowerby* 3–10. 166, 167——It matters little whether the last scientific name attached to a specimen be or be not in the Synopsis, *Bell* 345——Is an anonymous publication, *Owen* 509——It has improved of late years; is most deficient in the antiquarian department, *Sowerby* 94–109——Witness never heard any complaint of the Museum Synopsis, *Turner* 1952——If a Synopsis of the contents of the Museum existed, printed neatly at a moderate expense, containing a description of the Elgin marbles, &c., it would be beneficial, *Cochran* 3477.

See also *Britith Specimens.* *Donors,* Names of. *Euryale.* *Jardin des Plantes,* I. *Latham,* Dr. *Lophius.* *Marbles.* *Ornithological Collection.* *Surgeons,* College of. *Swimming Bladder.*

Synopsis Mammalium. See *Fischer,* Dr.

Syriac Manuscripts. [1836.] Extent to which the catalogue is completed, *Forshall* 4223, 4224. 4396.

T.

Tankerville, Earl of. [1836.] Valuable specimens of shells in the late Earl of Tankerville's collection; mode in which it was disposed of, *Turner* 1622–1626.

Taste:

[1835.] Extraordinary improvement of the taste of the country since the acquisition of the Elgin marbles, *Westmacott* 3960–3962——If the Jupiter and Mercury in Mr. Payne Knight's collection were moulded, and casts at a cheap rate obtained from them, it would tend to improve the public taste, *Westmacott* 4004, 4005.

[1836.] If the public supplied with casts of the finer statues at a cheap rate, it would tend much to the purification and improvement of public taste, *Weigall* 199. 228——Access to such institutions as the Museum would be an incalculable benefit to the public character, *Bell* 464. 470–475.

See also *Collections.* *Visitors.* *Zoological Collections,* 2.

Temminck:

[1835.] The ornithological collection is arranged principally according to Temminck, and his generic names adopted, *Children,* 3128.

[1836.] Is a good authority for the nomenclature of the general collection, *Yarrell* 1996——His ornithological collection was the largest in existence; was purchased by the Dutch government, but is not exposed to view, *Horsfield* 2568.

See also *Ornithological Collection,* 3.

Temperature. [1836.] The average external temperature of Paris is considerably lower in winter than the average temperature of London, *Smirke* 5410.

Temple, the Hon. *William.* [1835.] Despatch from, to the Duke of Wellington, dated Naples, 21st January 1835, relative to literary institutions in Sicily, *App. p.* 489.

Theological Works. [1836.] Deficiencies in this department of the Museum could be better pointed out if there were a classed catalogue, *Cochran* 3450.

917

Thorpe, Thomas. [1836.] (Analysis of his Evidence.)—Dealer in manuscripts, in Bedford-street, Covent Garden, 3209, 3210——Number and description of the charters, grants and muniments relating to Battle Abbey, the collection of Sir Godfrey Webster; price at which witness has offered them to the British Museum, but the purchase was declined 3212-3222——Witness has offered to buy manuscripts for the Museum at 10 per cent., by which they would save money, 3225, 3226——Presence of the Museum officers at a sale has raised the price of manuscripts 25 per cent., 3227–3230. 3232——Opinion that literary men would give preference to the purchase of the muniments of Battle Abbey for 1,200 *l.*, over the application of any 2,000 *l.* expended in sales by the Museum, 3231.

Preference given by Museum officers to certain manuscripts over others, which witness considered more valuable, 3233, 3234——Examination upon a manuscript Bible, supposed to be the one presented by Alcuin to the Emperor Charlemagne in the year 801, which sold for 1,500 *l.*, and which the trustees did not bid for, 3234–3251——If a classed catalogue of the manuscripts in the British Museum were published in octavo, it would be the best speculation ever undertaken by a bookseller; there would be no difficulty in forming a classed catalogue at the same time as an alphabetical one, 3252–3282.

Thorpe, Mr. [1835.] Qualifications of Mr. Thorpe, as a Saxon scholar, and whether his learning would not be desirable in the manuscript department, *Forshall* 874–883.

Tigers. See *Mammalia.*

Tilt, Charles. [1836.] (Analysis of his Evidence.)—Petition to the House of Commons relative to the invention of a machine by Mr. Collas for engraving medals, its application to those in the British Museum, and praying for the adoption of means for publishing a medallic History of England, which might be done at a small expense by the machine, 5592——Examination upon the petition; upon the utility of the work to science; upon its expense, and the impossibility of any publisher engaging in it without the assistance of Government; price of publication with that assistance; foreign as well as British demand required to make it pay; engravings to be executed in Paris, and the printing here; manner in which the name of Mr. Nolte, as well as Mr. Collas, is connected with the machine; periods of the work at which it is proposed Government should assist; work to be subject to the approbation of the trustees, or parties appointed by them, if there could be an indemnity against non-fulfilment of contract in France, 5593–5641.

Tilt, Charles. [1836.] The evidence on his petition laid before the House, and his petition placed in the Appendix to the Report, *Rep. p.* v.

Tin. [1836.] Does not shrink so much as brass or harder metals in taking casts, *Faraday* 5973.

Titles. [1836.] Difference between titles and volumes in estimating the contents of a library, *Baber* 4593.

See also *Catalogues of Books and Collections,* I. VII. VIII. 4. *Index to Manuscripts.*

Torch Light. [1836.] Desirable that sculpture should be exhibited by torch-light; statues in the Vatican have not been injured by being so exhibited, *Greenough* 3806, 3807——Visiting the statues at Rome by torch-light is a favour, *Greenough* 3841–3845——Is not recommended if other means can be obtained, *Greenough* 3841–3845.

Tortoises. [1836.] The Museum collection is not half equal to witness's private collection, in point of species, *Bell* 333——Loan by a naturalist, having charge of a collection in the Paris Museum, of a case of the rarest specimens of tortoises from the public collection, without any period being specified for their return, *Bell* 407–413.

See also *Reptilia.*

Toucans. [1836.] The Museum collection of, is poor compared with that of Paris, *Grant* 1523——Explanation concerning this collection, in answer to Dr. Grant's evidence, *Gray* 2991.——*See* also *Ornithological Collection,* 1.

Tours Library. [1836.] There is a classed and alphabetical catalogue in this library; the library is small, but conveniently arranged, *Mathew* 3384–3386.

Townleian Venus. [1836.] It was from neglect of proper precaution in moulding that this statue was broken, *Weigall* 174.

Towneley Collection. See *Duplicate Books and Coins.*

Towneley Marble Room. [1836.] The plan for the new buildings will lead to the sacrifice of this room, which cost 30,000 *l.*, *Greenough* 3903.

Towneley Marbles. [1835.] Account of expenditure for the drawings and engravings for the Towneley marbles, 1834, *App. p.* 404.——*See* also *Marbles.*

Transactions. See *Papal Government.*

Transcripts. [1835.] Fees for transcripts are not taken unless the officer makes the transcript, *Ellis* 275–280.

Travels. See *Continent.*

Treasury, First Lord of. [1836.] It is well that he should be connected with the board of trustees, *Bennett* 1862–1866, *Yarrell* 2035.

Tresor de Numismatique. [1836.] How far the plates exhibited before the Committee give a fair average of the style in which the work has hitherto been executed, *Hawkins* 5736–5740——The specimens selected were indiscriminately taken, to give a fair idea of the plates that have appeared, *Nolte* 5818——Impressions of engravings of medals exhibited to the Committee have been taken from the Tresor de Numismatique, *Nolte* 5833–5837——Tresor de Numismatique exhibited to the Committee in pursuance of their directions, *Forshall* 5841——As far as the skill of the artist can go, nothing can exceed the perfect beauty of the specimen plate of their work, but it is due to the artist and not to the machine, *Brockedon* 5898.——*See* also *Collas' Engraving Machine.*

Tribes. See *Characters of Orders and Tribes.*

Tropical Climates. See *Ornithological Collection*, 1.

TRUSTEES OF THE BRITISH MUSEUM:

1. *Generally; Objections to the constitution of the Trust, and amendments proposed.*
2. *Proposal for adding Scientific Men to the Trustees.*
3. *Effect of Public Functionaries being Trustees.*
4. *Elected Trustees.*
5. *Family Trustees.*
6. *Official Trustees.*

1. *Generally; objections to the constitution of the Trust, and amendments proposed:*

[1835.] Number of trustees, and of what descriptions, *Ellis* 12——High literary attainments of the trustees shows them to be amply qualified for the office, *Ellis* 92–117——Names of trustees who have been men eminent for literature and science, *Forshall*, 654–669——The constitution of the Museum might be improved, though not the slightest reflection can be cast on the present trustees, *Children* 3109, 3110——How far the trustees are responsible for the wants of the Museum when those wants are not fairly brought before them, *Children* 3403–3407——Circumstances under which the original nomination of trustees for the British Museum took place, *Ellis* 223–225——Within what period after the death or resignation of a trustee vacancies are filled up, *Ellis* 89——Are filled up by the three principal trustees; manner in which publicity is given to the fact of a vacancy, *Ellis* 364–369.

[1836.] No charge to be brought against them; their talents and acquirements admitted, *Rep. p.* v.——Extract from a work of Dr. Davy, giving the opinion of Sir Humphrey Davy against the constitution of the trusteeship of the Museum, *Grant* 313–315——Anything would be better than the present system at the Museum, *Grant* 1051——Want of proper attention and skill on the part of the trustees is one cause of the bad condition of the collections, *Grant* 1529——The constitution of the present board requires amendment, *Greenough* 3938–3947——They do not take that active part in the printed book department that is desirable, *Panizzi* 4925.

The extent of donations of books shows that there has not been dissatisfaction with the manner in which the trust has been conducted, *Panizzi* 4716–4788——Names of the present trustees who are not eminent for their scientific acquirements, *Grant* 323——Names of trustees on the committee appointed to communicate with the architect on the subject of the plans, *Smirke* 5273–5275——Duties of the trustees, *Nicolas* 3600——Objection to the appointment of trustees being in the Ministers of the day, *Gregory* 3570——Whether a better board of management could be formed than the present, *Archbishop of Canterbury* 5522–5525.

Opinion in favour of the official trustees, with certain exceptions, being replaced by trustees appointed by learned bodies, *Vigors* 1445 1448. 1457, 1458——The learned bodies who should have the privilege of appointing should be the Chancellors of the two Universities, and the presidents of certain learned societies in London, *South* 1108–1124——The principle of admitting the representatives of learned societies among the trustees might be beneficially extended, but it would not be desirable that eminent men should be selected from those societies, *Archbishop of Canterbury* 5565–5571. 5574–5576——Manner in which the appointment of the family and official trustees so far fixes the government of the Museum, *Hannay* 5152; *Archbishop of Canterbury* 5522–5525——The trustees should be composed of the same description of men as at present, *Panizzi* 4939–4941——Advantageous to make the board of trustees consist of the family trustees permanently, the elected trustees for life, the other trustees making way for appointments by learned societies; such board having the absolute appointment of the heads of departments, and being responsible to the Home Secretary, *South* 1098–1107——Extent to which the subdivided departments of the Museum should be represented at the board; differences would not be likely to arise between the practical members of the board and the professors of departments, *Grant* 1031 1044——Not desirable to make the number of trustees much more numerous, *Archbishop of Canterbury* 5572, 5573.

2. *Proposal for adding Scientific Men to the Trustees:*

[1835.] Opinion in favour of taking the evidence of scientific men, when occasion requires, rather than having scientific men at the Board, whose opinions might have undue weight, *Ellis* 122–127. 192–200. 211–213——The office of elected trustee is considered

919

Trustees of the British Museum. [1836.]—2. *Proposal, &c.*—continued.

sidered the blue ribbon of literature; it would not be a greater advantage to the institution that men of science should be elected instead of the present trustees, *Ellis* 138–154——Names of trustees who have been appointed, but not for their works on literature or science, *Ellis* 160–169——Trustees who are men of science and literature, with wealth and rank attached, are better calculated for the office than those who make literature or science a profession, *Forshall* 643–693. 709–713——Evils that would arise from the presence of men particularly eminent in any branch of science among the trustees, *Forshall* 714-718——The addition of the most eminent literary and scientific men to the Board of Trustees would be beneficial, *Children* 3072-3076——The honour of a trusteeship would be a benefit to science, and induce men to turn their attention to scientific objects, *Children* 3087–3089——Further evidence upon the supposed effect of associating scientific men with the trustees, *Children* 3079–3086.

Whether certain men of science named would benefit the Museum by being attached to it as trustees, *Children* 3090–3094. 3101——Very eminent scientific knowledge ought not to be a sufficient inducement for election were the individual not possessed of amiable qualities, *Children* 3095-3100. 3102. 3104——Distinguished scientific men who have been trustees have also been men of high rank, *Children* 3111–3115——Scientific and literary knowledge should be united in trustees of the Museum, *Children* 3116——The trustees have not been elected from professionally scientific men; men distinguished in branches of science with which the Museum has little connection would not be particularly well qualified for the management of such an institution as the Museum, *Brown* 3707-3712——Scientific knowledge, particularly as regards natural history, should not be overlooked as a qualification with regard to the election of trustees, *Brown* 3721–3723.

[1836.] Opportunity afforded the trustees, by means of the election of trustees, of occasionally conferring a mark of distinction on men of science, *Rep.* iii——Men eminent in science have not been elected trustees, *Grant* 312–324——The Museum might be made useful in conferring rewards on scientific men; the collections would not suffer by the greater accession of science in the board, *Yarrell* 2023–2026——No instance of a distinguished naturalist being a trustee, *Bell* 456——If trustees versed in natural history were added to the board it would improve this branch of the establishment, *Vigors* 1286——There are many patrons of zoology among the trustees, but only one (the Earl of Derby) who has paid particular attention to the science; consequently zoology is not sufficiently represented, *Vigors* 1292. 1393–1395. 1410–1412——Names of scientific men who would have done honour to the trusteeship, *Grant* 325——Evils of literary men having been 40 years excluded from the government of the Museum, *Nicolas* 3592–3599. 3732.

Extract from a work of Dr. Davy, giving the opinion of Sir Humphry Davy in favour of scientific men being appointed to the trusteeship, *Grant* 313–315——If the trusteeship made an honour, scientific men would look forward to it, *Grant* 307–312——Their being placed in the trusteeship would be an honorary distinction, and their opinions would be easily obtained with no expense to the Museum, *Richardson* 2294–2300——The trusteeship ought to be the reward of literature and science, *Nicolas* 3592–3599——Four or five trustees of high scientific attainments, representing all the departments, would be advantageous, *Owen* 566–573——Advantage of a combination of trustees, intimately acquainted with science, and of noblemen and gentlemen taking interest in the affairs of science, *Grant* 1027–1030. 1058–1060——Effect of the trustees being particularly conversant with any one department or subdivision on the curators of the department, *Owen* 579–581.

Differences of opinion detrimental to the Museum would not have been likely to arise between professors Jameson and Playfair, supposing one had been the professor of geology and the other the trustee representing that branch, *Grant* 1052–1057——Scientific men acting as a sub-committee of trustees over the several departments, would be of immense benefit, *Grant* 1007–1009——Advantages of the appointment of scientific men as regards improving the collections, *Bennett* 1810–1832, *Yarrell* 2058–2061, *Griffiths* 2149–2157——It would cause curators' recommendations to be attended to, *Owen* 592, 593, *Bowerbank* 988–992——It would cause applications for grants to be more attended to, *Vigors* 1445–1448——Intermixture of men of science in the trusteeship would be beneficial, *Grant* 307–312, *Bell* 455-458, *Owen* 550, *Bowerbank* 978–981——Desirable that they, as well as some of the curators, should have a share in the government, *Gregory* 3561–3564.

Objection to scientific men, practically acquainted with any particular department, being trustees of the Museum, *Bennett* 1761–1767——Their appointment would be disadvantageous if they interfered with details, *Grant* 1058–1060, *Bennett* 1810–1832——It would not be an advantage in the printed book department, *Baber* 4729, 4730——Their opinion could be as well obtained if they were heads of departments as if they were trustees, *Richardson* 2322——A board composed of the most distinguished men in science and literature would not have that weight with the Government and the country that attaches to the men of rank in the present trusteeship, *Panizzi* 4919–4924——The narrow-mindedness and vanity of scientific men would be objectionable in the trusteeship, *Panizzi* 4929-4935. 4939–4941——Better that the trustees should have a general

Trustees of the British Museum. [1836.]—2. *Proposal, &c.*—continued.

interest in the promotion of objects of science, than themselves to be pre-eminent in any one branch, *Archbishop of Canterbury* 5537——Objections that would arise from the general infusion of scientific men into the board of trustees, *Archbishop of Canterbury* 5562–5564.

3. *Effect of Public Functionaries being Trustees:*

[1835.] The important duties of great public functionaries leave them but little time to attend to the business of the Museum, *Children* 3108——Gentlemen holding high official situations, whose avocations would prevent their attending to the concerns of the Museum, would be equally as objectionable for its management as scientific men engaged in professional pursuits, *Brown* 3716–3720.

[1836.] Advantage of retaining in their hands a certain influence over the affairs of the Museum, *Rep.* iii——Advantages derived from members of the Government being official trustees, *Archbishop of Canterbury* 5543–5545——From Members of either House of Parliament, *Panizzi* 4918——There having been a greater disposition on the part of the Members of Government to attend to the expensive recommendations of the trustees has arisen from various causes, and which are rather approved of by the people than otherwise, *Archbishop of Canterbury* 5547, 5548——Extent of difference made by the official and family trustees to the recommendation of the three principal trustees communicated by the Archbishop of Canterbury, *Archbishop of Canterbury* 5519–5521——Evils that would result from the affairs of the Museum being delegated to inferior officers if two out of three of the official acting trustees were to decline to act, *Grant* 316–319——Whether men of rank have the best opportunities of selecting the most competent officers, *Nicolas* 3607–3610——Advantage from high functionaries and men of rank being in the trusteeship, *Yarrell* 2023–2042, *Griffiths* 2149–2157, *Panizzi* 4902–4907——Objections to their having the whole management, *Nicolas* 3588–3591—— Disadvantage of their official duties preventing their attending so much to the Museum as is desirable, *Greenough* 3933–3936.

4. *Elected Trustees:*

[1835.] Names of the elected trustees, *Ellis* 18——Mode of electing trustees, and at what place the election held, *Ellis* 46–63.

[1836.] The trustees recommended to take steps to ascertain whether certain whose attendance has been most infrequent, are willing to resign: in future persons not attending for a period to be fixed, to be expected to resign, *Rep.* iv——Trustees not in future to lose sight of the fact, that an opportunity is thus afforded them of occasionally conferring a mark of distinction on men of eminence in literature, science and art, *Rep.* iv ——Objections to elected trustees not having votes in the election of other trustees, *Nicolas* 3600–3606——Many of the elected trustees are consulted, *Archbishop of Canterbury* 5519–5521.

5. *Family Trustees:*

[1835.] Names of the family trustees, *Ellis* 17——Are appointed by Act of Parliament, *Ellis* 19, 20——They could not extend their number upon any donation being granted to them without an Act of Parliament, *Ellis* 33. 90——How far the body of trustees would interfere in the event of an hereditary trustee being a minor or an idiot, *Ellis* 21–29——The trustees have no veto on the appointment of family trustees, *Ellis* 30–32——Appointed on the principle that the successors of families should have an opportunity of seeing that the donation or bequest was disposed in the way the donor intended, *Ellis* 35——No limited amount of donation or bequest that will give the donor a claim to appoint a family trustee, *Ellis* 34——Donation of works of value to the Museum does not constitute any ground for the selection of trustees, *Ellis* 210 —— Return of the names of the family trustees of the British Museum, and the mode in which each family nominates such trustees, *App. p.* 395.

[1836.] Family trustees not recommended to be interfered with, they holding their offices under Acts of Parliament, *Rep.* iii——Disadvantages that would result from abridging them of their share in the management; inconvenience will not arise should there be an objectionable appointment among so many, *Archbishop of Canterbury* 5524, 5525.

6. *Official Trustees:*

[1835.] Names of the official trustees, *Ellis* 16——Cause of the Presidents of the Royal Academy, and of the Society of Antiquaries, being appointed official trustees, *Ellis* 226, 227.

[1836.] Number unnecessarily large; practically few attend; reduction recommended if ultimately found necessary by the Legislature, *Rep.* iii——The presidents of the Royal Academy and Society of Antiquaries should not be excluded from the official trusteeship, *South* 1124——The presidents of the Royal Society, of the Colleges of Physicians and Surgeons, and of the Society of Antiquaries should be included in the list of

Museum

Trustees of the British Museum—continued.

Museum trustees, *Vigors* 1458——Cause of the president of the Society of Antiquaries being appointed a trustee *Panizzi*, 4943, 4944.

Turin. See *Sardinia.*

Turner, John. [1836.] (Analysis of his Evidence.)—Dealer in objects of natural history, 1557, 1558——Well knows the collections at Paris, Ghent, Leyden and others on the Continent, 1559——Intimate knowledge of the shells in the Paris Museum, 1561–1563——Within the last six or seven years the collection of shells in the British Museum has become one of first-rate importance from being 10 or 12 years ago a disgrace to the country, 1564–1567——Comparison between the collections of shells in the French and British Museum, showing the British to be more unique, but the Parisian to have the greatest number of specimens, 1568–1579. 1614. 1664–1666——The collection at Leyden is a more choice collection than that of either Paris or London, from the Dutch having had intercourse with Japan which the others have not, 1580, 1581. 1605, 1606——The collection in the British Museum is satisfactory in point of arrangement, to the scientific man, and the whole collection is open to the public, 1582–1584. 1587–1590. 1607–1610.

Scientific and commercial value of a large collection is nearly the same, unless the collection is overloaded with duplicates, 1570. 1585, 1586. 1596–1598——Specimens offered by witness to the British Museum have generally been purchased; manner in which the transaction takes place, 1591–1595. 1611–1613——The rapid increase of specimens in the British Museum renders it difficult to keep the arrangement so complete as is desirable, 1599——The same thing occurs in the Paris collection, though there was a complete arrangement of that about 18 months since, 1599–1604——Circumstances which have caused witness to send finer specimens to the French than the British Museum, 1615–1617——There are none of the collections in Europe that are superior to that at the British Museum, 1621.

Valuable specimens in the late Earl of Tankerville's collection; mode in which it was disposed of, 1622–1626——Mr. Cumings is to all intents and purposes a dealer in shells, and spoken of as such, 1627–1631——Collection of British birds in the Museum is good; there is no other collection that can be compared to it, 1632–1638——The collection of foreign birds is bad, and the old specimens in a bad state, 1639–1645——Collection of birds in the Paris Museum is good, but witness does not approve of the mode of stuffing, 1646–1648.

Collection in the British Museum has increased more in proportion to the speed of zoological science than in the Paris Museum, 1648——Greater part of the birds in the British Museum are named, and mostly according to Temminck's nomenclature, 1649–1654——Improvement in the collection of birds in the last seven or eight years; the collection not worthy the name 10 or 12 years ago; they are too much crowded at present, 1672–1678——Collection of corals very good; is better than the collection at either Paris or Leyden, and has been formed within the last six or seven years; 1680–1684——The British Museum have nearly half the known species of shells, 1685, 1686.

[Second Examination.]—Provincial establishments of witness for collecting specimens of natural history in Great Britain, and agencies on the Continent, 1939–1942——Collection of marsupial animals in the British Museum is superior to that in any continental museum; that of the Paris Museum is decidedly inferior to it, 1943–1947——As is that of fossil saurian remains, 1948——There is no synopsis in the Paris Museum, 1949–1951——Witness never heard any complaint of the Museum Synopsis, 1952——More shells are named in the British than in the Paris collection; great progress has been made in naming the British collection during the last year, 1953, 1954——It is usual in the bird-stuffing department in the Paris Museum to transfer the wings and tails of different birds to others, 1955, 1956.

There is no additional money value given to shells because they are named; persons purchasing would rather have shells not named, that they may affix their own names to them, 1957–1970——Many private collections in England are named after those in the British Museum, 1958, 1959——Object of Dr. Beck's visit to this country was to compare the names of shells in the British Museum and in Mr. Gray's collection, 1960–1969——Every facility experienced by witness in consulting the Museum collections, 1971–1973——Dr. Beck's opinion that the Museum collection was respectable, and that in a few years it would be the first in Europe, 1977–1980——Some of the cases of the collection of fish and reptiles in the Jardin des Plantes are placed nine feet high, but in all collections some portions cannot be avoided being placed above the reach of the eye, 1981–1984.

Tuscany:

[1835.] Despatch from George H. Seymour, esq. to the Duke of Wellington, dated Florence, 29 December 1834, relative to literary institutions in Tuscany, *App. p.* 488——Particulars as to the Museum of Natural History at Florence, departments into which

Tuscany. [1835.]—continued.

divided, annual expenses, and out of what fund defrayed, admission of the public, &c., *App. p.* 488——Museums of antiquities in the provinces, *App. p.* 488——Public libraries at Florence, and in the provinces, their direction, annual expenses, admission of the public, &c, *App. p.* 488.

[1836.] Supposed number of casts of statues that it would be desirable to have from Florence, *Rennie*, 1274–1277——Nature of Bandini's arrangement of the catalogue of this library, *Holmes* 4314——There is a library there of which a catalogue was laid before the trustees more than two years ago, but nothing has been done to secure it, *Panizzi* 4818——Information relative to libraries there, viz.: the private library of the Grand Duke or Palatina, the Magliabecchiana, the Riccardiana, the Marucelliana; number of volumes, condition of the libraries, catalogues, &c., *App. p.* 542–562.

U.

Universities. See *Trustees*, 1.

University Library at Copenhagen. See *Denmark*, III, 3.

Unstuffed Specimens. See *Natural History*, Collection of, 4.

Upcott's Manuscripts:

[1835.] Rejection of Mr. Upcott's offer of manuscripts, *Forshall* 1573–1577.

[1836.] Examination of the character of the Upcott manuscripts, their offer to the British Museum, and upon the decline of the purchase by that institution, *Sherwell* 3762–3786. 3793–3799——Witness's answer to Capt. Sherwell's evidence relative to the offers for the purchase of Mr. Upcott's manuscripts, *Forshall* 4256–4259.

Valencienne, M. [1836.] He is not so capable of taking charge of the conchological collection in the Paris Museum as MM. Lamarck or Blainville, whom he succeeded; his knowledge is principally confined to ichthyology, *Turner* 1604.——*See* also *Cuvier.*

V.

Value of Collections. [1835.] How far the trustees arm themselves with evidence as to value, previous to any application to Parliament for a grant above 2,000 *l.* for the purchase of any curiosity, *Ellis* 1578–1581.

Van Praet, M. [1836.] His great knowledge of books, *Evans* 3320.

Vatican:

[1835.] Manner in which the Vatican library is superintended and directed, *Ellis* 214——It would be useful to the Museum and to the country if there was a depôt of fine casts from the principal statues of the Vatican, *Westmacott* 3942.

[1836.] There is no difficulty at Rome in procuring permission to mould the statues of the Vatican, *Weigall* 179, 180——Its being open on Sundays and fête days varies according to the inclinations of the ruling pope, *Rennie* 1231, 1232——Estimated by witness to be one mile and a half in length, *Rennie* 1270——Supposed number of casts it would be desirable to have from the Vatican, *Rennie* 1274–1277——Visiting the statues at Rome by torch-light is a favour, *Greenough* 3841–3845.

Letter from Dr. Gradwell to witness relative to the period the Vatican library is open, *Gage* 5042——Supposed difficulty of finding manuscripts therein, *Gage* 5043——There would be difficulty if even casual visitors were admitted, of ascertaining the extent of the collection, or the presence of any particular work, *Gage* 5048–5050——Want of facilities for study in the Vatican library, *Hannay* 5097–5102——The manuscripts there are only accessible to favourites of the papal government, *Hannay* 5098——It has long stood pre-eminent among Italian libraries in manuscripts, and still maintains the first rank; but in printed books it never did possess either a numerous or well chosen collection, *Hannay* 5149.

See also *Bibliotheque Royale à Paris. Library*, British Museum, 3. *Manuscripts*, 1. *Rome. Torch Light.*

Vellum. [1835.] No copies of any Museum publications have been printed on vellum at the public expense, *App. p.* 368.

Venice. [1836.] Particulars relative to the library of S. Marco or Marciana, number of volumes, state of the library, number of librarians, &c., *App. p.* 543–562.

Ventilation. [1836.] The rooms in the Museum open to the public are ventilated by large windows; there is no artificial ventilation, *Smirke* 5402——It is satisfactory in the new rooms, and can be improved in the east wing, *Smirke* 5462.

See also *Elgin Marbles. Reading Room.*

Venus de Medicis. [1835.] This statue was moulded only twice in fifty years, *Westmacott* 3942.

Vertebrated Animals. [1836.] There are seven skeletons in the Museum, and 2,600 in the Paris collection, *Grant* 1523——Answer to that statement, *Gray* 2935——The Museum contains the largest collection of vertebrated animals of any in Great Britain, *Richardson* 2170–2176. 2183.

923

Victor Hugo's Works. [1836.] There are one or two of his works in the Museum, but none of consequence, *Baber* 4672.

Vienna. See *Austria.*

Vigors, Nicholas Aylward. [1836.] (Analysis of his Evidence.)—Extent to which the zoological collection in the British Museum is deficient and unsatisfactory, 1283–1287——Valuable collection of shells formed by Mr. Cumings; terms on which it has been offered to the Zoological Society; if those terms not accepted, it will be offered to the British Museum; cause of his selecting the Zoological Society, 1287–1291. 1350–1365. 1392——Cuvier's system is adopted, but modified with certain modern discoveries and improvements, but which are pointed out to the student as far as the limited force of the establishment will allow, 1294, 1295——Advantages to science and the public of completing the national collection of zoology, and how far it might be done by combining various public collections in one central museum, 1296–1298. 1311——How far the nomenclature in the zoological department is satisfactory; the scientific and trivial name should be attached to each specimen, as well as the locality, 1300–1304.

The British Museum should have the power of exchanging with eminent collectors and country museums, 1307–1310——Donations should be preserved, though the consent of the donor should be obtained for parting with useless duplicates, 1312. 1376——Extent to which particular specimens should be preserved, although in duplicate, 1313–1316——Improvements that have taken place in the zoological collection since 1819, but more particularly in the last three or four years, 1317–1320. 1371, 1372——Deficiencies in the collection of birds might be filled up in six months; estimated expense, 1321–1333——Difficulty of estimating the expense at which the collection of mammalia could be completed; the space that would be required is more than the Museum could afford, 1334–1344——Students should be employed, who would give their services for the information they obtain, 1348, 1349.

Zoology and the fine arts should be removed from the British Museum, and that institution devoted to literature only, 1366–1370——The Museum has not much material for exchange, 1373–1375——It was injudicious of the Museum to part with the skulls of the rhinoceros and mammoth, presented to it by Sir Joseph Banks, to the College of Surgeons, 1377–1384——If there is to be a national zoological department, the collection should not be completed where it now is, or the new buildings appropriated to natural history, but the point should be settled, 1385–1388——Purchases in the natural history department should be made on a well-digested and well-connected system; principles of purchase proposed, 1390, 1391. 1396–1401——There are many patrons of zoology among the trustees of the British Museum, but only one (the Earl of Derby) who has paid particular attention to the science, consequently zoology is not sufficiently represented, 1393–1395. 1410–1412——With respect to the objects a national collection should contain, no one department is inferior to another; necessity for organic remains being included, 1402–1404.

Collection of British birds is very good; how far that collection has been perfected at the expense of others, 1405–1409——Great improvements have been made in the collection of fishes, but it falls short of perfection, 1413, 1414——The nomenclature of foreigners should not be so implicitly followed as it is; a plan should be formed for a British system, 1418–1422——Great importance of the formation of a catalogue of the zoological collection, 1423–1430——Hours during which the Museum is open should be extended, 1431, 1432——Museum might be opened with advantage to the public at Easter and Whitsuntide, without fear of injury to the collections, 1433, 1434——Hours of opening and closing the Zoological Society and gardens, 1434–1439——The British Museum, as a national museum, should be open as early and as late as possible, even if with artificial light, 1440. 1442——The zoological museum would not pay for being open with artificial light, though it is so when foreigners or men of science, with limited time, wish to see it, of an evening, 1441–1444——Opinion in favour of the trustees being appointed by certain learned societies, and other propositions for the government of the Museum, 1445–1448——Particulars as to the governing body of the Zoological Society, and showing that any dissentions that may have taken place in that body have not hurt the institution, 1449–1456——Opinion in favour of the official trustees of the Museum, with certain exceptions, being replaced by trustees appointed by learned bodies, 1457, 1458——Nature of the committee of science of the Zoological Society, which name being found inconvenient, the committee was abolished, 1459–1462——Nature of the committees of museum, and of publication at present existing, 1463, 1464——It would be better that the committees should not be confined to members of the council, but should include members of the society at large, 1465.

Villiers, George, Esq. [1835.] Despatch from, to Viscount Palmerston, dated San Ildefonso 9th August 1835, relative to literary institutions in Spain, *App. p.* 500.

Visitation:

[1835.] Nature and use of the annual visitation, besides which the trustees make inspections when they think proper, *Ellis* 75–83. 353–359, *Forshall* 910–919——Visitations and minute examinations occasionally take place by sub-committees, *Ellis* 84–86——Extent to which the annual visitation is useful; collections are previously placed in the most complete order; interest taken by individual trustees in the collections, *Gray* 3258–3270.

Visitation—continued.

[1836.] The time occupied in it is not sufficient to be effective, *Greenough* 3946——The visitation of the trustees, though cursory, is of great use, *Archbishop of Canterbury* 5549.

Visitors:

[1835.] They continue to come to the last moment the Museum is open, but the greater number come at earlier hours, *Ellis* 1286——Good conduct of the public generally while visiting the Museum, *Samouelle* 3915, 3916——Increase in the number of visitors at the present day over formerly, *Samouelle* 3918——Visiting the Museum would improve the taste of the public, *Samouelle* 3919——Return of the number of persons admitted to a view of the British Museum, 1807 to 1813, *App. p.* 296——1807 to 1814, *App. p.* 298——1808 to 1815, *App. p.* 301——1809 to 1816, *App. p.* 303——1810 to 1817, *App. p.* 306——1811 to 1818, *App. p.* 308——1812 to 1819, *App. p.* 311——1813 to 1820, *App. p.* 313——1814 to 1821, *App. p.* 315——1815 to 1822, *App. p.* 318——1816 to 1823, *App. p.* 321——1817 to 1823, *App. p.* 324——1818 to 1824, *App. p.* 327——1819 to 1825, *App. p.* 329——1820 to 1826, *App. p.* 332——1821 to 1827, *App. p.* 334——1822 to 1828, *App. p.* 337——1823 to 1829, *App. p.* 340——1823 to 1830, *App. p.* 342——1826 to 1831, *App. p.* 346——1826 to 1832, *App. p.* 349——1827 to 1833, *App. p.* 352——1828 to 1834, *App. p.* 356.

[1836.] Every facility experienced by witness in consulting the Museum collections, *Turner* 1971–1973, *Yarrell* 1997–1999, *Horsfield* 2558–2564——Hardly a practised zoologist in London who is not in the habit of coming continually to make use of the British Museum, *Gray* 2694–2696——Names of scientific persons who have been in the habit of frequenting the Museum, *Gray* 2696——Their testimony to the facility with which access was allowed and information given, *Gray* 2697, 2698——Information always afforded by attendants or by application to officers, *Gray* 2707——Facilities in the British Museum are far greater than in the Jardin des Plantes, *Gray* 2711, 3140——In foreign museums generally they have not the same facilities as at the British Museum, *Gray* 3142——Foreigners have every facility in the British Museum, and are more particular in turning over leaves of prints that English visitors, *Josi* 5256.

Number attending the museum; if it were open six days instead of three, it would not be so crowded, *Rennie* 1219–1222——Obscure persons and strangers have more attention paid them in the reading-room and throughout the house than eminent persons or persons known would have, *Panizzi* 4950–4952——Nature of the restrictions under which visitors are admitted to the print room, *Josi* 5200——Artists and visitors here are more careless as regards turning over leaves of prints than they are in France, *Josi* 5224–5228——Number of visitors who frequent the print room per day; there were complaints made during Mr. Ottley's illness, which have been removed since witness was appointed, *Josi* 5229–5234——Not desirable to show greater facility for examining the prints critically than is afforded at present; it is equal to that afforded by most foreign collections, *Josi* 5252–5255——Mode of admission for critical examination of prints at Paris, *Josi* 5240, 5241.

Wax. See *Moulds of Statues.*

Webster, Sir *Godfrey.* [1835.] The purchase of his collection of manuscripts have been declined at the price demanded for them, *Forshall* 829.
See also *Battle Abbey Muniments.*

Weigall, Henry. [1836.] (Analysis of his Evidence.)—Moulds could be made and a supply of casts given to the public without injury to the statues, and at a low price, 171——Detail of the mode of moulding, and the precautions that should be taken to prevent injury to statues, both ancient and modern, 172–178——There is no difficulty at Rome in procuring permission to mould the statues of the Vatican, 179, 180——Statues of the Louvre are moulded through a formatore, 181, 182——If a competent person were appointed to superintend the process of moulding at the Museum, it would be an additional security against the accidents to the statues, 183–188——Bronzes might be cast without affecting the colour; it would be better they should be moulded in wax than plaster, 189–192——If the antique statues are moulded once in many years it would be sufficient; as soon as a perfect mould is obtained, the cast should be taken from it, from which another mould should be made, and from this the casts should be multiplied, 193–195. 214–216.

Opinion that Canova did not rub any substance into the marble to complete the surface which washing would remove, 196, 197——The risks of injury from moulding antique statues being reduced by the employment of competent superintendence, it is desirable that an effort should be made to supply the public with casts at a cheap rate; advantages that would result; price at which the cost of a large statue could be furnished, 198–205——If the officer were competent, the appointment of a formatore would cause a total absence of danger from moulding, 206, 207——Extent of establishment that would be required for the institution of such an office, 209, 210. 217–221——Application made by the French Government to the English Government for copies of the finer statues in the British Museum might be complied with without injury to the statues, if the moulds taken under the personal superintendence of competent artists, 211–213——Objections to the lighting the large room in which the Elgin marbles are placed have been inconsiderately made, 222, 223——Due proportion should be kept between the size of subjects and the size of the room, 224, 225.

[Second Examination.]—Mode by which moulds might be taken in wax from bronze statues without injury, 226–229——Advantages that would be derived from a collection of casts from all the antique statues known to be in existence; also from the works of the celebrated sculptors that lived about the 15th century; also from the architectural sculpture and monumental remains of the middle ages, 230–247.

Wells Church. [1836.] Extract from Flaxman's lectures, showing its architectural beauty, *Weigall* 245.

Welsh Domesday. [1835.] The remuneration to witness for editing the extent of Welsh manors, or the Welsh Domesday for the Record Commission, will be according to the value the Commissioners set on the work, *Ellis* 285–288.

Westmacott, Richard, R.A. [1835.] (Analysis of his Evidence.)—The terms on which witness permitted to make moulds of the Elgin marbles were that the public should have every facility, and that the prices should be brought as reasonable as possible, 3928–3931——Offer of the moulds for sale to Sarti, which had it been accepted, would have been mentioned to the trustees, 3932–3941——Appointing a moulder to the Museum would be a dangerous thing, as many statues would suffer very much from being moulded, 3942——The appointment of a moulder under competent superintendence, with a proper place for working, would be a great advantage in improving public taste by the circulation of good casts at a cheap rate, 3943–3952.

There is a greater disposition to taste in sculpture in France than in England, each province having its Academy, which is supplied with casts from Paris, 3953–3954——Casts were taken in France from every statue of celebrity that was taken there, previous to its being returned to Rome, 3955–3957——Extraordinary improvement of the taste of the country since the acquisition of the Elgin marbles, 3960–3962——Improvements in the productions of the Potteries from the same cause, 3963–3965——The room in which the Elgin marbles are placed is one of the finest in the world, and as finely lighted as any, 3966–3973——Desirable that Government should occasionally purchase works of classical sculpture, 3974, 3975——Government have occasionally encouraged sculpture by monuments to eminent men, 3976, 3977——Works of modern art that are in the Museum, 3977–3982.

Students to the Gallery of Antiquities generally come recommended by Royal Academicians, though it is not absolutely necessary, 3983–3985——Delicate bronzes would suffer more from moulding than marbles; large bronzes not so much, 3988——Moulding in wax would do less injury to the statue than plaster; but on account of its pliability

Westmacott, Richard, R.A. [1835.] (Analysis of his Evidence)—*continued.*

could not be used for large statues, 3989-3999——It is not desirable that moulds should be taken of the smaller bronzes in the Museum, 4000–4003——If the Jupiter and Mercury in Mr. Payne Knight's collection were moulded, and casts at a cheap rate obtained from them, it would tend to improve public taste, 4004, 4005——Government patronage would do much to elevate public taste and advance the arts, 4006.

Westmacott, Mr.:

[1835.] Mr. Westmacott's proposal for making moulds from marbles in the Elgin collection, dated 15th February 1817, *App. p.* 444——Conditions on which the trustees accepted Mr. Westmacott's proposal, *App. p.* 445.

[1836.] Whether there is any blame attributable to him for the manner in which the Elgin marbles are lighted, *Rennie* 1208–1213.——*See* also *Elgin Marbles.*

Westminster Abbey. [1836.] Monuments therein that there would be advantage in having casts from, *Weigall* 245.

Westminster Review. [1836.] Extract from an article therein by witness, showing the facility with which the manuscripts in the Museum can be consulted, *Nicolas* 3699, 3700.

Wetherell, Mr. [1836.] Number of species in the conchological collection of Mr. Wetherell of Highgate, *Bowerbank* 846. 865.

Whitby, Scarborough and Manchester Museums. [1836.] Witness in correspondence with, for the mutual interchange of duplicates, *Bowerbank* 867.

White, Mr. [1836.] Circumstances under which Mr. White came into the establishment, and why the head of the department was not consulted, *Children* 2819-2823.

White's Bequest. [1835.] Bequest of Mr. White is in reversion, dependent on two lives; reason the mention of it was omitted in a return presented to the House of Commons, *Forshall* 438–441——State of this bequest, and powers and expectations of the trustees with regard to it, *Forshall* 1655, 1656.

Whitsun Holidays. See *Holidays. Reading-room. Zoological Gardens.*

Wieland's Works. [1836.] List of his works, extracted from the King's Catalogue, which Mr. Edwards would have found had he referred to that document, *Baber* 4667——Causes of witness's error relative thereto, *Edwards* 4742.

Wilson, John. [1836.] (Analysis of his Evidence.)—Casts of medals in enamels in glass give a very accurate representation of the original, 6004——Cost of the casts of the Cheselden medal, 6005, 6006——Opinion of the engravings of the medals of Henry the Fourth by the French and English machine, 6008.

Windows:

[1835.] Rooms for collections should be lighted with side windows, *Samouelle* 3913.

[1836.] The mode of opening them in the new rooms is inconvenient and cumbrous, but has been left so in the event of any alteration being made in the skylights, *Smirke* 5463.

Wirtemberg:

[1835.] Despatch from Lord William Russell to the Duke of Wellington, dated Stuttgard, 10 December 1834, relative to literary institutions in Wirtemberg, *App. p.* 486——Direction and control of the cabinet of natural history, and that of medals, antiquities and arts; annual expenses, and out of what funds paid; admission of the public, &c., *App. p.* 487——Direction of the library at Wirtemberg; expense of books; annual expenses; out of what funds paid; admission of the public; number of volumes of books and manuscripts; provincial library, *App. p.* 487.

[1836.] Period at which the museum at Stuttgard is open, *Gray* 3140.

Wiseman, Dr. [1836.] A Catholic gentleman from Rome, who thanked Mr. Baber for the attentions he had received in the reading-room, and stated it to be the best he ever was in, *Panizzi* 4873.

Withers, Mrs. [1836.] Makes drawings of birds from specimens in the collection at the British Museum, which are much valued, *Gray* 2964.

Wolfenbuttel. [1836.] Particulars relative to the Ducal library; number of volumes, number of librarians, &c., *App. p.* 543–562.

Wollaston Medal. [1836.] Die for this medal executed by witness, *Wyon* 5845.

Wood, Mr. [1836.] Number of species in the conchological collection of Mr. Wood, of Suffolk, *Bowerbank* 846. 865.

Woods and Forests, Commissioners of. [1836.] Difference in the arrangements for the management of the works under the Commissioners of Woods, and that of the late Office of Works, *Smirke* 5295.

Woods and Forests Reports. [1835.] Indexes made to several of these reports by Mr. Millard, under witness's direction, *Hansard* 2386, 2387.

927.

Working Classes. [1836.] Casts of the finer statues might facilitate a knowledge of design among the working classes, where their particular avocations rendered it necessary, *Weigall* 201.

Works, Board of. See *Buildings. Woods and Forests,* Commissioners of.

Wynn, Sir *Henry W. W.* [1835.] Despatch from him to the Duke of Wellington, dated Copenhagen, 24 March 1835, relative to literary institutions in Denmark, *App. p.* 481.

Wyon, William. [1836.] (Analysis of his Evidence.)—Chief engraver of the Mint; associate of the Royal Academy, and medallist by profession, 5842–5844——Origin of Mr. Bate's first machine for engraving; defects therein, but which have been overcome in his improved machine, 5848–5854. 5873–5875——Subjects which cannot be faithfully represented by machinery, 5855——Difference in the expense of engraving medals for the Museum by hand and by machinery, in favour of the latter, 5857——Distortions in the engraving of the Soane medal executed by the French machine; causes thereof, and manner they might be lessened, 5858–5864.

In an engraving of the same medal by Mr. Bate's machine the same disproportions do not exist, 5865, 5866——Comparison of the engraving of the large medal of Napoleon and Marie Louise, done by the French and English machines, in favour of the latter, 5867–5869. 5872——Advantage that would be derived by art as well as history from engraving the medals in the British Museum, 5876–5881.

Y.

Yarrell, William. [1836.] (Analysis of his Evidence.)—Author of various papers in the zoological journals, and of a work on British fishes, 1985——Increase in the zoological collection of the Museum within fifteen years, which has been more rapid since the erection of the new building, 1986–1991——The arrangement is good and useful as far as it goes, 1992——Mr. Jenyns's work is of sufficient authority for the naming the collection of British birds, 1993–1995——M. Temminck's is a good authority for the nomenclature of the general collection, 1996——Facilities experienced by witness when inspecting collections, both as regards the regulations of the Museum and the courtesy of the officers, 1997–1999——The collection of fishes in spirits is as good as fishes can be preserved in spirits; reasons why they cannot have that perfect appearance they might be expected to possess; for scientific purposes proper attention has been paid to the collection; value of the collection, 2000–2005.

No reason to find fault with the classification or nomenclature, 2006–2009——Defence of the term "swimming bladder," as applied to the air bladder of fish; works of authority in which the term is used, 2010, 2011——Comparison of the description in the Synopsis of the "lophius piscatorius" with Mr. South's evidence thereon, and how far they may be both considered as correct, 2012–2014——Communication of M. Agassiz to the Zoological Society, relative to two species of the genus lepisosteus, in the British Museum, shows that he had every facility afforded him of a close examination, even to opening and inspecting the internal structure of those specimens preserved in spirits, 2015–2019——The zoological collection is not such as the national collection should be, though it may be as good as the means appropriated can produce; it is not capable of extension with the present space, 2020–2022.

The Museum might be made useful in conferring reward on scientific men; the collections would not suffer by the greater accession of science in the board, 2023–2026——Necessity for the high functionaries, who are official trustees, remaining so; their interest and power are of great use, and they are a guarantee that the interests of the institution are properly taken care of, 2023–2042——The remuneration is sufficient to obtain the first talent for the highest offices in the Museum, 2043–2046——Witness has not seen a catalogue of the zoological collection, 2047–2049——The Synopsis was not written for scientific men; it is satisfactory as a popular description of the contents of the Museum; the arrangement in it is satisfactory and clear as far as it goes, 2050–2052——How far the zoological collection is entitled to be considered one of European reputation, 2053–2057——Scientific men being added to the trust might cause the collection to be rapidly improved and extended, 2058–2061.

Information upon the accommodation necessary for the different collections in the new buildings can be quite as well given to the architect by the trustees as by the curators, 2062–2068——Doubts whether any one obliged to devote the day to business, would go to the Museum for pleasure of an evening; doubts also upon the quality of the light, if he did go; it might be a convenience to the public if it were open during the summer months from nine in the morning till twilight; there is no public institution of similar character that is open during those hours, 2069–2085——The imperfect state of the collection formerly was from want of space to receive and exhibit; there has been great increase of late years, particularly since the new rooms were opened, 2086–2092——Witness has always been able to obtain the books he wanted in the library; particular works existing on particular subjects may be known by reference to Watt's Bibliotheca, 2093–2097.

Yarrell's Fishes. [1836.] Is an example of a work containing instruction and amusement for unscientific persons, *South* 766.

Young, Mr. [1836.] Mr. Young, the dealer in coins, bought the copyright of one of the editions of coins, but the expense prevented his republishing it, *Doubleday* 5930.

Z.

Zaluski. [1836.] The Russian library was originally the library Zaluski, and carried off from Warsaw in 1795, *Panizzi* 4783.

Zoological, Botanical and Mineralogical Departments. [1836.] They should be perfectly distinct, *Sowerby* 16.

ZOOLOGICAL COLLECTION:

1. *Condition of the Collection.*
2. *Classification and Nomenclature.*
3. *Comparison with Foreign and Private Collections.*
4. *Catalogue of the Collection.*
5. *Building Accommodation.*

1. *Condition of the Collection:*

[1835.] Objects of zoology may have been left in their cases unpacked, it being considered they were less liable to injury than if exposed to the air, *Forshall* 1119——This collection is inferior in completeness to that of the minerals and fossils, *König* 2558–2564——Instance of Dr. Shaw's burying and burning zoological rubbish, *König* 2755——All the specimens of zoology that can be conveniently exhibited are so, *König* 2797——Extent to which witness is responsible for the arrangement of the zoological collection, *Children* 3038–3043——How far it is arranged so as to be attractive to the public and useful to the student, and whether improvement might be made, *Children* 3361–3369.

[1836.] Mode of exhibition, classification and nomenclature of the collection in the Museum not such as ought to be expected in the national Museum of England in the present advanced state of zoology, *Grant* 252, *South* 714–726, *Gould* 2020–2022——Collection is an opprobrium to the British nation, *Grant* 315. 1061–1068——Witness's opinion does not coincide with that statement, *Bell* 370–372——Objects of a national zoological museum, which are not fulfilled in any of the conditions at the British Museum, *Grant* 1466, 1467——The long neglect of this department a cause of the deplorable state of the collection, *Grant* 1529——It is miserable in funds, science and materials, *Grant* 1523——It is not miserable in science or materials, *Horsfield* 2573——The collection more resembles a storehouse than a school of zoology, *Grant* 1523——Extent to which it is deficient and unsatisfactory, *Vigors* 1283–1287——Its bad state twenty years ago to be attributed more to the state of zoology at that time than want of space, *Griffiths* 2113.

How far the Museum collection should be considered one of European reputation, *Yarrell* 2053–2057——It is as good as the means appropriated can produce, *Yarrell* 2020–2022——There are specimens in the Museum which are nowhere else to be seen, *Yarrell* 2056——Skins, &c. in store, as well as those stuffed and exhibited, are shown to persons desiring to consult the collection, *Gray* 2937——Improvements that have taken place therein since 1819, but more particularly in the last three or four years, *Vigors* 1317–1320. 1371, 1372——Within the last twenty years, but particularly within the last seven or eight years, *Bennett* 1692–1701——Within fifteen years, and more particularly since the erection of the new building, *Yarrell* 1986–1991.

It has progressed with the state of the science since the time of Dr. Leach, *Griffiths* 2103–2108——The zoological collection has increased, and the trustees desire it should increase commensurate with the space in which it is displayed, *Archbishop of Canterbury* 5557, 5558——Everything has been done that could be by the curators, *Vigors* 1284, 1285——If the officers proceed with the same energy they have done in the last three or four years, the collection will rank among the first, *Gould* 2382–2388. 2418.

2. *Classification and Nomenclature:*

[1835.] Arrangement by witness in the zoological collection, which was subsequently broken up, *König* 2628——Complaints of nomenclature and the mode of classing objects in zoology, but which have been equally defended as complained of; any decided incorrectness would be interfered with by witness, *König* 2629–2637——Extent to which a general system of classification and nomenclature is adopted, *Children* 3376–3378——Extent to which the zoological subjects are actually named, *Children* 3379.

[1836.] It is without either classification or nomenclature, *Grant* 1523——Such a statement is not correct, *Horsfield* 2581——Necessity for the proper scientific names being attached to the objects, *Grant* 1503——Common objects with common names are lavished in the Museum, while the more difficult and valuable objects are left unnamed, *Grant* 1503——There are no gross errors in the names, *Richardson* 2230——It might be so arranged as to be useful to the students and tend to the improvement of the public taste, *Grant* 255, 256, *South* 714–726——Advisable that in the exposed part of the collection that each class, order, family or tribe should have displayed in the cases the organs upon which the divisions are founded, *Bell* 353, 354. 484.

Zoological Collection—2. *Classification and Nomenclature*—continued.

One general system of classification not recommended, *Grant* 260——It is better to adopt the improvements of the different individuals who have studied the different branches of zoology, *Grant* 260——Classification should be according to the system most generally adopted, and should not be altered till a master mind revises the entire system, *Owen* 534——Naturalists do not all agree relative to species, *Richardson* 2230——Better to employ the nomenclature of a well-known authority, as any curator varying it cannot be always at hand to explain his reasons, *South* 718.

Cuvier's system is adopted, but modified with certain modern discoveries and improvements, but which are pointed out to the student as far as the limited force of the establishment will allow, *Vigors* 1294, 1295——The nomenclature of foreigners should not be implicitly followed; manner in which a British system might be speedily arranged, *Vigors* 1418–1422——It would add to its usefulness if foreign names were affixed, *South* 732——French or German, wherever the animal possesses such name, *South* 748——How far the nomenclature is satisfactory; the scientific and trivial name should be attached to each specimen, as well as the locality, *Vigors* 1300–1304——Particularly as regards British animals, *Richardson* 2196, 2197.

3. *Comparison with Foreign and Private Collections:*

[1835.] Whether the zoological collection in the Museum is not equally conducive to the interests of science as that in the Jardin des Plantes, although the collections in the latter are more extensive, *Forshall* 624–632——Comparison of the zoological collection of the Museum with that of Paris and Berlin, *Gray* 3354, 3355.

[1836.] As compared with the Jardin des Plantes, this collection and its management are an opprobrium to the British nation, *Grant* 315——Witness's opinion does not coincide with that statement, *Bell* 370–372——Is infinitely inferior, in every point of view, to the collection at Paris, *Grant* 1524——The collection bears a fair comparison with any in Europe, *Gray* 2463——The collection of the College of Surgeons was better and in better preservation in 1809 than that of the Museum, *Clift* 643–659. 674, 675.

4. *Catalogue of the Collection:*

[1835.] A catalogue of the collections of zoology, like that of the College of Surgeons, would be useful, but also expensive, and it would be better to wait till the new building allows of more complete arrangement, *Children* 3413–3426.

[1836.] Impossible that the zoological officers could, under existing circumstances, form such a catalogue as the Museum ought to have, *Bell* 395——That part of the zoological collection which is submitted to the public is in a state worthy of a printed catalogue, *Owen* 518——There is no distinct catalogue of the zoological collection, *South* 1159——No general collection of zoology on the Continent in which there is a perfect catalogue, *Gray* 2517——Great importance of the formation of a catalogue of this collection; doubts whether the expense would be defrayed by sale, *Vigors* 1423–1430——Catalogues of the zoological departments are in progress, but are at present in an imperfect state, *Grant* 1526, 1527.

5. *Building Accommodation:*

[1835.] Witness had no communication with the architect or knowledge of the space to be allotted to zoology in the new buildings, *Children* 3370–3375.

[1836.] It would have been expedient that the officers of this department should have been consulted by the architect, *Gregory* 3526–3531——Want of accommodation in the old building at present used for the exhibition of the zoological collection causing confusion in classification, *Grant* 252, 253. 258, 259——Similar confusion will occur in the new building as is now experienced in the old, *Grant* 254——Double the space would be required to exhibit the zoological specimens properly, which would cause double the staff; arrangements might be made to prevent the expenses being doubled, *Grant* 271–273——Some years back the space was not adequately filled with the exhibition of objects of zoology; desire on the part of the officers in the last three or four years to fill every case, *Gould* 2418——Rare specimens might be purchased with a view of future exhibition, but in the present state of the Museum buildings it would not have been prudent to have purchased largely, *Bennett* 1730–1732——Former and present space allotted to this collection, *Gray* 2457——Details of the area now available for the zoological collection, and that which is proposed to be made available, *Smirke* 5416–5418.

Zoological Department:

[1835.] There is not sufficient assistance in the zoological department, *Children* 3047–3053. 3433.

[1836.] Present number of officers in the zoological department is nothing like sufficient for so large a collection, *South* 779, *Vigors* 1295——Evils of the trustees not having appointed eminent men to the several zoological departments, *Grant* 1488–1495——Zoology should be more divided, *Sowerby* 44, 45——Mineralogy and zoology might be divided if deemed expedient, without forming a board of officers to superintend the exe-

Zoological Department—[1836.]—continued.

cutive of the whole, *Archbishop of Canterbury* 5553——Advantageous to the collections and the public if a similar division of labour were established in the zoological staff at the Museum as is established in Paris, *Grant* 295——Desiderata in the zoological department of the National Library, *App. p.* 563.

See also *Library British Museum*, 1. *Trustees*, 2.

Zoological Gardens:

[1835.] Comparison with Continental establishments of species of living animals exhibited therein in the first two or three years of its formation, *Gray* 3357.

[1836.] Are much more attended on Easter and Whit-Mondays, than on any other days, *Sowerby* 142——The attendance generally is not so numerous as at the British Museum, but the living specimens at the gardens are more generally admired than the stuffed ones at the Museum, *Sowerby* 146——Have never sustained injury from the thousands that visit them on certain holidays, *Vigors* 1434.

Zoological Lectures:

[1835.] Delivery of them in the Museum would be beneficial, but would be attended with very great expense, *Children* 3187.

[1836.] Names of persons who now lecture on zoology at different institutions, *Gray* 3138——Not advisable to have lectures on zoology, *Gray* 3137.

Zoological Society:

[1835.] They had the picking of the specimens of natural history collected on Captain Franklin's voyage, before any part were presented to the Museum, *König* 2862——Government has from time to time presented the better specimens that have been collected by naturalists and officers accompanying expeditions, to the Zoological Society, *König* 2863.

[1836.] Hours of opening and closing, and mode of admission, *Vigors* 1434–1439, *Yarrell* 2085——The zoological museum would not pay for being open with artificial light, though it is so when foreigners or men of science with limited time wish to see it of an evening, *Vigors* 1441–1444——Particulars as to the governing body of the Society, showing that any dissensions that may have taken place in that body have not hurt the institution, *Vigors* 1449–1456——Nature of the committee of science, which name being found inconvenient, the committee was abolished, *Vigors* 1459–1462——Nature of the committees of museum and of publication, at present existing, *Vigors* 1463–1464——It would be better that committees should not be confined to members of the council, but should include members of the Society at large, *Vigors* 1465——Its collection is beautiful, which if added to the Museum would considerably improve it, *Vigors* 1296——Might be induced to give up the *élite* of their collection for the purpose of centralization, if the subject laid fairly before them, *Vigors* 1311.

The chief donors of valuable shells to this museum were Captains Lyon, King and Belcher, *Vigors* 1359——It only purchases those specimens of which it is deficient, *Vigors* 1397, 1398——Makes a point of obtaining and safe storing rare objects with a view to future exhibition, *Bennett* 1730——Nature of the catalogues therein, *Bennett* 1754——Collections are increased principally by presents, in some measure by purchase, and very little by exchange, *Bennett* 1758——Collections of, are equal in condition to the recent ones at the Museum, both having passed through the same hands, *Bennett* 1773, 1774——The arrangement and labelling the specimens in the Society's museum is done by the curators, *Bennett* 1878–1880. 1883, 1884——Value of its collection of birds, *Gould* 2343——It is perhaps better than that of Paris, but not equal to that of Leyden, *Gould* 2347.

ZOOLOGY:

1. *Advancement of the Science, and necessity for a National Collection.*
2. *Books on Zoology in the Library of the Museum.*

1. *Advancement of the Science, and necessity for a National Collection:*

[1836.] The first step in the recent advancement of zoology was contemporaneous with the opening the intercourse with the Continent, *Bennett* 1726, 1727, *Gray* 2463——Advantages to science and the public, of completing the national collection of zoology, and how far it might be done by combining various public collections in one central museum, *Vigors* 1296–1298. 1311——If there is to be a national zoological department, the collection should not be completed where it now is, or the new buildings appropriated to natural history; but the point should be settled, *Vigors* 1385–1388——Previous to erecting a National Museum, certain eminent zoologists should be applied to for their opinion, *Vigors* 1389.

2. *Books*

Zoology—continued.

2. *Books on Zoology in the Library of the Museum :*

Works upon zoology which are not to be found in the library of the British Museum, *Owen* 1539–1543——Some works have been introduced within the last two years, the supply of the current works have not been to that extent to raise the department to the degree of excellence in which it was left by Sir Joseph Banks, *Owen* 1544–1547—— The deficient works are essential to a library professing to be national, corresponding works are contained in Dryander's catalogue, *Owen* 1548–1551.

See also *Catalogue of Books and Collections*, III. *Comparative Anatomy*. *Conchological Collection*, 2. *Hardwicke*, General. *Mineral Department*. *Natural History Department*, 2. *Natural Theology*. *Ornithological Collection*, 4. *Pennant's British Zoology*. *Reeves*, Messrs. *Shaw*, Dr. *Surgeons, College of*, 1.

Zoophites. [1836.] The collection of, is an opprobrium to the British nation, *Grant* 1071 ——Progress is making with naming the small collection of dried specimens of recent zoophites, *Grant* 1515——There is not a single species or specimen of any extinct zoophites yet exhibited, *Grant* 1514——Answer to this statement, Viscount *Cole* 2748, *Gray* 3115——There are in the Museum 747 species, and 2200 individuals, *Gray* 3114 ——Are not yet exhibited for want of room, *König* 3168.——*See* also *Leyden Museum*.

Zootomical Specimens. [1836.] Manner in which a cabinet of zootomical specimens might be formed in the British Museum, in imitation of the French, *Grant* 257.

Zootomy, Works on. See *Dryander's Catalogue*.
